Differential electron emission at 15 deg is investigated for 50-500 keV/amu hydrogen impactingon He and H targets. From hydrogen particles (H, H(+), H2(+), H3(+)) ratios of cross sections relative to proton impact data, it is shown how bound projectile electrons influence the differential electron emission and where different ionization mechanisms are important. It is demonstrated that the H2(+) and H3(+) molecular ions interact as though they are composed of independent nuclei with the appropriate number of bound electrons, the electronic structure of the components appearing to be unimportant. PHOTOCHEMISTRY OF INTERMOLECULAR C-H BOND ACTIVATION REACTIONS Progress Report, 15 Sep. 1994 - 15 Mar. 1995
A. J. Lees 15 Dec. 1994 5 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DE-FG02-89ER-14039)
(DE95-008991; DOE/ER-14039/4) Avail: CASI HC A01

Since the last progress report (March 15, 1994), attention was paid to the solution photochemistry of (HBPz*3)Rh(CO2) (Pz* = 3,5-dimethylpyrazolyl) at different excitation wavelengths and in various hydrocarbon solvents (n-pentane). Absolute quantum efficiencies were obtained for the intermolecular C-H bond activation at different wavelengths and temperatures. Results indicate that there are two excited states with different reactivities and two reaction channels. The intermediate that is highly reactive toward hydrocarbon C-H bonds is probably the monocarbonyl (HBPz*3)Rh(CO) species. Related studies are being carried out on tungsten(4) eight-coordinate-chelate complexes. DOE

POSSIBLE REASON WHY LEPTONS ARE LIGHTER THAN QUARKS
R. R. Volkas 1994 9 p Sponsored in part by the Australian Research Council
(DE95-616383; UM-P-94/19; OZ-94/6) Avail: CASI HC A02/MF A01 (US Sales Only)

The minimal model of spontaneously broken leptonic color and discrete quark-lepton symmetry predicts that charged leptons have the same masses as their partner charge +2/3 quarks up to small radiative corrections. By invoking a different pattern of symmetry breaking, a similar model can be constructed with the structural feature that charged leptons have to be lighter than their partner quarks because of fermion mixing effects. As well as furnishing a new model-building tool, this is phenomenologically interesting because the scale of the new physics responsible for the quark-lepton mass hierarchy could be as low as several hundred GeV. TOP QUARK AND HIGGS BOSON MASSES FROM WORMHOLE PHYSICS
B. A. Harris and G. C. Joshi 1994 29 p
(DE95-616384; UM-P-93/117) Avail: CASI HC A03/MF A01 (US Sales Only)

This paper, brings together quantum field theory on S(sub 4) with the Coleman wormhole hypothesis, which imposes constraints on terms in the gravitational Lagrangian. In particular, it investigates the effect of matter fields on the trace anomaly, which is related to the curvature terms, by the use of the renormalization group equations. A toy model of a non-conformally coupled Higgs boson to a single top quark is considered. By numerically solving the renormalization group equations for the couplings of the model, preferred values of the particle masses were found for various values of the bare non-conformal coupling. By making the ad-hoc assumption that the tree-level, Higgs boson trace anomaly, vanishes on shell, a unique prediction can be made within this model for the masses of both the Higgs and the Top. DOE

INVERSION OF THE TOTAL CROSS SECTIONS FOR ELECTRON-MOLECULE AND ELECTRON-ATOM SCATTERING
D. R. Lun, K. Amos, and L. J. Allen 1994 14 p
(DE95-616466; UM-P-94/93) Avail: CASI HC A03/MF A01 (US Sales Only)

Inverse scattering theory has been applied to construct the interaction potentials from total cross sections as a function of energy for electrons scattered off of atoms and molecules. The underlying potentials are assumed to be real and energy independent and are evaluated using the Eikonal approximation and with real phase shifts determined from the total cross sections. The inversion potentials have been determined using either a high energy limit approximation or by using a fixed energy inversion method at select energies. These procedures have been used to analyse e(-) - CH4, e(-) - SiH4, e(-) - Kr and e(-) - Xe scattering data in particular. DOE

THE DESIGN AND CONSTRUCTION OF THE MUON ARM IN PHENIX Progress Report, 15 Dec. 1993 - 1 Dec. 1994
P. N. Kirk 15 Dec. 1994 89 p
(Contract DE-FG05-88ER-40445)
(DE95-010156; DOE/ER-40445/46) Avail: CASI HC A05/MF A01

This report describes activities performed by the Intermediate Energy Nuclear Physics Group (IENPG) at the Louisiana State University (LSU). The report covers the period of time between approximately December 15, 1993, and the present. The principal focus of the activities is the muon subgroup of the PHENIX Collaboration. During the preceding year the authors have contributed substantially to the development of hardware for the muon arm of PHENIX and have undertaken an important simulation. The authors are, however, in the process of concluding other activities, most notably their membership in the Di-Lepton Spectrometer (DLS) Collaboration at LBL. During the preceding year the authors have undertaken a major calculation on behalf of the DLS Collaboration. Because of its

fundamental nature, its importance to the DLS Collaboration, and its applicability to any other spectrometer, they discuss this calculation in considerable detail. DOE

ELECTROMAGNETIC-GRAVITATIONAL CONVERSION CROSS SECTIONS IN EXTERNAL ELECTROMAGNETIC FIELDS
Hoang Ngoc Long, Dang Van Soa, and Tuan A. Tran Sep. 1994 11 p
(DE95-613589; IC-94/285) Avail: CASI HC A03/MF A01 (US Sales Only)

The classical processes: the conversion of photons into gravitons in the static electromagnetic fields are considered by using Feynman perturbation techniques. The differential cross sections are presented for the conversion in the electric field of the flat condenser and the magnetic field of the solenoid. A numerical evaluation shows that the cross sections may have the observable value in the present technical scenario. DOE

HOLISTIC ANALYSIS OF GAMMA-RAY SPECTRA IN INSTRUMENTAL NEUTRON ACTIVATION ANALYSIS Ph.D. Thesis
M. Blaauw 15 Nov. 1993 176 p
(PB95-214458; ISBN-90-73861-16-0) Copyright Avail: CASI HC A09/MF A02

This thesis describes the scientific aspects of the analysis software written for the new automated system for INAA at IRI. Its scope is limited to the computerized analysis of gamma-ray spectra as obtained with Ge detectors in INAA with a research reactor as a source of neutrons. The analysis of gamma-ray spectra is considered to consist of reduction, standardization and interpretation. The standardization comprises the theoretical modelling of the processes occurring during activation and measurement. INAA has on many occasions proven to be a potentially accurate technique for trace element analysis because of the simplicity of the sample preparation and the physical basis of the techniques. Intercomparisons however reveal large discrepancies between the results obtained by different laboratories. Several possible causes for these discrepancies are examined and remedies looked for this work. One of the causes may be the treatment of spectral interferences (two elements contributing to the same peak in the gamma-ray spectrum). Most INAA protocols are based on activity and subsequent concentration calculations from pairs of characteristic peak areas (the 'characteristic peak method'): One peak from the gamma-ray spectrum of the sample, one from the spectrum of the comparator. Interferences may go unnoticed because the presence or absence of other peaks in the spectrum is disregarded. In the present study, an attempt is made to interpret all peaks in the spectra obtained from a sample at once. NTIS

MVP/GMVP: GENERAL PURPOSE MONTE CARLO CODES FOR NEUTRON AND PHOTON TRANSPORT CALCULATIONS BASED ON CONTINUOUS ENERGY AND MULTIGROUP METHODS
Takamasa Mori and Masayuki Nakagawa Aug. 1994 160 p
(DE95-722072; JAERI-Data/Code-94-007) Avail: CASI HC A08/MF A02

In order to realize fast and accurate Monte Carlo simulation of neutron and photon transport problems, new algorithms have been studied, and two fully vectorized Monte Carlo codes MVP and GMVP have been developed for FACOM VP series vector supercomputers. The former and latter codes use the continuous energy model and the multi-group model, respectively. Compared with conventional scalar codes, these codes achieve higher computation speed by a factor of 10 or more on FACOM VP-2600. Both codes have functions for production use including accurate physics model, geometry description capability and variance reduction technique. In addition to the execution on the vector supercomputers, these codes can be used on vector-parallel supercomputers with parallel calculation capability and on workstations with an OS of UNIX. For the continuous energy method, many nuclear data libraries have been prepared based on mainly JENDL 3. This report describes the physics model, geometry description method used in the codes and how to use them. DOE

TEXTURE DEVELOPMENT IN ALUMINIUM EXTRUSION
T. Aukrust and H. E. Vatne 28 Jun. 1994 65 p
(PB95-196598; STF24-A94044) Avail: Issuing Activity (National Technical Information Service (NTIS))

In this report, a study of texture, anisotropy and constitutive relations in a metal forming process has been performed. In Norway, extruded aluminum represents a large volume of products and the crystallographical texture is an important governing factor for product properties such as surface appearance (streaks and shading), anisotropic strength and formability. Thus, to study the evolution of texture and anisotropy, extrusion of a flat profile was chosen as the metal forming process. A careful characterization of the texture has been done and the crystallographical texture as a function of the deformation history has been simulated and compared with the observed texture. NTIS

INTERFEROMETRY WITH PARTICLES OF NON-ZERO REST MASS: TOPOLOGICAL EXPERIMENTS
Geoffrey I. Opat 1994 27 p
(DE95-616244; UM-P-94/09) Avail: CASI HC A03/MF A01 (US Sales Only)

Interferometry as a space-time process is described, together with its topology. Starting from this viewpoint, a convenient unified formalism for the phase shifts which arise in particle interferometry is developed. This formalism is based on a covariant form of Hamilton's action principle and Lagrange's equations of motion. It will be shown that this Lorentz invariant formalism yields a simple perturbation theoretic expression for the general phase shift that arises in matter-wave interferometry. The Lagrangian formalism is compared with the more usual formalism based on the wave propagation vector and frequency. The resulting formalism will be used to analyse the Sagnac effect, gravitational field measurements, and several Aharonov-Bohm-like topological phase shifts. Several topological interferometric experiments using particles of non-zero rest mass are discussed. These experiments involve the use of electrons, neutrons and neutral atoms. Neutron experiments will be emphasized. DOE

MINIJET VETO: A TOOL FOR THE HEAVY HIGGS SEARCH AT THE LHC
V. Barger, R. J. N. Phillips, and D. Zeppenfeld Jan. 1995 23 p
Prepared in cooperation with Wisconsin Univ., Madison, WI, and DOE, Washington, DC
(Contract DE-AC02-76ER-00881)

(PB95-196234; RAL-94-120) Avail: Issuing Activity (National Technical Information Service (NTIS))

The distinct color flow of the qq yields qqH, H yields W(+)W(-) process leads to suppressed radiation of soft gluons in the central region, a feature which is not shared by major background processes like t(bar-t) production of q(bar-q) yields W(+)W(-). For the leptonic decay of a heavy Higgs boson, H yields W(+)(W-) yields l(+)(nu)l(-)(bar-nu), it is shown that these backgrounds are typically accompanied by minijet emission in the 20-40 GeV range. A central minijet veto thus constitutes a powerful background rejection tool. It may be regarded as a rapidity gap trigger at the semihard parton level which should work even at high luminosities. LOW-DENSITY IONIZATION BEHAVIOR
G. A. Baker, Jr. 1995 12 p Presented at the Condensed Matter Theories, Caracas, Venezuela, 12-17 Jun. 1995
(Contract W-7405-eng-36)
(DE95-009495; LA-UR-95-1082; CONF-9506170-1) Avail: CASI HC A03/MF A01

As part of a continuing study of the physics of matter under extreme conditions, we give some results on matter at extremely low density. In particular we compare a quantum mechanical calculation of the pressure for atomic hydrogen with the corresponding pressure given by Thomas-Fermi theory. (This calculation differs from the 'confined atom' approximation in a physically significant way.) Since Thomas-Fermi theory in some sense, represents the case of infinite nuclear charge, these cases should represent extremes. Comparison is also made with Saha theory, which considers ionization from a chemical point of view, but is weak on excited-state effects. In this theory, the pressure undergoes rapid variation as electron ionization levels are passed. This effect is in contrast to the smooth behavior of the Thomas-Fermi fixed temperature, complete ionization occurs in the low density limit, we study the case where the temperature goes appropriately to zero with the density. Although considerable modification is required, Saha theory is closer to the actual results for this case than is Thomas-Fermi theory. DOE

FORMATION OF CAVITIES IN SI AND THEIR CHEMISORPTION OF MATERIALS
D. M. Follstaedt and S. M. Myers 1994 7 p Presented at the 9th International Conference on Microscopy of Semiconducting Materials, Oxford, England, 20-23 Mar. 1995
(Contract DE-AC04-94AL-85000)
(DE95-009586; SAND-94-3247C; CONF-9503125-1) Avail: CASI HC A02/MF A01

Nanometer-size cavities formed in Si by He(+) implantation and annealing are examined with cross-section TEM. During annealing at 700 C or above, He degasses from the specimens, leaving uhv cavities with reactive Si bonds on their walls. Cavity microstructures have been characterized in detail for an implanted fluence of 1 x 10(exp 17) He/sq cm: cavity volume remains approximately constant (0.75 lattice sites/He) for anneals from 700 to approximately 1000 C, while surface area (3 to 7 times the wafer area) decreases with temperature as the cavities coarsen. The cavities are found to getter up to approximately 1 monolayer of Cu or Au from solution in Si without second-phase formation, thus identifying the trapping mechanism as chemisorption on the cavity walls. INTRODUCTION TO THE THEORY OF GOYAKS: OPERATOR MANIFOLD APPROACH TO GEOMETRY AND PARTICLE PHYSICS
G. T. Ter-Kazarian Sep. 1994 76 p
(DE95-613460; IC-94/290) Avail: CASI HC A05/MF A01 (US Sales Only)

The main purpose of the theory of goyaks is the generalization and the further expansion of the basic ideas of the theory of distortion of space-time continuum, in order to find out the basic deeper structures, that underlay both geometry G(223) and particles. It will be appropriate to turn to them as the primordial deeper structures. Suggested theory will address itself to the question of the origin of fundamental concepts of particle physics, such as the quarks, their spins, internal symmetries and associated with them different charges. Within its context the prime-cause of origin of mentioned above fundamental principles, especially of the most challenging ones, just such as Gauge and Color Confinement principles, will be cleared up. PHOTOPHYSICAL PROPERTIES OF OPTO-ELECTRIC MOLECULES STUDIED BY TIME-RESOLVED MICROWAVE CONDUCTIVITY Ph.D. Thesis
Wouter Schuddeboom 17 Nov. 1994 253 p
(PB95-196994; ISBN-90-73861-21-7) Avail: CASI HC A12/MF A03

In this thesis the photophysical properties of various donor-acceptor (DA) and symmetrical organic compounds were investigated using the Time-Resolved Microwave Conductivity (TRMC) technique in combination with steady-state and time-resolved fluorescence techniques. On flash-photolysis of the molecules charge separated states are formed whose properties depend on aspects such as the nature of the donor and acceptor group, the length and the nature of the bridging unit, geometrical aspects such as flexibility and rotation, orbital symmetry and the dielectric properties of the bulk medium. With the TRMC technique the changes in dielectric loss, on formation of the dipolar transients can be detected with nanosecond time-resolution, by measuring the decrease in power of X-band microwaves at the resonance frequency of a cavity. If measurements are made at the half-power resonance frequencies of the cavity, additional information can be gained on the change in dielectric constant, or molecular polarizability. NTIS

ZONE AXIS BACKSCATTERED ELECTRON CONTRAST FOR FAST ELECTRONS
C. J. Rossouw (Commonwealth Scientific and Industrial Research Organization, Clayton, Australia.), P. R. Miller (Commonwealth Scientific and Industrial Research Organization, Clayton, Australia.), T. W. Josefsson, and L. J. Allen 1994 25 p
(DE95-616775; UM-P-94/34) Avail: CASI HC A03/MF A01 (US Sales Only)

A dependent Bloch wave theory for inelastic scattering is adapted to predict backscattered electron (BSE) contrast from perfect crystals. This is correlated with 300 keV data from a number of zone axes from spinal, chromia, silicon, aluminium and gallium arsenide. This theory is shown to supersede an independent Bloch wave theory for BSE contrast which is incapable of accounting for asymmetry across polar axes. Orientation dependence of thermal dechanneling of fast electrons is shown to be important. The BSE scattering potential is shown to approximate to a delta function scaled by the atomic number squared on each atom. DOE

INSTANTANEOUS CHIRAL QUARK MODEL FOR RELATIVISTIC MESONS IN A HOT AND DENSE MEDIUM
D. Blaschke (Rostock Univ., German D.R.), Yu. L. Kalinovskij (Rostock Univ., German D.R.), G. Roepke (Rostock Univ., German D.R.), S. Schmidt (Rostock Univ., German D.R.), L. Muenchow, and V. N. Pervushin 1994

27 p
(DE95-613782; JINR-E-2-94-307) Avail: CASI HC A03/MF A01 (US Sales Only)

A chiral quark model with covariant instantaneous interactions is formulated using relativistic thermodynamic Green functions. The approach is applied to the description of mesons as relativistic bound state in hot and dense quark matter. The Schwinger-Dyson equation for the quark mass operator is obtained for a covariant four-point interaction kernel. The Salpeter equations for quark-antiquark bound states in a two-component relativistic quark plasma are given in the scalar-pseudoscalar as well as vector-axial-vector channels. The case of nonvanishing total momentum of bound state relative to the medium is considered. Numerical results for the meson mass spectrum and the pion decay constant at finite temperature are presented for the special case of a separable interaction which can be applied to the case of more realistic potentials. DOE

MULTICHANNEL RESONANCES IN COUPLED CHANNELS OF MESON SCATTERING: SCALAR SECTOR
D. Krupa, V. A. Meshcheryakov, and Yu. S. Surovtsev 1994 22 p
(DE95-613783; JINR-R-2-94-243) Avail: CASI HC A03/MF A01 (US Sales Only)

The method to obtain the model-independent values of multichannel-resonance parameters is formulated for determining their QCD nature. The approach is based on the immediate application of such general principles, as analyticity and unitarity, to the analysis of experimental data on the coupled processes of particle scattering. The resonance representation by pairs of complex conjugate clusters of poles and zeros on the Riemann surfaces of the 2- and 3-channel S-matrices are discussed. The multi sheet structure of the Riemann surfaces is taken into account through the choice of proper uniformizing variables. The method permits, on the basis of the analysis on one process, to predict the remaining coupled-process amplitudes. This can be made in two manners: using the analytical continuations of S-matrix to all the unphysical sheets of the Riemann surface and the formulae of the Le Couteur-Newton type. The role of closed channels in forming the resonances is investigated in both the K- and S-matrix approaches. The method is concretized with the isoscalar s-wave channel of coupled processes pi pi yields pi pi, anti-K K, eta eta and of scalar resonances. DOE

EXPERIMENTAL RESULTS ON CHARGE EXCHANGE REACTIONS WITH DELTA EXCITATIONS AND POLARIZATION STUDIES OF DELTA AND N(SUP *) (1440) RESONANCES
E. A. Strokovsky and F. A. Gareev 1994 15 p
(DE95-614022; JINR-E-1-94-241) Avail: CASI HC A03/MF A01 (US Sales Only)

Main results of inclusive and exclusive experimental studies of (He-3, t), (t, He-3), (p, n), (p, p') reactions on protons and nuclei with Delta excitation are discussed and summarized. New possibilities for investigation of coherent pion production are discussed. We point out that experiments at various energies with different projectiles offer a possibility to separate partial contributions of mechanisms of charge-exchange reactions with excitation of broad baryonic resonances (Delta and N(sup *) (1440)) in nuclei. The importance of interference effects in this class of reactions is stressed. We discuss the (d, d') reaction on protons and nuclei, which gives a possibility to study polarization effects in reactions with resonance excitations. Such information in the Delta, Roper and overlapping region, where interference between these resonances might be essential, can help much in understanding their properties and underlying mechanisms of the reactions considered. It is particularly important for the theory of charge-exchange reactions at intermediate energies which cannot at present provide quantitative description of these reactions with nuclei. DOE

K-SHELL IONIZATION UNDER ZONE AXIS ELECTRON DIFFRACTION CONDITIONS
T. W. Josefsson, L. J. Allen, P. R. Miller (Commonwealth Scientific and Industrial Research Organization, Clayton, Australia.), and C. J. Rossouw (Commonwealth Scientific and Industrial Research Organization, Clayton, Australia.) 1994 35 p
(DE95-616780; UM-P-94/57) Avail: CASI HC A03/MF A01 (US Sales Only)

A comprehensive theoretical treatment for the inelastic scattering of fast electrons in a crystalline environment is applied to account for variations in characteristic x-ray emission rates from spinel and chromia under zone axis diffraction conditions for 300 keV electrons. X-ray counts as well as backscattered electron contrast are recorded as the beam is tilted by about 70 mrad on a two-dimensional scan raster. Calculated K-shell ionization and backscattering cross sections, based on a model which takes into account interaction delocalization, thermal diffuse scattering and the consequent thickness dependent channelling effects in a realistic way, are in good agreement with experiment. (Contract F49620-92-J-0040)
(AD-A293304; AFOSR-95-0251TR) Avail: CASI HC A03/MF A01

The flow of energy in molecules, either isolated or colliding, is fundamental to complex phenomena occurring in atmospheric chemistry, combustion, molecular lasers, plasmas, and a host of other environments containing energetic species. We have developed, proven, and applied a technique that combines vibrational overtone excitation, to prepare highly vibrationally excited initial states, and time-resolved spectroscopic detection, to probe the evolution of the prepared state, for studying energy transfer in vibrationally energized molecules. Our experiments on acetylene have demonstrated the power of this approach for learning about otherwise inaccessible vibrations in electronically excited molecules, for determining the pathways of intramolecular energy transfer in isolated molecules, and for measuring fully state-resolved rotational and vibrational energy transfer rates in collisions. SIGNATURES OF VIRTUAL LSP'S AT THE TEVATRON
A. Datta, S. Chakravarti (Maharaja Manindra Chandra Coll., Calcutta, India.), and M. Guchait (Jadavpur Univ., Calcutta, India.) Oct. 1994 9 p
(DE95-613798; IC-94/303; HEPPH-9410331) Avail: CASI HC A02/MF A01 (US Sales Only)

Relatively light sneutrinos which are experimentally allowed and are not theoretically disfavored may significantly affect the currently popular search strategies for supersymmetric particles by decaying dominantly into an invisible channel. In certain cases the second lightest neutralino may also decay invisibly leading to two extra carriers of missing energy (in addition to the lightest supersymmetric particle (LSP)) - the virtual LSP's (VLSP's). The lighter charginos which would be produced in pairs with reasonably large cross-sections at TEVATRON energies, decay dominantly into the hadronically quiet lepton + sneutrino (E(sub T)) modes with large branching ratios leading to interesting unlike sign dilepton events which are not swamped by the standard model background. The kinematical cuts required to eliminate the backgrounds from WW, Drell-Yan and (tau) pair production are discussed in detail. With 100 pb(sup -1) luminosity 10-35 background free events can be found in a large region of the SUSY parameter space. DOE

MOLECULAR DYNAMICS SIMULATIONS OF HIGH ENERGY CASCADES IN IRON
R. E. Stoller 1994 6 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract DE-AC05-84OR-21400)
(DE95-010116; CONF-941144-129) Avail: CASI HC A02/MF A01

A series of high-energy, up to 20 keV, displacement cascades in iron have been investigated for times up to 200 ps at 100 K using the method of molecular dynamics simulation. The simulations were carried out using the MOLDY code and a modified version of the many-body interatomic potential developed by Finnis and Sinclair. The paper focuses on those results obtained at the highest energies, 10 and 20 keV. The results indicate that the fraction of the Frenkel pairs surviving in-cascade recombination remains fairly high in iron and that the fraction of the surviving point defects that cluster is lower than in materials such as copper. In particular, vacancy clustering appears to be inhibited in iron. Some of the interstitial clusters were observed to exhibit an unexpectedly complex, three-dimensional morphology. The observations are discussed in terms of their relevance to microstructural evolution and mechanical property changes in irradiated iron-based alloys. DOE

EFFECTIVE CHIRAL-SPIN HAMILTONIAN FOR ODD-NUMBERED COUPLED HEISENBERG CHAINS
V. Subrahmanyam Sep. 1994 8 p
(DE95-614445; IC-94/288) Avail: CASI HC A02/MF A01 (US Sales Only)

An L x infinity system of odd number of coupled Heisenberg spin chains is studied using a degenerate perturbation theory, where L is the number of coupled chains. An effective chain Hamiltonian is derived explicitly in terms of two spin half degrees of freedom of a closed chain of L sites, valid in the regime the inter-chain coupling is stronger than the intra-chain coupling. The spin gap has been calculated numerically using the effective Hamiltonian for L = 3,5,7,9 for a finite chain up to ten sites. It is suggested that the ground state of the effective Hamiltonian is correlated, by examining various variational trial states for the effective-spin chain Hamiltonian. DOE

EXPERIMENTS WITH HIGHLY CHARGED IONS UP TO BARE U(SUP 92+) ON THE ELECTRON BEAM ION TRAP
P. Beiersdorfer Jul. 1994 25 p Presented at the 14th International Conference on Atomic Physics, Boulder, CO, 31 Jul. - 5 Aug. 1994
(Contract W-7405-eng-48)
(DE95-008827; UCRL-JC-118297; CONF-940707-1) Avail: CASI HC A03/MF A01

An overview is given of the current experimental effort to investigate the level structure of highly charged ions with the Livermore electron beam ion trap (EBIT) facility. The facility allows the production and study of virtually any ionization state of any element up to bare U(sup 92+). Precision spectroscopic measurements have been performed for a range of (Delta)n = 0 and (Delta)n = 1 transitions. Examples involving 3-4 and 2-3 as well as 3-3 and 2-2 transitions in uranium ions are discussed that illustrated some of the measurement and analysis techniques employed. The measurements have allowed tests of calculations of the the quantum electrodynamical contributions to the transitions energies at the 0.4 percent level in a regime where (Z(alpha)) (approx) 1. COULOMB CORRECTION CALCULATIONS OF pp BREMSSTRAHLUNG
A. Katsogiannis, K. Amos, M. Jetter (Hamburg Univ., Germany.), and H. V. vonGeramb (Hamburg Univ., Germany.) 1994 38 p
(DE95-616349; UM-P-93/88) Avail: CASI HC A03/MF A01 (US Sales Only)

The effects of the Coulomb interaction upon the photon cross section and analyzing power from pp Bremsstrahlung have been studied in detail. Off-shell properties of the Coulomb T matrices have been considered but the associated, Coulomb modified, hadronic T matrices are important elements in any analyses of low energy, forward proton scattering data. At the lowest energy considered (5 MeV), the full calculations gave cross sections that were half the size of those found without Coulomb effects or with a simple model approximation to them. With increasing energy, the cross sections varied to those characteristic of magnetic interaction dominance and the specific differences due to Coulomb effects diminished. DOE

TESTING VECTOR BOSON DOMINANCE OF ELECTROWEAK INTERACTIONS VIA e(+)e(-) (YIELDS) f-BAR f
V. V. Kabachenko (Moscow Inst. of Physics and Technology, Moscow, Russia.) and Y. F. Pirogov 1994 21 p Submitted for publication in Int. J. Mat. Phys.
(DE95-620528; IHEP-94-52) Avail: CASI HC A03/MF A01 (US Sales Only)

In the framework of the Vector Boson Dominance (VBD) of electroweak interactions for composite leptons, quarks and Higgs bosons, restrictions on the universal four-fermion contact interactions are investigated. Manifestations of the VBD via these interactions at the 2 TeV e(+)e(-) linear collider are studied. Definite signatures of the VBD are exposed. It is shown that the VBD could be tested at the collider for the unified substructure scale up to O(50 TeV), which lies well in naturally preferred Deca-TeV region. DOE

QUANTIZATION OF A RELATIVISTIC PARTICLE ON THE SL(2,R) MANIFOLD BASED ON HAMILTONIAN REDUCTION
G. Jorjadze (Tbilisi State Univ., USSR.), L. ORaifeartaigh (Dublin Inst. for Advanced Studies, Ireland.), and I. Tsutsui Jul. 1994 13 p
(DE95-737163; INS-1042; DIAS-STP-94-22) Avail: CASI HC A03/MF A01

A quantum theory is constructed for the system of a relativistic particle with mass m moving freely on the SL(2,R) group manifold. Applied to the cotangent bundle of SL(2,R), the method of Hamiltonian reduction allows us to split the reduced system into two coadjoint orbits of the group. We find that the Hilbert space consists of states given by the discrete series of the unitary irreducible representations of SL(2,R), and with a positive-definite, discrete spectrum. DOE

THE TOPOLOGICAL STRING ASSOCIATED WITH A SIMPLE SINGULARITY OF TYPE D
Toshio Nakatsu Aug. 1994 15 p
(DE95-737229; INS-1047) Avail: CASI HC A03/MF A01

The partition function of D(sub N+1) topological string, the coupled system of topological gravity and D(sub N+1) topological minimal matter, is proposed in the framework of KP hierarchy. It is specified by the elements of GL((infinity)) which constitute the deformed family from the A(sub 2N-1) topological string. Its dispersionless limit is investigated from the view of both dispersionless KP hierarchy and singularity theory. In particular the free energy restricted on the small phase space coincides with that for the topological Landau-Ginzburg model of type D(sub N+1). DOE

N95-31227# Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study.
PION-NUCLEON AND KAON-NUCLEON SCATTERING LENGTHS IN QCD SUM RULES
Y. Kondo, O. Morimatsu, and Y. Nishino (Osaka Univ., Ibaraki, Japan.) Sep. 1994 15 p
(DE95-737278; INS-1059) Avail: CASI HC A03/MF A01

The pion-nucleon and kaon-nucleon scattering lengths are studied in the QCD sum rule. We show that the leading and next-to-leading order terms of OPE give rise to the Tomozawa-Weinberg and sigma terms, respectively. We also show that in the kaon-nucleon system the (Lambda)(1405) contribution has to be subtracted from the OPE side in order to obtain the scattering length. The odd components of the T-matrices are in agreement with the experimental values not only in the pion-nucleon channel but also in the kaon-nucleon channel after the (Lambda)(1405) contribution subtracted. The even components disagree with the experimental values in the pion-nucleon channel, which is similar to the situation in the PCAC-plus-current-algebra approach at the Weinberg point. We speculate that this discrepancy should be explained by the continuum contribution in the spectral function above the pion-nucleon threshold. DOE

CONVOY ELECTRON EMISSION FROM SURFACES
Carlos O. Reinhold, Joachim Burgdoerfer (Tennessee Univ., Knoxville, TN.), Kenji Kimura, and Michihiko Mannami (Kyoto Univ., Japan.) 1994 14 p Presented at the 13th International Conference on the Application of Accelerators in Research and Industry, Denton, TX, 7-10 Nov. 1994 Sponsored in part by NSF and the Japan-US Cooperative Scientific Program
(Contract DE-AC05-84OR-21400)
(DE95-010298; CONF-941129-23) Avail: CASI HC A03/MF A01

The authors present results of a microscopic simulation of fast electron emission in glancing-angle ion-surface collisions. The model accounts for both dynamic image interactions and multiple scattering near the surface and predicts a pronounced convoy electron peak for small emission angles. Good agreement is found with their recent coincidence experiments for 0.2-0.5 MeV/u Li ions interacting with SnTe(001) surfaces. They find that convoy electrons principally originate from target core states and are emitted while the ion is in very close proximity to the topmost layer of target atoms. Because of the rapid charge changing cycle that the ions undergo during emission, almost no correlation is found between the convoy peak position and the final charge state of the ions. DOE

ELECTRON TRANSFER KINETICS OF SELF-ASSEMBLED FERROCENE C(12) ALKANETHIOL MONOLAYERS ON GOLD ELECTRODES FROM 125K TO 175K Interim Report
John N. Richardson, Gary K. Rowe, Michael T. Carter, Leonard M. Tender, and Larry S. Curtin 23 Mar. 1995 34 p
(Contract N00014-90-J-11230)
(AD-A292754; TR-63) Avail: CASI HC A03/MF A01

The electron transfer kinetics of monolayers of CpFeCpCO2(CH2)12SH and CH3(Ch2)11SH co-chemisorbed on gold electrodes have been measured in 2:1 (v:v) chloroethane/butyronitrile solvent at temperatures ranging from 125K to 175K with potential steps and cyclic voltammetry. Rate constants, k deg, measured using cyclic voltammetry range from 3 x 10(exp -4) to 10(exp -1)/s over these temperatures; an activation plot of log K DEG/K(SUB BETA)T(1/2) vs. 1/T gave Lambda= 0.89 eV for the reorganization energy for the Cp2Fe(+/0) reaction and a pre-factor of 6.5 x 10(exp 6) eV(-1)/s. The rate constants were obtained by comparison of experimental delta E PEAK values with those of cyclic voltammograms digitally simulated with Marcus-DOS theory. A value of Lambda = 0.76 eV is predicted from dielectric continuum theory. The CpFeCpCO2(CH2)12SH monolayers are kinetically inhomogeneous (disperse) as shown by nonlinear 1nl vs. time plots in potential step experiments. The kinetic dispersity has adverse effects on determinations of Lambda values from cyclic voltammetric waveshapes and from plots of potential step-derived rate constants, k(sub app,tau), against overpotential (eta), producing depressed values for Lambda. EFFECTS OF MOSAICITY ON PARAMETRIC X-RADIATION PRODUCTION M.S. Thesis
William M. Buckingham and Lisa R. Ivey Dec. 1994 88 p
(AD-A293677) Avail: CASI HC A05/MF A01

Previous measurements of parametric x-radiation (PXR) spectra from mosaic graphite observed yields that greatly exceeded theoretical predictions. At the Bragg scattering condition, the interaction of relativistically charged particles and the atomic planes of a crystal produces scattering of virtual photons. This is known as PXR. The discrepancies between actual yields and theoretical predictions might possibly have been caused by the mosaic spread of the atomic planes of the crystal. Re-analysis of previous data has shown a miscalculation of the effective target thickness used in earlier work. There was also an error in the calculation of the theory that was used for comparison. Correction of the two errors brought the data and theory in closer agreement, but the mosaic spread does change the intensity of the PXR. In this thesis, three samples of thick mosaic carbon graphite crystal with differing mosaic spreads are compared to determine the effect of the mosaicity on PXR yield. By obtaining 'rocking curves' where the target orientation angle is changed with respect to the incident electron beam and observation angle, it was found that the mosaic spread does have an effect on the PXR spectral distribution. This effect is quite significant and can be seen when viewing the 'rocking curves' of the samples. As the mosaicity is increased, the angular distribution was spread out and the coherence condition was relaxed. DTIC

ELECTRONIC STRUCTURE OF DONOR-SPACER-ACCEPTOR MOLECULES OF POTENTIAL INTEREST FOR MOLECULAR ELECTRONICS III: GEOMETRY AND ABSORPTION SPECTRUM OF CH3-ALPHA P3CNQ
Anders Broo and Michael C. Zerner 18 Apr. 1995 30 p
(Contract N00014-90-J-1608)
(AD-A293662; TR-26) Avail: CASI HC A03/MF A01

The geometry of Z-Beta-(1-methyl-2-pyridinium) - alpha-cyano-4-styryldicyanomethanide was optimized using semi-empirical and ab initio quantum chemical methods. The predicted geometries using a one determinant description do not compare well with the observed geometry. A better description of the geometry is obtained with a multi-determinant approach. Good agreement with experiment is obtained only when consideration of the media is taken into account. Absorption spectra in the solid state and in solution were calculated and the results compare very well with the experimental spectra. The solvatochromic shift of the absorption spectrum was calculated using a self-consistent reaction field approach. We also discuss the question of whether the title molecule is best described as a zwitterion. DTIC

IPNS NEUTRON SCATTERING INSTRUMENTATION. A: EXISTING AND PLANNED. B: POSSIBILITIES FOR IPNS UPGRADE, A 1-MW SPALLATION SOURCE
Bruce Brown and Kent Crawford 1994 12 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract W-31-109-eng-38)
(DE95-004119; ANL/IPNS/CP-84859) Avail: CASI HC A03/MF A01

The Intense Pulsed Neutron Source (IPNS) is a pulsed spallation neutron source located at Argonne National laboratory near Chicago, Illinois in the US. This facility is the outgrowth of a long line of pioneering work on pulsed spallation neutron sources begun at Argonne in the early 1970s. IPNS uses protons accelerated in the Rapid Cycling Synchrotron to produce neutron via the spallation process (effectively a nuclear evaporation in which 10-50 neutrons are released per incident proton) in heavy element target. These neutrons are then moderated to produce spectra peaked at thermal or subthermal energies, and directed into beam which serve a variety of instruments. This paper discusses the diffractometers, various spectrometers, and reflectometers in existence and those planned for the upgrade of the IPNS. DOE

INSTABILITY OF WEAK VACUUM
G. A. Kozlov 1994 11 p
(DE95-613590; JINR-E-2-94-303) Avail: CASI HC A03/MF A01 (US Sales Only)

We study the characteristic features of a hypothetical candidate for new scalar field chi. The mass constraint under which such a chi-boson occurs is presented. The instability of weak vacuum is investigated. By considering the approximate breaking symmetry, we find that the mass m(sub chi) less than 15 GeV of the chi-particle is unnatural. In the case of heavy top quark mass, m(sub top) approx. 170 GeV (the recent CDF collaboration has reported m(sub top, sup exp) = 174 +/- 16 GeV), we have carried out that the physically acceptable chi-boson upper bound will not exceed the 1 TeV level. For certain values of m(sub top) and m(sub chi), the one-loop approximation consideration leads to the fact that the physical (our) vacuum cannot be absolutely stable. DOE

ELECTROMAGNETIC HADRON MASS DIFFERENCES AND ESTIMATION OF ISOTOPIC SYMMETRY VIOLATION PARAMETERS OF QCD VACUUM FROM QUARK MODEL
A. E. Dorokhov 1994 15 p
(DE95-613628; JINR-E-2-94-231) Avail: CASI HC A03/MF A01 (US Sales Only)

The estimations of the light quark mass differences, m(sub d) - m(sub u), and the light quark condensate differences, (D(bar-D))- (U(bar-U)), are obtained in the framework of the quark model with QCD vacuum induced quark interaction. We consider long-wave condensate and short wave instanton contributions to the electromagnetic hadron mass differences and show that the latter significantly improve the results on baryon octet. The results are: m(sub d) - m(sub u) approx. equal to 3.5 MeV and (D(bar-D)) - (U(bar-U)) approx. equal to -(0 approx. 3) (centerdot)10(exp -3) (U(bar-U)). DOE

RENORMCHARGES IN V-A THEORIES
Kh. M. Beshtoev 1994 6 p
(DE95-613689; JINR-E-2-94-221) Avail: CASI HC A02/MF A01 (US Sales Only)

It is shown that in the theory of weak interaction there may not exist any group of the renormtransformation of charge (i.e., the charge-g(sub L) remains constant) because this theory can be characterized as a 'left' one, or if such a group exists it is then realized for the charge g(sub L), and it is not related to the charge g in the vector theory. In connection with the above said there arises a problem of relating the charges g(sub L) and g when constructing the unified theory of interaction. DOE

AMORPHIZATION AND THE EFFECT OF IMPLANTED IONS IN SiC
L. L. Snead and S. J. Zinkle 1994 7 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract DE-AC05-84OR-21400)
(DE95-009699; CONF-941144-139) Avail: CASI HC A02/MF A01

The effects of implanted ion chemistry and displacement damage on the amorphization threshold dose of SiC were studied using cross-section transmission electron microscopy. Room temperature as well as 200 and 400 C irradiations were carried out with 3.6 MeV Fe, 1.8 MeV Cl, 1 MeV He or 0.56 MeV Si ions. The room temperature amorphization threshold dose in irradiated regions well separated from the implanted ions was found to range from 0.3 to 0.5 dpa for the four different ion species. The threshold dose for amorphization in the He, Si and Fe ion-implanted regions was also (approximately)0.3 to 0.5 dpa. On the other hand, the amorphization threshold in the Cl-implanted region was only about 0.1 dpa. The volume change associated with amorphization was (approximately)17%. No evidence for amorphization was obtained in specimens irradiated at 200 or 400 C. An understanding of the microstructural evolution of SiC under irradiation is critical to the application of these materials in fusion energy systems. DOE

ATOMIC APPROACHES IN METASTABLE ANTIPROTONIC HELIUM ATOMS. REPLY TO ANALYSIS OF THE LIFETIMES AND FRACTIONS OF ANTIPROTONS TRAPPED IN METASTABLE ANTIPROTONIC HELIUM STATES BY I. SHIMAMHURA AND M. KIMURA
Toshimitsu Yamazaki and Kazumasa Ohtsuki (University of Electro-Communications, Chofu, Japan.) Aug. 1994 13 p
(DE95-737228; INS-1050) Avail: CASI HC A03/MF A01

In the present note the authors clarify the purpose of YO and complement its essential points, thus showing that the criticisms of SK are inappropriate. The paper YO was aimed at discussing some new aspects related to the metastability of hadronic helium atoms which had been discovered when negative kaons, negative pions and antiprotons were stopped in liquid helium. The delayed fraction, time spectrum shape and lifetimes were the observables. Further experimental studies are in progress, and as of today there is no successful explanation for these interesting phenomena. So, YO tried to give brief and rather qualitative estimates for the observations in an intuitive way, considering only the leading terms. The following problems are discussed in as simple a manner as possible, starting from the exotic-atom viewpoints of Condo and Russell: (1) the atomic core polarization effect; (2) the structure and radiative lifetimes; (3) the non-statistical distribution of the angular momentum and an estimate of the delayed fraction; and (4) the isotope effect, though the title represents only (1). To respond to the comments of SK, it is important to consider the correspondence between the atomic approach and the molecular approach for the metastable antiprotonic helium atom of Condo-Russell. We therefore begin this note with a discussion of this aspect. DOE

STUDIES OF THE STRONG AND ELECTROWEAK INTERACTIONS AT THE Z(SUB 0) POLE Ph.D. Thesis
M. D. Hildreth Mar. 1995 186 p
(Contract DE-AC03-76SF-00515)
(DE95-010353; SU-SLAC-R-95-458) Avail: CASI HC A09/MF A02

This thesis presents studies of the strong and electroweak forces, two of the fundamental interactions that govern the behavior of matter at high energies. The authors have used the hadronic decays of Z(sup 0) bosons produced with the unique experimental apparatus of the e(+)e(-) Linear Collider at the Stanford Linear Accelerator Center (SLAC) and the SLAC Large Detector (SLD) for these measurements. Employing the precision tracking capabilities of the SLD, they isolated samples of Z(sup 0) events containing primarily the decays of the Z(sup 0) to a chosen quark type. With an inclusive selection technique, they have tested the flavor independence of the strong coupling, alpha(sub s) by measuring the rates of multi-jet production in isolated samples of light (uds), c, and b quark events. They find: alpha(sub s, sup uds)/alpha(sub s, sup all) 0.987 +/- 0.027(stat) +/- 0.022(syst) +/- 0.022(theory), alpha(sub s, sup c)/alpha(sub s, sup all) = 1.012 +/- 0.104(stat) +/- 0.102(syst) +/- 0.096(theory), alpha(sub s, sup b)/alpha(sub s, sup all) = 1.026 +/- 0.041(stat) +/- 0.030(theory), which implies that the strong interaction is independent of quark flavor within the present experimental sensitivity. They have also measured the extent of parity-violation in the Z(sup 0) c(bar-c) coupling, given by the parameter A(sub c, sup 0), using a sample of fully and partially reconstructed D* and D(+) meson decays and the longitudinal polarization of the SLC electron beam. This sample of charm quark events was derived with selection techniques based on their kinematic properties and decay topologies. They find A(sub c, sup 0) = 0.73 +/- 0.22(stat) +/- 0.10(syst). This value is consistent with that expected in the electroweak standard model of particle interactions. DOE

LONG BASELINE NEUTRINO OSCILLATION EXPERIMENT AT THE AGS Physics Design Report
D. Beavis, A. Carroll, and I. Chiang Apr. 1995 270 p
(Contract DE-AC02-76CH-00016)
(DE95-004378; BNL-52459) Avail: CASI HC A12/MF A03

The authors present a design for a multidetector long baseline neutrino oscillation experiment at the BNL AGS. It has been approved by the BNL-HENP-PAC as AGS Experiment 889. The experiment will search for oscillations in the nu(sub mu) disappearance channel and the nu(sub mu) reversible reaction nu(sub e) appearance channel by means of four identical neutrino detectors located 1, 3, 24, and 68 km from the AGS neutrino source. Observed depletion of the nu(sub mu) flux (via quasi-elastic muon neutrino events, nu(sub mu)n yields mu(-)p) in the far detectors not attended by an observed proportional increase of the nu(sub e) flux (via quasi-elastic electron neutrino events, nu(sub e)n yields e(-)p) in those detectors will be prima facie evidence for the oscillation channel nu(sub mu) reversible reaction nu(sub tau). The experiment is directed toward exploration of the region of the neutrino oscillation parameters Delta m(exp 2) and sin(exp 2) 2 theta, suggested by the Kamiokande and IMB deep underground detectors but it will also explore a region more than two orders of magnitude larger than that of previous accelerator experiments. The experiment will run in a mode new to BNL. It will receive the fast extracted proton beam on the neutrino target approximately 20 hours per day when the AGS is not filling RHIC. A key aspect of the experimental design involves placing the detectors 1.5 degrees off the center line of the neutrino beam, which has the important advantage that the central value of the neutrino energy (approximately 1 GeV) and the beam spectral shape are, to a good approximation, the same in all four detectors. The proposed detectors are massive, imaging, water Cherenkov detectors similar in large part to the Kamiokande and IMB detectors. The design has profited from their decade-long experience, and from the detector designs of the forthcoming SNO and SuperKamiokande detectors. DOE

DETECTION OF THE PHASE SHIFT WHICH ACCOMPANIES THE EXCITATION OF AN ATOMIC BEAM BY N. F. RAMSEY'S METHOD [DETEKCJA PRZESUNIECIA FAZOWEGO WYSTEPUJACEGO PRYZ POBUDZANIU WIAZKI ATOMOWEJ METODA N. F. RAMSEY'A]
Andrzej Chachulski and Krystyna Drogon May 1995 19 p In POLISH
(ISSN 0208-5658)
(IFTR-5/1995) Avail: CASI HC A03/MF A01

This article contains a description of a new method for measuring the phase shift which occurs in an apparatus. This method seems to be quite accurate. The authors found that there is a close relationship between the asymmetry of two adjacent resonance frequencies of the main interference line (which accompanies the use of N. F. Ramsey's excitation method) and the resultant phase shift. Calculations were performed using an example of a system with a beam of cesium atoms. The authors studied the asymmetry of frequency relative to the phase difference for an example of phase detection on the constant component of detector current, as they did for a case of the analysis of the resonance curve of a phase-modulated signal and synchronic detection. The authors describe the physical conditions and the hardware implementations of the principle. Author

Z-Beta (1-hexadecyl 4 quinolinium) alpha-cyano 4-styryldicyano methanide (C16H33-Q3CNQ) and the pyridinium analogue yryldicyanomethanide (C16H33P3CNQ) are two very promising candidates for molecular device design. We obtain the geometry of the ground and excited state of these systems using the PM3 quantum mechanical model. The absorption spectra in vacuum and in solution are calculated using the INDO/CI model, and compared to experimental spectra. The solvatochromic shift of the absorption spectra was calculated using a self-consistent reaction field approach. The observed bleaching of Langmuir-Blodgett films and solutions of C16H33-Q3CNQ and C16H33-P3CNQ is explained as resulting from a twisted configuration formed without barrier upon absorption into a twisted intramolecular charge transfer state. The observed rectification is explained from a ground state potential energy surface with two minima, one of which is characterized by a very large dipole moment. The relative energy of these minima is easily shifted by an electric field. The overall electron transport rate is found to be very small due to the small electronic coupling between the mono-layers of the L-B film. Thus, the electron transport through the sample is likely through defects of the L-B film. A way to increase the electronic coupling between the monolayers is also discussed. DTIC

Particles with electric charge q/e less than or equal to 10(exp -3) and masses in the range 1-1000 MeV/c(sup 2) are not excluded by present experiments or by astrophysical or cosmological arguments. Such millicharged particles may be a form of shadow matter that couples to ordinary matter by virtue of shadow photon/photon mixing. This paper describes a search for millicharged particles in a dedicated beam-dump experiment at SLAC. A preliminary analysis of part of this data excludes particles of mass (approximately) 1 MeV/c(sup 2) with q/e greater than 6 x 10(exp -5). DOE

POLARIZED PROTON BEAMS
T. Roser 1995 6 p Presented at the Particle Accelerator Conference, Dallas, TX, 1-5 May 1995
(Contract DE-AC02-76CH-00016)
(DE95-010843; BNL-61022; CONF-950512-12) Avail: CASI HC A02/MF A01

The acceleration of polarized proton beams in circular accelerators is complicated by the presence of numerous depolarizing spin resonances. Careful and tedious minimization of polarization loss at each of these resonances allowed acceleration of polarized proton beams up to 22 GeV. It has been the hope that Siberian Snakes, which are local spin rotators inserted into ring accelerators, would eliminate these resonances and allow acceleration of polarized beams with the same ease and efficiency that is now routine for unpolarized beams. First tests at IUCF with a full Siberian Snake showed that the spin dynamics with a Snake can be understood in detail. The author now has results of the first tests of a partial Siberian Snake at the AGS, accelerating polarized protons to an energy of about 25 GeV. These successful tests of storage and acceleration of polarized proton beams open up new possibilities such as stored polarized beams for internal target experiments and high energy polarized proton colliders. OBSERVATION OF INTENSITY DEPENDENT LOSSES IN Au(15+) BEAMS
M. Blakiewicz, L. A. Ahrens, H. C. Hseuh, T. Roser, Y. Shoji, and K. Zeno 1995 3 p Presented at the Particle Accelerator Conference, Dallas, TX, 1-5 May 1995
(Contract DE-AC02-76CH-00016)
(DE95-010845; BNL-61092; CONF-950512-14) Avail: CASI HC A01/MF A01

During the 1994 heavy ion run at Brookhaven a strongly intensity dependent loss for the Au(15+) beam in the AGS Booster was encountered. Coherent instabilities or space charge induced stopband losses were neither expected nor consistent with the data. It was found that the beam lifetime was an order of magnitude shorter for normal operating conditions than in the low intensity limit with the inverse lifetime increasing monotonically with the injected number of particles. Studies data are presented and the Au(15+) situation is compared with that for Au(33+). Various hypothetical mechanisms are considered. DOE

The LLNL electron beam ion traps provide cold highly charged ions up to bare U. These machines have provided a wealth of atomic physics data using a compact, relatively inexpensive, device. The physics program has studied electron-ion collisions, QED, ion-surface interactions, and plasmas physics among many other topics. The prospects for the study of the highest charge states in the highest Z ions led to the beam energy upgrade of the first EBIT into Super-EBIT. The desire to use ions as a research probe in themselves led to an ion extraction program on EBIT-2. Finally, a Penning trap (referred to as the RETRAP) has been constructed to catch extracted ions where they can be further cooled and studied. Results of several experiments at the LLNL EBIT facility are described. The program's capabilities are discussed. DOE

(DE95-010252; UCRL-JC-118216; CONF-9403221-1) Avail: CASI HC A03/MF A01

The (bar p)-H interaction is the most important aspect of the (bar p)pe system. While this interaction is worthy of study in itself, it is also relevant to a number of (bar p) applications, both practical and in the area of fundamental physics. Theoretical study of p-H commenced more than 20 years ago and has continued with growing interest through the present. Experimental study has been limited, but recently measurements have been made of (bar p)'s slowing in hydrogen at KeV energies, which shed light on their interaction with hydrogen atoms. Theoretical work involving various kinds and levels of approximation has now been carried out for a variety of (bar p) energy domains. Particular attention has been given to (bar p) capture at low and sub eV energies, in which a bound (bar p)-p state is formed, and to H excitation and ionization at KeV energies. Such calculations now extend into the sub Kelvin domain of energies. It is beginning to be possible to make comparisons between experiment and calculation and to compare calculations to one another. These comparisons suggest that theoretical work needs to be carried out in some intermediate energy domains and that some past calculations have to be repeated with more accurate methods. DOE

SO(8) COLOR AS POSSIBLE ORIGIN OF GENERATIONS
Z. K. Silagadze 1993 42 p
(DE95-613560; BudkerINP-93-93; IYaF-93-93) Avail: CASI HC A03/MF A01 (US Sales Only)

A possible connection between the existence of three quark-lepton generations and the triality property of SO(8) group (the equality between 8-dimensional vectors and spinors) is investigated. SO(8) appears to be a natural one-flavor unification group. Family formation due to weak interactions results in SO(10) group and a broken triality symmetry. Further speculations about how to restore this symmetry lead finally to E(sub 6) exceptional group and three quark-lepton families. DOE

RENORMALIZATION GROUP ANALYSES OF PARTICLE MASSES IN FULL FOUR-GENERATION FERMION CONDENSATE SCHEME
Bangrong Zhou Sep. 1994 28 p
(DE95-613595; IC-94/277) Avail: CASI HC A03/MF A01 (US Sales Only)

The renormalization group analyses of the masses of the heavy fermions and the Higgs boson, including the discussions of possible fixed points and applicability of perturbation theory, are expounded in the full four-generation quark-lepton condensate scheme of the minimal electroweak symmetry breaking. The results also indicate that the model could accommodate itself to the top-quark mass m(sub t) = 160 - 180 GeV. The predicted Higgs boson mass is in fact not too sensitive to the above change of m(sub t). It is also found that for a model without the fourth generation of leptons, the limitation to Lambda imposed by the requirement that the masses of the fourth generation of extra quarks are bigger than m(sub t) = 174 GeV could be greatly relaxed up to (less than or equal) 10(exp 11) GeV. FORM FACTOR OF THE PROCESS GAMMA(*) GAMMA(*) YIELDS PI(SUP 0) FOR SMALL VIRTUALITY OF ONE OF THE PHOTONS AND QCD SUM RULES (2): SUM RULE
A. V. Radyushkin and R. Ruskov 1994 20 p
(DE95-613629; JINR-E-2-94-248) Avail: CASI HC A03/MF A01 (US Sales Only)

We extend the QCD sum rule analysis of the F(sub gamma(*) gamma(*)) yields pi(sup 0) (q(sup 2, sub 1), q(sup 2, sub 2)) form factor into the region where one of the photons has small virtuality: absolute value of(q(sup 2, sub 1)) much less than absolute value of (q(sup 2, sub 2)) greater than or equal to 1 GeV(sup 2). In this kinematics one should perform an additional factorization of short- and long-distance contributions. The extra long distance sensitivity of the three-point amplitude is described by two-point correlators (bilocals), and the low-momentum dependence of the correlators involving composite operators of two lowest twists is extracted from auxiliary QCD sum rules. The sum rule obtained is regular in the limit q(sup 2, sub 1) yields 0. Our estimates for F(sub gamma(*), gamma(*)) yields pi(sup 0) (q(sup 2, sub 1) = 0, Q(sup 2, sub 2)) are in good agreement with existing experimental data. DOE

APPLICATIONS OF CHIRAL SYMMETRY
Robert D. Pisarski Mar. 1995 48 p Presented at the Workshop on Finite Temperature QCD and Quark-Gluon Transport Theory, Wuhan, China, 18-21 Apr. 1994
(Contract DE-AC02-76CH-00016)
(DE95-009552; BNL-61547; CONF-9404253-1) Avail: CASI HC A03/MF A01

The author discusses several topics in the applications of chiral symmetry at nonzero temperature. First, where does the rho go? The answer: up. The restoration of chiral symmetry at a temperature T(sub chi) implies that the rho and a(sub 1) vector mesons are degenerate in mass. In a gauged linear sigma model the rho mass increases with temperature, m(sub rho)(T(sub chi)) greater than m(sub (rho))(0). The author conjectures that at T(sub chi) the thermal rho - a(sub 1), peak is relatively high, at about approximately 1 GeV, with a width approximately that at zero temperature (up to standard kinematic factors). The omega-meson also increases in mass, nearly degenerate with the rho, but its width grows dramatically with temperature, increasing to at least approximately 100 MeV by T(sub chi). The author also stresses how utterly remarkable the principle of vector meson dominance is, when viewed from the modern perspective of the renormalization group. Secondly, he discusses the possible appearance of disoriented chiral condensates from 'quenched' heavy ion collisions. It appears difficult to obtain large domains of disoriented chiral condensates in the standard two flavor model. This leads to the last topic, which is the phase diagram for QCD with three flavors, and its proximity to the chiral critical point. QCD may be very near this chiral critical point, and one might there by generated large domains of disoriented chiral condensates. DOE

Transport of polarization through hadronization process is one of the fundamental interest in Quantum Chromodynamics which is a theory of strong interactions. In the low energy region where the hadronization occurs, QCD calculations are difficult, therefore at present the transport can be investigated experimentally. In this study the authors have searched for signatures of polarization of quarks and antiquarks in hadronic jets from Z(sup 0) (yields) q(bar q) decays. The polarization of quarks and antiquark produced by Z(sup 0) decays are predicted by the Standard Model of elementary particle physics. The authors defined several quantities depending on 'jet handedness' methods and studied the correlation between the predicted polarization and the quantities. The signal was estimated by analyzing power which represents degree of the polarization transport through the hadronization process. The Z(sup 0) decays were measured by SLC Large Detector and the polarized electron beam provided by SLAC Linear Collider was useful for this study. The data from the 1993 run showed no signature of the transport of quark and antiquark polarization. Upper limits on magnitude of the analyzing power were set in the range 0.05-0.15 depending on the methods. DOE

We discuss a special type of polarization asymmetry ('handedness') in

the process e(+)e(-) yields 4 pi, when one of the initial particles is longitudinally polarized. The asymmetry is proportional to the degree of polarization and to the width of mass ratio of rho-meson. It can reach 4-5% in some kinematic region. Both channels 2pi(+)2pi(-) and 2pi(0)pi(+)pi(-) are considered in the framework of the effective chiral Lagrangian with vector mesons, in the energy range approx. 1.2 GeV. The corresponding total cross sections are also calculated. DOE

We have measured doubly differential cross sections (DDCS) for electron emission in ion-atom collisions for F, Cl, Br, I, and Au projectiles impinging on H2 targets for collision energies between 0.18 MeV/u and 0.62 MeV/u and electron emission angles between 0 and 70 degres. We relate the observed diffraction phenomena in the binary encounter region to diffraction structures previously established in elastic scattering of electrons in the finite range potentials of atoms and partially ionized ions. Whereas for swift light ions the binary encounter energy follows simple 2-body kinematics and the cross section is derived from the first order Born approximation for scattering of an electron in the field of a point projectile core charge, for heavy projectiles energy and cross section of the binary encounter show a very complex behavior. DOE

MIXING PHASES OF UNSTABLE TWO-LEVEL SYSTEMS
V. V. Sokolov and P. vonBrentano (Cologne Univ., Germany.) 1993 15 p
(DE95-613844; BudkerINP-93-95; IYaF-93-95) Avail: CASI HC A03/MF A01

An unstable two-level system decaying into an arbitrary number of channels is considered. It is shown that the mixing phases of the two overlapping resonances can be expressed in the terms of their partial widths and one additional universal mixing parameter. Some applications to a doublet of 2(sup +) resonances in Be-8 and to the rho - omega systems are considered. The mixing phases in the 2(pi) and 3(pi) channels are found. The mixing energy shifts are also calculated for both systems considered. DOE

SEARCH FOR ANOMALOUS ZZ(SUB GAMMA) AND Z(SUB (GAMMA, GAMMA)) COUPLINGS WITH D0
Gregg Landsberg 1995 6 p Presented at the International Symposium on Vector Boson Interactions, Los Angeles, CA, 1-3 Feb. 1995
(Contract DE-AC02-76CH-03000)
(DE95-010457; FNAL/C-95/061-E; CONF-950287-1) Avail: CASI HC A02/MF A01

A direct test of the Standard Model by searching for anomalous ZZ(sub gamma) and Z(sub(gamma, gamma))couplings is presented. The authors analyze p(bar p) yields ll(sub gamma) + X, (l = e,mu) events at radical s = 1.8 TeV with the D0 detector at the Fermilab Tevatron Collider. A fit to the transverse energy spectrum of the photon in the signal events, based on the data set corresponding to an integrated luminosity of 13.9 pb(sup -1) (13.3 pb(sup -1)) for the electron muon channel, yields the following 95% CL limits on the anomalous CP-conserving ZZ(sub gamma) couplings: -1.9 less than h(sub 30, sup Z) less than 1.8 (h(sub 40, sup Z) = 0), and -0.5 less than h(sub 40, sup Z) less than 0.5 (h(sub 30, supZ) = 0), for a form-factor scale Lambda = 500 GeV. Limits on the Z(sub (gamma, gamma)) couplings and CP-violating couplings are also discussed. DOE

A MEASUREMENT OF QUARK AND GLUON JET DIFFERENCES AT THE Z(SUP 0) RESONANCE Ph.D. Thesis
Yoshihito Iwasaki Mar. 1995 70 p
(Contract DE-AC03-76SF-00515)
(DE95-010666; SU-SLAC-R-95-460; TOHOKU-HEP-95-01; TOHOKU-HEP-NOTE-95-06) Avail: CASI HC A04/MF A01

The authors have studied the differences in properties between quark and gluon jets using three-jet events in hadronic decays of Z(sup 0) bosons collected by the SLD experiment at SLAC. Gluon jets were identified in three-jet events containing one jet tagged as a heavy quark jet. The tagged gluon jets were compared with a mixed sample of light quark (u, d and s) and gluon jets, and also with a mixed sample of heavy quark (c and b) and gluon jets. The study shows that the particle multiplicity of gluon jets is higher than that of light quark or heavy quark jets. The ratios of average charged multiplicities of gluon and quark jets are measured and results are given. These results are in quantitative agreement with QCD model expectations. Differences are also observed in particle energy spectra and jet widths, consistent with naive QCD expectations. The experimental results are compared to Monte Carlo models of the hadronization process. DOE

AN EXPERIMENTAL STUDY OF QCD AND JETS IN e(+)e(-) ANNIHILATION Ph.D. Thesis
Yukiyoshi Ohnishi Mar. 1995 78 p
(Contract DE-AC03-76SF-00515)
(DE95-010667; SU-SLAC-R-95-461) Avail: CASI HC A05/MF A01

This thesis is concerned with an experimental study of QCD and jets using hadronic decays of Z(sup 0) bosons by the SLD experiment at the SLAC Linear Collider. The strong coupling alpha(sub s)(M(sub Z)(sup 2)) has been measured, which is an important test of perturbative QCD theory. This comprehensive study comprised fifteen observables that describe hadronic final states; six event shapes, differential two-jet rates defined by six different jet resolution/recombination schemes, energy-energy

correlations and their asymmetry, and the jet cone energy fraction. The data were compared with QCD predictions both at fixed order, O(alpha(sub s)(sup 2)), and including resummed analytic formula based on the leading and next-to-leading logarithmic approximation. The consistency was checked between alpha(sub s)(M(sub Z)(sup 2)) values extracted from these different measures. A final average of alpha(sub s)(M(sub Z)(sup 2)) = 0.1200 +/- 0.0025 (exp.) +/- 0.0078 (theor.), corresponding to Lambda(sub (bar MS)) = 253(sub -96)(sup +130) MeV, was obtained by combining all results. The dominant uncertainty is from uncalculated higher order contributions. DOE

RECOIL LONGITUDINAL MOMENTUM SPECTROSCOPY OF ELECTRON CAPTURE FROM He BY O(7+) AND F(8+)
W. Wu, K. L. Wong, C. L. Cocke, J. P. Giese, and E. C. Montenegro 1995 2 p Presented at the 19th International Conference on the Physics of Electronic and the Atomic Collisions, Whistler, Canada, 26 Jul. - 1 Aug. 1995 Ilisions, Whistler, Canada, 26 Jul. - 1 Aug. 1995
(Contract DE-FG02-86ER-13491)
(DE95-010823; DOE/ER-13491/764; CONF-950706-10) Avail: CASI HC A01/MF A01

Recoil momentum spectroscopy is used to study final state distributions for single capture and for transfer ionization for hydrogenlike O and F projectiles on He. Beams of O(7+) and F(8+) were directed to a He gas jet. The recoil ions were extracted by an electric field and projected onto the face of a position sensitive channel plate detector. The time of flight of the recoil, measured in coincidence with the charge-state-analyzed projectile, and its position were used to reconstruct its vector momentum. Spectra of the longitudinal momentum transfer to the recoil ion, p(sub x), are shown in three channels: (1) single ionization, target ionization without any change in projectile charge-state; (2) single capture, for which the recoils are thrown backwards; and (3) transfer ionization. CASI

REVIEW OF LONGITUDINAL PERTURBATION FORMALISM
S. Y. Zhang 1995 4 p Presented at the Particle Accelerator Conference, Dallas, TX, 1-5 May 1995
(Contract DE-AC02-76CH-00016)
(DE95-010894; BNL-61071; CONF-950512-41) Avail: CASI HC A01/MF A01

The foundation of the beam perturbation formalism was established on the Sacherer integral equation. The original solution was obtained by using simplified radial functions, and the results can be used to explain several important beam instability problems. To solve the instabilities caused by high beam intensities calls for more complete solution and the extension to the formalism as well. For the noncoupled perturbation problem without frequency spread, two different eigenvalue type solutions were proposed. The formalism is also modified to solve the azimuthal mode coupling instability and the beam instability with synchrotron frequency spread, where both dispersion type and eigenvalue type solutions were proposed. In this article, a brief review of longitudinal perturbation formalism based on Sacherer integral equation is given. Some perspectives will also be discussed. DOE

CHARM PHOTOPRODUCTION DYNAMICS
Peter H. Garbincius Mar. 1995 13 p Presented at the LAFEX International School in High Energy Physics, Rio de Janeiro, Brazil, 20 Feb. 1995
(Contract DE-AC02-76CH-03000)
(DE95-009106; FNAL/C-95/041; CONF-950285-1) Avail: CASI HC A03/MF A01

Photoproduction of open charm is reviewed, both as a tool for studying the properties of charm particles such as spectroscopy, decays, and lifetimes, and as a testing ground for theoretical calculations of production dynamics. Many characteristics of charm photoproduction are described in terms of the leading order (LO) (alpha(sub EM))(alpha(sub S)) Photon-Gluon Fusion (PGF) model. The next-to-leading order (NLO) corrections of strength (alpha(sub EM))(alpha(sub S)(sup 2)) due to radiation of additional gluons are then added. The sensitivities of the NLO calculations on the mass of the charm quark, m(sub c), and on the choice of the gluon structure function of the nucleon are illustrated for the energy dependence of the cross section for charm photoproduction. These are compared with fixed target data and new HERA data. The single charm particle inclusive distributions in x(sub f) and p(sup 2)(perpendicular), along with sigma(gamma N yields c(anti-c)X) give good estimates of m(sub c) and n(sub g), the shape parameter for the gluon distribution within the nucleon. As in hadroproduction, some disagreements between prediction and observation begin to appear in trying to simultaneously match the distributions in both p(sup 2)(perpendicular) for single charm particles and in the Delta Phi acoplanarity angle between pairs of charm particles. These can be partially remedied by modifying the fragmentation function for c-quarks into charm particles, and by including extra k(sup2)(perpendicular) transverse smearing of the gluon distributions within the target nucleon. Initial studies of the relative production between charm particles and anti-particles indicate disagreement with the predictions of the independent string fragmentation model. DOE

SPIN PUZZLE IN NUCLEON
R. Ramachandran Sep. 1994 12 p
(DE95-613654; IC-94/261) Avail: CASI HC A03/MF A01 (US Sales Only)

The object of this brief review is to reconcile different points of view on how the spin of proton is made up from its constituents. On the basis of naive quark model with flavor symmetry such as isospin or SU(3) one finds a static description. On the contrary the local SU(3) colour symmetry gives a dynamical view. Both these views are contrasted and the role of U(1) axial anomaly and the ambiguity for the measurable spin content is discussed. DOE

ELECTROWEAK BARYOGENESIS
D. B. Kaplan 1995 11 p
(Contract DE-FG06-90ER-40561)
(DE95-012169; DOE/ER-40561/189) Avail: CASI HC A03/MF A01

Baryogenesis during the electroweak phase transition is a plausible scenario for the origin of matter in the Universe. Furthermore, it has the advantage over other scenarios in that one can imagine the much of the physics involved may be experimentally probed before long. In the past year a consensus has developed about the major mechanisms involved. In this talk I give an overview of the standard picture, and discuss briefly the advances over the past year that suggest electroweak baryogenesis is a robust phenomenon. DOE

BEAM-BEAM EFFECTS
A. Zholents Dec. 1994 10 p Presented at the Workshop on Nonlinear Dynamics in Particle Accelerators: Theory and Experiments, Arcidosso, Italy, 4-9 Sep. 1994 Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DE-AC03-76SF-00098)
(DE95-008443; LBL-36572; CBP-131; CONF-9409258-7) Avail: CASI HC A02

The term beam-beam effects is usually used to designate different phenomena associated with interactions of counter-rotating beams in storage rings. Typically, the authors speak about beam-beam effects when such interactions lead to an increase of the beam core size or to a reduction of the beam lifetime or to a growth of particle's population in the beam halo and a correspondent increase of the background. Although observations of beam-beam effects are very similar in most storage rings, it is very likely that every particular case is largely unique and machine-dependent. This constitutes one of the problems in studying the beam-beam effects, because the experimental results are often obtained without characterizing a machine at the time of the experiment. Such machine parameters as a dynamic aperture, tune dependencies on amplitude of particle oscillations and energy, betatron phase advance between the interaction points and some others are not well known, thus making later analysis uncertain. The authors begin their discussion with demonstrations that beam-beam effects are closely related to non linear resonances. Then, they will show that a non linearity of the space charge field is responsible for the excitation of these resonances. After that, they will consider how beam-beam effects could be intensified by machine imperfections. Then, they will discuss a leading mechanism for the formation of the beam halo and will describe a new technique for beam tails and lifetime simulations. They will finish with a brief discussion of the coherent beam-beam effects. DOE

The experimental and theoretical high energy physics programs at Texas A and M University have continued their ambitious research activities over the past year. On the experimental side, the authors have continued their participation in two major operating experiments, CDF and MACRO, and each of these programs have attained significant milestones during this period. Especially noteworthy is the CDF Collaborations paper on the 'evidence' for the top quark and MACRO's completion of the construction of the 'Attico.' In CDF, the Texas A and M group continues to play a leading role in the plans for upgrading the silicon vertex detector, as well as supporting the ongoing running of this experiment during its current data taking run. In addition, the group has focused its analysis efforts on studies of trilepton events as well as searching for supersymmetric particles. In MACRO, the authors have continued their work on the development of the final version of the waveform digitizing system. Within the past month the final production circuits have been assembled and they are currently testing these units at Texas A and M. The authors plan to complete this testing and commission the waveform digitizing system on the MACRO detector by the end of 1994. The theoretical high energy physics program has also continued to develop during the past funding cycle. Investigators have continued the study of the successful string-derived model that unifies all known interactions: flipped SU(5), which is the leading candidate for a theory of everything. Work has continued on generalizations of the symmetries of string theory, known as W algebras. DOE

MAY MULTIPLE INELASTIC SCATTERING IN CBED PATTERNS BE REMOVED ANALYTICALLY
R. Hoeier, K. Marthinsen, and R. Holmestad 21 Apr. 1994 4 p Prepared in cooperation with Trondheim Univ., Norway
(PB95-196333; STF19-S94001) Avail: Issuing Activity (National Technical Information Service (NTIS))

Quantitative convergent beam electron diffraction (CBED) has developed considerably over the last years. One can today determine individual structure factors with high accuracy and some charge density maps with focus on bonding effects have recently been published. This does not mean that the method in its present stage of development is fully established and can be routinely applied. Experimentally the method is both demanding and expensive as both energy filtering for partly removing the background and digital recording is on its way in. The mathematics is based on multiparameter least square fitting between theory and experiment. Here central problems, as for example the number of beams to be included and how to include the Debye-Waller factors even in simple, isotropic, monoatomic specimens, is still disputed. In the present studies, the focus is on the general background formed by inelastic scattering. We shall especially discuss multiple plasmon scattering and the possibility of numerical filtering of the plasmon contributions in the observed CBED intensity.

BACKGROUNDS AND DETECTOR PERFORMANCE AT A 2 X 2 TeV (MU)(+)(MU)(-) COLLIDER
G. William Foster and Nikolai V. Mokhov Mar. 1995 13 p Presented at the 2nd Workshop on Physics Potential and Development of Mu(+) Mu(-) Colliders, Sausalito, CA, 17-19 Nov. 1994
(Contract DE-AC02-76CH-03000)
(DE95-009107; FNAL/C-95/037; CONF-9411210-1) Avail: CASI HC A03/MF A01

The rich physics potential of a high-energy high-luminosity (mu)(+)(mu)(-) collider and the surprising feasibility of a design attract the attention of many people these days. A few issues define the practicality of such a project, with the enormous particle background levels in a detector due to unavoidable reasons holding first place. In contrast to hadron colliders where particle backgrounds come both from interaction point (IP) and accelerator, almost all the backgrounds in the muon collider detectors arise in the machine. The decay length for 2 TeV muons is (lambda)(sub D)(sup -1) approximately 10(exp -7)/m. With 10(exp 12) muons in a bunch one has 10(exp 5) decays per meter in a single pass through an interaction region, and 10(exp 8) decays per meter per 12 msec store. This paper examines two major classes of detector backgrounds presented in the muon collider: beam halo backgrounds, and the 'direct' backgrounds from electrons from (mu)(yields)e(nu)(bar (nu)) decay occurring in the beam channel. The authors describe the nature of both of these backgrounds, provide results of first realistic calculations for both sources and discuss their effects on plausible detectors. Various shielding and collimation geometries have been simulated, and their efficacy and the nature of the surviving background discussed. DOE

REFLECTION AND DIFFRACTION OF ATOMIC DE BROGLIE WAVES BY EVANESCENT LASER WAVES. BARE-STATE METHOD
Xiaoping Feng, N. S. Witte, C. L. Hollenberg, and G. Opat 1994 17 p
(DE95-616458; UM-P-94/17) Avail: CASI HC A03/MF A01 (US Sales Only)

Two methods are presented for the investigation of the reflection and diffraction of atoms by gratings formed either by standing or travelling evanescent laser waves. Both methods use the bare-state rather than dressed-state picture. One method is based on the Born series, whereas the other is based on the Laplace transformation of the coupled differential equations. The two methods yield the same theoretical expressions for the reflected and diffracted atomic waves in the whole space including the interaction and the asymptotic regions. DOE

IMPLEMENTATION OF THE SHOWER MAX ELECTRON TRIGGER AT CDF
K. Byrum, J. Dawson, L. Nodulman, A. B. Wicklund, D. Amidei, K. Burkett, D. Gerdes, C. Miao, and D. Wolinski Jun. 1994 18 p Presented at the 27th International Conference on High Energy Physics, Glasgow, Scotland, 20-27 Jul.1994
(Contract DE-AC02-76CH-03000)
(DE95-006684; FNAL/C-94/150-E; CONF-940722-44) Avail: CASI HC A03/MF A01

The authors have built and installed new electronics which brings the central shower max detector into the CDF Level-2 trigger. By matching a stiff track from the central fast track processor to an associated shower max cluster, this trigger improvement reduces the electron Level-2 cross section by approximately 50% while retaining greater than 85% of real electrons and allows the authors to lower their electron trigger threshold.

Pulse power technology has been supported and developed in the U.S. over the last 4 decades by the Department of Energy in support of the

nuclear weapons and energy research programs, and by the Department of Defense for advanced weapons technology and nuclear weapons effects research. Recent changes in the priorities and orientation of these programs have made the planning and conduct of basic science experiments possible using facilities heretofore completely dedicated to a more narrow range of experimental activities. The purpose of the 'Spring Workshop on Basic Science Using Pulsed Power' is to introduce high performance pulse power technology to a broader cross-section of the community and to discuss, with the community, experiments which can be planned now using currently operating systems and to begin to consider experiments which can be planned for the systems of the future. MEASUREMENT OF THE EFFECT OF COLLIMATOR GENERATED WAKEFIELDS ON THE BEAMS IN THE SLC
K. L. F. Bane, C. Adolphsen, F. J. Decker, P. Emma, P. Krejcik, and F. Zimmermann 1995 3 p Presented at the Particle Accelerator Conference, Dallas, TX, 1-5 May 1995
(Contract DE-AC03-76SF-00515)
(DE95-012101; SU-SLAC-PUB-95-6865; CONF-950512-30) Avail: CASI HC A01/MF A01

Collimators with adjustable jaws are used in the SLC linac, arcs, and final focus to eliminate the tails of the beams that produce backgrounds in the SLD detectors. However, if the beams are not centered within the jaws of the collimators, transverse wakefields are generated which act to increase the beam emittances. The sensitivity to the beam offset is largest in the vertical collimators in the linac where the small beam sizes (less than 100 micro m) require that the gap between the jaws be reduced to about a millimeter for effective background reduction. To study the wakefield effect of the collimators, measurements of the induced mean angular kick were made as function of the beam offset in one of the SLC collimators. The authors are interested in both the linear (dipole) behavior near the axis of the collimator and the non-linear behavior near the jaws of the collimator. In this paper they present the results together with a comparison to theoretical predictions. Besides helping them to quantify the effect of the collimators in the SLC these results are also useful in understanding their effect in future linear colliders, in which collimators will also be important components. THE COUPLING IMPEDANCE OF A TOROIDAL BEAM PIPE WITH CIRCULAR CROSS SECTION
H. Hahn 1995 3 p Presented at the Particle Accelerator Conference, Dallas, TX, 1-5 May 1995
(Contract DE-AC02-76CH-00016)
(DE95-010442; BNL-61223; CONF-950512-9) Avail: CASI HC A01/MF A01

In this paper, the topic of coupling impedances and beam-induced forces in a toroidal beam pipe is revisited. In straight, smooth accelerator beam pipe configurations, the space charge forces on a charged test particle due to beam-induced electric and magnetic fields are subject to a near perfect cancellation in the ultra-relativistic limit. It is well known that in toroidal geometries the cancellation is imperfect, resulting in residual, 'energy-independent' longitudinal and transverse forces which can impact the accelerator performance. Whereas the present-day designs of high-energy hadron accelerators/colliders are based on beam pipes with circular cross section, essentially all theoretical studies assume rectangular geometries, the notable exception being the report by Zotter. The expressions here presented are intended to amend this deficiency. An analytic expression for the non-resonant longitudinal coupling impedance in a toroidal beam pipe with circular cross section is derived using a perturbation treatment carried out in a local orthogonal coordinate system. A STUDY OF ION TRAPPING AND INSTABILITY IN THE FERMILAB ANTIPROTON ACCUMULATOR Ph.D. Thesis
Ping Zhou 1993 149 p
Avail: Univ. Microfilms Order No. DA9415841

In particle accelerators, electron-ion pairs are constantly created by beam particle collision with residual gas molecules. The beam may trap opposite charged ions. If uncorrected, trapped ions may cause beam instability and beam loss, and limit accelerator performance. The ion trapping problem especially related to the Fermi-lab antiproton accumulator, where the beam is unbunched and negatively charged, is studied here. The old clearing electrode system is found to be insufficient for complete ion clearing. The proposed upgrade to the clearing electrode system greatly improved the performance of the machine. Incomplete ion clearing is found to directly contribute to beam coherent oscillation and therefore beam coherent instability. A model has been developed which includes the effect of trapped ions in the normal beam coherent instability treatment with conventional machine impedance. It is found that the effect of trapped ions on the beam coherent instability can be described as a form of impedance. Together with physical arguments, it can be used to explain some of the behavior of the beam coherent instability observed in the accumulator. An Ion Detector and Energy Analyzer system was developed which provides the ability to directly monitor the ions coming out of the beam and measure their energy spectrum. Ions are observed to interact with explosive coherent oscillations that lead to emittance blowups. The ion energy distribution extends to much higher energy than expected. The flux of ions escaping with cool, stable beam is also higher than previously thought. The main subject of the study is related only to ion trapping in a DC beam, although a few issues are illustrated with a case study on the Tevatron with separated orbits of proton and antiproton beams. Dissert. Abstr.

(DE95-010265; UCRL-JC-118363; CONF-940922-7) Avail: CASI HC A02/MF A01

A model based on detailed calculations of the electron-impact excitation of n = 2 electrons in the Li- to Ne-like uranium ions was developed to interpret and explain measurements on EBIT (Electron Beam Ion Trap). While only considering the direct excitation process provided a good model for the electric dipole (El) transitions, it was necessary for the magnetic dipole (Ml) spectrum to include various additional excitation processes in the model. In particular, the model was expanded to include electron-impact excitation of n = 3 levels followed by radiative cascades. Moreover, excitation by the ionization of 2s(sub 1/2), 2p(sub 1/2), and 2p(sub 3/2) electrons and by radiative capture of beam electrons into excited levels was added. The new model demonstrates that the dipole-forbidden lines are almost exclusively produced by indirect excitation processes. DOE

THE HYLIFE-2 INERTIAL FUSION ENERGY POWER PLANT CONCEPT AND IMPLICATIONS FOR IFE
Ralph W. Moir Nov. 1994 9 p Presented at the Meeting of the Division of Plasma Physics of the American Physical Society, Minneapolis, MN, 7-11 Nov. 1994
(Contract W-7405-eng-48)
(DE95-010561; UCRL-JC-119070; CONF-941101-10) Avail: CASI HC A02/MF A01

HYLIFE-II is based on nonflammable, renewable-liquid-wall fusion target chambers formed with Li2BeF4 molten-salt jets, a heavy-ion driver, and single-sided illumination of indirect-drive targets. Building fusion chambers from existing materials with life-of-plant structural walls behind the liquid walls, while still meeting non-nuclear grade construction and low-level waste requirements, has profound implications for IFE development. Fluid-flow work and computational fluid dynamics predict chamber clearing adequate for 6-Hz pulse rates. Predicted electricity cost is reduced about 30% to 4.4 cents/kWh at 1 GWe. Development can be foreshortened and cost reduced by obviating expensive neutron sources to develop first-wall materials. The driver and chamber can be upgraded in stages, avoiding separate and sequential facilities. The most important features of a practical inertial fusion power plant are sufficient ignition and gain in targets; a low-cost, efficient, rep-ratable driver; and low-cost targets. DOE

RADIAL MODE EVOLUTION IN LONGITUDINAL BUNCHED BEAM INSTABILITY
S. Y. Zhang and W. T. Weng 1995 4 p Presented at the Particle Accelerator Conference, Dallas, TX, 1-5 May 1995
(Contract DE-AC02-76CH-00016)
(DE95-010895; BNL-61070; CONF-950512-40) Avail: CASI HC A01/MF A01

An indispensable aspect of the bunched beam instability mechanism is the variation of the particle distribution with respect to the beam intensity. This density variation can be shown as the evolution of radial modes. The radial modes, which are determined by the stationary particle distribution and the impedance, represent the coherence of the particle density variation governed by the Vlasov equation. Using this coherence in the beam instability analysis gives rise to not only the computational efficiency but also the physical insight into the instability mechanism. The evolution of the radial modes displays several interesting properties for the cases without and with synchrotron frequency spread. If the azimuthal mode coupling cannot be neglected, then corresponding to each coherent frequency shift there exists an extended radial mode which includes the interactions from other azimuthal modes. In this article, the radial mode evolution and the related physical implications will be discussed, which are useful for the understanding of the beam instabilities, and also useful for the beam diagnostics. KRAKEN, A NUMERICAL MODEL OF RHIC IMPEDANCES
S. Peggs and V. Mane 1995 4 p Presented at the Particle Accelerator Conference, Dallas, TX, 1-5 May 1995
(Contract DE-AC02-76CH-00016)
(DE95-011563; BNL-61166; CONF-950512-59) Avail: CASI HC A01/MF A01

The simulation code KRAKEN confirms analytical predictions of head-tail stability criteria, in the presence of momentum dependent linear coupling. It also confirms that resistive wall transverse wake fields are not a serious threat to strong head-tail stability in RHIC, at the vulnerable stage of proton injection. Equation 10, derived from the perspective of two macroparticles, potentially offers a very convenient seminumerical evaluation of the effects of arbitrary transverse wake potentials. It remains to be seen how well the two macroparticle results correlate with simulations using, say, 100 macroparticles. KRAKEN is still under rapid development. Future plans are to include resonant wakefields, multiple bunches, space charge wakefields, betatron detuning, and a connection to the detailed RHIC impedance database. DOE

SKEW CHROMATICITY IN LARGE ACCELERATORS
S. Peggs and G. F. Dell 1995 4 p Presented at the Particle Accelerator Conference, Dallas, TX, 1-5 May 1995
(Contract DE-AC02-76CH-00016)
(DE95-011564; BNL-61167; CONF-950512-60) Avail: CASI HC A01/MF A01

The 2-D 'skew chromaticity' vector k is introduced when the standard on-momentum description of linear coupling is extended to include off-momentum particles. A lattice that is well decoupled on-momentum may be badly decoupled off-momentum, inside the natural momentum spread of the beam. There are two general areas of concern: (1) the free space in the tune plane is decreased; (2) collective phenomena may be destabilized. Two strong new criteria for head-tail stability in the presence of off-momentum coupling are derived, which are consistent with experimental and operational observations at the Tevatron, and with tracking data from RHIC. DOE

NORMAL MODE TUNES FOR LINEAR COUPLED MOTION IN SIX DIMENSIONAL PHASE SPACE
G. Parzen 1995 3 p Presented at the Particle Accelerator Conference, Dallas, TX, 1-5 May 1995
(Contract DE-AC02-76CH-00016)
(DE95-011565; BNL-61168; CONF-950512-61) Avail: CASI HC A01/MF A01

The motion of a particle in 6-dimensional phase space in the presence of linear coupling can be written as the sum of 3 normal modes. A cubic equation is found for the tune of the normal modes, which allows the normal mode tunes to be computed from the 6 x 6 one turn transfer matrix. This result is similar to the quadratic equation found for the normal mode tunes for the motion of a particle in 4-dimensional phase space. These results are useful in tracking programs where the one turn transfer

matrix can be computed by multiplying the transfer matrices of each element of the lattice. The tunes of the 3 normal modes for motion in 6-dimensional phase space can then be found by solving the cubic equation. Explicit solutions of the cubic equation for the tune are given in terms of the elements of the 6 x 6 one turn transfer matrix. DOE

To satisfy the need of users of the synchrotron radiation at SRRC, the photon flux at the end station has to be kept at a constant with minimum fluctuation. The sources of flux variation attributable to the electron beam in the storage ring have been carefully studied and the effects on the flux have been investigated. The sources include floor vibration, power supply ripples, cooling water, ion trapping and transverse instability. The cures attempted or in plan include removal of vibration sources, reduction of ripple, local orbit feedback, ion cleaning and damping. A special diagnostic beamline has been constructed and used solely for accelerator studies and improvements. DOE

DESIGN STUDY OF PROTOTYPE ACCELERATOR AND MeV TEST FACILITY FOR DEMONSTRATION OF 1 MeV, 1 A NEGATIVE ION BEAM PRODUCTION
Takashi Inoue, Masaya Hanada, Kenji Miyamoto, Yoshihiro Ohara, Yoshikazu Okumura, Kazuhiro Watanabe (Japan Atomic Energy Research Inst., Ibaraki, Japan.), and Shuichi Maeno (Nissin Electric Mfg. Co. Ltd., Tokyo, Tokyo, Japan.) Aug. 1994 95 p
(DE95-737208; JAERI-Tech-94-007) Avail: CASI HC A05/MF A01

In fusion reactors such as ITER, a neutral beam injector of MeV class beam energy and several tens MW class power is required as one of candidates of heating and current drive systems. However, the beam energy of existing high power accelerators are one order of magnitude lower than the required value. In order to realize a neutral beam injector for the fusion reactor, 'Proof-of-Principle' of such high energy acceleration is a critical issue at a reactor relevant beam current and pulse length. An accelerator and an accelerator facility which are necessary to demonstrate the Proof-of-Principle acceleration of negative ion beams up to 1 MeV, have been designed in the present study. The accelerator is composed of a cesium-volume type ion source and a multi-stage electrostatic acceleration system 'Prototype Accelerator'. A negative hydrogen ion beam with the current of about one ampere (1 A) can be accelerated up to 1 MeV at a low operating pressure. Two types of acceleration systems, a multi-multi type and a multi-single type, have been studied. The test facility has sufficient capability for the test of the Prototype Accelerator (MeV Test Facility). The dc high voltage generator for negative ion acceleration is a Cockcroft-Walton type and capable of delivering 1 A at 1 MV (=1 MW) for 60 s. High voltage components including Prototype Accelerator are installed in a SF(sub 6) vessel pressurized at 6 kg/cm(exp 2) to overcome high voltage gradients. The vessel and the beamline are installed in a X-ray shield. DOE

TUNE MODULATION DUE TO SYNCHROTRON OSCILLATIONS AND CHROMATICITY, AND THE DYNAMIC APERTURE
G. Parzen 1995 3 p Presented at the Particle Accelerator Conference, Dallas, TX, 1-5 May 1995
(Contract DE-AC02-76CH-00016)
(DE95-011566; BNL-61169; CONF-950512-62) Avail: CASI HC A01/MF A01

A tracking study was done of the effects of a tune modulations, due to synchrotron oscillations and the tune dependence on momentum (chromaticity), on the dynamic aperture. The studies were done using several RHIC lattices and tracking runs of about 1 x 10(exp 6) turns. The dynamic aperture was found to decrease roughly linearly with the amplitude of the tune modulation. Lower order nonlinear resonances, like the 1/3 and 1/4 resonance, are not crossed because of the tune modulation. Three different cases were studied, corresponding to RHIC lattices with different beta*, and with different synchrotron oscillation amplitudes. In each case, the tune modulation amplitude was varied by changing the chromaticity. In each case, roughly the same result was found. The result found here for the effect of a tune modulation due to chromaticity may be compared with the result found for the effect of a tune modulation due to a gradient ripple in the quadrupoles. The effect of a tune modulation due to a gradient ripple appears to be about four times stronger than the effect of a tune modulation due to chromaticity and synchrotron oscillations. DOE

RFQ-DTL MATCHING SOLUTIONS FOR DIFFERENT REQUIREMENTS
D. Raparia 1995 4 p Presented at the Particle Accelerator Conference, Dallas, TX, 1-5 May 1995
(Contract DE-AC02-76CH-00016)
(DE95-010897; BNL-61181; CONF-950512-42) Avail: CASI HC A01/MF A01

The Radio-Frequency Quadrupole (RFQ) has a FODO lattice and Drift-Tube-Linacs (DTL) in general also have FODO lattices. Therefore the natural solution for the matching between these is a FODO lattice. For matching in all three planes one then needs sixteen degrees of freedom. However different requirements, depending on the applications, may change this solution. For example, in the production environment (like medical and industrial applications), one needs fixed current and fixed beam quality. On the other hand, in the research environment one not only needs all degrees of freedom, but may also want the chopping of beam pulse length. This paper discusses matching solutions for these different requirements. DOE

(AD-D017353; US-Patent-5,371,814; US-Patent-Appl-SN-151396; US-Patent-Class-385-25) Avail: US Patent and Trademark Office

A passive multi-channel optical fiber rotary joint couples optical fiber communication channels via axially bilaterally symmetrically disposed lens housings, or array pieces, for receiving miniature-collimation-lenses to one and the other sides of an image-derotation-prism and prism-rotational-drive-subassembly including an image derotation prism which rotates at a predetermined ratio of the relative rotation of the array pieces. This establishes transverse pseudo-planar rotary interfaces respectively between the one and another array piece and the confronting sides of the prism-and-prism- drive-subassembly. Each channel, at the axially outward side of each of one and the other array pieces, includes a fiber and lens junction in which the fiber is attached to the axially outward side of the collimation lens at a predetermined axially bilaterally symmetrical position chosen for maximum coupling of signal power through the joint, and individual lateral positions relative to the lens chosen to provide coupling with a path of beam propagation perpendicular to the rotary interface at the other side of the collimation lens. Each array piece forms a precision tolerance locality of axial engagement with the confronting side of the prism-and -prism -drive-subassembly, which in turn defines the respective rotary interfaces. PASSIVE RANGE MEASUREMENT SYSTEM Patent
Walter L. Harriman, inventor (to Navy) 22 Nov. 1994 6 p Filed 27 Jul. 1992
(AD-D017344; US-Patent-5,367,333; US-Patent-Appl-SN-921863; US-Patent-Class-348-117) Avail: US Patent and Trademark Office

A method and apparatus provides instantaneous passive range measurement onboard an aircraft for determining the range between the aircraft and a target. The target may either be stationary and on the Earth's surface, or a slower moving vehicle. Calculation of the desired range is achieved using the formula: Range = Sin a/Sin b V; where a = angle from aircraft heading to target, b = turning rate; and V = ground velocity. The apparatus consists of an automatic video tracker, a video camera, and a servo controlled aiming platform. A resolver on the aiming platform is utilized to determine the angle from the aircraft axis to the target. This angle is added to the aircraft drift angle to determine the total angle from the aircraft heading to the target. The video tracker is utilized to determine the turning rate of the aiming platform. Using the difference in contrast between the target and the background of the video scene, the tracker provides error signals (azimuth and elevation) to keep the aiming platform pointed at the target. The azimuth error signal determines the turning rate of the aiming platform. The total turning rate is determined by adding the aiming platform turning rate to the aircraft turning rate obtained from the aircraft inertial system. DTIC

OPTICAL FIBER PRESSURE SENSOR FOR LIQUID LEVEL MONITORING Patent
Frank W. Cuomo, inventor (to Navy) 6 Dec. 1994 7 p Filed 22 Feb. 1994
(AD-D017346; US-Patent-5,371,720; US-Patent-Appl-SN-199868; US-Patent-Class-367-149) Avail: US Patent and Trademark Office

An apparatus for continuously monitoring changes in a liquid level in accordance with a differential pressure is provided. A sensor body immersed in the liquid supports two thin-filmed metallic diaphragms that are independently axially responsive to pressure of the liquid. Each diaphragm has a different modulus of elasticity. Two fiber optic pressure sensors are mounted within an air space encased by the sensor body in combination with the two diaphragms. Each of the two fiber optic pressure sensors detects the axial response of one of the two diaphragms. The displacement difference between the two diaphragms is an indication of differential pressure related to the liquid level. DTIC

ULTRASONIC TWO PROBE SYSTEM FOR LOCATING AND SIZING Patent
Errol E. Wallingford, inventor (to Navy) and Robert DeNale, inventor (to Navy) 24 Jan. 1995 21 p Filed 26 Oct. 1992
(AD-D017438; US-Patent-5,383,366; US-Patent-Appl-SN-966825; US-Patent-Class-73-602) Avail: US Patent and Trademark Office

A two probe time-of-flight system has a transmit probe emitting a diverging beam into a test material at a certain beam-center angle, and a receive probe with its main beam extending into the test material at that same angle, with the two probes being arranged symmetrical about a centerline normal to the test face. The transmit probe generates a pulse wherein a portion of the pulse reflects at the incident angle back to the receive probe, which detects the reflections and marks the reception time as a reference. A sampling unit captures subsequent echo energy returning from a region within the test material. The sampled energy above a given threshold is processed to identify the sample times relative to the marked reference time. The identified sample times are used to determine the depth that the echo energy originated from. Consecutive identified samples in the depth direction are used to detect the height of a flaw within the test material. By scanning the probes in an x-y pattern, the planar dimensions of the flaw are determinad. DTIC

FIBER OPTIC INTERFEROMETRIC ELECTRIC FIELD AND VOLTAGE SENSOR UTILIZING AND ELECTROSTRICTIVE TRANSDUCER Patent
Sandeep T. Vohra, inventor (to Navy), Frank Bucholtz, inventor (to Navy), and Alan D. Kersey, inventor (to Navy) 7 Mar. 1995 11 p Filed 27 Aug. 1992
(AD-D017433; US-Patent-5,396,166; US-Patent-Appl-SN-936986; US-Patent-Class-324-96) Avail: US Patent and Trademark Office

A fiber optic interferometer sensor system utilizing a fiber optic interferometer with an elecrostrictive transducer bonded to one of first and second optical fiber arms of the interferometer for obtaining excellent low frequency voltage detectors and electric field sensors. The non-linear characteristics of the electrostrictive transducer allows for detecting low frequency or dc signals at sidebands of a high frequency carrier, resolving extremely small voltages at low frequencies, or sensing low frequency electric fields. Examples of electrostrictive material include Ba:PZT, PLZT, PMN+PT, and other doped ferroelectric relaxors. DTIC

LOG-POLAR BINOCULAR VISION SYSTEM Final Report
Carl F. R. Weinman Dec. 1994 91 p
(Contract NAS9-18637; SBIR-09.05-8988A)
(NASA-CR-188375; NAS 1.26:188375) Avail: CASI HC A05/MF A01

The objective of this research is to develop and implement new techniques for real time stereo vision for robots, based on active binocular vision using log-polar pixel layout and novel Gabor filter processing. The active vision platform is a high performance servo controlled binocular mount designed and built under this project. It emulates the articulation and speed of the human eye-head system. High performance processing is based on local Gabor filters embedded in global log-polar image plane geometry. This choice of geometry and processing, developed from first principles, closely resembles the structure and function of the primate retina and visual cortex. Binocular stereo vision is demonstrated on an autonomous mobile robot equipped with active binocular vision. Using real time visual guidance, the robot can perceive 3D environments and maneuver according to its perceptions. The new approach to vision relieves the computational bottlenecks of conventional machine vision, and provides robust sensory information which is well suited to real time maneuvering and manipulation. Space applications include eye-hand coordination for manipulators and high precision passive sensing for docking. Commercial applications include 3D visual telepresence for remote inspection and repair in nuclear and hazardous environments, visual autopilot for autonomous vehicles, and real time vision for robot arms in unstructured manipulation environments. The latter includes semi-autonomous aides for the elderly and handicapped. Author

CALCULATED COUPLING EFFICIENCY BETWEEN AN ELLIPTICAL-CORE OPTICAL FIBER AND AN OPTICAL WAVEGUIDE OVER TEMPERATURE

Margaret L. Tuma, Andreas Weisshaar, Jian Li, and Glenn Beheim Jul. 1995 14 p Presented at the International Symposium on Optical Science, Engineering, and Instrumentation, San Diego, CA, 8-14 Jul. 1995; Sponsored by Society of Photo-Optical Instrumentation Engineers

(RTOP 505-62-50)

(NASA-TM-107005; E-9787; NAS 1.15:107005) Avail: CASI HC A03/MF A01

To determine the feasibility of coupling the output of a single-mode optical fiber into a single-mode rib waveguide in a temperature varying environment, a theoretical calculation of the coupling efficiency between the two was investigated. Due to the complex geometry of the rib guide, there is no analytical solution to the wave equation for the guided modes, thus, approximation and/or numerical techniques must be utilized to determine the field patterns of the guide. In this study, three solution methods were used for both the fiber and guide fields; the effective-index method (EIM), Marcatili's approximation, and a Fourier method. These methods were utilized independently to calculate the electric field profile of each component at two temperatures, 20 C and 300 C, representing a nominal and high temperature. Using the electric field profile calculated from each method, the theoretical coupling efficiency between an elliptical-core optical fiber and a rib waveguide was calculated using the overlap integral and the results were compared. It was determined that a high coupling efficiency can be achieved when the two components are aligned. The coupling efficiency was more sensitive to alignment offsets in the y direction than the x, due to the elliptical modal field profile of both components. Changes in the coupling efficiency over temperature were found to be minimal. Author

REAL TIME CORRELATING OPERATION ON DIFFUSE OBJECTS

Wang Tianji, Yang Shining, Li Y. Tang, and Zhang S. Chao 1995 11 p

(AD-A293220; NAIC-ID(RS)T-0373-94) Avail: CASI HC A03/MF A01

Real time correlating operations on diffuse objects are an expansion and outgrowth on 2-D transparent objects. A real time optical correlator with two transparent pieces is made using photorefractive crystal Bi12SiO20 (BSO) and noncrystal membrane As2S3 as recording media (1-3). Due to the absence of wave filter that is associated with the typical real time optical correlator, this enables the two transparent pieces to have real time correlation and have potential applications in feature recognition. However, test object and reference object have to be in transparent state. In reality, most objects that need to be recognized tend to be diffuse objects, or they have to rely on natural light (incoherent light) for lightening. The realization of real time correlation on two diffuse objects or incoherent light images remains to be fulfilled. DTIC

A STUDY OF END-FIRE COUPLING OF SINGLE-MODE FIBER TO TI: LINBO3-SINGLE-MODE PLANAR WAVEGUIDE

Zhao Qinghua, Gai Junjie, Fan Junqing, and Xu Chengjie 6 Mar. 1995 15 p Transl. into ENGLISH from Faguang Xue Bao, China, v. 12, no. 3, Sep. 1991 p 1

(AD-A293249; NAIC-ID(RS)T-0420-94) Avail: CASI HC A03/MF A01

Most of the widely studied modulator, switch, spectrum analyzer in integrated optics use Ti-diffused LiNbO3 waveguides. Improving single-mode fiber to waveguide coupling efficiency and realizing the fixed connection between them is one of the most fundamental problems. In our experiment, a direct coupling of single-mode fiber to waveguide is used. The major limiting factor in coupling is the uneven profile of mode field of the single-mode fiber and waveguide, and the accuracy in transverse realignment between them. By using single-mode fiber microlens, the transverse field can be evenly adjusted. By using 2-D etched silicone V groove as a micromodulator, the alignment accuracy between them can be fine tuned. The maximum value for the coupling is measured at 64%, and the coupling has also been found very stable. DTIC

LASER-INDUCED HOLOGRAPHIC SURFACE RELIEF GRATINGS ON NONLINEAR OPTICAL POLYMER FILMS Technical Report, 1 Oct. 1994 - 30 Sep. 1995

D. Y. Kim, L. Li, J. Kumar, and S. K. Tripathy 30 Mar. 1995 13 p

(Contract N00014-90-J-1148)

(AD-A293169; TR-95-02) Avail: CASI HC A03/MF A01

We report observation of holographic surface relief gratings with relatively large amplitude on a second order nonlinear optical polymeric material. Surface relief gratings on these polymer films were created upon exposure to polarized Ar+ laser beams at 488 nm without any subsequent processing steps. The surface structure of the relief gratings was investigated by atomic force microscopy. The depth of the surface relief in a typical case was 140 nm which is approximately 25% of the original film thickness. Diffraction efficiency of gold-coated gratings were investigated as a function of wavelength and capability of recording orthogonal gratings on the same film was demonstrated. DTIC

(Contract F49620-93-1-0559)

(AD-A293079; AFOSR-95-0220TR) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The Wide Field Spectral Imager (WISPI) project was designed to provide a new capability for measuring the spectrum of the sky across fields of view much larger than the full moon. The instrument which we proposed would use a high speed optical system to form an image on the entrance slit of a matching stigmatic spectrometer, which would then disperse a spectrum of a strip of the sky onto a sensitive two-dimensional detector. A separate imaging system would be used for pointing and tracking, and both instruments would be on a computer controlled mounting that would permit automated data acquisition. Data from the instrument could be acquired remotely and then stored and analyzed on a high speed workstation. DTIC

PL/GPO field programs, CIRRIS-IA, EXCEDE III, FISTA and others have collected interferometer data i.e., interferograms, which were Fourier transformed to recover spectral information. Specific analysis has been performed to ascertain fundamental properties regarding the nature of the earth/atmosphere emissions. For the CIRRIS-1A nadir viewing interferometer data, fundamental relations regarding resolution limitations imposed by the finite character of the data are presented. Chromatic and achromatic sources are considered with conclusions on increasing spatial resolution. An extensive documentation on the earth/atmosphere ultraviolet radiation backgrounds is provided. Transformed EXCEDE III interferograms yielding high resolution spectra of electron (18 amp, 2.5 keV) irradiated air over 85 to 115 km are presented. The emission characteristics of many species are reveled including NO(+) (Delta v =1) with over 40 vibration-rotation lines isolated. Energy efficiency of NO(+) (Delta v= 1) photon production is derived. A computer model of electron impacting air was generated to follow radiation history of NO+. Detailed reaction rates have been derived for the nacient distribution of N(+) + O2 yields NO(+)(v). DTIC

A process for making an optical reflection grating in a glass fiber includes exposing all unjacketed optic fiber to a single writing pulse from a pair of interfering light beams that form an interference pattern in the fiber. A novel optical fiber has at least one optical grating with a preselected Bragg spacing in at least one region of the fiber, with a periodic modulation in its index of refraction, with high thermal stability and narrow linewidth. A process for making an array of optical reflection gratings in a glass fiber includes exposing a fiber to a plurality of writing pulse from a pair of interfering light beams that form an interference pattern in the fiber, where these pulses are applied sequentially as the fiber is drawn from a draw furnace. A novel optical fiber has a plurality of unspliced gratings with high thermal stability and narrow linewidth. DTIC

NUMERICAL STUDIES OF NONLINEAR OPTICAL PULSE PROPAGATION Ph.D. Thesis
Cheryl Vaught Hile 1993 100 p
Avail: Univ. Microfilms Order No. DA9415740

A one-dimensional mathematical model and numerical solution of Maxwell's equations describing the propagation of soliton-like pulses in nonlinear dispersive optical media is presented. The model includes linear dispersion, expressed in the time-domain, and a Kerr nonlinearity. The model is written in a coordinate system moving with the group velocity of the pulse, which allows significant reduction of the size of the computational grid. When the electromagnetic fields are assumed to be circularly polarized, an asymptotic analysis of Maxwell's equations is used to reduce them to the nonlinear Schrodinger (NLS) equation. This reduction provides approximate initial conditions for Maxwell's equations which generate soliton-like pulse solutions. These solutions are then compared to corresponding solutions of the NLS equation. Several specific cases of this comparison are presented and show good agreement. When the electromagnetic fields are assumed to be linearly polarized, the propagation of 'daughter' pulses, small amplitude pulses which propagate at three times the frequency of the soliton pulse, are observed. These daughter pulses are found to be the direct result of third harmonics generated by the soliton. Initial conditions which include both waves propagating at the same frequency as the soliton pulse and waves propagating at three times the frequency of the soliton pulse are derived. These initial conditions are used to solve the linearly polarized equations and result in the elimination of the daughter pulses. In addition, numerical solutions of an averaged envelope equation describing pulse propagation in a nonlinear optical fiber where loss in the fiber is balanced by a chain of periodically spaced, phase-sensitive amplifiers are presented. Pulse solutions are found to be stable, even when propagating for very long distances. Comparisons are made with similar solutions describing pulse propagation in a nonlinear optical fiber with erbium-doped amplifiers and indicate that phase-sensitive amplifiers effectively attenuate linear dispersive radiation while erbium doped amplifiers do not. Dissert. Abstr.

INDUCTIVELY COUPLED IR STARING ARRAY BASED ON PHOTOFLUXONIC PIXELS Final Report, 15 Jul. 1994 - 14 Jan. 1995
Andrew D. Hibbs, Alan L. Singsaas, and Douglas A. Taussig 14 Mar. 1995 29 p
(Contract F49620-94-C-0058)
(AD-A292784; CM1198F; AFOSR-95-0241TR) Avail: CASI HC A03/MF A01

The goal of this study was to investigate the feasibility of fabricating a new type of monolithic focal plane multipixel staring array for infrared (IR) radiation detection. This sensor works by the recently postulated process of photofluxonic conversion in which an infrared photon creates a vortex-antivortex pair in a superconducting material. The novelty of the new sensor lies in the detection mechanism itself, and in the way the vortex (or antivortex) is trapped in the device allowing individual sensing

pixels to be readout without direct electrical connections. The overall objective of Phase 1 was to determine the feasibility of building an inductively coupled, non-contact staring array based on the new photofluxonic detection elements. To this end, we have performed a series of experiments on a single array element, a 2 mm diameter loop of YBa2Cu307, and considered pixel requirements for constructing an array. The new system offers tremendous potential for improvement over current infrared detection devices via both the enhanced detection sensitivity and the greatly reduced system complexity. DTIC

NONLINEAR ORGANIZED MATERIALS FOR OPTICAL DEVICES Final Report
G. I. Stegeman 1995 15 p
(AF Proj. 2305)
(AD-A292809; AFOSR-95-0167TR) Avail: CASI HC A03/MF A01

Although polymers have been under development for nonlinear optics applications for about two decades, it is only in the last 5-7 years that serious efforts have been made towards device applications. Their unique properties in terms of electron conjugation and efficient charge transfer have led to very large nonlinearities. However, the challenges to using these materials are very different from the more standard nonlinear materials, for example semiconductors, and these challenges have to be overcome before organics will truly be used in devices. This research program dealt with supplying some of the necessary knowledge base and developing new device concepts, for both second and third order nonlinear optics in polymers. DTIC

PHOTOREFRACTIVE NONLINEAR OPTICS Final Report
Mark Cronin-Golomb 2 Mar. 1995 24 p
(Contract DAAL03-91-G-0243)
(AD-A292913; ARO-28526.16-PH) Avail: CASI HC A03/MF A01

This research program resulted in the development of several new photorefractive devices, and an increase in basic understanding of photorefractive nonlinear interactions. We developed an interferometric phase conjugating ellipsometer which also led to a new highly accurate class of interferometer applicable to polarimetry and distance measurement. The effectiveness of photorefractive beam cleanup was investigated, and found to be most useful for highly aberrated beams. We investigated the feasibility of efficient self aligning coupling of multiple beams simultaneously into a single single mode fiber. This has applications to fiber optic communications. We studied methods of broadening the spectral bandwidth of volume holographic devices by using achromatic techniques. Applications are in self-pumped phase conjugation of trains of femtosecond pulses, and high data rate transmission in optical fibers. The photorefractive beam propagation method was developed as a tool to analyze photorefractive devices and effects involving large bandwidth signals. It was also applied to model amplified photorefractive scattering (fanning) and the double phase conjugate mirror. A successful statistical model of fanning was developed and tested. We have also begun to study photorefractive waveguides, both epitaxially grown and self induced. High resolution X-ray topography was used to investigate photorefractive crystals and waveguides. A new method for nonvolatile data storage in photorefractive crystals was discovered and theoretically analyzed. DTIC

OPTICAL FREQUENCY STANDARDS: HERTZ-LEVEL WORKING STANDARDS AND THEIR ABSOLUTE FREQUENCY MEASUREMENT Final Report
Leo Hollberg and John Hall 26 Aug. 1994 6 p
(Grant AF-AFOSR-0283-91)
(AD-A293930; AFOSR-95-0332TR) Avail: CASI HC A02/MF A01

Promising optical frequency/wavelength standards in the visible based on neutral atoms and precise laser sources are studied. In particular we have developed high accuracy systems using diode-lasers with calcium atoms and also diode-pumped Yag-lasers with Iodine molecules. An actual frequency measurement of the Iodine transition at 532 nm is made with the frequency doubled Yag system. On the calcium transition at 657 nm in the red, optical Ramsey-fringes as narrow as 10 kHz have been observed with a high signal-to-noise ratio using diode lasers. High resolution multi-photon spectroscopy on laser cooled and trapped atoms (Na and Ca) have also been explored. In these pursuits, significant new diode-laser and frequency- measurement technology has been developed, including; highly stabilized diode and Yag lasers, the ability to coherently measure the frequency difference between two lasers to as high as approx. 700GHz, and the extension of the spectral coverage of diode laser sources to the blue (for laser cooling of calcium) and IR spectral regions by using nonlinear optical techniques. ACOUSTO-OPTICAL FREQUENCY SHIFTERS IN DUAL-CORE OPTICAL FIBRES Final Report, 30 Sep. 1993 - 29 Mar. 1995
T. A. Birks, P. J. Russell, D. O. Culverhouse, S. G. Farwell, and C. N. Pannell Mar. 1995 97 p
(Grant AF-AFOSR-0387-91)
(AD-A293979; EOARD-TR-95-09) Avail: CASI HC A05/MF A02

The aim of this project is the design and implementation of a practical acousto-optic frequency-shifter compatible with single-mode optical fibre. The frequency shifter was originally to be based on a special fibre with two dissimilar cores. Normally, little light couples between the cores, but in the presence of an appropriate flexural acoustic wave a large transfer of optical power, with a frequency shift, takes place. This interaction has been analyzed theoretically, a dual-core fibre frequency shifter designed, and its component parts assembled. Progress towards this initial experiment was hampered by fiber fabrication problems. In the meantime, an alternative type of frequency shifter was pursued. Here the acousto-optic interaction takes place between two modes in the narrow uniform waist of a special 'null' fused taper coupler. This has so many compelling advantages that the earlier dual-core work was put to one side. A prototype null coupler device was built and tested, and immediately satisfied some of the project's goals. The design promises to be able to satisfy the remainder also. DTIC

NONLINEAR OPTICS IN NOVEL COMPOSITE MEDIA
Nabil M. Lawandy 6 Jun. 1994 38 p
(Grant AF-AFOSR-0107-91)
(AD-A293886; AFOSR-95-0331TR) Avail: CASI HC A03/MF A01

During this period of funding the research group has covered a variety of areas of nonlinear optical phenomena in composite materials as well as several new spin-off areas. An update is given for the following: Pyroelectric Detection Using Molecular Guest-Host Complexes; Optical Limiter Action and Oxidation Chemistry of C60 in Organic Polymers; High Density Optical Information Storage in Glasses; Second-Harmonic Generation in Semiconductor Doped Glass Waveguides; Improved Conversion Efficiencies and New Frequency Doubling Fibers; Discovery of Thermally Driven Spontaneous Damage in Germanosilicate Fibers and the Optical Fuse; Simultaneous Self-Starting Additive Pulse Mode-Locking and Second Harmonic Generation of an Nd:YAG Laser using Self-Organized

Germanosilicate Optical Fibers; Nonlinear Propagation in Anisotropic Crystals: Beam Fission and Optically Induced Bending in Ruby; High Efficiency Stimulated Raman Scattering in Gases using External Seeding Processes; Kinematic Modelocking of a Ring Dye Laser; Development of a Picoliter Viscometer; Theory of Nonlinear Optical Properties of Crystalline Guest Host Complexes; Second Harmonic and Sum Frequency Generation in Silica Based Glass; Carrier Screening Effects in Semiconductor Microcrystallite-doped Glass Second Harmonic Generation; Saturation of Near Resonant xi(3) in Quantum Confined Semiconductors; Cerenkov Emission in a Photonic Bandgap Crystal; Dispersion Interactions Between Excited Atoms; Superradiance Effects on the Vibrational Fluorescence of Optically Pumped Molecules; and Light Driven Complex Structures in Colloidal Media. DESIGN AND TESTING OF AN OPTIMAL DIGITAL LINK CAPABLE OF 14-CHANNEL TRANSMISSION M.S. Thesis Final Report
Nejat Polat Sep. 1994 68 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288505) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This thesis presents the design, implementation, and evaluation of a communication system, capable of serializing 14-channel digital parallel data, transmission, and reception of the serial data over a high speed fiber link at 39 Mbps and converting the serial data back to its 14-channel parallel form. A time division multiplexing technique was used to transmit the data. The high-speed Emitter-Coupled Logic devices were employed to construct the design. Author

PHYSICAL OPTICS POLARIZATION SCATTERING MATRIX FOR A RIGHT-ANGLE DIHEDRAL
J. G. Verly 7 Feb. 1995 60 p
(Contract F19628-95-C-0002)
(AD-A293036; TR-1008; ESC-TR-94-092) Avail: CASI HC A04/MF A01

Using the geometrical optics (GO) and physical optics (PO) approximations, a correct, complete, ready-to-use formula is derived for the backscatter (monostatic) polarization scattering matrix (PSM) of the perfectly conducting right dihedral at arbitrary incidence angle. The absence of such a result from the literature is surprising given that the dihedral's PSM is needed in many applications, such as in the calibration of polarimetric radars, including synthetic aperture radars (SAR), in the generation of simulated polarimetric radar imagery, and in automatic target recognition (ATR). Because the new results provided are important to many researchers who may not be experts in electromagnetic theory (as is often the case for the computer-vision researchers working on ATR), the report is relatively self-contained and takes the reader from the definitions of PSMs and complex radar cross-sections, through the mathematical formulation of Huygen's Principle, the combined use of GO and PO, and changes of polarization bases, to the derivation, discussion, and simplification of the dihedral's PSM. DATA COLLECTION AT THE LOCKHEED SANTA CRUZ FACILITY USING MIDWAVE HYPERSPECTRAL IMAGERS
William A. Shaffer, Alan P. Schaum, Michelle Hinnrichs, Mark A. Massie, and David Fields 8 Feb. 1995 16 p Prepared in cooperation with Pacific Advanced Technology, Solvang, CA and Lawrence Livermore National Lab., Livermore, CA
(AD-A293057; NRL/MR/5620-95-7648) Avail: CASI HC A03/MF A01

From September 12-15, 1994, two midwave hyperspectral imagers (the Infrared Multispectral Sensor (IMSS) of Pacific Advanced Technology and the Livermore Imaging Fourier Transform Infrared Spectrometer (LIFTIRS) of Lawrence Livermore National Laboratory) made measurements of particular patches of forest background and a Lockheed Santa Cruz Facility test stand at various times of day and observed the firing of the rocket engine from a sensitive piece of hardware mounted in the Lockheed test stand. The hyperspectral image cubes of the same patch of background observed at various times will be used to investigate the temporal nature of the constituent-temperature interaction. The data of the rocket firing was collected as part of a classified program of the U.S. Army Missile Command. Two sets of data cubes taken of the same background region by IMSS and LIFTIRS simultaneously will be used both to compare the two instruments and to aid in instrument characterization. This paper describes the instruments used in this data collection, the types of backgrounds observed and the experiments performed, and the data collected. DTIC

AN INVESTIGATION OF A NOVEL APPROACH TO ELEMENTAL IMAGING IN THREE DIMENSIONS
M. C. Nichols, R. P. Goehner (Sandia National Labs., Albuquerque, NM.), and R. G. Tissot, Jr. (Sandia National Labs., Albuquerque, NM.) Apr. 1995 19 p
(Contract DE-AC04-94AL-85000)
(DE95-010340; SAND-95-8210) Avail: CASI HC A03/MF A01

Feasibility of a radically different method of using X-ray excited X-ray fluorescence to perform two- and three-dimensional elemental imaging at the micrometer size scale was examined. The proposed new approach was investigated using both laboratory and synchrotron X-ray sources. The project was funded as a high-risk venture by the Laboratory Directed Research & Development (LDRD) program at Sandia National Laboratories. Investigations centered around the use of two different types of monochromators and a CCD detector to allow the imaging of characteristic excited X-radiation in two dimensions, one element at a time. The goal of this approach was to be able to obtain three-dimensional images in a similar way as is now possible using X-ray tomographic microscopy methods. Unfortunately, it was not possible to obtain sufficient signal using either X-ray source to warrant further study in this area, and the project was terminated. It is possible that the advent of more intense synchrotron X-ray sources could allow this technique to be used for certain restricted applications, but the results obtained here indicate that, without some further breakthrough, it is unlikely that a practical instrument could result using this approach. NOVEL UNSYMMETRICAL POLYDIACETYLENES AS MATERIALS FOR SECOND AND THIRD ORDER NONLINEAR OPTICS Technical Report, 1 Oct. 1994 - 30 Sep. 1995
C. E. Masse, K. VandeWiede, W. H. Kim, X. L. Jiang, and J. Kumar 30 Mar. 1995 22 p
(Contract N00014-90-J-1148)
(AD-A293020; TR-95-03) Avail: CASI HC A03/MF A01

The objective of this investigation was to develop stable nonlinear optical (NLO) materials which possess both second and third order NLO properties. These materials were envisioned as having a polydiacetylene (PDA) backbone with a second order active NLO chromophoric substituent. The choice of a PDA backbone in this investigation was twofold. In terms of third order NLO properties, the extensive p-conjugation of the PDA backbone leads to large ultrafast third order effects. In terms of second order NLO properties, the high thermal stability and rigidity of the PDA matrix in a 'perfect' polymeric single crystal is expected to prevent the randomization of the NLO chromophores in the noncentrosymmetric environment. This paper focuses on the synthesis, structural analysis, and NLO properties of the unsymmetrical diacetylene monomers, ((9-Butoxy carbonyl) methyl urethanyl)- 1-(4-urethanyl- 4'-nitrobiphenyl)- nona-2,4-diyne, and ((9-Butoxy carbonyl) methyl urethanyl)- 1-(4-urethanyl- 4'-nitroazobenzene)-nona-2,4-diyne. THE EFFECT OF RAY CURVATURE ON LLOYD'S MIRROR FRINGE ESTIMATES AND SOURCE LOCALISATION
Paul R. Lewis Sep. 1994 31 p
(DSTO-TR-0064; AR-008-927) Avail: Issuing Activity (DSTO Aeronautical and Maritime Lab., GPO Box 4331, Melbourne, Victoria 3001, Australia)

A knowledge of the interference between direct, surface and bottom reflected rays emanating from a moving underwater source can be used to determine the source-detector relative positions. Using simple ray tracing, the frequency-time interference patterns for a broadband frequency source arising when the propagating medium has a piecewise linear sound speed profile are considered, and are compared with those for a constant sound speed. It is found that even small deviations from a constant sound speed can lead to a noticeably different interference fringe placement and shape, and consequently to the inferred source-detector geometry. Further, comparisons of model calculations to experimentally observed fringe systems demonstrate the inadequacy of the constant sound speed model, whereas the use of the simple segmented profile is capable of replicating the observed patterns. ANALYSIS OF TARGET CONTRAST IMPROVEMENT USING POLARIZATION FILTERING IN THE INFRARED REGION M.S. Thesis
David Gavin Moretz Dec. 1994 123 p
(AD-A293085) Avail: CASI HC A06/MF A02

Computer analysis with Interactive Data Language (IDL) was performed on polarized infrared image data obtained during the MAPTIP coastal experiment. Analysis of contrast enhancement of the oceanographic ship Hr. Ms. Tydeman and a Lynx helicopter using polarization filters is presented. Contrast of vertical and horizontal polarized images was determined by two methods. Unpolarized image contrast was developed from polarization data and used to calculate contrast improvement factors for vertical and horizontal polarizations. Background effects upon contrast were explored. Dependence of projected ship area on contrast improvement was analyzed. Vertical and horizontal polarized images were compared to verify preliminary observations of negligible predominant polarization of man-made targets. Results of this analysis confirm that vertically polarized sea background radiance can be reduced by polarization filtering to enhance ship-to-background contrast. Man-made targets appear to present negligible polarization. Sky background immediately above the horizon also appears unpolarized. Combining radiance from both sky background above the horizon and sea background to form an average background reference radiance reduces overall contrast improvement. Ship-to-background contrast should be calculated with respect to the horizon location. DTIC

IMPROVED LINEAR DYNAMIC RANGE IN EXTERNALLY MODULATED FIBER-OPTIC LINKS Ph.D. Thesis
Mark Lalon Farwell 1994 240 p
Avail: Univ. Microfilms Order No. DA9424917

This dissertation proposes two different methods for increasing the linear dynamic range of a fiber-optic link past the fundamental limits imposed by (1) the power handling capability of the detector and (2) the sinusoidal response of a conventional electro-optic modulator. The first method requires using a novel, linearized modulator called the linearized directional coupler in order to reduce the nonlinear distortion. This modulator utilizes an all-optical nonlinear compensation process that is unique in that it requires only a single electro-optic interaction. Because of this, the linearized directional coupler is the most promising design for achieving linearized modulation over a significant bandwidth. An algorithm for a computer simulation program is presented whereby the nonlinear distortion of any coupled waveguide modulator design can be calculated. The algorithm also provides a way in which the electro-optic phase mismatch can be accounted for and thus enables the nonlinearities to be determined as a function of frequency. Using computer simulation, the theoretical performance and the optimal design for the new modulator are determined. Theoretical performance calculations indicate that significant, broadband third-order nonlinear suppression is possible below 1 GHz with a simple electrode structure. Significant nonlinear suppression for an upper bandwidth limit larger than 1 GHz can be achieved by fabricating a traveling-wave electrode structure. The requirements on the traveling-wave electrodes as a function of frequency and required nonlinear suppression are determined in this work as well. Experimental results of both two-tone and forty-tone tests with prototype modulators at KHz, MHz and 1 GHz frequencies are reported. Significant, broadband third-order suppression is demonstrated up to approximately 200 MHz. Third-order compensation is also demonstrated at 1 GHz using a traveling-wave prototype. The second method, is a simple operational method called low biasing. This method allows linearized modulation to be achieved with a conventional modulator at the expense of an increase in optical source power. Increased even-order distortion, however, limits this method to single-octave transmission bandwidths. The nonlinear suppression possible with this method is particularly attractive since it is independent of frequency. This method is also shown to result in a significant increase in modulation efficiency without a trade-off in bandwidth. Using this method, a high fidelity fiber-optical transmission of forty CATV carriers is experimentally demonstrated. Dissert. Abstr.

CURRENT TRENDS IN THE PACKAGING OF PHOTONIC DEVICES
Richard F. Carson 1995 66 p Presented at the Spring Meeting on Optoelectronic and Photonic Devices, Tucson, AZ, 6 Apr. 1995
(Contract DE-AC04-94AL-85000)
(DE95-009583; SAND-95-0588C; CONF-9504140-1) Avail: CASI HC A04/MF A01

Optoelectronic and photonic devices hold great promise for high data-rate communication and computing. Their wide implementation was limited first by the device technologies and now suffers due to the need for high-precision packaging that is mass-produced. The use of photons as a medium of communication and control implies a unique set of packaging constraints that are highly driven by the need for micron and even sub-micron alignments between photonic devices and their transmission media. Current trends in optoelectronic device packaging are reviewed and future directions are identified both for free-space (3-dimensional) and guided-wave (2-dimensional) photonics. Emphasis will be placed on the special needs generated by increasing levels of device integration. DOE

STRATOSPHERIC OBSERVATORY FOR INFRARED ASTRONOMY (SOFIA). PHASE A: SYSTEM CONCEPT DESCRIPTION
1995 439 p
(Proj. SOFIA)
(NASA-TM-110669; NAS 1.15:110669) Avail: CASI HC A19/MF A04

Infrared astronomers have made significant discoveries using the NASA/Ames Research Center C-141 Kuiper airborne Observatory (KAO) with its 0.91-meter telescope. The need for a 3-meter class airborne observatory has been established to improve astronomy data gathering capability. The new system envisioned by NASA and the international community of astronomers will be known as the Stratospheric Observatory for Infrared Astronomy (SOFIA). The platform of choice for SOFIA is a modified Boeing 747SP. SOFIA is viewed as a logical progression from the KAO. Potentially, a 3-meter telescope operating at the altitude achievable by the 747SP aircraft can be 11 times more sensitive than the KAO, can have 3.3 times better angular resolution, and will allow observations of compact sources in a volume of space up to 36 times that of the KAO. The KAO has enabled detection of about 15 percent of the far infrared IRAS survey point-sources; SOFIA should be able to detect them all. This document presents the results of in-house ARC and contracted concept definition studies for SOFIA. Using the ARC-based Kuiper Airborne Observatory as a basis for both SOFIA design and operations concepts, the SOFIA system concept has been developed with a view toward demonstrating mission and technical feasibility, and preparing preliminary cost estimates. The reference concept developed is not intended to represent final design, and should be treated accordingly. The most important products of this study, other than demonstration of system feasibility, are the understanding of system trade-offs and the development of confidence in the technology base that exists to move forward with a program leading to implementation of the Stratospheric Observatory for Infrared Astronomy (SOFIA). Z-SCAN USING A DYE LASER [Z-SCAN MED FAERGAEMNESLASER]
S. Svensson, M. Lindgren, and B. Ericson Sep. 1994 27 p In SWAHILI
(PB95-222923; F0A-R-94-00021-3.1-SE) Avail: Issuing Activity (National Technical Information Service (NTIS))

The continuing development of laser technology increases the risk of harmful laser exposure of eyes and/or electro-optical sensors. Materials which spontaneously alter their optical properties when subjected to intense optical radiation might be utilized in protective devices. The research in this area of non-linear optics is therefore urgent and demanding. We have chosen to employ the z-scan method in our experimental work on non-linear optical protection of sensors. After a limited number of tests, we have noticed non-linear optical phenomena. Due to the dye-laser's poor beam profile, too long pulse duration, and frequent malfunctions, the laser does not suit our purposes. NTIS

NOTES ON LIE ALGEBRAIC ANALYSIS OF ACHROMATS
Chunxi Wang and A. Chao Jan. 1995 31 p
(Contract DE-AC03-76SF-00515)
(DE95-009524; SU-SLAC/AP-100) Avail: CASI HC A03/MF A01

Normal form technique is a powerful method to analyze the achromat problem. Assume the one cell map M(sub cell) = AR e(sup :h(sub 3)):(sub e)(sup :h(sub 4)): A(sup -1), where h(sub 3),h(sub 4) are the normal forms of the generators of the unit cell map, and A is the nonlinear transformation that brings M(sub cell) into its normal form (and :h: represents the classical Poisson bracket operation); then the map of the whole system is M(sub N) = M(sub cell)(sup N) = AR(sup N) A(sup -1) = I, provided that we can set e(sup :h(sub 3)):, e(sup :h(sub 4)), and R(sup N) to the identity (or only (delta) dependent) maps. Therefore, the conditions to form an achromat are h(sub 3) and h(sub 4) equal to zero (or delta dependent only) and the total linear map is identity. In this report, we will apply these conditions to a FODO array (a simple model system) to make it an achromat. We will start from Hamiltonians and work all the way up to obtain the analytical expressions of the required sextupole and octupole strengths. DOE

(Contracts DE-AC02-76CH-03073; DE-FG03-92ER-54150; W-7405-eng-48) (DE95-008387; GA-A-21871; CONF-941101-5) Avail: CASI HC A03/MF A01

The gyro-Landau fluid (GLF) model equations for toroidal geometry have been recently applied to the study ion temperature gradient (ITG) mode turbulence using the 3D nonlinear ballooning mode representation (BMR). The present paper extends this work by treating some unresolved issues concerning ITG turbulence with adiabatic electrons. Although eddies are highly elongated in the radial direction long time radial correlation lengths are short and comparable to poloidal lengths. Although transport at vanishing shear is not particularly large, transport at reverse global shear, is significantly less. Electrostatic transport at moderate shear is not much effected by inclusion of local shear and average favorable curvature. Transport is suppressed when critical E x B rotational shear is comparable to the maximum linear growth rate with only a weak dependence on magnetic shear. Self consistent turbulent transport of toroidal momentum can result in a transport bifurcation at sufficiently large r/(Rq). However the main thrust of the new formulation in the paper deals with advances in the development of finite beta GLF models with trapped electron and BMR numerical methods for treating the fast parallel field motion of the untrapped electrons. OPERATING IN THE SPACE PLASMA ENVIRONMENT: A SPACECRAFT CHARGING STUDY OF THE SOLAR X-RAY IMAGER
Joel L. Herr (Sverdrup Technology, Inc., Huntsville, AL.), Matthew B. McCollum, and Bonnie F. James [1994] 6 p
(NASA-TM-110644; NAS 1.15:110644) Avail: CASI HC A02/MF A01

This study presents the results of a spacecraft charging effects protection study conducted on the Solar X-ray Imager (SXI). The SXI is being developed by NASA Marshall Space Flight Center for NOAA's Space Environment Laboratory, and will be used to aid in forecasting energetic particle events and geomagnetic storms. Images will provide information on the intensity and location of solar flares, coronal mass ejections, and high speed solar streams. The SXI will be flown on a next-generation GOES sometime in the mid to late 1990's. Charging due to the encounter with a worst-case magnetic substorm environment is modeled using the NASCAP/GEO computer code. Charging levels of exterior surfaces and the floating potential of the spacecraft relative to plasma are determined as a function of spacecraft design, operational configuration, and orbital conditions. Areas where large surface voltage gradients exist on or near the SXI are identified as possible arc-discharge sites. Results of the charging analysis are then used to develop design recommendations that will limit the effects of spacecraft charging on the SXI operation. Derived from text

POWER OSCILLATOR IN THE TOKAMAKS TRAINING Ph.D. Thesis [USO DE UN OSCILADOR DE POTENCIA PARA EL ACONDICIONAMIENTO DE TOKAMAKS]
Raul ValenciaAlvarado 1994 147 p In SPANISH
(DE95-616538; INIS-mf-14453) Avail: CASI HC A07/MF A02 (US Sales Only)

This work reports the results obtained from the cleaning of the Novillo Tokamak Chamber, using an A.F. Taylor Discharge Cleaning (TDC) in H2 with a power oscillator of 20 kW and 17.5 kHz. The plasma temperature in the discharge was of one electron-volt (Te approximately equal 1 eV) with a moderate electron density n(sub e) approximately equal 4 x 10(exp 11) cm(exp -3). This discharge cleaning was found helpful in the removal of C and O via the formation of pumping compounds such as CH4 and H2O. A residual gas analyzer was used to monitor the partial pressure of these and other compounds, indicating removal rates as high as two monolayers/hour at the beginning of the discharge. A value of Z(sub eff) = 3 was estimated for a discharge of 7 kA after conditioning. DOE

D3-D has successfully operated with an all-graphite first wall, including the first observations of VH-mode without boronization. A major goal of this, and other recent upgrades, was to control impurity influxes and hydrogenic fueling. Graphite tiles were carefully preconditioned, first by ex situ preparation and then by baking and helium glow conditioning. No deuterium or hydrogen was used until tokamak operation commenced. With the all graphite wall, both impurity and deuterium influxes during tokamak discharges were lower than previous boronized discharges; central nickel impurity line radiation, NiXXV and NiXXVI, was an order of magnitude lower than previous discharges during the ELM free beam heated phase. The effect of reduced particle fueling on plasma performance, particularly H- and VH-mode discharges, will be presented. DOE

DEVELOPMENT OF A TOKAMAK PLASMA OPTIMIZED FOR STABILITY AND CONFINEMENT
P. A. Politzer Feb. 1995 11 p Presented at the 6th International Toki Conference on Plasma Physics and Controlled Nuclear Fusion: Research for Advanced Concepts in Magnetic Fusion, Toki-city, Japan, 29 Nov. - 2 Dec. 1994 Submitted for publication in the Proceedings of the 6th International Conference on Plasma Physics and Controlled Nuclear Fusion
(Contracts DE-AC03-89ER-51114; DE-AC05-84OR-21400; W-7405-eng-48) (DE95-009609; GA-A-21926; CONF-941182-3) Avail: CASI HC A03/MF A01

Design of an economically attractive tokamak fusion reactor depends on producing steady-state plasma operation with simultaneous high energy density (beta) and high energy confinement (tau(E)); either of these, by itself, is insufficient. In operation of the DIII-D tokamak, both high confinement enhancement (H equivalent to tau(E)/tau(ITER - 89P) = 4) and high normalized beta(beta(N) equivalent to beta/(I/aB) = 6%-m-T/MA) have been obtained. For the present, these conditions have been produced separately and in transient discharges. The DIII-D advanced tokamak development program is directed toward developing an understanding of the characteristics which lead to high stability and confinement, and to use that understanding to demonstrate stationary, high performance operation through active control of the plasma shape and profiles. The authors have identified some of the features of the operating modes in DIII-D that contribute to better performance. These are control of the plasma shape, control of both bulk plasma rotation and shear in the rotation and Er profiles, and particularly control of the toroidal current profiles. In order to guide their future experiments, they are developing optimized scenarios based on their anticipated plasma control capabilities, particularly using fast wave current drive (on-axis) and electron cyclotron current drive (off-axis). The most highly developed model is the second-stable core VH-mode, which has a reversed magnetic shear safety factor profile (q(0) = 3.9, q(min) = 2.6, and q(95) = 6). This model plasma uses profiles which the authors expect to be realizable. At (beta)(N) is greater than or equal to 6, it is stable to n = 1 kink modes and ideal ballooning modes, and is expected to reach H greater than or equal to 3 with VH-mode-like confinement. DOE

PHYSICS AND APPLICATION OF HIGH DENSITY Z-PINCHES
T. Miyamoto, ed. and K. Takasugi, ed. Jul. 1993 106 p Conference held in Nagoya, Japan, 11-12 Dec., 1992
(ISSN 0915-6348)
(NIFS-PROC-14) Avail: CASI HC A06/MF A02

This publication is a collection of papers presented at the research meeting on 'Physics and Application of Z-pinches' held at the National Institute for Fusion Science on December 11-12, 1992, in which thirty-seven persons attended from eighteen organizations, and eighteen lectures were given. The Z-pinch is an old subject that has been studied since the 1950's, but recently is noticed again in a new point of view. The classical Z-pinch is characterized by discharging in a dilute gas filled in the glass tube and by applying the relatively low discharge voltage of a few 10's of kV. On the other hand, the modern Z-pinch is characterized by puffing a gas into a vacuum vessel or using a solid fiber, and also by applying the relatively high discharge voltage, i.e., more than several hundred kV. Hence, the pulse power device is often used instead of the capacitor bank, and permits the generation of the Z-pinch using a solid narrow wire for which the discharge is explosive in a few 10's of kV. The modern Z-pinch researchers give a prospect in the important field, i.e., the discharge excitation of short wave length lasers, the production of a fusion plasma, etc. Nevertheless, it is regrettable that there is no Z-pinch research group in Japan that equips the pulse power device. One of the purposes of this meeting was to stimulate the researchers on Z-pinches and related subjects. This report includes the macroscopic behaviors and radiation measurements on gas-puff and metal-vapor Z-pinches which were presented by Nihon University and Tokyo Institute of Technology, soft x-ray measuring methods and data processing by Gunma University, the related technical problems on voltage amplification and closing switch by Himeji Institute of Technology and Kumamoto University, and unstable motion of toroidal Z-discharge plasma by Utsunomiya University. In the meeting several review talks (on pulsed power technology and x-ray laser) and other problems were given besides the above papers. Derived from text

A better understanding of helium transport in the plasma core and edge in enhanced confinement regimes is now emerging from recent experimental studies on DIII-D. Overall, the results are encouraging. Significant helium exhaust (tau(sup *, sub He)/tau(sub E) approximately 11) has been obtained in a diverted, H-mode plasmas with edge-localized modes (ELM's) simultaneous with a central source of helium. Detailed analysis of the helium profile evolution indicates that the exhaust rate is limited by the exhaust efficiency of the pump (approximately 5%) and not by the intrinsic helium transport properties of the plasma. Perturbative helium transport studies using gas puffing have shown that D(sub He)/X(sub eff) approximately 1 in all confinement regimes studied to date (including H-mode and VH-mode). Furthermore, there is no evidence of preferential accumulation of helium in any of these regimes. However, measurements in the core and pumping plenum show a significant dilution of helium as it flows from the plasma core to the pumping plenum. Such dilution could be the limiting factor in the overall removal rate of helium in a reactor system. DOE

REFLECTIVITY OF PLASMAS CREATED BY HIGH-INTENSITY, ULTRA-SHORT LASER PULSES Ph.D. Thesis
David Michael Gold Jun. 1994 225 p
(Contract W-7405-eng-48)
(DE95-009536; UCRL-LR-117512) Avail: CASI HC A10/MF A03

Experiments were performed to characterize the creation and evolution of high-temperature (T(sub e)(approximately)100eV), high-density (n(sub e) greater than 10(exp 22)/cu cm plasmas created with intense approximately 10(exp 12)-10(exp 16)W/sq cm, ultra-short (130fs) laser pulses. The principle diagnostic was plasma reflectivity at optical wavelengths (614nm). An array of target materials (Al, Au, Si, SiO2) with widely differing electronic properties tested plasma behavior over a large set of initial states. Time-integrated plasma reflectivity was measured as a function of laser intensity. Space- and time-resolved reflectivity, transmission and scatter were measured with a spatial resolution of approximately 3 micrometers and a temporal resolution of 130fs. An amplified, mode-locked dye laser system was designed to produce approximately 3.5mJ, approximately 130fs laser pulses to create and nonintrusively probe the plasmas. Laser prepulse was carefully controlled to suppress preionization and give unambiguous, high-density plasma results. In metals (Al and Au), it is shown analytically that linear and nonlinear inverse Bremsstrahlung absorption, resonance absorption, and vacuum heating explain time-integrated reflectivity at intensities near 10(exp 16)W/sq cm. In the insulator, SiO2, a non-equilibrium plasma reflectivity model using tunneling ionization, Helmholtz equations, and Drude conductivity agrees with time-integrated reflectivity measurements. Moreover, a comparison of ionization and Saha equilibration rates shows that plasma formed by intense, ultra-short pulses can exist with a transient, non-equilibrium distribution of ionization states. All targets are shown to approach a common reflectivity at intensities approximately 10(exp 16)W/sq cm, indicating a material-independent state insensitive to atomic or solid-state details. DOE

STABILIZATION OF THE RESISTIVE SHELL MODE IN TOKAMAKS
Richard Fitzpatrick and Ahmet Aydemir Feb. 1995 56 p
(Contract DE-FG05-80ET-53088)
(DE95-008748; DOE/ET-53088/694; IFSR-694) Avail: CASI HC A04/MF A01

The stability of current-driven external-kink modes is investigated in a tokamak plasma surrounded by an external shell of finite electrical conductivity. According to conventional theory, the ideal mode can be stabilized by placing the shell sufficiently close to the plasma, but the non-rotating 'resistive shell mode,' which grows on the characteristic L/R time of the shell, always persists. It is demonstrated, using both analytic and numerical techniques, that a combination of strong edge plasma rotation and dissipation somewhere inside the plasma is capable of stabilizing the resistive shell mode. This stabilization mechanism does not necessarily depend on toroidicity or presence of resonant surfaces inside the plasma. DOE

REYNOLDS STRESS OF LOCALIZED TOROIDAL MODES
Y. Z. Zhang (International Centre for Theoretical Physics, Trieste, Italy.) and S. M. Mahajan Feb. 1995 27 p
(Contract DE-FG05-80ET-53088)
(DE95-008750; DOE/ET-53088/691; IFSR-691) Avail: CASI HC A03/MF A01

An investigation of the 2D toroidal eigenmode problem reveals the possibility of a new consistent 2D structure, the dissipative BM-2 mode. In contrast to the conventional ballooning mode, the new mode is poloidally localized at (pi)/2 (or -(pi)/2), and possesses significant radial asymmetry. The radial asymmetry, in turn, allows the dissipative BM-2 to generate considerably larger Reynolds stress as compared to the standard slab drift type modes. It is also shown that a wide class of localized dissipative

toroidal modes are likely to be of the dissipative BM-II nature, suggesting that at the tokamak edge, the fluctuation generated Reynolds stress (a possible source of poloidal flow) can be significant. DOE

SHEAR FLOW EFFECTS ON ION THERMAL TRANSPORT IN TOKAMAKS
T. Tajima, W. Horton, J. Q. Dong, and Y. Kishimoto (Japan Atomic Energy Research Inst., Naka, Japan.) Mar. 1995 41 p
(Contract DE-FG05-80ET-53088)
(DE95-009115; DOE/ET-53088/697; IFSR-697) Avail: CASI HC A03/MF A01

From various laboratory and numerical experiments, there is clear evidence that under certain conditions the presence of sheared flows in a tokamak plasma can significantly reduce the ion thermal transport. In the presence of plasma fluctuations driven by the ion temperature gradient, the flows of energy and momentum parallel and perpendicular to the magnetic field are coupled with each other. This coupling manifests itself as significant off-diagonal coupling coefficients that give rise to new terms for anomalous transport. The authors derive from the gyrokinetic equation a set of velocity moment equations that describe the interaction among plasma turbulent fluctuations, the temperature gradient, the toroidal velocity shear, and the poloidal flow in a tokamak plasma. Four coupled equations for the amplitudes of the state variables radially extended over the transport region by toroidicity induced coupling are derived. The equations show bifurcations from the low confinement mode without sheared flows to high confinement mode with substantially reduced transport due to strong shear flows. Also discussed is the reduced version with three state variables. In the presence of sheared flows, the radially extended coupled toroidal modes driven by the ion temperature gradient disintegrate into smaller, less elongated vortices. Such a transition to smaller spatial correlation lengths changes the transport from Bohm-like to gyrobohm-like. The properties of these equations are analyzed. The conditions for the improved confined regime are obtained as a function of the momentum-energy deposition rates and profiles. The appearance of a transport barrier is a consequence of the present theory. DOE

STUDY OF CROSS-TAIL CURRENT CARRIERS IN MAGNETOTAIL Ph.D. Thesis
Chen Lu 1993 137 p
Avail: Univ. Microfilms Order No. DA9420565

The purpose of this study is to gain physical insight into how charged particles, which violate the guiding center approximations, contribute to cross-tail current in a self-consistent plasma sheet. A technique to generate self-consistent one-dimensional (1-D) current sheets is described. Groups of monoenergetic protons are followed in a model magnetic field. The sample current sheets are characterized by resonant quasiadiabatic and stochastic orbits. The magnetic moment of a quasiadiabatic ion which is injected from outside a current sheet changes substantially during an interaction with the current sheet, but returns to almost its initial value by the time the ion leaves. The resonant nature of the interaction is associated with a strong energy dependence. The magnetic moment of a stochastic ion changes substantially during an interaction with the current sheet. Several ion and electron groups are combined to produce a plasma sheet in which the charged particles carry the currents needed to generate the magnetic field in which the orbits are traced. An electric field also is required to maintain charge neutrality. Three distinct orbit types, one involving untrapped and two composed of trapped ions, are identified. Each class of ions carries a qualitatively different current distribution. Contributions from all three groups are needed when resonant ions are used to generate a typical quiet-time self-consistent current sheet. It was found that self-consistent current sheets can not be generated using only stochastic ions. A relatively small density of resonant protons must be added to a current sheet in which stochastic ions dominate. Distribution functions are evaluated so that the expected count rates and several fluid parameters could be plotted. Limitations associated with the use of a 1-D model also are investigated. It is found that the model can provide a good physical picture of an important component of the cross tail current. However, we conclude that 1-D models cannot adequately describe any region of the magnetotail in which the principal current sheet is separated from the plasma sheet boundary layer by a nearly isotropic outer portion of the central plasma sheet. Dissert. Abstr.

Plasma diagnostics systems are studied and designed in detail for tokamak KAERIT. The systems for the electron cyclotron emission (ECE) receiver, the soft X-ray spectroscopy, visible light spectroscopy, static electric probes and data acquisition to process the diagnostic data are planned to develop. Also studied for detail design in the next year are the systems for mm wave interferometry, vacumm-UV light spectroscopy and neutral beam detection. The ECE receiver is designed in single channel at 93 GHz aimming to get high sensitivity. The soft X-ray spectroscopy system consists of a carbon target which emits electrons by X-ray and an energy analyser for the electrons. The electric probe is designed in tripple electrodes and capable of detection in real time mode. DOE

The object of this project was the completion of a KT-2 tokamak device concept definition, completion of preliminary conceptual design, and assurance of technical feasibility. The content and scope of the study included identification of the research goal and program -- derivation of basic specifications of the plasma and the tokamak, and preliminary conceptual design of core components (magnets, power sources, vacuum system, and auxiliary heating system). The results of the research included a definition of the KT-2 tokamak concept: a medium-sized, large-aspect-ratio bootstrap tokamak with fast-wave current-drive; numerical scoping for performance and identification of KT-2 operation regimes (general specification from zero-dimensional analysis using TETRA and magnetic configuration and MHD equilibrium properties with FBT and basic specification of the PF system and derivation of basic operation scenario); basic specification of the magnet-power supply system and the vacuum system for detailed engineering study in the next step; and general specification for auxiliary system necessary for research goal and subsequent device concept. THEORY AND SIMULATION OF ELECTROSTATIC WAVE TURBULENCE IN THE SPACE SHUTTLE-INDUCED PLASMA ENVIRONMENT Final Report, 3 Jan. 1990 - 30 Sep. 1994
David R. Rivas and Daniel E. Hastings 30 Sep. 1994 313 p
(Contract F19628-90-K-0021)
(AD-A293467; PL-TR-95-2021) Avail: CASI HC A14/MF A03

One of the important observations of the Plasma Diagnostic Package (PDP) experiments that were designed to probe the environment around the shuttle was the high degree of electrostatic turbulence in the ambient plasma compared to what has been observed from similar instruments flown on unmanned spacecraft. It is shown that the turbulence is caused by a process which involves the outgassing of water vapor from the shuttle orbiter, the subsequent collisional charge exchange of these water neutral molecules with ionospheric oxygen ions for form pick-up water ions, and the excitation of the beam-arc plasma instability. This is a new instability which is driven by the interaction of the beam-arc (i.e., asymmetric ring) velocity distribution function of the contaminating water ions with the background ionospheric plasma. (Contract W-7405-eng-36)
(DE95-009431; LA-UR-95-872) Avail: CASI HC A03/MF A01

An erbium cathodic-arc has been installed on a Plasma Source Ion Implantation (PS2) experiment to allow the implantation of erbium metal and the growth of adherent erbia (erbium oxide) films on a variety of substrates. Operation of the PS2 pulser and the cathodic-arc are synchronized to achieve pure implantation, rather than the hybrid implantation/deposition being investigated in other laboratories. The relative phase of the 20 (mu)s PS2 and cathodic-arc pulses can to adjusted to tailor the energy distribution of implanted ions and suppress the initial high-current drain on the pulse modulator. The authors present experimental data on this effect and make a comparison to results from particle-in-cell simulations. DOE

STABILIZATION OF BALLOONING MODES WITH SHEARED TOROIDAL ROTATION
R. L. Miller, F. W. Waelbroeck, L. L. Lao, and T. S. Taylor Nov. 1994 7 p Presented at the 15th International Conference on Plasma Physics and Controlled Nuclear Fusion Research, Madrid, Spain, 26 Sep. - 1 Oct. 1994
(Contract DE-FG03-92ER-54150)
(DE95-008388; GA-A-21793; CONF-940933-36) Avail: CASI HC A02/MF A01

A new code demonstrates the stabilization of MHD ballooning modes by sheared toroidal rotation. A shifted-circle model is used to elucidate the physics and numerically reconstructed equilibria are used to analyze DIII-D discharges. In the ballooning representation, the modes shift periodically along the field line to the next point of unfavorable curvature. The shift frequency (d(Omega)/dq where Omega is the angular toroidal velocity and q is the safety factor) is proportional to the rotation shear and inversely proportional to the magnetic shear. Stability improves with increasing shift frequency and, in the shifted circle model, direct stable access to the second stability regime occurs when this frequency is a fraction of the Alfven frequency omega(sub A) = V(sub A)/qR. Shear stabilization is also demonstrated for an equilibrium reconstruction of a DIII-D VH-mode. DOE

As x-ray laser (XRL) research has matured, it has become possible to reliably utilize XRL's for applications in the laboratory. Laser coherence, high brightness and short pulse duration all make the XRL a unique tool for the diagnosis of laboratory plasmas. The high brightness of XRL's makes them well-suited for imaging and for interferometry when used in conjunction with multilayer mirrors and beamsplitters. We have utilized a soft x-ray laser in such an imaging system to examine laser-produced plasmas using radiography, moire deflectometry, and interferometry. Radiography experiments yield 100-200 ps snapshots of laser driven foils at a resolution of 1-2 micrometers. Moire deflectometry with an XRL has been used to probe plasmas at higher density than by optical means. Interferograms, which allow direct measurement of electron density in laser plasmas, have been obtained with this system. DOE

Rice et al Feb. 1995 29 p Presented at the Meeting of the Division of Plasma Physics of the American Physical Society, Minneapolis, MN, 7-11 Nov. 1994 Prepared in cooperation with Oak Ridge National Lab., TN and Lawrence Livermore National Lab., Livermore, CA

(Contracts DE-AC03-89ER-51114; DE-AC05-84OR-21400; W-7405-eng-48) (DE95-009607; GA-A-21914; CONF-941101-9) Avail: CASI HC A03/MF A01

Detailed analysis of recent high beta discharges in the D3-D tokamak demonstrates that the resistive vacuum vessel can provide stabilization of low-n magnetohydrodynamic (MHD) modes. The experimental beta values reaching up to beta(sub T) = 12.6% are more than 30% larger than the maximum stable beta calculated with no wall stabilization. Plasma rotation is essential for stabilization. When the plasma rotation slows sufficiently, unstable modes with the characteristics of the predicted 'resistive wall' mode are observed. Through slowing of the plasma rotation between the q = 2 and q = 3 surfaces with the application of a non-axisymmetric field, the authors have determined that the rotation at the outer rational surfaces is most important, and that the critical rotation frequency is of the order of Omega/2(pi) = 1 kHz. (DE95-009869; UCRL-JC-120076; CONF-9503127-2) Avail: CASI HC A02/MF A01

The main goal of the ITER Conductor Testing Program is to validate the design and the fabrication process of the CICC (Cable-In-Conduit Conductor) and its joints, in full-size samples. For testing large-scale cable-in-conduit conductors, several practical experimental techniques have been developed to specifically address the issues of conductor stability. The following described techniques enable experimentalists to quantify the effects and thus provide useful tools to improve the conductor performance in magnet applications. In this paper, the authors, present two experimental techniques: (a) stability margin calibration, and (b) current distribution. Both are much needed in the laboratory for testing the conductor stability. DOE

ONSET OF ELMs IN JT-60U

Yutaka Kamada, Masayasu Sato, Mitsuru Kikuchi, and Masahiro Mori (Japan Atomic Energy Research Inst., Ibaraki, Japan.) Aug. 1994 22 p

(DE95-737209; JAERI-Research-94-011) Avail: CASI HC A03/MF A01

The ELM's limiting the energy confinement in JT-60U appear when the heating power is high enough compared to the threshold power for the L-H transition. The ELM-free phase is observed when n-bar(sub e) is lower than the threshold density n-bar(sub e, sup th). The threshold density n-bar(sub e, sup th) increases with (B(sub t, sup 2)/(Rq(sub eff, sup 2)))I(sub i) which is a measure parameter for the ballooning stability, where q(sub eff) is the effective safety factor at the edge. The edge pressure gradient estimated by n-bar(sub e, sup th) T(sub i) (95%)/(T(sub i) (95%)(sup 0.5)/B(sub p) (a)) is proportional to (B(sub t, sup 2)/(Rq(sub eff, sup 2)))I(sub i) which allows us to understand that the ELM's are related to the ballooning instability. A time dependent analysis of the evolution of pressure and current profiles including the boot-strap current shows that the steep edge pressure gradient is close to the marginal value for the high-n ideal ballooning instability at the onset of ELM's. DEVELOPMENT OF INTEGRATED INSULATION JOINT FOR COOLING PIPE IN TOKAMAK REACTOR

Satoshi Nishio, Tetsuya Abe (Japan Atomic Energy Research Inst., Ibaraki, Japan.), Masashi Kawamura, and Seiichiro Yamazaki Aug. 1994 23 p

(DE95-737220; JAERI-Tech-94-006) Avail: CASI HC A03/MF A01

In a tokamak fusion reactor, an electrically insulated part is needed for an in-vessel piping system in order to break an electric circuit loop. When a closed loop is formed in the piping system, large induced electromagnetic forces during a plasma disruption (rapid plasma current quench) could give damages on the piping system. Ceramic brazing joint is a conventional method for the electric circuit break, but an application to the fusion reactor is not feasible due to its brittleness. Here, a stainless steel / ceramics / stainless steel functionally gradient material (FGM) has been proposed and developed as an integrated insulation joint of the piping system. Both sides of the joint can be welded to the main pipes, and expected to be reliable even in the fusion reactor environment. When the FGM joint is manufactured by way of a sintering process, a residual thermal stress is the key issue. Through detailed computations of the residual thermal stress and several trial productions, tubular elements of FGM joints have been successfully manufactured. DOE

MEASUREMENTS OF QUANTUM ELECTRODYNAMIC SENSITIVE TRANSITIONS IN Na-LIKE AND Cu-LIKE IONS Final Report, 1 Oct. 1993 - 29 Sep. 1994

Joseph Reader 1994 7 p

(Contract DE-FG03-93SF-20143)

(DE95-011593; DOE/SF-20143/T2) Avail: CASI HC A02/MF A01

The object was to use the GDL laser at the Laboratory for Laser Energetics at the University of Rochester to measure the energies of spectral transitions that would be of importance for testing the accuracy of calculations used to predict properties of plasmas found in inertial fusion experiments as well as in tokamaks and x-ray lasers. The general method to be used for this experiment was to focus the beam from the GDL laser to a small point so as to create a laser-produced plasma of the material of interest. Light from the plasma was to be photographed with a 2.2-m grazing incidence spectrograph transported to Rochester from NIST. The region of observation was 10-300 angstrom. In the initial phase of the work a series of spectrograms were made of highly ionized iron. For this a special target chamber was fabricated at NIST and interfaced to the light beam from the GDL laser. The results for iron provided valuable data for Li-like iron, Fe(23+). An example of the spectrum obtained in the region of 30-40 angstrom is shown. The lower spectrum shows intense lines of Fe(23+), obtained by focusing the GDL beam tightly onto the target surface. For the upper spectrum the GDL beam was focused slightly in front of the target, producing lines of Fe(23+) that are much reduced in intensity. Measurement of their wavelengths provided a comparison with ab initio values calculated with the Dirac-Fock quantum mechanics computer code of Desclaux. After completing the observations for Li-like iron, the GDL laser was shut down for the planned upgrade to much higher energy. The 2.2-m spectrograph was shipped back to NIST. Extensive work was undertaken to interface the NIST target chamber to the 30-cm-diameter beam of the upgraded GDL laser. The NIST system is now ready for use with the upgraded GDL laser. DOE

LOWER HYBRID ACCESSIBILITY IN A LARGE, HOT REVERSED FIELD PINCH M.S. Thesis

Robin Ann Dziubek Feb. 1995 48 p
(Contract DE-FG02-85ER-53212)
(DE95-011001; DOE/ER-53212/256) Avail: CASI HC A03/MF A01

Recent theoretical and experimental results indicate that driving a current in the outer radius of an RPF suppresses sawtooth activity and increases particle and energy confinement times. One candidate for a form of steady state current drive is the slow wave at the lower hybrid frequency. Here, the accessibility of such a wave in an RFP plasma is investigated theoretically, with focus on the RFX machine of Padua, Italy. To drive current, the slow wave with frequency between 1.0-1.5 GHz is considered where optimal Landau damping is desired at r/a approximately 0.7. By numerically determining the values of the wave's perpendicular index of refraction which satisfy the hot plasma dispersion relation, regions of propagation and evanescence can be found. The path of the wave can then be traced over a contour map of these regions so that accessibility can be clearly seen. The possibility of mode conversion events can be ascertained by plotting the values of the perpendicular index of refraction for the fast and slow wave and observing convergence points. To locate regions of maximum Landau damping, a technique developed by Stix was adapted for use with the slow wave in an RFP plasma. Results show that the slow wave is accessible to the target region without mode conversion so long as the value of the parallel index of refraction is correctly chosen at the edge of the plasma. Landau damping can also be optimized with this method. In an RFP, 2-20% of the electron population consists of fast electrons. Because this species alters the total electron distribution function and raises the effective temperature in the outer regions of the plasma, its presence is expected to shift the location of ideal Landau damping. A COLLISIONLESS SHOCK WAVE EXPERIMENT
Dan Winske, Michael E. Jones, Anthony G. Sgro, and Vincent A. Thomas 1995 10 p Presented at the Spring Workshop on Basic Science Using Pulsed Power, Santa Barbara, CA, 5-7 Apr. 1995
(Contract W-7405-eng-36)
(DE95-009489; LA-UR-95-1097; CONF-9504132-2) Avail: CASI HC A02/MF A01

Collisionless shock waves are a very important heating mechanism for plasmas and are commonly found in space and astrophysical environments. Collisionless shocks were studied in the laboratory more than 20 years ago, and more recently in space via in situ satellite measurements. The authors propose a new laboratory shock wave experiment to address unresolved issues related to the differences in the partition of plasma heating between electrons and ions in space and laboratory plasmas, which can have important implications for a number of physical systems. (DE95-009543; BNL-61549; CONF-950127-2) Avail: CASI HC A01/MF A01

Models which predict changes in the mass of the thermal rho field are disscussed. I emphasize that while the predictions are strongly model dependent, nevertheless substantial shifts in the thermal rho mass are expected to occur at the point of phase transition. As long as the thermal rho peak does not become too broad, this should provide a striking signature of the existence of a phase transition. DOE

Three applications of magnetic field effects upon the photoluminescence spectrum which provide unique information about semiconductor quantum well structures are presented. The first example shows data which provide a quantitative measure of both the conduction and valence-band the energy dispersion curves for an InGaAs/GaAs single-strained-quantum well and a GaAs/AlGaAs lattice-matched single quantum well. The second subject discusses magnetoluminescence data which provides a clear demonstration for the existence of spectral shifts related to ionized-impurity scattering and the third study involves infrared magnetoluminescence measurements on narrow bandgap semiconductor alloys and heterostructures. Emissive flat panel display systems operating in full color demand higher performance at low voltages (ca. 501000 V) from cathodoluminescent (CL) phosphors than cathode ray tubes require. Hydrothermal synthesis has been suggested as a route to phosphors with improved efficiencies, lower voltage thresholds, and increased saturation power. This hypothesis was tested in europium-doped yttrium orthovanadate (YVO4:Eu), an efficient, red emitting CL phosphor. The CL efficiency of YVO4:Eu crystallized from aqueous solution at 200 C is relatively low until it is annealed. The distribution of particle sizes in the low-temperature phosphor is similar to that in material made via a solid-state route, but crystallites remain much smaller (ca. 400 Angstrom) until they are annealed. These observations, along with the anomalously strong dependence of CL intensity on europium concentration, support a model in which efficiency principally depends on crystallite size. CL efficiency of both solid state and hydrothermal YVO4:Eu increases with voltage at constant power. Surface-bound electrons are likely the dominant influence on efficiency at voltages near threshold. Saturation power is independent of synthetic route. It is apparent that the CL properties of hydrothermally synthesized YVO4:Eu are essentially the same as those of YVO4:Eu produced via conventional, high-temperature routes. DOE

THE NEUTRON POWDER DIFFRACTION AND ACOUSTIC INVESTIGATIONS OF THE NH4SCN PHASE DIAGRAM
L. S. Smirnov, I. Natkaniec, S. I. Bragin, A. I. Solovev, J. Brankowski, V. A. Goncharova, and Gromnitskay 1994 10 p
(DE95-614372; JINR-E-14-94-266) Avail: CASI HC A02/MF A01 (US Sales Only)

The phase diagram of NH4SCN was investigated by neutron powder diffraction and acoustic methods, in order to search for a possible triple point and to reveal possible peculiarities near 200 K, observed by other authors, by Raman light scattering. The transition from the monoclinic to the orthorhombic phase was determined on the p-T phase plane in the range of 193-323 K and up to 1.6 GPa by the acoustic method. The temperature dependences of the unit cell parameters and volume and of the transversal wave velocity reveal some anomalies in the monoclinic NH4SCN phase near 200 K. It is possible that these observed anomalies are due to a freezing of the reorientation processes of NH4(+) ions. DOE

CRYSTALLIZATION OF SOL-GEL DERIVED LEAD ZIRCONATE TITANATE THIN FILMS IN ARGON AND OXYGEN ATMOSPHERES
L. A. Bursill and K. G. Brooks (Ecole Polytechnique Federale de Lausanne, Switzerland.) 1994 27 p
(DE95-615230; UM-P-93/98) Avail: CASI HC A03/MF A01 (US Sales Only)

Electron diffraction and high-resolution electron microscopic techniques are applied to reveal the mechanisms of crystallization of 75 nm thin films of ferroelectric lead-zirconate-titanate (PZT). Sol-gel methods, followed by pyrolysis at 350 C, were used to provide a common starting point after which a variety of rapid-thermal annealing (RTA) experiments in the temperature range 400-700 C were made in argon, oxygen and nitrogen/hydrogen atmospheres. The results are interpreted in terms of the crystal chemical analysis, which points out that partial pressure of oxygen and heating rate are important experimental parameters which must be controlled if ferroelectric perovskite-type Pb2ZrTiO6, rather than pyrochlore-type Pb2ZrTiO(6 + x), where 0 less than X less than 1 or -1 less than X less than 0, is to be obtained after the RTA step. Thus significant improvements in the crystallization of perovskite-type PZT were clearly demonstrated by using argon atmospheres for the RTA step. The results have significance for the production of high-quality ferroelectric thin films, with improved switching and fatigue characteristics, since even small amounts of the pyrochlore phase prove detrimental for these properties. LOW TEMPERATURE SYNTHESIS OF YBa2Cu3O(8-x) AND OTHER CRYSTALLINE OXIDES Patent
Josephine Covino-Hrbacek, inventor (to Navy) 27 Dec. 1994 4 p Filed 2 Aug. 1993
(AD-D017370; US-Patent-5,376,594; US-Patent-Appl-SN-104955; US-Patent-Class-501-12) Avail: US Patent and Trademark Office

Process for preparing a high temperature superconductor such as yttrium barium copper oxides is discussed. Suitable proportions of hydrolyzable salts, oxides, or organometallic compounds of yttrium, barium and copper are dissolved in an acid pH-controlled water-containing organic solvent such as methanol, and subjecting the resulting solution to ultrasonic energy or to an oxidation reduction reaction, preferably while passing oxygen under a positive pressure through the solution, and precipitating a hydrolyzed precursor material. Such precursor material is then heated or annealed at temperatures between about 300 C and about 600 C, also preferably in the presence of flowing oxygen, to produce the desired high temperature superconductor material. STM STUDIES OF CLEAN, CO- AND O2-EXPOSED Pt(100)-HEX-R0.7 DEG
A. Borg, A. M. Hilmen, and E. Bergene 19 May 1994 13 p Prepared in cooperation with Technical Univ. of Norway, Trondheim
(PB95-195376; STF19-S94002) Copyright Avail: Issuing Activity (National Technical Information Service (NTIS))

The structure of the Pt(100)-hex-R0.7 deg reconstructed phase has been studied by scanning tunneling microscopy (STM). The hexagonal first layer superstructure of this surface was imaged with atomic resolution. The fivefold periodicity of this reconstruction was confirmed. The coexistence of differently oriented hexagonal domains on a single terrace was observed. Steps along the longer corrugation length of the surface reconstruction were found, on the average, to follow the (N 1) direction of the hexagonal Pt overlayer rather than any low-index direction of the square substrate. Upon exposure to various adsorbates, such as CO and O2, the hexagonal reconstructions at the Pt(100) surface are lifted. At room temperature an adsorbate-covered (1 x 1) surface remains. This structural transformation was investigated. NTIS

MORPHOLOGY AND MICROSTRUCTURE OF (111) CRYSTALLINE CeO2 FILMS GROWN ON AMORPHOUS SiO2 SUBSTRATES BY PULSED-LASER ABLATION
S. Zhu, D. H. Lowndes, J. D. Budai, T. Thundat, D. P. Norton, and R. J. Warmack Nov. 1994 6 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract DE-AC05-84OR-21400)
(DE95-008842; CONF-941144-110) Avail: CASI HC A02/MF A01

The surface morphology and microstructure of (111)-oriented CeO2 thin films, grown on amorphous fused silica (SiO2) substrates by low-energy-ion-beam assisted pulsed laser ablation, have been studied by atomic force microscopy (AFM) and x-ray diffraction (XRD). These CeO2 films are aligned with respect to a single in-plane axis despite being deposited on an amorphous substrate. There is a honeycomb-like growth morphology to the films and island-growth can be observed in thicker films. These islands, inside of which are high density of honeycomb-like clusters, are separated by a void network with approximately 700 nm width. However, on the surface of the thinnest film approximately 3 nm, only very small clusters (diameter less than 60 nm) appear, and the boundaries of the void network are undefined, which implies that the film is just beginning to coalesce into clusters (grains). The combined AFM images and XRD pattern suggest these clusters probably are the initial seeds for the subsequent island growth. Based on these results, the growth mechanism of oriented CeO2 films on amorphous fused silica substrates is discussed. DOE

DIRECT DETERMINATION OF GRAIN BOUNDARY ATOMIC STRUCTURE IN SrTiO3
M. M. McGibbon, N. D. Browning, A. J. McGibbon, M. F. Chisholm, and S. J. Pennycook Dec. 1994 6 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract DE-AC05-84OR-21400)
(DE95-008847; CONF-941144-102) Avail: CASI HC A02/MF A01

In the electroceramic SrTiO3 the grain boundary atomic structure governs a variety of electrical properties such as non-linear 1-5 characteristics. An understanding of this atomic structure-property relationship for individual grain boundaries requires a technique which probes both composition and chemical bonding on an atomic scale. Atomic structure models for tilt boundaries in SrTiO3 bicrystals have been determined directly from experimental data, by combining high-resolution Z-contrast imaging to locate the cation columns at the boundary, with simultaneous electron energy loss spectroscopy to examine light element coordination at atomic resolution. In this paper we compare and contrast the grain boundary structure models of symmetric and asymmetric boundaries in SrTiO3. DOE

A VALENCE-FLUCTUATION MECHANISM WITH HIGHLY ANISOTROPIC S-WAVE PAIRING
B. H. Brandow 1995 3 p Presented at the Stanford Conference on Spectroscopies in Novel Superconductors, Stanford, CA, 15-18Mar. 1995 Submitted for publication in Journal of Physics and Chemistry of Solids
(Contract W-7405-eng-36)
(DE95-009419; LA-UR-95-972; CONF-950356-1) Avail: CASI HC A01/MF A01

The author has developed a fairly ab initio theory of cuprate superconductivity, based on the concept that the above-T(sub c) state is a normal Fermi liquid with strong electronic correlations of the type found in valence-fluctuation (VF) and heavy-fermion materials. The ground-state-correlation aspect is found to provide a satisfactory source or mechanism for the pairing. In addition to the high T(sub c)'s this explains many of the unusual features of cuprate superconductivity. DOE

ALLOYING EFFECTS OF KONDO INSULATORS
Cheng-Chung Lee, Wang Xu (Nanjing Univ., China.), Chun Chen (Nanjing Univ., China.), and Ming-Wen Xiao (Nanjing Univ., China.) Sep. 1994 28 p
(DE95-614308; IC-94/286) Avail: CASI HC A03/MF A01 (US Sales Only)

The effects of nonmagnetic impurities (Kondo holes) in Kondo insulators (KI) are studied which is based on the U = (infinity) Anderson model in the framework of a slave-boson mean-field theory under the coherent-potential approximation (CPA). The density of states for f-electrons and its variation with the concentration of Kondo holes are calculated self-consistently. The specific-heat coefficient, residual resistivity, and the T = 0 static susceptibility in the alloying system are obtained. The results show that the insulating gap in KI can easily be smeared out by Kondo holes, and the system changes gradually from an insulator to a heavy-fermion metal with increasing concentration, which is in qualitative agreement with experiments. Furthermore, the appearance of an impurity band in the gap comes out naturally in the dilute limit of our CPA calculations. DOE

THE ONE-DIMENSIONAL MODEL OF THE OFF-CENTRE POTENTIAL OF THE FLUORINE ION IN THE NaBr LATTICE
F. Despa Oct. 1994 11 p
(DE95-614310; IC-94/316) Avail: CASI HC A03/MF A01 (US Sales Only)

Fluorine ions in NaBr have associated large dipole moments with low-lying energy levels. It is well known that the dipoles were found to have equilibrium orientations in the (110) direction. A one-dimensional, double-well harmonic oscillator potential model is assumed for the relaxation rate calculation of this off-center system. It is possible by superimposing an asymmetric potential which localizes the particle in one potential well and assuming that, the coupling between the particle and the lattice vibrations can lead to the relaxation of the system. These preliminaries theoretical studies are used to determine the height of the potential barrier between the two minima of the off-center potential in the one-dimensional case approximation. DOE

THE QUANTUM INTERFERENCE EFFECT IN SEMICONDUCTOR SPACE CHARGE LAYERS STUDIED BY FEYNMAN PATH INTEGRALS: GENERAL FORMALISM AND ILLUSTRATIVE EXAMPLES
I. Nachev Oct. 1994 20 p
(DE95-614483; IC-94/334) Avail: CASI HC A03/MF A01 (US Sales Only)

The subband energy states in low-dimensional structures, quantum wells, and heterostructures are computed by a new method, which directly accounts for the quantum interference effect. It is based on the sum of Feynman paths in real space and time. The basis of this method is a special procedure, which sums a huge number of Feynman paths - to of order of 10(exp 663), as shown in one of the presented examples. The method has a wider applicability range as compared to conventional techniques based on the Schroedinger equation, and can be applied to modelling the following two cases: (1) resonant tunneling structures or space charge layers in which one discrete energy level interacts with quasi-continuum of

states; and (2) compounds with negative energy gaps. Several illustrative examples are given and possible modifications and applications to other problems are outlined. DOE

PHASE TRANSFORMATIONS IN MELT-SPUN Y-Ba-Cu-O BULK SUPERCONDUCTOR
H. Wu, M. J. Kramer, K. W. Dennis, and R. W. McCallum 1994 4 p Presented at the Applied Superconductivity Conference, Boston, MA, 16-21 Oct. 1994
(Contract W-7405-eng-82)
(DE95-010237; IS-M-814; CONF-941013-34) Avail: CASI HC A01/MF A01

Powders of YBa2Cu3O7 (Y123) and compositions around Y123 were heated by a containerless process and melt-spun in 21 percent oxygen atmosphere at temperatures of 1400 to 1650 C. Homogeneous materials were obtained with micron and submicron crystalline phases uniformly dispersed in an amorphous matrix. For Y123, the crystalline phases are identified by x-ray absorbsion diffraction (XRD) as BaCu2O2 and Y2O3 when the melt-spinning temperature is below 1600 C. At 1650 C, the crystalline phases are Y4Ba3O9, BaCu2O2 and Y2O3. The phase composition of the solidified melt is directly related to the oxygen content of the melt and can be related to the equilibrium phase diagrams at lower oxygen partial pressures. Isothermal annealing in oxygen at temperatures 500 to 950 C reveals that the crystallization sequence is: Y123 begins to form at 500 C, Y123 with minor amount of Y2BaCuO5 at 800 C, Y123 with very minor amount of CuO at 900 C, and single phase Y123 at 950 C. JOSEPHSON BREAK JUNCTION THIN FILM DEVICE Patent
Ignacio M. Perez, inventor (to Navy) and William R. Scott, inventor (to Navy) 27 Dec. 1994 9 p Filed 10 Oct. 1991
(AD-D017343; US-Patent-5,376,624; US-Patent-Appl-SN-777773; US-Patent-Class-505-190) Avail: US Patent and Trademark Office

A Josephson break junction device suitable for highly sensitive electronic detecting systems. A superconductor film such as YBa2Al3O7 is deposited on a substrate such as a single-crystal MgO. The film is fractured across a narrow strip by at least one indentation in the substrate juxtaposed from the strip to form a break junction. A transducer is affixed to the substrate for applying a bending movement to the substrate to regulate the distance across the gap formed at the fracture to produce a Josephson turned junction effect. Alternatively or in addition to the transducer, a bridge of a nobel metal is applied across the gap to produce a weak- link junction. DTIC

SPACE QUALIFIED HYBRID SUPERCONDUCTOR/SEMICONDUCTOR PLANAR OSCILLATOR CIRCUIT
F. A. Miranda, C. M. Chorey, R. R. Romanofsky, and K. B. Bhasin Jun. 1995 12 p Presented at the Low Temperature Electronics and High Temperature Superconductivity Symposium, Reno, NV, 21-26 May 1995; sponsored by the Electrochemical Society
(RTOP 235-01-0A)
(NASA-TM-106978; E-9541; NAS 1.15:106978) Avail: CASI HC A03/MF A01

We report on the space qualification of a hybrid superconductor/semiconductor planar local oscillator (LO) at 8.4 GHz. This oscillator was designed, fabricated, and tested as a component for the High Temperature Superconductivity Space Experiment 2 (HTSSE-2). The LO consisted of a GaAs MESFET and microstrip circuitry patterned onto a YBa2Cu3O(7-delta) high temperature superconducting (HTS) thin film on a 1.0 x 1.0 sq cm lanthanum aluminate (LaAlO3) substrate. At 77 K, this oscillator achieved power output levels up to 10 dBm into a 50 Ohm load. When incorporated into a full cryogenic receiver, the LO provided output powers within 0.0-3.0 dBm with less than 50 mW of dc power dissipation. Space qualification data on the sensitivity of the HTS films to the processing steps involved in the fabrication of HTS-based components are presented. Data on ohmic contacts, strength of wire bonds made to such contacts, and aging effects as well as vibration test results are discussed. Author

ACOUSTOMAGNETOELECTRIC EFFECT IN A SUPERLATTICE
S. Y. Mensah, F. K. A. Allotey, and S. K. Adjepong (Cape Coast Univ., Ghana.) Sep. 1994 9 p
(DE95-613445; IC-94/298) Avail: CASI HC A02/MF A01 (US Sales Only)

The acoustomagnetoelectric effect (AME) in a semiconductor superlattice (SL) has been studied for an acoustic wave in the region ql much greater than 1. The expression for the acoustomagnetoelectric current j(sup AME) was calculated in the (tau) = constant approximation. The result indicates that the existence of j(sup AME) in SL may be due to the finite gap band and the periodicity of the electron spectrum. It is shown, in particular, that when (omega)(sub q) greater than (Delta) and (Delta) much greater than T ((omega)(sub q) is the frequency of the acoustic phonons; 2(Delta) is the miniband width of SL and T is the temperature measured in energy unit) the SL behaves as a monopolar semiconductor bulk material and in that case j(sup AME) (yields) 0. A MONTE-CARLO MODEL OF IONIC TRANSPORT ACROSS A SOLID INTERFACE
Ivo. S. Nachev Oct. 1994 17 p
(DE95-613447; IC-94/320) Avail: CASI HC A03/MF A01 (US Sales Only)

An improved Monte-Carlo model of ionic transport across a solid interface in two-dimensional triangular lattice is presented. The new features of the model are: (1) more-realistic form of the microscopic potential of the ion-ion interaction; and (2) accounting of the mutual ion interactions up to second nearest neighbors. This way it is possible to simulate more flexible the ionic transport across the real interface between a fast-ion conducting glass and the intercalate in the cathode of a Lithium thin-film battery. Numerical results computed with this model are presented by emphasizing on the influence of the internal interface on the ion distribution, the site energies and the open circuit voltage. DOE

PROCESSING AND CHARACTERIZATION OF NANOCRYSTALLINE MOLYBDENUM DISILICIDE (MoSi2) CONSOLIDATED BY HOT ISOSTATIC PRESSING (HIP) Ph.D. Thesis
M. S. Haji-Mahmood 10 Feb. 1995 97 p
(Contract W-7405-eng-82)
(DE95-010243; IS-T-1729) Avail: CASI HC A05/MF A02

This work studied the effect nanocrystalline processing may have on mechanical properties of MoSi2 and the ease with which MoSi2 powder can be processed into a bulk shape. MoSi2 presently is limited by poor strength above 1000 C and brittleness below DBTT. This work studied cold and hot isostatic pressing (CIP, HIP). The attrited, CIPed, and HIPed samples were characterized by chemical analysis, XRD, SEM, microhardness, optical microscopy, and quantitative metallography (porosity, density). Fracture toughness of the nanocrystalline MoSi2 was found to be a factor of two higher than conventional MoSi2 and the hardness of 1500 C-HIPed compacts were higher, as well. Modulus test showed the calculated elastic constants to be higher than the original Cerac material. DOE

POLARISATION RESONANCE IN X-RAY DIFFRACTION
P. Goodman, D. Paterson, and S. Matheson 1994 15 p
(DE95-616727; UM-P-94/44) Avail: CASI HC A03/MF A01 (US Sales Only)

The study of crystal structures by means of dynamic X-ray diffraction has placed a challenge to theoreticians to revise the X-ray diffraction theory based on Maxwell's equation. In this paper the feasibility of using 'polarization resonance' as a tool in the determination of absolute configuration for asymmetric structures is investigated. Two (left- and right-handed), sigma(+) and sigma(-), circular polarization states for 3-beam conditions are considered. Moreover, extending interaction into the 3rd dimension (normal to the beam) opens the possibility of absolute configuration determination of asymmetric structures in 3 dimensions. The computational scheme used is shown in terms of scattering diagrams.

VERTICAL TRANSPORT IN GaAs/AlGaAs SUPERLATTICES Ph.D. Thesis
Shahla Khorram 1993 115 p
Avail: Univ. Microfilms Order No. DA9420496

An improved experimental method has been developed to study perpendicular carrier transport in heterostructures by a microwave time of flight technique. Transport properties of three samples, one with bulk GaAs, one with a AlGaAs barrier and one with a AlGaAs/GaAs superlattice have been measured and analyzed in a comparative manner. A direct measurement of miniband conduction in superlattices is presented. The carrier velocity-field characteristic of GaAs/AlGaAs superlattice is measured in the field range of 10-40 kV/cm at 77 K. Perpendicular transport of electrons in a series of GaAs/AlGaAs superlattices is investigated by a microwave time of flight technique. Hot carrier transient effects are studied by analyzing the phase versus bias data in two GaAs/Al(0.2)Ga(0.8)As superlattices. The effect of hot carrier transient behavior on the phase data is found to be more pronounced at fields below 30 kV/cm. Barrier height dependence of the carrier transport in GaAs/AlGaAs superlattices is also investigated, and the velocity-field characteristics of a GaAs/Al(0.4)Ga(0.6)As superlattice at 77 K is obtained. It is found that the electron velocity in superlattices has a strong dependence on the barrier height. We observe an oscillatory behavior in the velocity-field characteristics of all the superlattices. A simple scattering limited transport model which is closely related to Bloch oscillations is invoked to explain the data.

DIAMOND THIN FILM TEMPERATURE AND HEAT-FLUX SENSORS Final Report
M. Aslam, G. S. Yang, A. Masood, and R. Fredricks 3 Jul. 1995 20 p
(Grant NAG1-1328)
(NASA-CR-198859; NAS 1.26:198859) Avail: CASI HC A03/MF A01

Diamond film temperature and heat-flux sensors are developed using a technology compatible with silicon integrated circuit processing. The technology involves diamond nucleation, patterning, doping, and metallization. Multi-sensor test chips were designed and fabricated to study the thermistor behavior. The minimum feature size (device width) for 1st and 2nd generation chips are 160 and 5 micron, respectively. The p-type diamond thermistors on the 1st generation test chip show temperature and response time ranges of 80-1270 K and 0.29-25 microseconds, respectively. An array of diamond thermistors, acting as heat flux sensors, was successfully fabricated on an oxidized Si rod with a diameter of 1 cm. Some problems were encountered in the patterning of the Pt/Ti ohmic contacts on the rod, due mainly to the surface roughness of the diamond film. The use of thermistors with a minimum width of 5 micron (to improve the spatial resolution of measurement) resulted in lithographic problems related to surface roughness of diamond films. We improved the mean surface roughness from 124 nm to 30 nm by using an ultra high nucleation density of 10(exp 11)/sq cm. To deposit thermistors with such small dimensions on a curved surface, a new 3-D diamond patterning technique is currently under development. This involves writing a diamond seed pattern directly on the curved surface by a computer-controlled nozzle.

Ba(1-x)K(x)BiO3 (BKBO) has a transition temperature, T(sub c), of 34 K and is unique among the high-temperature oxide superconductors because it is isotropic. It has been little studied and it is desirable to understand its behavior from the perspectives of both potential electronic applications and fundamental understanding of superconductivity. This study has involved a determination of the structural, electronic, and chemical properties of BKBO films and junctions deposited by RF magnetron sputtering. It was found that films with the highest T(sub c) and lowest rocking curve widths were consistently grown on SrTiO3. This material was therefore used as a buffer layer for growing high-quality BKBO films on the more practical substrates LaAlO3 and NdGaO3. SrTiO3 was also used as a barrier to fabricate BKBO/SrTiO3/BKBO SIS junctions for the first time. These junctions exhibited tunneling behavior. Modelling based on electrical measurements and electron diffraction observations of surface structure indicated island-type growth of the barrier material. The thickness variation in the tunnel barrier as a result of island formation limits the practical potential of such junctions in most applications where tunneling current uniformity and junction reproducibility are required.

STUDIES OF C(60) AND C(70) AND OTHER FULLURENES: SYNTHESIS, DERIVATION, ELECTROCHEMISTRY, LUBRICANT PROPERTIES AND NEW COMPOSITION MATERIALS Final Report
R. E. Smalley, J. L. Margrave, R. H. Hauge, L. J. Wilson, and W. E. Billups Feb. 1995 37 p
(Contract DAAL03-92-G-0186)
(AD-A292726; ARO-30446.1-CH) Avail: CASI HC A03/MF A01

New designs for fullerene generators have been developed, including systems for producing endohedral species with metals inside the C60 or C70 cages. Also, focussed solar energy has been utilized for fullerene production. Electrochemical studies have led to the identification of C60(-1), C60(-2), C60(-6) ions and utilized for preparation of superconducting K3C60. Birch reductions of C60 and C70 led to C60H30 and C70H30 respectively. Adducts of C60 with tetraphenylcyclopentadienone and with cyclopropananaphthalene are described, and low-temperature reactions of C60 with H2 and with energetic nitrogen ion beams are reported. C60 does not appear to enhance the lubricity of motor oil formulations. The vapor pressure has been measured and it is estimated that the total pressure reaches one atmosphere at c.a. 1523K.

FERROMAGNETIC POTTS MODEL IN A MAGNETIC FIELD: FINITE LATTICE EXTRAPOLATION OF THE (1 + 1)-DIMENSIONAL HAMILTONIAN
A. Bassir and A. Benyoussef (Laboratoire de Magnetisme et Physique des

Hautes E Energies, Rabat, Morocco.) Sep. 1994 6 p
(DE95-614447; IC-94/294) Avail: CASI HC A02/MF A01 (US Sales Only)

The (1 + 1)-dimensional Hamiltonian q-state ferromagnetic Potts model in an external magnetic field H is studied using finite lattice extrapolation techniques. The possible phases and their boundaries are determined from the ground state energy and the gap in the excitation energy, for arbitrary values of q and both for positive and negative field. We found that, for H positive, there is a critical value q(c), where a first order transition line appears for q greater than q(c), starting at the zero field transition point and terminating at a critical point in (h/lambda, H/lambda) plane, which separates the disordered phase and the ordered phase in the direction of H. For h negative a critical transition line separating the disordered phase and the others (q - 1) ordered phases becomes first order for q greater than q(c). DOE

PICOSECOND PHASE CONJUGATION: NEW APPLICATIONS, DEVICES, AND MATERIALS Final Report, 1 Oct. 1991 - 31 Dec. 1994
Jack Feinberg 31 Dec. 1994 65 p
(Contract F49620-92-J-0022)
(AD-A293195; AFOSR-95-0238TR) Avail: CASI HC A04/MF A01

In this project we investigated four main areas: (1) Temporal shaping of picosecond laser pulses using beam coupling in a photorefractive crystal. We showed both theoretically and experimentally that one can add or subtract picosecond light pulses onto existing light pulses to create arbitrary temporal waveforms; (2) The physics of the photorefractive effect in barium titanate crystals. We showed that photovoltaic currents play an important role in the formation of photorefractive gratings in barium titanate. We also derived a theory to explain the curved beam paths observed in photorefractive phase conjugators; (3) Frequency doubling in infrared light in glass. We proved decisively that second harmonic generation in optically prepared glass is caused by a dc electric field imprisoned in the glass. We mapped the spatial profile of this dc field to a resolution of one micron; and (4) Injecting diode laser arrays using phase conjugation. We demonstrated that injecting broad-area diode laser with light causes the laser array to emit a spatially and spectrally narrow output beam. We use a double phase conjugator to guide light from an injecting laser into the lasing regions of the laser array. DTIC

DEVELOPMENT OF GERMANIUM-SILICON GROWTH TECHNOLOGY Final Report, 1 Feb. 1992 - 31 Jan. 1995
D. W. Greve 15 Mar. 1995 24 p
(Contract F49620-92-J-0155)
(AD-A293199) Avail: CASI HC A03/MF A01

Germanium-silicon epitaxial heterostructures have been grown and evaluated for possible use in far-infrared detectors. Growth was performed by ultra-high vacuum chemical vapor deposition at temperatures of 550-600 C. Multiple quantum well structures were grown and evaluated by X-ray diffraction, secondary ion mass spectrometry, and photoluminescence. Infrared absorption measurements showed that free-carrier absorption was dominant for normal-incidence illumination. Heterojunction internal photoemission structures have also been grown and characterized. The results show that both structures can be successfully fabricated using this technique when growth parameters are correctly chosen. DTIC

X-BAND MAGNICON AMPLIFIER RESEARCH AT THE NAVAL RESEARCH LABORATORY Interim Report
Steven H. Gold, Bahman Hafizi, and Arne W. Fliflet 19 Apr. 1995 10 p
(AD-A293203; NRL/MR/6793-95-7666) Avail: CASI HC A02/MF A01

We present a progress report on a program to develop a high-power second harmonic magnicon amplifier at 11.4 GHz for linear accelerator applications. The experiments are being carried out on the NRL Long-Pulse Accelerator Facility using a plasma cathode to create the electron beam. Typical beam parameters are 500 kV, 200 A, 5.5 mm diameter, with a approximately 300 nsec voltage flattop and a approximately 10(exp -2) Hz repetition rate. An initial deflection cavity experiment demonstrated two-cavity gain of approximately 15 dB at a frequency ship of 0.18%, in good agreement with theory and simulation. A complete five cavity magnicon circuit was designed via computer simulation, fabricated, and cold tested. This circuit is now undergoing experimental tests. In preliminary experiments, a low power saturation effect was observed in the deflection cavities, apparently due to plasma formation caused by the diode x-ray flux and by inadequate vacuum conditions. Following a major effort to improve the vacuum and surface conditions, very recent experiments have shown that is possible to 'burn through' this low power saturation effect, and achieve high fields in the deflection cavities. However, high power emission from the output cavity has not yet been observed. We are also evaluating new fourth magnicon designs via time-dependent multimode simulations. DTIC

An investigation was undertaken to determine the feasibility of integrating low temperature growth GaAs:As and silicon for the development of optoelectronic devices. These devices attempt to exploit the optoelectronic properties of LT GaAs while integrating the structure on silicon substrates. Numerical models of LT GaAs are developed and implemented to aid in the design of such devices. An integrated MSM-LED structure was successfully fabricated on a silicon substrate. The results of the study show that it is feasible to integrate LT GaAs devices and silicon technology. Further development of the design software and a variety of structures, including a high voltage switch, a transceiver and a GHz tunable filter are proposed for a Phase 2 effort. DTIC

(Grant AF-AFOSR-0319-91)
(AD-A293405; AFOSR-95-0170TR) Avail: CASI HC A22/MF A04

This final technical report describes the continual superconductivity research on the materials and structural phases responsible for the above 200-K superconducting transitions, their synthesis conditions, and the study

of the physical properties associated with these transitions. Resistive transitions having superconducting-like character have been observed in multi-phase ceramic YBaCuO samples and on surfaces of nominal YBa2Cu3O7 single crystals in the temperature range of 260 K to 340 K. The appearance of these transitions appears to require certain experimental measuring conditions including an oxygen atmosphere during measurements. Magnetization studies on these materials show a flux-trapping hysteretic behavior at similar temperatures, i.e., a more diamagnetic behavior in the zero-field-cooled-magnetization than the field-cooled-magnetization characteristic of a weak superconducting phase being present. The synthesis conditions and structural information on multi-phase YBaCuO samples exhibiting reproducible flux-trapping phenomenon at 336 K is also detailed. In addition, studies of the paramagnetic Meissner effect on a niobium disk and of Josephson properties in YBa2Cu3O7 single crystals and YBaCuO thin films are reported. DTIC

BAND GAP MEASUREMENT OF Si(1-x)C(x)/Si (0 LESS THAN OR EQUAL TO X LESS THAN OR EQUAL TO 0.014) ALLOYS USING PHOTOLUMINESCENCE AND SPECTROSCOPIC ELLIPSOMETRY
H. Lee, S. R. Kurtz, J. A. Floro, J. Strane, C. H. Seager, S. R. Lee, E. D. Jones, J. F. Nelson, T. Mayer, and S. T. Picraux 1995 6 p Presented at the Spring Meeting of the Materials Research Society, San Francisco, CA, 17-21 Apr. 1995
(Contract DE-AC04-94AL-85000)
(DE95-011020; SAND-94-2718C; CONF-950412-8) Avail: CASI HC A02/MF A01

The authors have characterized the optical properties of heteroepitaxial Si(1-x)C(x)/Si (0 less than or equal to x less than or equal to 0.014) alloys grown on Si substrates by solid phase epitaxy using spectroscopic ellipsometry and photoluminescence. The measured dielectric function confirms that the samples are of good crystalline quality. The 14-K photoluminescence spectra of Si(1-x)C(x)/Si show several defect peaks. After hydrogen passivation, the authors observed a new peak near 1.15-1.17 eV which increases in energy with the incorporation of carbon. The authors tentatively assign this peak as the no-phonon peak of the Si(1-x)C(x) epilayer. They discuss the alloy shift of the observed spectroscopic features in terms of the C-induced change in the Si indirect band gap. DOE

MOLECULAR NANOCLUSTERS AS PRECURSORS TO CONDUCTIVE THIN FILMS AND CRYSTALS Technical Report, 1 May 1994 - 30 Jun. 1995
Andrew C. Hillier, Joachim H. Schott, and Michael D. Ward 20 Jan. 1995 17 p
(Contract N00014-93-1-0563)
(AD-A290278; TR-8) Avail: CASI HC A03/MF A01

The fabrication of electrically conductive organic thin films and crystals is of both fundamental and technological interest. However, the mechanisms that control crystal structure and morphology during crystallization are not yet completely understood. In order to address these issues, we have employed scanning tunneling and atomic force microscopies to view the formation of molecular conductors on single crystal substrates. We have observed that these materials form ordered molecular nanoclusters, in which at least one dimension has molecular length scale. These nanoclusters evolve into thin films, and eventually, bulk crystals. The role of interactions between the substrate and organic overlayers, as well as the influence of intermolecular interactions within the molecular clusters, has been revealed. DTIC

DYNAMICS OF CURRENT DRIVEN DISORDERED JOSEPHSON JUNCTION ARRAYS
Daniel Dominguez, Niels Gronbech-Jensen, and Alan R. Bishop 1995 13 p Presented at the Workshop on Macroscopic Quantum Phenomena and Coherence in Superconducting Networks, Frascati, France, 1-5 Mar. 1995
(Contract W-7405-eng-36)
(DE95-009418; LA-UR-95-967; CONF-9503124-1) Avail: CASI HC A03/MF A01

We present dynamical simulations of disordered Josephson junction arrays with a bias current. We study the 4 characteristics and vortex dynamics as a function of integer frustration f = n, weak frustration f = n + delta (delta much less than 1) and full frustration pairs close to the critical current i(sub c). We focus on the study of the plastic flow of vortices (f = n + delta), of vortex-antivortex pairs (f = n), and the dynamics of domain walls (f = n + 1/2) close to i(sub c). We analyze the voltage noise and vortex fluctuations in the plastic flow regimes. We obtain the phase diagram for the different dynamical regimes as a function of disorder and applied current. We also study the dynamical critical behavior of depinning close to i(sub c) in the gauge glass limit of the model, f approaches infinity, calculating critical exponents for the voltage onset and voltage fluctuations. We discuss our results within the context of present theories of the non-linear dynamics of disordered media. DOE

MINORITY AND MAJORITY CARRIER TRANSPORT CHARACTERIZATION IN COMPOUND SEMICONDUCTORS
Michael L. Lovejoy 1995 15 p Presented at the Workshop on Semiconductor Characterization, Gaithersburg, MD, 30 Jan. - 2 Feb. 1995
(Contract DE-AC04-94AL-85000)
(DE95-010873; SAND-95-0054C; CONF-950117-4) Avail: CASI HC A03/MF A01

A review of minority and majority carrier transport characterization techniques is presented. Minority transport is discussed in the context of base transport in HBTs where the base transit time can be an important component of the total transit time through the transistor. Characterization techniques to measure minority carrier mobilities in heavily-doped compound semiconductors and theoretical results are reviewed. Majority carrier transport in high-performance PHEMT structures is discussed. Parallel conduction of the heavily-doped contact layer and the 2-D electron gas makes measurements of the 2-D electron concentration difficult. Techniques to measure the 2-D concentration are reviewed. Recent application of these techniques have yielded new data for GaAs that has important implications for device design and shows the need for measurements of other CS-materials and devices to realize accurate device design and optimization. TRANSITIONS, DEFECTS, AND WHISKERED MICROSTRUCTURES Final Technical Report, 1 Jul. 1991 - 31 Dec. 1994
Richard James, David Kinderlehrer, and Mitchell Luskin 15 Feb. 1995 10 p
(Grant AF-AFOSR-0301-91)
(AD-A292796; AFOSR-95-0178TR) Avail: CASI HC A02/MF A01

James and Kinderlehrer have given a new theory of magnetostriction. The theory shows excellent agreement with experiment and has motivated new experiments on the relation between domain structure and behavior

by Lord and by DeGraef. The theory implies a new mechanism for magnetostriction in Tb(x)Dy(1-x)Fe2 (x near 0.3). It also strongly suggests the existence of materials (termed 'magnetomemory' materials by the authors) that would have magnetostrictive strain that is two orders of magnitude larger than the largest produced by current giant magnetostrictive materials. Luskin and his research group have developed an advanced computational model for the dynamics of crystals which undergo a martensitic transformation. They have used this model to compute the development of martensitic microstructure and the propagation of the interface separating the austenitic phase from the martensitic phase, and they have obtained results for the influence of the surface energy and the viscosity on the dynamics. James, Kinderlehrer, Luskin and their collaborators have studied new mechanisms for hysteresis, and have clarified the role of elastic incompatibility, shuffling, kinetics, and microstructure. DTIC

SDIO: DISCOVERING SUPERCONDUCTING MATERIALS AT HIGH TEMPERATURES Final Technical Report, Jun. 1993 - 31 May 1994
Francis J. DiSalvo 25 Aug. 1994 3 p
(Contract F49620-93-1-0328)
(AD-A292820; AFOSR-95-0139TR) Avail: CASI HC A01/MF A01

The research funded under this grant focused on the layered structure compounds BaNIS2 and BaCoS2. The former is a metallic conductor while the latter is a magnetic Mott insulator. We planned doping studies to study the effects of both disorder and the crossover to the metallic state. It is hoped that doping a Mott insulator to the metallic state might produce a high temperature superconductor. Unfortunately, due to the termination of the SDIO program, this research was supported for only one year (instead of the planned three years), so the project is not complete. DTIC

POISSON'S RATIO FOR HEXAGONAL CRYSTALS
Arthur Ballato Mar. 1995 13 p
(AD-A293556; ARL-TR-424) Avail: CASI HC A03/MF A01

General expressions for Poisson's ratio are derived for hexagonal crystals; simplified forms are given for cases involving symmetry directions. Crystals of hexagonal symmetry include a number of the binary semiconductor systems with the piezoelectric wurtzite structure, such as GaN and AlN. These are becoming increasingly important for high technology applications. One of the most important representatives of this class is the family of poled electroceramics, including BaTiO3, PZT, and related alloys. All hexagonal classes have the same elastic matrix scheme, so for our purposes it is not necessary to distinguish between the different point groups; the presence of piezoelectricity is neglected. PHASE STABILITY, POINT DEFECTS AND SITE PREFERENCE OF FeAl AND NiAl WITH TERNARY ADDITIONS
C. L. Fu and J. Zou 1994 7 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract DE-AC05-84OR-21400)
(DE95-009694; CONF-941144-141) Avail: CASI HC A02/MF A01

First-principles calculations have been used to investigate the defect properties and the site preference of FeAl and NiAl with ternary additions. It is found that a 'triple-defect' structure model becomes invalid in describing the defect structure of FeAl (which is weakly ordered). The calculated mono-vacancy concentration on the Fe sites is lower than available experimental values by an order of magnitude, which may suggest the formation of defect complexes or the need of sufficiently long annealing time to anneal out quenched-in vacancies. For the site preference of ternary additions in FeAl, Cr and Ti are found to occupy Al sublattices, whereas Ni has a distinct preference for the Fe sites. The substitutional behavior of ternary elements in FeAl is consistent with the trend in the calculated heat-of-formation. For Fe addition in Al-rich NiAl, Fe atoms occupy Ni sublattices exclusively. The site preference of Fe addition in Ni-rich NiAl is dependent on alloy composition and temperature. At low temperatures, Fe atoms are found to preferentially occupy Al sublattices in Ni-rich alloys. DOE

Research continued in the growth of boron nitride films on various substrates including Si(100), diamond (100), Cu(100) and Ni(100) via ion beam assisted electron beam evaporation. Fourier transform infrared spectroscopy and high resolution transmission electron microscopy showed that the total films on Si and diamond consisted of the sequence from the substrate: a-BN, h-BN, c-BN. The c-BN layers formed as a function of deposition temperature, ion current and thickness. The occurrence of this layer is attributed to increasing intrinsic biaxial compressive stress generated during deposition. The interface and surface structure of highly oriented diamond films were examined by low resolution transmission electron microscopy (LRTEM), high resolution transmission electron microscopy (HRTEM) and using a transmission electron microscope with in situ cathodoluminescence. Interface studies by HRTEM indicated that SiC formation may have assisted in the formation of highly oriented diamond. Additionally, in some areas diamond appeared to be in direct contact with the silicon substrate; no indication of an amorphous or crystalline interlayer was observed. The grain boundaries of the highly oriented (100) diamond particles observed by LRTEM showed that the misorientation between these particles was compensated by a series of parallel dislocations. Finally, TEM/CL results showed that the majority of luminescence in the plan view was from misoriented or highly defective diamond grains. DTIC

(Contracts W-31-109-eng-38; W-7405-eng-36)
(DE95-009914; ANL/MSD/CP-84769; CONF-950201-12) Avail: CASI HC A02/MF A01

Wide-angle neutron diffraction measurements taken at temperatures from

6 to 250 K indicate that the portion of a chromium sample with a mean grain size of 73 nm is antiferromagnetically ordered at temperatures below 100 K. The Neel temperature (about 120 +/- 10 K) for this nanocrystalline sample is suppressed considerably below that of strain-free single-crystal chromium (311 K). Similar measurements of other samples indicate that the amount of antiferromagnetic order decreases with decreasing grain size. The grain size dependence of antiferromagnetic order is discussed in the context of a two-state model. DOE

SCHWINGER-BOSON STUDIES OF THE SINGLE HOLE MOTION IN A 2D QUANTUM ANTIFERROMAGNET
C. Q. Wu, L. Yu, and Z. B. Su (Academia Sinica, Beijing, China.) Sep. 1994 17 p
(DE95-614444; IC-94/272) Avail: CASI HC A03/MF A01 (US Sales Only)

Within the Schwinger-boson approach for the t-J model, the single hole problem in a two-dimensional quantum antiferromagnet is studied by using the quantum Bogoliubov-de Gennes formalism which treats the distortion of the spin background and quantum spin fluctuations on an equal footing. Several self-trapped localized hole states are found in the distorted spin-background as in the case of an anisotropic Heisenberg model. These localized hole states survive at finite temperatures when the antiferromagnetic order becomes short-ranged. The energy separation between the two lowest states is reduced by considering the spin-background distortion, but it remains finite. DOE

EVIDENCE FOR ELECTRONIC ENERGY LOSS PROCESSES STIMULATING SOLID PHASE EPITAXIAL REGROWTH OF SPATIALLY ISOLATED AMORPHOUS REGIONS IN SEMICONDUCTOR SYSTEMS
I. Jencic, I. M. Robertson, M. W. Bench (Minnesota Univ., Minneapolis, MN.), and M. A. Kirk (Argonne National Lab., IL.) Jan. 1995 6 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contracts DE-FG02-91ER-45439; W-31-109-eng-38)
(DE95-009892; ANL/MSD/CP-85469; CONF-941144-135) Avail: CASI HC A02/MF A01

Solid phase epitaxial regrowth of spatially isolated amorphous regions in Si, Ge and GaP has been stimulated by using an electron beam with energies in the range of 50 to 300 keV. In all materials, the rate at which the amorphous zones disappear decreases as the energy of the electron beam increases from 50 keV reaching a minimum below the threshold displacement voltage before it again increases with increasing electron energy. The experimental results are interpreted in terms of creation and motion of defects (dangling bonds, charged defects) along the amorphous-crystalline interface. DOE

DEFECT CONFIGURATIONS IN NEUTRON-IRRADIATED U3Si2
S. K. Chan, R. C. Birtcher, M. H. Mueller, and J. W. Richardson, Jr. Dec. 1994 7 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract W-31-109-eng-38)
(DE95-009896; ANL/MSD/CP-83382; CONF-941144-136) Avail: CASI HC A02/MF A01

Investigations of the nature of defects in neutron-irradiated intermetallic U3Si2 as a function of dose have been carried out. Defect categories of vacancies and interstitials, their clusters and dislocation loops have been considered. The effects of the displacement field from each on the neutron scattering intensity profiles are presented. The theoretical predictions are compared with experimentally determined intensity profiles from time-of-flight data using the General Purpose Powder Diffractometer at the Intense Pulse Neutron Source of Argonne National Laboratory. The results are illustrated for a particular peak at various doses and the physical implications discussed. DOE

GCMS AND FTIR STUDIES OF BY-PRODUCT INHIBITED GROWTH AND THE RATE-LIMITING STEP IN TEOS-BASED SiO2 CVD
Michael E. Bartram and Harry K. Moffat 1995 8 p Presented at the 187th Meeting of the Electrochemical Society, Reno, NV, 21-26 May 1995
(Contracts DE-AC04-94AL-85000; DE-AC04-76DP-00789)
(DE95-009863; SAND-95-0664C; CONF-950518-3) Avail: CASI HC A02/MF A01

To improve process reliability and deposition methods, it is essential to identify the rate-limiting step in TEOS-based SiO2 CVD and its dependence on process conditions. For this purpose, experiments designed to evaluate by-product inhibition effects and to identify the rate-limiting step in TEOS decomposition have been carried out in a research reactor using GCMS and FTIR. By repetitively sampling a series of reactions in which TEOS was first mixed with ethylene, ethanol, and water in the gas-phase, GCMS was used to show clearly that these reaction by-products do not inhibit the heterogeneous reaction step on SiO2 at 1,000 K. FTIR was used to determine that ethoxy groups from TEOS dissociative chemisorption have a significant lifetime on the SiO2 surface at CVD temperatures and have an activation energy for decomposition of 16 kcal/mol +/- 4 kcal/mol. This is much higher than the activation energy of 6 kcal/mol reported for the initial chemisorption step and is near the 22 kcal/mol reported for the overall activation energy for SiO2 deposition in a cold-wall reactor. These results suggest that, whether or not surface ethoxy groups inhibit TEOS reactions, their decomposition may be directly related to the rate-limiting step in SiO2 deposition. DOE

LASER PROPERTIES OF Yb(3+)-DOPED Sr5(PO4)3F CRYSTALS
C. D. Marshall, S. A. Payne, L. K. Smith, K. I. Schaffers, R. Beach, M. Emanuel, H. T. Powell, W. F. Krupke, and B. H.T. Chai Jun. 1994 5 p Presented at the Lasers and Electro-Optics Society Annual Meeting, Boston, MA, 31 Oct. - 3 Nov. 1994
(Contract W-7405-eng-48)
(DE95-010686; UCRL-JC-117359; CONF-9410192-2) Avail: CASI HC A01/MF A01

Yb(3+) based lasers have received substantial attention over the past several years. Yb-based materials, which typically lase around 1 micron, are aided by the simple electronic structure of Yb(3+) in that it has only two accessible electronic states eliminating the detrimental impact of upconversion or excited state absorption. In addition, the inherently small quantum defect of approximately 10-15% has led to relatively large intrinsic laser slope efficiencies. The pumping and extraction dynamics of Yb:Sr5(PO4)3F crystals will be discussed. A diode array and a free running Cr:LiSAF laser are utilized as pump sources for both Yb-oscillators and amplifiers. DOE

METALLIC MULTILAYERS AT THE NANOSCALE
Alan F. Jankowski Nov. 1994 16 p Presented at the 2nd International Conference on Nanostructured Materials, Stuttgart, Germany, 2-7 Oct. 1994
(Contract W-7405-eng-48)
(DE95-011534; UCRL-JC-118972; CONF-941039-5) Avail: CASI HC A03/MF A01

The development of multilayer structures has been driven by a wide range of commercial applications requiring enhanced material behaviors. Innovations in physical vapor deposition technologies, in particular magnetron sputtering, have enabled the synthesis of metallic-based structures with nanoscaled layer dimensions as small as one-to-two monolayers. Parameters used in the deposition process are paramount to the formation of these small layer dimensions and the stability of the structure. Therefore, optimization of the desired material properties must be related to assessment of the actual microstructure. Characterization techniques such as x-ray diffraction and high resolution microscopy are useful to reveal the interface and layer structure - whether ordered or disordered crystalline, amorphous, compositionally abrupt or graded, and/or lattice strained. Techniques for the synthesis of metallic multilayers with subnanometric layers are reviewed with applications based on enhancing material behaviors as reflectivity and magnetic anisotropy but with emphasis on experimental studies of mechanical properties. SUPPRESSION OF SELF-INTERSTITIALS IN SILICON DURING ION IMPLANTATION VIA IN-SITU PHOTOEXCITATION

J. Ravi (North Carolina State Univ., Raleigh, NC.), Yu Erokhin (North Carolina State Univ., Raleigh, NC.), K. Christensen (North Carolina State Univ., Raleigh, NC.), G. A. Rozgonyi (North Carolina State Univ., Raleigh, NC.), B. K. Patnaik (North Carolina Univ., Chapel Hill, NC.), and C. W. White Feb. 1995 7 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994 Sponsored in part by the National Science Foundation
(Contract DE-AC05-84OR-21400)
(DE95-009173; CONF-941144-119) Avail: CASI HC A02/MF A01

The influence of in-situ photoexcitation during low temperature implantation on self-interstitial agglomeration following annealing has been investigated using transmission electron microscopy (TEM). A reduction in the level of as-implanted damage determined by RBS and TEM occurs athermally during 150 keV self-ion implantation. The damage reduction following a 300 C anneal suggests that it is mostly divacancy related. Subsequent thermal annealing at 800 C resulted in the formation of (311) rod like defects or dislocation loops for samples with and without in-situ photoexcitation, respectively. Estimation of the number of self-interstitials bound by these defects in the sample without in-situ photoexcitation corresponds to the implanted dose; whereas for the in-situ photoexcitation sample a suppression of approx. 2 orders in magnitude is found. The kinetics of the athermal annealing process are discussed within the framework of either a recombination enhanced defect reaction mechanism, or a charge state enhanced defect migration and Coulomb interaction. DOE

ENERGETICS OF Pt ADSORPTION ON Pt(111)
P. J. Feibelman, J. S. Nelson, and G. L. Kellogg Apr. 1995 35 p
(Contract DE-AC04-94AL-85000)
(DE95-010933; SAND-93-2577) Avail: CASI HC A03/MF A01

First-principles Local Density Functional (FP-LDF) and Embedded Atom Method (EAM) total energies, for a single Pt atom adsorbed on Pt(111), are compared to each other and to Field Ion Microscope (FIM) observations. Our EAM calculations predict a small barrier to diffusion and only a slight energy difference between adsorption in the fcc and hcp three-fold hollows (both smaller than 1 meV). They correspond poorly to the results of the FP-LDF calculations, which imply a diffusion barrier of 0.38 eV for passage over a bridge, and a preference of 0.18 eV for the fcc as against the hcp site. FIM measurements yield a diffusion barrier of (0.25 +/- 0.02) eV, and imply that binding in the fcc site is preferred. DOE

STM MEASUREMENTS OF THE INTERACTION OF VACANCIES AND STEPS DURING LOW-ENERGY-ION BOMBARDMENT OF Si(001)
B. S. Swartzentruber Apr. 1995 10 p
(Contract DE-AC04-94AL-85000)
(DE95-010935; SAND-95-0594) Avail: CASI HC A02/MF A01

We create mobile surface vacancies on vicinal Si(001) by bombarding the surface with 300 eV Xe ions at a substrate temperature of 465 C. The vacancies preferentially annihilate at the rough steps retracting them with respect to their smooth neighbors. This process leads to a bimodal terrace width distribution. The retraction of the rough steps due to the vacancy annihilation is in competition with the healing process by which the surface tries to maintain its equilibrium configuration of equally spaced steps. As the two competing processes balance, the surface reaches steady state and subsequent removal of surface atoms is manifest as simple step flow. DOE

SUPERCONDUCTING AND NORMAL-STATE PROPERTIES OF NOVEL MATERIALS Ph.D. Thesis
V. H. Crespi Sep. 1994 195 p
(Contract DE-AC03-76SF-00098)
(DE95-012368; LBL-36770) Avail: CASI HC A09/MF A03

Interest in solid state physics naturally gravitates towards novel systems such as the copper oxide superconductors or the alkali-doped fullerenes. This paper tackles high temperature superconductivity by extension of the BCS theory for ordinary superconductors, in particular, incorporation of anharmonicity in phonon dynamics and anisotropy in electron-phonon coupling. These refinements can account for many anomalous properties of the cuprates. Phonon anharmonicity is consistent with a small isotope effect at optimal doping and a larger isotope effect in suboptimal systems. Anisotropy in the interaction, a plausible consequence of certain anharmonic models, can circumvent objections to electron-phonon coupling based on transport measurements. Such anisotropy is consistent with gap anisotropy and strong temperature dependence of Hall coefficient. In contrast to cuprates, the doped fullerenes appear understandable within the standard model of single electron band theory and BCS theory. Microscopic parameters derivable from transport and critical field measurements yield a self-consistent picture of a disordered Type-2 BCS superconductor. Isotope effects imply that superconductivity is mediated by carbon phonons opposed to alkali atom vibrations. The novel properties of the fullerenes are generally traceable to their microscopic heterogeneity, being a collection of tightly bound but weakly overlapping molecules. Separation of electronic regimes into weak intermolecular overlap and strong carbon-carbon on-ball bonds yields a superconductor with both a large density of states and a high phonon frequency, properties consistent with a relatively high (Tc). Disordered nature of intermolecular overlap produces a large residual resistivity and a universal dependence to the Hall coefficient. This disorder is also consistent with the anomalously large carbon isotope effect for heterogeneous isotopic substitution. DOE

ELLIPTIC DEFORMED CLASSICAL MECHANICS IN THREE-DIMENSIONAL PHASE SPACE
R. M. Yamaleev 1994 10 p
(DE95-613384; JINR-E-2-94-249) Avail: CASI HC A02/MF A01 (US Sales Only)

We suggest the new way of introduction into three-dimensional phase space. Our approach is based on the elliptic deformation of two-dimensional phase space. This kind of deformation we call 'elliptic' because oscillator of deformed mechanics is described by the Jacobi elliptic functions. The theory contains a parameter mu of energy dimensionality, so that for mu approaches infinity the deformed dynamics is reduced to the Newton equations. The quasiclassical way of quantization is considered. DOE

MULTI-PARTICLE CORRELATIONS IN QUATERNIONIC QUANTUM SYSTEMS
S. P. Brumby, G. C. Joshi, and R. Anderson (Massachusetts Inst. of Tech., Cambridge, MA.) 1994 16 p
(DE95-616271; UM-P-94/54; RCHEP-94/15) Avail: CASI HC A03/MF A01 (US Sales Only)

The authors investigated the outcomes of measurements on correlated, few-body quantum systems described by a quaternionic quantum mechanics that allows for regions of quaternionic curvature. It was found that a multi particles interferometry experiment using a correlated system of four nonrelativistic, spin-half particles has the potential to detect the presence of quaternionic curvature. Two-body systems, however, are shown to give predictions identical to those of standard quantum mechanics when relative angles are used in the construction of the operators corresponding to measurements of particle spin components. QUANTUM DYNAMICS IN REGIONS OF QUATERNIONIC CURVATURE
S. P. Brumby and G. Joshi 1994 11 p
(DE95-616276; UM-P-94/24; OZ-94/11) Avail: CASI HC A03/MF A01 (US Sales Only)

The complex unit appearing in the equations of quantum mechanics is generalized to a quaternionic structure on spacetime, leading to the consideration of complex quantum mechanical particles whose dynamical behavior is governed by inhomogeneous Dirac and Schroedinger equations. Mixing of hyper-complex components of wavefunctions occurs through their interaction with potentials dissipative into the extra quaternionic degrees of freedom. An interferometric experiment is analyzed to illustrate the effect. DOE

INTEGRALS OF MOTION IN THE TWO KILLING VECTOR REDUCTION OF GENERAL RELATIVITY
Nenad Manojlovic (Syracuse Univ., NY.) and Bill Spence Aug. 1993 19 p
(DE95-616281; UM-P-93/77; SU-GP-93/7-8) Avail: CASI HC A03/MF A01 (US Sales Only)

We apply the inverse scattering method to the midi-superspace models that are characterized by a two-parameter Abelian group of motions with two spacelike Killing vectors. We present a formulation that simplifies the construction of the soliton solutions of Belinskii and Zakharov. Furthermore, it enables us to obtain the zero curvature formulation for these models. Using this, and imposing periodic boundary conditions corresponding to the Gowdy models when the spatial topology is a three torus T(3), we show that the equation of motion for the monodromy matrix is an evolution equation of the Heisenberg type. Consequently, the eigenvalues of the monodromy matrix are the generating functionals for the integrals of motion. Furthermore, we utilize a suitable formulation of the transition matrix to obtain explicit expressions for the integrals of motion. This involves recursion relations which arise in solving an equation of Riccati type. In the case when the two Killing vectors are hypersurface orthogonal the integrals of motion have a particularly simple form. DOE

TWO-LOOP VACUUM AMPLITUDES IN A NON-ABELIAN GAUGE THEORY ON S(SUB 4)
B. A. Harris and G. C. Joshi 1994 35 p
(DE95-616284; UM-P-93/91) Avail: CASI HC A03/MF A01 (US Sales Only)

The authors have developed a matrix element approach to quantum field theory on S(sub 4), and used a complex l-plane method of performing the resulting angular momentum sums. The methods have been used to reproduce previous results for both one-loop and two-loop vacuum amplitudes for an Abelian gauge theory, including Dirac fermions and scalar bosons. In this paper they extend the formalism to non-Abelian gauge theory and show how the new complex l-plane methods allow the calculation of two-loop vacuum amplitudes involving ghost and gauge fields. It is shown how it is possible to overcome previous calculational limitations, resulting from the form of the ghost and gauge propagators, by performing the entire calculation in angular momentum space without reference to any particular configuration space form of the propagators. The two-loop interacting vacuum amplitude is derived in a non-Abelian gauge theory on a curved background and the required counterterm to renormalize the background gravitational action on S(sub 4) is given. WHAT'S WRONG WITH ANOMALOUS CHIRAL GAUGE THEORY?
T. D. Kieu May 1994 9 p Presented at the First International Symposium on Symmetries in Subatomic Physics, Taipei, Taiwan, 16-18 May, 1994 Sponsored in part by the Australian Research Council
(DE95-616285; UM-P-94/58; RCHEP-94/16) Avail: CASI HC A02/MF A01 (US Sales Only)

It is argued on general ground and demonstrated in the particular example of the Chiral Schwinger Model that there is nothing wrong with apparently anomalous chiral gauge theory. If quantized correctly, there should be no gauge anomaly and chiral gauge theory should be renormalizable and unitary, even in higher dimensions and with non-Abelian gauge groups. Furthermore, it is claimed that mass terms for gauge bosons and chiral fermions can be generated without spoiling the gauge invariance. DOE

BEYOND THE VARIATIONAL PRINCIPLE IN QUANTUM FIELD THEORY
Lloyd C. L. Hollenberg 1994 8 p Sponsored in part by the Australian Research Council
(DE95-616286; UM-P-94/64; RCHEP-94/18) Avail: CASI HC A02/MF A01 (US Sales Only)

A method of summing diagrams in quantum field theory beyond the variational Gaussian approximation is proposed using the continuum form of the recently developed plaquette expansion. In the context of (lambda)(phi)(sup 4) theory the Hamiltonian, H(phi), of Schroedinger functional equation H(phi) Psi(phi) = E Psi (phi) can be written down in tri-diagonal form as a cluster expansion in terms of connected moment coefficients derived from Hamiltonian moments with respect to a trial state V(sub 1)(phi). The usual variational procedure corresponds to minimizing the zeroth order of this cluster expansion. At first order in the expansion the Hamiltonian in this form can be diagonalized analytically. The subsequent expression for the vacuum energy E contains Hamiltonian moments up to fourth order and hence is a summation over multi-loop diagrams laying the foundation for the calculation of the effective potential beyond the Gaussian approximation. APPROXIMATE ANALYTIC DIAGONALIZATION OF LATTICE QCD
Lloyd C. L. Hollenberg 1994 12 p
(DE95-616332; UM-P-93/106; OZ-93/25) Avail: CASI HC A03/MF A01 (US Sales Only)

The first order plaquette expansion of lattice Hamiltonians is applied to quantum chromodynamics with two massless quarks. Analytic expressions are obtained for the vacuum energy density, epsilon(sub 0)(g), and lowest vector and nucleon masses, M(sub V)(g) and M(sub N)(g). The vacuum energy density is valid into the weak coupling region down to about g(sup 2) approximately 0.8, demonstrating the genuine non-perturbative nature of these approximates. The 'specific heat' derived from epsilon(sub 0)(g) agrees well with numerical calculations in the t-expansion. The ratio R = M(sub N)/M(sub V) increases from the strong coupling limit of zero to a more realistic value of R approximately = 1.2 approaches 1.3 at the transition from strong to weak coupling. DOE

LIGHT-FRONT DYNAMICS OF CHERN-SIMONS SYSTEMS
Prem P. Srivastava Oct. 1994 17 p
(DE95-613467; IC-94/305) Avail: CASI HC A03/MF A01 (US Sales Only)

The Chern-Simons theory coupled to complex scalars is quantized on the light-front in the local light-cone gauge by constructing the self-consistent Hamiltonian theory. It is shown that no inconsistency arises on using two local gauge-fixing conditions in the Dirac procedure. The light-front Hamiltonian turns out to be simple and the framework may be useful to construct renormalized field theory of particles with fractional statistics (anyons). The theory is shown to be relativistic and the extra term in the transformation of the matter field under space rotations, interpreted in previous works as anomaly, is argued to be gauge artefact. DOE

REVIEW OF GRAVITY PROBE B
1995 35 p
(Contract NASw-4627)
(NASA-CR-198959; NAS 1.26:198959) Avail: CASI HC A03/MF A01

In response to a request by the NASA Administrator, the National Research Council (NRC) has conducted an accelerated scientific review of NASA's Gravity Probe B (GP-B) mission. The review was carried out by the Task Group on Gravity Probe B, under the auspices of the NRC's Space Studies Board and Board on Physics and Astronomy. The specific charge to the task group was to review the GP-B mission with respect to the following terms of reference: (1) scientific importance - including a current assessment of the value of the project in the context of recent progress in gravitational physics and relevant technology; (2) technical feasibility - the technical approach will be evaluated for likelihood of success, both in terms of achievement of flight mission objectives but also in terms of scientific conclusiveness of the various possible outcomes for the measurements to be made; and (3) competitive value - if possible, GP-B science will be assessed qualitatively against the objectives and accomplishments of one or more fundamental physics projects of similar cost (e.g., the Cosmic Background Explorer, COBE). EINSTEIN'S LENGTH CONCEPT
M. S. Khvastunov 1994 7 p
(DE95-613368; JINR-R-2-94-222) Avail: CASI HC A02/MF A01 (US Sales Only)

Einstein's length measuring procedure of a rod moving with velocity upsilon (0 less than or equal upsilon less than c) is discussed. The part of this procedure, namely measuring the length of the resting (upsilon = 0) rod, is realizable and leads to the elongation of the moving rod. The other part of Einstein's procedure, measuring the length of the moving (upsilon not equal to 0) rod, is not realizable and leads to the contraction of the moving rod. As the result of this procedure the moving rod contraction concept is supposed physically unfounded. DOE

IRREDUCIBLE GREEN'S FUNCTIONS METHOD IN THE THEORY OF HIGHLY CORRELATED SYSTEMS
A. L. Kuzemsky Sep. 1994 27 p
(DE95-614446; IC-94/292) Avail: CASI HC A03/MF A01 (US Sales Only)

The self-consistent theory of the correlation effects in highly correlated systems (HCS) is presented. The novel irreducible Green's function (IGF) method is discussed in detail for the Hubbard model and random Hubbard model. The interpolation solution for the quasiparticle spectrum, which is valid for both the atomic and band limit, is obtained. The IGF method permits calculation of the quasiparticle spectra of many-particle systems with the complicated spectra and strong interaction in a very natural and compact way. The essence of the method is deeply related to the notion of the generalized mean fields (GMF), which determine the elastic scattering corrections. The inelastic scattering corrections leads to the damping of the quasiparticles and are the main topic of the present consideration. The calculation of the damping has been done in a self-consistent way for both limits. For the random Hubbard model the weak coupling case has been considered and the self-energy operator has been calculated using the combination of the IGF method and coherent potential approximation (CPA). The other applications of the method to the s-f model, Anderson model, Heisenberg antiferromagnet, electron-phonon interaction models, and quasiparticle tunneling are discussed briefly. DOE

GLOBAL ASPECTS OF THE WZNW REDUCTION TO TODA THEORIES
I. Tsutsui and L. Feher (Ecole Normale Superieure, Lyon, France.) Aug. 1994 23 p
(DE95-737230; INS-1048) Avail: CASI HC A03/MF A01

It is well-known that the Toda Theories can be obtained by reduction from the Wess-Zumino-Novikov-Witten (WZNW) model, but it is less known that this WZNW (yields) Toda reduction is 'incomplete'. The reason for this incompleteness being that the Gauss decomposition used to define the Toda fields from the WZNW field is valid locally but not globally over the WZNW group manifold, which implies that actually the reduced system is not just the Toda theory but has much richer structures. In this note we furnish a framework which allows us to study the reduced system globally, and thereby present some preliminary results on the global aspects. For simplicity, we analyze primarily 0+1 dimensional toy models for G=SL(n,R), but we also discuss the 1+1 dimensional model for G=SL(2,R) which corresponds to the WZNW (yields) Liouville reduction. NON-CRITICAL STRING FIELD THEORY WITH NON-ORIENTABLE STRING INTERACTIONS
Yoshiyuki Watabiki Jun. 1994 16 p
(DE95-737160; INS-1038) Avail: CASI HC A03/MF A01 (US Sales Only)

We study the non-critical string field theory with non-orientable string interactions by using the transfer matrix formalism in the dynamical triangulation. For any value of c (total central charge of matter), we have constructed the non-orientable string field theory at the discrete level. Two coupling constants G and G' which satisfy the relation (G')(sup 3)=GG' are introduced, where G counts the number of untwisted handles of the world-sheet while G' counts the number of cross-caps. In the case of the non-critical string theory which correspond to multicritical one matrix models (including c=0 case), we have succeeded in taking the continuum limit, and then have obtained the continuous string field theory. DOE

CHAOS-ENHANCED TRANSPORT AND AGGREGATION IN CHAOTIC FLOWS Final Technical Report, 15 Nov. 1993 - 14 Nov. 1994
Julio M. Ottino 7 Apr. 1995 6 p
(Contract F49620-92-J-0060)
(AD-A293892; AFOSR-95-0319TR) Avail: CASI HC A02/MF A01

Chaos-enhanced transport in cellular flows - such as those generated within cavities by a top free-flowing stream - are studied with the long term objective of devising means to increase the rate of transport between surfaces and bulk flows. In several experimental cavities chaotic advection is generated by periodic modulation of the free stream velocity. We find that transport occurs only near reattachment points of wall-attached streamlines. Detailed local measurements of transport in these regions places upper bounds on global transport rates in the cavity. The buildup of mixed area is measured and exit manifolds for lower cells are identified. DTIC

N95-31646 Rice Univ., Houston, TX.
VARIATIONAL OPTIMIZATION IN QUANTUM FIELD THEORY Ph.D. Thesis
Alan Charles Mattingly 1993 90 p
Avail: Univ. Microfilms Order No. DA9408646

We examine two different techniques for studying quantum field theories in which a 'variational' optimization of parameters plays a crucial role. In the context of the O(N)-symmetric lambda phi(exp 4) theory we discuss variational calculations of the effective potential that go beyond the Gaussian approximation. Trial wavefunctionals are constructed by applying a unitary operator to a Gaussian state. We calculate the expectation value of the Hamiltonian using the nonGaussian trial states generated, and thus obtain optimization equations for the variational-parameter functions of the ansatz. At the origin, phi(sub c) = O, these equations can be solved explicitly and lead to a nontrivial correction to the mass renormalization, with respect to the Gaussian case. Numerical results are obtained for the (O + 1)-dimensional case and show a worthwhile quantitative improvement over the Gaussian approximation. We also discuss the use of optimized perturbation theory (OPT) as applied to the third-order quantum chromodynamics (QCD) corrections to R(sub e(+)e(-)). The OPT method, based on the principle of minimal sensitivity, finds an effective coupling constant that remains finite down to zero energy. This allows us to apply the Poggio-Quinn-Weinberg smearing method down to energies below 1 GeV, where we find good agreement between theory and experiment. The couplant freezes to a zero-energy value ofalpha(sub s)/pi = 0.26, which is in remarkable concordance with values obtained phenomenologically. Dissert. Abstr.

PHASE TRANSITIONS AND GRAVITATIONAL COLLAPSE Ph.D. Thesis
N. A. Gentile Sep. 1994 142 p
(Contract W-7405-eng-48)
(DE95-011732; UCRL-LR-118331) Avail: CASI HC A07/MF A02

Results are presented for numerical calculations of gravitational collapses and explosions. Two effects are studied. The first involves aspects of the numerical models used in almost all current gravitational collapse calculations. The second involves phase transitions in the equation of state of dense matter. A (1 + 1) dimensional general relativistic hydrodynamics code was constructed to investigate both effects. A modification of standard artificial viscosity methods was developed. This extended both the tensor artificial viscosity formulation and the artificial heat conduction formulation to the general relativistic regime. This method shows better results for collapse calculations than the standard scalar artificial viscosity. Numerical collapse calculations were also examined with respect to the number of zones used in the model. These calculations suggest that the number of zones used in current supernova calculations may be insufficient, and that the more sophisticated artificial viscosity methods used may be useful in future core collapse investigations. The second effect studied by this thesis is the impact of phase transitions in dense matter on the results of core collapse in Type 2 supernovae. Two different phase transitions were investigated. The QCD phase transition embodies the prediction of quantum chromodynamics that at high density the constituents of baryonic matter will be free quarks and gluons. The effects on the shock wave formed by core collapse and bounce is studied for various phase transitions. We find that some of the phase transitions modeled significantly increase the shock strength. DOE

SELECTION OF SWEDISH SCHOLASTIC APTITUDE TEST TAKERS AS A FUNCTION OF SOCIOECONOMIC BACKGROUND AND ABILITY: EVALUATION THROUGH FOLLOW-UP
S. E. Reuterberg 1994 40 p
(PB95-212072) Avail: CASI HC A03/MF A01

The present study is part of project which aims at studying recruitment to higher education in Sweden. The Swedish Scholastic Aptitude Test (SweSAT) plays an important part in the admission to this educational level and therefore it is natural to start the project by examining the function of this test. In the present study we will confine ourselves to the process of self-selection to the SweSAT among individuals from different socioeconomic groups. The strength of the self-selection is measured by the difference between the SweSAT takers and the others within each socioeconomic group on grades from compulsory school, achievement tests and intelligence tests. According to all variables studied, the test takers constitute a positively selected group within all socioeconomic groups. The strongest selection effects are found within group 3 and the weakest ones in group 1. However, due to great social differences in the total sample, the test takers from group 3 still obtain lower means on all variables studied than do the test takers from group 1. NTIS

NON-COMPARABILITY OF FEMALE AND MALE ADMISSION TEST TAKERS: EVALUATION THROUGH FOLLOW-UP
A. Maekitalo 1994 26 p
(PB95-212080) Avail: CASI HC A03/MF A01

The purpose of the study is to investigate the possible differential selection to the Swedish Scholastic Aptitude Test (SweSAT) to see whether the gender differences in results on the SweSAT may, to some extent, be explained by initial differences in achievement between the male and female SweSAT takers. The empirical results consistently showed that male SweSAT takers constituted a more strongly selected group with respect to ability and previous school achievement than did female SweSaT takers. Thus, within the areas where females excelled initially, the selection effect decreased their advantage among the SweSAT takers. Within the areas where males excelled, the selection effect increased their advantage among the SweSAT takers. These results show that we cannot assume that selected and self-selected groups are comparable. Thereby, it is argued that it is essential to take the differential selection effects into account. REPORT TO THE SECRETARY OF DEFENSE. ACQUISITION REFORM: COMPARISON OF ARMY'S COMMERICAL HELICOPTER BUY AND PRIVATE SECTOR BUYS
17 Mar. 1995 31 p
(GAO/NSIAD-95-54; B-260371) Avail: CASI HC A03/MF A01; GAO, PO Box 6015, Gaithersburg, MD 20884-6015 HC

Army officials have cited the acquisition of the Army's New Training Helicopter (NTH) as an early example of success in streamlining its acquisition process to buy a commercial item. In this report, as a 'case study,' we (1) compare this Army acquisition with acquisitions by two of the largest private sector purchases of similar helicopters to determine key differences between these buys and the reasons for such differences, (2) identify successes the Army achieved in streamlining the NTH acquisition, and (3) discuss potential improvements that could be achieved from acquisition reform efforts. Our comparison is not intended to suggest that the identified private sector processes would be appropriate for a government procurement. However, as the government moves to greater use of commercial practices to procure commercial items, a comparative analysis can be a helpful tool in gauging status and progress. Author

ANNUAL REPORT TO THE CHAIRMAN AND RANKING MINORITY MEMBERS, HOUSE AND SENATE COMMITTEES ON APPROPRIATIONS. STATUS OF OPEN RECOMMENDATIONS: IMPROVING OPERATIONS OF FEDERAL DEPARTMENTS AND AGENCIES (Diskette Supplement)
30 Jan. 1995 268 p Diskette supplement: 3.5 diskette Contains pamplet as supplement
(GAO/OP-95-1; B-205879) Avail: CASI HC A12/MF A03/DK A02; GAO, PO Box 6015, Gaithersburg, MD 20877 HC

Each year, GAO's work contributes to many legislative and executive branch actions that result in significant financial savings and other improvements in government operations. Some, but not all, are identified through GAO's system for periodically following up to determine the status of actions taken on the recommendations made in its audit and evaluation reports. In fiscal year 1994, GAO made 1,450 recommendations, but, more importantly, about 4,400 GAO recommendations made over the past 5 years have been implemented. This report includes summary information on the status of all GAO recommendations that have not been fully implemented and highlights some of the key ones. This information should help congressional and agency leaders prepare for upcoming appropriations and oversight activities and stimulate further actions to achieve the desired improvements in government operations. In addition to including printed issue area summaries highlighting the ipact of GAO's work and the key open recommendations, this volume includes a set of computer diskettes with details on all open recommendations. REPORT TO CONGRESSIONAL COMMITTEES. FEDERAL RESEARCH: INTERIM REPORT ON THE PILOT TECHNOLOGY ACCESS PROGRAM
7 Mar. 1994 27 p
(GAO/RCED-94-75; B-255654) Avail: CASI HC A03/MF A01; GAO, PO Box 6015, Gaithersburg, MD 20877 HC

This interim report provides information on the status, implementation, and evaluation of the Pilot Technology Access Program (TAPP). In addition, this report includes the judgements of the participating centers' directors on TAPP's effect on small businesses' productivity and innovation. TAPP provides small businesses with access to (1) computerized data bases containing technical and business information that they typically are not aware of, or cannot afford, and (2) experts knowledgeable in a wide range of technical fields. REPORT TO CONGRESSIONAL COMMITTEES. FEDERAL RESEARCH: INTERIM REPORT ON THE SMALL BUSINESS INNOVATION RESEARCH PROGRAM
8 Mar. 1995 35 p
(GAO/RCED-95-59; B-259333) Avail: CASI HC A03/MF A01; GAO, PO Box 6015, Gaithersburg, MD 20877 HC

This report, authorized by the Small Business Research and Development Enhancement Act of 1992, focuses on the quality of small businesses' research proposals for technological innovation, the implementation of a provision for technical assistance by agencies participating in the program, and duplicate funding of similar research by more than one agency. To improve interagency coordination and to reduce the risk of funding duplicate research, GAO recommends that steps be taken to (1) determine whether the certification form that accompanies SBIR proposals needs to be improved and, if so, take the necessary steps to revise it; (2) develop substantive definitions and guidelines for agencies and companies regarding 'duplicate' research; and (3) provide interagency access to current information regarding recent SBIR awards. CONTRIBUTION OF GROUPWARE TO CORPORATE COMMUNICATION: TOWARDS THE HORIZONTAL ORGANIZATION
S. Joosten, E. Ploeger, and S. Brinkkemper Dec. 1994 22 p
(PB95-197661; Memo-INF-94-76) Copyright Avail: CASI HC A03/MF A01

Groupware is a name for computer-based systems supporting groups of people engaged in a common task. Groupware systems are used in the corporate communication architecture to facilitate a shift towards a horizontal organization. This paper reports about empirical comparative research which was done to find out whether groupware actually facilitates the horizontal organization, and how. Twenty-two applications in five organizations with groupware experience have been studied with respect to the communication type, the application type and the supported business function. This research shows which contributions are made to the horizontal organization and what difficulties are encountered. NTIS

DATA STORAGE MODELING AND MANAGEMENT FOR MULTIMEDIA INFORMATION SYSTEMS Ph.D. Thesis
Kingsley Chukwudum Nwosu 1993 184 p
Avail: Univ. Microfilms Order No. DA9422257

In spite of the tremendous technological advances, there is a paramount

hindrance to the full realization of real-time multimedia information processing. The bandwidths of the secondary storage devices have not improved relative to other technological advances. For real-time information retrieval and presentation, it is imperative that data, for a given medium, be retrievable at a given rate. For some media, these rates exceed the capability of current storage devices. As a result of these and other related problems in multimedia information processing, this research (1) captures the different storage allocation and retrieval requirements of various multimedia objects through a multimedia object model that incorporates different classifications of multimedia objects based on their I/O requirements; (2) presents some decomposition strategies necessary for generating the storage allocation units of multimedia objects in order to achieve their I/O requirements; (3) describes the necessary and sufficient conditions and criteria for an object's allocatability to a storage device; (4) presents efficient allocation criteria and techniques for multimedia object storage and distribution; (5) describes the bipartite graph model for mapping objects to storage devices as a precondition for determining optimal allocation of objects; (6) presents the optimal matching of objects to storage devices via the bipartite graph using the Hungarian Method; (7) presents techniques for exploiting the configuration of storage devices as a means of achieving efficient multimedia object allocations; (8) develops the extensions of the allocation strategies discussed for object allocations in a distributed computing environment; (9) presents simulation results based on the decomposition and allocation strategies developed that achieve the retrieval requirements of multimedia objects and also efficiently distribute the objects on the storage devices; (10) presents the designs of the storage and retrieval schemes for a multimedia object manager which are necessary for implementing the allocation strategies in a computing system; and (11) develops the design of the integrated data management system that describes the resolutions of the critical issues of distributed computing with respect to the multimedia object allocation strategies presented and also details the system functionalities and management interfaces and processes. This research develops a multimedia object model that classifies every multimedia object based on its I/O requirements; and using the decomposition techniques, and allocation parameters and criteria developed that take cognizance of the various characteristics of the objects, it shows that by optimizing the allocation of multimedia objects, we can achieve efficient object storage. The necessary storage and retrieval schemes are also developed that demonstrate the implementability of the proposed strategies. Dissert. Abstr.

EXTENDING A MULTI-SET RELATIONAL ALGEBRA TO A PARALLEL ENVIRONMENT

P. W. P. J. Grefen and J. Flokstra Sep. 1994 21 p

(PB95-207106; Memo-INF-94-50) Copyright Avail: CASI HC A03/MF A01

The report proposes an extended relational algebra for use with parallel database systems. The language has a close connection to the standard relational algebra and thus has a well-known and widely accepted background. The language is formally defined and has clear semantics. Further, the language has complete DML expressiveness, so it can either be used as a full-blown database manipulation language on its own, or as a formal background for other languages. Section 2 describes the extended relational algebra in a sequential (centralized) database environment. Section 3 extends the sequential language to a parallel language by adding concepts for data distribution and process allocation. It is shown that these concepts nicely fit into the formal character of the language. Section 4 discusses expression rewriting in the extended algebra, as performed in query optimization and query parallelization. Finally, Section 5 describes experience with the language in the PRISMA parallel database system project. NTIS

SUPPORTING DATA INTENSIVE APPLICATIONS WITH MEDIUM GRAINED PARALLELISM Final Report, Jul. 1991 - - Jun. 1994

John L. Pfaltz, James C. French, Andrew S. Grimshaw, and Sang H. Son Jul. 1994 39 p

(Contract DE-FG05-88ER-25063)

(DE95-010164; DOE/ER-25063/T14; UVA-527437/CS95/101) Avail: CASI HC A03/MF A01

The purpose of this second three year grant was to investigate opportunities for medium grained parallelism in data intensive applications; or more succinctly, can one create effective parallel database systems? It should be noted that the last three years have not been kind to parallel object-oriented database systems: to our knowledge none of those that have been implemented has been particularly effective. A second, implicit goal was to complete the innovative functional, object-oriented database language and system, called ADAMS, and to demonstrate its performance in a parallel environment. Thus the overall agenda was (1) to create new mechanisms that exploit parallel computing power, (2) install it in ADAMS, and (3) analyze its behavior. It will be seen that, while we did come up with several new innovative ideas which we thoroughly tested, we did not always have time to install them into the run-time ADAMS library. Although we proposed rewriting our storage manager to take advantage of the Concurrent File System (CFS) on the Intel iPSC/2, we did not. During the grant period, the Computer Science Department acquired a dedicated cluster of 8 SPARC 10's. Gradually the hypercube implementation has been phased out, and replaced by that on the SPARC cluster. DOE

ADAPTIVE IMAGE ENHANCEMENT OF TEXT IMAGES THAT CONTAIN TOUCHING OR BROKEN CHARACTERS

P. Stubberud, V. Kalluri, and J. Kanai 29 Nov. 1994 20 p

(Contract DE-FC08-90NV-10872)

(DE95-010173; DOE/NV-10872/T176) Avail: CASI HC A03/MF A01

Text images that contain touching or broken characters can significantly degrade the accuracy of optical character recognition (OCR) systems. This paper proposes an adaptive image restoration technique that can improve OCR accuracy by enhancing touching or broken character images. The technique begins by processing a distorted text image with an OCR system. Using the distorted text image and output information from the OCR system, an inverse model of the distortion that caused the touching or broken character problem is generated. After generating the inverse model, the unrecognized distorted characters are filtered by the inverse model and then processes by the OCR system. To demonstrate its feasibility, six distorted text images were processed using this technique. Four of the text images, two with touching characters and two with broken characters, were synthesized using mathematical distortion models. The remaining two distorted text images, one with touching characters and one with broken characters, were distorted using a photocopier. The performance of the adaptive image restoration technique was measured using pixel accuracy and OCR improvement. The examples demonstrate that this technique can improve both the pixel and OCR accuracy of text images containing touching or broken characters. DOE

JOIN PROCESSING IN RELATIONAL DATABASE SYSTEMS Ph.D. Thesis

Ram Danturti Gopal 1993 216 p

Avail: Univ. Microfilms Order No. DA9420149

An extremely important issue in the efficient implementation of a relational database system is query optimization. Query optimization is

concerned with the minimization of the amount of information that must be accessed from a database in order to respond to a user's query. In this research, we address the issue of join processing in relational database systems. Join is an important query which arises frequently, both in traditional and in emerging database applications. The need for efficient join processing algorithms is strongly underscored in the literature as it is an expensive query operation which directly limits the wide spread use of database systems in real world application. The central premise of this research is that optimization of the sequence in which the data pages of the underlying relations are accessed can lead to a significant improvement in the join execution cost over the current methods. Accordingly, we develop three approaches for join processing. In the first two approaches, we develop a tree representation consisting of the data pages of the relations. The tree representation reveals the structural properties of the join and provides a framework to identify the optimal page access sequence that minimizes the join execution cost. We formulate the join as a tree traversal process and accordingly develop efficient tree traversal algorithms. The third approach draws its inspiration from the hybrid hash algorithm, which is considered the state-of-the-art join processing method. In this approach, we segment the relations into zones. The join is materialized by processing the zones sequentially. We theoretically show that the proposed approach is guaranteed to outperform the hybrid hash method. The proposed approaches utilize indices on the participating relations to accelerate the join. The algorithms developed in this research are proceduraly straight forward and are easily transportable to any database management system. The data structures needed for the algorithms are simple, and easy to create and manage. Our computational experience suggests that the proposed approaches can lead to an order of magnitude improvement over current approaches to join processing, and thus constitute an important contribution to the theory and practice of relational database management. Dissert. Abstr.

SPACE SCIENCES LABORATORY PUBLICATIONS AND PRESENTATIONS Annual Report, 1 Jan. - 31 Dec. 1994

T. W. Moorehead, compl Washington Apr. 1995 74 p

(NASA-TM-108484; NAS 1.15:108484) Avail: CASI HC A04/MF A01

This document lists the significant publications and presentations of the Space Sciences Laboratory during the period Jan. 1 - Dec. 31, 1994. Entries in the main part of the document are categorized according to NASA Reports (arranged by report number), Open Literature, and Presentations (arranged alphabetically by title). Also included for completeness is an appendix (arranged by report number) listing preprints issued by the laboratory during this reporting period. Some of the preprints have not been published; those already published are so indicated. Most of the articles listed under Open Literature have appeared in referenced professional journals, books, monographs, or conference proceedings. Although many published abstracts are eventually expanded into full papers for publications in scientific and technical journals, they are often sufficiently comprehensive to include the significant results of the research reported. Therefore, published abstracts are listed separately in a subsection under Open Literature. The organizational code of the cognizant SSL branch or office is given at the end of each entry. Author

SYSTEM CONSIDERATIONS FOR EFFICIENT COMMUNICATION AND STORAGE OF MSTI IMAGE DATA

Robert F. Rice Oct. 1994 84 p Prepared for Ballistic Missile Defense Organization, Washington, DC

(Contract NAS7-1260; RTOP 889-54-49-10-20)

(NASA-CR-198869; JPL-Publ-94-16; NAS 1.26:198869) Avail: CASI HC A05/MF A01

The Ballistic Missile Defense Organization has been developing the capability to evaluate one or more high-rate sensor/hardware combinations by incorporating them as payloads on a series of Miniature Seeker Technology Insertion (MSTI) flights. This publication represents the final report of a 1993 study to analyze the potential impact f data compression and of related communication system technologies on post-MSTI 3 flights. Lossless compression is considered alone and in conjunction with various spatial editing modes. Additionally, JPEG and Fractal algorithms are examined in order to bound the potential gains from the use of lossy compression. but lossless compression is clearly shown to better fit the goals of the MSTI investigations. Lossless compression factors of between 2:1 and 6:1 would provide significant benefits to both on-board mass memory and the downlink. for on-board mass memory, the savings could range from $5 million to $9 million. Such benefits should be possible by direct application of recently developed NASA VLSI microcircuits. It is shown that further downlink enhancements of 2:1 to 3:1 should be feasible thorough use of practical modifications to the existing modulation system and incorporation of Reed-Solomon channel coding. The latter enhancement could also be achieved by applying recently developed VLSI microcircuits. Author

DEVELOPMENT OF TECHNICAL INFORMATION PROCESSING SYSTEMS

Ji Ho Lee, Tae Whan Kim, Sun Ja Kim, Young Min Kim, Kwang Choi, Joung Hun Oh, Hyun Suk Choung, Jong Yong Keum, An Na Yoo, and Deuck Haing Harn et al Dec. 1993 52 p In KOREAN

(DE95-613311; KAERI/RR-1269/93) Avail: CASI HC A04/MF A01

The major goal is to develop a more efficient information management system by connecting the KAREI serials database, which enables the users to access the database from their own laboratory facilities through KAREI-NET. The importance of this project is to make the serials information of KAERI easily accessible to users as valuable resources for research and development activities. The results of the project are as follows. (1) Development of the serials database and retrieval system enabled us to access the serials holding information through KAERI-NET. (2) The database construction establishes a foundation for the management of 1600 serials held in KAERI. (3) The system can be applied not only to KAERI but also to similar medium-level libraries. THE DEVELOPMENT OF KAERI MANAGEMENT INFORMATION SYSTEM 2: THE DEVELOPMENT OF TIME SHEET MANAGEMENT SYSTEM

Sin Bok Kang, Yeong Taek Kim, Soo Jin Park, Yeong Cheol Ko, Jong Bok Lee, Eun Sook Han, and Hyeon Jeong Kim Jan. 1994 104 p In KOREAN

(DE95-613355; KAERI/RR-1300/93) Avail: CASI HC A06/MF A02

The work done for the development, operation, and maintenance of Time Sheet Management System is described. This work is a part of the development of KAERI management information system. Manpower management is essential to cope with the external circumstances promptly and to maximize the productivity of the organization. This work aims at setting up a basis for the manpower management system. It is widely recognized that neither timely decision making nor competitive edge can be secured with the traditional management technology in a so rapidly changing situation at home and abroad, which can be characterized by openness and informality. The necessity of efficient and scientific man-power management by time-study has emerged on the reorganization of KAERI by expanding matrix system in order to enhance the research and development productivity. AN ARCHITECTURAL APPROACH TO STRATEGIC INFORMATION SYSTEMS PLANNING FOR THE OFFICE OF NAVAL INTELLIGENCE M.S. Thesis

Bruce F. Loveless Sep. 1994 166 p

(AD-A289930) Avail: CASI HC A08/MF A02

Strategic information systems (IS) planning aligns an organization's information systems with its critical strategic goals and supporting mission-specific functions. This thesis demonstrates a structured approach to strategic IS planning and provides a guide for developing an information systems architecture to support the organizational goals of the Office of Naval Intelligence (ONI). By first examining established information systems planning practices, architectural design methodologies. Department of Defense (DOD) guidelines, and published ONI organizational objectives, this thesis guides the reader through the decision-making process involved in strategic IS planning. The methodology is structured on guidance provided by the DOD's Technical Architecture Framework for Information Management (TAFIM) Standards-Based Architecture (SBA) Planning Guide. This thesis

demonstrates the validity of using the structured architectural approach, presented by the TAFIM and other strategic IS planning concepts, in concert with intelligence-specific IS planning guidance to systematically address the issues, problems, and critical decisions faced by organizations attempting the strategic IS planning process. IMPACT OF TASK PROPERTIES, DATA DISPLAY FORMAT AND COGNITIVE CHARACTERISTICS ON RECALL PERFORMANCE: A CUMULATIVE RESEARCH INVESTIGATION Ph.D. Thesis
Narayan S. Umanath 1987 345 p
Avail: Univ. Microfilms Order No. DA9411842

This research evaluates individual performance in an information recall context examining the effects due to MIS variables, task environment, and individual cognitive characteristics. The principal MIS variables manipulated here are data display format and order of presentation. Task-related variables are claimed to be capable of explaining a substantial amount of variance in the response variable of interest. To date, the rich and potentially significant factor, task properties, has not been sufficiently harnessed for use as a treatment variable(s) in MIS-oriented research. Three basic elements, content, structure, and complexity, may, in combination, provide a reasonable description of 'task.' Experiments in this research attempt to measure task characteristics by manipulating one or more of these three task elements simultaneously. Individual differences, especially individual cognitive style/skill, have been used as moderator(s) in several studies/experiments that assess the impact of IS on managerial performance. Though the value of cognitive style as an explanatory variable in MIS-related inquiries is questioned by some, this research attempts to examine the merits/demerits of cognitive factors (cognitive style and skill) in an information recall context. A framework reflecting the theme of the inquiry was developed to guide the research effort. A research strategy based on the concept of the cumulative research paradigm (a series of studies/experiments that are conducted such that every study/experiment in the program is firmly anchored to and builds on the findings of its predecessor(s)) was adopted. In all, five experiments and a field survey were conducted. The cumulative findings of this research clearly demarcate recall performance into two operational categories, viz., point value and pattern recall. Point value recall performance was repeatedly found to be significantly better with the use of tabular displays rather than graphics and was also relatively indifferent to all other effects examined. Pattern recollection, on the other hand, was found to be vulnerable to task characteristics, display format, order of presentation as well as imagery-oriented individual cognitive style. The chief contributions of this research are, it is hoped, (1) the reinstatement of 'recall' as a context of evaluation in the problem solving/decision making scenario, (2) the operationalization of attributes of task environment in the context of information recall, and (3) the demonstration of the cumulative research approach in empirical investigations. Dissert. Abstr.

N95-31348 Rensselaer Polytechnic Inst., Troy, NY.
ADAPTIVENESS IN INFORMATION SYSTEMS INTEGRATION Ph.D. Thesis
Gilbert Babin 1993 253 p
Avail: Univ. Microfilms Order No. DA9420307

Interoperability, local autonomy, and concurrent processing are major problems facing the integration of multiple data and knowledge systems, such as those found in today's manufacturing enterprises. Their solution, however, requires new analyses and insights beyond the previous understanding and formulation of these issues. We submit that the key to solving these problems is adaptiveness. The objective of this research, therefore, is to develop the new capabilities of adaptiveness needed to enable the enterprise to grow (i.e., incorporating new or legacy systems into the environment) and change its integrated information system while avoiding the well-known performance problems caused by the traditional approaches to global control and management. The solution utilizes (1) a metadatabase serving as the knowledge base for enterprise integration, (2) a concurrent architecture using the metadatabase for integration, and (3) a rule-oriented programming environment (ROPE) for implementing and managing the concurrent architecture. The technical nature of the research problem is concerned with concurrent knowledge representation and processing. This knowledge method must be able to (1) control the application logic of local systems without the use of a central controller, (2) enhance the local applications with a distributed knowledge capability for global behavior, and (3) transfer the needed knowledge both between the metadatabase and the local applications, and among the local applications themselves. The new ROPE method contributes not only to the metadatabase solutions to the problem of adaptiveness, making the metadatabase an active heterogeneous distributed database management systems, but also to the general concepts of local autonomy, open system architecture, interoperability, and systems evolution. Together, the research extends the current information integration technology and results in a particular method effecting adaptiveness in managing multiple systems environments. Moreover, its specific generic results provide the architecture, algorithms, and languages to further the state-of-the-art of current knowledge representation and processing, as well as the shells design which affords an efficient model for application program interface systems in general. TOWARD A RISK-BASED APPROACH TO THE ASSESSMENT OF THE SURETY OF INFORMATION SYSTEMS
G. D. Wyss, S. K. Fletcher, R. D. Halbgewachs, R. M. Jansma, J. J. Lim, M. Murphy, and P. D. Sands 1995 8 p Presented at the Joint ASME/JSME Pressure Vessels and Piping Conference, Honolulu, HI, 23-27 Jul. 1995
(Contract DE-AC04-94AL-85000)
(DE95-008821; SAND-95-0501C; CONF-950740-14) Avail: CASI HC A02/MF A01

Traditional approaches to the assessment of information systems have treated system security, system reliability, data integrity, and application functionality as separate disciplines. However, each area's requirements and solutions have a profound impact on the successful implementation of the other areas. A better approach is to assess the 'surety' of an information system, which is defined as ensuring the 'correct' operation of an information system by incorporating appropriate levels of safety, functionality, confidentiality, availability, and integrity. Information surety examines the combined impact of design alternatives on all of these areas. We propose a modeling approach that combines aspects of fault trees and influence diagrams for assessing information surety requirements under a risk assessment framework. This approach allows tradeoffs to be based on quantitative importance measures such as risk reduction while maintaining the modeling flexibility of the influence diagram paradigm. This paper presents an overview of the modeling method and a sample application problem. DOE

GUIDELINES FOR CREATING AND USING ABBREVIATIONS AND ACRONYMS
Diane F. Miller Apr. 1995 34 p
(Contract NAS7-1260; RTOP 889-21-32)
(NASA-CR-198884; JPL-Publ-95-9; NAS 1.26:198884) Avail: CASI HC A03/MF A01

The unchecked use of acronyms and initialisms in technical writing presents a huge obstacle to clarity and readability. Although technical communicators are certainly more aware of this problem than are the engineers, scientists, and managers with whom they work, they need concrete guidelines and at least a small degree of self-righteousness on this subject to help them cope with the onslaught. That acronyms frustrate communication is well founded in linguistic theory, not to mention common sense. Suggestions for mitigating their destructiveness include issues of

audience, term selectivity, frequency and occasion of use, and aesthetics.

PROPOSED DDS-SPECIFIC FIELDS FOR THE GENERIC AUTHENTICATION INFORMATION ELEMENT
Thomas D. Tarman 10 Apr. 1995 6 p Presented at the ATM Forum Technical Committee Meeting, Denver, CO, 10 Apr. 1995
(Contract DE-AC04-94AL-85000)
(DE95-009839; SAND-95-0666C; CONF-9504139-1) Avail: CASI HC A02/MF A01

This contribution proposes the format of the 'Algorithm-Specific Information' and 'Signature' fields within the 'Proposed Generic Authentication Information Element' for authentication IE's based on the Digital Signature Standard (DSS). These fields are designed to allow various levels of authentication 'strength' (or robustness), and many of these fields may be omitted in systems that optimize authentication performance by sharing common (public) Digital Signature Algorithm (DSA) parameters. This allows users and site security officers to design their authenticated signaling according to site security and performance requirements. DOE

One predominant application of OCR (Optical Character Recognition) is the recognition of full text documents for information retrieval. Modern retrieval systems exploit both the textual content of the document as well as its structure. The relationship between textual content and character accuracy has been the focus of recent studies. It has been shown that, due to the redundancies in text, average precision and recall is not heavily affected by OCR character errors. What is not fully known is to what extent OCR devices can provide reliable information that can be used to capture the structure of the document. In this paper, the authors present a preliminary report on the design and evaluation of a system to automatically markup technical documents, based on information provided by an OCR device. The device the authors use differs from traditional OCR devices in that it not only performs optical character recognition, but also provides detailed information about page layout, word geometry, and font usage. Their automatic markup program, which they call Autotag, uses this information, combined with dictionary, lookup and content analysis, to identify structural components of the text. These include the document title, author information, abstract, sections, section titles, paragraphs, sentences, and de-hyphenated words. A visual examination of the hardcopy will be compared to the output of their markup system to determine its correctness. DOE

TRANSLATION WORKBENCH FOR GENERATING SUBTITLES FOR ENGLISH TV NEWS
Hideki Sumiyoshi, Hideki Tanaka, Nobuko Hatada, and Terumasa Ehara Apr. 1995 8 p
(ISSN 0027-657X)
(NHK-435) Copyright Avail: Issuing Activity (Japan Broadcasting Corp., 1-10-11, Kinuta, Setagaya-ku, Tokyo 157, Japan)

An English-Japanese machine translation (MT) system has been used for the subtitles of a part of the World News program on NHK's satellite Channel 1 since August, 1989. The MT system does not merely translate English. Starting with the input of the original news script, it translates the text, converts it into subtitles, and specifies which subtitles are overlaid and when on the video signal. This procedure is inefficient, however, because each task is processed separately. We have now developed a prototype subtitle generation system that integrates all tasks efficiently. It is called the translation workbench. We describe its configuration and the operating procedure. Author

The objectives of collecting and analyzing data is discussed. It is claimed that it is not always possible to control all relevant factors, and this may lead to biased results. In its nature, prediction of future parameters based on events in the past is inductive. A Bayesian approach, however, stimulates deductive reasoning. A situation where important explanatory variables are missing is discussed at the end of the article. It is claimed that in its nature, the assessment of hardware reliability and human reliability is identical. NTIS

Protecting information technology (IT) involves a number of interrelated factors. These include mission, available resources, technologies, existing policies and procedures, internal culture, contemporary threats, and strategic enterprise direction. In the face of this formidable list, a structured approach provides cost effective actions that allow the organization to manage its risks. We face fundamental challenges that will persist for at least the next several years. It is difficult if not impossible to precisely quantify risk. IT threats and vulnerabilities change rapidly and continually. Limited organizational resources combined with mission restraints, such as availability and connectivity requirements, will insure that most systems will not be absolutely secure (if such security were even possible). In short, there is no technical (or administrative) 'silver bullet.' Protection is employing a stratified series of recommendations, matching protection levels against information sensitivities. Adaptive and flexible risk management is the key to effective protection of IT resources. The cost of the protection must be kept less than the expected loss, and one must take into account that an adversary will not expend more to attack a resource than the value of its compromise to that adversary. Notwithstanding the difficulty if not impossibility to precisely quantify risk, the aforementioned allows us to avoid the trap of choosing a course of action simply because 'it's safer' or ignoring an area because no one had explored its potential risk. Recommendations for protecting IT resources begins with discussing

contemporary threats and vulnerabilities, and then procedures from general to specific preventive measures. From a risk management perspective, it is imperative to understand that today, the vast majority of threats are against UNIX hosts connected to the Internet. DOE

THE TECHNOLOGY INFORMATION ENVIRONMENT WITH INDUSTRY (TIE-In): A MECHANISM FOR ACCESSING LABORATORY SOLUTIONS
J. A. Ang, G. D. Machin, and E. L. Marek 1994 13 p Presented at the Agile Manufacturing Enterprise Forum, Atlanta, GA, 7-8 Mar. 1995
(Contract DE-AC04-94AL-85000)
(DE95-008542; SAND-94-3279C; CONF-9503109-2) Avail: CASI HC A03/MF A01

The Technology Information Environment with Industry (TIE-In) is a system that helps users obtain laboratory-developed technical solutions without requiring that they duplicate the technical resources (in people, hardware and software) at the national laboratories. TIE-In is based on providing users with controlled access to distributed laboratory resources that are packaged in intelligent user interfaces. These interfaces help users obtain technical solutions without requiring that the user have specialized technical and computer expertise. As a designated DOE Technology Deployment Center/User Facility, industry users can access a broad range of laboratory-developed technologies on a cost-recovery basis. TIE-In will also be used to share laboratory resources with partners in US industry that help the DOE meet future manufacturing needs for the stewardship of our nation's nuclear weapons stockpile. Cooperative Research and Development Agreements (CRADAS) are one of several mechanisms whereby federal laboratories and private industry collaborate on research and development. CRADAS define the terms and conditions of the collaboration. This report points out the benefit CRADAS have given federal agencies and private companies. The CRADAS offered opportunities for federal laboratories and industry to collaborate on research while meeting their missions. Technology from federal laboratories was transferred to the private sector, resulting in commercial products. Research and Development programs were advanced. The sharing of resources aided federal laboratories and private companies in accomplishing the CRADAS' objectives. In addition, some of the CRADAS demonstrated a potential for long-term improvements to our nation's economy, health, and environment. Derived from text

X-RAY PERFORMANCE OF THE ENGINEERING PROTOTYPE STELLAR X-RAY POLARIMETER
E. Silver, K. Ziock, and J. Dwyer 1994 10 p Presented at the Annual Meeting of the Society of Photo-Optical Instrumentation Engineers, San Diego, CA, 24-29 Jul. 1994
(Contract W-7405-eng-48)
(DE95-010268; UCRL-JC-118726; CONF-940723-37) Avail: CASI HC A02/MF A01

The performance of the engineering prototype Stellar X-Ray Polarimeter (SXRP) has been evaluated. Hundred percent polarized monochromatic x-rays at 2.6 keV and 9.7 keV were used to measure the response of the instrument in the energy bands of the graphite and lithium polarizing elements, respectively. On-line analysis showed that the respective depths of modulation are 96% and 70% as expected. Irradiating SXRP with broadband unpolarized x-rays in the energy band 2--17 keV demonstrated that the level of spurious modulation inherent in the instrument is less than 3%. Up-to-date results are presented and compared to the predictions of Monte Carlo simulations. DOE

THE FUTURE OF SPACE IMAGING. REPORT OF A COMMUNITY-BASED STUDY OF AN ADVANCED CAMERA FOR THE HUBBLE SPACE TELESCOPE Final Technical Report
Robert A. Brown, ed. Oct. 1993 150 p
(Contract NAGw-3135; NAS5-26555)
(NASA-CR-198818; NAS 1.26:198818) Avail: CASI HC A07/MF A02

The scientific and technical basis for an Advanced Camera (AC) for the Hubble Space Telescope (HST) is discussed. In March 1992, the NASA Program Scientist for HST invited the Space Telescope Science Institute to conduct a community-based study of an AC, which would be installed on a scheduled HST servicing mission in 1999. The study had three phases: a broad community survey of views on candidate science program and required performance of the AC, an analysis of technical issues relating to its implementation, and a panel of experts to formulate conclusions and prioritize recommendations. From the assessment of the imaging tasks astronomers have proposed for or desired from HST, we believe the most valuable 1999 instrument would be a camera with both near ultraviolet/optical (NUVO) and far ultraviolet (FUV) sensitivity, and with both wide field and high resolution options. STRANGE-MATTER STARS
F. Weber, C. Kettner, and M. K. Weigel Dec. 1994 10 p Presented at the Symposium on Strangeness and Quark Matter, Crete, Greece, 1-5 Sep. 1994
(Contract DE-AC03-76SF-00098)
(DE95-008446; LBL-36210; CONF-9409310-2) Avail: CASI HC A02/MF A01

This paper gives an overview of the properties of all possible equilibrium sequences of compact strange-matter stars with nuclear crusts, which range from strange stars to strange dwarfs. In contrast to their non-strange counterparts--neutron stars and white dwarfs--their properties are determined by two (rather than one) parameters, the central star density and the density at the base of the nuclear crust. This leads to stellar strange-matter configurations whose properties are much more complex than those of the conventional sequence. As an example, two generically different categories of stable strange dwarfs are found, which could be the observed white dwarfs. Furthermore the authors find very-low-mass strange stellar objects, with masses as small as those of Jupiter or even lighter planets. Such objects, if abundant enough, should be seen by the presently performed gravitational microlensing searches. DOE

LARGE SCALE PERIODICITY OF THE UNIVERSE AND BARYOGENESIS
M. V. Chizhov (Sofia Univ., Bulgaria.) and D. P. Kirilova (Bulgarian Academy of Sciences, Sofia, Bulgaria.) 1994 7 p
(DE95-613461; JINR-E-2-94-258) Avail: CASI HC A02/MF A01 (US Sales Only)

A mechanism for generating baryon perturbations in the scalar field condensate baryogenesis scenario is proposed. This mechanism may naturally explain the observed periodic distribution of the luminous matter in the Universe with the characteristic scale of 128 h(sup -1) M pc. It is found that both the observed baryon asymmetry and the periodicity in the large structure of the Universe can be explained through the behaviour of a complex scalar field condensate formed at the inflationary stage. (NASA-TM-110641; NAS 1.26:110641) Avail: CASI HC A03/MF A01

We have determined spectroscopic orbits for three chromospherically active giants that have hot compact companions. They are HD 160538 (K0 III + wd, P = 904 days), HD 165141 (G8 III + wd, P approximately 5200 days), and HD 185510 (K0 III + sdB, P = 20.6619 days). By fitting an IUE spectrum with theoretical models, we find the white dwarf companion of HD 165141 has a temperature of about 35000 K. Spectral types and rotational velocities have been determined for the three giants and distances have been estimated. These three systems and 39 Ceti are compared with the barium star mass-transfer scenario. The long-period mild barium giant HD 165141 as well as HD 185510 and 39 Ceti, which have relatively short periods and normal abundance giants, appear to be consistent with this scenario. The last binary, HD 160538, a system with apparently near solar abundances, a white dwarf companion, and orbital characteristics similar to many barium stars, demonstrates that the existence of a white-dwarf companion is insufficient to produce a barium star. The paucity of systems with confirmed white-dwarf companions makes abundance analyses of HD 160538 and HD 165141 of great value in examining the role of metallicity in barium star formation. Author

THE CONICAL SINGULARITY AND QUANTUM CORRECTIONS TO ENTROPY OF BLACK HOLE
S. N. Solodukhin 1994 22 p
(DE95-613367; JINR-E-2-94-246) Avail: CASI HC A03/MF A01 (US Sales Only)

It is well known that at the temperature different from the Hawking temperature there appears a conical singularity in the Euclidean classical solution of gravitational equations. The method of regularizing the cone by regular surface is used to determine the curvature tensors for such metrics. It allows to calculate the one-loop matter effective action and the corresponding one-loop quantum corrections to the entropy in the framework of the path integral approach of Gibbons and Hawking. The two-dimensional and four-dimensional cases are considered. The entropy of the Rindler space is shown to be divergent logarithmically in two dimensions and quadratically in four dimensions. It corresponds to the results obtained earlier. For the eternal 2D black hole we observe finite, dependent on the mass, correction to the entropy. The entropy of the 4D Schwarzschild black hole is shown to possess an additional (in comparison to the 4D Rindler space) logarithmically divergent correction which does not vanish in the limit of infinite mass of the black hole. We argue that infinities of the entropy in four dimensions are renormalized with the renormalization of the gravitational coupling. DOE

ON THE QUASIHYDROSTATIC FLOWS OF RADIATIVELY COOLING SELF-GRAVITATING GAS CLOUDS
B. Meerson (Hebrew Univ. of Jerusalem, Rehovot, Israel.), E. Megged (Hebrew Univ. of Jerusalem, Rehovot, Israel.), and T. Tajima Mar. 1995 39 p
(Contract DE-FG05-80ET-53088)
(DE95-009116; DOE/ET-53088/698; IFSR-698) Avail: CASI HC A03/MF A01

Two model problems are considered, illustrating the dynamics of quasihydrostatic flows of radiatively cooling, optically thin self-gravitating gas clouds. In the first problem, spherically symmetric flows in an unmagnetized plasma are considered. For a power-law dependence of the radiative loss function on the temperature, a one-parameter family of self-similar solutions is found. The authors concentrate on a constant-mass cloud, one of the cases, when the self-similarity indices are uniquely selected. In this case, the self-similar flow problem can be formally reduced to the classical Lane-Emden equation and therefore solved analytically. The cloud is shown to undergo radiative condensation, if the gas specific heat ratio (gamma) greater than 4/3. The condensation proceeds either gradually, or in the form of (quasihydrostatic) collapse. For (gamma) less than 4/3, the cloud is shown to expand. The second problem addresses a magnetized plasma slab that undergoes quasihydrostatic radiative cooling and condensation. The problem is solved analytically, employing the Lagrangian mass coordinate. DOE

A SEARCH FOR INTERSTELLAR CH3D: LIMITS TO THE METHANE ABUNDANCE IN ORION-KL
Maria Womack, L. M. Ziurys (Arizona State Univ., Tempe, AZ.), and A. J. Apponi (Arizona State Univ., Tempe, AZ.) 30 Jun. 1995 18 p Sponsored in part by the Margaret Cullinan Wray Charitable Lead Annuity Trust
(Grant NAGw-3065)
(NASA-CR-198932; NAS 1.26:198932) Avail: CASI HC A03/MF A01

A search has been performed for interstellar CH3D via its J(K) = 1(0) - 0(0) transition at 230 GHz and its J(K) = 2(0) - 1(0) and J(K) = 2(1) - 1(1) lines at 465 GHz using the NRAO 12 m and CSO 10 m telescopes towards Orion-KL. This search was done in conjunction with laboratory measurements of all three transitions of CH3D using mm/sub-mm direct absorption spectroscopy. The molecule was not detected down to a 3 sigma level of T(A) less than 0.05 K towards Orion, which suggests an upper limit to the CH3D column density of N less than 6 x 10(exp 18)/sq cm in the hot core region and a fractional abundance (with respect to H2) of less than 6 x 10(exp -6). These measurements suggest that the methane abundance in the Orion hot core is f less than 6 x 10-4, assuming D/H approximately 0.01. Such findings are in agreement with recent hot core chemical models, which suggest CH4/H2 approximately 10(exp -4). Author

PARTONS AND BLACK HOLES
L. Susskind (Stanford Univ., CA.) and P. Griffin 1994 23 p Presented at the Theory of Hadrons and Light-front QCD Workshop, Polona Zgorzelisko, Poland, Aug. 1994
(Contract DE-FG05-86ER-40272)
(DE95-009921; DOE/ER-40272/209; UFIFT-HEP-9413; HEP-PH-9410306; CONF-9408188-2) Avail: CASI HC A03/MF A01

A light-front renormalization group analysis is applied to study matter which falls into massive black holes, and the related problem of matter with transplankian energies. One finds that the rate of matter spreading over the black hole's horizon unexpectedly saturates the causality bound. This is related to the transverse growth behavior of transplankian particles as their longitudinal momentum increases. This growth behavior suggests a natural mechanism to implement 't Hooft's scenario that the universe is an image of data stored on a 2 + 1 dimensional hologram-like projection. DOE

VOYAGER GO PROGRAM Final Report
Myron Smith Mar. 1995 32 p
(NASA Order S-97229-E)
(NASA-CR-189435; NAS 1.26:189435; RHPU-0428) Avail: CASI HC A03/MF A01

This contract pertained to the investigation of the time variability of the ultraviolet continuum flux of three stars: lambda Eri, 53 Persei, and gamma Cas. The Voyager observations of 53 Persei were conducted simultaneously with a global ground-based campaign of visual-wavelength photometry. The optical campaign established beyond doubt the existence of two nonradial pulsation modes with periods near two days. The second part of the program concerned the ultraviolet continuum modulations of the B2E star lambda Eri. Voyager observations of lambda Eri showed that the ultraviolet light curve of lambda Eri shows no variations over a timescale of a day, but may show excursions on the order of an hour. There was little actual overlap between the Voyager and the IUE datasets in time so we could not determine whether the short-term variations from Voyager are instrumental or from the star. The third and final part of the program

concerned the ultraviolet continuum variations of the B0.53 star gamma Cas. The Voyager observations of gamma Cas show that 10-20% variations occur on a timescale of 1-2 hours and are commonplace.

RESEARCH PROGRESS REPORT
1995 14 p
(Contract DE-FG05-90ER-40559)
(DE95-010726; DOE/ER-40559/T1) Avail: CASI HC A03/MF A01

A brief summary is given for the progress made by the 11 different researchers. The research covered is as follows: (1) phenomenological problems caused by moduli in string theory; (2) formulating nonperturbative critical string theory, constructing noncritical string theory in medium spacetime dimensions, and constructing the space of conformal boundary conditions for conformal field theory; (3) regularization of chiral gauge theories and random matrix model for localization and quantum chaos; (4) dynamics of four dimensional supersymmetric field theories; (5) four dimensional field theory with dynamic supersymmetry breaking, stringy inflation, and black hole entropy; (6) extension of Thermodynamic Bethe Ansatz in integrable quantum field theory; (7) nonperturbative dynamics of the supersymmetric gauge theories and post-inflation gravitino production; and (8) string theory and quantum chromodynamics. Ballester (Michigan Univ., Ann Arbor, MI.), and L. BenJaffel (Institut d'Astrophysique, Paris, France.) et al Jun. 1994 22 p Original contains color illustrations
Avail: CASI HC A03/MF A01

Two sets of UV (ultraviolet) images of the Jovian north aurora were obtained with the Faint Object Camera (FOC) on Hubble. The first series shows a very intense discrete arc in corotation with the planet. The maximum apparent H2 emission rate corresponds to an electron precipitation of approximately 1/sq Wm, a very large flux in comparison with the solar EUV (extreme ultraviolet) heating. The hugh particle heating rate of the auroral upper atmosphere of Jupiter is expected to cause a large transient temperature increase and generate strong thermospheric winds. Twenty hours later, the discrete arc had considerably decreased in brightness. The timescale and magnitude of the change in the UV aurora strongly suggests that the discrete Jovian auroral precipitation is related to large scale current system variations as are the Earth's discrete aurorae.

MARS TOGETHER AND FIRE AND ICE: REPORT OF THE JOINT US/RUSSIAN TECHNICAL WORKING GROUPS
Oct. 1994 116 p Sponsored by Russian Space Agency; and Russian Academy of Sciences Original contains color illustrations
(Contract NAS7-1260)
(NASA-CR-198864; JPL-Publ-94-29; NAS 1.26:198864) Avail: CASI HC A06/MF A02; 1 functional color page

The Cold War's end opened an opportunity for greater cooperation in planetary exploration for the United States and Russia. Two study groups were formed, Mars Together and FIRE and ICE. The Mars Together team developed a concept for a flight in 1998 that merged one U.S. Mars Surveyor 98 mission with the former Russian Mars 96 mission to further understanding of the Mars surface and atmosphere. The FIRE and ICE team developed concepts for a dual-spacecraft mission to the solar corona and for a mission to Pluto. The missions, scientific potential, and open issues are described.

ON THE RELATIONSHIP BETWEEN SUNSPOTS NUMBER AND THE FLARE INDEX
Robert M. Wilson [1994] 12 p
(NASA-TM-110643; NAS 1.15:110643) Avail: CASI HC A03/MF A01

During the years 1976-1991, sunspot number and the Kleczek flare index have displayed a strong linear correlation ($r = 0.94$), one that can be described by the equation $y = -0.15 + 0.10\ x$, where x denotes annual sunspot number. While true, the temporal behaviors of the two parameters have differed, with sunspot number peaking first in 1979 and the flare index peaking much later in 1982 during cycle 21 and with more contemporaneous behavior in cycle 22 (both peaking in 1989, with a secondary peak in 1991). The difference appears to be directly attributable to the way in which the Kleczek flare index has been defined; namely, the annual flare index is the sum of the product of each flare's intensity (importance) times its duration (in minutes) divided by the total number of flares during the year. Because the number of 'major' flares (those of importance greater than or equal to 2) and flares of very long duration (duration greater than or equal to 100 min) both peaked after sunspot maximum (1982/81, respectively) in cycle 21, one should have expected the flare index to also peak (which it did). Likewise, because the number of major flares and flares of very long duration peaked simultaneously with sunspot number (1989) in cycle 22, one should have expected the flare index to also peak (which it did).

ON REFLECTION OF ALFVEN WAVES IN THE SOLAR WIND

M. Krogulec (Alabama Univ., Huntsville, AL.), Z. E. Musielak (Alabama Univ., Huntsville, AL.), S. T. Suess, R. L. Moore, and S. F. Nerney [1993] 36 p Sponsored by Polish Academy of Sciences

(Grants NAGw-2933; NAG8-839; NSF INT-90-16514; NSF ATM-91-19580) (NASA-TM-110642; NAS 1.15:110642) Avail: CASI HC A03/MF A01

We have revisited the problem of propagation of toroidal and linear Alfven waves formulated by Heinemann and Olbert (1980) to compare WKB and non-WKB waves and their effects on the solar wind. They considered two solar wind models and showed that reflection is important for Alfven waves with periods of the order of one day and longer, and that non-WKB Alfven waves are no more effective in accelerating the solar wind than WKB waves. There are several recently published papers which seem to indicate that Alfven waves with periods of the order of several minutes should be treated as non-WKB waves and that these non-WKB waves exert a stronger acceleration force than WKB waves. The purpose of this paper is to study the origin of these discrepancies by performing parametric studies of the behavior of the waves under a variety of different conditions. In addition, we want to investigate two problems that have not been addressed by Heinemann and Olbert, namely, calculate the efficiency of Alfven wave reflection by using the reflection coefficient and identify the region of strongest wave reflection in different wind models. To achieve these goals, we investigated the influence of temperature, electron density distribution, wind velocity and magnetic field strength on the waves. The obtained results clearly demonstrate that Alfven wave reflection is strongly model dependent and that the strongest reflection can be expected in models with the base temperatures higher than 10(exp 6) K and with the base densities lower than 7 x 10(exp 7) cm(exp -3). In these models as well as in the models with lower temperatures and higher densities, Alfven waves with periods as short as several minutes have negligible reflection so that they can be treated as WKB waves; however, for Alfven waves with periods of the order of one hour or longer reflection is significant, requiring a non-WKB treatment. We also show that non-WKB, linear Alfven waves are always less effective in accelerating the plasma than WKB Alfven waves. Finally, it is evident from our results that the region of strongest wave reflection is usually located at the base of the models, and hence that interpretation of wave reflection based solely on the reflection coefficient can be misleading. LOW ENERGY SOLAR NEUTRINO EXPERIMENTS: THE SOVIET AMERICAN GALLIUM EXPERIMENT (SAGE) Final Report, 12 Aug. 1988 - 31 Oct. 1994

1995 31 p

(Contract DE-FG05-88ER-40481)

(DE95-010159; DOE/ER-40481/T1) Avail: CASI HC A03/MF A01

Two Ga-71 experiments are currently in operation. The first is the 60 ton Soviet American Gallium Experiment (SAGE) at Baksan, which has recently reported a signal level of 73 +18/-16 (stat) +5/-7 (syst) solar neutrino units (SNU); the second is the 30 ton GALLEX experiment at Gran Sasso, which sees 87 +/-14 +/-7 SNU. Both results are consistent, and both suggest a neutrino flux level low compared to the total expected from standard solar model calculations. It is not possible, however, to make a case for flux levels lower than the p-p prediction. Assuming the experiments are correct, it is not at all clear yet whether the answer lies with the neutrino physics, solar physics, or a combination of both. Nevertheless, though solar model effects cannot be ruled out, if the Homestake and Kamiokande results are taken at face value, then these two experiments alone imply that neutrino oscillations or some similar particle physics result must be present to some degree. This report reviews the SAGE experiment and recent results. Nonradiochemical experiments are also discussed, with an emphasis on the Kamiokande water Cerenkov results. DOE

STUDYING THE THERMAL/NON-THERMAL CROSSOVER IN SOLAR FLARES Contractor Report, 1 Nov. 1993 - 1 Nov. 1994

R. A. Schwartz Dec. 1994 36 p

(Contract NAS5-32584)

(NASA-CR-189436; NAS 1.26:189436; IHK-341-03) Avail: CASI HC A03/MF A01

This report describes work performed under contract NAS5-32584 for Phase 3 of the Compton Gamma Ray Observatory (CGRO) from 1 November 1993 through 1 November 1994. We have made spectral observations of the hard x-ray and gamma-ray bremsstrahlung emissions from solar flares using the Burst and Transit Source Experiment (BASTE) on CGRO. These measurements of their spectrum and time profile provided valuable information on the fundamental flare processes of energy release, particle acceleration, and energy transport. Our scientific objective was to study both the thermal and non-thermal sources of solar flare hard x-ray and gamma-ray emission. Author (revised)

ENVIRONMENTAL CONDITIONS RESPONSIBLE FOR SOLAR ACTIVITY Final Technical Report, 1 Oct. 1991 - 30 Sep. 1994

Peter A. Sturrock 28 Feb. 1995 18 p

(Contract F49620-92-J-0015)

(AD-A292859; AFOSR-95-0221TR) Avail: CASI HC A03/MF A01

Solar coronal activity is of concern to the Air Force primarily because

of the terrestrial effects of coronal mass ejections and solar flares. Coronal mass ejections can lead to geomagnetic disturbances that in turn cause magnetospheric substorms. This geomagnetic activity disturbs the ionosphere, especially in the polar regions, interfering with radio propagation. Ionizing radiation (UV and X-ray) and particle events from solar flares can also lead to ionospheric disturbances. Furthermore, major flares pose serious hazards to astronauts. During the past three years, the Stanford group has obtained significant theoretical insights into the driving mechanism of eruptive events in the solar corona. The question of what causes coronal eruptions inevitably leads to questions concerning the plasma conditions and magnetic field configurations in which eruptions occur. In particular, we have grappled with the long-standing issue of how the coronal plasma is maintained at a temperature of several million degrees, while the underlying surface of the sun that is visible in white light has a temperature of only a few thousand degrees. Our work over the past three years has taken us closer to the goal of being able to predict the imminent onset of solar flares and coronal mass ejections. DTIC

ANALYSIS OF PLASMA MEASUREMENTS FOR THE GEOTAIL MISSION Annual Performance Report, 1 Oct. 1994 - 30 Sep. 1995
Louis A. Frank 30 Sep. 1995 11 p
(Grant NAG5-2371)
(NASA-CR-199074; NAS 1.26:199074) Avail: CASI HC A03/MF A01

The first phase of the Geotail mission, an exploration of the distant magnetotail, was successfully concluded in October 1994. Geotail is currently engaged in a survey of plasmas at distances from Earth approximately 10 to 30 R(sub E). Throughout the mission the Comprehensive Plasma Instrumentation has functioned well with successful return of data. The analysis of the CPI measurements has resulted in a series of publications, and research efforts are ongoing. Research topics include interaction of the magnetotail with the fields and plasmas of the solar wind, steady-state magnetic reconnection in the distant magnetotail at a neutral line bounded by a pair of slow-mode magnetohydrodynamic shocks, development and evolution of plasmoids in magnetotail and magnetospheric substorms, and cold ion beams coexisting as distinct components in the presence of hot plasma-sheet plasmas. RADIATION EFFECTS IN SPACE: THE CLEMENTINE 1 MISSION
T. Gregory Guzik (Louisiana State Univ., Baton Rouge, LA.), Edmund Clayton (Louisiana State Univ., Baton Rouge, LA.), and John P. Wefel (Louisiana State Univ., Baton Rouge, LA.) 20 Dec. 1994 106 p
(Contract W-7405-eng-36)
(DE95-011513; UCRL-CR-119438) Avail: CASI HC A06/MF A02

The space radiation environment for the Clementine 1 mission was investigated using a new calculational model, CHIME, which includes the effects of galactic cosmic rays (GCR), anomalous component (AC) species and solar energetic particle (SEP) events and their variations as a function of time. Unlike most previous radiation environment models, CHIME is based upon physical theory and is 'calibrated' with energetic particle measurements made over the last two decades. Thus, CHIME provides an advance in the accuracy of estimating the interplanetary radiation environment. Using this model we have calculated particle energy spectra, fluences and linear energy transfer (LET) spectra for all three major components of the Clementine 1 mission during 1994: (1) the spacecraft in lunar orbit, (2) the spacecraft during asteroid flyby, and (3) the interstage adapter (ISA) in earth orbit. Our investigations indicate that during 1994 the level of solar modulation, which dominates the variation in the GCR and AC flux as a function of time, will be decreasing toward solar minimum levels. Consequently the GCR and AC flux will be increasing during the year and, potentially, will rise to levels seen during previous solar minimums. The estimated radiation environment also indicates that the AC will dominate the energetic particle spectra for energies below 30-50 MeV/nucleon, while the GCR have a peak flux at approximately 300 MeV/nucleon and maintain a relatively high flux level up to greater than 1000 MeV/nucleon. The AC significantly enhances the integrated flux for LET in the range 1 to 10 MeV/(mg/sq cm), but due to the steep energy spectra of the AC a relatively small amount of material (approximately 50 mils of Al) can effectively shield against this component. The GCR are seen to be highly penetrating and require massive amounts of shielding before there is any appreciable decrease in the LET flux. DOE

RESEARCH PROPOSAL Quarterly Status Report, Oct. - Dec. 1994
1994 67 p
(AD-A293207; AFOSR-95-0256TR) Avail: CASI HC A04/MF A01

This research proposal status report is published quarterly as of March, June, September and December of each year. It lists all the research proposals received by the Air Force Office of Scientific Research (AFOSR) in the six month period prior to the date of this report. Normally, decision and actions are made within six months after receving a research proposal. The action taken (i.e. initiated, declined, or withdraw) will be listed in this report. The report is divided into two parts: Part 1 is the institution index which lists the proposals received, alphabetically by institution. Part 2 is the AFOSR Directorate index in which the proposal received are listed alphabetically by directorate and alphabetically by AFOSR Program Manager within the directorate. The purpose of the quarterly report is to inform other government sponsoring agencies of the proposals received by the AFOSR and the action taken on these proposals. DTIC

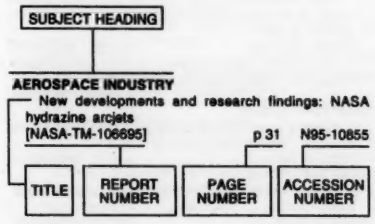
LABORATORY DIRECTED RESEARCH AND DEVELOPMENT REPORT Annual Report, FY 1994
Feb. 1995 284 p Prepared in cooperation with Pacific Northwest Lab., Richland, WA
(Contract DE-AC06-87RL-10930)
(DE95-011405; PNL-10458) Avail: CASI HC A13/MF A03

The Department of Energy Order DOE 5000.4A establishes DOE's policy and guidelines regarding Laboratory Directed Research and Development (LDRD) at its multiprogram laboratories. This report represents Pacific Northwest Laboratory's (PNL's) LDRD report for FY 1994. During FY 1994, 161 LDRD projects were selected for support through PNL's LDRD project selection process. Consistent with the Mission Statement and Strategic Plan provided in PNL's Institutional Plan, the LDRD investments are focused on developing new and innovative approaches in research related to our 'core competencies.' Currently, PNL's core competencies have been identified as integrated environmental research, process science and engineering, and energy systems development. Individual summaries of LDRD projects are organized according to these core competencies. The largest proportion of laboratory-level LDRD funds is allocated to the core competency of integrated environmental research. Projects within the three core competency areas were approximately 91.4 % of total LDRD project funding at PNL in FY 1994. A significant proportion of PNL's LDRD funds are also allocated to projects within the various research centers that are proposed by individual researchers or small research teams. The report provides an overview of PNL's LDRD program, the management process used for the program, and project summaries for each LDRD project. DOE

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The page number helps you locate the citation in the abstract section. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus*.

ACCELEROMETERS
Micromachined sensor and actuator research at the Microelectronics Development Laboratory
[DE95-008540] p 2878 N95-30384
Results from tests of the Honeywell integrated flight management unit
[PB95-211355] p 2748 N95-30597
Fiber optic accelerometer with centrally supported flexural disk
[AD-D017369] p 2879 N95-30858
Orbiter rarefied-flow reentry measurements from the OARE on STS-62
[NASA-TM-110182] p 2891 N95-30783
A novel instrumentation system for measurement of helicopter rotor motions and loads data, phase 1
[AD-A293309] p 2751 N95-30923

ACCEPTABILITY
Evaluation of alternative pavement marking materials
[AD-A292973] p 2763 N95-31468

ACCEPTOR MATERIALS
Photophysical properties of opto-electric molecules studied by time-resolved microwave conductivity
[PB95-196994] p 2980 N95-30774
Noisy-network acceptors
[PB95-197976] p 2951 N95-30813

ACCESS CONTROL
UNIX and PC security in a network environment. UNINETT
[PB95-196291] p 2934 N95-30662
UNIX and PC security in a network environment. LOKALNETT 1993
[PB95-196309] p 2934 N95-30697
Effective bandwidth techniques in bufferless and buffered ATM multiplexers
[PB95-207072] p 2862 N95-31185

ACCIDENT PREVENTION
Metascientific problems in safety science
[PB95-196408] p 2838 N95-30521
SCARLET: DLR rate saturation flight experiment
p 2746 N95-31068

ACCUMULATORS
A study of Damascus steel
[DE95-010127] p 2809 N95-32023

ACCURACY
Flight test evaluation of the Stanford University/United Airlines differential GPS Category 3 automatic landing system
[NASA-TM-110354] p 2743 N95-30788
Improved altimeter settings for A-10 aircraft
[AD-A293142] p 2753 N95-30920

ACETYLENE
Development of a new instrument for rocket engine combustion diagnostics p 2799 N95-31211

ACHIEVEMENT
Selection of Swedish scholastic aptitude test takers as a function of socioeconomic background and ability: Evaluation through follow-up
[PB95-212072] p 3021 N95-30699

ACID RAIN
Atmospheric environmental implications of propulsion systems p 2771 N95-31747

ACIDITY
Acidity and basicity of nitro substituted imidazoles
p 2832 N95-31301
Acidity and basicidity of nitro substituted imidazoles
[AD-A293969] p 2836 N95-31526

ACOUSTIC ATTENUATION
Gear pump with reduced fluid-borne noise
[AD-D017362] p 2887 N95-30399
Advanced signal processing filter
[AD-D017324] p 2848 N95-30917
Materials for adaptive structural acoustic control, volume 1
[AD-A293444] p 2788 N95-31369
Materials for adaptive structural acoustic control, volume 2
[AD-A293445] p 2788 N95-31370
Materials for adaptive structural acoustic control, volume 3
[AD-A293446] p 2788 N95-31371
Materials for adaptive structural acoustic control, volume 4
[AD-A293447] p 2788 N95-31372
ACOUSTIC COUPLING
Energy flow analysis of coupled structures
p 2895 N95-31316
ACOUSTIC DUCTS
Robust fixed-structure control
[AD-A292883] p 2952 N95-30961
ACOUSTIC EMISSION
Apparatus for producing images acoustically
[AD-D017365] p 2973 N95-30530
ACOUSTIC EXCITATION
Control of high Reynolds number round jets
p 2876 N95-31733
Combustion response to acoustic perturbation in liquid rocket engines p 2770 N95-31972
ACOUSTIC FREQUENCIES
Ultrasonic frequency selection for aqueous fine cleaning p 2779 N95-31788
ACOUSTIC MEASUREMENT
Method for extracting forward acoustic wave components from rotating microphone measurements in the inlets of turbofan engines
[NASA-CR-195457] p 2755 N95-30779
The TEVA experiment cruise report
[AD-A293025] p 2923 N95-31701
ACOUSTIC PROPAGATION
User's manual for the Scanning Fast Field Program (SCAFFIP) EOSAEL version 1.0
[AD-A291445] p 2933 N95-30397
ACOUSTIC PROPERTIES
Sea ice stress research
[AD-A293164] p 2923 N95-30964
Rationale and summary of methods for determining ultrasonic properties of materials at Lawrence Livermore National Laboratory
[DE95-009475] p 2795 N95-31593
ACOUSTIC SCATTERING
Sonic apparatus for degassing liquids
[AD-D017352] p 2791 N95-30554
Calculations of the sound scattering from fluid-filled spherical shell sonar targets
[DSTO-RR-0020] p 2974 N95-31365
Multiple scatter theory of ocean sediments
[AD-A293951] p 2923 N95-31523
The effects of large and small scale turbulence on sound propagation in the atmosphere
[AD-A293657] p 2975 N95-31608
ACOUSTIC VELOCITY
User's manual for the Scanning Fast Field Program (SCAFFIP) EOSAEL version 1.0
[AD-A291445] p 2933 N95-30397
The effects of large and small scale turbulence on sound propagation in the atmosphere
[AD-A293657] p 2975 N95-31608
The effect of ray curvature on Lloyd's mirror fringe estimates and source localisation
[DSTO-TR-0064] p 3001 N95-31745
ACOUSTICS
Far field acoustic radiation reduction
[AD-D017452] p 2974 N95-30725
The effects of large and small scale turbulence on sound propagation in the atmosphere
[AD-A293657] p 2975 N95-31608
Combustion response to acoustic perturbation in liquid rocket engines p 2770 N95-31972
The contextual variance of devoiced fricatives in polish
[IFTR-7/1995] p 2854 N95-32192
ACOUSTO-OPTICS
Phase object display by using acousto-optical Bragg diffraction
[AD-A293153] p 2998 N95-31006
Temporal feature extraction in photorefractive resonators
[AD-A292906] p 2881 N95-31365
Acousto-optical frequency shifters in dual-core optical fibres
[AD-A293979] p 2999 N95-31529
ACRYLATES
Epoxy and acrylate stereolithography resins: In-situ measurements of cure shrinkage and stress relaxation
[DE95-008506] p 2811 N95-30389
Intelligent synthetic polymers
[AD-A292905] p 2819 N95-31395
ACRYLIC ACID
Responsive copolymers for enhanced petroleum recovery
[DE95-011857] p 2823 N95-32361
ACRYLIC RESINS
Experiments in a 120-mm ram accelerator including flow visualization p 2799 N95-31202
Intelligent synthetic polymers
[AD-A292905] p 2819 N95-31395
Compatibility of Single Hydraulic Fluid with military specification fluids, seals and metallurgy
[AD-A292954] p 2821 N95-31663
Operational parameters and material effects
p 2845 N95-32179
Responsive copolymers for enhanced petroleum recovery
[DE95-011857] p 2823 N95-32361
ACTINIDE SERIES
Faster, cheaper radioanalytical methods
[DE95-009913] p 2797 N95-32061
ACTIVATION
Glass matrix doped with activated luminescent nanocrystalline particles
[AD-D017416] p 2816 N95-31010
ACTIVE CONTROL
Microwave repeater with broadband active and/or passive isolation control
[AD-D017358] p 2846 N95-30417
Design of systems for active sound control
[PB95-197869] p 2973 N95-30461
Active turbulence control using microelectrodes, permanent magnets in microgrooves
[AD-D017351] p 2867 N95-30553
Flight Vehicle Integration Panel Workshop on Pilot Induced Oscillations
[AGARD-AR-335] p 2745 N95-31061
Enhanced energy release and soot reduction in actively controlled flames p 2799 N95-31200
Active control of combustion instability using injection techniques p 2800 N95-31288
Investigating the use of smart acoustically active surfaces for flow separation control in turbomachinery
[AD-A292819] p 2874 N95-31443
Active control technology: Applications and lessons learned
[AGARD-CP-560] p 2757 N95-31989
The role of handling qualities specifications in flight control system design p 2757 N95-31990
The importance of flying qualities design specifications for active control systems p 2757 N95-31992
Experiences with ADS-33 helicopter specification testing and contributions to refinement research
p 2757 N95-31993
Model following control for tailoring handling qualities: ACT experience with ATTHeS p 2758 N95-32000
Structural aspects of active control technology
p 2760 N95-32006
Flight test results of the F-16 aircraft modified with axisymmetric vectoring exhaust nozzle
p 2752 N95-32007
Experimental Aircraft Programme (EAP): Flight control system design and test p 2760 N95-32010
Pilot Induced Oscillation: A report on the AGARD Workshop on PIO p 2761 N95-32017
Vibration control of spacecrafts and space structures from lift-off to on-orbit environments
p 2767 N95-32110
Vibration reduction in helicopter rotors using an actively controlled partial span trailing edge flap located on the blade p 2762 N95-32111
ACTUATORS
Micromachined sensor and actuator research at the Microelectronics Development Laboratory
[DE95-008540] p 2878 N95-30384
New adaptive methods for reconfigurable flight control systems, appendix 1
[AD-A292711] p 2756 N95-30937
Materials for adaptive structural acoustic control, volume 3
[AD-A293446] p 2788 N95-31371
Investigating the use of smart acoustically active surfaces for flow separation control in turbomachinery
[AD-A292819] p 2874 N95-31443
ADA (PROGRAMMING LANGUAGE)
Penelope reference manual: Version 3-3 (C001). Includes Larch/Ada specification manual for sequential Ada (C002)
[AD-A289828] p 2942 N95-31683
ADAPTIVE CONTROL
High-tech controls for energy and environment
[DE95-011702] p 2952 N95-31255
Materials for adaptive structural acoustic control, volume 1
[AD-A293444] p 2788 N95-31369
Materials for adaptive structural acoustic control, volume 2
[AD-A293445] p 2788 N95-31370
Materials for adaptive structural acoustic control, volume 3
[AD-A293446] p 2788 N95-31371
Materials for adaptive structural acoustic control, volume 4
[AD-A293447] p 2788 N95-31372
Flight assessment of the onboard propulsion system model for the Performance Seeking Control algorithm on an F-15 aircraft
[NASA-TM-4705] p 2756 N95-31425
An efficient implementation of Forward-Backward Least-Mean-Square Adaptive Line Enhancers
p 2855 N95-32224
ADAPTIVE FILTERS
Adaptive space-time processing for airborne radars based on Doppler pre-processing
[PB95-205464] p 2854 N95-32114
ADAPTIVE OPTICS
Adaptive optics design for the advanced electro-optical system (AEOS)
[AD-A293972] p 2974 N95-31527
ADDITIVES
Diamond thin film temperature and heat-flux sensors
[NASA-CR-198859] p 3012 N95-30847
Environmentally safe aviation fuels
p 2775 N95-31768
Silicon carbide-silicon heterostructure solar cells
p 2905 N95-31952
A stochastic EM estimator in the presence of missing data: Theory and applications
[DE95-010329] p 2944 N95-32089
ADDUCTS
Studies of C(60) and C(70) and other fullurenes: Synthesis, derivation, electrochemistry, lubricant properties and new composition materials
[AD-A292726] p 3012 N95-30944
ADHESION TESTS
Verification of surface preparation for adhesive bonding p 2782 N95-31807
ADHESIVE BONDING
Influence of adhesives and bonding techniques on the properties of glued timber-steelplate joints
[PB95-211470] p 2813 N95-30599
Implementation of environmentally compliant cleaning and insulation bonding for MNASA p 2780 N95-31796
Cleanliness inspection tool for RSRM bond surfaces
p 2781 N95-31799
Verification of surface preparation for adhesive bonding p 2782 N95-31807
ADSORBENTS
Extension of the pore tree model to describe pore interconnectivity
[AD-A290366] p 2793 N95-30971
The Wide Field/Planetary Camera 2 (WFPC-2) molecular adsorber
[NASA-CR-198866] p 2881 N95-31456
ADSORPTION
Applications of SXPS for studying surface structure, reaction mechanisms and kinetics
[DE95-008903] p 2803 N95-30547
Consequences of kinetic dispersion on the electrochemistry of an adsorbed redox-active monolayer
[AD-A292794] p 2795 N95-31437
Study of the surface properties of ceramic materials by chromatography
[DE95-011578] p 2823 N95-32298
Energetics of Pt adsorption on Pt(111)
[DE95-010933] p 3017 N95-32307
ADVANCED SOLID ROCKET MOTOR (STS)
Shuttle Redesigned Solid Rocket Motor aluminum oxide investigations p 2770 N95-31197
ADVANCED VERY HIGH RESOLUTION RADIOMETER
Shiptracks in the Californian stratus region: Dependency on marine atmospheric boundary layer depth
[AD-A293272] p 2901 N95-31125
ADVECTION
Calculation of a residual mean meridional circulation for a zonal-mean tracer transport model
[DE95-009474] p 2911 N95-32350
AERIAL PHOTOGRAPHY
Optical feature recognition
[AD-A293168] p 2997 N95-30966
AEROACOUSTICS
Method for extracting forward acoustic wave components from rotating microphone measurements in the inlets of turbofan engines
[NASA-CR-195457] p 2755 N95-30779

AEROBES
Degradation of TCE using sequential anaerobic biofilm and aerobic immobilized bed reactor
p 2780 N95-31791
AERODYNAMIC CHARACTERISTICS
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept
[NASA-TM-108489] p 2742 N95-30712
Hypervelocity wind tunnel number 9, high Mach number development program
[AD-A289934] p 2743 N95-30929
Unified criteria for ACT aircraft longitudinal dynamics
p 2745 N95-31065
Effects of cavity bleed and its configuration on aerodynamic characteristics of supersonic internal flow
[NAL-TR-1247] p 2744 N95-31715
AERODYNAMIC COEFFICIENTS
Static behaviour of axially loaded uniplanar and multiplanar tubular x-joints
[PB95-207866] p 2892 N95-30585
Side force acting on blunted circular cylinder bodies at high angles of attack in supersonic flow
[NAL-TR-1255] p 2744 N95-31741
AERODYNAMIC CONFIGURATIONS
A general inverse design procedure for aerodynamic bodies p 2750 N95-30497
Numerical investigation into vortical flow about a delta-wing configuration up to incidences at which vortex breakdown occurs in experiment
[PB95-198024] p 2743 N95-30837
Application of multigrid computational fluid dynamics (CFD) methods to rotor analysis
[AD-A293012] p 2874 N95-31475
Afterbody/nozzle pressure distributions of a twin-tail twin-engine fighter with axisymmetric nozzles at Mach numbers from 0.6 to 1.2
[NASA-TP-3509] p 2744 N95-31984
AERODYNAMIC DRAG
Static behaviour of axially loaded uniplanar and multiplanar tubular x-joints
[PB95-207866] p 2892 N95-30585
AERODYNAMIC FORCES
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept
[NASA-TM-108489] p 2742 N95-30712
Side force acting on blunted circular cylinder bodies at high angles of attack in supersonic flow
[NAL-TR-1255] p 2744 N95-31741
Advanced gust management systems: Lessons learned and perspectives p 2759 N95-32002
AERODYNAMIC HEAT TRANSFER
Advanced k-epsilon modeling of heat transfer
[NASA-CR-4679] p 2874 N95-31423
AERODYNAMIC INTERFERENCE
Unsteady flow simulations about moving boundary configurations using dynamic domain decomposition techniques p 2877 N95-31837
AERODYNAMIC LOADS
A novel instrumentation system for measurement of helicopter rotor motions and loads data, phase 1
[AD-A293309] p 2751 N95-30923
Probabilistic reliability modeling of fatigue on the H-46 tie bar
[AD-A289926] p 2751 N95-30927
Digital simulation of wind velocities for wind turbine rotors: General considerations
[PB95-206447] p 2904 N95-31157
AERODYNAMIC STABILITY
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept
[NASA-TM-108489] p 2742 N95-30712
Looking for the simple PIO model
p 2745 N95-31066
FPCAS3D User's guide: A three dimensional full potential aeroelastic program, version 1
[NASA-CR-198367] p 2899 N95-32205
AERODYNAMIC STALLING
Validation of the helicopter rotor code HERO
[PB95-198040] p 2751 N95-30838
Vorticity dynamics and control of dynamic stall
[AD-A286658] p 2756 N95-31400
X-31: A program overview and flight test status
p 2753 N95-32013
Control of unsteady separated flow associated with the dynamic stall of airfoils
[NASA-CR-198972] p 2744 N95-32193
AEROELASTICITY
Aeroelastic pilot-in-the-loop oscillations
p 2746 N95-31070
Performance improvement of composite wings through aeroelastic tailoring and modern control
[AD-A293689] p 2752 N95-31602
Vibration reduction in helicopter rotors using an actively controlled partial span trailing edge flap located on the blade p 2762 N95-32111
FPCAS3D User's guide: A three dimensional full potential aeroelastic program, version 1
[NASA-CR-198367] p 2899 N95-32205
AEROEMBOLISM
Arterial gas bubbles after decompression in pigs with Patent Foramen Ovale
[PB95-195319] p 2925 N95-30515
AERONAUTICS
Aeronautics and space report of the President
[NASA-TM-110743] p 3028 N95-31979
AEROSOLS
Aerosol measurements over the Pacific Ocean in support of the IR aerosol backscatter program
[NASA-CR-198925] p 2918 N95-30782
Cloud condensation nuclei measurements in shiptrails
[AD-A293302] p 2919 N95-30951
AEROSPACE ENGINEERING
Design of fibre reinforced composite panels for aerospace applications
[PB95-197851] p 2784 N95-30460
Effects of thermal and electrical stressing on the breakdown behavior of space wiring
[NASA-CR-198360] p 2768 N95-30860
Flight Vehicle Integration Panel Workshop on Pilot Induced Oscillations
[AGARD-AR-335] p 2745 N95-31061
Advanced small rocket chambers. Option 3: 110 lbf Ir-Re rocket, volume 1
[NASA-CR-195435-VOL-1] p 2768 N95-31169
AEROSPACE ENVIRONMENTS
Operating in the space plasma environment: A spacecraft charging study of the Solar X-ray Imager
[NASA-TM-110644] p 3003 N95-30468
Aerospace Environmental Technology Conference
[NASA-CP-3298] p 2771 N95-31746
Radiation effects in space: The Clementine 1 mission
[DE95-011513] p 3032 N95-32282
SVN 9 End-Of-Life testing p 2767 N95-32345
AEROSPACE INDUSTRY
Aerospace Environmental Technology Conference: Exectutive summary
[NASA-CP-3297] p 2771 N95-31350
AEROSPACE MEDICINE
Electromyostimulation, circuits and monitoring
[NASA-TM-110741] p 2926 N95-30846
Psychological pilot selection in the US Air Force, the Luftwaffe, and the German Aerospace Research Establishment
[AD-A293779] p 2928 N95-31376
AEROSPACE SAFETY
GPHS-RTGs in support of the Cassini RTG Program
[DE95-010306] p 2768 N95-30674
AEROSPACE SCIENCES
Space Sciences Laboratory Publications and Presentations
[NASA-TM-108484] p 3024 N95-30780
Aeronautics and space report of the President
[NASA-TM-110743] p 3028 N95-31979
AEROSPACE SYSTEMS
A manual for pyrotechnic design, development and qualification
[NASA-TM-110172] p 2766 N95-31358
Computational methods for control and optimal design of aerospace systems
[AD-A292861] p 2751 N95-31451
Space systems environmental interaction studies
[AD-A293826] p 2766 N95-31553
The Telecommunications and Data Acquisition Report
[NASA-CR-198911] p 2854 N95-32221
AEROSPACE VEHICLES
Solid Modeling Aerospace Research Tool (SMART) user's guide, version 2.0
[NASA-TM-4431] p 2940 N95-31420
Preventing cracking of anodized coatings
[NASA-TM-104622] p 2839 N95-31690
Environmentally regulated aerospace coatings
p 2777 N95-31775
AFRICA
Equatorial Africa: A climatological study
[AD-A293956] p 2920 N95-31524
AFTERBODIES
Validation of the NPARC code for nozzle afterbody flows at transonic speeds
[NASA-TM-106971] p 2742 N95-30704
Afterbody/nozzle pressure distributions of a twin-tail twin-engine fighter with axisymmetric nozzles at Mach numbers from 0.6 to 1.2
[NASA-TP-3509] p 2744 N95-31984
AGGLOMERATION
Oscillatory combustion of aluminized AP/HTPB propellants p 2800 N95-31286
AGGREGATES
Confederation Verification, Validation, and Accreditation Master Plan (CVVAMP). Technical test plan
[AD-A289717] p 2936 N95-31050
AGING (MATERIALS)
Ageing control no. 3 of propellants for rocket motors RB 27 and RB 28
[PB95-210357] p 2825 N95-30626
Evaluation on materials performance of Hastelloy Alloy XR for HTTR uses. 4: Tensile properties of base metals and welded joints
[DE95-721871] p 2804 N95-30761
NaK pool-boiler solar receiver durability bench test. Volume 2: Metallurgical analysis
[DE95-010338] p 2905 N95-31640
AGING (METALLURGY)
Interface degradation in CAS/Nicalon during elevated temperature aging
[DE95-008843] p 2812 N95-30543
The influence of matrix microstructure and temperature on cyclic deformation and fatigue of particle-reinforced 2219 aluminum p 2808 N95-31974
AGRICULTURE
Biomass production by fescue and switchgrass alone and in mixed swards with legumes
[DE95-009137] p 2909 N95-31612
AIR
Differences in creep performance of a HIPed silicon nitride in ambient air and inert environments
[DE95-009172] p 2796 N95-31633
AIR BREATHING ENGINES
The 31st JANNAF Combustion Subcommittee Meeting, volume 1 p 2825 N95-31194
AIR CONDITIONING EQUIPMENT
Compatibility of refrigerants and lubricants with motor materials under retrofit conditions
[DE95-010185] p 2814 N95-30767
Simultaneous heat and mass transfer in a horizontal tube absorber: Numerical tools for present and future absorber designs
[PB95-196978] p 2869 N95-30872
AIR COOLING
10 kW heat pipe-heat sink development
[AD-A293167] p 2870 N95-30965
AIR DEFENSE
Guidance and Control for Future Air-Defence Systems
[AGARD-CP-555] p 2839 N95-32123
Study of Extended Air Defence Post 2000
p 2839 N95-32124
SOSIE: A pragmatic approach to the simulation of Broad Air Defense applied to the theater level
p 2840 N95-32127
Electronic combat and lethal defense suppression
p 2842 N95-32140
AIR DUCTS
An investigation of the side-dump dual in-line ramjet combustor p 2756 N95-31199
AIR FLOW
An experimental study of planar heterogeneous supersonic confined jets
[AD-A290859] p 2867 N95-30557
10 kW heat pipe-heat sink development
[AD-A293167] p 2870 N95-30965
Enhanced energy release and soot reduction in actively controlled flames p 2799 N95-31200
On the interactions between particles and turbulence in a fully-developed channel flow in air
p 2875 N95-31707
AIR INTAKES
A pulsed liquid fuel ramjet p 2756 N95-31201
AIR JETS
A pulsed liquid fuel ramjet p 2756 N95-31201
Control of high Reynolds number round jets
p 2876 N95-31733
Cleaning verification by air/water impingement
p 2782 N95-31805
AIR LAND INTERACTIONS
A numerical study of the effect of the Gulf Stream and the Appalachian Mountains on Carolina coastal frontogenesis
[AD-A293765] p 2921 N95-31577
Simulation of katabatic flow and mountain waves
[DE95-010863] p 2911 N95-32276
AIR POLLUTION
Overview of IEA biomass combustion activities
[PB95-196374] p 2902 N95-30519
Demonstration of split-flow ventilation and recirculation as flow-reduction methods in an Air Force paint spray booth, volume 2
[AD-A286808] p 2762 N95-30926
Cloud condensation nuclei measurements in shiptrails
[AD-A293302] p 2919 N95-30951
Demonstration of split-flow ventilation and recirculation as flow-reduction methods in an Air Force paint spray booth, volume 1
[AD-A286807] p 2763 N95-31101
Environmental projects. Volume 16: Waste minimization assessment
[NASA-CR-198861] p 2909 N95-31651

Particulate air pollution and increased mortality: Biological plausibility for causal relationship
[DE95-006161] p 2909 N95-31703
Air pollution control system research: An iterative approach to developing affordable systems
p 2773 N95-31759
Combatting urban air pollution through Natural Gas Vehicle (NGV) analysis, testing, and demonstration
[DE95-008300] p 2911 N95-32156
No-thermal plasma processing of VOCs and NO(x) at LLNL
[DE95-011445] p 2911 N95-32281
Calculation of a residual mean meridional circulation for a zonal-mean tracer transport model
[DE95-009474] p 2911 N95-32350

AIR QUALITY
Producing usable fuel from municipal solid waste
[DE95-008405] p 2902 N95-30375
Combatting urban air pollution through Natural Gas Vehicle (NGV) analysis, testing, and demonstration
[DE95-008300] p 2911 N95-32156
Compatibility of manufacturing process fluids with HFC refrigerants and ester lubricants
[DE95-012152] p 2911 N95-32364

AIR SAMPLING
Aerosol measurements over the Pacific Ocean in support of the IR aerosol backscatter program
[NASA-CR-198925] p 2918 N95-30782
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
[DE95-000047] p 2881 N95-31694

AIR SEA ICE INTERACTIONS
The role of the hydrological cycle and the ocean's thermohaline circulation in climate change: A multicomponent climate model study
p 2909 N95-31720

AIR TRAFFIC
A NASPAC-Based analysis of the delay and cost effects of the western-pacific region preliminary resectorization effort of 1993
[AD-A288696] p 2748 N95-31013
Effects of civil tiltrotor service in the northeast corridor on en route airspace loads
[AD-A293586] p 2747 N95-31687
Integration of air traffic databases: A case study
[AD-A293691] p 2749 N95-32022

AIR TRAFFIC CONTROL
Human factors at the FAA Technical Center: Bibliography
[AD-A288638] p 2930 N95-31399
Emerging applications in probability (Sensor management)
[AD-A292781] p 2749 N95-31433
Initial evaluation of the Oregon State University planetary boundary layer column model for ITWS applications
[AD-A293775] p 2920 N95-31465
Integrated terminal weather system (ITWS) demonstration and validation operational test and evaluation
[AD-A293932] p 2749 N95-31521
The ATC operational evaluation of the prototype integrated terminal weather system (ITWS) at Dallas/Fort Worth and Orlando airports (May-September 1993)
[AD-A293808] p 2921 N95-31587
FAA aviation forecasts: Fiscal year 1995-2006
[AD-A293682] p 2741 N95-31598
Controller resource management: What can we learn from aircrews?
[DOT/FAA/AM-95/21] p 2750 N95-32186
Fact sheet for Congressional Committees. Air traffic control: Status of FAA's modernization program
[GAO/RCED-94-167FS] p 2750 N95-32197
Report to the Chairman, Subcommittee on Transportation and Related Agencies, Committee on Appropriations, House of Representatives. Air traffic control: Status of FAA's plans to close and contract out low-activity towers
[GAO/RCED-94-265] p 2750 N95-32199

AIR TRAFFIC CONTROLLERS (PERSONNEL)
Forward rapid rotation shiftwork in USAF air traffic controllers: Sleep, activity, fatigue and mood analyses
[AD-A293448] p 2927 N95-31373
The ATC operational evaluation of the prototype integrated terminal weather system (ITWS) at Dallas/Fort Worth and Orlando airports (May-September 1993)
[AD-A293808] p 2921 N95-31587
Controller resource management: What can we learn from aircrews?
[DOT/FAA/AM-95/21] p 2750 N95-32186

AIR TRANSPORTATION
Aviation capacity enhancement plan 1994
[AD-A292758] p 2747 N95-31428
Patient/aircraft forecasting for the strategic aeromedical evacuation lift-bed process
[AD-A293902] p 2747 N95-31512
Effects of civil tiltrotor service in the northeast corridor on en route airspace loads
[AD-A293586] p 2747 N95-31687
Special investigation report: Safety of the air tour industry in the United States
[PB95-917004] p 2748 N95-32185

AIR WATER INTERACTIONS
NASA Tropical Rainfall Measurement Mission (TRMM): Effects of tropical rainfall on upper ocean dynamics, air-sea coupling and hydrologic cycle
[NASA-CR-189437] p 2919 N95-31123
Shiptracks in the Californian stratus region: Dependency on marine atmospheric boundary layer depth
[AD-A293272] p 2901 N95-31125
Investigation of microwave backscatter from the air-sea interface
[NASA-CR-198854] p 2851 N95-31457
A numerical study of the effect of the Gulf Stream and the Appalachian Mountains on Carolina coastal frontogenesis
[AD-A293765] p 2921 N95-31577
The role of the hydrological cycle and the ocean's thermohaline circulation in climate change: A multicomponent climate model study
p 2909 N95-31720
Carbon dioxide concentrations in surface water and the atmosphere during 1986-1989 NOAA/PMEL cruises in the Pacific and Indian Oceans
[DE95-009659] p 2910 N95-32099

AIRBORNE EQUIPMENT
Simulation of airborne electromagnetic measurements in three dimensional environments
[DE95-008546] p 2900 N95-30363
Radiometer measurements of sea ice in the Gulf of Bothnia 1992
[PB95-206611] p 2900 N95-30718
Airborne ocean water lidar (OWL) real time processor (RTP)
[AD-A293226] p 2848 N95-30904
Stratospheric Observatory For Infrared Astronomy (SOFIA). Phase A: System concept description
[NASA-TM-110669] p 3002 N95-32187

AIRBORNE RADAR
Adaptive space-time processing for airborne radars based on Doppler pre-processing
[PB95-205464] p 2854 N95-32114

AIRBORNE SURVEILLANCE RADAR
Multisensor data fusion for integrated maritime surveillance p 2842 N95-32135

AIRBORNE/SPACEBORNE COMPUTERS
Model following control for tailoring handling qualities: ACT experience with ATTHeS p 2758 N95-32000

AIRCRAFT ACCIDENTS
The relation of handling qualities ratings to aircraft safety p 2746 N95-31067
SAAB experience with PIO p 2746 N95-31069
Annual review of aircraft accident data: US general aviation calendar year 1993
[PB95-215828] p 2747 N95-31712
Special investigation report: Safety of the air tour industry in the United States
[PB95-917004] p 2748 N95-32185

AIRCRAFT COMPARTMENTS
Aircraft evacuations through Type-3 exits I: Effects of seat placement at the exit
[DOT/FAA/AM-95/22] p 2748 N95-31845

AIRCRAFT CONFIGURATIONS
A general inverse design procedure for aerodynamic bodies p 2750 N95-30497
Numerical investigation into vortical flow about a delta-wing configuration up to incidences at which vortex breakdown occurs in experiment
[PB95-198024] p 2743 N95-30837
Application of multigrid computational fluid dynamics (CFD) methods to rotor analysis
[AD-A293012] p 2874 N95-31475

AIRCRAFT CONSTRUCTION MATERIALS
Thermal-mechanical fatigue crack growth in aircraft engine materials
[ISBN-0-315-86543-1] p 2894 N95-31098
Development of stitched/RTM primary structures for transport aircraft
[NASA-CR-191441] p 2789 N95-31421
Aerospace Environmental Technology Conference
[NASA-CP-3298] p 2771 N95-31746

AIRCRAFT CONTROL
Moving base simulation of an integrated flight and propulsion control system for an ejector-augmentor STOVL aircraft in hover
[NASA-TM-108867] p 2750 N95-30646
Flight Vehicle Integration Panel Workshop on Pilot Induced Oscillations
[AGARD-AR-335] p 2745 N95-31061
The process for addressing the challenges of aircraft pilot coupling p 2745 N95-31063
Observations on PIO p 2745 N95-31064
Unified criteria for ACT aircraft longitudinal dynamics p 2745 N95-31065
Looking for the simple PIO model p 2745 N95-31066
SAAB experience with PIO p 2746 N95-31069
Aeroelastic pilot-in-the-loop oscillations p 2746 N95-31070
Handling qualities analysis on rate limiting elements in flight control systems p 2746 N95-31071
Calspan experience of PIO and the effects of rate limiting p 2746 N95-31072
Computational methods for control and optimal design of aerospace systems
[AD-A292861] p 2751 N95-31451
Flight test validation of a frequency-based system identification method on an F-15 aircraft
[NASA-TM-4704] p 2757 N95-31846
The prevention of PIO by design p 2757 N95-31991
Robust control: A structured approach to solve aircraft flight control problems p 2758 N95-31995
Evaluation of the techniques of fuzzy control for the piloting an aircraft p 2758 N95-31997
Control law design using H-infinity and mu-synthesis short-period controller for a tail-airplane p 2758 N95-31999
Flight demonstration of an advanced pitch control law in the VAAC Harrier aircraft p 2760 N95-32012
X-31: A program overview and flight test status p 2753 N95-32013
Flying qualities of civil transport aircraft with electrical flight control p 2761 N95-32016
Pilot Induced Oscillation: A report on the AGARD Workshop on PIO p 2761 N95-32017

AIRCRAFT DESIGN
A general inverse design procedure for aerodynamic bodies p 2750 N95-30497
The process for addressing the challenges of aircraft pilot coupling p 2745 N95-31063
The relation of handling qualities ratings to aircraft safety p 2746 N95-31067
Handling qualities analysis on rate limiting elements in flight control systems p 2746 N95-31071
Development of stitched/RTM primary structures for transport aircraft
[NASA-CR-191441] p 2789 N95-31421
Geometric modeling for computer aided design
[NASA-CR-198828] p 2943 N95-31982
Catapult-launching of the RAFALE design and experimentation p 2752 N95-32008

AIRCRAFT DETECTION
AIDEX: An expert system for aircraft identification p 2842 N95-32138

AIRCRAFT ENGINES
Thermal-mechanical fatigue crack growth in aircraft engine materials
[ISBN-0-315-86543-1] p 2894 N95-31098
Icing simulation in the aeropropulsion systems test facility propulsion development test cell C-2
[AD-A293039] p 2747 N95-31667

AIRCRAFT EQUIPMENT
Apparent size passive range method
[AD-D017360] p 2753 N95-31180

AIRCRAFT FUELS
Environmentally safe aviation fuels p 2775 N95-31768

AIRCRAFT ICING
Icing simulation in the aeropropulsion systems test facility propulsion development test cell C-2
[AD-A293039] p 2747 N95-31667

AIRCRAFT INSTRUMENTS
Guidelines for the design of GPS and LORAN receiver controls and displays
[AD-A293753] p 2749 N95-31572

AIRCRAFT LANDING
Flight test evaluation of the Stanford University/United Airlines differential GPS Category 3 automatic landing system
[NASA-TM-110354] p 2743 N95-30788

AIRCRAFT MAINTENANCE
Bicarbonate of soda paint stripping process validation and material characterization p 2777 N95-31778
Environmentally Safe and Effective Processes for Paint Removal
[AGARD-LS-201] p 2843 N95-32165
Process evaluation p 2845 N95-32180
Standardization work p 2845 N95-32181

AIRCRAFT PARTS
Bicarbonate of soda paint stripping process validation and material characterization p 2777 N95-31778

AIRCRAFT PERFORMANCE
Flight assessment of the onboard propulsion system model for the Performance Seeking Control algorithm on an F-15 aircraft
[NASA-TM-4705] p 2756 N95-31425

Performance improvement of composite wings through aeroelastic tailoring and modern control
[AD-A293689] p 2752 N95-31602
Flight test validation of a frequency-based system identification method on an F-15 aircraft
[NASA-TM-4704] p 2757 N95-31846
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. Tactical aircraft: F-15 replacement is premature as currently planned
[GAO/NSIAD-94-118] p 2964 N95-31987
Lavi flight control system: Design requirements, development and flight test results p 2758 N95-31994
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. Unmanned aerial vehicles: Performance of short-range system still in question
[GAO/NSIAD-94-65] p 2752 N95-32196

AIRCRAFT PILOTS
Using computerized neuropsychological testing to assess aviator skills
[AD-A293227] p 2928 N95-30905
Psychological pilot selection in the US Air Force, the Luftwaffe, and the German Aerospace Research Establishment
[AD-A293779] p 2928 N95-31376

AIRCRAFT PRODUCTION
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. Tactical aircraft: F-15 replacement is premature as currently planned
[GAO/NSIAD-94-118] p 2964 N95-31987

AIRCRAFT SAFETY
Electrical short circuit and current overload tests on aircraft wiring
[AD-A293308] p 2860 N95-30922
The relation of handling qualities ratings to aircraft safety p 2746 N95-31067
Chemical options to halons for aircraft use
[AD-A293741] p 2747 N95-31569
Aircraft evacuations through Type-3 exits I: Effects of seat placement at the exit
[DOT/FAA/AM-95/22] p 2748 N95-31845
Special investigation report: Safety of the air tour industry in the United States
[PB95-917004] p 2748 N95-32185

AIRCRAFT SPECIFICATIONS
Experiences with ADS-33 helicopter specification testing and contributions to refinement research p 2757 N95-31993
Lavi flight control system: Design requirements, development and flight test results p 2758 N95-31994
The control system design methodology of the STOL and maneuver technology demonstrator p 2758 N95-31998
Control law design using H-infinity and mu-synthesis short-period controller for a tail-airplane p 2758 N95-31999

AIRCRAFT STABILITY
Flight Vehicle Integration Panel Workshop on Pilot Induced Oscillations
[AGARD-AR-335] p 2745 N95-31051
Unified criteria for ACT aircraft longitudinal dynamics p 2745 N95-31065
Looking for the simple PIO model p 2745 N95-31066
Aeroelastic pilot-in-the-loop oscillations p 2746 N95-31070
The prevention of PIO by design p 2757 N95-31991
Pilot Induced Oscillation: A report on the AGARD Workshop on PIO p 2761 N95-32017

AIRCRAFT STRUCTURES
A comparison of coating alternatives for US Coast Guard aircraft
[AD-A293270] p 2817 N95-31124
Failure analysis for polycarbonate transparencies
[AD-A292992] p 2820 N95-31471
Performance improvement of composite wings through aeroelastic tailoring and modern control
[AD-A293689] p 2752 N95-31602
The FCS-structural coupling problem and its solution p 2759 N95-32005
Mapping hidden aircraft defects with dual-band infrared computed tomography
[DE95-011531] p 2741 N95-32164
Selective chemical stripping p 2844 N95-32175

AIRCRAFT WAKES
Hot jet/wake turbulent structure and laser propagation. Part 3: Laser propagation measurements and modeling p 2871 N95-30992

AIRFOIL OSCILLATIONS
Control of unsteady separated flow associated with the dynamic stall of airfoils
[NASA-CR-198972] p 2744 N95-32193

AIRFOIL PROFILES
Control of unsteady separated flow associated with the dynamic stall of airfoils
[NASA-CR-198972] p 2744 N95-32193

AIRFOILS
Axial loads on yawed rotors
[PB95-214193] p 2742 N95-30638
Multigrid convergence acceleration for the 2D Euler equations applied to high-lift systems
[PB95-198081] p 2743 N95-30814
A laser-based ice shape profilometer for use in icing wind tunnels
[NASA-TM-106936] p 2880 N95-30851

AIRFRAMES
Development of stitched/RTM primary structures for transport aircraft
[NASA-CR-191441] p 2789 N95-31421
The FCS-structural coupling problem and its solution p 2759 N95-32005

AIRLINE OPERATIONS
Development of advanced approach and departure procedures. Failure scenarios
[PB95-198123] p 2748 N95-30815
A NASPAC-Based analysis of the delay and cost effects of the western-pacific region preliminary resectorization effort of 1993
[AD-A288696] p 2748 N95-31013
Integrated terminal weather system (ITWS) demonstration and validation operational test and evaluation
[AD-A293932] p 2749 N95-31521
Analysis and modeling of an airport departure process
[AD-A293782] p 2749 N95-31581

AIRPORT TOWERS
FAA aviation forecasts: Fiscal year 1995-2006
[AD-A293682] p 2741 N95-31598
Report to the Chairman, Subcommittee on Transportation and Related Agencies, Committee on Appropriations, House of Representatives. Air traffic control: Status of FAA's plans to close and contract out low-activity towers
[GAO/RCED-94-265] p 2750 N95-32199

AIRPORTS
Development of advanced approach and departure procedures. Failure scenarios
[PB95-198123] p 2748 N95-30815
A NASPAC-Based analysis of the delay and cost effects of the western-pacific region preliminary resectorization effort of 1993
[AD-A288696] p 2748 N95-31013
Aviation capacity enhancement plan 1994
[AD-A292758] p 2747 N95-31428
Evaluation of alternative pavement marking materials
[AD-A292973] p 2763 N95-31468
Integrated terminal weather system (ITWS) demonstration and validation operational test and evaluation
[AD-A293932] p 2749 N95-31521
Analysis and modeling of an airport departure process
[AD-A293782] p 2749 N95-31581
The ATC operational evaluation of the prototype integrated terminal weather system (ITWS) at Dallas/Fort Worth and Orlando airports (May-September 1993)
[AD-A293808] p 2921 N95-31587
FAA aviation forecasts: Fiscal year 1995-2006
[AD-A293682] p 2741 N95-31598
Integration of air traffic databases: A case study
[AD-A293691] p 2749 N95-32022
Fact sheet for Congressional Committees. Air traffic control: Status of FAA's modernization program
[GAO/RCED-94-167FS] p 2750 N95-32197

AIRSPACE
Effects of civil tiltrotor service in the northeast corridor on en route airspace loads
[AD-A293586] p 2747 N95-31687

AIRSPEED
Experimental and computational investigation of the tip clearance flow in a transonic axial compressor rotor
[NASA-TM-106711] p 2876 N95-31738

ALBEDO
National Institute for Global Environmental Change
[DE95-008333] p 2907 N95-30358

ALCOHOLS
Enantioselectivity of quinoprotein alcohol dehydrogenases: Production of enantiomerically pure C3-alcohol synthons
[PB95-196960] p 2771 N95-30734

ALGEBRA
Canonical symmetric invariant pairings in vertex operator super algebras and gramians
[PB95-208112] p 2955 N95-30488
Strange compactification theorem: Infinite processes and the 3-dimensional poincare conjecture 6. Part A
[PB95-207924] p 2965 N95-30504
Extending a multi-set relational algebra to a parallel environment
[PB95-207106] p 3023 N95-30566
Dressing symmetry of the uniformization solution of Liouville equation
[DE95-613380] p 2956 N95-30607
Associators in generalized octonionic maps
[DE95-616243] p 2957 N95-30688
A BRST charge for non-critical W2(s) strings
[DE95-613470] p 3019 N95-30771
Advances in robust control
[AD-A291126] p 2952 N95-31266
Antipodes and integrals in Hopf algebras over rings and quantum Yang-Baxter equation
[PB95-212155] p 2961 N95-31397
Quasi-Newton updating for large scale nonlinear systems
[AD-A292776] p 2940 N95-31431
Notes on lie algebraic analysis of achromats
[DE95-009524] p 3002 N95-32356

ALGORITHMS
A Heuristic and complete planner for the classical mover's problem
[DE95-008440] p 2949 N95-30377
Adaptive path planning: Algorithm and analysis
[DE95-008549] p 2950 N95-30463
Convergence properties of an augmented lagrangian algorithm for optimization with a combination of general equality and linear constraints
[PB95-208039] p 2956 N95-30570
Refinement techniques in computer graphics
[PB95-208526] p 2934 N95-30625
MVP/GMVP: General purpose Monte Carlo codes for neutron and photon transport calculations based on continuous energy and multigroup methods
[DE95-722072] p 2979 N95-30656
ESAA: Environment for Seismic Activity Analysis
[DE95-612416] p 2913 N95-30675
Algorithm comparison and benchmarking using a parallel spectra transform shallow water model
[DE95-009124] p 2913 N95-30683
Join processing in relational database systems p 3023 N95-30764
Simplex method for semi-definite programming: Optimization and systems theory
[PB95-212122] p 2934 N95-30792
Dynamic routation in distributed environments
[PB95-197968] p 2847 N95-30812
SeaWiFS Technical Report Series. Volume 29: SeaWiFS CZCS-type pigment algorithm
[NASA-TM-104566] p 2922 N95-30857
Fast multipole methods for scattering computations
[AD-A291093] p 2848 N95-30869
Terminal doppler weather radar (TDWR) build 5B operational test and evaluation (OT&E) integration and OT&E operational test plan
[AD-A293251] p 2848 N95-30910
Algorithms for categorizing multiprocessor communication under invalidate and update-based coherence protocols
[AD-A290022] p 2947 N95-30930
Statistical interface for chaotic signal in noise
[AD-A290271] p 2848 N95-30932
New adaptive methods for reconfigurable flight control systems, appendix 1
[AD-A292711] p 2756 N95-30937
Inverse and control problems in electromagnetics
[AD-A292993] p 2849 N95-30962
SSUSI single sensor auroral E-layer algorithm: Functional description
[AD-A288630] p 2914 N95-31012
Workshop on diffusion approximation in communication and stochastic systems theory
[AD-A292872] p 2952 N95-31055
A scalable parallel Strassen's matrix multiply algorithm for distributed memory computers
[DE95-010213] p 2936 N95-31109
Numerical stability investigations of processes for solving linear initial value problems
[PB95-207023] p 2959 N95-31183
Effective bandwidth techniques in bufferless and buffered ATM multiplexers
[PB95-207072] p 2862 N95-31185
Control of mechanical systems with rolling contacts: Applications to robotics p 2889 N95-31332
Flight assessment of the onboard propulsion system model for the Performance Seeking Control algorithm on an F-15 aircraft
[NASA-TM-4705] p 2756 N95-31425
Multi-dimensional data compression for portable communication
[AD-A292751] p 2850 N95-31426
Improved modeling of unsteady heat transfer (The first step)
[AD-A292777] p 2874 N95-31432

Towards increased productivity of algorithm implementation
[AD-A292862] p 2940 N95-31452
Clouds: Their prediction and simulation
[AD-A292864] p 2920 N95-31453
Functions for processing synthetic aperture radar imagery
[AD-A293895] p 2851 N95-31510
Integrated terminal weather system (ITWS) demonstration and validation operational test and evaluation
[AD-A293932] p 2749 N95-31521
Adaptive optics design for the advanced electro-optical system (AEOS)
[AD-A293972] p 2974 N95-31527
The remainder form and the cord-slope form in global optimization with interval methods p 2941 N95-31533
Fast algorithms for three-dimensional inverse scattering problems
[AD-A293510] p 2852 N95-31537
Spectral methods and sum acceleration algorithms
[DE95-009689] p 2941 N95-31630
Finite-sample based learning algorithms for feedforward networks
[DE95-009123] p 2941 N95-31631
A simple and efficient procedure for polyhedral assembly partitioning under infinitesimal motions
[DE95-009838] p 2942 N95-31644
Using case-based reasoning as a Reinforcement Learning framework for optimization with changing criteria
[AD-A293602] p 2953 N95-31654
Image representation using fast algorithms based on the Zak transform
[AD-A293416] p 2942 N95-31684
Production matching for large learning systems
[AD-A293105] p 2953 N95-31827
SeaWiFS technical report series. Volume 28: SeaWiFS algorithms, part 1
[NASA-TM-104566-VOL-28] p 2924 N95-31850
PADO: Learning tree structured algorithms for orchestration into an object recognition system
[AD-A293109] p 2943 N95-32020
Monte Carlo tests of the ELIPGRID-PC algorithm
[DE95-010811] p 2943 N95-32030
A Stochastic EM algorithm for approximating the maximum likelihood estimate
[DE95-010328] p 2943 N95-32044
A stochastic difference equation approach to inference with missing data: Some new results
[DE95-010327] p 2944 N95-32088
A stochastic EM estimator in the presence of missing data: Theory and applications
[DE95-010329] p 2944 N95-32089
Proposed DDS-specific fields for the Generic Authentication Information Element
[DE95-009839] p 3026 N95-32144
A proposed Generic Authentication Information Element
[DE95-009862] p 2948 N95-32146
An efficient implementation of Forward-Backward Least-Mean-Square Adaptive Line Enhancers p 2855 N95-32224
A seismic data compression system using subband coding p 2857 N95-32238
Fast identification of some typical digital modulation schemes
[PB95-211454] p 2857 N95-32247
Data reduction of piecewise linear curves
[PB95-212270] p 2962 N95-32256
Compact location problems with budget and communication constraints
[DE95-010876] p 2948 N95-32277
Metafitting: Weight optimization for least-squares fitting of PTTI data p 2971 N95-32340

ALLOCATIONS
Report to Congressional Committees. Federal Research: Interim report on the small business innovation research program
[GAO/RCED-95-59] p 3022 N95-32200

ALLOYING
Mechanical alloying processing with application to structural materials
[AD-A290788] p 2802 N95-30404
Alloying effects of Kondo insulators
[DE95-614306] p 3010 N95-30644
A metallurgical approach toward alloying in rare earth permanent magnet systems
[DE95-010242] p 2966 N95-30668
The effect of grain refinement on the room-temperature ductility of as-cast Fe3Al-based alloys
[DE95-010121] p 2805 N95-31107
Shape memory properties of an iron modified nickel aluminide alloy
[DE95-010223] p 2805 N95-31111

ALLOYS
Mechanical alloying processing with application to structural materials
[AD-A290788] p 2802 N95-30404
Wettability of boron carbide
[PB95-196358] p 2802 N95-30518
First-principles approaches to materials stability
[DE95-011533] p 2810 N95-32283

ALTERNATIVES
A comparison of coating alternatives for US Coast Guard aircraft
[AD-A293270] p 2817 N95-31124
The search for CFC alternatives is over? p 2774 N95-31760
Evaluating the cost effectiveness of environmental projects: Case studies in aerospace and defense p 2774 N95-31762
The Oak Ridge Refrigerant Management Program p 2774 N95-31763
Prepsolv (TM): The optimum alternative to 1,1,1-trichloroethane and methyl ethyl ketone for hand-wipe cleaning of aerospace materials p 2774 N95-31764
Evaluation of HFC 245ca and HFC 236ea as foam blowing agents p 2775 N95-31766
Alternatives to ozone depleting refrigerants in test equipment p 2775 N95-31767
F-200(TM): The new solution for fire protection p 2776 N95-31770
Aqueous cleaning design presentation p 2778 N95-31781
An overview of NASA testing requirements for alternate cleaning solvents used in liquid and gaseous oxygen environments p 2783 N95-31813
Development of a CFC Critical Area Response (CAR) package p 2783 N95-31814
Energy storage and alternatives to improve train voltage on a mass transit system
[DE95-010344] p 2906 N95-32090
Treatment of plastic media waste p 2844 N95-32177
Process evaluation p 2845 N95-32180

ALTIMETERS
Improved altimeter settings for A-10 aircraft
[AD-A293142] p 2753 N95-30920

ALTIMETRY
Improved altimeter settings for A-10 aircraft
[AD-A293142] p 2753 N95-30920
Investigation of microwave backscatter from the air-sea interface
[NASA-CR-198854] p 2851 N95-31457

ALTITUDE SIMULATION
Icing simulation in the aeropropulsion systems test facility propulsion development test cell C-2
[AD-A293039] p 2747 N95-31667

ALUMINIDES
Reaction synthesis of intermetallics
[DE95-009029] p 2803 N95-30575
Determination of site-occupancies in aluminide intermetallics by ALCHEMI
[DE95-009179] p 2803 N95-30733
The effect of interface properties on nickel base alloy composites
[NASA-CR-198363] p 2785 N95-30787
Shape memory properties of an iron modified nickel aluminide alloy
[DE95-010223] p 2805 N95-31111
Influence of strain rate and temperature on the mechanical behavior of iron aluminide-based alloys
[DE95-009426] p 2808 N95-31636
Creep of a fine-grained, fully-lamellar, two-phase TiAl alloy at 760 C
[DE95-009531] p 2810 N95-32272

ALUMINUM
Trivalent chromium solutions for sealing anodized aluminum
[AD-D017349] p 2803 N95-30551
Texture development in aluminium extrusion
[PB95-196598] p 2979 N95-30666
The 21st JANNAF Exhaust Plume Technology Meeting, volume 1
[CPIA-PUBL-621-VOL-1] p 2870 N95-30986
The Al and A(lc)l2O3 droplet cloud in solid rocket motors p 2770 N95-30988
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures p 2799 N95-30990
The Al and Al2O3 droplet cloud in solid rocket motors p 2770 N95-31196
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures p 2799 N95-31198
Oscillatory combustion of aluminized AP/HTPB propellants p 2800 N95-31286
Characterization of an improved Rijke burner as prelude to measurements of aluminum distributed combustion p 2800 N95-31287
In situ composites in the aluminum nitride-alumina system
[AD-A293776] p 2789 N95-31509
Response of dual-layered structures subjected to shock pressure wave
[AD-A293731] p 2896 N95-31568
Thin-film sulfuric acid anodizing as a replacement for chromic acid anodizing p 2776 N95-31772
A microwave plasma cleaning apparatus p 2779 N95-31786
The influence of matrix microstructure and temperature on cyclic deformation and fatigue of particle-reinforced 2219 aluminum p 2808 N95-31974
High-resolution superconducting x-ray spectrometers with aluminum trapping layers of different thicknesses
[DE95-010253] p 2881 N95-32047

ALUMINUM ALLOYS
Physical modelling of microstructural evolution during thermomechanical processing of aluminium alloys
[PB95-196341] p 2805 N95-31053
Review of environmental effects in intermetallics
[DE95-010120] p 2805 N95-31106
The effect of grain refinement on the room-temperature ductility of as-cast Fe3Al-based alloys
[DE95-010121] p 2805 N95-31107
The 10th International Conference on the Strength of Materials
[AD-A292335] p 2894 N95-31263
Surface inspection using FTIR spectroscopy p 2782 N95-31803
Processing and microstructural evolution of alumina/aluminum alloy and aluminum nitride/aluminum alloy composites by directed melt oxidation p 2789 N95-31973
The influence of microstructure on creep deformation in near-gamma TiAl alloys p 2808 N95-31975
Control of interfacial chemistry and mechanical properties in metal/ceramic composites p 2790 N95-31976
Interfacial segregation and deformation of superplastically deformed Al-Mg-Mn alloys
[DE95-009572] p 2809 N95-32052
Cascade damage in the ordered alloy Ni3Al
[DE95-009893] p 2809 N95-32104
Residual stress distribution in FeAl weld overlay on steel
[DE95-009178] p 2899 N95-32317

ALUMINUM COATINGS
Replacement of corrosion protection chromate primers and paints used in cryogenic applications on the Space Shuttle with wire arc sprayed aluminum coatings p 2776 N95-31774

ALUMINUM GALLIUM ARSENIDES
Magnetoluminescence characterization of quantum well structures
[DE95-008527] p 3008 N95-30381
Fractal quantum well heterostructures for broadband light emitters
[DE95-009579] p 2860 N95-30707
Vertical transport in GaAs/AlGaAs superlattices p 3012 N95-30822
Optical logic and signal processing using a semiconductor laser diode-based optical bistability device
[AD-A293248] p 2997 N95-30908
A compact and efficient violet laser source
[AD-A292782] p 2885 N95-31434

ALUMINUM NITRIDES
Hydrogen diffusion and passivation in InGaAlN alloys
[DE95-010889] p 2806 N95-31150
Pseudomorphic heterostructure materials for high performance devices
[AD-A292906] p 2788 N95-31384

ALUMINUM OXIDES
Observation of a low-binding-energy peak in the 2p core-level photoemission from oxidized Al(111)
[PB95-195350] p 2802 N95-30534
Mechanisms of enhanced ionic conduction at interfaces in ceramics
[DE95-009125] p 2814 N95-30730
Urethane foam process improvements
[DE95-008957] p 2815 N95-30798
Innovative processing of composites for ultra-high temperature applications, book 3
[AD-A290891] p 2786 N95-30866
Innovative processing of composites for ultra-high temperature applications, book 4
[AD-A290892] p 2786 N95-30867
Room temperature fracture and high temperature creep deformation properties of alumina reinforced with 20 vol% particulate niobium
[DE95-010234] p 2815 N95-30897

The 21st JANNAF Exhaust Plume Technology Meeting, volume 1
[CPIA-PUBL-621-VOL-1] p 2870 N95-30986
Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-30987
The Al and A(lc)l2O3 droplet cloud in solid rocket motors p 2770 N95-30988
Shuttle redesigned solid rocket motor aluminum oxide investigations p 2770 N95-30989
An assessment of the cost of microwave sintering ceramic tiles for armor applications. Phase 2 report
[DE95-010000] p 2816 N95-31103
Low temperature fabrication from nano-size ceramic powders
[DE95-010995] p 2818 N95-31153
Effect of irradiation spectrum on the microstructure of ion-irradiated Al2O3
[DE95-010225] p 2806 N95-31188
Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-31195
The Al and Al2O3 droplet cloud in solid rocket motors p 2770 N95-31196
Shuttle Redesigned Solid Rocket Motor aluminum oxide investigations p 2770 N95-31197
Processing and microstructural evolution of alumina/aluminum alloy and aluminum nitride/aluminum alloy composites by directed melt oxidation p 2789 N95-31973
Control of interfacial chemistry and mechanical properties in metal/ceramic composites p 2790 N95-31976
Microstructure of Al2O3 irradiated with an applied electric field
[DE95-010278] p 2822 N95-32043
Nondestructive testing of ceramic components: Cooperative Research and Development Agreement completion report
[DE95-009510] p 2823 N95-32352

ALUMINUM-LITHIUM ALLOYS
Analysis of stress concentration at holes in components made of 2195 aluminum-lithium
[NASA-TP-3554] p 2893 N95-30613

AMBIENT TEMPERATURE
Differences in creep performance of a HIPed silicon nitride in ambient air and inert environments
[DE95-009172] p 2796 N95-31633

AMBIPOLAR DIFFUSION
A theoretical analysis of steady-state photocurrents in simple silicon diodes
[NASA-CR-198885] p 2859 N95-30651

AMMONIA
Porous spherical shells and microspheres by electrodispersion precipitation
[DE95-009073] p 2815 N95-30799
Flame structure studies of neat and NH3 doped H2/N2O flames employing molecular beam mass spectrometry and modeling p 2801 N95-31313
Self-lubricating, TiN-MoS2 composite coatings produced by simultaneous deposition from Ti((CH3))2N4/NH3/MoF6H2S gas mixture
[DE95-010359] p 2788 N95-31403

AMMONIUM COMPOUNDS
The neutron powder diffraction and acoustic investigations of the NH4SCN phase diagram
[DE95-614372] p 3009 N95-30419

AMMONIUM PERCHLORATES
Shuttle redesigned solid rocket motor aluminum oxide investigations p 2770 N95-30989
Shuttle Redesigned Solid Rocket Motor aluminum oxide investigations p 2770 N95-31197
Unsteady laser augmented combustion of pure oxidizers AP and RDX p 2799 N95-31284
Oscillatory combustion of aluminized AP/HTPB propellants p 2800 N95-31286
Model for defining propellant burn rate performance boundaries p 2800 N95-31290
AP reclamation and reuse in RSRM propellant p 2772 N95-31751

AMORPHOUS MATERIALS
Orientation of rapid thermally annealed lead zirconate titanate thin films on (111) Pt substrate
[DE95-615232] p 2811 N95-30422
Synthesis of carbo-nitride films using high-energy shock plasma deposition
[DE95-615231] p 2811 N95-30450
Morphology and microstructure of (111) crystalline CeO2 films grown on amorphous SiO2 substrates by pulsed-laser ablation
[DE95-006842] p 3009 N95-30542
Phthalonitrile prepolymer as high temperature sizing material for composite fibers
[AD-D017447] p 2818 N95-31272
Microstructure of Al2O3 irradiated with an applied electric field
[DE95-010278] p 2822 N95-32043
Comprehensive research on the stability and electronic properties of a-Si:H and a-SiGe:H alloys and devices
[DE95-004088] p 2810 N95-32154

AMORPHOUS SEMICONDUCTORS
Evidence for electronic energy loss processes stimulating solid phase epitaxial regrowth of spatially isolated amorphous regions in semiconductor systems
[DE95-009892] p 3016 N95-32103

AMORPHOUS SILICON
Large-area, triple-junction a-Si alloy production scale-up
[DE95-004067] p 2904 N95-31163
Evidence for electronic energy loss processes stimulating solid phase epitaxial regrowth of spatially isolated amorphous regions in semiconductor systems
[DE95-009892] p 3016 N95-32103

AMPLIFICATION
Pre-amplifier with multi-stage feedback
[AD-D017371] p 2859 N95-30659

AMPLITUDE MODULATION
Smart active multiwave sensing with zero background amplitude modulated probes
[DE95-008813] p 2792 N95-30714

AMPLITUDES
Handling qualities analysis on rate limiting elements in flight control systems p 2746 N95-31071

AMPOULES
The effect of gravity on the deposition of thin films: The physical vapor transport of copper phthalocyanine
[AD-A292997] p 2838 N95-31472

ANAEROBES
Degradation of TCE using sequential anaerobic biofilm and aerobic immobilized bed reactor p 2780 N95-31791

ANALOG SIMULATION
Generation of earthquake signals
[PB95-211223] p 2913 N95-30631

ANALOG TO DIGITAL CONVERTERS
Coherent integrator
[AD-D017422] p 2847 N95-30743
Decimation of encoding errors in an optimum SNS 2 micron low-noise CMOS ADC
[AD-A293208] p 2860 N95-30900
Analog preprocessing in a SNS 2 micrometers low-noise CMOS folding ADC
[AD-A293356] p 2849 N95-30954
Electromagnetic field exposure dosimeter
[AD-A293191] p 2927 N95-30981

ANALOGIES
Unification of LARCH and Z-based object models to support algebraically-based design refinement: The LARCH perspective
[AD-A289235] p 2935 N95-30999
A cognitive architecture for solving ill-defined problems
[AD-A293582] p 2929 N95-31686

ANALOGS
On the string equation at c=1
[DE95-737161] p 3014 N95-31222

ANALYSIS (MATHEMATICS)
MPI implementation of PHOENICS: A general purpose computational fluid dynamics code
[DE95-009810] p 2877 N95-32033

ANALYSIS OF VARIANCE
Modeling F/A-18 flight hour program costs using regression analysis
[AD-A293771] p 2752 N95-31579

ANALYTIC FUNCTIONS
Higher Schwarzian operators and combinatorics of Schwarzian derivative
[PB95-208435] p 2957 N95-30623
Existence of solutions in plane quasistationary stokes flow driven by surface tension
[PB95-197935] p 2868 N95-30810

ANGLE OF ATTACK
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept
[NASA-TM-108489] p 2742 N95-30712
Multigrid convergence acceleration for the 2D Euler equations applied to high-lift systems
[PB95-198081] p 2743 N95-30814
Unsteady transonic wind tunnel test on a semispan straked delta wing, oscillating in pitch. Part 1: Description of the model, test setup, data acquisition, and data processing
[AD-A293113] p 2743 N95-30885
Side force acting on blunted circular cylinder bodies at high angles of attack in supersonic flow
[NAL-TR-1255] p 2744 N95-31741
X-31: A program overview and flight test status p 2753 N95-32013

ANGULAR MOMENTUM
Two-loop vacuum amplitudes in a non-Abelian gauge theory on S(sub 4)
[DE95-616284] p 3018 N95-30436
Nuclear-spin-dependent parity-nonconserving effects in thallium, lead and bismuth atoms
[DE95-614120] p 2991 N95-32354

ANGULAR RESOLUTION
Beam-centroid tracking instrument for ion thrusters
[AD-A293654] p 2769 N95-31567

ANGULAR VELOCITY
Dynamical analysis of the coriolis effect which causes space disorientation
[NAL-TR-1258] p 2928 N95-31714

ANIMALS
Temporal information processing mechanisms
[PB95-208344] p 3027 N95-32370

ANIONS
The one-dimensional model of the off-centre potential of the fluorine ion in the NaBr lattice
[DE95-614310] p 3010 N95-30647
Calculated structures and electronic absorption spectroscopy for magnesium phthalocyanine and its anion radical
[AD-A293672] p 2796 N95-31596

ANISOTROPIC MEDIA
Numerical evaluation of three-dimensional crack-tip integrals for layered anisotropic solids p 2898 N95-32191

ANISOTROPY
Texture development in aluminium extrusion
[PB95-196598] p 2979 N95-30666
TV-VI semiconductor quantum well lasers, physics and engineering p 2883 N95-30805
A viscoelastic anisotropic wave propagation model for composite cure evaluation p 2786 N95-30839
Dynamics of an inhomogeneous anisotropic antiferromagnetic spin chain
[DE95-614449] p 3013 N95-30959
The effect of gravity on the deposition of thin films: The physical vapor transport of copper phthalocyanine
[AD-A292997] p 2838 N95-31472
Derivation of two-dimensional (2-D) conduction equation in generalized coordinates with constant and anisotropic physical properties
[AD-A293896] p 3020 N95-31511
Rationale and summary of methods for determining ultrasonic properties of materials at Lawrence Livermore National Laboratory
[DE95-009475] p 2795 N95-31593
Influence of layer order and composition on the magnetic anisotropy of ultra-thin Co sandwiches
[DE95-010608] p 2810 N95-32265

ANNEALING
Orientation of rapid thermally annealed lead zirconate titanate thin films on (111) Pt substrate
[DE95-615232] p 2811 N95-30422
Phase transformations in melt-spun Y-Ba-Cu-O bulk superconductor
[DE95-010237] p 3011 N95-30667
Formation of cavities in Si and their chemisorption of materials
[DE95-009586] p 2980 N95-30708
Phase stability, point defects and site preference of FeAl and NiAl with ternary additions
[DE95-009694] p 3015 N95-31641

ANNIHILATION REACTIONS
Generalized deformed para-Bose oscillator and its coherent states
[DE95-613444] p 2963 N95-30610
WW and WZ production at the tevatron
[DE95-011014] p 2981 N95-30970
Radiative corrections to the three quantum annihilation cross section in high energy electron-positron collisions
[DE95-623675] p 2995 N95-32296
STM measurements of the interaction of vacancies and steps during low-energy-ion bombardment of Si(001)
[DE95-010935] p 3017 N95-32308

ANNUAL VARIATIONS
Middle atmosphere structure and dynamics: Lidar studies at the South Pole, Syowa and Urbana p 2916 N95-31736
Global climatology and variability of potential new production estimated from remote sensing of sea-surface temperature
[NASA-CR-198840] p 2910 N95-31961

ANODES
Anodically enhanced diffusion in Cu/Ag thin film couples
[DE95-009198] p 2814 N95-30738

ANODIC COATINGS
Trivalent chromium solutions for sealing anodized aluminum
[AD-D017349] p 2803 N95-30551
Preventing cracking of anodized coatings
[NASA-TM-104622] p 2839 N95-31690

ANODIZING
Preventing cracking of anodized coatings
[NASA-TM-104622] p 2839 N95-31690

Thin-film sulfuric acid anodizing as a replacement for chromic acid anodizing p 2776 N95-31772

ANOMALIES

Forecast of Atlantic seasonal hurricane activity for 1994 p 2918 N95-30832

A RASCAL in-bore dynamic analysis of the task B and task C electromagnetic railguns
[AD-A292742] p 2764 N95-30948

Comparison of satellite-derived MSU brightness temperatures and conventionally-derived fields
[AD-A293692] p 2901 N95-31603

ANTARCTIC REGIONS

Middle atmosphere structure and dynamics: Lidar studies at the South Pole, Syowa and Urbana p 2916 N95-31736

Swedish polar bibliography: A guide to Swedish literature on polar research, 1945-1988 with supplement, 1989-1992
[PB95-208161] p 2902 N95-32115

ANTENNA ARRAYS

Scattering and radiation from cylindrically conformal antennas p 2847 N95-30669

Proceedings of the antenna applications symposium, volume 1
[AD-A293258] p 2848 N95-30895

Proceedings of the antenna applications symposium, volume 2
[AD-A293259] p 2850 N95-31387

Research in ground-to-air microwave imaging
[AD-A292907] p 2852 N95-31551

Portable digital Satellite News Gathering (SNG) RF terminal using a flat antenna
[NHK-LABS-NOTE-436] p 2853 N95-31744

Adaptive space-time processing for airborne radars based on Doppler pre-processing
[PB95-205464] p 2854 N95-32114

Performance of residual carrier array-feed combining in correlated noise p 2856 N95-32232

Residual and suppressed-carrier arraying techniques for deep-space communications p 2856 N95-32235

Effects of correlated noise on the full-spectrum combining and complex-symbol combining arraying techniques p 2856 N95-32237

ANTENNA COMPONENTS

Portable digital Satellite News Gathering (SNG) RF terminal using a flat antenna
[NHK-LABS-NOTE-436] p 2853 N95-31744

ANTENNA DESIGN

Proceedings of the antenna applications symposium, volume 1
[AD-A293258] p 2848 N95-30895

Inverse and control problems in electromagnetics
[AD-A292993] p 2849 N95-30962

Research in ground-to-air microwave imaging
[AD-A292907] p 2852 N95-31551

Portable digital Satellite News Gathering (SNG) RF terminal using a flat antenna
[NHK-LABS-NOTE-436] p 2853 N95-31744

ANTENNA FEEDS

Proceedings of the antenna applications symposium, volume 1
[AD-A293258] p 2848 N95-30895

Proceedings of the antenna applications symposium, volume 2
[AD-A293259] p 2850 N95-31387

ANTENNA RADIATION PATTERNS

Scattering and radiation from cylindrically conformal antennas p 2847 N95-30669

ANTHROPOMETRY

Erect, neutral and slump sitting postures: A study of the torso linkage system from shoulder to hip joint
[AD-A293239] p 2930 N95-30907

ANTIBIOTICS

Acidity and basicity of nitro substituted imidazoles p 2832 N95-31301

Acidity and basicidity of nitro substituted imidazoles
[AD-A293969] p 2836 N95-31526

ANTIFERROMAGNETISM

On the theory of hole propagation in an antiferromagnetic background
[DE95-614469] p 3010 N95-30650

Properties of a multichannel resonant-level model
[DE95-614482] p 2979 N95-30652

Multisite antiferromagnetic Ising spin model: Phase transition through doubling bifurcation
[DE95-614311] p 3011 N95-30722

Dynamics of an inhomogeneous anisotropic antiferromagnetic spin chain
[DE95-614449] p 3013 N95-30959

On the possibility of a two-state magnetic structure for nanocrystalline chromium
[DE95-009914] p 3015 N95-32062

Schwinger-boson studies of the single hole motion in a 2D quantum antiferromagnet
[DE95-614444] p 3016 N95-32071

ANTIMISSILE DEFENSE

Definition of an anti-missile ballistic defense architecture for Europe p 2840 N95-32125

Design of surveillance and multisensor anti-aerial systems p 2841 N95-32134

ANTIMONY

Preparation of diisopropyl stibines and use thereof
[AD-D017419] p 2771 N95-30418

ANTIPARTICLES

The Foldy-Wouthuysen transformation
[DE95-616277] p 2976 N95-30427

Instanton - antiinstanton interaction and asymptotics of perturbation theory expansion of in double well oscillator
[DE95-619245] p 2966 N95-31259

ANTIPODES

Antipodes and integrals in Hopf algebras over rings and quantum Yang-Baxter equation
[PB95-212155] p 2961 N95-31397

ANTIPROTONS

On explanation of proton electromagnetic form Factor near p (anti p)-threshold from the PS-170 experiment
[DE95-613766] p 2977 N95-30508

Atomic approaches in metastable antiprotonic helium atoms. Reply to Analysis of the lifetimes and fractions of antiprotons trapped in metastable antiprotonic helium states by I. Shimamhura and M. Kimura --- mura
[DE95-737228] p 2986 N95-31658

The antiproton-hydrogen atom interaction
[DE95-010252] p 2987 N95-32039

ANTISHIP MISSILES

Results from tests of the Kearfott T16-B Inertial Measurement Unit
[PB95-212031] p 2879 N95-30502

Results from tests of the Honeywell integrated flight management unit
[PB95-211355] p 2748 N95-30597

APERTURES

Tune modulation due to synchrotron oscillations and chromaticity, and the dynamic aperture
[DE95-011566] p 2995 N95-32297

APPALACHIAN MOUNTAINS (NORTH AMERICA)

A numerical study of the effect of the Gulf Stream and the Appalachian Mountains on Carolina coastal frontogenesis
[AD-A293765] p 2921 N95-31577

APPLICATION SPECIFIC INTEGRATED CIRCUITS

Decimation of encoding errors in an optimum SNS 2 micron low-noise CMOS ADC
[AD-A293208] p 2860 N95-30900

APPLICATIONS OF MATHEMATICS

Semiannual report
[NASA-CR-198172] p 2931 N95-30657

APPLICATIONS PROGRAMS (COMPUTERS)

User's manual for the Scanning Fast Field Program (SCAFFIP) EOSAEL version 1.0
[AD-A291445] p 2933 N95-30397

Advanced system identification techniques for wind turbine structures
[DE95-004049] p 2902 N95-30505

Detecting intravascular gas bubbles in ultrasonic images
[PB95-195301] p 2926 N95-30513

Object-oriented approach for gas turbine engine simulation
[NASA-TM-106970] p 2754 N95-30594

Computerized design of controllers using data models
[NASA-CR-198921] p 2950 N95-30655

MVP/GMVP: General purpose Monte Carlo codes for neutron and photon transport calculations based on continuous energy and multigroup methods
[DE95-722072] p 2979 N95-30656

ESAA: Environment for Seismic Activity Analysis
[DE95-612416] p 2913 N95-30675

Validation of the NPARC code for nozzle afterbody flows at transonic speeds
[NASA-TM-106971] p 2742 N95-30704

Enhancements to the SSME transfer function modeling code
[NASA-CR-198957] p 2958 N95-30754

SHEAT: A computer code for probabilistic seismic hazard analysis, user's manual
[DE95-717874] p 2913 N95-30758

Development of BERMUDA: A radiation transport code system. Part 3: A one-dimensional adjoint neutron transport code
[DE95-717875] p 2934 N95-30759

Neutron shielding point kernel integral calculation code for personal computer: PKN-pc
[DE95-717876] p 2980 N95-30760

Wide area networking R&D
[AD-A291057] p 2947 N95-30868

Improved altimeter settings for A-10 aircraft
[AD-A293142] p 2753 N95-30920

Acceleration potential models PREDICHAT/PREDICDYN applied for calculation of axisymmetric dynamic inflow cases
[PB95-207015] p 2869 N95-30957

FISHFINDE: Interactive software package to predict fish locations using satellite image data and fish species behavior rules
[AD-A293394] p 2935 N95-30968

QTSAW (Quick Typhoon Surge and Waves). Wave information studies of US coastlines
[AD-A293172] p 2919 N95-30976

Implementation of KIVA-3 on distributed memory MIMD computers
[DE95-010288] p 2931 N95-31130

Nordic symposium on analysis of electromagnetic transient phenomena using EMTP, part 3
[PB95-206504] p 2849 N95-31158

Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 2
[PB95-206579] p 2849 N95-31160

Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 4
[PB95-206587] p 2849 N95-31181

Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 1
[PB95-206595] p 2850 N95-31182

Hadronic production of B(sub c)-mesons
[DE95-620536] p 2983 N95-31216

An ignition model for modern double base propellants p 2800 N95-31292

Automation of the control of acoustic parameters in a digital speech synthesizer
[IFTR-2/1995] p 2850 N95-31357

Numerical solution of a singular integral equation arising from a sequential probability ratio test
[AD-A293463] p 2963 N95-31375

Aspects of the search time in binary search trees modified according to the move-to-root heuristic
[PB95-212148] p 2963 N95-31396

Solid Modeling Aerospace Research Tool (SMART) user's guide, version 2.0
[NASA-TM-4431] p 2940 N95-31420

Investigation of ground target detection methods in fully polarimetric wide angle synthetic aperture radar images
[AD-A293922] p 2851 N95-31513

Modern methods in meteorological and oceanographic data acquisition and analyses
[AD-A293884] p 2920 N95-31541

Space systems environmental interaction studies
[AD-A293826] p 2766 N95-31553

Monte Carlo code for evaluating the Boundary Layer Illumination and Radiation Balance model (BLIRB)
[AD-A293963] p 2915 N95-31560

Network user's guide
[DE95-009185] p 2942 N95-31634

Experimental and computational investigation of the tip clearance flow in a transonic axial compressor rotor
[NASA-TM-106711] p 2876 N95-31738

Environmental databases and other computerized information tools p 2783 N95-31810

NEIS (NASA Environmental Information System) p 2783 N95-31811

Geometric modeling for computer aided design
[NASA-CR-198828] p 2943 N95-31982

Practical experiences in control systems design using the NCR Bell 205 Airborne Simulator p 2761 N95-32015

TMD detection and tracking using improved AWACS sensors p 2840 N95-32128

Operation of the computer model for direct atomic oxygen exposure of Earth satellites
[NASA-CR-198188] p 2767 N95-32189

Numerical evaluation of three-dimensional crack-tip integrals for layered anisotropic solids p 2898 N95-32191

FPCAS3D User's guide: A three dimensional full potential aeroelastic program, version 1
[NASA-CR-198367] p 2899 N95-32205

BRUTUS: A program for conversion between image formats
[PB95-211421] p 2945 N95-32246

ASSIST user manual
[NASA-TM-4592] p 2948 N95-32250

Production simulator for wave power plants
[PB95-212262] p 2907 N95-32286

Inversion of ERS-1 wavemode spectra. User's and programmer's guide
[PB95-223582] p 2902 N95-32316

APPROACH INDICATORS

Flight test evaluation of the Stanford University/United Airlines differential GPS Category 3 automatic landing system
[NASA-TM-110354] p 2743 N95-30788

APPROPRIATIONS
Annual report to the Chairman and Ranking Minority Members, House and Senate Committees on Appropriations. Status of open recommendations: Improving operations of federal departments and agencies
| GAO/OP-95-1 | p 3022 N95-31986
APPROXIMATION
Spectral methods in complex geometries
| PB95-208336 | p 2955 N95-30495
Periodically Specified Problems: An Exponential Complexity Gap Between Exact and Approximate Solutions
| DE95-009435 | p 2934 N95-30603
Higher Schwarzian operators and combinatorics of Schwarzian derivative
| PB95-208435 | p 2957 N95-30623
Calculated coupling efficiency between an elliptical-core optical fiber and an optical waveguide over temperature
| NASA-TM-107005 | p 2997 N95-30849
Workshop on diffusion approximation in communication and stochastic systems theory
| AD-A292872 | p 2952 N95-31055
Direct and inverse problems in random media
| AD-A293033 | p 2850 N95-31280
Poisson approximation using the Stein-Chen method and coupling: Number of exceedances of a discrete-time-chi-squared process
| PB95-212205 | p 2961 N95-31398
Multipoint quadratic approximation for numerical optimization
| AD-A293837 | p 2961 N95-31557
Evaluation of nonlinear structural dynamic responses using a fast-running spring-mass formulation
| DE95-008503 | p 2967 N95-31625
The complexity and approximability of finding maximum feasible subsystems of linear relations
| TRITA-NA-9313 | p 2961 N95-31648
Compact location problems with budget and communication constraints
| DE95-010876 | p 2948 N95-32277
APTITUDE
Selection of Swedish scholastic aptitude test takers as a function of socioeconomic background and ability: Evaluation through follow-up
| PB95-212072 | p 3021 N95-30699
Non-comparability of female and male admission test takers: Evaluation through follow-up
| PB95-212080 | p 3021 N95-30700
AQUEOUS SOLUTIONS
On-line surfactant monitoring
| DE95-009417 | p 2792 N95-30735
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures
p 2799 N95-30990
Lithium ion aqueous cells
| AD-A293828 | p 2905 N95-31554
Aqueous cleaning design presentation
p 2778 N95-31781
Aqueous cleaning and verification processes for precision cleaning of small parts p 2779 N95-31787
QFD analysis of RSRM aqueous cleaners
p 2779 N95-31789
Cleaning without chlorinated solvents
p 2780 N95-31792
Evaluation of control parameters for Spray-In-Air (SIA) aqueous cleaning for shuttle RSRM hardware
p 2780 N95-31794
Laboratory robotics: An automated tool for preparing Ion Chromatography calibration standards
| DE95-009441 | p 2798 N95-32318
Base hydrolysis and hydrothermal processing of PBX-9404 explosive
| DE95-009497 | p 2837 N95-32355
AQUIFERS
CALORSTOCK 1994: Thermal energy storage. Better economy, environment, technology
| DE95-772422 | p 2904 N95-31138
CALORSTOCK'94. Thermal energy storage. Better economy, environment, technology
| DE95-772421 | p 2907 N95-32368
ARABIAN SEA
Arabian Sea mixed layer dynamics experiment: Mooring deployment cruise report
| AD-A293684 | p 2923 N95-31600
ARC DISCHARGES
Operating in the space plasma environment: A spacecraft charging study of the Solar X-ray Imager
| NASA-TM-110644 | p 3003 N95-30468
ARCHITECTURE
Definition of an anti-missile ballistic defense architecture for Europe p 2840 N95-32125
ARCHITECTURE (COMPUTERS)
Workflow literature guide, version 1
| PB95-207080 | p 2947 N95-30721
Foundations of technology for constructing highly reliable distributed realtime systems
| AD-A293254 | p 2931 N95-30892
An architectural approach to strategic information systems planning for the Office of Naval Intelligence
| AD-A289930 | p 3024 N95-30928
Implementation of KIVA-3 on distributed memory MIMD computers
| DE95-010288 | p 2931 N95-31130
Integrated high performance distributed system
| AD-A292821 | p 2947 N95-31445
Acquiring consistent knowledge for Bayesian Forests
| AD-A293858 | p 2952 N95-31517
Analysis and extension of model-based software executives
| AD-A293834 | p 2944 N95-32073
Integration issues in modular mission management aid development p 2841 N95-32133
Architecture and implementation of a multi-sensor data fusion demonstration model within the real-time combat system of the Canadian Patrol Frigate
p 2842 N95-32139
ARCTIC REGIONS
Sea ice stress research
| AD-A293164 | p 2923 N95-30964
Preliminary design for Arctic atmospheric radiative transfer experiments
| DE95-009580 | p 2917 N95-32080
Swedish polar bibliography: A guide to Swedish literature on polar research, 1945-1988 with supplement, 1989-1992
| PB95-208161 | p 2902 N95-32115
ARGON
Differences in creep performance of a HIPed silicon nitride in ambient air and inert environments
| DE95-009172 | p 2796 N95-31633
A microwave plasma cleaning apparatus
p 2779 N95-31786
ARITHMETIC
Arithmetic features of rational conformal field theory
| PB95-207908 | p 2966 N95-30591
ARITHMETIC AND LOGIC UNITS
Cesar3 MALU library
| PB95-211363 | p 2933 N95-30598
ARMED FORCES (UNITED STATES)
Research proposal
| AD-A293207 | p 3032 N95-30899
Psychological pilot selection in the US Air Force, the Luftwaffe, and the German Aerospace Research Establishment
| AD-A293779 | p 2928 N95-31376
ARMOR
An assessment of the cost of microwave sintering ceramic tiles for armor applications. Phase 2 report
| DE95-010000 | p 2816 N95-31103
ARPA COMPUTER NETWORK
Comparisons of target detection clutter using data from the 1993 FOPEN experiments
| AD-A293052 | p 2852 N95-31606
ARSENIC
Spatial time-series: Pollution pattern recognition under irregular interventions
| AD-A293830 | p 2909 N95-31556
ARTERIES
Arterial gas bubbles after decompression in pigs with Patent Foramen Ovale
| PB95-195319 | p 2925 N95-30515
ARTIFICIAL INTELLIGENCE
A Heuristic and complete planner for the classical mover's problem
| DE95-008440 | p 2949 N95-30377
Precision manipulation with a dextrous robot hand
p 2888 N95-30829
Making intelligent systems team players. A guide to developing intelligent monitoring systems
| NASA-TM-104807 | p 2951 N95-30925
High-tech controls for energy and environment
| DE95-011702 | p 2952 N95-31255
Artificial intelligence techniques for flight test planning, phase 1
| AD-A293962 | p 2751 N95-31525
A cognitive architecture for solving ill-defined problems
| AD-A293582 | p 2929 N95-31686
Production matching for large learning systems
| AD-A293105 | p 2953 N95-31827
PADO: Learning tree structured algorithms for orchestration into an object recognition system
| AD-A293109 | p 2943 N95-32020
Multi-sensor data fusion in command and control and the merit of artificial intelligence p 2842 N95-32137
AIDEX: An expert system for aircraft identification
p 2842 N95-32138
ARTIFICIAL SATELLITES
Computer interface development for the petite amateur navy satellite (PANSAT) simulator
| AD-A293263 | p 2766 N95-31388
ASSEMBLING
Development of flexible feeder techniques
| PB95-196317 | p 2934 N95-30663
ASSIMILATION
Comparison of satellite-derived MSU brightness temperatures and conventionally-derived fields
| AD-A293692 | p 2901 N95-31603
ASTRONAUTS
Electromyostimulation, circuits and monitoring
| NASA-TM-110741 | p 2926 N95-30846
Mir 18 post flight presentation
| NASA-TM-110657 | p 2766 N95-30854
STS-70 flight: Day 8
| NASA-TM-110666 | p 2764 N95-30873
ASTRONOMICAL POLARIMETRY
X-ray performance of the engineering prototype Stellar x-ray polarimeter
| DE95-010268 | p 3028 N95-31129
ASTRONOMICAL SPECTROSCOPY
Chromospherically active stars. 6: Giants with compact hot companions and the barium star scenario
| NASA-TM-110641 | p 3028 N95-30466
ASTROPHYSICS
Abstracts of Annual Physics Conference of Iran
| DE95-611717 | p 2768 N95-30881
Future scientific applications for high-energy lasers
| DE95-009380 | p 2885 N95-31230
A search for millicharged particles at SLAC
| DE95-010094 | p 2987 N95-32026
ASYMMETRY
On the Compton twist-3 asymmetries
| DE95-613627 | p 3017 N95-30371
Electron-optical nonlinear interaction in asymmetric quantum-well laser heterostructures
| DE95-613443 | p 2883 N95-30609
Experimental investigation of optical nonlinearities in conjugated polymers
| AD-A288353 | p 2884 N95-31145
Detection of the phase shift which accompanies the excitation of an atomic beam by N. F. Ramsey's method
| IFTR-5/1995 | p 2986 N95-31818
ASYMPTOTIC METHODS
Workshop on diffusion approximation in communication and stochastic systems theory
| AD-A292872 | p 2952 N95-31055
ASYMPTOTIC PROPERTIES
HERA and the asymptotic behaviour of F2(sup rho)
| PB95-195764 | p 2956 N95-30540
ASYMPTOTIC SERIES
Extension to higher dimensions of the Jaeschke-Eicker result on the standardized empirical process
| PB95-206868 | p 2965 N95-30523
Golden ten equations of motion
| PB95-197927 | p 2967 N95-30809
Instanton - antiinstanton interaction and asymptotics of perturbation theory expansion of in double well oscillator
| DE95-619245 | p 2966 N95-31259
Numerical studies of nonlinear optical pulse propagation p 2998 N95-31411
Ricci-flat Kaehler metrics on symmetric varieties
| DE95-613459 | p 2962 N95-32068
ATLANTIC OCEAN
Forecast of Atlantic seasonal hurricane activity for 1994 p 2918 N95-30832
Early August updated forecast of Atlantic seasonal hurricane activity for 1994 p 2919 N95-30844
ATMOSPHERIC ATTENUATION
User's manual for the Scanning Fast Field Program (SCAFFIP) EOSAEL version 1.0
| AD-A291445 | p 2933 N95-30397
ATMOSPHERIC BOUNDARY LAYER
Study of cross-tail current carriers in magnetotail
p 3005 N95-30804
Shiptracks in the Californian stratus region: Dependency on marine atmospheric boundary layer depth
| AD-A293272 | p 2901 N95-31125
Global Ultraviolet Imager (GUVI) investigation
| NASA-CR-189430 | p 2917 N95-31820
ATMOSPHERIC CHEMISTRY
Measurement and analysis related to infrared emissions
| AD-A293296 | p 2998 N95-31192
Global Ultraviolet Imager (GUVI) investigation
| NASA-CR-189430 | p 2917 N95-31820
ATMOSPHERIC CIRCULATION
IR DIAL performance modeling
| DE95-008377 | p 2912 N95-30373
Development of a novel wind lidar, phase 1
| AD-A292703 | p 2849 N95-30935
Adaptive optics design for the advanced electro-optical system (AEOS)
| AD-A293972 | p 2974 N95-31527

Diagnosis of the kinematics and dynamics of rapidly developing maritime cyclones
[AD-A293919] p 2921 N95-31675
Global Ultraviolet Imager (GUVI) investigation
[NASA-CR-189430] p 2917 N95-31820
The GCRC two-dimensional zonally averaged statistical dynamical climate model: Development, model performance, and climate sensitivity
p 2910 N95-31851
Simulation of katabatic flow and mountain waves
[DE95-010863] p 2911 N95-32276

ATMOSPHERIC COMPOSITION
Global change research: Summaries of research in FY 1994
[DE95-009660] p 2908 N95-30755
Aerosol measurements over the Pacific Ocean in support of the IR aerosol backscatter program
[NASA-CR-198925] p 2916 N95-30782
The GCRC two-dimensional zonally averaged statistical dynamical climate model: Development, model performance, and climate sensitivity
p 2910 N95-31851
Carbon dioxide concentrations in surface water and the atmosphere during 1986-1989 NOAA/PMEL cruises in the Pacific and Indian Oceans
[DE95-009659] p 2910 N95-32099

ATMOSPHERIC CORRECTION
SeaWiFS technical report series. Volume 13: Case studies for SeaWiFS calibration and validation, part 1
[NASA-TM-104566-VOL-13] p 2924 N95-32220

ATMOSPHERIC EFFECTS
Atmospheric environmental implications of propulsion systems p 2771 N95-31747

ATMOSPHERIC GENERAL CIRCULATION MODELS
The land component of the global climate system with adequate spatial resolution
[DE95-009323] p 2908 N95-30686

ATMOSPHERIC HEATING
HST-FOC observations of a remarkable UV auroral event on Jupiter p 3030 N95-30806
Underdense heating of the ionosphere using oblique high power HF radiowaves p 2917 N95-31951

ATMOSPHERIC MODELS
IR DIAL performance modeling
[DE95-008377] p 2912 N95-30373
User's manual for the Scanning Fast Field Program (SCAFFIP) EOSAEL version 1.0
[AD-A291445] p 2933 N95-30397
Chemical kinetics and photochemical data for use in stratospheric modeling: Evaluation number 11
[NASA-CR-198863] p 2912 N95-30525
Algorithm comparison and benchmarking using a parallel spectra transform shallow water model
[DE95-009124] p 2913 N95-30683
Modeling and parameterization of gravity wave breaking, interactions, and instability processes in the lower and middle atmosphere
[AD-A292740] p 2914 N95-31278
Initial evaluation of the Oregon State University planetary boundary layer column model for ITWS applications
[AD-A293775] p 2920 N95-31465
Measurements of ionospheric variability
[AD-A293495] p 2915 N95-31535
Proceedings of the 16th Annual Conference on Atmospheric Transmission Models, volume 1
[AD-A293807] p 2915 N95-31575
A numerical study of the effect of the Gulf Stream and the Appalachian Mountains on Carolina coastal frontogenesis
[AD-A293765] p 2921 N95-31577
Validation of the atmospheric transmission large-area analysis system (ATLAS)
[AD-A293810] p 2916 N95-31589
Proceedings of the 16th Annual Conference on Atmospheric Transmission Models, volume 2
[AD-A293806] p 2916 N95-31604
DE-1 observations of polar O(+) stream bulk parameters and comparison with a model of the centrifugally-accelerated polar wind
[NASA-CR-198930] p 2917 N95-31743
Calculation of a residual mean meridional circulation for a zonal-mean tracer transport model
[DE95-009474] p 2911 N95-32350

ATMOSPHERIC MOISTURE
Brightness temperature simulations for the physical and synoptic interpretation of advanced microwave sounding unit moisture channels p 2921 N95-31721

ATMOSPHERIC OPTICS
Optimum truncation of a Gaussian beam for propagation through atmospheric turbulence
[AD-A291156] p 2883 N95-30394

ATMOSPHERIC PHYSICS
Kiruna geophysical data. Data summary 94/1-3, January-March 1994
[PB95-210373] p 2913 N95-30628
Future scientific applications for high-energy lasers
[DE95-009380] p 2885 N95-31230

ATMOSPHERIC PRESSURE
Summary of 1993 Atlantic tropical cyclone activity and verification of author's forecast. A year of unanticipated light hurricane activity and a poor forecast: The expected dissipation of the El Nino did not take place and Caribbean basin surface pressure became quite high
p 2918 N95-30842
Early August updated forecast of Atlantic seasonal hurricane activity for 1994 p 2919 N95-30844

ATMOSPHERIC RADIATION
History and status of the atmospheric radiation measurement program
[DE95-009951] p 2908 N95-30802
Monte Carlo code for evaluating the Boundary Layer Illumination and Radiation Balance model (BLIRB)
[AD-A293963] p 2915 N95-31560
Preliminary design for Arctic atmospheric radiative transfer experiments
[DE95-009580] p 2917 N95-32080
Feasibility of tropospheric water vapor profiling using infrared heterodyne differential absorption lidar
[DE95-009647] p 2917 N95-32142
Use of arm measurements to improve radiative transfer models used in climate models
[NASA-CR-199014] p 2921 N95-32184
Spectral sky background in the IR: Measurements with FTIR
[PB95-222998] p 2922 N95-32315

ATMOSPHERIC REFRACTION
Measurements of ionospheric variability
[AD-A293495] p 2915 N95-31535

ATMOSPHERIC SOUNDING
Anticipated uncertainty budgets of PRARETIME and T2L2 techniques as applied to ExTRAS
p 2968 N95-32326

ATMOSPHERIC TEMPERATURE
Middle atmosphere structure and dynamics: Lidar studies at the South Pole, Syowa and Urbana
p 2916 N95-31736
Global Ultraviolet Imager (GUVI) investigation
[NASA-CR-189430] p 2917 N95-31820
The GCRC two-dimensional zonally averaged statistical dynamical climate model: Development, model performance, and climate sensitivity
p 2910 N95-31851

ATMOSPHERIC TURBULENCE
Optimum truncation of a Gaussian beam for propagation through atmospheric turbulence
[AD-A291156] p 2883 N95-30394
Digital simulation of wind velocities for wind turbine rotors: General considerations
[PB95-206447] p 2904 N95-31157
The effects of large and small scale turbulence on sound propagation in the atmosphere
[AD-A293657] p 2975 N95-31608

ATMOSPHERIC WINDOWS
Design of an immersion echelle-prism mid-IR spectrograph for chemical remote sensing
[DE95-010729] p 2901 N95-32027

ATMOSPHERICS
Validation of the atmospheric transmission large-area analysis system (ATLAS)
[AD-A293810] p 2916 N95-31589

ATOMIC BEAMS
Magneto-optical transmission-reflection beam splitter for multi-level atoms
[DE95-616267] p 2976 N95-30423
Reflection and diffraction of atomic de Broglie waves by evanescent laser waves. Bare-state method
[DE95-616458] p 2992 N95-30960
Resonance characteristics in the case of the excitation of a monoenergetic beam of free atoms by means of N. F. Ramsey's method
[IFTR-6/1995] p 2993 N95-31336
Determination of electric and magnetic fields in open trap plasmas by means of atomic-molecular beam hydrogen isotopes
[DE95-614177] p 3006 N95-31680
Detection of the phase shift which accompanies the excitation of an atomic beam by N. F. Ramsey's method
[IFTR-5/1995] p 2986 N95-31818

ATOMIC CLOCKS
Time activities at the BIPM p 2968 N95-32325
Relativistic timescale analysis suggests lunar theory revision p 2970 N95-32333
Monte Carlo simulations of precise timekeeping in the Milstar communication satellite system
p 2970 N95-32336
Metafitting: Weight optimization for least-squares fitting of PTTI data p 2971 N95-32340
Methodologies for steering clocks
p 2971 N95-32341
The effects of clock errors on timescale stability
p 2971 N95-32342
Relativistic theory for syntonization of clocks in the vicinity of the Earth p 2971 N95-32343
Allan deviation computations of a linear frequency synthesizer system using frequency domain techniques
p 2972 N95-32344
SVN 9 End-Of-Life testing p 2767 N95-32345
Laser retroreflector experiment on NAVSTAR 35 and 36 p 2887 N95-32347
(T2L2) Time Transfer by Laser Link
p 2887 N95-32348
Satellite test of the isotropy of the one-way spe ed of light using ExTRAS p 2973 N95-32349

ATOMIC COLLISIONS
Inversion of the total cross sections for electron-molecule and electron-atom scattering
[DE95-616466] p 2978 N95-30583
Analytic cross sections for collisions of H, H2, He and Li atoms and ions with atoms and molecules
[DE95-722055] p 2979 N95-30654
Operation of the computer model for direct atomic oxygen exposure of Earth satellites
[NASA-CR-198188] p 2767 N95-32189
Study of aligned states in ion-atom collisions
[DE95-010825] p 2990 N95-32275

ATOMIC ENERGY LEVELS
Magnetic resonance spectroscopy of fullerenes and (pi)-conjugated polymers
[DE95-010131] p 2817 N95-31108

ATOMIC EXCITATIONS
Inner- and outer-shell excitation in lithium isoelectronic sequence
[DE95-614107] p 2981 N95-31003
Resonance characteristics in the case of the excitation of a monoenergetic beam of free atoms by means of N. F. Ramsey's method
[IFTR-6/1995] p 2993 N95-31336
On the Jahn-Teller effect of Mn(2+) in zinc-blende ZnS crystal
[AD-A293711] p 2797 N95-31830
Study of aligned states in ion-atom collisions
[DE95-010825] p 2990 N95-32275

ATOMIC PHYSICS
Analytic cross sections for collisions of H, H2, He and Li atoms and ions with atoms and molecules
[DE95-722055] p 2979 N95-30654
Abstracts of Annual Physics Conference of Iran
[DE95-611717] p 2768 N95-30881
Atomic approaches in metastable antiprotonic helium atoms. Reply to Analysis of the lifetimes and fractions of antiprotons trapped in metastable antiprotonic helium states by I. Shimamhura and M. Kimura --- mura
[DE95-737228] p 2986 N95-31658
Studies of highly charged ions with EBIT and Super-EBIT
[DE95-010251] p 2987 N95-32038

ATOMIC SPECTRA
Analytic cross sections for collisions of H, H2, He and Li atoms and ions with atoms and molecules
[DE95-722055] p 2979 N95-30654

ATOMIC STRUCTURE
Direct determination of grain boundary atomic structure in SrTiO3
[DE95-008847] p 3010 N95-30544
EBIT: Electron Beam Ion Trap V-division experimental physics
[DE95-010207] p 3004 N95-30769
Theoretical aspects of electron emission holography
[DE95-614371] p 2880 N95-31167
Experiments with highly charged ions up to bare U(sup 92+) on the electron beam ion trap
[DE95-008827] p 2982 N95-31174
Acidity and basicity of nitro substituted imidazoles
p 2832 N95-31301
Conjugated aromatic polyimines. 2. Synthesis, structure, and properties of new aromatic polyazomethines
[AD-A292955] p 2819 N95-31461
Effects of molecular structure on the electroactive and optical properties of conjugated rigid-rod polybenzobisazoles
[AD-A292968] p 2819 N95-31467
Electronic structure of Donor-Spacer-Acceptor molecules of potential interest for molecular electronics III: Geometry and absorption spectrum of CH3-Alpha P3CNQ
[AD-A293662] p 2985 N95-31609
Electronic structure of Donor-Spacer-Acceptor molecules of potential interest for molecular electronics 4. Geometry and device properties of P3CNQ and Q3CNQ
[AD-A293717] p 2986 N95-31832
First-principles approaches to materials stability
[DE95-011533] p 2810 N95-32283

ATOMIZING
Atomization simulations using an Eulerian-VOF-Lagrangian method p 2828 N95-31210

Primary atomization of liquid jets issuing from rocket engine coaxial injectors p 2769 N95-31716

ATOMS

Theoretical absorption spectroscopy of high-temperature metal vapors: Model and experiment compared
[AD-A290872] p 2791 N95-30409

Low-density ionization behavior
[DE95-009495] p 2980 N95-30705

Effects of mosaicity on Parametric X-Radiation production
[AD-A293677] p 2985 N95-31597

Nuclear-spin-dependent parity-nonconserving effects in thallium, lead and bismuth atoms
[DE95-614120] p 2991 N95-32354

ATROPHY

Electromyostimulation, circuits and monitoring
[NASA-TM-110741] p 2926 N95-30846

ATTENUATION

Design of systems for active sound control
[PB95-197869] p 2973 N95-30461

ATTITUDE (INCLINATION)

Direct determination of grain boundary atomic structure in SrTiO3
[DE95-008847] p 3010 N95-30544

On the use of electronic tilt sensors as angle encoders for synchrotron applications
[DE95-005836] p 2880 N95-30941

Synthetic Terrain Imagery for Helmet-Mounted Display, volume 1
[AD-A293612] p 2753 N95-31656

ATTITUDE CONTROL

Practical experiences in control systems design using the NCR Bell 205 Airborne Simulator p 2761 N95-32015

AUDIO EQUIPMENT

Fractional delay waveguide modeling of acoustic tubes
[PB95-206637] p 2975 N95-31650

AUDIO FREQUENCIES

Characterization of an improved Rijke burner as prelude to measurements of aluminum distributed combustion p 2800 N95-31287

AUGER EFFECT

Inner- and outer-shell excitation in lithium isoelectronic sequence
[DE95-614107] p 2981 N95-31003

Theoretical aspects of electron emission holography
[DE95-614371] p 2880 N95-31167

AUGMENTATION

Mechanisms of enhanced ionic conduction at interfaces in ceramics
[DE95-009125] p 2814 N95-30730

Enhancements to the SSME transfer function modeling code
[NASA-CR-198957] p 2958 N95-30754

AASERT-92 augmentation of research training in chronobiology: Regulation of the mammalian circadian clock by neurotransmitters
[AD-A288243] p 2925 N95-31144

The 25th International Symposium on Combustion
[AD-A286825] p 2794 N95-31268

Aviation capacity enhancement plan 1994
[AD-A292758] p 2747 N95-31428

AURORAS

HST-FOC observations of a remarkable UV auroral event on Jupiter p 3030 N95-30806

Perpendicular electron heating by absorption of auroral kilometric radiation
[NASA-198815] p 2914 N95-30848

SSUSI single sensor auroral E-layer algorithm: Functional description
[AD-A288630] p 2914 N95-31012

Global Ultraviolet Imager (GUVI) investigation
[NASA-CR-189430] p 2917 N95-31820

AUSTENITE

Transitions, defects, and whiskered microstructures
[AD-A292796] p 3014 N95-31438

AUTOIONIZATION

Inner- and outer-shell excitation in lithium isoelectronic sequence
[DE95-614107] p 2981 N95-31003

AUTOMATA THEORY

France --- modeling and verification of parallel computer systems
[PB95-206385] p 2949 N95-32371

AUTOMATIC CONTROL

Laser Tracker 3: Sandia National Laboratories' third generation laser tracking system
[DE95-008525] p 2882 N95-30379

Passive range measurement system
[AD-D017344] p 2996 N95-30678

New adaptive methods for reconfigurable flight control systems, appendix 1
[AD-A292711] p 2756 N95-30937

Inversion of ERS-1 wavemode spectra. User's and programmer's guide
[PB95-223582] p 2902 N95-32316

France --- modeling and verification of parallel computer systems
[PB95-206385] p 2949 N95-32371

AUTOMATIC FLIGHT CONTROL

Automatic flight control system for an unmanned helicopter system design and flight test results p 2759 N95-32004

AUTOMATIC GAIN CONTROL

Noise signal processor
[AD-D017430] p 2974 N95-30747

AUTOMATIC LANDING CONTROL

Flight test evaluation of the Stanford University/United Airlines differential GPS Category 3 automatic landing system
[NASA-TM-110354] p 2743 N95-30788

AUTOMATIC PILOTS

Digital autopilot design for combat aircraft in ALENIA p 2760 N95-32009

AUTOMOBILE FUELS

BioFacts: Fueling a stronger economy. Methanol from biomass, revision 2
[DE95-010302] p 2836 N95-31638

BioFacts: Fueling a stronger economy. Ethanol from biomass, revision 2
[DE95-010304] p 2836 N95-31639

BioFacts: Fueling a stronger economy, global warming and biofuels emissions
[DE94-006864] p 2910 N95-31821

BioFacts: Fueling a stronger economy, thermochemical conversion of biomass
[DE94-006866] p 2905 N95-31822

Combatting urban air pollution through Natural Gas Vehicle (NGV) analysis, testing, and demonstration
[DE95-008300] p 2911 N95-32156

Liquid natural gas as a transportation fuel in the heavy trucking industry
[DE95-010376] p 2837 N95-32158

AUTONOMOUS NAVIGATION

Adaptive path planning: Algorithm and analysis
[DE95-008549] p 2950 N95-30463

Neural networks for real-time terrain typing
[AD-A293569] p 2953 N95-31540

AVERAGE

Particle filtration: An analysis using the method of volume averaging
[DE95-009467] p 2875 N95-31592

AVIATION PSYCHOLOGY

Human factors at the FAA Technical Center: Bibliography
[AD-A288638] p 2930 N95-31399

Controller resource management: What can we learn from aircrews?
[DOT/FAA/AM-95/21] p 2750 N95-32186

AVIONICS

Foundations of technology for constructing highly reliable distributed realtime systems
[AD-A293254] p 2931 N95-30892

Experimental Aircraft Programme (EAP): Flight control system design and test p 2760 N95-32010

AWARDS

Quality assurance tendering and awarding contracts
[PB95-197760] p 2891 N95-31362

AXIAL FLOW

Development of a linearized unsteady Euler analysis for turbomachinery blade rows
[NASA-CR-4677] p 2742 N95-30611

AXIAL FLOW PUMPS

Centrifugal and axial pump design and off-design performance prediction p 2830 N95-31289

AXIAL LOADS

Experimental determination of probability distributions for parameters of a Salem limestone cap plasticity model
[AD-A290878] p 2892 N95-30559

Axial loads on yawed rotors
[PB95-214193] p 2742 N95-30638

An inverse method to measure the axial modulus of composite materials under tension
[AD-A293042] p 2789 N95-31668

AXIAL STRAIN

Interfacial segregation and deformation of superplastically deformed Al-Mg-Mn alloys
[DE95-009572] p 2809 N95-32052

AXIOMS

Unification of LARCH and Z-based object models to support algebraically-based design refinement: The LARCH perspective
[AD-A289235] p 2935 N95-30999

Inductively coupled IR staring array based on photofluxonic pixels
[AD-A292784] p 2998 N95-31435

AXISYMMETRIC FLOW

An explanation for the shape of nanoindentation unloading curves based on finite element simulation
[DE95-008905] p 2812 N95-30548

A turbulence module for the NPARC code
[NASA-CR-198358] p 2959 N95-30855

Acceleration potential models PREDICHAT/PREDICDYN applied for calculation of axisymmetric dynamic inflow cases
[PB95-207015] p 2869 N95-30957

AZIMUTH

Apparent size passive range method
[AD-D017360] p 2753 N95-31180

AZOLES

Acidity and basicity of nitro substituted imidazoles p 2832 N95-31301

B

BACKGROUND NOISE

Background event discrimination in neutron time-of-flight measurements at beams of relativistic nuclei of the JINR synchrotron
[DE95-613006] p 2991 N95-30604

Automatic Target Recognition (ATR): Background statistics and the detection of targets in clutter
[AD-A293062] p 2853 N95-31673

Effects of correlated noise on the full-spectrum combining and complex-symbol combining arraying techniques p 2856 N95-32237

BACKGROUND RADIATION

Spectral sky background in the IR: Measurements with FTIR
[PB95-222998] p 2922 N95-32315

BACKSCATTERING

Zone axis backscattered electron contrast for fast electrons
[DE95-616775] p 2980 N95-30790

K-shell ionization under zone axis electron diffraction conditions
[DE95-616780] p 2981 N95-30916

Investigation of microwave backscatter from the air-sea interface
[NASA-CR-198854] p 2851 N95-31457

Physical optics polarization scattering matrix for a right-angle dihedral
[AD-A293036] p 3000 N95-31665

Middle atmosphere structure and dynamics: Lidar studies at the South Pole, Syowa and Urbana p 2916 N95-31736

The development of a pulsed laser imaging system for natural gas leak detection
[DE95-011407] p 2887 N95-32260

BACKUPS

An overview of high-speed networking for workstations
[DE95-009076] p 2947 N95-30577

BACKWARD WAVES

Harmonic gyrotron amplifiers and phase-locked oscillators
[AD-A293185] p 2861 N95-30979

BACTERIA

Design and processing of materials by biomimicking. Sections 1. Publications
[AD-A293852] p 2820 N95-31559

BAINITE

A study of Damascus steel
[DE95-010127] p 2809 N95-32023

BALL BEARINGS

Enhancement of perfluoropolyether boundary lubrication performance: I. Preliminary results
[NASA-TM-106937] p 2813 N95-30621

BALLISTIC MISSILES

Definition of an anti-missile ballistic defense architecture for Europe p 2840 N95-32125

Possible allied ballistic missile defense systems: Related guidance and control requirements p 2840 N95-32126

SOSIE: A pragmatic approach to the simulation of Broad Air Defense applied to the theater level p 2840 N95-32127

TMD detection and tracking using improved AWACS sensors p 2840 N95-32128

Acquisition, tracking, pointing and fire control for Ballistic Missile Defense p 2841 N95-32131

Using a Red Team to devise countermeasures p 2842 N95-32141

BALLISTIC RANGES

Aerophysics test program 1
[AD-A293890] p 2963 N95-31543

BALLISTICS

Three-dimensional (3D) large fluid flow computations for US Army applications on KSR-1, CM-200, CM-5, and Cray C-90
[AD-A293125] p 2869 N95-30889

BALLOONING MODES
Advances in the simulation of toroidal gyro Landau fluid model turbulence
[DE95-008387] p 3003 N95-30359
Reynolds stress of localized toroidal modes
[DE95-008750] p 3004 N95-30795
Stabilization of ballooning modes with sheared toroidal rotation
[DE95-008388] p 3006 N95-31624
Onset of ELMs in JT-60U
[DE95-737209] p 3007 N95-32263
BALTIC SEA
Radiometer measurements of sea ice in the Gulf of Bothnia 1992
[PB95-206611] p 2900 N95-30718
BANACH SPACE
Solvability of a class of hypersingular nonlinear integral equations
[PB95-207031] p 3011 N95-30720
BAND RATIOING
SeaWiFS Technical Report Series. Volume 29: SeaWiFS CZCS-type pigment algorithm
[NASA-TM-104566] p 2922 N95-30857
BAND STRUCTURE OF SOLIDS
The quantum interference effect in semiconductor space charge layers studied by Feynman path integrals: General formalism and illustrative examples
[DE95-614483] p 3010 N95-30653
BANDPASS FILTERS
Advanced signal processing filter
[AD-D017324] p 2848 N95-30917
BANDWIDTH
Diffraction-line broadening analysis and stress relaxation in thin metal layers
[PB95-213886] p 2893 N95-30634
Effective bandwidth techniques in bufferless and buffered ATM multiplexers
[PB95-207072] p 2862 N95-31185
Quantum 1/f noise in high technology applications including ultrasmall structures and devices
[AD-A292812] p 2862 N95-31442
Integrated high performance distributed system
[AD-A292821] p 2947 N95-31445
Towards optimum demodulation of bandwidth-limited and low SNR square-wave subcarrier signals
p 2855 N95-32229
BARIUM FLUORIDES
TV-VI semiconductor quantum well lasers, physics and engineering p 2883 N95-30805
BARIUM OXIDES
Innovative processing of composites for ultra-high temperature applications, book 3
[AD-A290891] p 2786 N95-30866
BARIUM TITANATES
Picosecond phase conjugation: New applications, devices, and materials
[AD-A293195] p 3013 N95-30982
BARS
An inverse method to measure the axial modulus of composite materials under tension
[AD-A293042] p 2789 N95-31668
BARYON RESONANCE
Do the narrow cryptoexotic baryon resonances exist?
[DE95-619291] p 2984 N95-31378
Search for exotic baryons with the SPHINX facility
[DE95-613774] p 2984 N95-31549
BARYONS
Strange-matter stars
[DE95-008446] p 3028 N95-30361
Large scale periodicity of the universe and baryogenesis
[DE95-613461] p 3028 N95-30366
Real Higgs singlet and electroweak phase transition in the standard model
[DE95-616315] p 2976 N95-30442
The 10th INS Scientific Computational Programs
[DE95-717864] p 2982 N95-31178
Double charmed baryons production at B-factory
[DE95-620540] p 2983 N95-31219
Do the narrow cryptoexotic baryon resonances exist?
[DE95-619291] p 2984 N95-31378
Unitarization of Koerner-Kuroda model of electromagnetic structure of octet 1/2(+) baryons
[DE95-613765] p 2984 N95-31548
Search for exotic baryons with the SPHINX facility
[DE95-613774] p 2984 N95-31549
Electroweak baryogenesis
[DE95-012169] p 2991 N95-32365
BASES (CHEMICAL)
Acidity and basicidity of nitro substituted imidazoles
[AD-A293969] p 2836 N95-31526
BAYES THEOREM
Acquiring consistent knowledge for Bayesian Forests
[AD-A293858] p 2952 N95-31517
Data analysis: Naive inductivism
[PB95-212213] p 3026 N95-32254
BAYS (TOPOGRAPHIC FEATURES)
Energy storage and alternatives to improve train voltage on a mass transit system
[DE95-010344] p 2906 N95-32090
BCS THEORY
Superconducting and normal-state properties of novel materials
[DE95-012368] p 3017 N95-32366
BEAM CURRENTS
The coupling impedance of a toroidal beam pipe with circular cross section
[DE95-010442] p 2993 N95-31405
BEAM INJECTION
Measurement of the effect of collimator generated wakefields on the beams in the SLC
[DE95-012101] p 2993 N95-31256
Determination of electric and magnetic fields in open trap plasmas by means of atomic-molecular beam hydrogen isotopes
[DE95-614177] p 3006 N95-31680
KRAKEN, a numerical model of RHIC impedances
[DE95-011563] p 2994 N95-32242
Design study of prototype accelerator and MeV test facility for demonstration of 1 MeV, 1 A negative ion beam production
[DE95-737208] p 2995 N95-32262
RFQ-DTL matching solutions for different requirements
[DE95-010897] p 2995 N95-32306
BEAM INTERACTIONS
Beam-beam effects
[DE95-008443] p 2991 N95-30360
A study of ion trapping and instability in the Fermilab antiproton accumulator p 2993 N95-31647
BEAM SPLITTERS
Magneto-optical transmission-reflection beam splitter for multi-level atoms
[DE95-616267] p 2976 N95-30423
BEAM WAVEGUIDES
Fiber optic reference frequency distribution to remote beam waveguide antennas p 2972 N95-32346
BEAMFORMING
Beam-beam effects
[DE95-008443] p 2991 N95-30360
Wavefront simulator for evaluating RF communication array signal processors
[AD-D017372] p 2847 N95-30660
Phase object display by using acousto-optical Bragg diffraction
[AD-A293153] p 2998 N95-31006
RFQ-DTL matching solutions for different requirements
[DE95-010897] p 2995 N95-32306
BEAMS (RADIATION)
Beam-beam effects
[DE95-008443] p 2991 N95-30360
The art and science of magnet design: Selected notes of Klaus Halbach, volume 2
[DE95-008450] p 2861 N95-31059
Advances in high-power chemical lasers
[AD-A289737] p 2885 N95-31389
On the search for exotic hadrons in the experiments with high energy hyperon beam
[DE95-620534] p 2989 N95-32261
RFQ-DTL matching solutions for different requirements
[DE95-010897] p 2995 N95-32306
BEAMS (SUPPORTS)
Modeling multi-beam structures for control
p 2895 N95-31346
Nonlinear dynamics and chaotic motions of a singularly perturbed nonlinear viscoelastic beam
p 2897 N95-31706
BEAUFORT SEA (NORTH AMERICA)
Sea ice stress research
[AD-A293164] p 2923 N95-30964
BELL AIRCRAFT
Practical experiences in control systems design using the NCR Bell 205 Airborne Simulator
p 2761 N95-32015
BEND TESTS
The effect of grain refinement on the room-temperature ductility of as-cast Fe3Al-based alloys
[DE95-010121] p 2805 N95-31107
Control of interfacial chemistry and mechanical properties in metal/ceramic composites
p 2790 N95-31976
BENDING
Interface degradation in CAS/Nicalon during elevated temperature aging
[DE95-008843] p 2812 N95-30543
Static behaviour of axially loaded uniplanar and multiplanar tubular x-joints
[PB95-207866] p 2892 N95-30585
BERYLLIUM ISOTOPES
Mixing phases of unstable two-level systems
[DE95-613844] p 2989 N95-32151
BETATRONS
Beam-beam effects
[DE95-008443] p 2991 N95-30360
BIAS
Plasma source ion implantation of metal ions: Synchronization of cathodic-arc plasma production and target bias pulses
[DE95-009431] p 3006 N95-31613
BIBLIOGRAPHIES
Workflow literature guide, version 1
[PB95-207080] p 2947 N95-30721
Space Sciences Laboratory Publications and Presentations
[NASA-TM-108484] p 3024 N95-30780
Bibliography of technical reports, 1993
[AD-A292741] p 2923 N95-30918
Human factors at the FAA Technical Center: Bibliography
[AD-A288638] p 2930 N95-31399
Swedish polar bibliography: A guide to Swedish literature on polar research, 1945-1988 with supplement, 1989-1992
[PB95-208161] p 2902 N95-32115
BICRYSTALS
Direct determination of grain boundary atomic structure in SrTiO3
[DE95-008847] p 3010 N95-30544
BIMETRIC THEORIES
Harmonic coordinates in the problem on static gravitational and massless scalar fields with a point source
[DE95-623632] p 3020 N95-32295
BINARY DATA
Gravitational-radiation damping of compact binary systems to second post-Newtonian order
[PB95-207882] p 2912 N95-30588
Gravitational waves from inspiralling compact binaries: Energy loss and waveform to second-post-Newtonian order
[PB95-207890] p 2913 N95-30590
Aspects of the search time in binary search trees modified according to the move-to-root heuristic
[PB95-212148] p 2963 N95-31396
Estimation in second order dependency model for multivariate binary data
[DE95-010326] p 2944 N95-32087
BINARY FLUIDS
Calculations of the sound scattering from fluid-filled spherical shell sonar targets
[DSTO-RR-0020] p 2974 N95-31365
BINARY SYSTEMS (MATERIALS)
Poisson's ratio for hexagonal crystals
[AD-A293556] p 3015 N95-31539
BINDING ENERGY
On explanation of proton electromagnetic form Factor near p (anti p)-threshold from the PS-170 experiment
[DE95-613766] p 2977 N95-30508
Observation of a low-binding-energy peak in the 2p core-level photoemission from oxidized Al(111)
[PB95-195350] p 2802 N95-30534
Applications of SXPS for studying surface structure, reaction mechanisms and kinetics
[DE95-008903] p 2803 N95-30547
Energetics of Pt adsorption on Pt(111)
[DE95-010933] p 3017 N95-32307
BINOCULAR VISION
Log-polar binocular vision system
[NASA-CR-188375] p 2996 N95-30772
BINOMIAL COEFFICIENTS
Canonical symmetric invariant pairings in vertex operator super algebras and gramians
[PB95-208112] p 2955 N95-30488
BIOCONVERSION
BioFacts: Fueling a stronger economy. Methanol from biomass, revision 2
[DE95-010302] p 2836 N95-31638
BioFacts: Fueling a stronger economy, thermochemical conversion of biomass
[DE94-006866] p 2905 N95-31822
BIODEGRADABILITY
Enhanced alkaline hydrolysis and biodegradability studies of nitrocellulose-bearing missile propellant
p 2772 N95-31752
BIODEGRADATION
Degradation of TCE using sequential anaerobic biofilm and aerobic immobilized bed reactor
p 2780 N95-31791
BIODYNAMICS
Vertical impact testing of two helmet-mounted night vision systems
[AD-A293055] p 2931 N95-31671

BIOINSTRUMENTATION
Biosensors based on cross-linking of biotinylated Glucose Oxidase by avidin
[AD-A290439] p 2925 N95-30452
BIOLOGICAL EFFECTS
Particulate air pollution and increased mortality: Biological plausibility for causal relationship
[DE95-006161] p 2909 N95-31703
BIOLOGICAL MODELS (MATHEMATICS)
SeaWiFS Technical Report Series. Volume 29: SeaWiFS CZCS-type pigment algorithm
[NASA-TM-104566] p 2922 N95-30857
Neurodynamical systems for cognition and target identification
[AD-A293111] p 2951 N95-30884
BIOMASS
Overview of IEA biomass combustion activities
[PB95-196374] p 2902 N95-30519
Biomass production by fescue and switchgrass alone and in mixed swards with legumes
[DE95-009137] p 2909 N95-31612
BioFacts: Fueling a stronger economy. Methanol from biomass, revision 2
[DE95-010302] p 2836 N95-31638
BioFacts: Fueling a stronger economy. Ethanol from biomass, revision 2
[DE95-010304] p 2836 N95-31639
BIOMASS ENERGY PRODUCTION
Overview of IEA biomass combustion activities
[PB95-196374] p 2902 N95-30519
Sleeping renewable beauty: Will the prince ever come
[PB95-214573] p 2903 N95-30640
Data on development of new energy technologies
[DE95-764135] p 2904 N95-31155
BioFacts: Fueling a stronger economy. Methanol from biomass, revision 2
[DE95-010302] p 2836 N95-31638
BioFacts: Fueling a stronger economy, global warming and biofuels emissions
[DE94-006864] p 2910 N95-31821
BioFacts: Fueling a stronger economy, thermochemical conversion of biomass
[DE94-006866] p 2905 N95-31822
BIOPHYSICS
Simulation of oculomotor post-inhibitory rebound burst firing using a Hodgkin-Huxley model of a neuron
[AD-A293821] p 2927 N95-31552
Summaries of fiscal year 1994 projects in medical applications and biophysical research
[DE95-010405] p 2925 N95-32040
BIOPOLYMER DENATURATION
Services to develop, standardize, and validate Polymerase Chain Reaction (PCR) protocols for the detection of leishmaniasis in clinical samples
[AD-A290155] p 2817 N95-31115
BIOREACTORS
STS-70 flight: Day 7
[NASA-TM-110665] p 2764 N95-30874
Degradation of TCE using sequential anaerobic biofilm and aerobic immobilized bed reactor
p 2780 N95-31791
BIOTIN
Biosensors based on cross-linking of biotinylated Glucose Oxidase by avidin
[AD-A290439] p 2925 N95-30452
BIPOLAR TRANSISTORS
Minority and majority carrier transport characterization in compound semiconductors
[DE95-010873] p 3014 N95-31233
BISMUTH
Nuclear-spin-dependent parity-nonconserving effects in thallium, lead and bismuth atoms
[DE95-614120] p 2991 N95-32354
BISMUTH COMPOUNDS
Photo-refractive Bi12SiO20: Spatial light modulator
[AD-A293084] p 3001 N95-32153
BIT ERROR RATE
Testing the performance of feedback concatenated decoder with a nonideal receiver p 2856 N95-32231
BIT SYNCHRONIZATION
Methodologies for steering clocks
p 2971 N95-32341
BITUMENS
Laboratory simulated hydrothermal alteration of sedimentary organic matter from Guaymas Basin, Gulf of California
[NASA-CR-198951] p 2914 N95-30865
BIVARIATE ANALYSIS
Estimation in second order dependency model for multivariate binary data
[DE95-010326] p 2944 N95-32087
BLACK HOLES (ASTRONOMY)
Theoretical high energy physics
[DE95-003107] p 2991 N95-30527
Gravitational-radiation damping of compact binary systems to second post-Newtonian order
[PB95-207882] p 2912 N95-30588
The conical singularity and quantum corrections to entropy of black hole
[DE95-613367] p 3029 N95-30606
Partons and black holes
[DE95-009921] p 3029 N95-31102
BLADE TIPS
Application of multigrid computational fluid dynamics (CFD) methods to rotor analysis
[AD-A293012] p 2874 N95-31475
Experimental and computational investigation of the tip clearance flow in a transonic axial compressor rotor
[NASA-TM-106711] p 2876 N95-31738
BLADE-VORTEX INTERACTION
Experimental and computational investigation of the tip clearance flow in a transonic axial compressor rotor
[NASA-TM-106711] p 2876 N95-31738
BLAST LOADS
Dry media blasting with wheat starch
p 2843 N95-32169
Paint removal and surface cleaning using ice particles
p 2844 N95-32171
Stripping with dry ice p 2844 N95-32172
Facilities used for plastic media blasting
p 2763 N95-32176
Operational parameters and material effects
p 2845 N95-32179
BLOCK COPOLYMERS
Intelligent synthetic polymers
[AD-A292905] p 2819 N95-31395
BLOOD CIRCULATION
Effects of air bubbles on rabbit blood brain barrier
[PB95-195293] p 2925 N95-30512
Arterial gas bubbles after decompression in pigs with Patent Foramen Ovale
[PB95-195319] p 2925 N95-30515
BLOOD FLOW
Control of skin blood flow in the neutral zone of human body temperature regulation
[AD-A291499] p 2926 N95-30563
BLOOD-BRAIN BARRIER
Effects of air bubbles on rabbit blood brain barrier
[PB95-195293] p 2925 N95-30512
BLOWING
Control of high Reynolds number round jets
p 2876 N95-31733
BLUNT BODIES
Analysis of planar laser-induced fluorescence images obtained during shakedown testing of the AEDC impulse facility
[AD-A293237] p 2884 N95-30906
The 25th International Symposium on Combustion
[AD-A286825] p 2794 N95-31268
Side force acting on blunted circular cylinder bodies at high angles of attack in supersonic flow
[NAL-TR-1255] p 2744 N95-31741
BODY CENTERED CUBIC LATTICES
Energetics of Pt adsorption on Pt(111)
[DE95-010933] p 3017 N95-32307
BODY TEMPERATURE
Control of skin blood flow in the neutral zone of human body temperature regulation
[AD-A291499] p 2926 N95-30563
BODY-WING CONFIGURATIONS
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept
[NASA-TM-108489] p 2742 N95-30712
Numerical investigation into vortical flow about a delta-wing configuration up to incidences at which vortex breakdown occurs in experiment
[PB95-198024] p 2743 N95-30837
BOEING AIRCRAFT
Development of advanced approach and departure procedures. Failure scenarios
[PB95-198123] p 2748 N95-30815
BOLTZMANN-VLASOV EQUATION
Dressing symmetry of the uniformization solution of Liouville equation
[DE95-613380] p 2956 N95-30607
Radial mode evolution in longitudinal bunched beam instability
[DE95-010895] p 2994 N95-32092
BOMBARDMENT
STM measurements of the interaction of vacancies and steps during low-energy-ion bombardment of Si(001)
[DE95-010935] p 3017 N95-32308
BONDED JOINTS
Cleanliness evaluation of rough surfaces with diffuse IR reflectance p 2782 N95-31804
The role of surface chemical analysis in a study to select replacement processes for TCA vapor degreasing
p 2782 N95-31809
BONDING
Formation of cavities in Si and their chemisorption of materials
[DE95-009586] p 2960 N95-30706
The effect of interface properties on nickel base alloy composites
[NASA-CR-198363] p 2785 N95-30787
BOOSTER ROCKET ENGINES
Environmentally compatible solid rocket propellants
p 2772 N95-31753
BOREHOLES
Development of the Multi-Level Seismic Receiver (MLSR)
[DE95-008823] p 2916 N95-31610
BORN APPROXIMATION
Reflection and diffraction of atomic de Broglie waves by evanescent laser waves. Bare-state method
[DE95-616458] p 2992 N95-30960
Radiative corrections to the three quantum annihilation cross section in high energy electron-positron collisions
[DE95-623675] p 2995 N95-32296
BORON
The structure and reactivity of boron and carbon surfaces
[AD-A292804] p 2795 N95-31440
BORON CARBIDES
Wettability of boron carbide
[PB95-196358] p 2802 N95-30518
BORON NITRIDES
Growth, characterization and device development in monocrystalline diamond films
[AD-A293106] p 3015 N95-32018
BOSONS
Dynamical analogy of Cabibbo-Kobayashi-Maskawa matrices
[DE95-613462] p 2975 N95-30367
Current issues in perturbative QCD
[DE95-008448] p 2975 N95-30388
The search for the decay of Z boson into two gamma as a test of Bose statistics
[DE95-616373] p 2976 N95-30393
CP violating effects in e(+) e(-) yields ZH and their optimization
[DE95-616302] p 2976 N95-30441
Confronting left-right symmetric models with electroweak precision data at the Z peak
[PB95-208054] p 2977 N95-30484
Properties of a multichannel resonant-level model
[DE95-614482] p 2979 N95-30652
Minijet veto: A tool for the heavy Higgs search at the LHC
[PB95-196234] p 2979 N95-30695
WW and WZ production at the tevatron
[DE95-011014] p 2981 N95-30970
Testing vector boson dominance of electroweak interactions via e(+)e(-) (yields) f-bar f
[DE95-620528] p 2982 N95-31214
Search for new physics indirect effects in e(+)e(-) yields W(+)W(-) at linear colliders with polarized beams
[DE95-613688] p 2984 N95-31547
Studies of the strong and electroweak interactions at the Z(sub 0) pole
[DE95-010353] p 2986 N95-31682
Search for anomalous ZZ(sub gamma) and Z(sub (gamma, gamma)) couplings with D0
[DE95-010457] p 2989 N95-32162
A measurement of quark and gluon jet differences at the Z(sup 0) resonance
[DE95-010666] p 2989 N95-32266
An experimental study of QCD and jets in e(+)e(-) annihilation
[DE95-010667] p 2989 N95-32267
BOUNDARIES
Operating system support for distributed multimedia applications: A survey of current research
[PB95-207098] p 2964 N95-30565
BOUNDARY CONDITIONS
Velocity boundary conditions for vorticity formulations of the incompressible Navier-Stokes equations
[DE95-008715] p 2966 N95-30464
On perturbative asymptotic of Regge trajectories
[DE95-613585] p 3018 N95-30636
The land component of the global climate system with adequate spatial resolution
[DE95-009323] p 2908 N95-30686
Solution of the three-dimensional Helmholtz equation with nonlocal boundary conditions
[NASA-TM-110174] p 2974 N95-30850
Probabilistic reliability modeling of fatigue on the H-46 tie bar
[AD-A289926] p 2751 N95-30927
Inverse and control problems in electromagnetics
[AD-A292993] p 2849 N95-30962
Stability prediction with rotational flow effects
p 2799 N95-31283

Role of free-surface boundary conditions and nonlinearities in wave/boundary-layer and wake interaction p 2872 N95-31317
Two-dimensional Finite Difference Time Domain (FD-TD) model of electromagnetic (EM) scattering from a buried rectangular object
[AD-A293685] p 2852 N95-31601

BOUNDARY ELEMENT METHOD
Simulation of viscous sintering
[PB95-197109] p 2868 N95-30636
A unified interpretation of singular and near-singular integrals in the boundary element method
[ISBN-0-315-86297-1] p 2962 N95-31947
Numerical evaluation of three-dimensional crack-tip integrals for layered anisotropic solids p 2898 N95-32191

BOUNDARY INTEGRAL METHOD
Inverse and control problems in electromagnetics
[AD-A292993] p 2849 N95-30962
A boundary integral equation approach to three dimensional electromagnetic wave scattering problems p 2853 N95-31839
Numerical evaluation of three-dimensional crack-tip integrals for layered anisotropic solids p 2898 N95-32191

BOUNDARY LAYER CONTROL
Active turbulence control using microelectrodes, permanent magnets in microgrooves
[AD-D017351] p 2867 N95-30553
Effects of cavity bleed and its configuration on aerodynamic characteristics of supersonic internal flow
[NAL-TR-1247] p 2744 N95-31715
Control of unsteady separated flow associated with the dynamic stall of airfoils
[NASA-CR-198972] p 2744 N95-32193

BOUNDARY LAYER FLOW
An experimental study of planar heterogeneous supersonic confined jets
[AD-A290859] p 2867 N95-30557
Shear-free turbulent boundary layers p 2873 N95-31349
Advanced k-epsilon modeling of heat transfer
[NASA-CR-4679] p 2874 N95-31423
Compressible turbulence measurement in low-angle injection into a supersonic flow
[AD-A293836] p 2874 N95-31516
Application of wavelet-filtering techniques to intermittent turbulent and wall pressure events. Part 2. Detection of cluster patterns
[AD-A293805] p 2875 N95-31586

BOUNDARY LAYER SEPARATION
Vorticity dynamics and control of dynamic stall
[AD-A288658] p 2756 N95-31400
Investigating the use of smart acoustically active surfaces for flow separation control in turbomachinery
[AD-A292819] p 2874 N95-31443
Control of unsteady separated flow associated with the dynamic stall of airfoils
[NASA-CR-198972] p 2744 N95-32193

BOUNDARY LAYERS
A numerical study of the starting process in a hypersonic shock tunnel p 2762 N95-30493
Low-latitude boundary layer near noon: An open field line model
[ATR-93(7270)-1] p 2914 N95-30773
A turbulence model for steady and unsteady boundary layers in strong pressure gradients p 2868 N95-30840
Role of free-surface boundary conditions and nonlinearities in wave/boundary-layer and wake interaction p 2872 N95-31317
Monte Carlo code for evaluating the Boundary Layer Illumination and Radiation Balance model (BLIRB)
[AD-A293963] p 2915 N95-31560
Numerical simulation of the Langevin equation for skewed turbulence
[DE95-009477] p 2877 N95-32049

BOUNDARY LUBRICATION
Enhancement of perfluoropolyether boundary lubrication performance: I. Preliminary results
[NASA-TM-106937] p 2813 N95-30621

BOUNDARY VALUE PROBLEMS
Singular eigenfunctions for shearing fluids I
[DE95-008952] p 2868 N95-30763
Existence of solutions in plane quasistationary stokes flow driven by surface tension
[PB95-197935] p 2868 N95-30810
A viscoelastic anisotropic wave propagation model for composite cure evaluation p 2786 N95-30839
A feedback linearization approach to orbital maneuvers p 2765 N95-30841
Numerical stability investigations of processes for solving linear initial value problems
[PB95-207023] p 2959 N95-31183
Effect of the stopping of the Newton iteration in implicit linear multistep methods
[PB95-207056] p 2959 N95-31184

BOW WAVES
Analysis of planar laser-induced fluorescence images obtained during shakedown testing of the AEDC impulse facility
[AD-A293237] p 2884 N95-30906

BRACKETS
Hamiltonian dynamics of the condensed media with spontaneously broken symmetry
[DE95-614448] p 3010 N95-30648

BRAGG ANGLE
May multiple inelastic scattering in CBED patterns be removed analytically
[PB95-196333] p 2992 N95-30717
Phase object display by using acousto-optical Bragg diffraction
[AD-A293153] p 2998 N95-31006
Technique to prepare high-reflectance optical fiber Bragg gratings with single exposure in-line or fiber draw tower
[AD-D017445] p 2998 N95-31270
Effects of mosaicity on Parametric X-Radiation production
[AD-A293677] p 2985 N95-31597

BRAIN
Effects of air bubbles on rabbit blood brain barrier
[PB95-195293] p 2925 N95-30512

BRANCHING (MATHEMATICS)
Bifurcations of contracting singular cycles
[DE95-613371] p 2962 N95-32117

BRAVAIS CRYSTALS
Bravais classes, Voronoie cells, Delone symbols
[PB95-207916] p 3009 N95-30503

BREADBOARD MODELS
Integrated X-ray testing of the electro-optical breadboard model for the XMM reflection grating spectrometer
[DE95-008829] p 2879 N95-30507
Development of a new instrument for rocket engine combustion diagnostics p 2799 N95-31211

BREAKWATERS
The determination of wave group parameters from the resolution of incident and reflected waves
[AD-A293703] p 2924 N95-31829

BREATHING APPARATUS
Effect of oxygen and decompression bubbles on inert gas washout
[PB95-196556] p 2925 N95-30665

BREMSSTRAHLUNG
Studying the thermal/non-thermal crossover in solar flares
[NASA-CR-189436] p 3031 N95-30785
Coulomb correction calculations of pp Bremsstrahlung
[DE95-616349] p 2982 N95-31176

BRIDGES (STRUCTURES)
Fatigue behaviour of multiplanar tubular joints
[PB95-207874] p 2893 N95-30586

BRIDGMAN METHOD
Numerical modeling of Bridgman growth of PbSnTe in a magnetic field
[NASA-TM-106996] p 2837 N95-31359

BRIGHTNESS
Diagnosing high density, fast-evolving plasmas using x-ray lasers
[DE95-010734] p 3006 N95-32028
Enhanced brightness x-ray lasers
[DE95-010735] p 2886 N95-32029

BRIGHTNESS TEMPERATURE
Weather influence on passive microwave brightness temperatures
[PB95-195384] p 2900 N95-30536
Radiometer measurements of sea ice in the Gulf of Bothnia 1992
[PB95-206611] p 2900 N95-30718
Comparison of satellite-derived MSU brightness temperatures and conventionally-derived fields
[AD-A293692] p 2901 N95-31603
Brightness temperature simulations for the physical and synoptic interpretation of advanced microwave sounding unit moisture channels p 2921 N95-31721

BRITTLE MATERIALS
High strain rate properties and constitutive modeling of glass
[DE95-008434] p 2816 N95-31058
Cracking during nanoindentation and its use in the measurement of fracture toughness
[DE95-008839] p 2818 N95-31175

BRITTLENESS
Interface degradation in CAS/Nicalon during elevated temperature aging
[DE95-006843] p 2812 N95-30543
Processing and characterization of nanocrystalline molybdenum disilicide (MoSi2) consolidated by hot isostatic pressing (HIP)
[DE95-010243] p 3012 N95-30756
The 10th International Conference on the Strength of Materials
[AD-A292335] p 2894 N95-31263
Initial survey on fracture toughness of commercial Nd2Fe14B
[DE95-009813] p 2808 N95-31643

BROADBAND
Microwave repeater with broadband active and/or passive isolation control
[AD-D017358] p 2846 N95-30417
Fractal quantum well heterostructures for broadband light emitters
[DE95-009579] p 2860 N95-30707
Noise signal processor
[AD-D017430] p 2974 N95-30747
Use of a variable frequency source with a single-mode cavity to process ceramic filaments
[DE95-010992] p 2817 N95-31152
Infrared and millimeter wave detection using thin films of Pb doped BiSrCaCuO superconductor p 2840 N95-32129

BROKEN SYMMETRY
Possible reason why leptons are lighter than quarks
[DE95-616383] p 2978 N95-30579
Hamiltonian dynamics of the condensed media with spontaneously broken symmetry
[DE95-614448] p 3010 N95-30648
Electromagnetic hadron mass differences and estimation of isotopic symmetry violation parameters of QCD vacuum from quark model
[DE95-613628] p 2985 N95-31621
SO(8) color as possible origin of generations
[DE95-613560] p 2988 N95-32069
Supersymmetric magnetic moments sum rules and spontaneous supersymmetry breaking
[DE95-613771] p 2989 N95-32096
Research progress report
[DE95-010726] p 3030 N95-32269

BROWNIAN MOVEMENTS
Particle filtration: An analysis using the method of volume averaging
[DE95-009467] p 2875 N95-31592

BRUSH SEALS
Brush seal shaft wear resistant coatings
[NASA-CR-198950] p 2889 N95-31382

BSCCO SUPERCONDUCTORS
Hydrostatic extrusion of BSCCO/Ag composite wire
[DE95-007862] p 2805 N95-31121
Solution based temperature of Perovskite-type oxide films and powders
[DE95-009089] p 2820 N95-31629
Infrared and millimeter wave detection using thin films of Pb doped BiSrCaCuO superconductor p 2840 N95-32129

BUBBLES
Decompression illness, observable bubbles. (Session K)
[PB95-195285] p 2926 N95-30511
Effects of air bubbles on rabbit blood brain barrier
[PB95-195293] p 2925 N95-30512
Detecting intravascular gas bubbles in ultrasonic images
[PB95-195301] p 2926 N95-30513
Arterial gas bubbles after decompression in pigs with Patent Foramen Ovale
[PB95-195319] p 2925 N95-30515
Effect of oxygen and decompression bubbles on inert gas washout
[PB95-196556] p 2925 N95-30665
Study of effect of bubbles on a free-shear layer p 2872 N95-31100

BUCKLING
Application of shallow shell stability to plant morphogenesis by Fourier series p 2897 N95-31734

BUCKMINSTERFULLERENE
Magnetic resonance spectroscopy of fullerenes and (pi)-conjugated polymers
[DE95-010131] p 2817 N95-31108

BUFFERS
Effective bandwidth techniques in bufferless and buffered ATM multiplexers
[PB95-207072] p 2862 N95-31185

BUNCHING
Radial mode evolution in longitudinal bunched beam instability
[DE95-010895] p 2994 N95-32092

BURNERS
Characterization of an improved Rijke burner as prelude to measurements of aluminum distributed combustion p 2800 N95-31287

BURNING RATE
Unsteady laser augmented combustion of pure oxidizers AP and RDX p 2799 N95-31284
Oscillatory combustion of aluminized AP/HTPB propellants p 2800 N95-31286
Model for defining propellant burn rate performance boundaries p 2800 N95-31290
Survey of US burning rate measurement methods for solid propulsion applications p 2800 N95-31291

Assessment of dynamic burning behavior for JA-2 propellant rods p 2800 N95-31299

BURNING TIME

Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures p 2799 N95-30990

Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures p 2799 N95-31198

BUTANES

Evaluation of halon alternatives in inerting experiments [AD-A293774] p 2795 N95-31580

BY-PRODUCTS

GCMS and FTIR studies of by-product inhibited growth and the rate-limiting step in TEOS-based SiO2 CVD [DE95-009863] p 3016 N95-32147

BYPASS RATIO

Wave rotor-enhanced gas turbine engines [NASA-TM-106998] p 2754 N95-30517

BYPASSES

Response of mechanically fastened composite joints under multiple bypass loads p 2785 N95-30824

C

C BAND

Multiparameter radar measurements of precipitation in complex terrain: Meteorological and hydrological applications [AD-A290786] p 2918 N95-30403

C++ (PROGRAMMING LANGUAGE)

C++ as an introductory programming language [PB95-195715] p 2933 N95-30539

CADMIUM

Cadmium plating replacements p 2776 N95-31773

CADMIUM ALLOYS

Volumetric and electro analytical techniques for chemical characterization of nuclear grade Ag-In-Cd alloys [DE95-620664] p 2807 N95-31407

CADMIUM SELENIDES

Semiconductor nanocrystals formed in SiO2 by ion implantation [DE95-008900] p 2978 N95-30546

CADMIUM TELLURIDES

Direct sublattice imaging of interface dislocation structures in CdTe/GaAs(001) [DE95-009031] p 3010 N95-30576

CALCIUM

Physiology and physiopathology of equilibration [PB95-208328] p 2926 N95-30494

Optical frequency standards: Hertz-level working standards and their absolute frequency measurement [AD-A293930] p 2999 N95-31515

CALCIUM FLUORIDES

Mechanisms of enhanced ionic conduction at interfaces in ceramics [DE95-009125] p 2814 N95-30730

CALCULUS

Barendregt cube with definitions and generalized reduction [PB95-206793] p 2966 N95-30719

Formalization of the ramified type theory [PB95-206785] p 2961 N95-31422

CALIBRATING

Standardization of (13)CO2 production procedure from organic matter for mass spectrometric analysis [DE95-614629] p 2791 N95-30420

Integrated X-ray testing of the electro-optical breadboard model for the XMM reflection grating spectrometer [DE95-008829] p 2879 N95-30507

FOG --- evaluation test of a fiber optic gyroscope (FOG) [PB95-211546] p 2879 N95-30600

Evaluation of calibration parameters and performance of the video imaging technique of assessing exposure (VITAE system) [AD-A289023] p 2927 N95-30998

Using satellites for radar performance monitoring and calibration [AD-A293809] p 2852 N95-31588

Standardization of surface contamination analysis systems p 2781 N95-31798

Calibration of multichannel analyzer of charge-exchange atoms [DE95-614178] p 2987 N95-32053

SeaWiFS technical report series. Volume 13: Case studies for SeaWiFS calibration and validation, part 1 [NASA-TM-104566-VOL-13] p 2924 N95-32220

Laboratory robotics: An automated tool for preparing Ion Chromatography calibration standards [DE95-009441] p 2798 N95-32318

High accuracy time transfer synchronization p 2968 N95-32321

Relativistic timescale analysis suggests lunar theory revision p 2970 N95-32333

Automated delay measurement system for an Earth station for Two-Way Satellite Time and Frequency Transfer p 2971 N95-32337

Metafitting: Weight optimization for least-squares fitting of PTTI data p 2971 N95-32340

CAMERAS

Passive range measurement system [AD-D017344] p 2996 N95-30678

STS-70 flight: Day 7 [NASA-TM-110665] p 2764 N95-30874

The future of space imaging. Report of a community-based study of an advanced camera for the Hubble Space Telescope [NASA-CR-198818] p 3028 N95-31364

The Wide Field/Planetary Camera 2 (WFPC-2) molecular adsorber [NASA-CR-198866] p 2881 N95-31456

Optimal infrared detector configurations for air target detection p 2841 N95-32130

CANADA

Architecture and implementation of a multi-sensor data fusion demonstration model within the real-time combat system of the Canadian Patrol Frigate p 2842 N95-32139

CANARD CONFIGURATIONS

Catapult-launching of the RAFALE design and experimentation p 2752 N95-32008

CANONICAL FORMS

Canonical symmetric invariant pairings in vertex operator super algebras and gramians [PB95-208112] p 2955 N95-30488

CANOPIES

Failure analysis for polycarbonate transparencies [AD-A292992] p 2820 N95-31471

CAPACITANCE

TV-VI semiconductor quantum well lasers, physics and engineering p 2883 N95-30805

Contactless characterization of semiconductors using laser-induced surface photo-charge voltage measurements [AD-A293618] p 2863 N95-31725

CAPACITANCE SWITCHES

Operational characteristics of a 200 C LC parallel resonant circuit [NASA-TM-106983] p 2864 N95-31742

CAPACITORS

Pre-amplifier with multi-stage feedback [AD-D017371] p 2859 N95-30659

Operational characteristics of a 200 C LC parallel resonant circuit [NASA-TM-106983] p 2864 N95-31742

CARBIDES

Modeling of grain boundary stresses in Alloy 600 [DE95-009033] p 2808 N95-31825

CARBON

Synthesis of carbo-nitride films using high-energy shock plasma deposition [DE95-615231] p 2811 N95-30450

Power oscillator in the tokamaks training [DE95-616538] p 3003 N95-30473

A metallurgical approach toward alloying in rare earth permanent magnet systems [DE95-010242] p 2966 N95-30668

Ultrasonic characterization of fiber-matrix interphasial properties and damage in high-temperature composites p 2785 N95-30823

Method of synthesizing high quality, doped diamond and diamonds and devices obtained therefrom [AD-D017432] p 3014 N95-31269

X-ray diffraction study of clusters in a-tC films [DE95-010860] p 2794 N95-31393

Ion-Assisted Pulsed Laser Deposition of amorphous tetrahedral-coordinated carbon films [DE95-010861] p 2885 N95-31394

The structure and reactivity of boron and carbon surfaces [AD-A292804] p 2795 N95-31440

Ionization of He by highly charged ions at low velocity [DE95-010815] p 2990 N95-32273

CARBON CYCLE

Global change research: Summaries of research in FY 1994 [DE95-009660] p 2908 N95-30755

Carbon dioxide concentrations in surface water and the atmosphere during 1986-1989 NOAA/PMEL cruises in the Pacific and Indian Oceans [DE95-009659] p 2910 N95-32099

CARBON DIOXIDE

Standardization of (13)CO2 production procedure from organic matter for mass spectrometric analysis [DE95-614629] p 2791 N95-30420

Development of a new instrument for rocket engine combustion diagnostics p 2799 N95-31211

A centrifuge CO2 pellet cleaning system p 2778 N95-31784

CO2 (dry ice) cleaning system p 2778 N95-31785

BioFacts: Fueling a stronger economy, global warming and biofuels emissions [DE94-006864] p 2910 N95-31821

Stripping with dry ice p 2844 N95-32172

CARBON DIOXIDE CONCENTRATION

Economical analysis relating to the global warming issue [DE95-764072] p 2908 N95-30677

Global change research: Summaries of research in FY 1994 [DE95-009660] p 2908 N95-30755

Carbon dioxide concentrations in surface water and the atmosphere during 1986-1989 NOAA/PMEL cruises in the Pacific and Indian Oceans [DE95-009659] p 2910 N95-32099

CARBON DIOXIDE LASERS

RDX laser-assisted flame structure p 2801 N95-31314

The physical and chemical processes governing CO2 laser-induced pyrolysis and combustion of the solid propellants RDX, ADN, XM39, and M43 p 2836 N95-31531

CARBON DIOXIDE REMOVAL

Standardization of (13)CO2 production procedure from organic matter for mass spectrometric analysis [DE95-614629] p 2791 N95-30420

CARBON FIBER REINFORCED PLASTICS

A study of elevated temperature testing techniques for the fatigue behavior of PMCS: Application to T650-35/AMB21 [NASA-TM-106927] p 2791 N95-32209

CARBON FIBERS

Intermodulation Interference (IMI) testing of composite materials [AD-A288621] p 2787 N95-31146

CARBON MONOXIDE

STM studies of clean, CO- and O2-exposed Pt(100)-hex-R0.7 deg [PB95-195376] p 3009 N95-30535

Molecular gas in starburst galaxies: Line intensities and physical conditions [PB95-208021] p 3029 N95-30569

The oxidation of carbon monoxide by nitrous oxide p 2801 N95-31309

The oxidation of carbon monoxide by nitrogen dioxide p 2801 N95-31310

An analysis of gas phase ethanol/water chemistry for diamond CVD [AD-A293009] p 2795 N95-31473

CARBONATES

Composite polymer electrolyte for lithium batteries [AD-A293924] p 2820 N95-31514

Bicarbonate of soda paint stripping process validation and material characterization p 2777 N95-31778

Carbon dioxide concentrations in surface water and the atmosphere during 1986-1989 NOAA/PMEL cruises in the Pacific and Indian Oceans [DE95-009659] p 2910 N95-32099

CARGO AIRCRAFT

Report to Congressional Committees. Military airlift: C-17 settlement is not a good deal [GAO/NSIAD-94-141] p 2741 N95-32198

CARIBBEAN REGION

Summary of 1993 Atlantic tropical cyclone activity and verification of author's forecast. A year of unanticipated light hurricane activity and a poor forecast: The expected dissipation of the El Nino did not take place and Caribbean basin surface pressure became quite high p 2918 N95-30842

CARRIER FREQUENCIES

Noise signal processor [AD-D017430] p 2974 N95-30747

Degradation in finite-harmonic subcarrier demodulation p 2855 N95-32228

CARRIER INJECTION

Method and apparatus for non-destructively measuring local resistivity of semiconductors [AD-D017436] p 2862 N95-31343

CARRIER MOBILITY

Electrical conductivity study on polythiophenes films [DE95-614309] p 2813 N95-30645

Minority and majority carrier transport characterization in compound semiconductors [DE95-010873] p 3014 N95-31233

Carrier dynamics and optical properties of GaAs- and InP-based strained quantum well lasers p 2886 N95-31848

CASCADE CONTROL

Pre-amplifier with multi-stage feedback [AD-D017371] p 2859 N95-30659

CASCADE FLOW
Improved modeling of unsteady heat transfer (The first step)
| AD-A292777 | p 2874 N95-31432
CASCADES
Microwave electro-optic mixer
| AD-D017328 | p 2862 N95-31179
CASSINI MISSION
GPHS-RTGs in support of the Cassini RTG Program
| DE95-010306 | p 2768 N95-30674
Welding isotopic heat sources for the cassini mission to Saturn
| DE95-060104 | p 2890 N95-32367
CAST ALLOYS
Effect of local melting on tribology in metal cutting
| PB95-195392 | p 2804 N95-31052
The effect of grain refinement on the room-temperature ductility of as-cast Fe3Al-based alloys
| DE95-010121 | p 2805 N95-31107
CASTING
Urethane foam process improvements
| DE95-008957 | p 2815 N95-30798
CATALOGS (PUBLICATIONS)
Album of simole perfect squared squares of order 26
| PB95-197398 | p 2954 N95-30401
CATALYSIS
Biosensors based on cross-linking of biotinylated Glucose Oxidase by avidin
| AD-A290439 | p 2925 N95-30452
Lanthanide(III) catalyzed reactions: Structure an d thermodynamics of intermediate complexes, and implications for reactivity
| PB95-197000 | p 3019 N95-30775
Extension of the pore tree model to describe pore interconnectivity
| AD-A290366 | p 2793 N95-30971
Electrified microheterogeneous catalysis
| AD-D017446 | p 2794 N95-31271
CATALYSTS
Catalytic reactions of synthesis gas. Part 4: Heterogeneous hydroformylation
| PB95-195558 | p 2791 N95-30537
Fischer-tropsch synthesis in supercritical fluids
| DE95-009631 | p 2792 N95-30709
Enantioselectivity of quinoprotein alcohol dehydrogenases: Production of enantiomerically pure C3-alcohol synthons
| PB95-196960 | p 2771 N95-30734
A study of catalysts and mechanisms in synthesis reactions
| DE95-010177 | p 2793 N95-30766
Porous spherical shells and microspheres by electrodispersion precipitation
| DE95-009073 | p 2815 N95-30799
Aqueous TiO2 photocatalysis of metal-EDTA complexes
| DE95-011058 | p 2793 N95-31113
CATALYTIC ACTIVITY
The oxidation of carbon monoxide by nitrous oxide
p 2801 N95-31309
CATAPULTS
Catapult-launching of the RAFALE design and experimentation p 2752 N95-32008
CATHODE RAY TUBES
Low-voltage cathodoluminescence of europium-activated yttrium orthovanadate
| DE95-008536 | p 3008 N95-30382
CATHODES
A Monte-Carlo model of ionic transport across a solid interface
| DE95-613447 | p 3011 N95-30737
X-band magnicon amplifier research at the Naval Research Laboratory
| AD-A293203 | p 3013 N95-30984
CATHODIC COATINGS
Off-potential measurement systems for impressed current cathodic protection
| AD-A290876 | p 2812 N95-30558
Comparison of cathodic protection currents on 70/30 copper-nickel and alloy 625 piping systems
| AD-A292953 | p 2807 N95-31561
CATHODOLUMINESCENCE
Low-voltage cathodoluminescence of europium-activated yttrium orthovanadate
| DE95-008536 | p 3008 N95-30382
Method and apparatus for a high resolution, flat panel cathodoluminescent display device
| AD-D017434 | p 2862 N95-31342
CATIONS
Measurements of quantum electrodynamic sensitive transitions in Na-like and Cu-like ions
| DE95-011593 | p 3007 N95-32299
CAVITATION FLOW
Large deformation failure mechanisms in nonlinear solids
| AD-A293010 | p 2898 N95-31474
Chaos-enhanced transport and aggregation in chaotic flows
| AD-A293892 | p 3020 N95-31545
Ultrasonic cleaning: Fundamental theory and application p 2778 N95-31783
An efficient numerical procedure for thermohydrodynamic analysis of cavitating bearings
| NASA-CR-195476 | p 2878 N95-32210
Film temperatures in the presence of cavitation
| NASA-CR-195481 | p 2878 N95-32216
CAVITIES
Microwave coupling into a slotted cavity. Additional results
| PB95-210381 | p 2847 N95-30629
Formation of cavities in Si and their chemisorption of materials
| DE95-009586 | p 2980 N95-30708
Use of a variable frequency source with a single-mode cavity to process ceramic filaments
| DE95-010992 | p 2817 N95-31152
Tunable ytterbium-doped solid state laser
| AD-D017449 | p 2885 N95-31274
Effects of cavity bleed and its configuration on aerodynamic characteristics of supersonic internal flow
| NAL-TR-1247 | p 2744 N95-31715
CAVITY RESONATORS
New material for high average power infrared generation: QPM-DB GaAs
| AD-A292714 | p 2967 N95-30939
X-band magnicon amplifier research at the Naval Research Laboratory
| AD-A293203 | p 3013 N95-30984
CELL MEMBRANES (BIOLOGY)
Membrane transport: A cellular probe of heat stroke
| AD-A293327 | p 2926 N95-30924
CEMENTITE
A study of Damascus steel
| DE95-010127 | p 2809 N95-32023
CEMENTS
LLW solidification in cement: Effect of dilution
| DE95-010108 | p 2798 N95-32091
CENSORED DATA (MATHEMATICS)
A Stochastic EM algorithm for approximating the maximum likelihood estimate
| DE95-010328 | p 2943 N95-32044
CENTRIFUGAL COMPRESSORS
Laser anemometer measurements of the three-dimensional rotor flow field in the NASA low-speed centrifugal compressor
| NASA-TP-3527 | p 2756 N95-31985
CENTRIFUGAL PUMPS
Centrifugal and axial pump design and off-design performance prediction p 2830 N95-31289
CENTRIFUGES
A centrifuge CO2 pellet cleaning system
p 2778 N95-31784
CEPHEID VARIABLES
Cepheid temperature and the Blazhko effect
| NASA-CR-189433 | p 3030 N95-31819
CERAMIC COATINGS
Off-potential measurement systems for impressed current cathodic protection
| AD-A290876 | p 2812 N95-30558
Brush seal shaft wear resistant coatings
| NASA-CR-198950 | p 2889 N95-31382
CERAMIC FIBERS
Innovative processing of composites for ultra-high temperature applications, book 3
| AD-A290891 | p 2786 N95-30866
Dielectric property measurement of zirconia fibers at high temperatures
| DE95-010991 | p 2821 N95-31705
CERAMIC HONEYCOMBS
The Wide Field/Planetary Camera 2 (WFPC-2) molecular adsorber
| NASA-CR-198866 | p 2881 N95-31456
CERAMIC MATRIX COMPOSITES
Interfacial studies of coated fiber reinforced glass-ceramic matrix composites
| AD-A290780 | p 2783 N95-30433
Innovative processing of composites for ultra-high temperature applications, book 3
| AD-A290891 | p 2786 N95-30866
Characterization of compressive damage mechanisms in ceramic and polymeric matrix composite materials
| AD-A293171 | p 2787 N95-30975
A numerical analysis of crack growth in microcracking ceramic and ceramic composites
| DE95-010132 | p 2897 N95-32024
Low cost fabrication of silicon carbide based ceramics and fiber reinforced composites
| NASA-TM-107001 | p 2822 N95-32208
CERAMICS
Ceramics derived from metal-organic precursors
| AD-A290791 | p 2811 N95-30405
Ion implantation and thermal stress resistance of ceramics
| DE95-615349 | p 2812 N95-30451
Molecular modeling of PMN ceramics
| AD-A290879 | p 2813 N95-30560
TEM-examination of ceramic-metal interfaces
| PB95-196531 | p 2813 N95-30664
Advanced computational research in materials processing for design and manufacturing
| DE95-009130 | p 2838 N95-30684
Mechanisms of enhanced ionic conduction at interfaces in ceramics
| DE95-009125 | p 2814 N95-30730
Porous spherical shells and microspheres by electrodispersion precipitation
| DE95-009073 | p 2815 N95-30799
Ultrasonic characterization of fiber-matrix interphasial properties and damage in high-temperature composites
p 2785 N95-30823
Ceramic/Metal Composite Circuit-Board-Level Technology for Application Specific Electronic Modules (ASEM's)
| AD-A293183 | p 2787 N95-30978
Investigations of YBaCuO materials with near-room-temperature resistivity transitions
| AD-A293405 | p 3013 N95-31008
Germanate glass ceramic
| AD-D017418 | p 2816 N95-31011
An assessment of the cost of microwave sintering ceramic tiles for armor applications. Phase 2 report
| DE95-010000 | p 2816 N95-31103
Life prediction methodology for ceramic components of advanced heat engines: Phase 1. Volume 1
| DE95-010805 | p 2817 N95-31135
Life prediction methodology for ceramic components of advanced heat engines. Phase 1: Volume 2. Appendices
| DE95-010806 | p 2817 N95-31136
Use of a variable frequency source with a single-mode cavity to process ceramic filaments
| DE95-010992 | p 2817 N95-31152
Low temperature fabrication from nano-size ceramic powders
| DE95-010995 | p 2818 N95-31153
Cracking during nanoindentation and its use in the measurement of fracture toughness
| DE95-008839 | p 2818 N95-31175
The 10th International Conference on the Strength of Materials
| AD-A292335 | p 2894 N95-31263
Design and processing of materials by biomimicking. Sections 1. Publications
| AD-A293852 | p 2820 N95-31559
Differences in creep performance of a HIPed silicon nitride in ambient air and inert environments
| DE95-009172 | p 2796 N95-31633
Control of interfacial chemistry and mechanical properties in metal/ceramic composites
p 2790 N95-31976
A numerical analysis of crack growth in microcracking ceramic and ceramic composites
| DE95-010132 | p 2897 N95-32024
Predictions of tensile behavior and strengths of a Si3N4 ceramic at high temperatures based on a viscoplastic model
| DE95-010220 | p 2821 N95-32025
Development of large-area monolithically integrated Silicon-Film(trademark) photovoltaic modules
| DE95-004089 | p 2906 N95-32057
Low cost fabrication of silicon carbide based ceramics and fiber reinforced composites
| NASA-TM-107001 | p 2822 N95-32208
Study of the surface properties of ceramic materials by chromatography
| DE95-011578 | p 2823 N95-32298
Whisker reinforced glass ceramic
| DE95-010542 | p 2823 N95-32305
Nondestructive testing of ceramic components: Cooperative Research and Development Agreement completion report
| DE95-009510 | p 2823 N95-32352
CERENKOV COUNTERS
Long baseline neutrino oscillation experiment at the AGS
| DE95-004378 | p 2986 N95-31702
CERENKOV RADIATION
The radiation conditioned by the 'velocity part' of the electromagnetic field of a moving charge
| DE95-613366 | p 2846 N95-30605
CERIUM
An experimental search for high ZT semiconductors: A survey of the preparation and properties of several alloy systems
| DE95-010232 | p 2865 N95-32084

CERIUM OXIDES
Morphology and microstructure of (111) crystalline CeO2 films grown on amorphous SiO2 substrates by pulsed-laser ablation
| DE95-008842 | p 3009 N95-30542
CERTIFICATION
Flight test evaluation of the Stanford University/United Airlines differential GPS Category 3 automatic landing system
| NASA-TM-110354 | p 2743 N95-30788
Experimental control in software reliability certification p 2938 N95-31248
Photovoltaic module certification/laboratory accreditation criteria development
| DE95-004063 | p 2905 N95-31381
CESIUM
Resonance characteristics in the case of the excitation of a monoenergetic beam of free atoms by means of N. F. Ramsey's method
| IFTR-6/1995 | p 2993 N95-31336
The 26th Annual Precise Time and Time Interval (PTTI) Applications and Planning Meeting
| NASA-CP-3302 | p 2967 N95-32319
High accuracy time transfer synchronization p 2968 N95-32321
Investigation into the effects of VHF and UHF band radiation on Hewlett-Packard (HP) Cesium Beam Frequency Standards p 2970 N95-32332
The effects of clock errors on timescale stability p 2971 N95-32342
Allan deviation computations of a linear frequency synthesizer system using frequency domain techniques p 2972 N95-32344
CHANGE DETECTION
Surface inspection using FTIR spectroscopy p 2782 N95-31803
CHANNEL FLOW
K-shell ionization under zone axis electron diffraction conditions
| DE95-616780 | p 2981 N95-30916
On the interactions between particles and turbulence in a fully-developed channel flow in air p 2875 N95-31707
CHANNEL NOISE
Noisy-network acceptors
| PB95-197976 | p 2951 N95-30813
CHANNELS (DATA TRANSMISSION)
Design and testing of an optimal digital link capable of 14-channel transmission
| AD-A288505 | p 3000 N95-31652
Rate considerations in deep space telemetry p 2765 N95-32223
Computer simulation results for PCM/PM/NRZ receivers in nonideal channels p 2765 N95-32225
CHAOS
Chaos-enhanced transport and aggregation in chaotic flows
| AD-A293892 | p 3020 N95-31545
Nonlinear dynamics and chaotic motions of a singularly perturbed nonlinear viscoelastic beam p 2897 N95-31706
CHARACTER RECOGNITION
Adaptive image enhancement of text images that contain touching or broken characters
| DE95-010173 | p 3023 N95-30620
Optical feature recognition
| AD-A293168 | p 2997 N95-30966
An evaluation of an automatic markup system
| DE95-009885 | p 3026 N95-32149
CHARACTERIZATION
Characterization of an improved Rijke burner as prelude to measurements of aluminum distributed combustion p 2800 N95-31287
Conjugated aromatic polyimines. 2. Synthesis, structure, and properties of new aromatic polyazomethines
| AD-A292955 | p 2819 N95-31461
Growth, characterization and device development in monocrystalline diamond films
| AD-A293106 | p 3015 N95-32018
CHARGE COUPLED DEVICES
The future of space imaging. Report of a community-based study of an advanced camera for the Hubble Space Telescope
| NASA-CR-198818 | p 3028 N95-31364
Folded compact range development and coherent change detection measurement project
| DE95-009082 | p 2853 N95-31628
CHARGE EXCHANGE
Experimental results on charge exchange reactions with delta excitations and polarization studies of delta and N(sup *) (1440) resonances
| DE95-614022 | p 2981 N95-30913
CHARGE TRANSFER
Excited-state complexes of conjugated polymers: Novel photophysical processes and optoelectronic materials
| AD-A292958 | p 2819 N95-31462
Excited-state complexes of conjugated polymers
| AD-A292960 | p 2819 N95-31466
Theory and simulation of electrostatic wave turbulence in the space shuttle-induced plasma environment
| AD-A293467 | p 3005 N95-31534
Electronic structure of Donor-Spacer-Acceptor molecules of potential interest for molecular electronics 4. Geometry and device properties of P3CNQ and Q3CNQ
| AD-A293717 | p 2986 N95-31832
CHARGED PARTICLES
Hamiltonian formulation of two body problem in Wheeler-Feynman electrodynamics
| DE95-620526 | p 3019 N95-31193
The coupling impedance of a toroidal beam pipe with circular cross section
| DE95-010442 | p 2993 N95-31405
Quantum 1/f noise in high technology applications including ultrasmall structures and devices
| AD-A292812 | p 2862 N95-31442
Oxygen charge state abundance in the inner magnetosphere
| AD-A293497 | p 2915 N95-31536
Effects of mosaicity on Parametric X-Radiation production
| AD-A293677 | p 2985 N95-31597
Renormcharges in V-A theories
| DE95-613689 | p 2985 N95-31622
Longitudinal losses of charged particles from an open configuration with arbitrary beta ratio
| DE95-614187 | p 2987 N95-32055
CHARM (PARTICLE PHYSICS)
Hadronic production of S-wave and P-wave charmed beauty mesons via heavy quark fragmentation
| DE95-008737 | p 2977 N95-30465
Do the narrow cryptoexotic baryon resonances exist?
| DE95-619291 | p 2984 N95-31378
Charm photoproduction dynamics
| DE95-009106 | p 2990 N95-32303
CHARTS
Luminance effects on visual acuity and small letter contrast sensitivity
| AD-A293310 | p 2928 N95-31140
An exploratory survey of information requirements for instrument approach charts
| AD-A293882 | p 2749 N95-31520
CHECKOUT
Applying program comprehension techniques to improve software inspections p 2937 N95-31241
CHELATION
A theoretical treatment of the absorption and emission properties of Cu(2) porphyrin
| AD-A293669 | p 2795 N95-31595
CHEMICAL ANALYSIS
Processing and characterization of nanocrystalline molybdenum disilicide (MoSi2) consolidated by hot isostatic pressing (HIP)
| DE95-010243 | p 3012 N95-30756
Shuttle Redesigned Solid Rocket Motor aluminum oxide investigations p 2770 N95-31197
Surface contamination analysis technology team overview p 2781 N95-31797
Standardization of surface contamination analysis systems p 2781 N95-31798
The role of surface chemical analysis in a study to select replacement processes for TCA vapor degreasing p 2782 N95-31809
Waste minimization via preparative scale high performance gel permeation chromatography
| DE95-011797 | p 2798 N95-32360
CHEMICAL BONDS
Direct determination of grain boundary atomic structure in SrTiO3
| DE95-008847 | p 3010 N95-30544
Molecular modeling of PMN ceramics
| AD-A290879 | p 2813 N95-30560
CHEMICAL CLEANING
The 19th Annual Electronics Manufacturing Seminar
| AD-A293067 | p 2863 N95-31674
Aqueous cleaning design presentation p 2778 N95-31781
CO2 (dry ice) cleaning system p 2778 N95-31785
Aqueous cleaning and verification processes for precision cleaning of small parts p 2779 N95-31787
QFD analysis of RSRM aqueous cleaners p 2779 N95-31789
A design of experiments test to define critical spray cleaning parameters for Brulin 815 GD and Jettacin cleaners p 2779 N95-31790
Cleaning without chlorinated solvents p 2780 N95-31792
Evaluation of control parameters for Spray-In-Air (SIA) aqueous cleaning for shuttle RSRM hardware p 2780 N95-31794
Environmentally compatible hand wipe cleaning solvents p 2780 N95-31795
Implementation of environmentally compliant cleaning and insulation bonding for MNASA p 2780 N95-31796
CHEMICAL COMPOSITION
ARTI Refrigerant Database
| DE95-008336 | p 2816 N95-31057
Self-lubricating, TiN-MoS2 composite coatings produced by simultaneous deposition from Ti((CH3))2N4/NH3/MoF6H2S gas mixture
| DE95-010359 | p 2788 N95-31403
CHEMICAL ENGINEERING
Prospector 7: Small fuel cells for portable power workshop
| AD-A292729 | p 2904 N95-30947
Aerospace Environmental Technology Conference: Exectutive summary
| NASA-CP-3297 | p 2771 N95-31350
JPRS report: Science and technology. Central Eurasia
| JPRS-UST-95-025 | p 2771 N95-31360
CHEMICAL EXPLOSIONS
Base hydrolysis and hydrothermal processing of PBX-9404 explosive
| DE95-009437 | p 2836 N95-32048
Base hydrolysis and hydrothermal processing of PBX-9404 explosive
| DE95-009497 | p 2837 N95-32355
CHEMICAL LASERS
The 25th International Symposium on Combustion
| AD-A286825 | p 2794 N95-31268
Advances in high-power chemical lasers
| AD-A289737 | p 2885 N95-31389
CHEMICAL PROPERTIES
Structural, chemical and electronic properties of superconducting thin films and junctions
| AD-A292700 | p 3012 N95-30933
ARTI Refrigerant Database
| DE95-008336 | p 2816 N95-31057
Volumetric and electro analytical techniques for chemical characterization of nuclear grade Ag-In-Cd alloys
| DE95-620664 | p 2807 N95-31407
CHEMICAL PROPULSION
Survey of US burning rate measurement methods for solid propulsion applications p 2800 N95-31291
Manufacturing waste disposal practices of the chemical propulsion industry p 2771 N95-31748
Environmental benefits of chemical propulsion p 2772 N95-31750
CHEMICAL REACTIONS
Preparation of diisopropyl stibines and use thereof
| AD-D017419 | p 2771 N95-30418
Catalytic reactions of synthesis gas. Part 4: Heterogeneous hydroformylation
| PB95-195558 | p 2791 N95-30537
Method for laser-assisted silicon etching using halocarbon ambients
| AD-D017426 | p 2883 N95-30744
Lanthanide(III) catalyzed reactions: Structure an d thermodynamics of intermediate complexes, and implications for reactivity
| PB95-197000 | p 3019 N95-30775
Electrified microheterogeneous catalysis
| AD-D017446 | p 2794 N95-31271
An ab initio study of the reaction HNO + NO yields OH + N2O: Preliminary results p 2801 N95-31308
Studies of reactions pertaining to and development of a reduced mechanism for the double base propellant dark zone p 2801 N95-31312
The physical and chemical processes governing CO2 laser-induced pyrolysis and combustion of the solid propellants RDX, ADN, XM39, and M43 p 2836 N95-31531
Prioritization methodology for chemical replacement p 2773 N95-31757
CHEMICAL REACTORS
No-thermal plasma processing of VOCs and NO(x) at LLNL
| DE95-011445 | p 2911 N95-32281
Optimal heat transfer design of chemical vapor deposition reactors
| DE95-010997 | p 2878 N95-32309
CHEMICAL TESTS
Residual stresses and stress corrosion cracking in pipe fittings
| DE95-009332 | p 2894 N95-31054
CHEMISORPTION
Formation of cavities in Si and their chemisorption of materials
| DE95-009586 | p 2980 N95-30708
CHEMOTHERAPY
Laser induced vitreoretinal scarring. Evaluation of causative factors and a therapeutic approach
| AD-A293742 | p 2928 N95-31570
CHIPS
Overview of IEA biomass combustion activities
| PB95-196374 | p 2902 N95-30519

CHIPS (ELECTRONICS)
Diamond thin film temperature and heat-flux sensors
[NASA-CR-198659] p 3012 N95-30847
Decimation of encoding errors in an optimum SNS 2 micron low-noise CMOS ADC
[AD-A293208] p 2860 N95-30900
Intelligent finite element submodeling of multichip modules for reliability analysis
[AD-A292911] p 2940 N95-31455
CHIRAL DYNAMICS
Reflection and transmission of electromagnetic plane waves from a uniaxial chiro-omega slab
[PB95-206629] p 2853 N95-31649
CHIRALITY
What's wrong with anomalous chiral gauge theory?
[DE95-616285] p 3018 N95-30437
Electroweak interactions on the lattice
[DE95-616287] p 2965 N95-30439
Chiral gauge theory in four dimensions
[DE95-616288] p 3018 N95-30440
Instantaneous chiral quark model for relativistic mesons in a hot and dense medium
[DE95-613782] p 2960 N95-30911
Plane wave reflection from a uniaxial chiral quarter-wave polarization transformer
[PB95-206512] p 2849 N95-31159
Effective chiral-spin Hamiltonian for odd-numbered coupled Heisenberg chains
[DE95-614445] p 2982 N95-31168
Global aspects of the WZNW reduction to Toda theories
[DE95-737230] p 3019 N95-31226
Applications of chiral symmetry
[DE95-009552] p 2988 N95-32079
CHLORIDES
Conjugated aromatic polyimines. 2. Synthesis, structure, and properties of new aromatic polyazomethines
[AD-A292955] p 2819 N95-31461
CHLORINATION
Urethane foam process improvements
[DE95-008957] p 2815 N95-30798
CHLOROETHYLENE
Degradation of TCE using sequential anaerobic biofilm and aerobic immobilized bed reactor
p 2780 N95-31791
CHLOROFLUOROCARBONS
Method for laser-assisted silicon etching using halocarbon ambients
[AD-D017426] p 2883 N95-30744
Compatibility of refrigerants and lubricants with motor materials under retrofit conditions
[DE95-010185] p 2814 N95-30767
CFC-replacement by natural working fluids: R&D and industrial challenges within the refrigeration, air conditioning amd heat pump areas
[PB95-195756] p 2815 N95-30871
Aerospace Environmental Technology Conference: Exectutive summary
[NASA-CP-3297] p 2771 N95-31350
Aerospace Environmental Technology Conference
[NASA-CP-3298] p 2771 N95-31746
The search for CFC alternatives is over?
p 2774 N95-31760
The Oak Ridge Refrigerant Management Program
p 2774 N95-31763
Evaluation of HFC 245ca and HFC 236ea as foam blowing agents p 2775 N95-31766
Aqueous cleaning design presentation
p 2778 N95-31781
Aqueous cleaning and verification processes for precision cleaning of small parts p 2779 N95-31787
Development of a CFC Critical Area Response (CAR) package p 2783 N95-31814
CHLOROPHYLLS
SeaWiFS Technical Report Series. Volume 29: SeaWiFS CZCS-type pigment algorithm
[NASA-TM-104566] p 2922 N95-30857
CHROMATES
Replacement of corrosion protection chromate primers and paints used in cryogenic applications on the Space Shuttle with wire arc sprayed aluminum coatings
p 2776 N95-31774
Treatment of plastic media waste
p 2844 N95-32177
Minutes of the fourth annual workshop on chromate replacements in light metal finishing
[DE95-010937] p 2810 N95-32241
CHROMATOGRAPHY
Determination of halogens in a petroleum product by ion chromatography
[DE95-002056] p 2797 N95-31840
Study of the surface properties of ceramic materials by chromatography
[DE95-011578] p 2823 N95-32298
Laboratory robotics: An automated tool for preparing Ion Chromatography calibration standards
[DE95-009441] p 2798 N95-32318
CHROMIC ACID
Thin-film sulfuric acid anodizing as a replacement for chromic acid anodizing p 2776 N95-31772
CHROMIUM
Metrology of chrome on quartz photomasks using low voltage scanning electron microscopy. Part 1: Physical SEM parameters
[PB95-195780] p 2880 N95-30693
Magnesium battery disposal characteristics
[AD-A293053] p 2863 N95-31607
Industry participation workshop: Chromium electroplating of superconductor strand. Proceedings
[DE95-009629] p 2807 N95-31615
On the possibility of a two-state magnetic structure for nanocrystalline chromium
[DE95-009914] p 3015 N95-32062
Luminescence properties of ZnWO4:Cr(3+) laser crystals
[AD-A293065] p 2887 N95-32152
Femtosecond, Cr(4+):YAG laser
[DE95-004964] p 2887 N95-32155
CHROMIUM ALLOYS
The electrodeposition of low contraction chromium/molybdenum alloys using pulse-reverse plating
[AD-A292727] p 2804 N95-30945
Comparison of cathodic protection currents on 70/30 copper-nickel and alloy 625 piping systems
[AD-A292953] p 2807 N95-31561
CHROMIUM COMPOUNDS
Trivalent chromium solutions for sealing anodized aluminum
[AD-D017349] p 2803 N95-30551
CHROMIUM OXIDES
K-shell ionization under zone axis electron diffraction conditions
[DE95-616780] p 2981 N95-30916
CHROMOPHORES
Nonlinear optical processes in polymer films
[AD-A293384] p 2815 N95-30955
CHROMOSPHERE
Studying the thermal/non-thermal crossover in solar flares
[NASA-CR-189436] p 3031 N95-30785
CIRCADIAN RHYTHMS
AASERT-92 augmentation of research training in chronobiology: Regulation of the mammalian circadian clock by neurotransmitters
[AD-A288243] p 2925 N95-31144
CIRCUIT BOARDS
Visualization of circuit card electromagnetic fields
[AD-A291491] p 2845 N95-30398
BASIS image processor PR5200: Module Common Part
[PB95-212023] p 2933 N95-30501
Ceramic/Metal Composite Circuit-Board-Level Technology for Application Specific Electronic Modules (ASEM's)
[AD-A293183] p 2787 N95-30978
CIRCUIT BREAKERS
Electrical short circuit and current overload tests on aircraft wiring
[AD-A293308] p 2860 N95-30922
CIRCUITS
Voltage surge suppression power circuits
[AD-D017454] p 2860 N95-30726
Coherent integrator
[AD-D017422] p 2847 N95-30743
Noise signal processor
[AD-D017430] p 2974 N95-30747
X-band magnicon amplifier research at the Naval Research Laboratory
[AD-A293208] p 3013 N95-30984
HTS Josephson technology on silicon with application to high speed digital microelectronics
[AD-A288627] p 2861 N95-31147
Multi-dimensional data compression for portable communication
[AD-A292751] p 2850 N95-31426
The 19th Annual Electronics Manufacturing Seminar
[AD-A293067] p 2863 N95-31674
A time stepping coupled finite element-state space modeling environment for synchronous machine performance and design analysis in the ABC frame of reference p 2864 N95-31948
CIRCULAR CYLINDERS
Propagation and scattering of elastic waves in laminated circular cylinders
[ISBN-0-315-85957-1] p 2848 N95-30828
CIRCULAR POLARIZATION
Polarisation resonance in X-ray diffraction
[DE95-616727] p 3012 N95-30789
CIRCULAR TUBES
Electrically heated tube investigation of cooling channel geometry effects
[NASA-TM-106985] p 2768 N95-30856
The coupling impedance of a toroidal beam pipe with circular cross section
[DE95-010442] p 2993 N95-31405
CIRCULATION
Demonstration of split-flow ventilation and recirculation as flow-reduction methods in an Air Force paint spray booth, volume 2
[AD-A286808] p 2762 N95-30926
CIRRUS CLOUDS
Clouds: Their prediction and simulation
[AD-A292864] p 2920 N95-31453
CIVIL AVIATION
Development of advanced approach and departure procedures. Failure scenarios
[PB95-198123] p 2748 N95-30815
Human factors at the FAA Technical Center: Bibliography
[AD-A288638] p 2930 N95-31399
Effects of civil tiltrotor service in the northeast corridor on en route airspace loads
[AD-A293586] p 2747 N95-31687
Integration of air traffic databases: A case study
[AD-A293691] p 2749 N95-32022
Special investigation report: Safety of the air tour industry in the United States
[PB95-917004] p 2748 N95-32185
CLASSICAL MECHANICS
Elliptic deformed classical mechanics in three-dimensional phase space
[DE95-613384] p 3017 N95-30365
Gibbs measures and quasi-periodic solutions for nonlinear Hamiltonian partial differential equations
[PB95-207932] p 2956 N95-30506
CLASSIFICATIONS
Bravais classes, Voronoie cells, Delone symbols
[PB95-207916] p 3009 N95-30503
Arithmetic features of rational conformal field theory
[PB95-207908] p 2966 N95-30591
Exact smooth classification of Hamiltonian vector fields on symplectic 2-manifolds
[DE95-613378] p 2958 N95-30803
Fuel-type classification and parameters prediction by Gas Liquid Chromatography analysis
[AD-A293442] p 2794 N95-31368
Paint removal principles p 2843 N95-32167
CLAYS
LLW solidification in cement: Effect of dilution
[DE95-010108] p 2798 N95-32091
CLEAN FUELS
BioFacts: Fueling a stronger economy. Ethanol from biomass, revision 2
[DE95-010304] p 2836 N95-31639
CLEANERS
The search for CFC alternatives is over?
p 2774 N95-31760
Prepsolv (TM): The optimum alternative to 1,1,1-trichloroethane and methyl ethyl ketone for hand-wipe cleaning of aerospace materials
p 2774 N95-31764
Ultrasonic frequency selection for aqueous fine cleaning p 2779 N95-31788
QFD analysis of RSRM aqueous cleaners
p 2779 N95-31789
A design of experiments test to define critical spray cleaning parameters for Brulin 815 GD and Jettacin cleaners p 2779 N95-31790
Environmentally compatible hand wipe cleaning solvents p 2780 N95-31795
The role of surface chemical analysis in a study to select replacement processes for TCA vapor degreasing
p 2782 N95-31809
The effect of environmental initiatives on NASA specifications and standards activities
p 2783 N95-31812
An overview of NASA testing requirements for alternate cleaning solvents used in liquid and gaseous oxygen environments p 2783 N95-31813
CLEANING
Power oscillator in the tokamaks training
[DE95-616538] p 3003 N95-30473
Major weapon system environmental life-cycle cost estimating for Conservation, Cleanup, Compliance and Pollution Prevention (C3P2) p 2774 N95-31761
Prepsolv (TM): The optimum alternative to 1,1,1-trichloroethane and methyl ethyl ketone for hand-wipe cleaning of aerospace materials
p 2774 N95-31764
Bicarbonate of soda paint stripping process validation and material characterization p 2777 N95-31778
Ultra-high pressure water jetting for coating removal and surface preparation p 2778 N95-31780

Evaluation of pressurized water cleaning systems for hardware refurbishment p 2778 N95-31782
A centrifuge CO2 pellet cleaning system p 2778 N95-31784
A microwave plasma cleaning apparatus p 2779 N95-31786
Contamination detection NDE for cleaning process inspection p 2781 N95-31802
Cleaning verification by air/water impingement p 2782 N95-31805
Investigation of cleanliness verification techniques for rocket engine hardware p 2770 N95-31806
The role of surface chemical analysis in a study to select replacement processes for TCA vapor degreasing p 2782 N95-31809
The effect of environmental initiatives on NASA specifications and standards activities p 2783 N95-31812
An overview of NASA testing requirements for alternate cleaning solvents used in liquid and gaseous oxygen environments p 2783 N95-31813
Environmentally Safe and Effective Processes for Paint Removal
[AGARD-LS-201] p 2843 N95-32165
Dry media blasting with wheat starch p 2843 N95-32169
Water blasting paint removal methods p 2843 N95-32170
Paint removal and surface cleaning using ice particles p 2844 N95-32171
Aquastrip p 2844 N95-32173
Selective chemical stripping p 2844 N95-32175
Facilities used for plastic media blasting p 2763 N95-32176
Operational parameters and material effects p 2845 N95-32179
Standardization work p 2845 N95-32181

CLEANLINESS
Cleaning without chlorinated solvents p 2780 N95-31792
Surface contamination analysis technology team overview p 2781 N95-31797
Cleanliness inspection tool for RSRM bond surfaces p 2781 N95-31799
Study of surfaces using near infrared optical fiber spectrometry p 2781 N95-31801
Contamination detection NDE for cleaning process inspection p 2781 N95-31802
Cleanliness evaluation of rough surfaces with diffuse IR reflectance p 2782 N95-31804
Investigation of cleanliness verification techniques for rocket engine hardware p 2770 N95-31806

CLEAR AIR TURBULENCE
Modeling and parameterization of gravity wave breaking, interactions, and instability processes in the lower and middle atmosphere
[AD-A292740] p 2914 N95-31278

CLIMATE
National Institute for Global Environmental Change
[DE95-008333] p 2907 N95-30358
The land component of the global climate system with adequate spatial resolution
[DE95-009323] p 2908 N95-30686
The GCRC two-dimensional zonally averaged statistical dynamical climate model: Development, model performance, and climate sensitivity p 2910 N95-31851

CLIMATE CHANGE
National Institute for Global Environmental Change
[DE95-008333] p 2907 N95-30358
Global change research: Summaries of research in FY 1994
[DE95-009660] p 2908 N95-30755
Equatorial Africa: A climatological study
[AD-A293956] p 2920 N95-31524
The role of the hydrological cycle and the ocean's thermohaline circulation in climate change: A multicomponent climate model study p 2909 N95-31720
The GCRC two-dimensional zonally averaged statistical dynamical climate model: Development, model performance, and climate sensitivity p 2910 N95-31851
Preliminary design for Arctic atmospheric radiative transfer experiments
[DE95-009580] p 2917 N95-32080

CLIMATE MODELS
National Institute for Global Environmental Change
[DE95-008333] p 2907 N95-30358
The land component of the global climate system with adequate spatial resolution
[DE95-009323] p 2908 N95-30686
History and status of the atmospheric radiation measurement program
[DE95-009951] p 2908 N95-30802
The role of the hydrological cycle and the ocean's thermohaline circulation in climate change: A multicomponent climate model study p 2909 N95-31720
The GCRC two-dimensional zonally averaged statistical dynamical climate model: Development, model performance, and climate sensitivity p 2910 N95-31851
Feasibility of tropospheric water vapor profiling using infrared heterodyne differential absorption lidar
[DE95-009647] p 2917 N95-32142
Use of arm measurements to improve radiative transfer models used in climate models
[NASA-CR-199014] p 2921 N95-32184

CLIMATOLOGY
Global change research: Summaries of research in FY 1994
[DE95-009660] p 2908 N95-30755
Aerosol measurements over the Pacific Ocean in support of the IR aerosol backscatter program
[NASA-CR-198925] p 2918 N95-30782
History and status of the atmospheric radiation measurement program
[DE95-009951] p 2908 N95-30802
JPL Physical Oceanography Distributed Active Archive Center (PO.DAAC) data availability, version 1-94
[NASA-CR-198871] p 2922 N95-30859
Directory of global environmental sciences in Japan p 2899 N95-31413
Evaluation of alternative pavement marking materials
[AD-A292973] p 2763 N95-31468
Equatorial Africa: A climatological study
[AD-A293956] p 2920 N95-31524
Global climatology and variability of potential new production estimated from remote sensing of sea-surface temperature
[NASA-CR-198840] p 2910 N95-31981
Use of arm measurements to improve radiative transfer models used in climate models
[NASA-CR-199014] p 2921 N95-32184

CLINICAL MEDICINE
Services to develop, standardize, and validate Polymerase Chain Reaction (PCR) protocols for the detection of leishmaniasis in clinical samples
[AD-A290155] p 2817 N95-31115

CLOCKS
AASERT-92 augmentation of research training in chronobiology: Regulation of the mammalian circadian clock by neurotransmitters
[AD-A288243] p 2925 N95-31144
A high-speed photonic clock and carrier regenerator p 2856 N95-32236
Fine tuning GPS clock estimation in the MCS p 2968 N95-32322
European plans for new clocks in space p 2968 N95-32324
Anticipated uncertainty budgets of PRARETIME and T2L2 techniques as applied to ExTRAS p 2968 N95-32326
Time aspects of the European Complement to GPS: Continental and transatlantic experimental phases p 2969 N95-32328
Network time synchronization servers at the US Naval Observatory p 2969 N95-32329
Custom Turnkey Time and Frequency Systems: A structured, expandable approach p 2969 N95-32330

CLOUD COVER
History and status of the atmospheric radiation measurement program
[DE95-009951] p 2908 N95-30802

CLOUDS (METEOROLOGY)
Support of environmental requirements for cloud analysis and archive (SERCAA): Database management facility
[AD-A293938] p 2920 N95-31522
Proceedings of the 16th Annual Conference on Atmospheric Transmission Models, volume 1
[AD-A293807] p 2915 N95-31575
Spectral sky background in the IR: Measurements with FTIR
[PB95-222998] p 2922 N95-32315

CLUTTER
Investigation of ground target detection methods in fully polarimetric wide angle synthetic aperture radar images
[AD-A293922] p 2851 N95-31513
Comparisons of target detection clutter using data from the 1993 FOPEN experiments
[AD-A293052] p 2852 N95-31606
Automatic Target Recognition (ATR): Background statistics and the detection of targets in clutter
[AD-A293062] p 2853 N95-31673

CMOS
Decimation of encoding errors in an optimum SNS 2 micron low-noise CMOS ADC
[AD-A293208] p 2860 N95-30900
Analog preprocessing in a SNS 2 micrometers low-noise CMOS folding ADC
[AD-A293356] p 2849 N95-30954

COAL
Multi-color pyrometer temperature measurement system
[DE95-009825] p 2879 N95-30687
Whisker reinforced glass ceramic
[DE95-010542] p 2823 N95-32305

COAL GASIFICATION
Publications of the Fossil Energy Advanced Research and Technology Development Materials Program: April 1, 1993-March 31, 1995
[DE95-009200] p 2903 N95-30745

COAL LIQUEFACTION
Publications of the Fossil Energy Advanced Research and Technology Development Materials Program: April 1, 1993-March 31, 1995
[DE95-009200] p 2903 N95-30745

COASTAL PLAINS
QTSAW (Quick Typhoon Surge and Waves). Wave information studies of US coastlines
[AD-A293172] p 2919 N95-30978

COASTAL ZONE COLOR SCANNER
SeaWiFS Technical Report Series. Volume 29: SeaWiFS CZCS-type pigment algorithm
[NASA-TM-104566] p 2922 N95-30857
SeaWiFS technical report series. Volume 24: SeaWiFS technical report series cumulative index, volumes 1-23
[NASA-TM-104566-VOL-24] p 2924 N95-32122

COASTS
A numerical study of the effect of the Gulf Stream and the Appalachian Mountains on Carolina coastal frontogenesis
[AD-A293765] p 2921 N95-31577

COATING
Electromagnetically activated compliant wavy-wall
[AD-D017340] p 2866 N95-30412
The impact of microbiologically influenced corrosion on protective polymer coatings
[AD-A288896] p 2816 N95-30997
A comparison of coating alternatives for US Coast Guard aircraft
[AD-A293270] p 2817 N95-31124
Phthalonitrile prepolymer as high temperature sizing material for composite fibers
[AD-D017447] p 2818 N95-31272
Ultra-high pressure water jetting for coating removal and surface preparation p 2778 N95-31780

COATINGS
Process for producing hydrophilic polymer membranes
[AD-D017355] p 2811 N95-30415
The effect of adding roughness and thickness to a transonic axial compressor rotor
[NASA-TM-106958] p 2867 N95-30524
State-of-the-art low-cost solar reflector materials
[DE95-000260] p 2902 N95-30526
Ion-Assisted Pulsed Laser Deposition of amorphous tetrahedral-coordinated carbon films
[DE95-010861] p 2865 N95-31394
Waterjet processes for coating removal p 2777 N95-31779
A microwave plasma cleaning apparatus p 2779 N95-31786

COBALT
Catalytic reactions of synthesis gas. Part 4: Heterogeneous hydroformylation
[PB95-195558] p 2791 N95-30537
Reaction synthesis of intermetallics
[DE95-009029] p 2803 N95-30575
Influence of layer order and composition on the magnetic anisotropy of ultra-thin Co sandwiches
[DE95-010608] p 2810 N95-32265

COBALT 60
Behaviour of polymers in radioactive environments: Effects of dose speed
[DE95-821008] p 2818 N95-31221

CODERS
On the use of electronic tilt sensors as angle encoders for synchrotron applications
[DE95-005836] p 2880 N95-30941

CODING
Feature-based modeling of product families
[PB95-207148] p 2933 N95-30568
Decimation of encoding errors in an optimum SNS 2 micron low-noise CMOS ADC
[AD-A293208] p 2860 N95-30900
Towards increased productivity of algorithm implementation
[AD-A292862] p 2940 N95-31452
Multiple turbo codes for deep-space communications p 2855 N95-32227
Enhanced decoding for the Galileo low-gain antenna mission: Viterbi redecoding with four decoding stages p 2855 N95-32230

COEFFICIENT OF FRICTION
Golden ten equations of motion
[PB95-197927] p 2967 N95-30809
COEFFICIENTS
Specific rate coefficients from vibrational overtone activation of 1-methylcyclopropene
[AD-A288755] p 2793 N95-31014
COGENERATION
Overview of IEA biomass combustion activities
[PB95-196374] p 2902 N95-30519
COGNITION
Neurodynamical systems for cognition and target identification
[AD-A293111] p 2951 N95-30884
Using computerized neuropsychological testing to assess aviator skills
[AD-A293227] p 2928 N95-30905
Training metacognitive skills for problem solving
[AD-A290310] p 2959 N95-31002
Analysis of symbolic parameter models
[AD-A292916] p 2940 N95-31459
A cognitive architecture for solving ill-defined problems
[AD-A293582] p 2929 N95-31686
COGNITIVE PSYCHOLOGY
Impact of task properties, data display format and cognitive characteristics on recall performance: A cumulative research investigation p 3025 N95-31334
Optimizing the long-term retention of skills: Structural and analytic approaches to skill maintenance
[AD-A293798] p 2929 N95-31585
A cognitive architecture for solving ill-defined problems
[AD-A293582] p 2929 N95-31686
COHERENT RADAR
Multisensor data fusion for integrated maritime surveillance p 2842 N95-32135
Point reflector model for the simulation of radar target glint and Doppler phenomena
[PB95-222960] p 2857 N95-32314
COHERENT RADIATION
Stable high-power harmonic gyro-amplifiers
[AD-A293697] p 2881 N95-31828
COLD FLOW TESTS
Combustion response to acoustic perturbation in liquid rocket engines p 2770 N95-31972
COLD PLASMAS
Selected problems of the identification of weak double layers in plasma on a background of different aperiodic non-collision structures
[IFTR-4/1995] p 3006 N95-31737
Studies of highly charged ions with EBIT and Super-EBIT
[DE95-010251] p 2987 N95-32038
COLD PRESSING
Processing and characterization of nanocrystalline molybdenum disilicide (MoSi2) consolidated by hot isostatic pressing (HIP)
[DE95-010243] p 3012 N95-30756
COLD WEATHER TESTS
Impact behavior of the active zone within a frozen soil profile
[AD-A292909] p 2915 N95-31386
COLD WORKING
Effect of cold work on creep properties of Hastelloy XR
[DE95-722056] p 2806 N95-31154
COLLIMATORS
Measurement of the effect of collimator generated wakefields on the beams in the SLC
[DE95-012101] p 2993 N95-31256
COLLINEARITY
Wave propagation in a fluid-loaded homogeneous, transversely isotropic, elastic cylinder of arbitrary thickness
[AD-A292728] p 2869 N95-30948
COLLISIONLESS PLASMAS
Bernstein-Green-Kruskal wave
[DE95-614201] p 3007 N95-32056
A collisionless shock wave experiment
[DE95-009489] p 3008 N95-32351
COLLISIONS
Scaling of cross sections in ion-atom collisions
[DE95-008938] p 2978 N95-30573
B(sub c)-meson production in hadron-hadron collisions
[DE95-620537] p 2983 N95-31217
Monte Carlo code for evaluating the Boundary Layer Illumination and Radiation Balance model (BLIRB)
[AD-A293963] p 2915 N95-31560
COLLOIDS
Investigation of Fe3O4 colloid behaviour in a magnetic field by polarized neutron transmission
[DE95-614351] p 2961 N95-30915
On convective effects in sedimentation of concentrated suspensions with high effective gravity
[TRITA-NA-9316] p 2794 N95-31356
COLOR
Method and apparatus for a high resolution, flat panel cathodoluminescent display device
[AD-D017434] p 2862 N95-31342
Evaluation of alternative pavement marking materials
[AD-A292973] p 2763 N95-31468
Degradation of blue AlGaN/InGaN/GaN LEDs subjected to high current pulses
[DE95-008824] p 2863 N95-31611
Skew chromaticity in large accelerators
[DE95-011564] p 2994 N95-32243
COLORIMETRY
Hydrogen sulfide analyzer with protective barrier
[AD-D017412] p 2793 N95-31009
COLUMNS
Simplex method for semi-definite programming: Optimization and systems theory
[PB95-212122] p 2934 N95-30792
COMBAT
SOSIE: A pragmatic approach to the simulation of Broad Air Defense applied to the theater level p 2840 N95-32127
Electronic combat and lethal defense suppression p 2842 N95-32140
COMBINATORIAL ANALYSIS
Size of Fulton's essential set
[PB95-211645] p 2955 N95-30477
Combination of Fulton's essential set
[PB95-211637] p 2956 N95-30500
Bravais classes, Voronoie cells, Delone symbols
[PB95-207916] p 3009 N95-30503
Periodically Specified Problems: An Exponential Complexity Gap Between Exact and Approximate Solutions
[DE95-009435] p 2934 N95-30603
The complexity and approximability of finding maximum feasible subsystems of linear relations
[TRITA-NA-9313] p 2961 N95-31648
Using case-based reasoning as a Reinforcement Learning framework for optimization with changing criteria
[AD-A293602] p 2953 N95-31654
COMBUSTIBLE FLOW
An investigation of the side-dump dual in-line ramjet combustor p 2756 N95-31199
A pulsed liquid fuel ramjet p 2756 N95-31201
Spectral element method for numerical simulation of unsteady laminar diffusion flames p 2794 N95-31333
COMBUSTION
Overview of IEA biomass combustion activities
[PB95-196374] p 2902 N95-30519
Simulation of chemical kinetics in turbulent natural gas combustion. Volume 2: Experimental studies of nitric oxide production in gas flames
[PB95-196721] p 2791 N95-30541
NASA Lewis Research Center's preheated combustor and materials test facility
[NASA-TM-106676] p 2762 N95-30592
Multi-color pyrometer temperature measurement system
[DE95-009825] p 2879 N95-30687
Achieving improved cycle efficiency via pressure gain combustors
[DE95-008945] p 2792 N95-30762
The 49th International Symposium on Molecular Spectroscopy
[AD-A292708] p 2793 N95-30936
Pressure transducer performance and measurement trade-offs in a transient, high temperature, combustion environment p 2799 N95-31209
The 25th International Symposium on Combustion
[AD-A286825] p 2794 N95-31268
The 31st JANNAF Combustion Subcommittee Meeting, volume 2
[CPIA-PUBL-620] p 2829 N95-31282
Whisker reinforced glass ceramic
[DE95-010542] p 2823 N95-32305
COMBUSTION CHAMBERS
NASA Lewis Research Center's preheated combustor and materials test facility
[NASA-TM-106676] p 2762 N95-30592
Jet mixing and emission characteristics of transverse jets in annular and cylindrical confined crossflow
[NASA-TM-106976] p 2755 N95-30698
Achieving improved cycle efficiency via pressure gain combustors
[DE95-008945] p 2792 N95-30762
Jet mixing in a reacting cylindrical crossflow
[NASA-TM-106975] p 2755 N95-30853
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 1
[NASA-CR-195435-VOL-1] p 2768 N95-31169
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 2
[NASA-CR-195435-VOL-2] p 2769 N95-31170
Experimental investigation of turbulent particle dispersion in swirling flows
[DLR-FB-94-20] p 2873 N95-31355
Experiment of rocket-ram combined combustor
[NAL-TR-1249] p 2769 N95-31739
SSME Main Combustion Chamber (MCC) hot oil dewaxing p 2777 N95-31777
COMBUSTION CHEMISTRY
Overview of IEA biomass combustion activities
[PB95-196374] p 2902 N95-30519
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures p 2799 N95-30990
The 25th International Symposium on Combustion
[AD-A286825] p 2794 N95-31268
An ignition model for modern double base propellants p 2800 N95-31292
The oxidation of carbon monoxide by nitrous oxide p 2801 N95-31309
Detailed chemical kinetic modeling of premixed hydrocarbon flames supported by NO2 p 2801 N95-31311
Studies of reactions pertaining to and development of a reduced mechanism for the double base propellant dark zone p 2801 N95-31312
RDX laser-assisted flame structure p 2801 N95-31314
COMBUSTION CONTROL
Active control of combustion instability using injection techniques p 2800 N95-31288
COMBUSTION EFFICIENCY
Overview of IEA biomass combustion activities
[PB95-196374] p 2902 N95-30519
COMBUSTION PHYSICS
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures p 2799 N95-31198
Experiments in a 120-mm ram accelerator including flow visualization p 2799 N95-31202
Investigation of ram accelerator performance capabilities p 2799 N95-31204
Pulse forming network in the ETC combustion characterization of plasma augmented solid propellants p 2799 N95-31205
Workshop report: Measurement techniques in highly transient, spectrally rich combustion environments p 2799 N95-31208
Development of a new instrument for rocket engine combustion diagnostics p 2799 N95-31211
The 25th International Symposium on Combustion
[AD-A286825] p 2794 N95-31268
The 31st JANNAF Combustion Subcommittee Meeting, volume 2
[CPIA-PUBL-620] p 2829 N95-31282
Assessment of dynamic burning behavior for JA-2 propellant rods p 2800 N95-31299
Flame structure studies of neat and NH3 doped H2/N2O flames employing molecular beam mass spectrometry and modeling p 2801 N95-31313
Primary atomization of liquid jets issuing from rocket engine coaxial injectors p 2769 N95-31716
COMBUSTION PRODUCTS
The 21st JANNAF Exhaust Plume Technology Meeting, volume 1
[CPIA-PUBL-621-VOL-1] p 2870 N95-30986
The Al and A(lc)l2O3 droplet cloud in solid rocket motors p 2770 N95-30988
Shuttle redesigned solid rocket motor aluminum oxide investigations p 2770 N95-30989
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures p 2799 N95-30990
Vacuum plume backflow and rarefaction p 2871 N95-30995
Shuttle Redesigned Solid Rocket Motor aluminum oxide investigations p 2770 N95-31197
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures p 2799 N95-31198
A study of the gas-phase processes of RDX combustion using a triple quadrupole mass-spectrometer p 2801 N95-31315
Low acid producing solid propellants p 2773 N95-31754
Improved hybrid rocket fuel p 2773 N95-31755
COMBUSTION STABILITY
Design and testing of an oxidizer-rich preburner p 2799 N95-31212
The 31st JANNAF Combustion Subcommittee Meeting, volume 2
[CPIA-PUBL-620] p 2829 N95-31282
Stability prediction with rotational flow effects p 2799 N95-31283
Theory of unsteady combustion of solids: Investigation of Quasi-steady assumption p 2800 N95-31285

Active control of combustion instability using injection techniques p 2800 N95-31288
Effects of gas-phase thermal expansion on the stability of deflagration through a porous energetic material
[DE95-004382] p 2797 N95-31824
Combustion response to acoustic perturbation in liquid rocket engines p 2770 N95-31972

COMBUSTION SYNTHESIS
Reaction synthesis of intermetallics
[DE95-009029] p 2803 N95-30575

COMBUSTION TEMPERATURE
NASA Lewis Research Center's preheated combustor and materials test facility
[NASA-TM-106676] p 2762 N95-30592
Characterization of an improved Rijke burner as prelude to measurements of aluminum distributed combustion p 2800 N95-31287

COMMAND AND CONTROL
Guidance and Control for Future Air-Defence Systems
[AGARD-CP-555] p 2839 N95-32123
Study of Extended Air Defence Post 2000 p 2839 N95-32124
Multi-sensor data fusion in command and control and the merit of artificial intelligence p 2842 N95-32137

COMMAND GUIDANCE
Guidance and Control for Future Air-Defence Systems
[AGARD-CP-555] p 2839 N95-32123

COMMERCIAL AIRCRAFT
Electrical short circuit and current overload tests on aircraft wiring
[AD-A293308] p 2860 N95-30922
Integration of air traffic databases: A case study
[AD-A293691] p 2749 N95-32022
Standardization work p 2845 N95-32181
Special investigation report: Safety of the air tour industry in the United States
[PB95-917004] p 2748 N95-32185

COMMONWEALTH OF INDEPENDENT STATES
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-025] p 2771 N95-31360

COMMUNICATION
Multiple turbo codes for deep-space communications p 2855 N95-32227

COMMUNICATION CABLES
Fiber optic reference frequency distribution to remote beam waveguide antennas p 2972 N95-32346

COMMUNICATION EQUIPMENT
The quad-service satellite transmitting and receiving system for medical supply support: A battlefield interoperability and communications system prototype, volume 2. User documentation
[AD-A292835] p 2851 N95-31448
The quad-service satellite transmitting and receiving system for medical supply support: A battlefield interoperability and communications system prototype, volume 1
[AD-A292836] p 2851 N95-31449

COMMUNICATION NETWORKS
Contribution of groupware to corporate communication: Towards the horizontal organization
[PB95-197661] p 3022 N95-30453
Dynamic routation in distributed environments
[PB95-197968] p 2847 N95-30812
System considerations for efficient communication and storage of MSTI image data
[NASA-CR-198869] p 3024 N95-30858
Wide area networking R&D
[AD-A291057] p 2947 N95-30868
Effective bandwidth techniques in bufferless and buffered ATM multiplexers
[PB95-207072] p 2862 N95-31185
Support of environmental requirements for cloud analysis and archive (SERCAA): Database management facility
[AD-A293938] p 2920 N95-31522
Dynamic maintenance scheduling for a stochastic telecommunication network: Determination of performance factors
[AD-A293829] p 2852 N95-31555
Scalable ATM encryption
[DE95-009868] p 2948 N95-32065
The 1994 international transatlantic two-way satellite time and frequency transfer experiment: Preliminary results p 2858 N95-32320
Network time synchronization servers at the US Naval Observatory p 2969 N95-32329

COMMUNICATION SATELLITES
High accuracy time transfer synchronization p 2968 N95-32321
Monte Carlo simulations of precise timekeeping in the Milstar communication satellite system p 2970 N95-32336
Automated delay measurement system for an Earth station for Two-Way Satellite Time and Frequency Transfer p 2971 N95-32337

COMPACTING
Low temperature fabrication from nano-size ceramic powders
[DE95-010995] p 2818 N95-31153
Gelcasting of sintered reaction-bonded silicon nitride for improved mechanical properties
[DE95-010282] p 2822 N95-32085

COMPANION STARS
Chromospherically active stars. 6: Giants with compact hot companions and the barium star scenario
[NASA-TM-110641] p 3028 N95-30466
Cepheid temperature and the Blazhko effect
[NASA-CR-189433] p 3030 N95-31819

COMPARATORS
Analog preprocessing in a SNS 2 micrometers low-noise CMOS folding ADC
[AD-A293356] p 2849 N95-30954

COMPARISON
Psychological pilot selection in the US Air Force, the Luftwaffe, and the German Aerospace Research Establishment
[AD-A293779] p 2928 N95-31376

COMPARTMENTS
Facilities used for plastic media blasting p 2763 N95-32176

COMPATIBILITY
Compatibility of refrigerants and lubricants with motor materials under retrofit conditions
[DE95-010185] p 2814 N95-30767
Compatibility of Single Hydraulic Fluid with military specification fluids, seals and metallurgy
[AD-A292954] p 2821 N95-31663
Evaluation of Environmentally Acceptable hydraulic fluids
[AD-A293037] p 2821 N95-31666

COMPENSATORS
Computerized design of controllers using data models
[NASA-CR-198921] p 2950 N95-30655
Robust position and force tracking control for a robot in contract p 2888 N95-30830

COMPETITION
Specific rate coefficients from vibrational overtone activation of 1-methylcyclopropene
[AD-A288755] p 2793 N95-31014

COMPILERS
The Linux operating system: An introduction
[NASA-CR-198178] p 2932 N95-31988

COMPLEX COMPOUNDS
Aqueous TiO2 photocatalysis of metal-EDTA complexes
[DE95-011058] p 2793 N95-31113

COMPLEX SYSTEMS
Nonlinear dynamical systems: Elements of a complex system analysis
[PB95-211652] p 2950 N95-30478
ASSIST user manual
[NASA-TM-4592] p 2948 N95-32250

COMPLEX VARIABLES
Complex mean value interpolation
[PB95-211629] p 2956 N95-30601

COMPLEXITY
Simulation with complex measures
[DE95-616333] p 2955 N95-30445
Does software design complexity affect maintenance effort? p 2939 N95-31251

COMPONENT RELIABILITY
Measures of reliability and RCM
[PB95-192985] p 2891 N95-30510
Performance evaluation of high-temperature superconducting current leads for micro-SMES systems
[DE95-005843] p 2861 N95-30943
Failure analysis of a repairable system: The case study of a cam-driven reciprocating pump
[AD-A293144] p 2889 N95-30949
Dynamic maintenance scheduling for a stochastic telecommunication network: Determination of performance factors
[AD-A293829] p 2852 N95-31555

COMPOSITE MATERIALS
Theoretical absorption spectroscopy of high-temperature metal vapors: Model and experiment compared
[AD-A290872] p 2791 N95-30409
Large area smart piezoelectric and pyroelectric sensors
[AD-A291487] p 2859 N95-30561
Thermoviscoelastic behaviour of solids
[PB95-196226] p 2784 N95-30694
Mechanisms of enhanced ionic conduction at interfaces in ceramics
[DE95-009125] p 2814 N95-30730
A theory for predicting and minimizing the effects of matrix degradation on the thermomechanical properties of general laminates p 2785 N95-30768
The effect of interface properties on nickel base alloy composites
[NASA-CR-198363] p 2785 N95-30787
A viscoelastic anisotropic wave propagation model for composite cure evaluation p 2786 N95-30839
Innovative processing of composites for ultra-high temperature applications, book 4
[AD-A290892] p 2786 N95-30867
Room temperature fracture and high temperature creep deformation properties of alumina reinforced with 20 vol% particulate niobium
[DE95-010234] p 2815 N95-30897
Metal nanotubule membranes with electrochemically switchable ion-transport selectivity
[AD-A292712] p 2793 N95-30938
Opto-electronic components from non-stoichiometric 3-5 materials
[AD-A293206] p 3013 N95-30985
Intermodulation Interference (IMI) testing of composite materials
[AD-A288621] p 2787 N95-31146
Elastic and inelastic micromechanical analysis of functionally graded materials and laminated structures using transformation fields p 2787 N95-31347
Materials for adaptive structural acoustic control, volume 1
[AD-A293444] p 2788 N95-31369
Materials for adaptive structural acoustic control, volume 2
[AD-A293445] p 2788 N95-31370
Materials for adaptive structural acoustic control, volume 4
[AD-A293447] p 2788 N95-31372
Self-lubricating, TiN-MoS2 composite coatings produced by simultaneous deposition from Ti((CH3))2N4/NH3/MoF6H2S gas mixture
[DE95-010359] p 2788 N95-31403
Development of stitched/RTM primary structures for transport aircraft
[NASA-CR-191441] p 2789 N95-31421
Metallurgical and Materials Transactions
[AD-A293617] p 2807 N95-31464
An inverse method to measure the axial modulus of composite materials under tension
[AD-A293042] p 2789 N95-31668

COMPOSITE PROPELLANTS
Ageing control no. 3 of propellants for rocket motors RB 27 and RB 28
[PB95-210357] p 2825 N95-30626
A study of gas-phase processes during the deflagration of RDX composite propellants using a triple quadrupole mass spectrometer p 2801 N95-31304
Thermoplastic elastomers as a binder in composite propellants
[PB95-211553] p 2837 N95-32249

COMPOSITE STRUCTURES
Low vibration polymeric composite engine
[AD-D017332] p 2887 N95-30386
Design of fibre reinforced composite panels for aerospace applications
[PB95-197851] p 2784 N95-30460
Composite structure forming a wear surface
[AD-D017462] p 2785 N95-30749
Response of mechanically fastened composite joints under multiple bypass loads p 2785 N95-30824
Effects of hydrostatic pressure on the mechanical behavior of composite materials
[AD-A293162] p 2787 N95-30963
Intermodulation Interference (IMI) testing of composite materials
[AD-A288621] p 2787 N95-31146
Materials for adaptive structural acoustic control, volume 2
[AD-A293445] p 2788 N95-31370
Materials for adaptive structural acoustic control, volume 4
[AD-A293447] p 2788 N95-31372
Development of stitched/RTM primary structures for transport aircraft
[NASA-CR-191441] p 2789 N95-31421
Performance improvement of composite wings through aeroelastic tailoring and modern control
[AD-A293689] p 2752 N95-31602
Mapping hidden aircraft defects with dual-band infrared computed tomography
[DE95-011531] p 2741 N95-32164
A probabilistic design method applied to smart composite structures
[NASA-TM-106715] p 2899 N95-32206

COMPRESSIBILITY
Some aspects on the modelling of non-Newtonian fluid flow
[TRITA-NA-9317] p 2873 N95-31415
Simulation of fracture in compression using a field-theory model
[DE95-009874] p 2898 N95-32102

COMPRESSIBILITY EFFECTS
Numerical simulation of shock/turbulent boundary layer interaction
[NASA-CR-198846] p 2872 N95-31341
Compressible turbulence measurement in low-angle injection into a supersonic flow
[AD-A293836] p 2874 N95-31516
COMPRESSIBLE BOUNDARY LAYER
Numerical simulation of shock/turbulent boundary layer interaction
[NASA-CR-198846] p 2872 N95-31341
COMPRESSIBLE FLOW
Navier-Stokes flow field analysis of compressible flow in a high pressure safety relief valve
[NASA-TM-110640] p 2868 N95-30862
Numerical simulation of shock/turbulent boundary layer interaction
[NASA-CR-198846] p 2872 N95-31341
Compressible turbulence measurement in low-angle injection into a supersonic flow
[AD-A293836] p 2874 N95-31516
LES, DNS and RANS for the analysis of high-speed turbulent reacting flows
[NASA-CR-199075] p 2878 N95-32219
COMPRESSION LOADS
Failure mechanisms in composite plates subjected to in-plane compressive loading p 2790 N95-32108
COMPRESSION TESTS
Characterization and prediction of post-impact fatigue damage in stitched composites p 2785 N95-30826
High strain rate properties and constitutive modeling of glass
[DE95-008434] p 2816 N95-31058
Hot compression testing of tungsten
[AD-A293683] p 2807 N95-31599
COMPRESSIVE STRENGTH
LLW solidification in cement: Effect of dilution
[DE95-010108] p 2798 N95-32091
COMPRESSOR BLADES
The effect of adding roughness and thickness to a transonic axial compressor rotor
[NASA-TM-106958] p 2867 N95-30524
Investigating the use of smart acoustically active surfaces for flow separation control in turbomachinery
[AD-A292819] p 2874 N95-31443
COMPRESSOR EFFICIENCY
The effect of adding roughness and thickness to a transonic axial compressor rotor
[NASA-TM-106958] p 2867 N95-30524
COMPRESSOR ROTORS
The effect of adding roughness and thickness to a transonic axial compressor rotor
[NASA-TM-106958] p 2867 N95-30524
Experimental and computational investigation of the tip clearance flow in a transonic axial compressor rotor
[NASA-TM-106711] p 2876 N95-31738
COMPRESSORS
Composite structure forming a wear surface
[AD-D017462] p 2785 N95-30749
Reducing process noise in superconducting helium liquid level probes
[DE95-008956] p 2814 N95-30765
Linear Motor Free Piston Compressor
[AD-A293452] p 2889 N95-31374
COMPTON EFFECT
On the Compton twist-3 asymmetries
[DE95-613627] p 3017 N95-30371
COMPUTATION
Statistical interface for chaotic signal in noise
[AD-A290271] p 2848 N95-30932
MCNP analyses of criticality calculation results
[DE95-010886] p 2960 N95-31253
Multiresolution signal and system analysis and the analysis and control of discrete-event dynamic systems
[AD-A292775] p 2851 N95-31430
COMPUTATIONAL ELECTROMAGNETICS
Scattering and radiation from cylindrically conformal antennas p 2847 N95-30669
A two-dimensional finite difference algorithm on the KSR1
[AD-A293576] p 2941 N95-31594
A boundary integral equation approach to three dimensional electromagnetic wave scattering problems p 2853 N95-31839
COMPUTATIONAL FLUID DYNAMICS
Velocity boundary conditions for vorticity formulations of the incompressible Navier-Stokes equations
[DE95-008715] p 2866 N95-30464
Multidimensional discretization of conservation laws for unstructured polyhedral grids
[DE95-008796] p 2955 N95-30470
Three-D mesh optimization methods for unstructured polyhedra
[DE95-008808] p 2955 N95-30471
A numerical study of the starting process in a hypersonic shock tunnel p 2762 N95-30493
Simulation of chemical kinetics in turbulent natural gas combustion. Volume 2: Experimental studies of nitric oxide production in gas flames
[PB95-196721] p 2791 N95-30541
Development of a linearized unsteady Euler analysis for turbomachinery blade rows
[NASA-CR-4677] p 2742 N95-30611
A numerical model for dynamic wave rotor analysis
[NASA-TM-106997] p 2754 N95-30617
Validation of the NPARC code for nozzle afterbody flows at transonic speeds
[NASA-TM-106971] p 2742 N95-30704
Numerical simulation of flow in a whirling annular seal and comparison with experiments
[NASA-TM-106961] p 2867 N95-30710
Computation of high-altitude hypersonic flow-field radiation p 2743 N95-30843
Parametrics on 2D Navier-Stokes analysis of a Mach 2.68 bifurcated rectangular mixed-compression inlet
[NASA-TM-107003] p 2755 N95-30861
Three-dimensional (3D) large fluid flow computations for US Army applications on KSR-1, CM-200, CM-5, and Cray C-90
[AD-A293125] p 2869 N95-30889
Acceleration potential models PREDICHAT/PREDICDYN applied for calculation of axisymmetric dynamic inflow cases
[PB95-207015] p 2869 N95-30957
QMR methods in computational fluid dynamics
[DE95-010293] p 2872 N95-31132
Atomization simulations using an Eulerian-VOF-Lagrangian method p 2828 N95-31210
The 2nd Japan-US Symposium on Finite Element Methods in Large Scale Computational Fluid Dynamics
[AD-A292337] p 2960 N95-31264
Role of free-surface boundary conditions and nonlinearities in wave/boundary-layer and wake interaction p 2872 N95-31317
Spectral element method for numerical simulation of unsteady laminar diffusion flames p 2794 N95-31333
Numerical simulation of shock/turbulent boundary layer interaction
[NASA-CR-198846] p 2872 N95-31341
Shear-free turbulent boundary layers p 2873 N95-31349
A study of numerical solutions of conservation laws
[TRITA-NA-9315] p 2960 N95-31361
Advanced k-epsilon modeling of heat transfer
[NASA-CR-4679] p 2874 N95-31423
Application of multigrid computational fluid dynamics (CFD) methods to rotor analysis
[AD-A293012] p 2874 N95-31475
Unsteady flow simulations about moving boundary configurations using dynamic domain decomposition techniques p 2877 N95-31837
Analysis and modeling of subgrid scalar mixing using numerical data
[NASA-CR-198169] p 2877 N95-31978
MPI implementation of PHOENICS: A general purpose computational fluid dynamics code
[DE95-009810] p 2877 N95-32033
The HYLIFE-2 inertial fusion energy power plant concept and implications for IFE
[DE95-010561] p 2994 N95-32074
Numerical solution of the full potential equation using a chimera grid approach
[NASA-TM-110360] p 2744 N95-32188
An efficient numerical procedure for thermohydrodynamic analysis of cavitating bearings
[NASA-CR-195476] p 2878 N95-32210
Film temperatures in the presence of cavitation
[NASA-CR-195481] p 2878 N95-32216
LES, DNS and RANS for the analysis of high-speed turbulent reacting flows
[NASA-CR-199075] p 2878 N95-32219
COMPUTATIONAL GEOMETRY
Equivalence of two non-commutative geometry approaches
[DE95-613469] p 2957 N95-30642
Geometric modeling for computer aided design
[NASA-CR-198828] p 2943 N95-31982
COMPUTATIONAL GRIDS
Fourier analysis of a robust multigrid method for convection-diffusion equations
[PB95-197091] p 2958 N95-30835
Parametrics on 2D Navier-Stokes analysis of a Mach 2.68 bifurcated rectangular mixed-compression inlet
[NASA-TM-107003] p 2755 N95-30861
Self-adaptive multilevel methods for fluid flow problems p 2873 N95-31412
Evaluation of discretization procedures for transition elements in adaptive mesh refinement

Abstracts of Annual Physics Conference of Iran
| DE95-611717 | p 2768 N95-30881
Proceedings of the antenna applications symposium, volume 1
| AD-A293258 | p 2848 N95-30895
The 49th International Symposium on Molecular Spectroscopy
| AD-A292708 | p 2793 N95-30936
The 21st JANNAF Exhaust Plume Technology Meeting, volume 1
| CPIA-PUBL-621-VOL-1 | p 2870 N95-30986
Workshop on diffusion approximation in communication and stochastic systems theory
| AD-A292872 | p 2952 N95-31055
Flight Vehicle Integration Panel Workshop on Pilot Induced Oscillations
| AGARD-AR-335 | p 2745 N95-31061
CALORSTOCK 1994: Thermal energy storage. Better economy, environment, technology
| DE95-772422 | p 2904 N95-31138
Nordic symposium on analysis of electromagnetic transient phenomena using EMTP, part 3
| PB95-206504 | p 2849 N95-31158
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 2
| PB95-206579 | p 2849 N95-31160
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 4
| PB95-206587 | p 2849 N95-31181
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 1
| PB95-206595 | p 2850 N95-31182
The 31st JANNAF Combustion Subcommittee Meeting, volume 1 p 2825 N95-31194
Proceedings of the 19th Annual Software Engineering Workshop
| NASA-CR-189411 | p 2936 N95-31234
The 25th International Symposium on Combustion
| AD-A286825 | p 2794 N95-31268
The 31st JANNAF Combustion Subcommittee Meeting, volume 2
| CPIA-PUBL-620 | p 2829 N95-31282
Aerospace Environmental Technology Conference: Exectutive summary
| NASA-CP-3297 | p 2771 N95-31350
Proceedings of the antenna applications symposium. volume 2
| AD-A293259 | p 2850 N95-31387
Proceedings of the high energy density matter (HEDM) contractor's conference
| AD-A292988 | p 2836 N95-31470
Proceedings of the 16th Annual Conference on Atmospheric Transmission Models, volume 1
| AD-A293807 | p 2915 N95-31575
Proceedings of the 16th Annual Conference on Atmospheric Transmission Models, volume 2
| AD-A293806 | p 2916 N95-31604
Industry participation workshop: Chromium electroplating of superconductor strand. Proceedings
| DE95-009629 | p 2807 N95-31615
Annual meeting of the Advanced Light Source Users' Association
| DE95-009373 | p 3000 N95-31635
The 19th Annual Electronics Manufacturing Seminar
| AD-A293067 | p 2863 N95-31674
Aerospace Environmental Technology Conference
| NASA-CP-3298 | p 2771 N95-31746
Proceedings of the 1st Annual Software Engineering Techniques Workshop on Software Reengineering
| AD-A293724 | p 2943 N95-31834
Active control technology: Applications and lessons learned
| AGARD-CP-560 | p 2757 N95-31989
Guidance and Control for Future Air-Defence Systems
| AGARD-CP-555 | p 2839 N95-32123
Environmentally Safe and Effective Processes for Paint Removal
| AGARD-LS-201 | p 2843 N95-32165
The 26th Annual Precise Time and Time Interval (PTTI) Applications and Planning Meeting
| NASA-CP-3302 | p 2967 N95-32319
CALORSTOCK'94. Thermal energy storage. Better economy, environment, technology
| DE95-772421 | p 2907 N95-32368

CONFIGURATION INTERACTION
Inner- and outer-shell excitation in lithium isoelectronic sequence
| DE95-614107 | p 2981 N95-31003
A theoretical treatment of the absorption and emission properties of Cu(2) porphyrin
| AD-A293669 | p 2795 N95-31595

CONFORMAL MAPPING
Existence of solutions in plane quasistationary stokes flow driven by surface tension
| PB95-197935 | p 2868 N95-30810

CONGENITAL ANOMALIES
Arterial gas bubbles after decompression in pigs with Patent Foramen Ovale
| PB95-195319 | p 2925 N95-30515

CONGRESSIONAL REPORTS
National Laboratories: Are their R and D activities related to commercial product development? Report to Congressional Requesters
| GAO/PEMD-95-2 | p 3027 N95-31345
Annual report to the Chairman and Ranking Minority Members, House and Senate Committees on Appropriations. Status of open recommendations: Improving operations of federal departments and agencies
| GAO/OP-95-1 | p 3022 N95-31986

Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. Tactical aircraft: F-15 replacement is premature as currently planned
| GAO/NSIAD-94-118 | p 2964 N95-31987
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. Unmanned aerial vehicles: Performance of short-range system still in question
| GAO/NSIAD-94-65 | p 2752 N95-32196
Report to Congressional Committees. Military airlift: C-17 settlement is not a good deal
| GAO/NSIAD-94-141 | p 2741 N95-32198
Report to the Chairman, Subcommittee on Transportation and Related Agencies, Committee on Appropriations, House of Representatives. Air traffic control: Status of FAA's plans to close and contract out low-activity towers
| GAO/RCED-94-265 | p 2750 N95-32199

CONICAL BODIES
The 25th International Symposium on Combustion
| AD-A286825 | p 2794 N95-31268
Fractional delay waveguide modeling of acoustic tubes
| PB95-206637 | p 2975 N95-31650

CONICS
Perpendicular electron heating by absorption of auroral kilometric radiation
| NASA-198815 | p 2914 N95-30848

CONIFERS
Unification of LARCH and Z-based object models to support algebraically-based design refinement: The LARCH perspective
| AD-A289235 | p 2935 N95-30999

CONJUGATE GRADIENT METHOD
Use of element-by-element preconditioners to solve large scale partially separable optimization problems
| PB95-195772 | p 2957 N95-30692

CONJUGATES
Complex conjugate pairs in stationary Sturmians
| DE95-616279 | p 2976 N95-30429

CONJUGATION
Experimental investigation of optical nonlinearities in conjugated polymers
| AD-A288353 | p 2884 N95-31145
Nonlinear organized materials for optical devices
| AD-A292809 | p 2999 N95-31441
Photorefractive nonlinear optics
| AD-A292913 | p 2999 N95-31458
Conjugated aromatic polyimines. 2. Synthesis, structure, and properties of new aromatic polyazomethines
| AD-A292955 | p 2819 N95-31461
Excited-state complexes of conjugated polymers: Novel photophysical processes and optoelectronic materials
| AD-A292958 | p 2819 N95-31462
Excited-state complexes of conjugated polymers
| AD-A292960 | p 2819 N95-31466
Effects of molecular structure on the electroactive and optical properties of conjugated rigid-rod polybenzobisazoles
| AD-A292968 | p 2819 N95-31467

CONNECTORS
Smart material joint band
| AD-D017374 | p 2888 N95-30716

CONSERVATION
CP violating effects in e(+) e(-) yields ZH and their optimization
| DE95-616302 | p 2976 N95-30441
Major weapon system environmental life-cycle cost estimating for Conservation, Cleanup, Compliance and Pollution Prevention (C3P2) p 2774 N95-31761

CONSERVATION EQUATIONS
Some aspects on the modelling of non-Newtonian fluid flow
| TRITA-NA-9317 | p 2873 N95-31415

CONSERVATION LAWS
Multidimensional discretization of conservation laws for unstructured polyhedral grids
| DE95-008796 | p 2955 N95-30470
A study of numerical solutions of conservation laws
| TRITA-NA-9315 | p 2960 N95-31361
Computational methods for control and optimal design of aerospace systems
| AD-A292861 | p 2751 N95-31451

CONSISTENCY
Improving data consistency in mobile computing using Isolation-Only Transactions
| AD-A293110 | p 2948 N95-32021

CONSONANTS (SPEECH)
The contextual variance of devoiced fricatives in polish
| IFTR-7/1995 | p 2854 N95-32192

CONSTANTS
Electron transfer kinetics of self-assembled ferrocene C(12) alkanethiol monolayers on gold electrodes from 125K to 175K
| AD-A292754 | p 2984 N95-31427

CONSTELLATIONS
Multiple Target Tracking based on constellation matching and Kalman filter p 2842 N95-32136

CONSTITUTIVE EQUATIONS
Wave propagation in a fluid-loaded homogeneous, transversely isotropic, elastic cylinder of arbitrary thickness
| AD-A292728 | p 2869 N95-30946
Some aspects on the modelling of non-Newtonian fluid flow
| TRITA-NA-9317 | p 2873 N95-31415

CONSTRAINTS
Pseudo-time methods for constrained optimization problems governed by PDE
| NASA-CR-195081 | p 2959 N95-31120
Control of mechanical systems with rolling contacts: Applications to robotics p 2889 N95-31332

CONSTRUCTION
Low vibration polymeric composite engine
| AD-D017332 | p 2887 N95-30386
Influence of adhesives and bonding techniques on the properties of glued timber-steelplate joints
| PB95-211470 | p 2813 N95-30599
The HYLIFE-2 inertial fusion energy power plant concept and implications for IFE
| DE95-010561 | p 2994 N95-32074

CONSTRUCTION MATERIALS
Mechanical alloying processing with application to structural materials
| AD-A290788 | p 2802 N95-30404
Observations of star fracture and longitudinal splitting in BIS 812 EMA and Q1N submarine construction steels
| DSTO-RR-0014 | p 2806 N95-31344

CONTAMINANTS
Achieving improved cycle efficiency via pressure gain combustors
| DE95-008945 | p 2792 N95-30762
The 49th International Symposium on Molecular Spectroscopy
| AD-A292708 | p 2793 N95-30936
Evaluation of calibration parameters and performance of the video imaging technique of assessing exposure (VITAE system)
| AD-A289023 | p 2927 N95-30998
Analytical instrumentation for environmental research
| AD-A292832 | p 2908 N95-31447
Magnesium battery disposal characteristics
| AD-A293053 | p 2863 N95-31607
CFD assessment of the pollutant environment from RD-170 propulsion system testing p 2772 N95-31749
Verification of surface preparation for adhesive bonding p 2782 N95-31807
Spectroscopic ellipsometry as a sensitive monitor of materials contamination p 2782 N95-31808
Bioremediation of wheat starch media waste p 2845 N95-32178
Calculation of a residual mean meridional circulation for a zonal-mean tracer transport model
| DE95-009474 | p 2911 N95-32350

CONTAMINATION
Vacuum plume backflow and rarefaction p 2871 N95-30995
Spatial time-series: Pollution pattern recognition under irregular interventions
| AD-A293830 | p 2909 N95-31556
Preventing cracking of anodized coatings
| NASA-TM-104622 | p 2839 N95-31690
Surface contamination analysis technology team overview p 2781 N95-31797
Standardization of surface contamination analysis systems p 2781 N95-31798
Cleanliness inspection tool for RSRM bond surfaces p 2781 N95-31799
The design and development of a third generation OSEE instrument p 2781 N95-31800
Study of surfaces using near infrared optical fiber spectrometry p 2781 N95-31801
Contamination detection NDE for cleaning process inspection p 2781 N95-31802
Surface inspection using FTIR spectroscopy p 2782 N95-31803
Cleanliness evaluation of rough surfaces with diffuse IR reflectance p 2782 N95-31804
Spectroscopic ellipsometry as a sensitive monitor of materials contamination p 2782 N95-31808
The role of surface chemical analysis in a study to select replacement processes for TCA vapor degreasing p 2782 N95-31809
Monte Carlo tests of the ELIPGRID-PC algorithm
| DE95-010811 | p 2943 N95-32030
Treatment of plastic media waste p 2844 N95-32177

CONTINGENCY
Patient/aircraft forecasting for the strategic aeromedical evacuation lift-bed process
| AD-A293902 | p 2747 N95-31512
Estimation in second order dependency model for multivariate binary data
| DE95-010326 | p 2944 N95-32087

CONTINUITY (MATHEMATICS)
A unified interpretation of singular and near-singular integrals in the boundary element method
| ISBN-0-315-86297-1 | p 2962 N95-31947

CONTINUITY EQUATION
Particle filtration: An analysis using the method of volume averaging
| DE95-009467 | p 2875 N95-31592

CONTINUOUS RADIATION
Development of a novel wind lidar, phase 1
| AD-A292703 | p 2849 N95-30935
Diode-pumped, continuously tunable, 2.3 micron CW laser
| AD-D017448 | p 2885 N95-31273
Advances in high-power chemical lasers
| AD-A289737 | p 2885 N95-31389

CONTINUOUS SPECTRA
Singular eigenfunctions for shearing fluids I
| DE95-008952 | p 2868 N95-30763

CONTINUOUS WAVE LASERS
Spotsize measurements of a focused CW Nd: YAG laser
| DE95-007746 | p 2884 N95-31139
The 25th International Symposium on Combustion
| AD-A286825 | p 2794 N95-31268
Diode-pumped, continuously tunable, 2.3 micron CW laser
| AD-D017448 | p 2885 N95-31273
A compact and efficient violet laser source
| AD-A292782 | p 2885 N95-31434
Sandia National Lab's precision laser tracking systems
| DE95-009837 | p 2886 N95-32143

CONTINUUM FLOW
Numerical simulation of time dependent viscoelastic fluid flow
| TRITA-NA-9311 | p 2873 N95-31414

CONTINUUM MECHANICS
Numerical simulation of time dependent viscoelastic fluid flow
| TRITA-NA-9311 | p 2873 N95-31414
Some aspects on the modelling of non-Newtonian fluid flow
| TRITA-NA-9317 | p 2873 N95-31415

CONTINUUM MODELING
Dynamics of an inhomogeneous anisotropic antiferromagnetic spin chain
| DE95-614449 | p 3013 N95-30959
Modeling of fiber-reinforced composites incorporating distinct interface properties p 2787 N95-31110
A computational procedure for multibody systems including flexible beam dynamics
| NASA-CR-199035 | p 2897 N95-31730

CONTINUUMS
Beyond the variational principle in quantum field theory
| DE95-616286 | p 3018 N95-30438
Singular eigenfunctions for shearing fluids I
| DE95-008952 | p 2868 N95-30763

CONTRACT MANAGEMENT
Quality assurance tendering and awarding contracts
| PB95-197760 | p 2891 N95-31362
Report to Congressional Committees. Military airlift: C-17 settlement is not a good deal
| GAO/NSIAD-94-141 | p 2741 N95-32198

CONTRACT NEGOTIATION
Quality assurance tendering and awarding contracts
| PB95-197760 | p 2891 N95-31362
Report to Congressional Committees. Military airlift: C-17 settlement is not a good deal
| GAO/NSIAD-94-141 | p 2741 N95-32198

CONTRACTION
The electrodeposition of low contraction chromium/molybdenum alloys using pulse-reverse plating
| AD-A292727 | p 2804 N95-30945

CONTRACTORS
Proceedings of the high energy density matter (HEDM) contractor's conference
| AD-A292988 | p 2836 N95-31470

CONTRAILS
Cloud condensation nuclei measurements in shiptrails
| AD-A293302 | p 2919 N95-30951

CONTRAST
Luminance effects on visual acuity and small letter contrast sensitivity
| AD-A293310 | p 2928 N95-31140

CONTROL STABILITY
Stability analysis of linear control systems with uncertain parameters p 2954 N95-31949
An investigation of pilot induced oscillation phenomena in digital-flight control systems p 2760 N95-32011

CONTROL SURFACES
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept [NASA-TM-108489] p 2742 N95-30712
The FCS-structural coupling problem and its solution p 2759 N95-32005
Structural aspects of active control technology p 2760 N95-32006

CONTROL SYSTEMS DESIGN
Computerized design of controllers using data models [NASA-CR-198921] p 2950 N95-30655
System identification for robust process control. Nominal models and error bounds [PB95-197026] p 2839 N95-30777
Generalized controlled invariance for nonlinear systems [PB95-197901] p 2950 N95-30807
Control of flexible spacecraft structures using H-infinity wave absorbing control [AD-A293141] p 2766 N95-30919
Flight Vehicle Integration Panel Workshop on Pilot Induced Oscillations [AGARD-AR-335] p 2745 N95-31061
SCARLET: DLR rate saturation flight experiment p 2746 N95-31068
Handling qualities analysis on rate limiting elements in flight control systems p 2746 N95-31071
Calspan experience of PIO and the effects of rate limiting p 2746 N95-31072
High-tech controls for energy and environment [DE95-011702] p 2952 N95-31255
Representation of feedback operators for hyperbolic systems [NASA-CR-198171] p 2960 N95-31319
The role of handling qualities specifications in flight control system design p 2757 N95-31990
The importance of flying qualities design specifications for active control systems p 2757 N95-31992
Lavi flight control system: Design requirements, development and flight test results p 2758 N95-31994
Robust control: A structured approach to solve aircraft flight control problems p 2758 N95-31995
Dynamic inversion: An evolving methodology for flight control design p 2758 N95-31996
Evaluation of the techniques of fuzzy control for the piloting an aircraft p 2758 N95-31997
The control system design methodology of the STOL and maneuver technology demonstrator p 2758 N95-31998
Control law design using H-infinity and mu-synthesis short-period controller for a tail-airplane p 2758 N95-31999
Model following control for tailoring handling qualities: ACT experience with ATTHeS p 2758 N95-32000
X-29 flight control system: Lessons learned p 2759 N95-32001
The FCS-structural coupling problem and its solution p 2759 N95-32005
Structural aspects of active control technology p 2760 N95-32006
Flight test results of the F-16 aircraft modified with axisymmetric vectoring exhaust nozzle p 2752 N95-32007
Digital autopilot design for combat aircraft in ALENIA p 2760 N95-32009
Experimental Aircraft Programme (EAP): Flight control system design and test p 2760 N95-32010
An investigation of pilot induced oscillation phenomena in digital-flight control systems p 2760 N95-32011
Advanced flight control technology achievements at Boeing Helicopters p 2761 N95-32014
Practical experiences in control systems design using the NCR Bell 205 Airborne Simulator p 2761 N95-32015
Integration issues in modular mission management aid development p 2841 N95-32133
Using a Red Team to devise countermeasures p 2842 N95-32141

CONTROL THEORY
Fixed modes in quasi-static state feedback decoupling [PB95-206850] p 2950 N95-30564
System identification for robust process control. Nominal models and error bounds [PB95-197026] p 2839 N95-30777
H(sub 2) optimal controllers with observer based architecture for continuous-time systems: Separation principle [PB95-197067] p 2951 N95-30833
SCARLET: DLR rate saturation flight experiment p 2746 N95-31068
A two-timescale approach to nonlinear Model Predictive Control [DE95-000943] p 2952 N95-31161
Advances in robust control [AD-A291126] p 2952 N95-31266
Global stabilization of nonlinear gyroscopic systems p 2881 N95-31836
Flight demonstration of an advanced pitch control law in the VAAC Harrier aircraft p 2760 N95-32012
Advanced flight control technology achievements at Boeing Helicopters p 2761 N95-32014
Practical experiences in control systems design using the NCR Bell 205 Airborne Simulator p 2761 N95-32015
Methodologies for steering clocks p 2971 N95-32341

CONTROLLABILITY
Generalized controlled invariance for nonlinear systems [PB95-197901] p 2950 N95-30807
The process for addressing the challenges of aircraft pilot coupling p 2745 N95-31063
Observations on PIO p 2745 N95-31064
The relation of handling qualities ratings to aircraft safety p 2746 N95-31067
SAAB experience with PIO p 2746 N95-31069
Aeroelastic pilot-in-the-loop oscillations p 2746 N95-31070
Analysis of heads-up display quickening versus handling qualities [AD-A293797] p 2753 N95-31584
The role of handling qualities specifications in flight control system design p 2757 N95-31990
Experiences with ADS-33 helicopter specification testing and contributions to refinement research p 2757 N95-31993
Control law design using H-infinity and mu-synthesis short-period controller for a tail-airplane p 2758 N95-31999
Model following control for tailoring handling qualities: ACT experience with ATTHeS p 2758 N95-32000

CONTROLLERS
Computerized design of controllers using data models [NASA-CR-198921] p 2950 N95-30655
Speed control of an elastic two-mass system: Optimization and systems theory [PB95-212106] p 2888 N95-30701
Precision manipulation with a dextrous robot hand p 2888 N95-30829
H(sub 2) optimal controllers with observer based architecture for continuous-time systems: Separation principle [PB95-197067] p 2951 N95-30833
Mobile electric power [AD-A292721] p 2860 N95-30940
Robust fixed-structure control [AD-A292883] p 2952 N95-30961
Robust control: A structured approach to solve aircraft flight control problems p 2758 N95-31995
Evaluation of the techniques of fuzzy control for the piloting an aircraft p 2758 N95-31997
Control law design using H-infinity and mu-synthesis short-period controller for a tail-airplane p 2758 N95-31999

CONVECTION
Direct and inverse problems in random media [AD-A293033] p 2850 N95-31280
On convective effects in sedimentation of concentrated suspensions with high effective gravity [TRITA-NA-9316] p 2794 N95-31356
Numerical modeling of Bridgman growth of PbSnTe in a magnetic field [NASA-TM-106996] p 2837 N95-31359
Fundamental topics in heat transfer through deformable two-phase media p 2874 N95-31532
Numerical simulation of the Langevin equation for skewed turbulence [DE95-009477] p 2877 N95-32049

CONVECTION-DIFFUSION EQUATION
Fourier analysis of a robust multigrid method for convection-diffusion equations [PB95-197091] p 2958 N95-30835
Numerical stability investigations of processes for solving linear initial value problems [PB95-207023] p 2959 N95-31183

CONVECTIVE FLOW
A turbulence model for steady and unsteady boundary layers in strong pressure gradients p 2868 N95-30840

CONVERGENCE
Convergence properties of an augmented lagrangian algorithm for optimization with a combination of general equality and linear constraints [PB95-208039] p 2956 N95-30570
Multigrid convergence acceleration for the 2D Euler equations applied to high-lift systems [PB95-198081] p 2743 N95-30814
Theory & numerical methods for problems in shape reconstruction and large deviations [AD-A292874] p 2952 N95-31279
Convergent spray process for environmentally friendly coatings p 2777 N95-31776
Newton Raphson method, scaling at fractal boundaries and mathematica [DE95-613374] p 2962 N95-32095
The individual element test revisited [NASA-CR-199039] p 2945 N95-32215

CONVEXITY
Complex mean value interpolation [PB95-211629] p 2956 N95-30601
Co-groups on sequentially complete, locally convex, topological vector spaces in particular on strict LF-spaces [PB95-206918] p 2966 N95-30681

CONVOLUTION INTEGRALS
A finite element formulation for the time domain vibration analysis of an elastic-viscoelastic structure p 2895 N95-31318

COOLANTS
Experimental investigation of the effectiveness of flow-through modules for electronics cooling [AD-A293284] p 2861 N95-30950

COOLING
On the quasihydrostatic flows of radiatively cooling self-gravitating gas clouds [DE95-009116] p 3029 N95-30729
Electrically heated tube investigation of cooling channel geometry effects [NASA-TM-106985] p 2768 N95-30856
Construction and performance measurement of a portable thermoacoustic refrigerator demonstration apparatus [AD-A293265] p 2839 N95-31122

COOPERATION
A system simulation development project: Leveraging resources through partnerships [NASA-TM-106962] p 2753 N95-30514

COORDINATES
Computer-aided inspection process definition: Development of an expert planning and programming system for coordinate metrology [DE95-010411] p 2940 N95-31404
Derivation of two-dimensional (2-D) conduction equation in generalized coordinates with constant and anisotropic physical properties [AD-A293896] p 3020 N95-31511
Method of normal coordinates in the formulation of a system with dissipation: The harmonic oscillator [DE95-613372] p 3020 N95-32094
Harmonic coordinates in the problem on static gravitational and massless scalar fields with a point source [DE95-623632] p 3020 N95-32295

COPOLYMERS
Thermoplastic elastomers as a binder in composite propellants [PB95-211553] p 2837 N95-32249
Responsive copolymers for enhanced petroleum recovery [DE95-011857] p 2823 N95-32361

COPPER
Anodically enhanced diffusion in Cu/Ag thin film couples [DE95-009198] p 2814 N95-30738
Glass matrix doped with activated luminescent nanocrystalline particles [AD-D017416] p 2816 N95-31010
Experimental investigation of optical nonlinearities in conjugated polymers [AD-A288353] p 2884 N95-31145
Solderability enhancement of copper through chemical etching [DE95-010514] p 2806 N95-31406
The effect of gravity on the deposition of thin films: The physical vapor transport of copper phthalocyanine [AD-A292997] p 2838 N95-31472

COPPER ALLOYS
Metallurgical and Materials Transactions [AD-A293617] p 2807 N95-31464
Comparison of cathodic protection currents on 70/30 copper-nickel and alloy 625 piping systems [AD-A292953] p 2807 N95-31561

COPPER OXIDES
A valence-fluctuation mechanism with highly anisotropic S-wave pairing [DE95-009419] p 3010 N95-30571
Superconducting and normal-state properties of novel materials [DE95-012368] p 3017 N95-32366

COPPER SELENIDES
Investigation of polycrystalline thin film CuInSe2 solar cells based on ZnSe windows [DE95-004068] p 2904 N95-31164

CORIOLIS EFFECT
Dynamical analysis of the coriolis effect which causes space disorientation
[NAL-TR-1258] p 2928 N95-31714
COROTATION
HST-FOC observations of a remarkable UV auroral event on Jupiter p 3030 N95-30806
CORPUSCULAR RADIATION
Particle filtration: An analysis using the method of volume averaging
[DE95-009467] p 2875 N95-31592
CORRECTION
The conical singularity and quantum corrections to entropy of black hole
[DE95-613367] p 3029 N95-30606
Functions for processing synthetic aperture radar imagery
[AD-A293895] p 2851 N95-31510
SeaWiFS technical report series. Volume 28: SeaWiFS algorithms, part 1
[NASA-TM-104566-VOL-28] p 2924 N95-31850
Radiative corrections to the three quantum annihilation cross section in high energy electron-positron collisions
[DE95-623675] p 2995 N95-32296
CORRELATION
Multi-particle correlations in quaternionic quantum systems
[DE95-616271] p 3018 N95-30424
SeaWiFS Technical Report Series. Volume 29: SeaWiFS CZCS-type pigment algorithm
[NASA-TM-104566] p 2922 N95-30857
Patterns in the sky: Natural visualization of aircraft flow fields
[NASA-SP-514] p 2741 N95-31000
Statistical properties of chaotic scattering with one open channel
[DE95-613370] p 3020 N95-32150
CORROSION
Off-potential measurement systems for impressed current cathodic protection
[AD-A290876] p 2812 N95-30558
The impact of microbiologically influenced corrosion on protective polymer coatings
[AD-A288896] p 2816 N95-30997
Space Shuttle Orbiter corrosion history, 1981-1993: A review and analysis of issues involving structures and subsystems
[NASA-TM-104810] p 2810 N95-32183
CORROSION PREVENTION
Off-potential measurement systems for impressed current cathodic protection
[AD-A290876] p 2812 N95-30558
Computational modeling of coating integrity effects on impressed current cathodic protection system
[AD-A293256] p 2815 N95-30894
Assessment of pollution prevention and control technology for plating operations p 2776 N95-31771
Replacement of corrosion protection chromate primers and paints used in cryogenic applications on the Space Shuttle with wire arc sprayed aluminum coatings p 2776 N95-31774
Space Shuttle Orbiter corrosion history, 1981-1993: A review and analysis of issues involving structures and subsystems
[NASA-TM-104810] p 2810 N95-32183
Minutes of the fourth annual workshop on chromate replacements in light metal finishing
[DE95-010937] p 2810 N95-32241
CORROSION RESISTANCE
Trivalent chromium solutions for sealing anodized aluminum
[AD-D017349] p 2803 N95-30551
Evaluation of Environmentally Acceptable hydraulic fluids
[AD-A293037] p 2821 N95-31666
Thin-film sulfuric acid anodizing as a replacement for chromic acid anodizing p 2776 N95-31772
Cadmium plating replacements p 2776 N95-31773
Environmentally regulated aerospace coatings p 2777 N95-31775
Robotic weld overlay coatings for erosion control
[DE95-009643] p 2809 N95-32098
CORROSION TESTS
NaK pool-boiler solar receiver durability bench test. Volume 2: Metallurgical analysis
[DE95-010338] p 2905 N95-31640
COSMIC GASES
Molecular gas in starburst galaxies: Line intensities and physical conditions
[PB95-208021] p 3029 N95-30569
COSMIC RAYS
Solar-geophysical data number 606, February 1995. Part 1: (Prompt reports). Data for December 1994, January 1995, and late data
[PB95-200853] p 3031 N95-30816
COSMOLOGY
Large scale periodicity of the universe and baryogenesis
[DE95-613461] p 3028 N95-30366
COSMONAUTS
STS-71 post flight presentation
[NASA-TM-110658] p 2764 N95-30852
Mir 18 post flight presentation
[NASA-TM-110657] p 2766 N95-30854
COST ANALYSIS
An assessment of the cost of microwave sintering ceramic tiles for armor applications. Phase 2 report
[DE95-010000] p 2816 N95-31103
Neural network false alarm filter, volume 1
[AD-A293097] p 2953 N95-31562
Modeling F/A-18 flight hour program costs using regression analysis
[AD-A293771] p 2752 N95-31579
Study of Extended Air Defence Post 2000 p 2839 N95-32124
COST EFFECTIVENESS
Evaluating the cost effectiveness of environmental projects: Case studies in aerospace and defense p 2774 N95-31762
COST ESTIMATES
Lessons learned in deploying software estimation technology and tools p 2938 N95-31246
Major weapon system environmental life-cycle cost estimating for Conservation, Cleanup, Compliance and Pollution Prevention (C3P2) p 2774 N95-31761
COST REDUCTION
Photovoltaic Czochralski silicon manufacturing technology improvements
[DE95-004066] p 2904 N95-31162
Large-area, triple-junction a-Si alloy production scale-up
[DE95-004067] p 2904 N95-31163
Photovoltaic Energy Program overview: Fiscal year 1994
[DE94-011871] p 2905 N95-31661
Report to the Chairman, Subcommittee on Transportation and Related Agencies, Committee on Appropriations, House of Representatives. Air traffic control: Status of FAA's plans to close and contract out low-activity towers
[GAO/RCED-94-265] p 2750 N95-32199
COSTS
Failure analysis of a repairable system: The case study of a cam-driven reciprocating pump
[AD-A293144] p 2889 N95-30949
A NASPAC-Based analysis of the delay and cost effects of the western-pacific region preliminary resectorization effort of 1993
[AD-A288696] p 2748 N95-31013
Integration of air traffic databases: A case study
[AD-A293691] p 2749 N95-32022
COULOMB POTENTIAL
Coulomb correction calculations of pp Bremsstrahlung
[DE95-616349] p 2982 N95-31176
COUNTING
Reply-frequency interference/jamming detector
[AD-D017428] p 2847 N95-30746
COUPLED MODES
Normal mode tunes for linear coupled motion in six dimensional phase space
[DE95-011565] p 2994 N95-32244
Review of longitudinal perturbation formalism
[DE95-010894] p 2990 N95-32278
COUPLERS
Demodulators for optical fiber interferometers with (3 x 3) outputs
[AD-D017415] p 2995 N95-30402
Diode-pumped, continuously tunable, 2.3 micron CW laser
[AD-D017448] p 2885 N95-31273
Improved linear dynamic range in externally modulated fiber-optic links p 3001 N95-31950
COUPLES
Passive, multi-channel fiber optic rotary joint assembly
[AD-D017353] p 2996 N95-30529
Anodically enhanced diffusion in Cu/Ag thin film couples
[DE95-009198] p 2814 N95-30738
COUPLING
Locking device for fluid coupling
[AD-D017354] p 2888 N95-30414
A theory for predicting and minimizing the effects of matrix degradation on the thermomechanical properties of general laminates p 2785 N95-30768
Physics goals of a mu(+) mu(-) collider
[DE95-009546] p 2994 N95-32059
Search for anomalous ZZ(sub gamma) and Z(sub (gamma, gamma)) couplings with D0
[DE95-010457] p 2989 N95-32162
Normal mode tunes for linear coupled motion in six dimensional phase space
[DE95-011565] p 2994 N95-32244
COUPLING CIRCUITS
Pre-amplifier with multi-stage feedback
[AD-D017371] p 2859 N95-30659
COUPLING COEFFICIENTS
Shear flow effects on ion thermal transport in tokamaks
[DE95-009115] p 3005 N95-30601
COUPLINGS
Coupling stud assembly
[AD-D017335] p 2887 N95-30387
CRACK BRIDGING
Fatigue crack growth behavior of a titanium matrix composite under thermomechanical loading p 2784 N95-30491
CRACK GEOMETRY
Cracking during nanoindentation and its use in the measurement of fracture toughness
[DE95-008839] p 2818 N95-31175
CRACK INITIATION
Failure analysis for polycarbonate transparencies
[AD-A292992] p 2820 N95-31471
CRACK PROPAGATION
Fatigue crack growth behavior of a titanium matrix composite under thermomechanical loading p 2784 N95-30491
Room temperature fracture and high temperature creep deformation properties of alumina reinforced with 20 vol% particulate niobium
[DE95-010234] p 2815 N95-30897
A simple and accurate technique for monitoring crack growth behavior using a wave form analyzer
[AD-A293161] p 2894 N95-31007
Thermal-mechanical fatigue crack growth in aircraft engine materials
[ISBN-0-315-86543-1] p 2894 N95-31098
Cracking during nanoindentation and its use in the measurement of fracture toughness
[DE95-008839] p 2818 N95-31175
Failure analysis for polycarbonate transparencies
[AD-A292992] p 2820 N95-31471
Mode I large strain viscoelastic crack behavior in nitrile rubber sheets
[AD-A289984] p 2820 N95-31617
A numerical analysis of crack growth in microcracking ceramic and ceramic composites
[DE95-010132] p 2897 N95-32024
Simulation of fracture in compression using a field-theory model
[DE95-009874] p 2898 N95-32102
CRACK TIPS
Numerical evaluation of three-dimensional crack-tip integrals for layered anisotropic solids p 2898 N95-32191
CRACKING (FRACTURING)
Ion implantation and thermal stress resistance of ceramics
[DE95-615349] p 2812 N95-30451
Fourier series methods for cracks in polygonal plates and shells of revolution p 2893 N95-30825
The 10th International Conference on the Strength of Materials
[AD-A292335] p 2894 N95-31263
Preparation of S-70A-9 Black Hawk helicopter for flight tests to investigate cause of cracking of inner fuselage panel
[AD-A293891] p 2752 N95-31544
Mode I large strain viscoelastic crack behavior in nitrile rubber sheets
[AD-A289984] p 2820 N95-31617
Numerical evaluation of three-dimensional crack-tip integrals for layered anisotropic solids p 2898 N95-32191
CRACKS
Fourier series methods for cracks in polygonal plates and shells of revolution p 2893 N95-30825
A simple and accurate technique for monitoring crack growth behavior using a wave form analyzer
[AD-A293161] p 2894 N95-31007
Preventing cracking of anodized coatings
[NASA-TM-104622] p 2839 N95-31690
Simulation of fracture in compression using a field-theory model
[DE95-009874] p 2898 N95-32102
CRANES
Fatigue behaviour of multiplanar tubular joints
[PB95-207874] p 2893 N95-30586
CRASHES
Releaseable unconstrained inflatable body protector
[AD-D017350] p 2930 N95-30552

CREEP PROPERTIES
Room temperature fracture and high temperature creep deformation properties of alumina reinforced with 20 vol% particulate niobium
[DE95-010234] p 2815 N95-30897
Effect of cyclic loading on the creep performance of silicon nitride
[DE95-010289] p 2894 N95-31131
Effect of cold work on creep properties of Hastelloy XR
[DE95-722056] p 2806 N95-31154
The influence of microstructure on creep deformation in near-gamma TiAl alloys p 2808 N95-31975
Creep of a fine-grained, fully-lamellar, two-phase TiAl alloy at 760 C
[DE95-009531] p 2810 N95-32272

CREEP RUPTURE STRENGTH
Effect of cold work on creep properties of Hastelloy XR
[DE95-722056] p 2806 N95-31154

CREEP STRENGTH
Creep of a fine-grained, fully-lamellar, two-phase TiAl alloy at 760 C
[DE95-009531] p 2810 N95-32272

CREEP TESTS
Interfacial studies of coated fiber reinforced glass-ceramic matrix composites
[AD-A290780] p 2783 N95-30433
Effect of cyclic loading on the creep performance of silicon nitride
[DE95-010289] p 2894 N95-31131
Effect of cold work on creep properties of Hastelloy XR
[DE95-722056] p 2806 N95-31154
Creep of a fine-grained, fully-lamellar, two-phase TiAl alloy at 760 C
[DE95-009531] p 2810 N95-32272

CRITERIA
Quantum 1/f noise in high technology applications including ultrasmall structures and devices
[AD-A292812] p 2862 N95-31442

CRITICAL TEMPERATURE
Multisite antiferromagnetic Ising spin model: Phase transition through doubling bifurcation
[DE95-614311] p 3011 N95-30722

CROSS FLOW
Simulation of chemical kinetics in turbulent natural gas combustion. Volume 2: Experimental studies of nitric oxide production in gas flames
[PB95-196721] p 2791 N95-30541
Effects of initial conditions on a single jet in crossflow
[NASA-TM-107002] p 2754 N95-30589
Jet mixing and emission characteristics of transverse jets in annular and cylindrical confined crossflow
[NASA-TM-106976] p 2755 N95-30698
Jet mixing in a reacting cylindrical crossflow
[NASA-TM-106975] p 2755 N95-30853

CROSS SECTIONS
Pion-pair production by two photons
[DE95-737162] p 2983 N95-31223

CROSSLINKING
Process for producing hydrophilic polymer membranes
[AD-D017355] p 2811 N95-30415
Biosensors based on cross-linking of biotinylated Glucose Oxidase by avidin
[AD-A290439] p 2925 N95-30452
An interpenetrating polymer network for second-order nonlinear optics
[AD-A293019] p 2821 N95-31699
Influence of storage on the maximal pull-out force of three different optical fibers from three epoxides
[PB95-211777] p 2822 N95-32253

CRUDE OIL
Responsive copolymers for enhanced petroleum recovery
[DE95-011857] p 2823 N95-32361

CRYOGENIC EQUIPMENT
Supplemental multilayer insulation research facility
[NASA-TM-106991] p 2768 N95-30595
Reducing process noise in superconducting helium liquid level probes
[DE95-008956] p 2814 N95-30765
Replacement of corrosion protection chromate primers and paints used in cryogenic applications on the Space Shuttle with wire arc sprayed aluminum coatings p 2776 N95-31774

CRYOGENIC FLUIDS
Optimization of high-temperature superconductor current leads
[DE95-005836] p 2861 N95-30942
Performance evaluation of high-temperature superconducting current leads for micro-SMES systems
[DE95-005843] p 2861 N95-30943

CRYOGENIC ROCKET PROPELLANTS
Combustion of LOX with H2(sub g) under subcritical and supercritical conditions p 2797 N95-31717

CRYOGENIC TEMPERATURE
A water blown urethane insulation for use in cryogenic environments p 2775 N95-31765

CRYOGENIC WIND TUNNELS
Computer model to simulate testing at the National Transonic Facility
[NASA-TM-4664] p 2763 N95-32217

CRYOGENICS
Supplemental multilayer insulation research facility
[NASA-TM-106991] p 2768 N95-30595
The 26th Annual Precise Time and Time Interval (PTTI) Applications and Planning Meeting
[NASA-CP-3302] p 2967 N95-32319

CRYOSTATS
Free electron laser as energy driver for inertial confinement fusion
[DE95-614252] p 2884 N95-30914

CRYPTOGRAPHY
Requirements for security signalling
[DE95-008714] p 2948 N95-31605
Scalable ATM encryption
[DE95-009868] p 2948 N95-32065
Proposed DDS-specific fields for the Generic Authentication Information Element
[DE95-009839] p 3026 N95-32144
A proposed Generic Authentication Information Element
[DE95-009862] p 2948 N95-32146

CRYSTAL DEFECTS
Microstructural and mechanical property changes in model Fe-Cu alloys
[DE95-010117] p 2805 N95-31105
Effect of irradiation spectrum on the microstructure of ion-irradiated Al2O3
[DE95-010225] p 2806 N95-31188
Evidence for electronic energy loss processes stimulating solid phase epitaxial regrowth of spatially isolated amorphous regions in semiconductor systems
[DE95-009892] p 3016 N95-32103
Defect configurations in neutron-irradiated U3Si2
[DE95-009896] p 3016 N95-32105
Suppression of self-interstitials in silicon during ion implantation via in-situ photoexcitation
[DE95-009173] p 3016 N95-32301

CRYSTAL DISLOCATIONS
Diffraction-line broadening analysis and stress relaxation in thin metal layers
[PB95-213898] p 2893 N95-30634
Characterization of /11'01/ twin dislocation structures in evaporated titanium thin films by HREM
[DE95-615391] p 2820 N95-31623

CRYSTAL GROWTH
Orientation of rapid thermally annealed lead zirconate titanate thin films on (111) Pt substrate
[DE95-615232] p 2811 N95-30422
Synthesis of carbo-nitride films using high-energy shock plasma deposition
[DE95-615231] p 2811 N95-30450
Langasite crystals growth with quality factor Q, that exceeds the Q of quartz, and which are suitable for high-precision resonators
[AD-A293397] p 3013 N95-30969
Intelligent synthetic polymers
[AD-A292905] p 2819 N95-31395
Metallurgical and Materials Transactions
[AD-A293617] p 2807 N95-31464
The effect of gravity on the deposition of thin films: The physical vapor transport of copper phthalocyanine
[AD-A292997] p 2838 N95-31472
Characterization of /11'01/ twin dislocation structures in evaporated titanium thin films by HREM
[DE95-615391] p 2820 N95-31623
Silicon carbide-silicon heterostructure solar cells p 2905 N95-31952
Processing and microstructural evolution of alumina/aluminum alloy and aluminum nitride/aluminum alloy composites by directed melt oxidation p 2789 N95-31973

CRYSTAL LATTICES
The neutron powder diffraction and acoustic investigations of the NH4SCN phase diagram
[DE95-614372] p 3009 N95-30419
Electroweak interactions on the lattice
[DE95-616287] p 2965 N95-30439
Molecular modeling of PMN ceramics
[AD-A290879] p 2813 N95-30560
The one-dimensional model of the off-centre potential of the fluorine ion in the NaBr lattice
[DE95-614310] p 3010 N95-30647
Zone axis backscattered electron contrast for fast electrons
[DE95-616775] p 2980 N95-30790
TV-VI semiconductor quantum well lasers, physics and engineering p 2883 N95-30805
Ferromagnetic Potts model in a magnetic field: Finite lattice extrapolation of the (1 + 1)-dimensional Hamiltonian
[DE95-614447] p 3012 N95-30958
Dynamics of an inhomogeneous anisotropic antiferromagnetic spin chain
[DE95-614449] p 3013 N95-30959
Pseudomorphic heterostructure materials for high performance devices
[AD-A292906] p 2788 N95-31384
Metallurgical and Materials Transactions
[AD-A293617] p 2807 N95-31464
Characterization of /11'01/ twin dislocation structures in evaporated titanium thin films by HREM
[DE95-615391] p 2820 N95-31623
Synthesis and characterization of nanophase face-centered-cubic titanium
[DE95-009533] p 2809 N95-32051

CRYSTAL OPTICS
X-ray standing wave interferometry-optics at 1 angstrom with applications to surface and material sciences
[DE95-011453] p 2998 N95-31114

CRYSTAL STRUCTURE
Crystallization of sol-gel derived lead zirconate titanate thin films in argon and oxygen atmospheres
[DE95-615230] p 3009 N95-30421
Structural investigation of xenon ion-beam-irradiated glassy carbon
[DE95-616777] p 2977 N95-30474
STM studies of clean, CO- and O2-exposed Pt(100)-hex-R0.7 deg
[PB95-195376] p 3009 N95-30535
Molecular modeling of PMN ceramics
[AD-A290879] p 2813 N95-30560
Diffraction-line broadening analysis and stress relaxation in thin metal layers
[PB95-213898] p 2893 N95-30634
A theoretical analysis of steady-state photocurrents in simple silicon diodes
[NASA-CR-198885] p 2859 N95-30651
Phase transformations in melt-spun Y-Ba-Cu-O bulk superconductor
[DE95-010237] p 3011 N95-30667
Polarisation resonance in X-ray diffraction
[DE95-616727] p 3012 N95-30789
Zone axis backscattered electron contrast for fast electrons
[DE95-616775] p 2980 N95-30790
Molecular nanoclusters as precursors to conductive thin films and crystals
[AD-A290278] p 3014 N95-31189
Poisson's ratio for hexagonal crystals
[AD-A293556] p 3015 N95-31539

CRYSTAL SURFACES
X-ray standing wave interferometry-optics at 1 angstrom with applications to surface and material sciences
[DE95-011453] p 2998 N95-31114

CRYSTALLINITY
Morphology and microstructure of (111) crystalline CeO2 films grown on amorphous SiO2 substrates by pulsed-laser ablation
[DE95-008842] p 3009 N95-30542
Fabrication and modification of metal nanocluster composites using ion and laser beams
[DE95-009131] p 2784 N95-30731
New material for high average power infrared generation: QPM-DB GaAs
[AD-A292714] p 2967 N95-30939

CRYSTALLIZATION
Crystallization of sol-gel derived lead zirconate titanate thin films in argon and oxygen atmospheres
[DE95-615230] p 3009 N95-30421
The pyrochlore-to-perovskite transformation in solution-derived lead zirconate titanate thin films
[DE95-010453] p 2822 N95-32161

CRYSTALLOGRAPHY
Orientation of rapid thermally annealed lead zirconate titanate thin films on (111) Pt substrate
[DE95-615232] p 2811 N95-30422
Characterization of /11'01/ twin dislocation structures in evaporated titanium thin films by HREM
[DE95-615391] p 2820 N95-31623

CRYSTALS
A room temperature LSO/PIN photodiode PET detector module that measures depth of interaction
[DE95-008447] p 2878 N95-30378
The neutron powder diffraction and acoustic investigations of the NH4SCN phase diagram
[DE95-614372] p 3009 N95-30419
Crystallization of sol-gel derived lead zirconate titanate thin films in argon and oxygen atmospheres
[DE95-615230] p 3009 N95-30421
Low temperature synthesis of YBa2Cu3O(8-x) and other crystalline oxides
[AD-D017370] p 3009 N95-30533

Semiconductor nanocrystals formed in SiO2 by ion implantation
[DE95-008900] p 2978 N95-30546
Molecular nanoclusters as precursors to conductive thin films and crystals
[AD-A290278] p 3014 N95-31189
Method of synthesizing high quality, doped diamond and diamonds and devices obtained therefrom
[AD-D017432] p 3014 N95-31269
Transitions, defects, and whiskered microstructures
[AD-A292796] p 3014 N95-31438
Proceedings of the high energy density matter (HEDM) contractor's conference
[AD-A292988] p 2836 N95-31470
Poisson's ratio for hexagonal crystals
[AD-A293556] p 3015 N95-31539
Effects of mosaicity on Parametric X-Radiation production
[AD-A293677] p 2985 N95-31597
Wavelengths measurements of the He-like krypton K-shell spectrum
[DE95-010264] p 2987 N95-32041
Luminescence properties of ZnWO4:Cr(3+) laser crystals
[AD-A293065] p 2887 N95-32152
Photo-refractive Bi12SiO20: Spatial light modulator
[AD-A293084] p 3001 N95-32153

CUBES (MATHEMATICS)
Barendregt cube with definitions and generalized reduction
[PB95-206793] p 2966 N95-30719

CUBIC LATTICES
Crystallization of sol-gel derived lead zirconate titanate thin films in argon and oxygen atmospheres
[DE95-615230] p 3009 N95-30421

CUMULATIVE DAMAGE
Robust Rocket Engine Concept
[NASA-TM-107010] p 2770 N95-32121

CURING
Epoxy and acrylate stereolithography resins: In-situ measurements of cure shrinkage and stress relaxation
[DE95-008506] p 2811 N95-30389
A viscoelastic anisotropic wave propagation model for composite cure evaluation p 2786 N95-30839
Phthalonitrile prepolymer as high temperature sizing material for composite fibers
[AD-D017447] p 2818 N95-31272

CURRENT ALGEBRA
Arithmetic features of rational conformal field theory
[PB95-207908] p 2966 N95-30591
Pion-pair production by two photons
[DE95-737162] p 2983 N95-31223

CURRENT DENSITY
Effects of temperature ramp rate during heat treatment on hysteresis loss and critical current density of internal tin processed wires
[DE95-009551] p 2803 N95-30706
Anodically enhanced diffusion in Cu/Ag thin film couples
[DE95-009198] p 2814 N95-30738
Optimization of high-temperature superconductor current leads
[DE95-005838] p 2861 N95-30942
Lower hybrid accessibility in a large, hot reversed field pinch
[DE95-011001] p 3007 N95-32310

CURRENT DISTRIBUTION
Optimization of a thermoelectric IR-detector for low working temperature
[NASA-CR-198933] p 2880 N95-30752
Measurements of stability margins and current distribution in large-scale Nb3Sn cable-in-conduit conductors
[DE95-009869] p 3007 N95-32148

CURRENT SHEETS
Study of cross-tail current carriers in magnetotail p 3005 N95-30804
The art and science of magnet design: Selected notes of Klaus Halbach, volume 2
[DE95-008450] p 2861 N95-31059

CURVATURE
Multi-particle correlations in quaternionic quantum systems
[DE95-616271] p 3018 N95-30424
Quantum dynamics in regions of quaternionic curvature
[DE95-616276] p 3018 N95-30426
The conical singularity and quantum corrections to entropy of black hole
[DE95-613367] p 3029 N95-30606
The effect of ray curvature on Lloyd's mirror fringe estimates and source localisation
[DSTO-TR-0064] p 3001 N95-31745

CURVE FITTING
Assessment of the NASA orbital debris engineering model
[AD-A293350] p 2766 N95-31143

CURVED BEAMS
Picosecond phase conjugation: New applications, devices, and materials
[AD-A293195] p 3013 N95-30982

CURVES (GEOMETRY)
Data reduction of piecewise linear curves
[PB95-212270] p 2962 N95-32256

CUTTERS
Effect of local melting on tribology in metal cutting
[PB95-195392] p 2804 N95-31052

CYANATES
The neutron powder diffraction and acoustic investigations of the NH4SCN phase diagram
[DE95-614372] p 3009 N95-30419

CYBERNETICS
Emerging applications in probability (Sensor management)
[AD-A292781] p 2749 N95-31433

CYCLES
A simple and accurate technique for monitoring crack growth behavior using a wave form analyzer
[AD-A293161] p 2894 N95-31007

CYCLIC LOADS
A simple and accurate technique for monitoring crack growth behavior using a wave form analyzer
[AD-A293161] p 2894 N95-31007
Effect of cyclic loading on the creep performance of silicon nitride
[DE95-010289] p 2894 N95-31131

CYCLOGENESIS
LAWS hurricane studies
[NASA-CR-189438] p 2919 N95-31128
Diagnosis of the kinematics and dynamics of rapidly developing maritime cyclones
[AD-A293919] p 2921 N95-31675

CYCLONES
Forecast of Atlantic seasonal hurricane activity for 1994 p 2918 N95-30832
Summary of 1993 Atlantic tropical cyclone activity and verification of author's forecast. A year of unanticipated light hurricane activity and a poor forecast: The expected dissipation of the El Nino did not take place and Caribbean basin surface pressure became quite high p 2918 N95-30842
Early August updated forecast of Atlantic seasonal hurricane activity for 1994 p 2919 N95-30844
Diagnosis of the kinematics and dynamics of rapidly developing maritime cyclones
[AD-A293919] p 2921 N95-31675

CYCLOTRON RADIATION
Perpendicular electron heating by absorption of auroral kilometric radiation
[NASA-198815] p 2914 N95-30848
Development of plasma diagnostics technologies: A study on nuclear fusion reactor
[DE95-614180] p 3005 N95-31004

CYCLOTRON RESONANCE DEVICES
Harmonic gyrotron amplifiers and phase-locked oscillators
[AD-A293185] p 2861 N95-30979
Stable high-power harmonic gyro-amplifiers
[AD-A293697] p 2881 N95-31828

CYLINDRICAL BODIES
Fast-acting valve for projective launching systems
[AD-D017357] p 2888 N95-30416
Metal nanotubule membranes with electrochemically switchable ion-transport selectivity
[AD-A292712] p 2793 N95-30938
Hot compression testing of tungsten
[AD-A293683] p 2807 N95-31599
Fractional delay waveguide modeling of acoustic tubes
[PB95-206637] p 2975 N95-31650
Side force acting on blunted circular cylinder bodies at high angles of attack in supersonic flow
[NAL-TR-1255] p 2744 N95-31741

CZOCHRALSKI METHOD
Photovoltaic Czochralski silicon manufacturing technology improvements
[DE95-004066] p 2904 N95-31162

D

DAMAGE
Amorphization threshold in Si-implanted strained SiGe alloy layers
[DE95-008901] p 2804 N95-30797
Response of mechanically fastened composite joints under multiple bypass loads p 2785 N95-30824

Computational modeling of coating integrity effects on impressed current cathodic protection system
[AD-A293256] p 2815 N95-30894
Probabilistic reliability modeling of fatigue on the H-46 tie bar
[AD-A289926] p 2751 N95-30927
New adaptive methods for reconfigurable flight control systems, appendix 1
[AD-A292711] p 2756 N95-30937
Microstructure of Al2O3 irradiated with an applied electric field
[DE95-010278] p 2822 N95-32043
Suppression of self-interstitials in silicon during ion implantation via in-situ photoexcitation
[DE95-009173] p 3016 N95-32301

DAMAGE ASSESSMENT
Economical analysis relating to the global warming issue
[DE95-764072] p 2908 N95-30677
Ultrasonic characterization of fiber-matrix interphasial properties and damage in high-temperature composites p 2785 N95-30823
Navier-Stokes flow field analysis of compressible flow in a high pressure safety relief valve
[NASA-TM-110640] p 2868 N95-30862
Damage dosimetry and embrittlement monitoring of nuclear pressure vessels in real time by magnetic properties measurement
[DE95-011454] p 2894 N95-31254
The determination of wave group parameters from the resolution of incident and reflected waves
[AD-A293703] p 2924 N95-31829
Mapping hidden aircraft defects with dual-band infrared computed tomography
[DE95-011531] p 2741 N95-32164

DAMPING
Gravitational-radiation damping of compact binary systems to second post-Newtonian order
[PB95-207882] p 2912 N95-30588

DATA ACQUISITION
Smart active multiwave sensing with zero background amplitude modulated probes
[DE95-008813] p 2792 N95-30714
Offshore next generation weather radar (NEXRAD) OT&E integration and OT&E operational test
[AD-A293223] p 2848 N95-30902
Impact behavior of the active zone within a frozen soil profile
[AD-A292909] p 2915 N95-31386
Acquiring consistent knowledge for Bayesian Forests
[AD-A293858] p 2952 N95-31517
Modern methods in meteorological and oceanographic data acquisition and analyses
[AD-A293884] p 2920 N95-31541
Arabian Sea mixed layer dynamics experiment: Mooring deployment cruise report
[AD-A293684] p 2923 N95-31600
Data collection at the Lockheed Santa Cruz facility using midwave hyperspectral imagers
[AD-A293057] p 3000 N95-31672
A programming interface for application-aware adaptation in mobile computing
[AD-A293107] p 2943 N95-32019
Acquisition, tracking, pointing and fire control for Ballistic Missile Defense p 2841 N95-32131
The Telecommunications and Data Acquisition Report
[NASA-CR-198911] p 2854 N95-32221

DATA BASE MANAGEMENT SYSTEMS
Data management system: User's guide
[DE95-008692] p 3022 N95-30392
Extending a multi-set relational algebra to a parallel environment
[PB95-207106] p 3023 N95-30566
Recommendations for developing portable parallel I/O facilities for scientific applications
[DE95-009384] p 2947 N95-30578
Supporting data intensive applications with medium grained parallelism
[DE95-010164] p 3023 N95-30619
Workflow literature guide, version 1
[PB95-207080] p 2947 N95-30721
Join processing in relational database systems p 3023 N95-30764
Development of technical information processing systems
[DE95-613311] p 3024 N95-30882
The development of KAERI management information system 2: The development of Time Sheet Management System
[DE95-613355] p 3024 N95-30883
Client server architecture for multidatabase access. Ingres SQL server
[PB95-192852] p 2947 N95-31051
Adaptiveness in information systems integration p 3025 N95-31348

Support of environmental requirements for cloud analysis and archive (SERCAA): Database management facility
[AD-A293938] p 2920 N95-31522
UNLV: Information Science Research Institute
[DE95-011941] p 3027 N95-32362

DATA BASES
Protocols for integrity constraint checking in federated databases
[PB95-197695] p 3022 N95-30456
Extending a multi-set relational algebra to a parallel environment
[PB95-207106] p 3023 N95-30566
Supporting data intensive applications with medium grained parallelism
[DE95-010164] p 3023 N95-30619
Geostatistics and hydrology. Part 3. Hydro-meteorological network design
[PB95-206462] p 2900 N95-30818
QTSAW (Quick Typhoon Surge and Waves). Wave information studies of US coastlines
[AD-A293172] p 2919 N95-30976
Operator's handbook: NAWC Software Production Facility
[AD-A290216] p 2935 N95-31001
Client server architecture for multidatabase access. Ingres SQL server
[PB95-192852] p 2947 N95-31051
ARTI Refrigerant Database
[DE95-008336] p 2816 N95-31057
Assessment of the NASA orbital debris engineering model
[AD-A293350] p 2766 N95-31143
Digital Mapping Charting and Geodesy Analysis Program technical review of Vector Product Format (VPF)
[AD-A289766] p 2901 N95-31390
Human factors at the FAA Technical Center: Bibliography
[AD-A288638] p 2930 N95-31399
Synthetic Terrain Imagery for Helmet-Mounted Display. Volume 3: Software user's manual
[AD-A293613] p 2753 N95-31463
Acquiring consistent knowledge for Bayesian Forests
[AD-A293858] p 2952 N95-31517
Support of environmental requirements for cloud analysis and archive (SERCAA): Database management facility
[AD-A293938] p 2920 N95-31522
Class of service in the high performance storage system
[DE95-007959] p 2932 N95-31704
Prioritization methodology for chemical replacement p 2773 N95-31757
Environmental databases and other computerized information tools p 2783 N95-31810
NEIS (NASA Environmental Information System) p 2783 N95-31811
Integration of air traffic databases: A case study
[AD-A293691] p 2749 N95-32022
Report to Congressional Committees. Federal research: Interim report on the pilot technology access program
[GAO/RCED-94-75] p 3022 N95-32195

DATA COLLECTION PLATFORMS
Development and implementation of a computer facility for nuclear data updating and reactor calculations using personal computers
[DE95-623577] p 2940 N95-31408

DATA COMPRESSION
System considerations for efficient communication and storage of MSTI image data
[NASA-CR-198869] p 3024 N95-30858
Multi-dimensional data compression for portable communication
[AD-A292751] p 2850 N95-31426
A seismic data compression system using subband coding p 2857 N95-32238

DATA CONVERSION ROUTINES
BRUTUS: A program for conversion between image formats
[PB95-211421] p 2945 N95-32246

DATA FLOW ANALYSIS
Computer simulation results for PCM/PM/NRZ receivers in nonideal channels p 2765 N95-32225

DATA LINKS
High Frequency (HF) upgrade study for the Canadian Regional Operations Control Center (ROCC) AWACS Digital Information Link (RADIL) project
[AD-A293435] p 2850 N95-31367
High accuracy time transfer synchronization p 2968 N95-32321

DATA MANAGEMENT
Expert system for assessing accuracy of models of physical phenomena and for selecting alternate models in the presence of noise
[AD-D017348] p 2974 N95-30550
Supporting data intensive applications with medium grained parallelism
[DE95-010164] p 3023 N95-30619
JPL Physical Oceanography Distributed Active Archive Center (PO.DAAC) data availability, version 1-94
[NASA-CR-198871] p 2922 N95-30859
Acquiring consistent knowledge for Bayesian Forests
[AD-A293858] p 2952 N95-31517
Class of service in the high performance storage system
[DE95-007959] p 2932 N95-31704
Management, visualization, and analysis of environmental and geotechnical data
[DE95-000063] p 3026 N95-31823
Westinghouse Hanford Company Data Management Plan Template, revision 1
[DE95-010046] p 3026 N95-32107

DATA PROCESSING
Expert system for assessing accuracy of models of physical phenomena and for selecting alternate models in the presence of noise
[AD-D017348] p 2974 N95-30550
ESAA: Environment for Seismic Activity Analysis
[DE95-612416] p 2913 N95-30675
Theory & numerical methods for problems in shape reconstruction and large deviations
[AD-A292874] p 2952 N95-31279
Development and implementation of a computer facility for nuclear data updating and reactor calculations using personal computers
[DE95-623577] p 2940 N95-31408
Support of environmental requirements for cloud analysis and archive (SERCAA): Database management facility
[AD-A293938] p 2920 N95-31522
Using satellites for radar performance monitoring and calibration
[AD-A293809] p 2852 N95-31588
Development of the Multi-Level Seismic Receiver (MLSR)
[DE95-008823] p 2916 N95-31610
Topics in exploratory and speculative data analysis
[AD-A290505] p 3025 N95-31618
Implementation of a standard format for GPS common view data p 2968 N95-32323
Time activities at the BIPM p 2968 N95-32325
High resolution time interval counter p 2969 N95-32331

DATA REDUCTION
Laser Tracker 3: Sandia National Laboratories' third generation laser tracking system
[DE95-008525] p 2882 N95-30379
Operating system support for distributed multimedia applications: A survey of current research
[PB95-207098] p 2964 N95-30565
Artificial intelligence techniques for flight test planning, phase 1
[AD-A293962] p 2751 N95-31525
Validation of special sensor microwave/imager ocean surface wind retrievals in equatorial regions
[AD-A293750] p 2920 N95-31571
Data reduction of piecewise linear curves
[PB95-212270] p 2962 N95-32256

DATA RETRIEVAL
Machine learning for a toolkit for image mining
[AD-A293137] p 2951 N95-30890

DATA SAMPLING
A two-timescale appróach to nonlinear Model Predictive Control
[DE95-000943] p 2952 N95-31161

DATA STORAGE
Data storage modeling and management for multimedia information systems p 3022 N95-30483
System considerations for efficient communication and storage of MSTI image data
[NASA-CR-198869] p 3024 N95-30858
A real time method for Fourier transform holographic information storage
[AD-A293186] p 2880 N95-30980
Degradation of blue AlGaN/InGaN/GaN LEDs subjected to high current pulses
[DE95-008824] p 2863 N95-31611
Class of service in the high performance storage system
[DE95-007959] p 2932 N95-31704
Gigabit testbed research project
[DE95-010728] p 2945 N95-32270

DATA STRUCTURES
Join processing in relational database systems p 3023 N95-30764

DATA SYSTEMS
JPL Physical Oceanography Distributed Active Archive Center (PO.DAAC) data availability, version 1-94
[NASA-CR-198871] p 2922 N95-30859
Comparison of satellite-derived MSU brightness temperatures and conventionally-derived fields
[AD-A293692] p 2901 N95-31603
Improving data consistency in mobile computing using Isolation-Only Transactions
[AD-A293110] p 2948 N95-32021
The application of noncoherent Doppler data types for Deep Space Navigation p 2765 N95-32226

DATA TRANSFER (COMPUTERS)
Effective bandwidth techniques in bufferless and buffered ATM multiplexers
[PB95-207072] p 2862 N95-31185

DATA TRANSMISSION
High Frequency (HF) upgrade study for the Canadian Regional Operations Control Center (ROCC) AWACS Digital Information Link (RADIL) project
[AD-A293435] p 2850 N95-31367
Requirements for security signalling
[DE95-008714] p 2948 N95-31605
Design and testing of an optimal digital link capable of 14-channel transmission
[AD-A288505] p 3000 N95-31652
Scalable ATM encryption
[DE95-009868] p 2948 N95-32065
Proposed DDS-specific fields for the Generic Authentication Information Element
[DE95-009839] p 3026 N95-32144
A proposed Generic Authentication Information Element
[DE95-009862] p 2948 N95-32146
Degradation in finite-harmonic subcarrier demodulation p 2855 N95-32228
Fast identification of some typical digital modulation schemes
[PB95-211454] p 2857 N95-32247
Gigabit testbed research project
[DE95-010728] p 2945 N95-32270

DBR LASERS
A compact and efficient violet laser source
[AD-A292782] p 2885 N95-31434

DE BROGLIE WAVELENGTHS
Magneto-optical transmission-reflection beam splitter for multi-level atoms
[DE95-616267] p 2976 N95-30423
Reflection and diffraction of atomic de Broglie waves by evanescent laser waves. Bare-state method
[DE95-616458] p 2992 N95-30960

DECISION MAKING
Dynamic maintenance scheduling for a stochastic telecommunication network: Determination of performance factors
[AD-A293829] p 2852 N95-31555

DECODERS
Enhanced decoding for the Galileo low-gain antenna mission: Viterbi redecoding with four decoding stages p 2855 N95-32230
Testing the performance of feedback concatenated decoder with a nonideal receiver p 2856 N95-32231

DECODING
Enhanced decoding for the Galileo low-gain antenna mission: Viterbi redecoding with four decoding stages p 2855 N95-32230
Trellis complexity bounds for decoding linear block codes p 2856 N95-32234

DECOMPOSITION
Applications of SXPS for studying surface structure, reaction mechanisms and kinetics
[DE95-008903] p 2803 N95-30547
Global aspects of the WZNW reduction to Toda theories
[DE95-737230] p 3019 N95-31226
Base hydrolysis and hydrothermal processing of PBX-9404 explosive
[DE95-009437] p 2836 N95-32048
A modification to the GMRES method for ill-conditioned linear systems
[DE95-010661] p 2962 N95-32076
A stochastic difference equation approach to inference with missing data: Some new results
[DE95-010327] p 2944 N95-32088
GCMS and FTIR studies of by-product inhibited growth and the rate-limiting step in TEOS-based SiO2 CVD
[DE95-009863] p 3016 N95-32147

DECOMPRESSION SICKNESS
Decompression illness, observable bubbles. (Session K)
[PB95-195285] p 2926 N95-30511
Effects of air bubbles on rabbit blood brain barrier
[PB95-195293] p 2925 N95-30512
Detecting intravascular gas bubbles in ultrasonic images
[PB95-195301] p 2926 N95-30513
Arterial gas bubbles after decompression in pigs with Patent Foramen Ovale
[PB95-195319] p 2925 N95-30515

DECONTAMINATION
Aqueous TiO2 photocatalysis of metal-EDTA complexes
[DE95-011058] p 2793 N95-31113
The Wide Field/Planetary Camera 2 (WFPC-2) molecular adsorber
[NASA-CR-196866] p 2881 N95-31456
Recycling MIL-H-46170 hydraulic fluid to extend fluid service life
[AD-A293035] p 2821 N95-31664
Replacement of ozone depleting and toxic chemicals in gravimetric analysis of non-volatile residue
p 2780 N95-31793

DECOUPLING
Fixed modes in quasi-static state feedback decoupling
[PB95-206850] p 2950 N95-30564
A simple model for the dc flux transformer in layered superconductors with Josephson coupling
[DE95-614468] p 2859 N95-30649
Generalized controlled invariance for nonlinear systems
[PB95-197901] p 2950 N95-30807
New adaptive methods for reconfigurable flight control systems, appendix 1
[AD-A292711] p 2756 N95-30937
Method of normal coordinates in the formulation of a system with dissipation: The harmonic oscillator
[DE95-613372] p 3020 N95-32094

DEDUCTION
Barendregt cube with definitions and generalized reduction
[PB95-206793] p 2966 N95-30719

DEEP SPACE
Rate considerations in deep space telemetry
p 2765 N95-32223
Multiple turbo codes for deep-space communications
p 2855 N95-32227
Residual and suppressed-carrier arraying techniques for deep-space communications p 2856 N95-32235
European plans for new clocks in space
p 2968 N95-32324

DEEP SPACE NETWORK
The Telecommunications and Data Acquisition Report
[NASA-CR-198911] p 2854 N95-32221
Determination of the position of Jupiter from radio metric tracking of Voyager 1 p 2854 N95-32222
Computer simulation results for PCM/PM/NRZ receivers in nonideal channels p 2765 N95-32225
The application of noncoherent Doppler data types for Deep Space Navigation p 2765 N95-32226
Effects of correlated noise on the full-spectrum combining and complex-symbol combining arraying techniques p 2856 N95-32237
DSS-24 microwave holography measurements
p 2857 N95-32239
Digital signal processing in the radio science stability analyzer p 2857 N95-32240
The Deep Space Network stability analyzer
p 2858 N95-32334
Fiber optic reference frequency distribution to remote beam waveguide antennas p 2972 N95-32346

DEFECTS
Ultrasonic two probe system for locating and sizing
[AD-D017438] p 2996 N95-30724
Mechanisms of enhanced ionic conduction at interfaces in ceramics
[DE95-009125] p 2814 N95-30730
Transitions, defects, and whiskered microstructures
[AD-A292796] p 3014 N95-31438
Phase stability, point defects and site preference of FeAl and NiAl with ternary additions
[DE95-009694] p 3015 N95-31641
The 19th Annual Electronics Manufacturing Seminar
[AD-A293067] p 2863 N95-31674
Validation of favor code linear elastic fracture solutions for finite-length flaw geometries
[DE95-009034] p 2898 N95-32157
Nondestructive testing of ceramic components: Cooperative Research and Development Agreement completion report
[DE95-009510] p 2823 N95-32352

DEFENSE INDUSTRY
Federally funded R and D centers: Executive compensation at the Aerospace Corporation. Report to Congressional requestors
[GAO/NSIAD-95-75] p 3022 N95-32213

DEFENSE PROGRAM
Unmanned aerial vehicles. 1994 master plan
p 2751 N95-31416
Definition of an anti-missile ballistic defense architecture for Europe p 2840 N95-32125

DEFLAGRATION
Preliminary assessment of combustion modes for internal combustion wave rotors
[NASA-TM-107000] p 2754 N95-30632
A study of gas-phase processes during the deflagration of RDX composite propellants using a triple quadrupole mass spectrometer p 2801 N95-31304
Effects of gas-phase thermal expansion on the stability of deflagration through a porous energetic material
[DE95-004382] p 2797 N95-31824

DEFLECTION
Impact behavior of the active zone within a frozen soil profile
[AD-A292909] p 2915 N95-31386

DEFORMATION
Generalized deformed para-Bose oscillator and its coherent states
[DE95-613444] p 2963 N95-30610
Simulation of viscous sintering
[PB95-197109] p 2868 N95-30836
Physical modelling of microstructural evolution during thermomechanical processing of aluminium alloys
[PB95-196341] p 2805 N95-31053
Residual stresses and stress corrosion cracking in pipe fittings
[DE95-009332] p 2894 N95-31054
The topological string associated with a simple singularity of type D
[DE95-737229] p 2983 N95-31225
Large deformation failure mechanisms in nonlinear solids
[AD-A293010] p 2896 N95-31474
Fundamental topics in heat transfer through deformable two-phase media p 2874 N95-31532
Hot compression testing of tungsten
[AD-A293683] p 2807 N95-31599
A computational procedure for multibody systems including flexible beam dynamics
[NASA-CR-199035] p 2897 N95-31730
The influence of matrix microstructure and temperature on cyclic deformation and fatigue of particle-reinforced 2219 aluminum p 2808 N95-31974
The influence of microstructure on creep deformation in near-gamma TiAl alloys p 2808 N95-31975
Structural analyses of the JPL Mars Pathfinder impact
[DE95-009581] p 2767 N95-32081

DEGASSING
Sonic apparatus for degassing liquids
[AD-D017352] p 2791 N95-30554

DEGRADATION
Interface degradation in CAS/Nicalon during elevated temperature aging
[DE95-008843] p 2812 N95-30543
A theory for predicting and minimizing the effects of matrix degradation on the thermomechanical properties of general laminates p 2785 N95-30768
The effect of interface properties on nickel base alloy composites
[NASA-CR-198363] p 2785 N95-30787
Behaviour of polymers in radioactive environments: Effects of dose speed
[DE95-621008] p 2818 N95-31221
Analytical instrumentation for environmental research
[AD-A292832] p 2908 N95-31447
Degradation of blue AlGaN/InGaN/GaN LEDs subjected to high current pulses
[DE95-008824] p 2863 N95-31611
Environmentally regulated aerospace coatings
p 2777 N95-31775
Base hydrolysis and hydrothermal processing of PBX-9404 explosive
[DE95-009437] p 2836 N95-32048
Residual and suppressed-carrier arraying techniques for deep-space communications p 2856 N95-32235

DEGREES OF FREEDOM
A queer reduction of degrees of freedom
[DE95-613471] p 2964 N95-30369
Robust position and force tracking control for a robot in contract p 2888 N95-30830
Dynamical systems as models for flow-induced vibrations
[PB95-206991] p 2869 N95-30956
Analytic and experimental investigation of rotordynamic response and backward whirl induced by split resonance
[AD-A293639] p 2889 N95-31566
A survey of the core-congruential formulation for geometrically nonlinear TL finite elements
[NASA-CR-199044] p 2944 N95-32203

DEHUMIDIFICATION
Recycling MIL-H-46170 hydraulic fluid to extend fluid service life
[AD-A293035] p 2821 N95-31664

DELAY
Analysis and modeling of an airport departure process
[AD-A293782] p 2749 N95-31581
Fractional delay waveguide modeling of acoustic tubes
[PB95-206637] p 2975 N95-31650

DELAY CIRCUITS
Coherent integrator
[AD-D017422] p 2847 N95-30743

DELTA WINGS
Numerical investigation into vortical flow about a delta-wing configuration up to incidences at which vortex breakdown occurs in experiment
[PB95-198024] p 2743 N95-30837
Unsteady transonic wind tunnel test on a semispan straked delta wing, oscillating in pitch. Part 1: Description of the model, test setup, data acquisition, and data processing
[AD-A293113] p 2743 N95-30885

DEMODULATION
Degradation in finite-harmonic subcarrier demodulation
p 2855 N95-32228
Towards optimum demodulation of bandwidth-limited and low SNR square-wave subcarrier signals
p 2855 N95-32229

DEMODULATORS
Demodulators for optical fiber interferometers with (3 x 3) outputs
[AD-D017415] p 2995 N95-30402
Noise signal processor
[AD-D017430] p 2974 N95-30747

DENSE PLASMAS
Development of a tokamak plasma optimized for stability and confinement
[DE95-009609] p 3003 N95-30641
Relativistic non-interacting electron gas in a magnetic field
[DE95-616903] p 2967 N95-31177

DENSITY (MASS/VOLUME)
Ocean mass density calculations from temperature and salinity data
[DSTO-TR-0023] p 2922 N95-30711

DENSITY (NUMBER/VOLUME)
Metal nanotubule membranes with electrochemically switchable ion-transport selectivity
[AD-A292712] p 2793 N95-30938

DENSITY DISTRIBUTION
Ocean mass density calculations from temperature and salinity data
[DSTO-TR-0023] p 2922 N95-30711

DENSITY MEASUREMENT
A prototype ionospheric tomography system (ITS)
[AD-A293015] p 2916 N95-31698

DEOXYRIBONUCLEIC ACID
Services to develop, standardize, and validate Polymerase Chain Reaction (PCR) protocols for the detection of leishmaniasis in clinical samples
[AD-A290155] p 2817 N95-31115

DEPENDENCE
From molecular to macromolecular liquid crystals
[AD-A293170] p 2816 N95-30974
Estimation in second order dependency model for multivariate binary data
[DE95-010326] p 2944 N95-32087

DEPLOYMENT
The quad-service satellite transmitting and receiving system for medical supply support: A battlefield interoperability and communications system prototype, volume 2. User documentation
[AD-A292835] p 2851 N95-31448
The quad-service satellite transmitting and receiving system for medical supply support: A battlefield interoperability and communications system prototype, volume 1
[AD-A292836] p 2851 N95-31449
Arabian Sea mixed layer dynamics experiment: Mooring deployment cruise report
[AD-A293684] p 2923 N95-31600
High strain-rate testing of parachute materials
[DE95-009577] p 2897 N95-31614

DEPOLARIZATION
Polarized proton beams
[DE95-010843] p 2967 N95-32031

DEPOSITION
Synthesis of carbo-nitride films using high-energy shock plasma deposition
[DE95-615231] p 2811 N95-30450
High temperature barrier coatings for refractory metals
[NASA-CR-195475] p 2802 N95-30531
Modeling of thermal, electronic, hydrodynamic, and dynamic deposition processes for pulsed-laser deposition of thin films
[DE95-008906] p 2813 N95-30572
Mechanisms of enhanced ionic conduction at interfaces in ceramics
[DE95-009125] p 2814 N95-30730
Glass matrix doped with activated luminescent nanocrystalline particles
[AD-D017416] p 2816 N95-31010
Method of synthesizing high quality, doped diamond and diamonds and devices obtained therefrom
[AD-D017432] p 3014 N95-31269

Thin-film edge field emitter device and method of manufacture therefor
| AD-D017453 | p 2862 N95-31275
Deposition and characterization of photoconductive PZT thin films
| ATR-93(8308)-7 | p 2819 N95-31417
Advanced thin-film deposition and physical properties of high-temperature and other novel superconducting materials
| AD-A292798 | p 2795 N95-31439
The effect of gravity on the deposition of thin films: The physical vapor transport of copper phthalocyanine
| AD-A292997 | p 2838 N95-31472
High performance YBCO films
| AD-A293045 | p 2863 N95-31669
Synthesis and characterization of nanophase face-centered-cubic titanium
| DE95-009533 | p 2809 N95-32051
Development of large-area monolithically integrated Silicon-Film(trademark) photovoltaic modules
| DE95-004089 | p 2906 N95-32057
Comprehensive research on the stability and electronic properties of a-Si:H and a-SiGe:H alloys and devices
| DE95-004088 | p 2810 N95-32154

DEPOSITS
Spectroscopic ellipsometry as a sensitive monitor of materials contamination p 2782 N95-31808

DEPRECIATION
Removal of scattered surface waves from seismic data
| PB95-197802 | p 2922 N95-30457

DEPTH
A room temperature LSO/PIN photodiode PET detector module that measures depth of interaction
| DE95-008447 | p 2878 N95-30378
Ultrasonic two probe system for locating and sizing
| AD-D017438 | p 2996 N95-30724
Shiptracks in the Californian stratus region: Dependency on marine atmospheric boundary layer depth
| AD-A293272 | p 2901 N95-31125

DEPTH MEASUREMENT
Seismic studies of subducted lithosphere p 2915 N95-31335

DERIVATION
Higher Schwarzian operators and combinatorics of Schwarzian derivative
| PB95-208435 | p 2957 N95-30623

DESIGN ANALYSIS
Specific method for task-based interaction design
| PB95-196440 | p 2929 N95-30522
Operating system support for distributed multimedia applications: A survey of current research
| PB95-207098 | p 2964 N95-30565
Effects of thermal and electrical stressing on the breakdown behavior of space wiring
| NASA-CR-198360 | p 2768 N95-30860
A novel instrumentation system for measurement of helicopter rotor motions and loads data, phase 1
| AD-A293309 | p 2751 N95-30923
Client server architecture for multidatabase access. Ingres SQL server
| PB95-192852 | p 2947 N95-31051
The art and science of magnet design: Selected notes of Klaus Halbach, volume 2
| DE95-008450 | p 2861 N95-31059
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 1
| NASA-CR-195435-VOL-1 | p 2768 N95-31169
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 2
| NASA-CR-195435-VOL-2 | p 2769 N95-31170
Management of major system programs and projects. Handbook
| NHB-7120.5 | p 3021 N95-31380
A time stepping coupled finite element-state space modeling environment for synchronous machine performance and design analysis in the ABC frame of reference p 2864 N95-31948
Underdense heating of the ionosphere using oblique high power HF radiowaves p 2917 N95-31951
Control law design using H-infinity and mu-synthesis short-period controller for a tail-airplane p 2758 N95-31999

DESTRUCTION
Acoustoelastic stress evaluation in metal plate using absolute shear and longitudinal time-of-flight data
| PB95-197810 | p 2892 N95-30458
Base hydrolysis and hydrothermal processing of PBX-9404 explosive
| DE95-009437 | p 2836 N95-32048
Base hydrolysis and hydrothermal processing of PBX-9404 explosive
| DE95-009497 | p 2837 N95-32355

DESTRUCTIVE TESTS
Round-robin validation exercise for plate twist test method
| PB95-208088 | p 2812 N95-30487

DETECTION
A room temperature LSO/PIN photodiode PET detector module that measures depth of interaction
| DE95-008447 | p 2878 N95-30378
Detecting intravascular gas bubbles in ultrasonic images
| PB95-195301 | p 2926 N95-30513
Method and system for reducing drag on a body moving through a fluid medium
| AD-D017336 | p 2867 N95-30672
Josephson break junction thin film device
| AD-D017343 | p 3011 N95-30673
Terminal doppler weather radar (TDWR) build 5B operational test and evaluation (OT&E) integration and OT&E operational test plan
| AD-A293251 | p 2848 N95-30910
Luminance effects on visual acuity and small letter contrast sensitivity
| AD-A293310 | p 2928 N95-31140
Study of different type neutrino oscillations based on neutrino beams from 600 GeV
| DE95-619267 | p 2983 N95-31260
On possibility to study neutrino oscillations by detectors located at Gran Sasso (Italy) using beams from 600 GeV UNK-1 machine
| DE95-619268 | p 2983 N95-31261
Inductively coupled IR staring array based on photofluxonic pixels
| AD-A292784 | p 2998 N95-31435
Investigation of ground target detection methods in fully polarimetric wide angle synthetic aperture radar images
| AD-A293922 | p 2851 N95-31513
Comparisons of target detection clutter using data from the 1993 FOPEN experiments
| AD-A293052 | p 2852 N95-31606
Folded compact range development and coherent change detection measurement project
| DE95-009082 | p 2853 N95-31628
Next generation fire suppressants p 2775 N95-31769
PADO: Learning tree structured algorithms for orchestration into an object recognition system
| AD-A293109 | p 2943 N95-32020
Design of an immersion echelle-prism mid-IR spectrograph for chemical remote sensing
| DE95-010729 | p 2901 N95-32027
Monte Carlo tests of the ELIPGRID-PC algorithm
| DE95-010811 | p 2943 N95-32030

DETERGENTS
Cleaning without chlorinated solvents p 2780 N95-31792

DETERMINANTS
Canonical symmetric invariant pairings in vertex operator super algebras and gramians
| PB95-208112 | p 2955 N95-30488
Electronic structure of Donor-Spacer-Acceptor molecules of potential interest for molecular electronics III: Geometry and absorption spectrum of CH3-Alpha P3CNQ
| AD-A293662 | p 2985 N95-31609

DETONATION
Base hydrolysis and hydrothermal processing of PBX-9404 explosive
| DE95-009437 | p 2836 N95-32048
Base hydrolysis and hydrothermal processing of PBX-9404 explosive
| DE95-009497 | p 2837 N95-32355

DETONATION WAVES
Numerical computation of one-dimensional detonation waves
| PB95-197950 | p 2868 N95-30811

DEUTERIDES
Preparation of diisopropyl stibines and use thereof
| AD-D017419 | p 2771 N95-30418

DEUTERIUM COMPOUNDS
A search for interstellar CH3D: Limits to the methane abundance in Orion-KL
| NASA-CR-198932 | p 3029 N95-30751

DEUTERIUM FLUORIDES
Advances in high-power chemical lasers
| AD-A289737 | p 2885 N95-31389

DEVELOPING NATIONS
Economical analysis relating to the global warming issue
| DE95-764072 | p 2908 N95-30677

DEWAXING
SSME Main Combustion Chamber (MCC) hot oil dewaxing p 2777 N95-31777

DIAGNOSIS
Services to develop, standardize, and validate Polymerase Chain Reaction (PCR) protocols for the detection of leishmaniasis in clinical samples
| AD-A290155 | p 2817 N95-31115
Development of a new instrument for rocket engine combustion diagnostics p 2799 N95-31211
Development of a structured design and programming methodology for expert systems shells utilizing a visual programming language: Application of structured methodology to the MK92 maintenance advisor expert system, performance module prototype
| AD-A289897 | p 2939 N95-31391
Analysis of symbolic parameter models
| AD-A292916 | p 2940 N95-31459
Diagnosing high density, fast-evolving plasmas using x-ray lasers
| DE95-010734 | p 3006 N95-32028

DIAMOND FILMS
Polarized Raman spectroscopy of chemically vapour deposited diamond films
| DE95-616776 | p 2815 N95-30791
Diamond thin film temperature and heat-flux sensors
| NASA-CR-198859 | p 3012 N95-30847
Method of synthesizing high quality, doped diamond and diamonds and devices obtained therefrom
| AD-D017432 | p 3014 N95-31269
Growth, characterization and device development in monocrystalline diamond films
| AD-A293106 | p 3015 N95-32018
Models of transport, gas-phase and surface chemistry in diamond chemical vapor deposition
| DE95-009861 | p 2822 N95-32101

DIAMONDS
Method of synthesizing high quality, doped diamond and diamonds and devices obtained therefrom
| AD-D017432 | p 3014 N95-31269
Substrate heating measurements in pulsed ion beam film deposition
| DE95-010862 | p 2818 N95-31377
An analysis of gas phase ethanol/water chemistry for diamond CVD
| AD-A293009 | p 2795 N95-31473
Growth, characterization and device development in monocrystalline diamond films
| AD-A293106 | p 3015 N95-32018
Models of transport, gas-phase and surface chemistry in diamond chemical vapor deposition
| DE95-009861 | p 2822 N95-32101

DIATOMIC MOLECULES
Properties of new materials relevant to energy and fuel research
| AD-A289734 | p 2825 N95-31149

DIBORANE
The structure and reactivity of boron and carbon surfaces
| AD-A292804 | p 2795 N95-31440

DICHROISM
The theoretical calculation of vibrational circular dichroism spectra
| AD-A293614 | p 2798 N95-32258

DIELECTRIC PROPERTIES
Band gap measurement of Si(1-x)C(x)/Si (0 less than or equal to x less than or equal to 0.014) alloys using photoluminescence and spectroscopic ellipsometry
| DE95-011020 | p 3014 N95-31112
Intermodulation Interference (IMI) testing of composite materials
| AD-A288621 | p 2787 N95-31146
Use of a variable frequency source with a single-mode cavity to process ceramic filaments
| DE95-010992 | p 2817 N95-31152
Materials for adaptive structural acoustic control, volume 2
| AD-A293445 | p 2788 N95-31370

DIELECTRICS
Ceramics derived from metal-organic precursors
| AD-A290791 | p 2811 N95-30405
Two-dimensional Finite Difference Time Domain (FD-TD) model of electromagnetic (EM) scattering from a buried rectangular object
| AD-A293685 | p 2852 N95-31601

DIESEL ENGINES
Low vibration polymeric composite engine
| AD-D017332 | p 2887 N95-30386

DIESEL FUELS
BioFacts: Fueling a stronger economy, global warming and biofuels emissions
| DE94-006864 | p 2910 N95-31821

DIFFERENCE EQUATIONS
A stochastic difference equation approach to inference with missing data: Some new results
| DE95-010327 | p 2944 N95-32088
A stochastic EM estimator in the presence of missing data: Theory and applications
| DE95-010329 | p 2944 N95-32089

DIFFERENTIAL ABSORPTION LIDAR
Feasibility of tropospheric water vapor profiling using infrared heterodyne differential absorption lidar
| DE95-009647 | p 2917 N95-32142
DIFFERENTIAL ANALYZERS
Demodulators for optical fiber interferometers with (3 x 3) outputs
| AD-D017415 | p 2995 N95-30402
DIFFERENTIAL CALCULUS
Equivalence of two non-commutative geometry approaches
| DE95-613469 | p 2957 N95-30642
DIFFERENTIAL EQUATIONS
Ray trace model of sound propagation in range dependent media
| PB95-211751 | p 2973 N95-30481
Development of a linearized unsteady Euler analysis for turbomachinery blade rows
| NASA-CR-4677 | p 2742 N95-30611
Higher Schwarzian operators and combinatorics of Schwarzian derivative
| PB95-208435 | p 2957 N95-30623
Golden ten equations of motion
| PB95-197927 | p 2967 N95-30809
Numerical computation of one-dimensional detonation waves
| PB95-197950 | p 2868 N95-30811
Multigrid convergence acceleration for the 2D Euler equations applied to high-lift systems
| PB95-198081 | p 2743 N95-30814
A finite element formulation for the time domain vibration analysis of an elastic-viscoelastic structure
p 2895 N95-31318
DiffEqlab: A MATLAB based package for studying ordinary differential equations
| PB95-207197 | p 2960 N95-31363
The remainder form and the cord-slope form in global optimization with interval methods p 2941 N95-31533
Validity of the differential equations for ionization cooling
| DE95-010438 | p 2989 N95-32160
DIFFERENTIAL PRESSURE
Optical fiber pressure sensor for liquid level monitoring
| AD-D017346 | p 2996 N95-30679
DIFFRACTION
NIR High-efficiency subwavelength diffractive structures in semiconductors
| DE95-008535 | p 3008 N95-30391
Phase object display by using acousto-optical Bragg diffraction
| AD-A293153 | p 2998 N95-31006
DIFFRACTOMETERS
IPNS neutron scattering instrumentation. A: Existing and planned. B: Possibilities for IPNS upgrade, a 1-MW spallation source
| DE95-004119 | p 2985 N95-31616
DIFFUSE RADIATION
Real time correlating operation on diffuse objects
| AD-A293220 | p 2997 N95-30901
Cleanliness evaluation of rough surfaces with diffuse IR reflectance p 2782 N95-31804
DIFFUSION
Viscous diffusion of vorticity in unsteady wall layers using the diffusion velocity concept
| DE95-008537 | p 2866 N95-30383
Anodically enhanced diffusion in Cu/Ag thin film couples
| DE95-009198 | p 2814 N95-30738
Simultaneous heat and mass transfer in a horizontal tube absorber: Numerical tools for present and future absorber designs
| PB95-196978 | p 2869 N95-30872
Extension of the pore tree model to describe pore interconnectivity
| AD-A290366 | p 2793 N95-30971
Solution based temperature of Perovskite-type oxide films and powders
| DE95-009089 | p 2820 N95-31629
Numerical simulation of the Langevin equation for skewed turbulence
| DE95-009477 | p 2877 N95-32049
Ultrasensitive fluorescence detection and photophysics in microdroplets
| DE95-010283 | p 2798 N95-32086
Energetics of Pt adsorption on Pt(111)
| DE95-010933 | p 3017 N95-32307
DIFFUSION COEFFICIENT
Fischer-tropsch synthesis in supercritical fluids
| DE95-009631 | p 2792 N95-30709
DIFFUSION FLAMES
Enhanced energy release and soot reduction in actively controlled flames p 2799 N95-31200
Advanced oxidizers diffusion flames structure
p 2801 N95-31307
Spectral element method for numerical simulation of unsteady laminar diffusion flames p 2794 N95-31333
DIFFUSION WELDING
New material for high average power infrared generation: QPM-DB GaAs
| AD-A292714 | p 2967 N95-30939
DIFFUSIVITY
Hydrogen diffusion and passivation in InGaAlN alloys
| DE95-010889 | p 2806 N95-31150
DIGITAL DATA
Detecting intravascular gas bubbles in ultrasonic images
| PB95-195301 | p 2926 N95-30513
High Frequency (HF) upgrade study for the Canadian Regional Operations Control Center (ROCC) AWACS Digital Information Link (RADIL) project
| AD-A293435 | p 2850 N95-31367
Digital Mapping Charting and Geodesy Analysis Program technical review of Vector Product Format (VPF)
| AD-A289766 | p 2901 N95-31390
Synthetic Terrain Imagery for Helmet-Mounted Display. Volume 3: Software user's manual
| AD-A293613 | p 2753 N95-31463
Design and testing of an optimal digital link capable of 14-channel transmission
| AD-A288505 | p 3000 N95-31652
DIGITAL ELECTRONICS
Visualization of circuit card electromagnetic fields
| AD-A291491 | p 2845 N95-30398
DIGITAL FILTERS
Design of digital low-pass filters for time-domain recursive filtering of impact acceleration signals
| AD-A293086 | p 2864 N95-31842
DIGITAL SIMULATION
Digital simulation of wind velocities for wind turbine rotors: General considerations
| PB95-206447 | p 2904 N95-31157
Atomization simulations using an Eulerian-VOF-Lagrangian method p 2828 N95-31210
DIGITAL SYSTEMS
Computer interface development for the petite amateur navy satellite (PANSAT) simulator
| AD-A293263 | p 2766 N95-31388
Portable digital Satellite News Gathering (SNG) RF terminal using a flat antenna
| NHK-LABS-NOTE-436 | p 2853 N95-31744
Mission critical failure effects analysis using quantitative techniques
| AD-A293098 | p 2864 N95-31844
Digital autopilot design for combat aircraft in ALENIA p 2760 N95-32009
An investigation of pilot induced oscillation phenomena in digital-flight control systems p 2760 N95-32011
Advanced flight control technology achievements at Boeing Helicopters p 2761 N95-32014
The High Altitude Balloon Experiment demonstration of acquisition, tracking, and pointing technologies (HABE-ATP) p 2841 N95-32132
Digital signal processing in the radio science stability analyzer p 2857 N95-32240
DILUTION
Jet mixing in a reacting cylindrical crossflow
| NASA-TM-106975 | p 2755 N95-30853
LLW solidification in cement: Effect of dilution
| DE95-010108 | p 2798 N95-32091
DIMENSIONAL ANALYSIS
Chiral gauge theory in four dimensions
| DE95-616288 | p 3018 N95-30440
DIMENSIONAL MEASUREMENT
Simultaneity and length of the moving rod
| DE95-613369 | p 3017 N95-30364
Einstein's length concept
| DE95-613368 | p 3019 N95-30972
DIMENSIONS
Local fractal dimension estimation
| AD-A293354 | p 2959 N95-30953
DIODES
The junction characteristics and current conduction mechanisms of GaInP2 n(+)p diodes and solar cells
| AD-A290857 | p 2902 N95-30408
A theoretical analysis of steady-state photocurrents in simple silicon diodes
| NASA-CR-198885 | p 2859 N95-30651
X-band magnicon amplifier research at the Naval Research Laboratory
| AD-A293203 | p 3013 N95-30984
A compact and efficient violet laser source
| AD-A292782 | p 2885 N95-31434
Degradation of blue AlGaN/InGaN/GaN LEDs subjected to high current pulses
| DE95-008824 | p 2863 N95-31611
DIPOLE MOMENTS
Semi-iterative method for estimation of the dipole parameters using the knowledge of the dipole orientation
| PB95-211736 | p 2858 N95-30480
DIRAC EQUATION
Quantum dynamics in regions of quaternionic curvature
| DE95-616276 | p 3018 N95-30426
The Foldy-Wouthuysen transformation
| DE95-616277 | p 2976 N95-30427
Light-front dynamics of Chern-Simons systems
| DE95-613467 | p 3019 N95-30741
Recoil correction in the Dirac-Coulomb problem
| DE95-619241 | p 2959 N95-31137
A compact expression for bilinear combination of Dirac spinors via world tensors
| DE95-619200 | p 2960 N95-31258
DIRECT CURRENT
A simple model for the dc flux transformer in layered superconductors with Josephson coupling
| DE95-614468 | p 2859 N95-30649
DIRECTIONAL SOLIDIFICATION (CRYSTALS)
Numerical modeling of Bridgman growth of PbSnTe in a magnetic field
| NASA-TM-106996 | p 2837 N95-31359
DIRECTIONAL STABILITY
Flight evaluation of forebody vortex control in post-stall flight p 2752 N95-32003
DIRECTORIES
Directory of global environmental sciences in Japan
p 2899 N95-31413
Requirements for security signalling
| DE95-008714 | p 2948 N95-31605
DISABILITIES
A graphical programming language for service robots in semi-structured environments p 2935 N95-30831
DISCONNECT DEVICES
Smart material joint band
| AD-D017374 | p 2888 N95-30716
DISCOVERY (ORBITER)
STS-70 flight: Day 8
| NASA-TM-110666 | p 2764 N95-30873
STS-70 flight: Day 7
| NASA-TM-110665 | p 2764 N95-30874
STS-70 flight: Day 6
| NASA-TM-110664 | p 2764 N95-30875
STS-70 flight: Day 5
| NASA-TM-110663 | p 2764 N95-30876
STS-70 flight: Day 4
| NASA-TM-110662 | p 2764 N95-30877
STS-70 flight: Day 3
| NASA-TM-110661 | p 2765 N95-30878
STS-70 flight: Day 2
| NASA-TM-110660 | p 2765 N95-30879
STS-70 flight: Day 1
| NASA-TM-110659 | p 2765 N95-30880
DISCRETE COSINE TRANSFORM
Image representation using fast algorithms based on the Zak transform
| AD-A293416 | p 2942 N95-31684
DISCRETE FUNCTIONS
Design of systems for active sound control
| PB95-197869 | p 2973 N95-30461
Fitting discrete distributions on the first two moments
| PB95-197885 | p 2950 N95-30462
Poisson approximation using the Stein-Chen method and coupling: Number of exceedances of a discrete-time-chi-squared process
| PB95-212205 | p 2961 N95-31398
DISCRIMINANT ANALYSIS (STATISTICS)
Selecting optimal experiments for feedforward multilayer perceptrons
| AD-A290856 | p 2949 N95-30406
A hypothesis-testing approach to discriminant analysis with mixed categorical and continuous variables when data are missing
| AD-A293714 | p 2964 N95-31831
DISCRIMINATORS
Background event discrimination in neutron time-of-flight measurements at beams of relativistic nuclei of the JINR synchrotron
| DE95-613006 | p 2991 N95-30604
DISCUSSION
Workshop report: Measurement techniques in highly transient, spectrally rich combustion environments
p 2799 N95-31208
DISILICIDES
Processing and characterization of nanocrystalline molybdenum disilicide (MoSi2) consolidated by hot isostatic pressing (HIP)
| DE95-010243 | p 3012 N95-30756
DISKS
Fiber optic accelerometer with centrally supported flexural disk
| AD-D017369 | p 2879 N95-30658
DISLOCATIONS (MATERIALS)
Solvability of a class of hypersingular nonlinear integral equations
| PB95-207031 | p 3011 N95-30720

DISORIENTATION
Dynamical analysis of the coriolis effect which causes space disorientation
[NAL-TR-1258] p 2928 N95-31714
DISPERSING
Design and processing of materials by biomimicking. Sections 1. Publications
[AD-A293852] p 2820 N95-31559
DISPLACEMENT
Field performance of the Walker Branch throughfall displacement experiment
[DE95-008677] p 2908 N95-30793
Amorphization and the effect of implanted ions in SiC
[DE95-009699] p 2985 N95-31642
Microstructure of Al2O3 irradiated with an applied electric field
[DE95-010278] p 2822 N95-32043
Evaluation of discretization procedures for transition elements in adaptive mesh refinement
[NASA-CR-199037] p 2944 N95-32190
DISPLACEMENT MEASUREMENT
A simple and accurate technique for monitoring crack growth behavior using a wave form analyzer
[AD-A293161] p 2894 N95-31007
DISPLAY DEVICES
Arithmetic features of rational conformal field theory
[PB95-207908] p 2966 N95-30591
Terminal doppler weather radar (TDWR) build 5B operational test and evaluation (OT&E) integration and OT&E operational test plan
[AD-A293251] p 2848 N95-30910
Application of computer generated holograms to optical transformations
[AD-A293146] p 2880 N95-30921
Impact of task properties, data display format and cognitive characteristics on recall performance: A cumulative research investigation p 3025 N95-31334
Method and apparatus for a high resolution, flat panel cathodoluminescent display device
[AD-D017434] p 2862 N95-31342
Guidelines for the design of GPS and LORAN receiver controls and displays
[AD-A293753] p 2749 N95-31572
Degradation of blue AlGaN/InGaN/GaN LEDs subjected to high current pulses
[DE95-008824] p 2863 N95-31611
Integration issues in modular mission management aid development p 2841 N95-32133
DISSIPATION
Stabilization of the resistive shell mode in tokamaks
[DE95-008748] p 3004 N95-30794
Reynolds stress of localized toroidal modes
[DE95-008750] p 3004 N95-30795
Experimental investigation of the effectiveness of flow-through modules for electronics cooling
[AD-A293284] p 2861 N95-30950
Method of normal coordinates in the formulation of a system with dissipation: The harmonic oscillator
[DE95-613372] p 3020 N95-32094
DISSOLVING
Dissolution of eutectic microstructures
[DE95-010244] p 2804 N95-30757
DISTILLATION
Synthesis of separation systems: Methods and applications in downstream gas processes
[PB95-208518] p 2798 N95-32372
DISTORTION
Adaptive image enhancement of text images that contain touching or broken characters
[DE95-010173] p 3023 N95-30620
Introduction to the theory of Goyaks: Operator manifold approach to geometry and particle physics
[DE95-613460] p 2980 N95-30740
Calculated structures and electronic absorption spectroscopy for magnesium phthalocyanine and its anion radical
[AD-A293672] p 2796 N95-31596
DISTRIBUTED PARAMETER SYSTEMS
Dynamic routation in distributed environments
[PB95-197968] p 2847 N95-30812
Representation of feedback operators for hyperbolic systems
[NASA-CR-198171] p 2960 N95-31319
DISTRIBUTED PROCESSING
Selecting optimal experiments for feedforward multilayer perceptrons
[AD-A290856] p 2949 N95-30406
Expert system for assessing accuracy of models of physical phenomena and for selecting alternate models in the presence of noise
[AD-D017348] p 2974 N95-30550
Foundations of technology for constructing highly reliable distributed realtime systems
[AD-A293254] p 2931 N95-30892
Implementation of KIVA-3 on distributed memory MIMD computers
[DE95-010288] p 2931 N95-31130
Requirements for security signalling
[DE95-008714] p 2948 N95-31605
DISTRIBUTION FUNCTIONS
Extension to higher dimensions of the Jaeschke-Eicker result on the standardized empirical process
[PB95-206868] p 2965 N95-30523
DISTRIBUTION MOMENTS
Fitting discrete distributions on the first two moments
[PB95-197885] p 2950 N95-30462
DIURNAL VARIATIONS
Suprioius semi-diurnal variation in the E.R.B.E. outgoing longwave radiation
[NOAA-TR-NESDIS-84] p 2913 N95-30643
Middle atmosphere structure and dynamics: Lidar studies at the South Pole, Syowa and Urbana p 2916 N95-31736
DIVERGENCE
An analysis of gas phase ethanol/water chemistry for diamond CVD
[AD-A293009] p 2795 N95-31473
DIVING (UNDERWATER)
Effect of oxygen and decompression bubbles on inert gas washout
[PB95-196556] p 2925 N95-30665
DMSP SATELLITES
SSUSI single sensor auroral E-layer algorithm: Functional description
[AD-A288630] p 2914 N95-31012
DOMAINS
PADO: Learning tree structured algorithms for orchestration into an object recognition system
[AD-A293109] p 2943 N95-32020
DOMINANCE
Testing vector boson dominance of electroweak interactions via e(+)e(-) (yields) f-bar f
[DE95-620528] p 2982 N95-31214
DONOR MATERIALS
Photophysical properties of opto-electric molecules studied by time-resolved microwave conductivity
[PB95-196994] p 2980 N95-30774
DOORS
Aircraft evacuations through Type-3 exits I: Effects of seat placement at the exit
[DOT/FAA/AM-95/22] p 2748 N95-31845
DOPED CRYSTALS
Orientation of rapid thermally annealed lead zirconate titanate thin films on (111) Pt substrate
[DE95-615232] p 2811 N95-30422
Alloying effects of Kondo insulators
[DE95-614308] p 3010 N95-30644
Electrical conductivity study on polythiophenes films
[DE95-614309] p 2813 N95-30645
A theoretical analysis of steady-state photocurrents in simple silicon diodes
[NASA-CR-198885] p 2859 N95-30651
Glass matrix doped with activated luminescent nanocrystalline particles
[AD-D017416] p 2816 N95-31010
A 1.94 micrometer laser apparatus, system and method using a thulium-doped yttrium-lithium-fluoride laser crystal pumped with a diode laser
[AD-D017435] p 2884 N95-31213
Method of synthesizing high quality, doped diamond and diamonds and devices obtained therefrom
[AD-D017432] p 3014 N95-31269
Deposition and characterization of photoconductive PZT thin films
[ATR-93(8308)-7] p 2819 N95-31417
Nonlinear optics in novel composite media
[AD-A293866] p 2999 N95-31542
Silicon carbide-silicon heterostructure solar cells p 2905 N95-31952
Infrared and millimeter wave detection using thin films of Pb doped BiSrCaCuO superconductor p 2840 N95-32129
Laser properties of Yb(3+)-doped Sr5(PO4)3F crystals
[DE95-010686] p 3016 N95-32268
Superconducting and normal-state properties of novel materials
[DE95-012368] p 3017 N95-32366
DOPPLER EFFECT
Point reflector model for the simulation of radar target glint and Doppler phenomena
[PB95-222980] p 2857 N95-32314
DOPPLER RADAR
Offshore next generation weather radar (NEXRAD) OT&E integration and OT&E operational test
[AD-A293223] p 2848 N95-30902
Terminal doppler weather radar (TDWR) build 5B operational test and evaluation (OT&E) integration and OT&E operational test plan
[AD-A293251] p 2848 N95-30910
Development of a novel wind lidar, phase 1
[AD-A292703] p 2849 N95-30935
LAWS hurricane studies
[NASA-CR-189438] p 2919 N95-31128
Initial evaluation of the Oregon State University planetary boundary layer column model for ITWS applications
[AD-A293775] p 2920 N95-31465
Using satellites for radar performance monitoring and calibration
[AD-A293809] p 2852 N95-31588
Adaptive space-time processing for airborne radars based on Doppler pre-processing
[PB95-205464] p 2854 N95-32114
The Telecommunications and Data Acquisition Report
[NASA-CR-198911] p 2854 N95-32221
Determination of the position of Jupiter from radio metric tracking of Voyager 1 p 2854 N95-32222
The application of noncoherent Doppler data types for Deep Space Navigation p 2765 N95-32226
The dynamic range of radar signal generation in the MSS-2 simulation facility
[AD-A293856] p 2857 N95-32259
DOSAGE
Behaviour of polymers in radioactive environments: Effects of dose speed
[DE95-621008] p 2818 N95-31221
Amorphization and the effect of implanted ions in SiC
[DE95-009699] p 2985 N95-31642
DOSIMETERS
Electromagnetic field exposure dosimeter
[AD-A293191] p 2927 N95-30981
Summaries of fiscal year 1994 projects in medical applications and biophysical research
[DE95-010405] p 2925 N95-32040
DOUBLE BASE PROPELLANTS
An ignition model for modern double base propellants p 2800 N95-31292
Measurement of temperatures and OH concentrations of solid propellant flames using absorption spectroscopy p 2801 N95-31302
Studies of reactions pertaining to and development of a reduced mechanism for the double base propellant dark zone p 2801 N95-31312
DOUBLE BASE ROCKET PROPELLANTS
Enhanced alkaline hydrolysis and biodegradability studies of nitrocellulose-bearing missile propellant p 2772 N95-31752
DRAG
Electromagnetically activated compliant wavy-wall
[AD-D017340] p 2866 N95-30412
DRAG REDUCTION
Method and system for reducing drag on a body moving through a fluid medium
[AD-D017336] p 2867 N95-30672
DROP SIZE
Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-30987
The Al and A(lc)l2O3 droplet cloud in solid rocket motors p 2770 N95-30988
Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-31195
DROPS (LIQUIDS)
National Institute for Global Environmental Change
[DE95-008333] p 2907 N95-30358
Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-31195
The Al and Al2O3 droplet cloud in solid rocket motors p 2770 N95-31196
Selected flows with free surfaces: Streams and drops
[IFTR-3/1995] p 2876 N95-31817
Ultrasensitive fluorescence detection and photophysics in microdroplets
[DE95-010283] p 2798 N95-32086
DRUGS
Porous spherical shells and microspheres by electrodispersion precipitation
[DE95-009073] p 2815 N95-30799
DUALITY PRINCIPLE
Double charmed baryons production at B-factory
[DE95-620540] p 2983 N95-31219
DUCT GEOMETRY
An investigation of the side-dump dual in-line ramjet combustor p 2756 N95-31199
DUCTED FLOW
Solution of the three-dimensional Helmholtz equation with nonlocal boundary conditions
[NASA-TM-110174] p 2974 N95-30850
DUCTILITY
Analysis of variation embedding tests with 17 MM dowel: Densified veneer wood FOREST project, part 7
[PB95-206876] p 2963 N95-30680
The effect of grain refinement on the room-temperature ductility of as-cast Fe3Al-based alloys
[DE95-010121] p 2805 N95-31107

Shape memory properties of an iron modified nickel aluminide alloy
[DE95-010223] p 2805 N95-31111
Large deformation failure mechanisms in nonlinear solids
[AD-A293010] p 2896 N95-31474

DUMP COMBUSTORS
An investigation of the side-dump dual in-line ramjet combustor p 2756 N95-31199
A pulsed liquid fuel ramjet p 2756 N95-31201

DURABILITY
State-of-the-art low-cost solar reflector materials
[DE95-000260] p 2902 N95-30526
Evaluation of alternative pavement marking materials
[AD-A292973] p 2763 N95-31468
NaK pool-boiler solar receiver durability bench test. Volume 2: Metallurgical analysis
[DE95-010338] p 2905 N95-31640
Robust Rocket Engine Concept
[NASA-TM-107010] p 2770 N95-32121

DYE LASERS
Reflectivity of plasmas created by high-intensity, ultra-short laser pulses
[DE95-009536] p 3004 N95-30742
Z-scan using a dye laser
[PB95-222923] p 3002 N95-32312

DYNAMIC CHARACTERISTICS
Localization in tungsten heavy alloys subjected to shearing deformations under superimposed high pressures
[AD-A293177] p 2804 N95-30977
Assessment of dynamic burning behavior for JA-2 propellant rods p 2800 N95-31299
Normal mode tunes for linear coupled motion in six dimensional phase space
[DE95-011565] p 2994 N95-32244

DYNAMIC CONTROL
Control of mechanical systems with rolling contacts: Applications to robotics p 2889 N95-31332
Vorticity dynamics and control of dynamic stall
[AD-A288658] p 2756 N95-31400
Global stabilization of nonlinear gyroscopic systems p 2881 N95-31836

DYNAMIC LOADS
Sea ice stress research
[AD-A293164] p 2923 N95-30964

DYNAMIC MODELS
Control of flexible spacecraft structures using H-infinity wave absorbing control
[AD-A293141] p 2766 N95-30919

DYNAMIC PROGRAMMING
Statistical interface for chaotic signal in noise
[AD-A290271] p 2848 N95-30932
Fast algorithms for three-dimensional inverse scattering problems
[AD-A293510] p 2852 N95-31537
An analysis of hierarchical genetic programming
[AD-A293964] p 2942 N95-31657

DYNAMIC RANGE
Improved linear dynamic range in externally modulated fiber-optic links p 3001 N95-31950
The dynamic range of radar signal generation in the MSS-2 simulation facility
[AD-A293856] p 2857 N95-32259

DYNAMIC RESPONSE
Generation of earthquake signals
[PB95-211223] p 2913 N95-30631
Minimizing structural vibrations with Input Shaping (TM)
[NASA-CR-189439] p 2893 N95-30786
Response of mechanically fastened composite joints under multiple bypass loads p 2785 N95-30824
Dynamical systems as models for flow-induced vibrations
[PB95-206991] p 2869 N95-30956
Energy flow analysis of coupled structures p 2895 N95-31316
Studies in non-linear multi-mode responses of harmonically excited rectangular plates with internal resonances p 2895 N95-31331
Impact behavior of the active zone within a frozen soil profile
[AD-A292909] p 2915 N95-31386
Analytic and experimental investigation of rotordynamic response and backward whirl induced by split resonance
[AD-A293639] p 2889 N95-31566
Response of dual-layered structures subjected to shock pressure wave
[AD-A293731] p 2896 N95-31568
Evaluation of nonlinear structural dynamic responses using a fast-running spring-mass formulation
[DE95-008503] p 2967 N95-31625
A mode decomposition based finite element formulation for the nonlinear dynamics of flexible spatial structures and mechanisms p 2898 N95-32118

DYNAMIC STABILITY
Results from tests of the Kearfott T16-B Inertial Measurement Unit
[PB95-212031] p 2879 N95-30502
Beam stability at SRRC storage ring
[DE95-010842] p 2995 N95-32260

DYNAMIC STRUCTURAL ANALYSIS
Generation of earthquake signals
[PB95-211223] p 2913 N95-30631
Advanced small rocket chambers. Option 3: 110 lbf Ir-Re rocket, volume 2
[NASA-CR-195435-VOL-2] p 2769 N95-31170
Energy flow analysis of coupled structures p 2895 N95-31316
A finite element formulation for the time domain vibration analysis of an elastic-viscoelastic structure p 2895 N95-31318
Response of dual-layered structures subjected to shock pressure wave
[AD-A293731] p 2896 N95-31568
Finite element analysis of smart structures and modal testing of a flexible spacecraft arm
[AD-A293761] p 2890 N95-31576
Nonlinear dynamics and chaotic motions of a singularly perturbed nonlinear viscoelastic beam p 2897 N95-31706
A computational procedure for multibody systems including flexible beam dynamics
[NASA-CR-199035] p 2897 N95-31730
Finite element analysis of damped vibrations of laminated composite plates
[ISBN-0-315-84928-2] p 2789 N95-31731
Vibration control for precision manufacturing at Sandia National Laboratories
[DE95-009582] p 2839 N95-32082
A mode decomposition based finite element formulation for the nonlinear dynamics of flexible spatial structures and mechanisms p 2898 N95-32118
Staggered solution procedures for multibody dynamics simulation
[NASA-CR-199034] p 2899 N95-32202
Computational methods and software systems for dynamics and control of large space structures
[NASA-CR-199036] p 2767 N95-32204
A transient FETI methodology for large-scale parallel implicit computations in structural mechanics
[NASA-CR-199040] p 2945 N95-32214

DYNAMIC TESTS
Influence of strain rate and temperature on the mechanical behavior of iron aluminide-based alloys
[DE95-009426] p 2808 N95-31636

DYNAMICAL SYSTEMS
Nonlinear dynamical systems: Elements of a complex system analysis
[PB95-211652] p 2950 N95-30478
Around Ratner --- applications of Ratner's measure and topological theorems on unipotent homogeneous actions
[DE95-613377] p 2958 N95-30770
Dynamical systems as models for flow-induced vibrations
[PB95-206991] p 2869 N95-30956
Global stabilization of nonlinear gyroscopic systems p 2881 N95-31836

E

E GLASS
Large area smart piezoelectric and pyroelectric sensors
[AD-A291487] p 2859 N95-30561

E REGION
SSUSI single sensor auroral E-layer algorithm: Functional description
[AD-A288630] p 2914 N95-31012

EARTH ATMOSPHERE
IR DIAL performance modeling
[DE95-008377] p 2912 N95-30373
Atmospheric environmental implications of propulsion systems p 2771 N95-31747
Numerical simulation of the Langevin equation for skewed turbulence
[DE95-009477] p 2877 N95-32049
Preliminary design for Arctic atmospheric radiative transfer experiments
[DE95-009580] p 2917 N95-32080

EARTH IONOSPHERE
Kiruna geophysical data. Data summary 94/4-6, April-June 1994
[PB95-210365] p 2913 N95-30627
Kiruna geophysical data. Data summary 94/1-3, January-March 1994
[PB95-210373] p 2913 N95-30628
Holistic analysis of gamma-ray spectra in instrumental neutron activation analysis
[PB95-214458] p 2979 N95-30639
A prototype ionospheric tomography system (ITS)
[AD-A293015] p 2916 N95-31698
Underdense heating of the ionosphere using oblique high power HF radiowaves p 2917 N95-31951

EARTH MAGNETOSPHERE
Oxygen charge state abundance in the inner magnetosphere
[AD-A293497] p 2915 N95-31536
Aspects of the magnetospheric amplification phenomenon in ducted whistler-mode waves p 2916 N95-31718
DE-1 observations of polar O(+) stream bulk parameters and comparison with a model of the centrifugally-accelerated polar wind
[NASA-CR-198930] p 2917 N95-31743
A collisionless shock wave experiment
[DE95-009489] p 3008 N95-32351

EARTH MANTLE
Seismic studies of subducted lithosphere p 2915 N95-31335

EARTH OBSERVATIONS (FROM SPACE)
STS-70 flight: Day 6
[NASA-TM-110664] p 2764 N95-30875
STS-70 flight: Day 3
[NASA-TM-110661] p 2765 N95-30878
STS-70 flight: Day 2
[NASA-TM-110660] p 2765 N95-30879
European plans for new clocks in space p 2968 N95-32324

EARTH OBSERVING SYSTEM (EOS)
LAWS hurricane studies
[NASA-CR 189438] p 2919 N95-31128

EARTH ORBITAL ENVIRONMENTS
The NASA/JPL Evaluation of Oxygen Interactions with Materials-3 (EOIM-3)
[NASA-CR-198865] p 2796 N95-31660
Operation of the computer model for direct atomic oxygen exposure of Earth satellites
[NASA-CR-198188] p 2767 N95-32189

EARTH ORBITAL RENDEZVOUS
STS-71 post flight presentation
[NASA-TM-110658] p 2764 N95-30852
Mir 18 post flight presentation
[NASA-TM-110657] p 2766 N95-30854

EARTH ORBITS
Mir 18 post flight presentation
[NASA-TM-110657] p 2766 N95-30854
Radiation effects in space: The Clementine 1 mission
[DE95-011513] p 3032 N95-32282

EARTH RADIATION BUDGET
Suprioius semi-diurnal variation in the E.R.B.E. outgoing longwave radiation
[NOAA-TR-NESDIS-84] p 2913 N95-30643

EARTH RADIATION BUDGET EXPERIMENT
Suprioius semi-diurnal variation in the E.R.B.E. outgoing longwave radiation
[NOAA-TR-NESDIS-84] p 2913 N95-30643

EARTH SCIENCES
Directory of global environmental sciences in Japan p 2899 N95-31413

EARTH SURFACE
The land component of the global climate system with adequate spatial resolution
[DE95-009323] p 2908 N95-30686

EARTHQUAKES
Generation of earthquake signals
[PB95-211223] p 2913 N95-30631
ESAA: Environment for Seismic Activity Analysis
[DE95-612416] p 2913 N95-30675
SHEAT: A computer code for probabilistic seismic hazard analysis, user's manual
[DE95-717874] p 2913 N95-30758
Seismic studies of subducted lithosphere p 2915 N95-31335

ECCENTRIC ORBITS
A feedback linearization approach to orbital maneuvers p 2765 N95-30841

ECHO SUPPRESSORS
Energy absorption apparatus
[AD-D017361] p 2814 N95-30715

ECHOCARDIOGRAPHY
Decompression illness, observable bubbles. (Session K)
[PB95-195285] p 2926 N95-30511

ECOLOGY
Carbon dioxide concentrations in surface water and the atmosphere during 1986-1989 NOAA/PMEL cruises in the Pacific and Indian Oceans
[DE95-009659] p 2910 N95-32099

ECONOMIC ANALYSIS
Economical analysis relating to the global warming issue
[DE95-764072] p 2908 N95-30677
A manual for the economic evaluation of energy efficiency and renewable energy technologies
[DE95-000211] p 2903 N95-30896

ECONOMIC FACTORS
Evaluating the cost effectiveness of environmental projects: Case studies in aerospace and defense p 2774 N95-31762
ECOSYSTEMS
Field performance of the Walker Branch throughfall displacement experiment
[DE95-008677] p 2908 N95-30793
EDDY VISCOSITY
Advanced k-epsilon modeling of heat transfer
[NASA-CR-4679] p 2874 N95-31423
EDEMA
Effects of air bubbles on rabbit blood brain barrier
[PB95-195293] p 2925 N95-30512
EDGE DETECTION
Artificial neural networks and model-based recognition of 3-D objects from 2-D images p 2954 N95-31838
EDGE DISLOCATIONS
Characterization of /11'01/ twin dislocation structures in evaporated titanium thin films by HREM
[DE95-615391] p 2820 N95-31623
EDGES
Image enhancement by edge-preserving filtering
[DE95-008077] p 2936 N95-31056
Thin-film edge field emitter device and method of manufacture therefor
[AD-D017453] p 2862 N95-31275
EDUCATION
C++ as an introductory programming language
[PB95-195715] p 2933 N95-30539
Non-comparability of female and male admission test takers: Evaluation through follow-up
[PB95-212080] p 3021 N95-30700
Training metacognitive skills for problem solving
[AD-A290310] p 2959 N95-31002
Confederation Verification, Validation, and Accreditation Master Plan (CVVAMP). Technical test plan
[AD-A289717] p 2936 N95-31050
AASERT-92 augmentation of research training in chronobiology: Regulation of the mammalian circadian clock by neurotransmitters
[AD-A288243] p 2925 N95-31144
Human-computer interaction (HCI) specialization track Masters of Software Engineering (MSE) program
[AD-A292895] p 2930 N95-31401
Nonparametric methods for incomplete data in reliability and for changepoints in smooth functions
[AD-A292773] p 2963 N95-31429
Use of body surface heat patterns for predicting and evaluating acute lower extremity pain among soldiers
[AD-A292829] p 2927 N95-31446
EGRESS
Aircraft evacuations through Type-3 exits I: Effects of seat placement at the exit
[DOT/FAA/AM-95/22] p 2748 N95-31845
EIGENVALUES
Complex conjugate pairs in stationary Sturmians
[DE95-616279] p 2976 N95-30429
Analysis on fractals, laplacians on self-similar sets, noncommutative geometry and spectral dimensions
[PB95-208005] p 2956 N95-30556
The iteration formula of the Maslov-type index theory with applications to nonlinear Hamiltonian systems
[DE95-613379] p 2957 N95-30676
Singular eigenfunctions for shearing fluids I
[DE95-008952] p 2868 N95-30763
Around Ratner — applications of Ratner's measure and topological theorems on unipotent homogeneous actions
[DE95-613377] p 2958 N95-30770
A finite element formulation for the time domain vibration analysis of an elastic-viscoelastic structure p 2895 N95-31318
A modification to the GMRES method for ill-conditioned linear systems
[DE95-010661] p 2962 N95-32076
EIGENVECTORS
Complex conjugate pairs in stationary Sturmians
[DE95-616279] p 2976 N95-30429
Generalized deformed para-Bose oscillator and its coherent states
[DE95-613444] p 2963 N95-30610
Singular eigenfunctions for shearing fluids I
[DE95-008952] p 2868 N95-30763
EJECTION INJURIES
Vertical impact testing of two helmet-mounted night vision systems
[AD-A293055] p 2931 N95-31671
EL NINO
Forecast of Atlantic seasonal hurricane activity for 1994 p 2918 N95-30832
Summary of 1993 Atlantic tropical cyclone activity and verification of author's forecast. A year of unanticipated light hurricane activity and a poor forecast: The expected dissipation of the El Nino did not take place and Caribbean basin surface pressure became quite high p 2918 N95-30842
Early August updated forecast of Atlantic seasonal hurricane activity for 1994 p 2919 N95-30844
ELASTIC CYLINDERS
Wave propagation in a fluid-loaded homogeneous, transversely isotropic, elastic cylinder of arbitrary thickness
[AD-A292728] p 2869 N95-30946
ELASTIC DEFORMATION
An extremum principle for the analysis and design of constitutively nonlinear systems p 2898 N95-32112
ELASTIC PLATES
An analysis of the cover of a liquid-filled circular container
[IFTR-1/1995] p 2895 N95-31338
ELASTIC PROPERTIES
An explanation for the shape of nanoindentation unloading curves based on finite element simulation
[DE95-008905] p 2812 N95-30548
Wave propagation in a fluid-loaded homogeneous, transversely isotropic, elastic cylinder of arbitrary thickness
[AD-A292728] p 2869 N95-30946
Elastic and inelastic micromechanical analysis of functionally graded materials and laminated structures using transformation fields p 2787 N95-31347
An extremum principle for the analysis and design of constitutively nonlinear systems p 2898 N95-32112
Numerical evaluation of three-dimensional crack-tip integrals for layered anisotropic solids p 2898 N95-32191
ELASTIC SCATTERING
Density dependent effective interactions
[DE95-616348] p 2977 N95-30447
Inversion of the total cross sections for electron-molecule and electron-atom scattering
[DE95-616466] p 2978 N95-30583
ELASTIC WAVES
Propagation and scattering of elastic waves in laminated circular cylinders
[ISBN-0-315-85957-1] p 2848 N95-30828
Control of flexible spacecraft structures using H-infinity wave absorbing control
[AD-A293141] p 2766 N95-30919
Fractional delay waveguide modeling of acoustic tubes
[PB95-206637] p 2975 N95-31650
ELASTOHYDRODYNAMICS
Fluid-film lubrication with an application to piston rings p 2890 N95-32119
ELASTOMERS
Electromagnetically activated compliant wavy-wall
[AD-D017340] p 2866 N95-30412
Compatibility of Single Hydraulic Fluid with military specification fluids, seals and metallurgy
[AD-A292954] p 2821 N95-31663
Thermoplastic elastomers as a binder in composite propellants
[PB95-211553] p 2837 N95-32249
ELASTOPLASTICITY
An analysis of the cover of a liquid-filled circular container
[IFTR-1/1995] p 2895 N95-31338
ELECTRIC ARCS
Effects of thermal and electrical stressing on the breakdown behavior of space wiring
[NASA-CR-198360] p 2768 N95-30860
ELECTRIC BATTERIES
A Monte-Carlo model of ionic transport across a solid interface
[DE95-613447] p 3011 N95-30737
Composite polymer electrolyte for lithium batteries
[AD-A293924] p 2820 N95-31514
Evaluation and analysis survey on new energy introduction, part 3
[DE95-769806] p 2906 N95-32072
ELECTRIC CHARGE
The radiation conditioned by the 'velocity part' of the electromagnetic field of a moving charge
[DE95-613366] p 2846 N95-30605
Metal nanotubule membranes with electrochemically switchable ion-transport selectivity
[AD-A292712] p 2793 N95-30938
Contactless characterization of semiconductors using laser-induced surface photo-charge voltage measurements
[AD-A293618] p 2863 N95-31725
A search for millicharged particles at SLAC
[DE95-010694] p 2987 N95-32026
ELECTRIC CONDUCTORS
Molecular nanoclusters as precursors to conductive thin films and crystals
[AD-A290278] p 3014 N95-31189
ELECTRIC CONNECTORS
Performance evaluation of high-temperature superconducting current leads for micro-SMES systems
[DE95-005843] p 2861 N95-30943
Ceramic/Metal Composite Circuit-Board-Level Technology for Application Specific Electronic Modules (ASEM's)
[AD-A293183] p 2787 N95-30978
ELECTRIC CONTROL
Flying qualities of civil transport aircraft with electrical flight control p 2761 N95-32016
ELECTRIC CURRENT
A theoretical analysis of steady-state photocurrents in simple silicon diodes
[NASA-CR-198885] p 2859 N95-30651
Stability analysis of the TPX toroidal field coil
[DE95-009666] p 2865 N95-32100
ELECTRIC DIPOLES
Semi-iterative method for estimation of the dipole parameters using the knowledge of the dipole orientation
[PB95-211736] p 2858 N95-30480
Excitation mechanisms of 2s(sub 1/2)-2p(sub 3/2) and 2p(sub 1/2)-2p(sub 3/2)in U(82+) through U(89+)
[DE95-010265] p 2993 N95-32042
ELECTRIC DISCHARGES
Development of a method for measurement of triboelectric charging
[PB95-211322] p 2859 N95-30633
Optimization of a thermoelectric IR-detector for low working temperature
[NASA-CR-198933] p 2880 N95-30752
No-thermal plasma processing of VOCs and NO(x) at LLNL
[DE95-011445] p 2911 N95-32281
ELECTRIC EQUIPMENT TESTS
Test operations procedure (TOP) 1-2-512 electromagnetic compatibility tests
[AD-A293758] p 2852 N95-31574
ELECTRIC FIELDS
Electromagnetically activated compliant wavy-wall
[AD-D017340] p 2866 N95-30412
Device for low electric-field induced switching of Langmuir-Blodgett ferroelectric liquid crystal polymer films
[AD-D017457] p 3011 N95-30728
Fiber optic interferometric electric field and voltage sensor utilizing and electrostrictive transducer
[AD-D017433] p 2996 N95-30753
Porous spherical shells and microspheres by electrodispersion precipitation
[DE95-009073] p 2815 N95-30799
Electrified microheterogeneous catalysis
[AD-D017446] p 2794 N95-31271
Two-dimensional Finite Difference Time Domain (FD-TD) model of electromagnetic (EM) scattering from a buried rectangular object
[AD-A293685] p 2852 N95-31601
Determination of electric and magnetic fields in open trap plasmas by means of atomic-molecular beam hydrogen isotopes
[DE95-614177] p 3006 N95-31680
Microstructure of Al2O3 irradiated with an applied electric field
[DE95-010278] p 2822 N95-32043
ELECTRIC GENERATORS
A time stepping coupled finite element-state space modeling environment for synchronous machine performance and design analysis in the ABC frame of reference p 2864 N95-31948
ELECTRIC IGNITION
Progress in developing propellant ignition systems based upon electrically conductive polymers p 2800 N95-31300
ELECTRIC MOTORS
Compatibility of refrigerants and lubricants with motor materials under retrofit conditions
[DE95-010185] p 2814 N95-30767
ELECTRIC NETWORKS
Nordic symposium on analysis of electromagnetic transient phenomena using EMTP, part 3
[PB95-206504] p 2849 N95-31158
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 2
[PB95-206579] p 2849 N95-31160
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 4
[PB95-206587] p 2849 N95-31181
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 1
[PB95-206595] p 2850 N95-31182
ELECTRIC POTENTIAL
Low-voltage cathodoluminescence of europium-activated yttrium orthovanadate
[DE95-008536] p 3008 N95-30382
Density dependent effective interactions
[DE95-616348] p 2977 N95-30447
Worldwide intercomparison of impulse voltage measuring systems at 600 kV level
[PB95-195574] p 2858 N95-30538

Off-potential measurement systems for impressed current cathodic protection
[AD-A290876] p 2812 N95-30558
Development of a method for measurement of triboelectric charging
[PB95-211322] p 2859 N95-30633
A theoretical analysis of steady-state photocurrents in simple silicon diodes
[NASA-CR-198865] p 2859 N95-30651
Voltage surge suppression power circuits
[AD-D017454] p 2860 N95-30726
Fiber optic interferometric electric field and voltage sensor utilizing and electrostrictive transducer
[AD-D017433] p 2996 N95-30753
Decimation of encoding errors in an optimum SNS 2 micron low-noise CMOS ADC
[AD-A293208] p 2860 N95-30900
Energy storage and alternatives to improve train voltage on a mass transit system
[DE95-010344] p 2906 N95-32090
Voltage controlled MESFET pulse shape generator
[DE95-011656] p 2865 N95-32300

ELECTRIC POWER PLANTS

Production simulator for wave power plants
[PB95-212262] p 2907 N95-32286

ELECTRIC POWER TRANSMISSION

Nordic symposium on analysis of electromagnetic transient phenomena using EMTP, part 3
[PB95-206504] p 2849 N95-31158
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 2
[PB95-206579] p 2849 N95-31160
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 4
[PB95-206587] p 2849 N95-31181
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 1
[PB95-206595] p 2850 N95-31182
Prime power for shipboard high-average power FELs
[AD-A293718] p 2886 N95-31833

ELECTRIC PULSES

Electromyostimulation, circuits and monitoring
[NASA-TM-110741] p 2926 N95-30846

ELECTRIC STIMULI

Electromyostimulation, circuits and monitoring
[NASA-TM-110741] p 2926 N95-30846

ELECTRIC WIRE

Effects of thermal and electrical stressing on the breakdown behavior of space wiring
[NASA-CR-198360] p 2768 N95-30860
Electrical short circuit and current overload tests on aircraft wiring
[AD-A293308] p 2860 N95-30922

ELECTRICAL ENGINEERING

Effects of thermal and electrical stressing on the breakdown behavior of space wiring
[NASA-CR-198360] p 2768 N95-30860
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-025] p 2771 N95-31360
FBIS report: Science and technology. Central Eurasia
[FBIS-UST-95-029] p 2863 N95-31728
FBIS report: Science and technology. Central Eurasia
[FBIS-UST-95-028] p 2839 N95-31729

ELECTRICAL FAULTS

Effects of thermal and electrical stressing on the breakdown behavior of space wiring
[NASA-CR-198360] p 2768 N95-30860

ELECTRICAL GROUNDING

Test operations procedure (TOP) 1-2-512 electromagnetic compatibility tests
[AD-A293758] p 2852 N95-31574

ELECTRICAL IMPEDANCE

Scattering and radiation from cylindrically conformal antennas p 2847 N95-30669

ELECTRICAL INSULATION

Alloying effects of Kondo insulators
[DE95-614308] p 3010 N95-30644
Effects of thermal and electrical stressing on the breakdown behavior of space wiring
[NASA-CR-198360] p 2768 N95-30860

ELECTRICAL MEASUREMENT

Visualization of circuit card electromagnetic fields
[AD-A291491] p 2845 N95-30398
Worldwide intercomparison of impulse voltage measuring systems at 600 kV level
[PB95-195574] p 2858 N95-30538
Off-potential measurement systems for impressed current cathodic protection
[AD-A290876] p 2812 N95-30558
Development of a method for measurement of triboelectric charging
[PB95-211322] p 2859 N95-30633
Optimization of a thermoelectric IR-detector for low working temperature
[NASA-CR-198933] p 2880 N95-30752
Electromyostimulation, circuits and monitoring
[NASA-TM-110741] p 2926 N95-30846
Volumetric and electro analytical techniques for chemical characterization of nuclear grade Ag-In-Cd alloys
[DE95-620664] p 2807 N95-31407
Dielectric property measurement of zirconia fibers at high temperatures
[DE95-010991] p 2821 N95-31705
Contactless characterization of semiconductors using laser-induced surface photo-charge voltage measurements
[AD-A293618] p 2863 N95-31725

ELECTRICAL PROPERTIES

Direct determination of grain boundary atomic structure in SrTiO3
[DE95-008847] p 3010 N95-30544
Development of a method for measurement of triboelectric charging
[PB95-211322] p 2859 N95-30633

ELECTRICAL RESISTANCE

Modeling of thermal response of filament used in T-jump experiment p 2800 N95-31297
Method and apparatus for non-destructively measuring local resistivity of semiconductors
[AD-D017436] p 2862 N95-31343

ELECTRICAL RESISTIVITY

Electrical conductivity study on polythiophenes films
[DE95-614309] p 2813 N95-30645
A simple model for the dc flux transformer in layered superconductors with Josephson coupling
[DE95-614468] p 2859 N95-30649
Stabilization of the resistive shell mode in tokamaks
[DE95-008748] p 3004 N95-30794
Investigations of YBaCuO materials with near-room-temperature resistivity transitions
[AD-A293405] p 3013 N95-31008
Progress in developing propellant ignition systems based upon electrically conductive polymers p 2800 N95-31300
Method and apparatus for non-destructively measuring local resistivity of semiconductors
[AD-D017436] p 2862 N95-31343

ELECTRICITY

Electromagnetic field exposure dosimeter
[AD-A293191] p 2927 N95-30981

ELECTRO-OPTICAL EFFECT

Z-scan using a dye laser
[PB95-222923] p 3002 N95-32312

ELECTRO-OPTICS

Integrated X-ray testing of the electro-optical breadboard model for the XMM reflection grating spectrometer
[DE95-008829] p 2879 N95-30507
Photophysical properties of opto-electric molecules studied by time-resolved microwave conductivity
[PB95-196994] p 2980 N95-30774
Nonlinear optical processes in polymer films
[AD-A293384] p 2815 N95-30955
Optical feature recognition
[AD-A293168] p 2997 N95-30966
Microwave electro-optic mixer
[AD-D017328] p 2862 N95-31179
Materials for adaptive structural acoustic control, volume 3
[AD-A293446] p 2788 N95-31371
Adaptive optics design for the advanced electro-optical system (AEOS)
[AD-A293972] p 2974 N95-31527
Ultraviolet and visible lasers: Rare earth-doped waveguide devices and non-linear optical extraction techniques
[AD-A293976] p 2885 N95-31528
Solid state research
[AD-A293083] p 3015 N95-31826
Improved linear dynamic range in externally modulated fiber-optic links p 3001 N95-31950

ELECTROACOUSTIC TRANSDUCERS

Investigating the use of smart acoustically active surfaces for flow separation control in turbomachinery
[AD-A292819] p 2874 N95-31443

ELECTROCHEMISTRY

Metal nanotubule membranes with electrochemically switchable ion-transport selectivity
[AD-A292712] p 2793 N95-30938
Studies of C(60) and C(70) and other fullurenes: Synthesis, derivation, electrochemistry, lubricant properties and new composition materials
[AD-A292726] p 3012 N95-30944
Consequences of kinetic dispersion on the electrochemistry of an adsorbed redox-active monolayer
[AD-A292794] p 2795 N95-31437

ELECTRODEPOSITION

High temperature barrier coatings for refractory metals
[NASA-CR-195475] p 2802 N95-30531
The electrodeposition of low contraction chromium/molybdenum alloys using pulse-reverse plating
[AD-A292727] p 2804 N95-30945

ELECTRODES

Biosensors based on cross-linking of biotinylated Glucose Oxidase by avidin
[AD-A290439] p 2925 N95-30452
Active turbulence control using microelectrodes, permanent magnets in microgrooves
[AD-D017351] p 2867 N95-30553
Device for low electric-field induced switching of Langmuir-Blodgett ferroelectric liquid crystal polymer films
[AD-D017457] p 3011 N95-30728
Electron transfer kinetics of self-assembled ferrocene C(12) alkanethiol monolayers on gold electrodes from 125K to 175K
[AD-A292754] p 2984 N95-31427
Lithium ion aqueous cells
[AD-A293828] p 2905 N95-31554

ELECTRODYNAMICS

Global Ultraviolet Imager (GUVI) investigation
[NASA-CR-189430] p 2917 N95-31820

ELECTROLYTES

Electrochemical vapour deposition of SOFC interconnection materials
[PB95-197844] p 2812 N95-30459
Composite polymer electrolyte for lithium batteries
[AD-A293924] p 2820 N95-31514
Lithium ion aqueous cells
[AD-A293828] p 2905 N95-31554
Design and processing of materials by biomimicking. Sections 1. Publications
[AD-A293852] p 2820 N95-31559

ELECTROLYTIC CELLS

Lithium ion aqueous cells
[AD-A293828] p 2905 N95-31554

ELECTROMAGNETIC ABSORPTION

Kiruna geophysical data. Data summary 94/4-6, April-June 1994
[PB95-210365] p 2913 N95-30627
Kiruna geophysical data. Data summary 94/1-3, January-March 1994
[PB95-210373] p 2913 N95-30628

ELECTROMAGNETIC COMPATIBILITY

EMC requirements for type approval of marine electronics. Nordtest project 1157-94
[PB95-211330] p 2859 N95-30596
Test operations procedure (TOP) 1-2-512 electromagnetic compatibility tests
[AD-A293758] p 2852 N95-31574

ELECTROMAGNETIC COUPLING

A simple model for the dc flux transformer in layered superconductors with Josephson coupling
[DE95-614468] p 2859 N95-30649

ELECTROMAGNETIC FIELDS

The interaction of magnetizations with an external electromagnetic field and a time-dependent magnetic Aharonov-Bohm effect
[DE95-613463] p 2845 N95-30368
Visualization of circuit card electromagnetic fields
[AD-A291491] p 2845 N95-30398
Six-vector formalism in electromagnetics of bianisotropic media
[PB95-207130] p 2846 N95-30567
The radiation conditioned by the 'velocity part' of the electromagnetic field of a moving charge
[DE95-613366] p 2846 N95-30605
Electromagnetic-gravitational conversion cross sections in external electromagnetic fields
[DE95-613589] p 2979 N95-30637
Electromagnetic field exposure dosimeter
[AD-A293191] p 2927 N95-30981
Direct and inverse problems in random media
[AD-A293033] p 2850 N95-31280
Numerical studies of nonlinear optical pulse propagation p 2998 N95-31411
Materials with controllable signature properties
[PB95-222964] p 2857 N95-32313

ELECTROMAGNETIC INTERACTIONS

New tensor interaction and the K(sub L) - K(sub S)mass difference
[DE95-613597] p 2845 N95-30370
Electromagnetic-gravitational conversion cross sections in external electromagnetic fields
[DE95-613589] p 2979 N95-30637
Introduction to the theory of Goyaks: Operator manifold approach to geometry and particle physics
[DE95-613460] p 2980 N95-30740
Hamiltonian formulation of two body problem in Wheeler-Feynman electrodynamics
[DE95-620526] p 3019 N95-31193

Electromagnetic hadron mass differences and estimation of isotopic symmetry violation parameters of QCD vacuum from quark model
[DE95-613628] p 2985 N95-31621
ELECTROMAGNETIC INTERFERENCE
The effect of ray curvature on Lloyd's mirror fringe estimates and source localisation
[DSTO-TR-0064] p 3001 N95-31745
ELECTROMAGNETIC MEASUREMENT
Simulation of airborne electromagnetic measurements in three dimensional environments
[DE95-008546] p 2900 N95-30363
ELECTROMAGNETIC PULSES
Nordic symposium on analysis of electromagnetic transient phenomena using EMTP, part 3
[PB95-206504] p 2849 N95-31158
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 2
[PB95-206579] p 2849 N95-31160
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 4
[PB95-206587] p 2849 N95-31161
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 1
[PB95-206595] p 2850 N95-31162
A two-dimensional finite difference algorithm on the KSR1
[AD-A293576] p 2941 N95-31594
Basic science with pulsed power and some off-the-wall ideas
[DE95-009486] p 2854 N95-32050
ELECTROMAGNETIC RADIATION
On explanation of proton electromagnetic form Factor near- p (anti p)-threshold from the PS-170 experiment
[DE95-613766] p 2977 N95-30508
The 49th International Symposium on Molecular Spectroscopy
[AD-A292706] p 2793 N95-30936
Electromagnetic field exposure dosimeter
[AD-A293191] p 2927 N95-30981
Reflection and transmission of electromagnetic plane waves from a uniaxial chiro-omega slab
[PB95-206629] p 2853 N95-31649
Materials with controllable signature properties
[PB95-222964] p 2857 N95-32313
ELECTROMAGNETIC SCATTERING
Scattering and radiation from cylindrically conformal antennas p 2847 N95-30669
Fast multipole methods for scattering computations
[AD-A291093] p 2848 N95-30869
Inverse and control problems in electromagnetics
[AD-A292993] p 2849 N95-30962
Two-dimensional Finite Difference Time Domain (FD-TD) model of electromagnetic (EM) scattering from a buried rectangular object
[AD-A293685] p 2852 N95-31601
A boundary integral equation approach to three dimensional electromagnetic wave scattering problems p 2853 N95-31639
ELECTROMAGNETIC SHIELDING
Microwave coupling into a slotted cavity. Additional results
[PB95-210381] p 2847 N95-30629
ELECTROMAGNETIC WAVE TRANSMISSION
Proceedings of the 16th Annual Conference on Atmospheric Transmission Models, volume 2
[AD-A293806] p 2916 N95-31604
Reflection and transmission of electromagnetic plane waves from a uniaxial chiro-omega slab
[PB95-206629] p 2853 N95-31649
ELECTROMAGNETISM
Six-vector formalism in electromagnetics of bianisotropic media
[PB95-207130] p 2846 N95-30567
Inverse and control problems in electromagnetics
[AD-A292993] p 2849 N95-30962
ELECTROMAGNETS
Electromagnetically activated compliant wavy-wall
[AD-D017340] p 2866 N95-30412
ELECTRON ACCELERATORS
Implementation of the shower max electron trigger at CDF
[DE95-006684] p 2992 N95-31165
ELECTRON BEAMS
EBIT: Electron Beam Ion Trap V-division experimental physics
[DE95-010207] p 3004 N95-30769
X-band magnicon amplifier research at the Naval Research Laboratory
[AD-A293203] p 3013 N95-30984
Hollow cathode electron gun research and development
[DE95-010262] p 2992 N95-31127
Experiments with highly charged ions up to bare U(sup 92+) on the electron beam ion trap
[DE95-006827] p 2982 N95-31174
Measurement of the effect of collimator generated wakefields on the beams in the SLC
[DE95-012101] p 2993 N95-31256
Method and apparatus for a high resolution, flat panel cathodoluminescent display device
[AD-D017434] p 2862 N95-31342
A microwave plasma cleaning apparatus p 2779 N95-31786
Growth, characterization and device development in monocrystalline diamond films
[AD-A293106] p 3015 N95-32018
Studies of highly charged ions with EBIT and Super-EBIT
[DE95-010251] p 2987 N95-32038
Wavelengths measurements of the He-like krypton K-shell spectrum
[DE95-010264] p 2987 N95-32041
Excitation mechanisms of 2s(sub 1/2)-2p(sub 3/2) and 2p(sub 1/2)-2p(sub 3/2)in U(82+) through U(89+)
[DE95-010265] p 2993 N95-32042
Beam stability at SRRC storage ring
[DE95-010842] p 2995 N95-32260
ELECTRON BUNCHING
Design considerations for a Density-Channel-Guided laser wake-field accelerator
[AD-A292876] p 2884 N95-31190
ELECTRON CAPTURE
Recoil longitudinal momentum spectroscopy of electron capture from He by O(7+) and F(8+)
[DE95-010823] p 2990 N95-32274
ELECTRON DENSITY (CONCENTRATION)
Determination of electric and magnetic fields in open trap plasmas by means of atomic-molecular beam hydrogen isotopes
[DE95-614177] p 3006 N95-31680
ELECTRON DIFFRACTION
The effect of a non-Hermitian crystal potential on the scattering matrix in reflection electron diffraction
[DE95-616779] p 2977 N95-30476
Application of spin-sensitive electron spectroscopies to investigations of electronic and magnetic properties of solid surfaces and epitaxial systems
[DE95-010154] p 2792 N95-30614
May multiple inelastic scattering in CBED patterns be removed analytically
[PB95-196333] p 2992 N95-30717
K-shell ionization under zone axis electron diffraction conditions
[DE95-616780] p 2981 N95-30916
ELECTRON EMISSION
Scaling of cross sections in ion-atom collisions
[DE95-008938] p 2978 N95-30573
Convoy electron emission from surfaces
[DE95-010298] p 2984 N95-31402
Surface contamination analysis technology team overview p 2781 N95-31797
The design and development of a third generation OSEE instrument p 2781 N95-31800
Study of surfaces using near infrared optical fiber spectrometry p 2781 N95-31801
Generalized Ramsauer-Townsend minima in heavy-ion induced electron continua
[DE95-010913] p 2989 N95-32120
Study of aligned states in ion-atom collisions
[DE95-010825] p 2990 N95-32275
ELECTRON ENERGY
Direct determination of grain boundary atomic structure in SrTiO3
[DE95-008847] p 3010 N95-30544
Relativistic non-interacting electron gas in a magnetic field
[DE95-616903] p 2967 N95-31177
ELECTRON GAS
Relativistic non-interacting electron gas in a magnetic field
[DE95-616903] p 2967 N95-31177
ELECTRON GUNS
Hollow cathode electron gun research and development
[DE95-010262] p 2992 N95-31127
ELECTRON IMPACT
Excitation mechanisms of 2s(sub 1/2)-2p(sub 3/2) and 2p(sub 1/2)-2p(sub 3/2)in U(82+) through U(89+)
[DE95-010265] p 2993 N95-32042
ELECTRON IRRADIATION
The junction characteristics and current conduction mechanisms of GaInP2 n(+)p diodes and solar cells
[AD-A290857] p 2902 N95-30408
ELECTRON MICROSCOPY
Annual meeting of the Advanced Light Source Users' Association
[DE95-009373] p 3000 N95-31635
Standardization of surface contamination analysis systems p 2781 N95-31798
ELECTRON MOBILITY
Self-consistent, 2D simulations of filament propagation in photoconducting switches
[DE95-010794] p 2861 N95-31133
ELECTRON OSCILLATIONS
Vertical transport in GaAs/AlGaAs superlattices p 3012 N95-30822
ELECTRON PLASMA
Perpendicular electron heating by absorption of auroral kilometric radiation
[NASA-198815] p 2914 N95-30848
Relativistic non-interacting electron gas in a magnetic field
[DE95-616903] p 2967 N95-31177
ELECTRON SCATTERING
Inelastic plasmon and inter-band electron-scattering potentials for Si from dielectric matrix calculations
[DE95-616778] p 2977 N95-30475
The effect of a non-Hermitian crystal potential on the scattering matrix in reflection electron diffraction
[DE95-616779] p 2977 N95-30476
Inversion of the total cross sections for electron-molecule and electron-atom scattering
[DE95-616466] p 2978 N95-30583
Zone axis backscattered electron contrast for fast electrons
[DE95-616775] p 2980 N95-30790
Convoy electron emission from surfaces
[DE95-010298] p 2984 N95-31402
The design and development of a third generation OSEE instrument p 2781 N95-31800
Contamination detection NDE for cleaning process inspection p 2781 N95-31802
ELECTRON SOURCES
Spin structure in high energy processes
[DE95-008628] p 2993 N95-31627
ELECTRON SPECTROSCOPY
Application of spin-sensitive electron spectroscopies to investigations of electronic and magnetic properties of solid surfaces and epitaxial systems
[DE95-010154] p 2792 N95-30614
Acoustomagnetoelectric effect in a superlattice
[DE95-613445] p 3011 N95-30736
ELECTRON SPIN
Dynamics of an inhomogeneous anisotropic antiferromagnetic spin chain
[DE95-614449] p 3013 N95-30959
ELECTRON STATES
Study of aligned states in ion-atom collisions
[DE95-010825] p 2990 N95-32275
Measurements of quantum electrodynamic sensitive transitions in Na-like and Cu-like ions
[DE95-011593] p 3007 N95-32299
ELECTRON TRANSFER
Electron transfer kinetics of self-assembled ferrocene C(12) alkanethiol monolayers on gold electrodes from 125K to 175K
[AD-A292754] p 2984 N95-31427
Consequences of kinetic dispersion on the electrochemistry of an adsorbed redox-active monolayer
[AD-A292794] p 2795 N95-31437
ELECTRON TRANSITIONS
Measurements of quantum electrodynamic sensitive transitions in Na-like and Cu-like ions
[DE95-011593] p 3007 N95-32299
ELECTRON-POSITRON PAIRS
Spin momentum correlation (handedness) in the process of four pion production in the electron-positron collisions
[DE95-613690] p 2988 N95-32093
ELECTRONIC CONTROL
Guidance and Control for Future Air-Defence Systems
[AGARD-CP-555] p 2839 N95-32123
Using a Red Team to devise countermeasures p 2842 N95-32141
ELECTRONIC COUNTERMEASURES
Electronic combat and lethal defense suppression p 2842 N95-32140
Using a Red Team to devise countermeasures p 2842 N95-32141
ELECTRONIC EQUIPMENT
EMC requirements for type approval of marine electronics. Nordtest project 1157-94
[PB95-211330] p 2859 N95-30596
Experimental investigation of the effectiveness of flow-through modules for electronics cooling
[AD-A293284] p 2861 N95-30850
Analysis of symbolic parameter models
[AD-A292916] p 2940 N95-31459
Dynamic maintenance scheduling for a stochastic telecommunication network: Determination of performance factors
[AD-A293629] p 2852 N95-31555
The 19th Annual Electronics Manufacturing Seminar
[AD-A293067] p 2863 N95-31674

ELECTRONIC EQUIPMENT TESTS
EMC requirements for type approval of marine electronics. Nordtest project 1157-94
[PB95-211330] p 2859 N95-30596
Test operations procedure (TOP) 1-2-512 electromagnetic compatibility tests
[AD-A293758] p 2852 N95-31574
Mission critical failure effects analysis using quantitative techniques
[AD-A293098] p 2864 N95-31844
ELECTRONIC MAIL
Email: Why and how
[PB95-195327] p 2846 N95-30516
Workflow literature guide, version 1
[PB95-207080] p 2947 N95-30721
ELECTRONIC MODULES
Ceramic/Metal Composite Circuit-Board-Level Technology for Application Specific Electronic Modules (ASEM's)
[AD-A293183] p 2787 N95-30978
ELECTRONIC WARFARE
Guidance and Control for Future Air-Defence Systems
[AGARD-CP-555] p 2839 N95-32123
Electronic combat and lethal defense suppression
p 2842 N95-32140
Using a Red Team to devise countermeasures
p 2842 N95-32141
ELECTRONS
Scaling of cross sections in ion-atom collisions
[DE95-008938] p 2978 N95-30573
Backgrounds and detector performance at a 2 x 2 TeV (mu)(+)(mu)(-) collider
[DE95-009107] p 2992 N95-30800
Perpendicular electron heating by absorption of auroral kilometric radiation
[NASA-198815] p 2914 N95-30848
K-shell ionization under zone axis electron diffraction conditions
[DE95-616780] p 2981 N95-30916
Irreducible Green's Functions method in the theory of highly correlated systems
[DE95-614446] p 3019 N95-31186
Thin-film edge field emitter device and method of manufacture therefor
[AD-D017453] p 2862 N95-31275
Search for anomalous ZZ(sub gamma) and Z(sub (gamma, gamma)) couplings with D0
[DE95-010457] p 2989 N95-32162
Radiative corrections to the three quantum annihilation cross section in high energy electron-positron collisions
[DE95-623675] p 2995 N95-32296
ELECTROPHORESIS
Analytical instrumentation for environmental research
[AD-A292832] p 2908 N95-31447
ELECTROPHOTOMETERS
The design and development of a third generation OSEE instrument p 2781 N95-31800
ELECTROPHYSIOLOGY
Simulation of oculomotor post-inhibitory rebound burst firing using a Hodgkin-Huxley model of a neuron
[AD-A293821] p 2927 N95-31552
Temporal information processing mechanisms
[PB95-208344] p 3027 N95-32370
ELECTROPLATING
Industry participation workshop: Chromium electroplating of superconductor strand. Proceedings
[DE95-009629] p 2807 N95-31615
ELECTROSTATIC CHARGE
Development of a method for measurement of triboelectric charging
[PB95-211322] p 2859 N95-30633
Theory and simulation of electrostatic wave turbulence in the space shuttle-induced plasma environment
[AD-A293467] p 3005 N95-31534
ELECTROSTATIC ENGINES
Beam-centroid tracking instrument for ion thrusters
[AD-A293654] p 2769 N95-31567
ELECTROSTATIC PROBES
Development of plasma diagnostics technologies: A study on nuclear fusion reactor
[DE95-614180] p 3005 N95-31004
Beam-centroid tracking instrument for ion thrusters
[AD-A293654] p 2769 N95-31567
Calibration of multichannel analyzer of charge-exchange atoms
[DE95-614178] p 2987 N95-32053
ELECTROSTATIC WAVES
Theory and simulation of electrostatic wave turbulence in the space shuttle-induced plasma environment
[AD-A293467] p 3005 N95-31534
ELECTROSTATICS
Development of a method for measurement of triboelectric charging
[PB95-211322] p 2859 N95-30633
Theory and simulation of electrostatic wave turbulence in the space shuttle-induced plasma environment
[AD-A293467] p 3005 N95-31534
ELECTROSTRICTION
Fiber optic interferometric electric field and voltage sensor utilizing and electrostrictive transducer
[AD-D017433] p 2996 N95-30753
Materials for adaptive structural acoustic control, volume 1
[AD-A293444] p 2788 N95-31369
Materials for adaptive structural acoustic control, volume 2
[AD-A293445] p 2788 N95-31370
Materials for adaptive structural acoustic control, volume 3
[AD-A293446] p 2788 N95-31371
Materials for adaptive structural acoustic control, volume 4
[AD-A293447] p 2788 N95-31372
ELECTROTHERMAL ENGINES
The 31st JANNAF Combustion Subcommittee Meeting, volume 1 p 2825 N95-31194
ELECTROWEAK INTERACTIONS (FIELD THEORY)
Electroweak interactions on the lattice
[DE95-616287] p 2965 N95-30439
Real Higgs singlet and electroweak phase transition in the standard model
[DE95-616315] p 2976 N95-30442
Phenomenology of the two Higgs doublet sector of a quark-lepton symmetric model
[DE95-616337] p 2976 N95-30446
Confronting left-right symmetric models with electroweak precision data at the Z peak
[PB95-208054] p 2977 N95-30484
WW and WZ production at the tevatron
[DE95-011014] p 2981 N95-30970
Testing vector boson dominance of electroweak interactions via e(+)e(-) (yields) f-bar f
[DE95-620528] p 2982 N95-31214
Renormcharges in V-A theories
[DE95-613689] p 2985 N95-31622
Spin structure in high energy processes
[DE95-008628] p 2993 N95-31627
Studies of the strong and electroweak interactions at the Z(sub 0) pole
[DE95-010353] p 2986 N95-31682
Physics goals of a mu(+) mu(-) collider
[DE95-009546] p 2994 N95-32059
Renormalization group analyses of particle masses in full four-generation fermion condensate scheme
[DE95-613595] p 2988 N95-32070
Electroweak flavor-conserving gauge processes: Virtual effects
[DE95-009922] p 3020 N95-32106
Electroweak baryogenesis
[DE95-012169] p 2991 N95-32365
ELECTROWEAK MODEL
New tensor interaction and the K(sub L) - K(sub S)mass difference
[DE95-613597] p 2845 N95-30370
Search for new physics indirect effects in e(+)e(-) yields W(+)W(-) at linear colliders with polarized beams
[DE95-613688] p 2984 N95-31547
ELEMENTARY EXCITATIONS
On the theory of hole propagation in an antiferromagnetic background
[DE95-614469] p 3010 N95-30650
ELEMENTARY PARTICLE INTERACTIONS
The mechanism of particle production process in hadron-nucleon collisions
[DE95-613727] p 2975 N95-30372
Current issues in perturbative QCD
[DE95-008448] p 2975 N95-30388
On explanation of proton electromagnetic form Factor near p (anti p)-threshold from the PS-170 experiment
[DE95-613766] p 2977 N95-30508
SO(8) color as possible origin of generations
[DE95-613560] p 2988 N95-32069
Form factor of the process gamma(*) gamma(*) yields pi(sup 0) for small virtuality of one of the photons and QCD sum rules (2): Sum rule
[DE95-613629] p 2988 N95-32078
Search for anomalous ZZ(sub gamma) and Z(sub (gamma, gamma)) couplings with D0
[DE95-010457] p 2989 N95-32162
ELEMENTARY PARTICLES
The Foldy-Wouthuysen transformation
[DE95-616277] p 2976 N95-30427
Covariant phase space formulations of superparticles and supersymmetric WZW models
[DE95-616278] p 2964 N95-30428
Interferometry with particles of non-zero rest mass: Topological experiments
[DE95-616244] p 2979 N95-30689
Introduction to the theory of Goyaks: Operator manifold approach to geometry and particle physics
[DE95-613460] p 2980 N95-30740
ELEVATION
Synthetic Terrain Imagery for Helmet-Mounted Display. Volume 3: Software user's manual
[AD-A293613] p 2753 N95-31463
Synthetic Terrain Imagery for Helmet-Mounted Display, volume 1
[AD-A293612] p 2753 N95-31656
ELEVATION ANGLE
Apparent size passive range method
[AD-D017360] p 2753 N95-31180
ELLIPSOMETERS
Photorefractive nonlinear optics
[AD-A292913] p 2999 N95-31458
ELLIPSOMETRY
Standardization of surface contamination analysis systems p 2781 N95-31798
Spectroscopic ellipsometry as a sensitive monitor of materials contamination p 2782 N95-31808
ELLIPTIC DIFFERENTIAL EQUATIONS
Reduced heat kernels on nilpotent lie groups
[PB95-206926] p 2958 N95-30778
ELLIPTIC FUNCTIONS
Elliptic deformed classical mechanics in three-dimensional phase space
[DE95-613384] p 3017 N95-30365
ELLIPTICAL ORBITS
A feedback linearization approach to orbital maneuvers p 2765 N95-30841
ELLIPTICAL POLARIZATION
Plane wave reflection from a uniaxial chiral quarter-wave polarization transformer
[PB95-206512] p 2849 N95-31159
ELONGATION
Einstein's length concept
[DE95-613368] p 3019 N95-30972
Behaviour of polymers in radioactive environments: Effects of dose speed
[DE95-621008] p 2818 N95-31221
EMBEDDING
Large area smart piezoelectric and pyroelectric sensors
[AD-A291487] p 2859 N95-30561
Analysis of variation embedding tests with 17 MM dowel: Densified veneer wood FOREST project, part 7
[PB95-206876] p 2963 N95-30680
Embedded infrared fiber optic absorption studies of nitramine propellant strand burning
p 2801 N95-31305
Aspects of the search time in binary search trees modified according to the move-to-root heuristic
[PB95-212148] p 2963 N95-31396
Influence of storage on the maximal pull-out force of three different optical fibers from three epoxides
[PB95-211777] p 2822 N95-32253
EMBRITTLEMENT
Microstructural and mechanical property changes in model Fe-Cu alloys
[DE95-010117] p 2805 N95-31105
Damage dosimetry and embrittlement monitoring of nuclear pressure vessels in real time by magnetic properties measurement
[DE95-011454] p 2894 N95-31254
EMISSION SPECTRA
Observations of accreting pulsars
[NASA-CR-198931] p 3028 N95-30469
Shiptracks in the Californian stratus region: Dependency on marine atmospheric boundary layer depth
[AD-A293272] p 2901 N95-31125
Measurement and analysis related to infrared emissions
[AD-A293296] p 2998 N95-31192
Luminescence properties of ZnWO4:Cr(3+) laser crystals
[AD-A293065] p 2887 N95-32152
EMITTANCE
Measurement of the effect of collimator generated wakefields on the beams in the SLC
[DE95-012101] p 2993 N95-31256
RFQ-DTL matching solutions for different requirements
[DE95-010897] p 2995 N95-32306
EMITTERS
Fractal quantum well heterostructures for broadband light emitters
[DE95-009579] p 2860 N95-30707
InP solar cell development on inexpensive Si substrates
[AD-A293255] p 2903 N95-30693
Thin-film edge field emitter device and method of manufacture therefor
[AD-D017453] p 2862 N95-31275

ENCAPSULATING
Porous spherical shells and microspheres by electrodispersion precipitation
[DE95-009073] p 2815 N95-30799
ENCLOSURES
Facilities used for plastic media blasting
p 2763 N95-32176
END EFFECTORS
Precision manipulation with a dextrous robot hand
p 2888 N95-30829
ENERGETIC PARTICLES
Modeling of thermal, electronic, hydrodynamic, and dynamic deposition processes for pulsed-laser deposition of thin films
[DE95-008906] p 2813 N95-30572
Radiation effects in space: The Clementine 1 mission
[DE95-011513] p 3032 N95-32282
ENERGY ABSORPTION
Energy absorption apparatus
[AD-D017361] p 2814 N95-30715
ENERGY BUDGETS
Global Ultraviolet Imager (GUVI) investigation
[NASA-CR-189430] p 2917 N95-31820
ENERGY CONSERVATION
A manual for the economic evaluation of energy efficiency and renewable energy technologies
[DE95-000211] p 2903 N95-30896
Free electron laser as energy driver for inertial confinement fusion
[DE95-614252] p 2884 N95-30914
The potential for microtechnology applications in energy systems: Results of an experts workshop
[DE95-009103] p 2865 N95-32077
CALORSTOCK'94. Thermal energy storage. Better economy, environment, technology
[DE95-772421] p 2907 N95-32368
ENERGY DISSIPATION
Direct determination of grain boundary atomic structure in SrTiO3
[DE95-008847] p 3010 N95-30544
Gravitational-radiation damping of compact binary systems to second post-Newtonian order
[PB95-207882] p 2912 N95-30588
Gravitational waves from inspiralling compact binaries: Energy loss and waveform to second-post-Newtonian order
[PB95-207890] p 2913 N95-30590
Observation of intensity dependent losses in Au(15+) beams
[DE95-010845] p 2987 N95-32032
The potential for microtechnology applications in energy systems: Results of an experts workshop
[DE95-009103] p 2865 N95-32077
Evidence for electronic energy loss processes stimulating solid phase epitaxial regrowth of spatially isolated amorphous regions in semiconductor systems
[DE95-009892] p 3016 N95-32103
ENERGY DISTRIBUTION
Study of the surface properties of ceramic materials by chromatography
[DE95-011578] p 2823 N95-32298
ENERGY GAPS (SOLID STATE)
The quantum interference effect in semiconductor space charge layers studied by Feynman path integrals: General formalism and illustrative examples
[DE95-614483] p 3010 N95-30653
Band gap measurement of Si(1-x)C(x)/Si (0 less than or equal to x less than or equal to 0.014) alloys using photoluminescence and spectroscopic ellipsometry
[DE95-011020] p 3014 N95-31112
Degradation of blue AlGaN/InGaN/GaN LEDs subjected to high current pulses
[DE95-006824] p 2863 N95-31611
Terahertz spectroscopy of silicon micromachined three-dimensional photonic bandgap crystal
[DE95-010233] p 3015 N95-32037
Investigation of the basic physics of high efficiency semiconductor hot carrier solar cell
[NASA-CR-198945] p 2906 N95-32212
ENERGY LEVELS
The quantum interference effect in semiconductor space charge layers studied by Feynman path integrals: General formalism and illustrative examples
[DE95-614483] p 3010 N95-30653
Inner- and outer-shell excitation in lithium isoelectronic sequence
[DE95-614107] p 2981 N95-31003
Experiments with highly charged ions up to bare U(sup 92+) on the electron beam ion trap
[DE95-008627] p 2982 N95-31174
Shnirelman peak in the level spacing statistics
[DE95-623599] p 3019 N95-31276
ENERGY METHODS
MVP/GMVP: General purpose Monte Carlo codes for neutron and photon transport calculations based on continuous energy and multigroup methods
[DE95-722072] p 2979 N95-30656
ENERGY POLICY
Outlook for renewable energy technologies: Assessment of international programs and policies
[DE95-009084] p 2907 N95-32302
ENERGY SPECTRA
Energy spectra of charge-exchange atoms from a rotating plasma
[DE95-614179] p 3006 N95-32054
Search for anomalous ZZ(sub gamma) and Z(sub (gamma, gamma)) couplings with D0
[DE95-010457] p 2989 N95-32162
ENERGY STORAGE
Data on development of new energy technologies
[DE95-764135] p 2904 N95-31155
Energy storage and alternatives to improve train voltage on a mass transit system
[DE95-010344] p 2906 N95-32090
CALORSTOCK'94. Thermal energy storage. Better economy, environment, technology
[DE95-772421] p 2907 N95-32368
ENERGY TECHNOLOGY
Overview of IEA biomass combustion activities
[PB95-196374] p 2902 N95-30519
Sleeping renewable beauty: Will the prince ever come
[PB95-214573] p 2903 N95-30640
Publications of the Fossil Energy Advanced Research and Technology Development Materials Program: April 1, 1993-March 31, 1995
[DE95-009200] p 2903 N95-30745
A manual for the economic evaluation of energy efficiency and renewable energy technologies
[DE95-000211] p 2903 N95-30896
CALORSTOCK 1994: Thermal energy storage. Better economy, environment, technology
[DE95-772422] p 2904 N95-31138
Properties of new materials relevant to energy and fuel research
[AD-A289734] p 2825 N95-31149
Data on development of new energy technologies
[DE95-764135] p 2904 N95-31155
High-tech controls for energy and environment
[DE95-011702] p 2952 N95-31255
Laboratory directed research and development report
[DE95-011405] p 3032 N95-32279
Outlook for renewable energy technologies: Assessment of international programs and policies
[DE95-009084] p 2907 N95-32302
CALORSTOCK'94. Thermal energy storage. Better economy, environment, technology
[DE95-772421] p 2907 N95-32368
ENERGY TRANSFER
Theoretical absorption spectroscopy of high-temperature metal vapors: Model and experiment compared
[AD-A290872] p 2791 N95-30409
Studying the thermal/non-thermal crossover in solar flares
[NASA-CR-189436] p 3031 N95-30785
Energy transfer dynamics in isolated and colliding highly vibrationally excited molecules
[AD-A293304] p 2981 N95-30952
Energy flow analysis of coupled structures
p 2895 N95-31316
Numerical simulation of shock/turbulent boundary layer interaction
[NASA-CR-198846] p 2872 N95-31341
Preliminary design for Arctic atmospheric radiative transfer experiments
[DE95-009580] p 2917 N95-32080
ENGINE ANALYZERS
Development of a new instrument for rocket engine combustion diagnostics p 2799 N95-31211
ENGINE CONTROL
Flight test validation of a frequency-based system identification method on an F-15 aircraft
[NASA-TM-4704] p 2757 N95-31846
Robust Rocket Engine Concept
[NASA-TM-107010] p 2770 N95-32121
ENGINE DESIGN
Wave rotor-enhanced gas turbine engines
[NASA-TM-106998] p 2754 N95-30517
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 1
[NASA-CR-195435-VOL-1] p 2768 N95-31169
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 2
[NASA-CR-195435-VOL-2] p 2769 N95-31170
An investigation of the side-dump dual in-line ramjet combustor p 2756 N95-31199
A pulsed liquid fuel ramjet p 2756 N95-31201
Design and testing of an oxidizer-rich preburner
p 2799 N95-31212
Experiment of rocket-ram combined combustor
[NAL-TR-1249] p 2769 N95-31739
ENGINE INLETS
Effects of initial conditions on a single jet in crossflow
[NASA-TM-107002] p 2754 N95-30589
Method for extracting forward acoustic wave components from rotating microphone measurements in the inlets of turbofan engines
[NASA-CR-195457] p 2755 N95-30779
ENGINE MONITORING INSTRUMENTS
Method for extracting forward acoustic wave components from rotating microphone measurements in the inlets of turbofan engines
[NASA-CR-195457] p 2755 N95-30779
ENGINE NOISE
An active liner system for jet engine exhaust silencers, phase 1
[AD-A293277] p 2756 N95-31191
ENGINE PARTS
Low vibration polymeric composite engine
[AD-D017332] p 2887 N95-30386
Bicarbonate of soda paint stripping process validation and material characterization p 2777 N95-31778
ENGINE TESTS
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 1
[NASA-CR-195435-VOL-1] p 2768 N95-31169
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 2
[NASA-CR-195435-VOL-2] p 2769 N95-31170
An active liner system for jet engine exhaust silencers, phase 1
[AD-A293277] p 2756 N95-31191
A pulsed liquid fuel ramjet p 2756 N95-31201
Investigation of ram accelerator performance capabilities p 2799 N95-31204
Development of a new instrument for rocket engine combustion diagnostics p 2799 N95-31211
Design and testing of an oxidizer-rich preburner
p 2799 N95-31212
Icing simulation in the aeropropulsion systems test facility propulsion development test cell C-2
[AD-A293039] p 2747 N95-31667
CFD assessment of the pollutant environment from RD-170 propulsion system testing p 2772 N95-31749
ENGINEERING
FBIS report: Science and technology. Central Eurasia
[FBIS-UST-95-028] p 2839 N95-31729
ENGINEERING MANAGEMENT
Geostatistics and hydrology. Part 1: Spatial and temporal variability. Communications of the Sanitary Engineering and Water Management Division

Evaluation of Environmentally Acceptable hydraulic fluids
[AD-A293037] p 2821 N95-31666
Manufacturing waste disposal practices of the chemical propulsion industry p 2771 N95-31748
Enhanced alkaline hydrolysis and biodegradability studies of nitrocellulose-bearing missile propellant p 2772 N95-31752
Environmentally compatible solid rocket propellants p 2772 N95-31753
Prioritization methodology for chemical replacement p 2773 N95-31757
National Center for Manufacturing Sciences: Environmentally conscious manufacturing p 2773 N95-31758
Major weapon system environmental life-cycle cost estimating for Conservation, Cleanup, Compliance and Pollution Prevention (C3P2) p 2774 N95-31761
The Oak Ridge Refrigerant Management Program p 2774 N95-31763
A water blown urethane insulation for use in cryogenic environments p 2775 N95-31765
Evaluation of HFC 245ca and HFC 236ea as foam blowing agents p 2775 N95-31766
Environmentally safe aviation fuels p 2775 N95-31768
F-200(TM): The new solution for fire protection p 2776 N95-31770
Replacement of corrosion protection chromate primers and paints used in cryogenic applications on the Space Shuttle with wire arc sprayed aluminum coatings p 2776 N95-31774
Environmentally regulated aerospace coatings p 2777 N95-31775
Convergent spray process for environmentally friendly coatings p 2777 N95-31776
SSME Main Combustion Chamber (MCC) hot oil dewaxing p 2777 N95-31777
Evaluation of pressurized water cleaning systems for hardware refurbishment p 2778 N95-31782
Implementation of environmentally compliant cleaning and insulation bonding for MNASA p 2780 N95-31796
Environmental databases and other computerized information tools p 2783 N95-31810
NEIS (NASA Environmental Information System) p 2783 N95-31811
Combatting urban air pollution through Natural Gas Vehicle (NGV) analysis, testing, and demonstration
[DE95-008300] p 2911 N95-32156
Overview of paint removal methods p 2843 N95-32166

ENVIRONMENTAL MONITORING
Directory of global environmental sciences in Japan p 2899 N95-31413
Environmental benefits of chemical propulsion p 2772 N95-31750

ENVIRONMENTAL SURVEYS
The effect of environmental initiatives on NASA specifications and standards activities p 2783 N95-31812

ENVIRONMENTS
High-tech controls for energy and environment
[DE95-011702] p 2952 N95-31255

ENZYMES
Enantioselectivity of quinoprotein alcohol dehydrogenases: Production of enantiomerically pure C3-alcohol synthons
[PB95-196960] p 2771 N95-30734
Bioremediation of wheat starch media waste p 2845 N95-32178

EPHEMERIS TIME
Relativistic timescale analysis suggests lunar theory revision p 2970 N95-32333

EPIDEMIOLOGY
Particulate air pollution and increased mortality: Biological plausibility for causal relationship
[DE95-006161] p 2909 N95-31703

EPITAXY
InP solar cell development on inexpensive Si substrates
[AD-A293255] p 2903 N95-30893
Development of germanium-silicon growth technology
[AD-A293199] p 3013 N95-30983
Band gap measurement of Si(1-x)C(x)/Si (0 less than or equal to x less than or equal to 0.014) alloys using photoluminescence and spectroscopic ellipsometry
[DE95-011020] p 3014 N95-31112
Evidence for electronic energy loss processes stimulating solid phase epitaxial regrowth of spatially isolated amorphous regions in semiconductor systems
[DE95-009892] p 3016 N95-32103

EPOXY COMPOUNDS
Effects of hydrostatic pressure on the mechanical behavior of composite materials
[AD-A293162] p 2787 N95-30963
An interpenetrating polymer network for second-order nonlinear optics
[AD-A293019] p 2821 N95-31699

EPOXY MATRIX COMPOSITES
Characterization and prediction of post-impact fatigue damage in stitched composites p 2785 N95-30826
Post-impact fatigue of cross-plied, through-the-thickness reinforced carbon/epoxy composites
[NASA-TM-110625] p 2896 N95-31419
Influence of storage on the maximal pull-out force of three different optical fibers from three epoxides
[PB95-211777] p 2822 N95-32253

EPOXY RESINS
Epoxy and acrylate stereolithography resins: In-situ measurements of cure shrinkage and stress relaxation
[DE95-008506] p 2811 N95-30389
Large area smart piezoelectric and pyroelectric sensors
[AD-A291487] p 2859 N95-30561
Evaluation of alternative pavement marking materials
[AD-A292973] p 2763 N95-31468
Influence of storage on the maximal pull-out force of three different optical fibers from three epoxides
[PB95-211777] p 2822 N95-32253

EQUATIONS OF MOTION
Elliptic deformed classical mechanics in three-dimensional phase space
[DE95-613384] p 3017 N95-30365
Integrals of motion in the two Killing vector reduction of general relativity
[DE95-616281] p 3018 N95-30431
Interferometry with particles of non-zero rest mass: Topological experiments
[DE95-616244] p 2979 N95-30689
Golden ten equations of motion
[PB95-197927] p 2967 N95-30809
Wave propagation in a fluid-loaded homogeneous, transversely isotropic, elastic cylinder of arbitrary thickness
[AD-A292728] p 2869 N95-30946
A finite element formulation for the time domain vibration analysis of an elastic-viscoelastic structure p 2895 N95-31318
Studies in non-linear multi-mode responses of harmonically excited rectangular plates with internal resonances p 2895 N95-31331
Large-eddy simulation of turbulent flow using the finite element method
[DE95-009464] p 2875 N95-31591
A computational procedure for multibody systems including flexible beam dynamics
[NASA-CR-199035] p 2897 N95-31730
Instability of weakly nonlinear chaotic structures
[DE95-613441] p 2966 N95-32066
Staggered solution procedures for multibody dynamics simulation
[NASA-CR-199034] p 2899 N95-32202

EQUATIONS OF STATE
Ocean mass density calculations from temperature and salinity data
[DSTO-TR-0023] p 2922 N95-30711
Phase transitions and gravitational collapse
[DE95-011732] p 3021 N95-32359

EQUATORIAL REGIONS
Equatorial Africa: A climatological study
[AD-A293956] p 2920 N95-31524
Validation of special sensor microwave/imager ocean surface wind retrievals in equatorial regions
[AD-A293750] p 2920 N95-31571

EQUILIBRIUM EQUATIONS
Analyzing GI/Erlang-r/1 queues
[PB95-197034] p 2949 N95-30400

EQUIPMENT SPECIFICATIONS
EMC requirements for type approval of marine electronics. Nordtest project 1157-94
[PB95-211330] p 2859 N95-30596

EQUIVALENCE
Equivalence of two non-commutative geometry approaches
[DE95-613469] p 2957 N95-30642

ERBIUM
Plasma source ion implantation of metal ions: Synchronization of cathodic-arc plasma production and target bias pulses
[DE95-009431] p 3006 N95-31613

ERGODIC PROCESS
Around Ratner --- applications of Ratner's measure and topological theorems on unipotent homogeneous actions
[DE95-613377] p 2958 N95-30770

EROSION
Navier-Stokes flow field analysis of compressible flow in a high pressure safety relief valve
[NASA-TM-110640] p 2868 N95-30862
Robotic weld overlay coatings for erosion control
[DE95-009643] p 2809 N95-32098

ERROR ANALYSIS
Effect of the stopping of the Newton iteration in implicit linear multistep methods
[PB95-207056] p 2959 N95-31184
MCNP analyses of criticality calculation results
[DE95-010886] p 2960 N95-31253
The development of human behaviour analysis techniques and the development of human factors technologies
[DE95-613356] p 2930 N95-31267
Using satellites for radar performance monitoring and calibration
[AD-A293809] p 2852 N95-31588
Allan deviation computations of a linear frequency synthesizer system using frequency domain techniques p 2972 N95-32344

ERROR CORRECTING CODES
Neural network false alarm filter, volume 2
[AD-A293114] p 2860 N95-30886

ERROR DETECTION CODES
Neural network false alarm filter, volume 2
[AD-A293114] p 2860 N95-30886

ERRORS
Determination of site-occupancies in aluminide intermetallics by ALCHEMI
[DE95-009179] p 2803 N95-30733
A hypothesis-testing approach to discriminant analysis with mixed categorical and continuous variables when data are missing
[AD-A293714] p 2964 N95-31831

ERYTHROCYTES
Membrane transport: A cellular probe of heat stroke
[AD-A293327] p 2926 N95-30924

ESTERS
Evaluation of Environmentally Acceptable hydraulic fluids
[AD-A293037] p 2821 N95-31666
Compatibility of manufacturing process fluids with HFC refrigerants and ester lubricants
[DE95-012152] p 2911 N95-32364

ESTIMATES
Theory & numerical methods for problems in shape reconstruction and large deviations
[AD-A292874] p 2952 N95-31279

ESTIMATING
Experimental determination of probability distributions for parameters of a Salem limestone cap plasticity model
[AD-A290878] p 2892 N95-30559
Golden ten equations of motion
[PB95-197927] p 2967 N95-30809
Local fractal dimension estimation
[AD-A293354] p 2959 N95-30953
Estimating heat of formation of energetic compounds using corrected semiempirical molecular orbital theory p 2800 N95-31294

A stochastic difference equation approach to inference with missing data: Some new results
[DE95-010327] p 2944 N95-32088
A stochastic EM estimator in the presence of missing data: Theory and applications
[DE95-010329] p 2944 N95-32089
ETCHING
Method for laser-assisted silicon etching using halocarbon ambients
[AD-D017426] p 2883 N95-30744
Solderability enhancement of copper through chemical etching
[DE95-010514] p 2806 N95-31406
ETHYL ALCOHOL
An analysis of gas phase ethanol/water chemistry for diamond CVD
[AD-A293009] p 2795 N95-31473
BioFacts: Fueling a stronger economy. Ethanol from biomass, revision 2
[DE95-010304] p 2836 N95-31639
BioFacts: Fueling a stronger economy, global warming and biofuels emissions
[DE94-006864] p 2910 N95-31821
ETHYLENE
Enhanced energy release and soot reduction in actively controlled flames p 2799 N95-31200
Composite polymer electrolyte for lithium batteries
[AD-A293924] p 2820 N95-31514
ETHYLENEDIAMINETETRAACETIC ACIDS
Aqueous TiO2 photocatalysis of metal-EDTA complexes
[DE95-011058] p 2793 N95-31113
EUCLIDEAN GEOMETRY
Bravais classes, Voronoie cells, Delone symbols
[PB95-207916] p 3009 N95-30503
The conical singularity and quantum corrections to entropy of black hole
[DE95-613367] p 3029 N95-30606
Good metric spaces without good parameterizations
[PB95-208427] p 2957 N95-30622
EULER EQUATIONS OF MOTION
Development of a linearized unsteady Euler analysis for turbomachinery blade rows
[NASA-CR-4677] p 2742 N95-30611
Multigrid convergence acceleration for the 2D Euler equations applied to high-lift systems
[PB95-198081] p 2743 N95-30814
QMR methods in computational fluid dynamics
[DE95-010293] p 2872 N95-31132
Atomization simulations using an Eulerian-VOF-Lagrangian method p 2828 N95-31210
EUROPE
Definition of an anti-missile ballistic defense architecture for Europe p 2840 N95-32125
EUROPEAN SPACE AGENCY
Integrated X-ray testing of the electro-optical breadboard model for the XMM reflection grating spectrometer
[DE95-008829] p 2879 N95-30507
EUROPEAN SPACE PROGRAMS
(T2L2) Time Transfer by Laser Link
p 2887 N95-32348
Satellite test of the isotropy of the one-way spe ed of light using ExTRAS p 2973 N95-32349
EUROPIUM
Low-voltage cathodoluminescence of europium-activated yttrium orthovanadate
[DE95-008536] p 3008 N95-30382
EUROPIUM ISOTOPES
Waste minimization via preparative scale high performance gel permeation chromatography
[DE95-011797] p 2798 N95-32360
EUTECTICS
Dissolution of eutectic microstructures
[DE95-010244] p 2804 N95-30757
EVACUATING (TRANSPORTATION)
Patient/aircraft forecasting for the strategic aeromedical evacuation lift-bed process
[AD-A293902] p 2747 N95-31512
Aircraft evacuations through Type-3 exits I: Effects of seat placement at the exit
[DOT/FAA/AM-95/22] p 2748 N95-31845
EVALUATION
Assessment of computer aids during communication exercise 1991
[PB95-211462] p 2945 N95-32248
EVAPORATION
Combustion of LOX with H2(sub g) under subcritical and supercritical conditions p 2797 N95-31717
Selected flows with free surfaces: Streams and drops
[IFTR-3/1995] p 2876 N95-31817
EVAPORATION RATE
Combustion of LOX with H2(sub g) under subcritical and supercritical conditions p 2797 N95-31717
EVENT HORIZON
Partons and black holes
[DE95-009921] p 3029 N95-31102
EXCIMER LASERS
Method for laser-assisted silicon etching using halocarbon ambients
[AD-D017426] p 2883 N95-30744
EXCIMERS
Properties of new materials relevant to energy and fuel research
[AD-A289734] p 2825 N95-31149
Excited-state complexes of conjugated polymers: Novel photophysical processes and optoelectronic materials
[AD-A292958] p 2819 N95-31462
Excited-state complexes of conjugated polymers
[AD-A292960] p 2819 N95-31466
EXCITATION
Photochemistry of intermolecular C-H bond activation reactions
[DE95-008991] p 2978 N95-30574
Electron-optical nonlinear interaction in asymmetric quantum-well laser heterostructures
[DE95-613443] p 2883 N95-30609
Experimental results on charge exchange reactions with delta excitations and polarization studies of delta and N(sup *) (1440) resonances
[DE95-614022] p 2981 N95-30913
Excited-state complexes of conjugated polymers
[AD-A292960] p 2819 N95-31466
Excitation mechanisms of 2s(sub 1/2)-2p(sub 3/2) and 2p(sub 1/2)-2p(sub 3/2)in U(82+) through U(89+)
[DE95-010265] p 2993 N95-32042
Method of normal coordinates in the formulation of a system with dissipation: The harmonic oscillator
[DE95-613372] p 3020 N95-32094
Mixing phases of unstable two-level systems
[DE95-613844] p 2989 N95-32151
EXHAUST CLOUDS
The Al and Al2O3 droplet cloud in solid rocket motors
p 2770 N95-31196
EXHAUST EMISSION
Jet mixing and emission characteristics of transverse jets in annular and cylindrical confined crossflow
[NASA-TM-106976] p 2755 N95-30698
Vacuum plume backflow and rarefaction
p 2871 N95-30995
CFD assessment of the pollutant environment from RD-170 propulsion system testing p 2772 N95-31749
Environmental benefits of chemical propulsion
p 2772 N95-31750
Environmentally compatible solid rocket propellants
p 2772 N95-31753
Low acid producing solid propellants
p 2773 N95-31754
Air pollution control system research: An iterative approach to developing affordable systems
p 2773 N95-31759
BioFacts: Fueling a stronger economy, global warming and biofuels emissions
[DE94-006864] p 2910 N95-31821
EXHAUST FLOW SIMULATION
Hot jet/wake turbulent structure and laser propagaion. Part 1: Jet/wake turbulence modeling
p 2871 N95-30991
EXHAUST GASES
The 21st JANNAF Exhaust Plume Technology Meeting, volume 1
[CPIA-PUBL-621-VOL-1] p 2870 N95-30986
Hot jet/wake turbulent structure and laser propagaion. Part 1: Jet/wake turbulence modeling
p 2871 N95-30991
Beam-centroid tracking instrument for ion thrusters
[AD-A293654] p 2769 N95-31567
CFD assessment of the pollutant environment from RD-170 propulsion system testing p 2772 N95-31749
EXHAUST NOZZLES
Vacuum plume backflow and rarefaction
p 2871 N95-30995
Flight test results of the F-16 aircraft modified with axisymmetric vectoring exhaust nozzle
p 2752 N95-32007
EXHAUST SYSTEMS
Demonstration of split-flow ventilation and recirculation as flow-reduction methods in an Air Force paint spray booth, volume 1
[AD-A286807] p 2763 N95-31101
EXISTENCE THEOREMS
Solvability of a class of hypersingular nonlinear integral equations
[PB95-207031] p 3011 N95-30720
EXPECTATION
A Stochastic EM algorithm for approximating the maximum likelihood estimate
[DE95-010328] p 2943 N95-32044
EXPERIMENT DESIGN
Selecting optimal experiments for feedforward multilayer perceptrons
[AD-A290856] p 2949 N95-30406
Experiments in a 120-mm ram accelerator including flow visualization p 2799 N95-31202
Long baseline neutrino oscillation experiment at the AGS
[DE95-004378] p 2986 N95-31702
A collisionless shock wave experiment
[DE95-009489] p 3008 N95-32351
EXPERIMENTATION
Pulse power for high energy density physics experiments
[DE95-010868] p 2992 N95-31232
EXPERT SYSTEMS
Expert system for assessing accuracy of models of physical phenomena and for selecting alternate models in the presence of noise
[AD-D017348] p 2974 N95-30550
Workflow literature guide, version 1
[PB95-207080] p 2947 N95-30721
Making intelligent systems team players. A guide to developing intelligent monitoring systems
[NASA-TM-104807] p 2951 N95-30925
Development of a structured design and programming methodology for expert systems shells utilizing a visual programming language: Application of structured methodology to the MK92 maintenance advisor expert system, performance module prototype
[AD-A289897] p 2939 N95-31391
Computer-aided inspection process definition: Development of an expert planning and programming system for coordinate metrology
[DE95-010411] p 2940 N95-31404
Acquiring consistent knowledge for Bayesian Forests
[AD-A293858] p 2952 N95-31517
An analysis of hierarchical genetic programming
[AD-A293964] p 2942 N95-31657
Multi-sensor data fusion in command and control and the merit of artificial intelligence p 2842 N95-32137
AIDEX: An expert system for aircraft identification
p 2842 N95-32138
EXPLORATION
SDIO: Discovering superconducting materials at high temperatures
[AD-A292820] p 3015 N95-31444
EXPLOSIVE DEVICES
A manual for pyrotechnic design, development and qualification
[NASA-TM-110172] p 2766 N95-31358
EXPLOSIVES
Base hydrolysis and hydrothermal processing of PBX-9404 explosive
[DE95-009497] p 2837 N95-32355
EXPOSURE
Evaluation of calibration parameters and performance of the video imaging technique of assessing exposure (VITAE system)
[AD-A289023] p 2927 N95-30998
Technique to prepare high-reflectance optical fiber Bragg gratings with single exposure in-line or fiber draw tower
[AD-D017445] p 2998 N95-31270
Operation of the computer model for direct atomic oxygen exposure of Earth satellites
[NASA-CR-198188] p 2767 N95-32189
EXTERNAL TANKS
Analysis of stress concentration at holes in components made of 2195 aluminum-lithium
[NASA-TP-3554] p 2893 N95-30613
EXTINGUISHING
An experimental and numerical study on the structure and extinction of laminar premixed flames
p 2792 N95-30670
EXTRACTION
On-line surfactant monitoring
[DE95-009417] p 2792 N95-30735
Ultraviolet and visible lasers: Rare earth-doped waveguide devices and non-linear optical extraction techniques
[AD-A293976] p 2885 N95-31528
EXTRAPOLATION
Analytic cross sections for collisions of H, H2, He and Li atoms and ions with atoms and molecules
[DE95-722055] p 2979 N95-30654
Ferromagnetic Potts model in a magnetic field: Finite lattice extrapolation of the (1 + 1)-dimensional Hamiltonian
[DE95-614447] p 3012 N95-30958
EXTREME ULTRAVIOLET EXPLORER SATELLITE
NASA space astronomy update 6
[NASA-CR-197664] p 3028 N95-31099
EXTREME ULTRAVIOLET RADIATION
HST-FOC observations of a remarkable UV auroral event on Jupiter p 3030 N95-30806
EXTREMELY HIGH FREQUENCIES
A theoretical treatment of the absorption and emission properties of Cu(2) porphyrin
[AD-A293869] p 2795 N95-31595

EXTREMELY LOW FREQUENCIES
The occurrence of continuation parameters in CPS terms
[AD-A292952] p 2941 N95-31480
EXTRUDING
Texture development in aluminium extrusion
[PB95-196598] p 2979 N95-30666
Hydrostatic extrusion of BSCCO/Ag composite wire
[DE95-007862] p 2805 N95-31121
EYE MOVEMENTS
Design and integration issues of visually-coupled evaluation
[AD-A293521] p 2931 N95-31538

F

F REGION
Measurements of ionospheric variability
[AD-A293495] p 2915 N95-31535
F-15 AIRCRAFT
Flight assessment of the onboard propulsion system model for the Performance Seeking Control algorithm on an F-15 aircraft
[NASA-TM-4705] p 2756 N95-31425
Flight test validation of a frequency-based system identification method on an F-15 aircraft
[NASA-TM-4704] p 2757 N95-31846
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. Tactical aircraft: F-15 replacement is premature as currently planned
[GAO/NSIAD-94-118] p 2964 N95-31987
F-16 AIRCRAFT
Looking for the simple PIO model
p 2745 N95-31066
Flight test results of the F-16 aircraft modified with axisymmetric vectoring exhaust nozzle
p 2752 N95-32007
F-18 AIRCRAFT
Modeling F/A-18 flight hour program costs using regression analysis
[AD-A293771] p 2752 N95-31579
F-22 AIRCRAFT
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. Tactical aircraft: F-15 replacement is premature as currently planned
[GAO/NSIAD-94-118] p 2964 N95-31987
FABRICATION
High-temperature superconducting current leads
[DE95-008404] p 2858 N95-30374
A phenomenological finite element model of part building in the stereolithography process
[DE95-008437] p 2932 N95-30376
NIR High-efficiency subwavelength diffractive structures in semiconductors
[DE95-008535] p 3008 N95-30391
Electrochemical vapour deposition of SOFC interconnection materials
[PB95-197844] p 2812 N95-30459
GPHS-RTGs in support of the Cassini RTG Program
[DE95-010306] p 2768 N95-30674
Fabrication and modification of metal nanocluster composites using ion and laser beams
[DE95-009131] p 2784 N95-30731
Low temperature fabrication from nano-size ceramic powders
[DE95-010995] p 2818 N95-31153
Investigation of polycrystalline thin film CuInSe2 solar cells based on ZnSe windows
[DE95-004068] p 2904 N95-31164
Thin-film edge field emitter device and method of manufacture therefor
[AD-D017453] p 2862 N95-31275
Inductively coupled IR staring array based on photofluxonic pixels
[AD-A292784] p 2998 N95-31435
Microstructure and aging response of SiCp reinforced A356 Al metal matrix composite subject to post fabrication thermomechanical processing
[AD-A292975] p 2789 N95-31469
Development of large-area monolithically integrated Silicon-Film(trademark) photovoltaic modules
[DE95-004089] p 2906 N95-32057
The potential for microtechnology applications in energy systems: Results of an experts workshop
[DE95-009103] p 2865 N95-32077
Comprehensive research on the stability and electronic properties of a-Si:H and a-SiGe:H alloys and devices
[DE95-004088] p 2810 N95-32154
Low cost fabrication of silicon carbide based ceramics and fiber reinforced composites
[NASA-TM-107001] p 2822 N95-32208
Whisker reinforced glass ceramic
[DE95-010542] p 2823 N95-32305
FABRICS
High strain-rate testing of parachute materials
[DE95-009577] p 2897 N95-31614
Structural analyses of the JPL Mars Pathfinder impact
[DE95-009581] p 2767 N95-32081
FABRY-PEROT INTERFEROMETERS
Fabry-Perot interferometer measurement of static temperature and velocity for ASTOVL model tests
[NASA-TM-107014] p 2879 N95-30587
FACE CENTERED CUBIC LATTICES
Diffraction-line broadening analysis and stress relaxation in thin metal layers
[PB95-213898] p 2893 N95-30634
Synthesis and characterization of nanophase face-centered-cubic titanium
[DE95-009533] p 2809 N95-32051
Energetics of Pt adsorption on Pt(111)
[DE95-010933] p 3017 N95-32307
FACTORIZATION
Newton methods for large-scale linear inequality-constrained minimization: Optimization and systems theory
[PB95-210332] p 2956 N95-30499
FADDEEV EQUATIONS
The 10th INS Scientific Computational Programs
[DE95-717864] p 2982 N95-31178
FAILURE
Development of advanced approach and departure procedures. Failure scenarios
[PB95-198123] p 2748 N95-30815
New adaptive methods for reconfigurable flight control systems, appendix 1
[AD-A292711] p 2756 N95-30937
The 10th International Conference on the Strength of Materials
[AD-A292335] p 2894 N95-31263
Large deformation failure mechanisms in nonlinear solids
[AD-A293010] p 2896 N95-31474
FAILURE ANALYSIS
Learning in an intentional system
[AD-A291158] p 2949 N95-30395
Response of mechanically fastened composite joints under multiple bypass loads p 2785 N95-30824
Summary of 1993 Atlantic tropical cyclone activity and verification of author's forecast. A year of unanticipated light hurricane activity and a poor forecast: The expected dissipation of the El Nino did not take place and Caribbean basin surface pressure became quite high
p 2918 N95-30842
Effects of thermal and electrical stressing on the breakdown behavior of space wiring
[NASA-CR-198360] p 2768 N95-30860
Failure analysis of a repairable system: The case study of a cam-driven reciprocating pump
[AD-A293144] p 2889 N95-30949
Sea ice stress research
[AD-A293164] p 2923 N95-30964
Characterization of compressive damage mechanisms in ceramic and polymeric matrix composite materials
[AD-A293171] p 2787 N95-30975
Localization in tungsten heavy alloys subjected to shearing deformations under superimposed high pressures
[AD-A293177] p 2804 N95-30977
Failure analysis for polycarbonate transparencies
[AD-A292992] p 2820 N95-31471
Mission critical failure effects analysis using quantitative techniques
[AD-A293098] p 2864 N95-31844
Failure mechanisms in composite plates subjected to in-plane compressive loading p 2790 N95-32108
FAILURE MODES
Interface degradation in CAS/Nicalon during elevated temperature aging
[DE95-008843] p 2812 N95-30543
Failure mechanisms in composite plates subjected to in-plane compressive loading p 2790 N95-32108
FAINT OBJECT CAMERA
HST-FOC observations of a remarkable UV auroral event on Jupiter p 3030 N95-30806
FALSE ALARMS
Neural network false alarm filter, volume 2
[AD-A293114] p 2860 N95-30886
Neural network false alarm filter, volume 1
[AD-A293097] p 2953 N95-31562
FAR FIELDS
Optimum truncation of a Gaussian beam for propagation through atmospheric turbulence
[AD-A291156] p 2883 N95-30394
Far field acoustic radiation reduction
[AD-D017452] p 2974 N95-30725
FAR INFRARED RADIATION
Molecular gas in starburst galaxies: Line intensities and physical conditions
[PB95-208021] p 3029 N95-30569
FAST FOURIER TRANSFORMATIONS
Image representation using fast algorithms based on the Zak transform
[AD-A293416] p 2942 N95-31684
FASTENERS
Coupling stud assembly
[AD-D017335] p 2887 N95-30387
Smart material joint band
[AD-D017374] p 2888 N95-30716
Response of mechanically fastened composite joints under multiple bypass loads p 2785 N95-30824
FATIGUE (BIOLOGY)
Forward rapid rotation shiftwork in USAF air traffic controllers: Sleep, activity, fatigue and mood analyses
[AD-A293448] p 2927 N95-31373
FATIGUE (MATERIALS)
Interfacial studies of coated fiber reinforced glass-ceramic matrix composites
[AD-A290780] p 2783 N95-30433
Fatigue crack growth behavior of a titanium matrix composite under thermomechanical loading
p 2784 N95-30491
TV-VI semiconductor quantum well lasers, physics and engineering p 2883 N95-30805
Characterization and prediction of post-impact fatigue damage in stitched composites p 2785 N95-30826
Probabilistic reliability modeling of fatigue on the H-46 tie bar
[AD-A289926] p 2751 N95-30927
A simple and accurate technique for monitoring crack growth behavior using a wave form analyzer
[AD-A293161] p 2894 N95-31007
Post-impact fatigue of cross-plied, through-the-thickness reinforced carbon/epoxy composites
[NASA-TM-110625] p 2896 N95-31419
Failure analysis for polycarbonate transparencies
[AD-A292992] p 2820 N95-31471
FATIGUE LIFE
Stress and strain concentration factors of welded multiplanar joints between square hollow sections
[PB95-208260] p 2892 N95-30492
Fatigue behaviour of multiplanar tubular joints
[PB95-207874] p 2893 N95-30586
The influence of matrix microstructure and temperature on cyclic deformation and fatigue of particle-reinforced 2219 aluminum p 2808 N95-31974
FATIGUE TESTS
Interfacial studies of coated fiber reinforced glass-ceramic matrix composites
[AD-A290780] p 2783 N95-30433
Thermal-mechanical fatigue crack growth in aircraft engine materials
[ISBN-0-315-86543-1] p 2894 N95-31098
Post-impact fatigue of cross-plied, through-the-thickness reinforced carbon/epoxy composites
[NASA-TM-110625] p 2896 N95-31419
A new goodness-of-fit test for the gamma distribution based on sample spacings from complete and censored samples
[AD-A293875] p 2961 N95-31518
A study of elevated temperature testing techniques for the fatigue behavior of PMCS: Application to T650-35/AMB21
[NASA-TM-106927] p 2791 N95-32209
FAULT DETECTION
Visualization of circuit card electromagnetic fields
[AD-A291491] p 2845 N95-30398
Neural network false alarm filter, volume 2
[AD-A293114] p 2860 N95-30886
FAULT TOLERANCE
Mission critical failure effects analysis using quantitative techniques
[AD-A293098] p 2864 N95-31844
ASSIST user manual
[NASA-TM-4592] p 2948 N95-32250
FEASIBILITY
An investigation of a novel approach to elemental imaging in three dimensions
[DE95-010340] p 3000 N95-31681
FEASIBILITY ANALYSIS
Unconventional imaging field experiment plan
[AD-A291492] p 2846 N95-30562
Calculated coupling efficiency between an elliptical-core optical fiber and an optical waveguide over temperature
[NASA-TM-107005] p 2997 N95-30649
System considerations for efficient communication and storage of MSTI image data
[NASA-CR-198869] p 3024 N95-30858
Neural network false alarm filter, volume 1
[AD-A293097] p 2953 N95-31562
Basic study of the pumping of a gamma-ray laser
[AD-A293561] p 2886 N95-31563
Possible allied ballistic missile defense systems: Related guidance and control requirements
p 2840 N95-32126

FEDERAL BUDGETS
Report to the Chairman, Subcommittee on Transportation and Related Agencies, Committee on Appropriations, House of Representatives. Air traffic control: Status of FAA's plans to close and contract out low-activity towers
[GAO/RCED-94-265] p 2750 N95-32199
FEED SYSTEMS
Performance of residual carrier array-feed combining in correlated noise p 2856 N95-32232
FEEDBACK
Fixed modes in quasi-static state feedback decoupling
[PB95-206850] p 2950 N95-30564
Testing the performance of feedback concatenated decoder with a nonideal receiver p 2856 N95-32231
FEEDBACK CONTROL
Computerized design of controllers using data models
[NASA-CR-198921] p 2950 N95-30655
H(sub 2) optimal controllers with observer based architecture for continuous-time systems: Separation principle
[PB95-197067] p 2951 N95-30833
A feedback linearization approach to orbital maneuvers p 2765 N95-30841
A novel instrumentation system for measurement of helicopter rotor motions and loads data, phase 1
[AD-A293309] p 2751 N95-30923
Use of a variable frequency source with a single-mode cavity to process ceramic filaments
[DE95-010992] p 2817 N95-31152
A two-timescale approach to nonlinear Model Predictive Control
[DE95-000943] p 2952 N95-31161
Representation of feedback operators for hyperbolic systems
[NASA-CR-198171] p 2960 N95-31319
Structural aspects of active control technology p 2760 N95-32006
FEEDERS
Development of flexible feeder techniques
[PB95-196317] p 2934 N95-30663
FEEDFORWARD CONTROL
Selecting optimal experiments for feedforward multilayer perceptrons
[AD-A290856] p 2949 N95-30406
Control of skin blood flow in the neutral zone of human body temperature regulation
[AD-A291499] p 2926 N95-30563
Finite-sample based learning algorithms for feedforward networks
[DE95-009123] p 2941 N95-31631
FEMALES
Non-comparability of female and male admission test takers: Evaluation through follow-up
[PB95-212060] p 3021 N95-30700
FERMI LIQUIDS
A valence-fluctuation mechanism with highly anisotropic S-wave pairing
[DE95-009419] p 3010 N95-30571
Properties of a multichannel resonant-level model
[DE95-614482] p 2979 N95-30652
New Fermi-liquid approach for the theory of disordered magnetics
[DE95-613448] p 2967 N95-30739
FERMI SURFACES
Molecular modeling of PMN ceramics
[AD-A290879] p 2813 N95-30560
FERMIONS
Electroweak interactions on the lattice
[DE95-616287] p 2965 N95-30439
Effective Lagrangian approach to the fermion mass problem
[DE95-616316] p 2976 N95-30443
Renormalization group analyses of particle masses in full four-generation fermion condensate scheme
[DE95-613595] p 2988 N95-32070
FERROCENES
Electron transfer kinetics of self-assembled ferrocene C(12) alkanethiol monolayers on gold electrodes from 125K to 175K
[AD-A292754] p 2984 N95-31427
Consequences of kinetic dispersion on the electrochemistry of an adsorbed redox-active monolayer
[AD-A292794] p 2795 N95-31437
FERROELECTRICITY
Ceramics derived from metal-organic precursors
[AD-A290791] p 2811 N95-30405
Crystallization of sol-gel derived lead zirconate titanate thin films in argon and oxygen atmospheres
[DE95-615230] p 3009 N95-30421
Device for low electric-field induced switching of Langmuir-Blodgett ferroelectric liquid crystal polymer films
[AD-D017457] p 3011 N95-30728
Materials for adaptive structural acoustic control, volume 1
[AD-A293444] p 2788 N95-31369
Materials for adaptive structural acoustic control, volume 2
[AD-A293445] p 2788 N95-31370
Materials for adaptive structural acoustic control, volume 3
[AD-A293446] p 2788 N95-31371
Materials for adaptive structural acoustic control, volume 4
[AD-A293447] p 2788 N95-31372
A study of switching behavior in Pb(Zr,Ti)O3 thin films using x-ray diffraction
[DE95-010859] p 2808 N95-31689
FERROMAGNETIC MATERIALS
Properties of a multichannel resonant-level model
[DE95-614482] p 2979 N95-30652
Ferromagnetic Potts model in a magnetic field: Finite lattice extrapolation of the (1 + 1)-dimensional Hamiltonian
[DE95-614447] p 3012 N95-30958
Dynamics of an inhomogeneous anisotropic antiferromagnetic spin chain
[DE95-614449] p 3013 N95-30959
FEYNMAN DIAGRAMS
On the Compton twist-3 asymmetries
[DE95-613627] p 3017 N95-30371
The quantum interference effect in semiconductor space charge layers studied by Feynman path integrals: General formalism and illustrative examples
[DE95-614483] p 3010 N95-30653
FIBER COMPOSITES
Interfacial studies of coated fiber reinforced glass-ceramic matrix composites
[AD-A290780] p 2783 N95-30433
Design of fibre reinforced composite panels for aerospace applications
[PB95-197851] p 2784 N95-30460
Round-robin validation exercise for plate twist test method
[PB95-208088] p 2812 N95-30487
Fatigue crack growth behavior of a titanium matrix composite under thermomechanical loading p 2784 N95-30491
Innovative processing of composites for ultra-high temperature applications, book 3
[AD-A290891] p 2786 N95-30866
Effects of hydrostatic pressure on the mechanical behavior of composite materials
[AD-A293162] p 2787 N95-30963
Characterization of compressive damage mechanisms in ceramic and polymeric matrix composite materials
[AD-A293171] p 2787 N95-30975
Modeling of fiber-reinforced composites incorporating distinct interface properties p 2787 N95-31110
Development and computer implementation of design/analysis techniques for multilayered composite structures. Probabilistic fiber composite micromechanics
[NASA-CR-198979] p 2930 N95-31134
Intermodulation Interference (IMI) testing of composite materials
[AD-A288621] p 2787 N95-31146
An evaluation of the Iosipescu specimen for composite materials shear property measurement
[NASA-CR-198755] p 2896 N95-31418
Control of interfacial chemistry and mechanical properties in metal/ceramic composites p 2790 N95-31976
Failure mechanisms in composite plates subjected to in-plane compressive loading p 2790 N95-32108
Low cost fabrication of silicon carbide based ceramics and fiber reinforced composites
[NASA-TM-107001] p 2822 N95-32208
FIBER OPTICS
Passive, multi-channel fiber optic rotary joint assembly
[AD-D017353] p 2996 N95-30529
FOG --- evaluation test of a fiber optic gyroscope (FOG)
[PB95-211546] p 2879 N95-30600
Fiber optic accelerometer with centrally supported flexural disk
[AD-D017369] p 2879 N95-30658
Optical fiber pressure sensor for liquid level monitoring
[AD-D017346] p 2996 N95-30679
Fiber optic interferometric electric field and voltage sensor utilizing and electrostrictive transducer
[AD-D017433] p 2996 N95-30753
Optical logic and signal processing using a semiconductor laser diode-based optical bistability device
[AD-A293248] p 2997 N95-30908
A study of end-fire coupling of single-mode fiber to Ti: LiNbO3-single-mode planar waveguide
[AD-A293249] p 2997 N95-30909
Embedded infrared fiber optic absorption studies of nitramine propellant strand burning p 2801 N95-31305
Photorefractive nonlinear optics
[AD-A292913] p 2999 N95-31458
Acousto-optical frequency shifters in dual-core optical fibres
[AD-A293979] p 2999 N95-31529
Improved linear dynamic range in externally modulated fiber-optic links p 3001 N95-31950
Current trends in the packaging of photonic devices
[DE95-009583] p 3001 N95-32064
Fiber optic reference frequency distribution to remote beam waveguide antennas p 2972 N95-32346
FIBER PULLOUT
Influence of storage on the maximal pull-out force of three different optical fibers from three epoxides
[PB95-211777] p 2822 N95-32253
FIBER STRENGTH
The effect of interface properties on nickel base alloy composites
[NASA-CR-198363] p 2785 N95-30787
FIBER-MATRIX INTERFACES
The effect of interface properties on nickel base alloy composites
[NASA-CR-198363] p 2785 N95-30787
Modeling of fiber-reinforced composites incorporating distinct interface properties p 2787 N95-31110
FIELD COILS
Stability analysis of the TPX toroidal field coil
[DE95-009666] p 2865 N95-32100
FIELD EFFECT TRANSISTORS
Finite element simulation of GaAs MESFET's
[PB95-208062] p 3009 N95-30485
Space qualified hybrid superconductor/semiconductor planar oscillator circuit
[NASA-TM-106978] p 3011 N95-30703
Pseudomorphic heterostructure materials for high performance devices
[AD-A292906] p 2788 N95-31384
Voltage controlled MESFET pulse shape generator
[DE95-011656] p 2865 N95-32300
Hyperfrequency components
[PB95-208302] p 2866 N95-32369
FIELD OF VIEW
SeaWiFS Technical Report Series. Volume 29: SeaWiFS CZCS-type pigment algorithm
[NASA-TM-104566] p 2922 N95-30857
Wide field of view helmet display systems mounted for helicopter simulation
[AD-A293123] p 2930 N95-30888
SeaWiFS technical report series. Volume 28: SeaWiFS algorithms, part 1
[NASA-TM-104566-VOL-28] p 2924 N95-31850
FIELD THEORY (PHYSICS)
Large scale periodicity of the universe and baryogenesis
[DE95-613461] p 3028 N95-30366
Covariant phase space formulations of superparticles and supersymmetric WZW models
[DE95-616278] p 2964 N95-30428
The solutions of affine and conformal affine Toda field theory
[DE95-616280] p 2965 N95-30430
Plaquette expansion proof and interpretation
[DE95-616282] p 2965 N95-30432
Theoretical high energy physics
[DE95-003107] p 2991 N95-30527
Equivalence of two non-commutative geometry approaches
[DE95-613469] p 2957 N95-30642
Alloying effects of Kondo insulators
[DE95-614308] p 3010 N95-30644
Irreducible Green's Functions method in the theory of highly correlated systems
[DE95-614446] p 3019 N95-31186
Molecular models for nitro compounds p 2831 N95-31293
Variational optimization in quantum field theory p 3020 N95-31646
FIGHTER AIRCRAFT
Numerical investigation into vortical flow about a delta-wing configuration up to incidences at which vortex breakdown occurs in experiment
[PB95-198024] p 2743 N95-30837
New adaptive methods for reconfigurable flight control systems, appendix 1
[AD-A292711] p 2756 N95-30937
Lavi flight control system: Design requirements, development and flight test results p 2758 N95-31994
Digital autopilot design for combat aircraft in ALENIA p 2760 N95-32009
Experimental Aircraft Programme (EAP): Flight control system design and test p 2760 N95-32010

FIGURE OF MERIT
An experimental search for high ZT semiconductors: A survey of the preparation and properties of several alloy systems
[DE95-010232] p 2865 N95-32084
FILE MAINTENANCE (COMPUTERS)
Building an experience factory for maintenance
p 2937 N95-31237
Applying program comprehension techniques to improve software inspections p 2937 N95-31241
An experiment to assess the cost-benefits of code inspections in large scale software development
p 2937 N95-31242
A quantitative comparison of corrective and perfective maintenance p 2939 N95-31250
Does software design complexity affect maintenance effort? p 2939 N95-31251
FILM COOLING
Effect of velocity and temperature distribution at the hole exit on film cooling of turbine blades
[NASA-TM-106954] p 2755 N95-30702
FILM THICKNESS
Mechanisms of enhanced ionic conduction at interfaces in ceramics
[DE95-009125] p 2814 N95-30730
Fluid-film lubrication with an application to piston rings
p 2890 N95-32119
FILMS
Substrate heating measurements in pulsed ion beam film deposition
[DE95-010862] p 2818 N95-31377
FILTRATION
4-manifold topology 2: Dwyer's filtration and surgery kernels
[PB95-207940] p 2965 N95-30509
Particle filtration: An analysis using the method of volume averaging
[DE95-009467] p 2875 N95-31592
Particle filtration: A comparison between theory and experiment
[DE95-009442] p 2875 N95-31637
FINANCE
Workflow literature guide, version 1
[PB95-207080] p 2947 N95-30721
FINANCIAL MANAGEMENT
Federally funded R and D centers: Executive compensation at the Aerospace Corporation. Report to Congressional requestors
[GAO/NSIAD-95-75] p 3022 N95-32213
FINGERS
Smart material joint band
[AD-D017374] p 2888 N95-30716
Precision manipulation with a dextrous robot hand
p 2888 N95-30829
FINISHES
Solderability enhancement of copper through chemical etching
[DE95-010514] p 2806 N95-31406
FINITE DIFFERENCE THEORY
Simulation of airborne electromagnetic measurements in three dimensional environments
[DE95-008546] p 2900 N95-30363
Method and apparatus for locating an acoustic source
[AD-D017347] p 2974 N95-30549
Fourier analysis of a robust multigrid method for convection-diffusion equations
[PB95-197091] p 2958 N95-30835
Simultaneous heat and mass transfer in a horizontal tube absorber: Numerical tools for present and future absorber designs
[PB95-196978] p 2869 N95-30872
Implementation of KIVA-3 on distributed memory MIMD computers
[DE95-010288] p 2931 N95-31130
QMR methods in computational fluid dynamics
[DE95-010293] p 2872 N95-31132
The 2nd Japan-US Symposium on Finite Element Methods in Large Scale Computational Fluid Dynamics
[AD-A292337] p 2960 N95-31264
Theory & numerical methods for problems in shape reconstruction and large deviations
[AD-A292874] p 2952 N95-31279
Numerical simulation of shock/turbulent boundary layer interaction
[NASA-CR-198846] p 2872 N95-31341
Self-adaptive multilevel methods for fluid flow problems p 2873 N95-31412
A two-dimensional finite difference algorithm on the KSR1
[AD-A293576] p 2941 N95-31594
Two-dimensional Finite Difference Time Domain (FD-TD) model of electromagnetic (EM) scattering from a buried rectangular object
[AD-A293685] p 2852 N95-31601
Staggered solution procedures for multibody dynamics simulation
[NASA-CR-199034] p 2899 N95-32202
FINITE ELEMENT METHOD
A phenomenological finite element model of part building in the stereolithography process
[DE95-008437] p 2932 N95-30376
Finite element simulation of GaAs MESFET's
[PB95-208062] p 3009 N95-30485
An explanation for the shape of nanoindentation unloading curves based on finite element simulation
[DE95-008905] p 2812 N95-30548
Scattering and radiation from cylindrically conformal antennas p 2847 N95-30669
Use of element-by-element preconditioners to solve large scale partially separable optimization problems
[PB95-195772] p 2957 N95-30692
Control of flexible spacecraft structures using H-infinity wave absorbing control
[AD-A293141] p 2766 N95-30919
The 2nd Japan-US Symposium on Finite Element Methods in Large Scale Computational Fluid Dynamics
[AD-A292337] p 2960 N95-31264
A finite element formulation for the time domain vibration analysis of an elastic-viscoelastic structure
p 2895 N95-31318
An evaluation of the Iosipescu specimen for composite materials shear property measurement
[NASA-CR-198755] p 2896 N95-31418
Intelligent finite element submodeling of multichip modules for reliability analysis
[AD-A292911] p 2940 N95-31455
Finite element analysis of smart structures and modal testing of a flexible spacecraft arm
[AD-A293761] p 2890 N95-31576
Large-eddy simulation of turbulent flow using the finite element method
[DE95-009464] p 2875 N95-31591
Mode I large strain viscoelastic crack behavior in nitrile rubber sheets
[AD-A289984] p 2820 N95-31617
Evaluation of nonlinear structural dynamic responses using a fast-running spring-mass formulation
[DE95-008503] p 2967 N95-31625
Finite element analysis of damped vibrations of laminated composite plates
[ISBN-0-315-84928-2] p 2789 N95-31731
A time stepping coupled finite element-state space modeling environment for synchronous machine performance and design analysis in the ABC frame of reference p 2864 N95-31948
A numerical analysis of crack growth in microcracking ceramic and ceramic composites
[DE95-010132] p 2897 N95-32024
Structural analyses of the JPL Mars Pathfinder impact
[DE95-009581] p 2767 N95-32081
Automated volumetric grid generation for finite element modeling of human hand joints
[DE95-009575] p 2928 N95-32097
A mode decomposition based finite element formulation for the nonlinear dynamics of flexible spatial structures and mechanisms p 2898 N95-32118
Validation of favor code linear elastic fracture solutions for finite-length flaw geometries
[DE95-009034] p 2898 N95-32157
Evaluation of discretization procedures for transition elements in adaptive mesh refinement
[NASA-CR-199037] p 2944 N95-32190
A survey of the core-congruential formulation for geometrically nonlinear TL finite elements
[NASA-CR-199044] p 2944 N95-32203
Computational methods and software systems for dynamics and control of large space structures
[NASA-CR-199036] p 2767 N95-32204
FPCAS3D User's guide: A three dimensional full potential aeroelastic program, version 1
[NASA-CR-198367] p 2899 N95-32205
A transient FETI methodology for large-scale parallel implicit computations in structural mechanics
[NASA-CR-199040] p 2945 N95-32214
The individual element test revisited
[NASA-CR-199039] p 2945 N95-32215
Residual stress distribution in FeAl weld overlay on steel
[DE95-009178] p 2899 N95-32317
FIRE CONTROL
Development of a structured design and programming methodology for expert systems shells utilizing a visual programming language: Application of structured methodology to the MK92 maintenance advisor expert system, performance module prototype
[AD-A289897] p 2939 N95-31391
Next generation fire suppressants
p 2775 N95-31769
Guidance and Control for Future Air-Defence Systems
[AGARD-CP-555] p 2839 N95-32123
Acquisition, tracking, pointing and fire control for Ballistic Missile Defense p 2841 N95-32131
FIRE EXTINGUISHERS
Simple model of foam spreading on liquid surfaces
[PB95-211207] p 2838 N95-30630
Next generation fire suppressants
p 2775 N95-31769
F-200(TM): The new solution for fire protection
p 2776 N95-31770
FIRE FIGHTING
Simple model of foam spreading on liquid surfaces
[PB95-211207] p 2838 N95-30630
Chemical options to halons for aircraft use
[AD-A293741] p 2747 N95-31569
Evaluation of halon alternatives in inerting experiments
[AD-A293774] p 2795 N95-31580
Next generation fire suppressants
p 2775 N95-31769
FIRE PREVENTION
F-200(TM): The new solution for fire protection
p 2776 N95-31770
Convergent spray process for environmentally friendly coatings p 2777 N95-31776
FIRES
Navier-Stokes flow field analysis of compressible flow in a high pressure safety relief valve
[NASA-TM-110640] p 2868 N95-30862
Electrical short circuit and current overload tests on aircraft wiring
[AD-A293308] p 2860 N95-30922
Next generation fire suppressants
p 2775 N95-31769
FISCHER-TROPSCH PROCESS
Catalytic reactions of synthesis gas. Part 4: Heterogeneous hydroformylation
[PB95-195558] p 2791 N95-30537
Fischer-tropsch synthesis in supercritical fluids
[DE95-009631] p 2792 N95-30709
FISHES
FISHFINDE: Interactive software package to predict fish locations using satellite image data and fish species behavior rules
[AD-A293394] p 2935 N95-30968
FITTING
Fitting discrete distributions on the first two moments
[PB95-197885] p 2950 N95-30462
Analysis of symbolic parameter models
[AD-A292916] p 2940 N95-31459
FITTINGS
Residual stresses and stress corrosion cracking in pipe fittings
[DE95-009332] p 2894 N95-31054
FIXTURES
Hot compression testing of tungsten
[AD-A293683] p 2807 N95-31599
FLAME PROPAGATION
An experimental and numerical study on the structure and extinction of laminar premixed flames
p 2792 N95-30670
The study of flame-vortex interactions using a particle image velocimeter p 2796 N95-31709
Effects of gas-phase thermal expansion on the stability of deflagration through a porous energetic material
[DE95-004382] p 2797 N95-31824
FLAME RETARDANTS
Chemical options to halons for aircraft use
[AD-A293741] p 2747 N95-31569
Evaluation of halon alternatives in inerting experiments
[AD-A293774] p 2795 N95-31580
FLAME TEMPERATURE
Measurement of temperatures and OH concentrations of solid propellant flames using absorption spectroscopy
p 2801 N95-31302
FLAMES
Simulation of chemical kinetics in turbulent natural gas combustion. Volume 2: Experimental studies of nitric oxide production in gas flames
[PB95-196721] p 2791 N95-30541
Species and temperature profiles of propellant flames obtained from FTIR absorption spectroscopy
p 2801 N95-31303
Improvements in infrared absorption of solid propellant flames p 2801 N95-31306
RDX laser-assisted flame structure
p 2801 N95-31314
A study of the gas-phase processes of RDX combustion using a triple quadrupole mass-spectrometer
p 2801 N95-31315
Next generation fire suppressants
p 2775 N95-31769
FLAMMABILITY
Evaluation of Environmentally Acceptable hydraulic fluids
[AD-A293037] p 2821 N95-31666

FLANGES
Coupling stud assembly
[AD-D017335] p 2887 N95-30387
FLAT PANEL DISPLAYS
Low-voltage cathodoluminescence of europium-activated yttrium orthovanadate
[DE95-008536] p 3008 N95-30382
Method and apparatus for a high resolution, flat panel cathodoluminescent display device
[AD-D017434] p 2862 N95-31342
FLAVOR (PARTICLE PHYSICS)
Phenomenology of the two Higgs doublet sector of a quark-lepton symmetric model
[DE95-616337] p 2976 N95-30446
On hadronic production of the B(sub c) meson
[DE95-613726] p 2991 N95-32304
Spin puzzle in nucleon
[DE95-613654] p 2991 N95-32353
FLEXIBILITY
Predictions of tensile behavior and strengths of a Si3N4 ceramic at high temperatures based on a viscoplastic model
[DE95-010220] p 2821 N95-32025
FLEXIBLE BODIES
Control of flexible spacecraft structures using H-infinity wave absorbing control
[AD-A293141] p 2766 N95-30919
A computational procedure for multibody systems including flexible beam dynamics
[NASA-CR-199035] p 2897 N95-31730
A mode decomposition based finite element formulation for the nonlinear dynamics of flexible spatial structures and mechanisms p 2898 N95-32118
FLEXIBLE SPACECRAFT
Finite element analysis of smart structures and modal testing of a flexible spacecraft arm
[AD-A293761] p 2890 N95-31576
Vibration control of spacecrafts and space structures from lift-off to on-orbit environments
p 2767 N95-32110
Computational methods and software systems for dynamics and control of large space structures
[NASA-CR-199036] p 2767 N95-32204
FLEXING
Interface degradation in CAS/Nicalon during elevated temperature aging
[DE95-008843] p 2812 N95-30543
Fiber optic accelerometer with centrally supported flexural disk
[AD-D017369] p 2879 N95-30658
Vibration-damping structural component
[AD-D017376] p 2784 N95-30661
Influence of fiber content on mechanical performance of SiC-fiber-reinforced reaction-bonded silicon nitride composites
[NASA-TM-110639] p 2790 N95-32060
FLIGHT CHARACTERISTICS
Aeroelastic pilot-in-the-loop oscillations
p 2746 N95-31070
FLIGHT CONDITIONS
Integrated terminal weather system (ITWS) demonstration and validation operational test and evaluation
[AD-A293932] p 2749 N95-31521
Icing simulation in the aeropropulsion systems test facility propulsion development test cell C-2
[AD-A293039] p 2747 N95-31667
FLIGHT CONTROL
Moving base simulation of an integrated flight and propulsion control system for an ejector-augmentor STOVL aircraft in hover
[NASA-TM-108867] p 2750 N95-30646
New adaptive methods for reconfigurable flight control systems, appendix 1
[AD-A292711] p 2756 N95-30937
Flight Vehicle Integration Panel Workshop on Pilot Induced Oscillations
[AGARD-AR-335] p 2745 N95-31061
The process for addressing the challenges of aircraft pilot coupling p 2745 N95-31063
Observations on PIO p 2745 N95-31064
SAAB experience with PIO p 2746 N95-31069
Handling qualities analysis on rate limiting elements in flight control systems p 2746 N95-31071
Calspan experience of PIO and the effects of rate limiting p 2746 N95-31072
Active control technology: Applications and lessons learned
[AGARD-CP-560] p 2757 N95-31989
The role of handling qualities specifications in flight control system design p 2757 N95-31990
The prevention of PIO by design
p 2757 N95-31991
The importance of flying qualities design specifications for active control systems p 2757 N95-31992
Experiences with ADS-33 helicopter specification testing and contributions to refinement research
p 2757 N95-31993
Lavi flight control system: Design requirements, development and flight test results p 2758 N95-31994
Robust control: A structured approach to solve aircraft flight control problems p 2758 N95-31995
Dynamic inversion: An evolving methodology for flight control design p 2758 N95-31996
Evaluation of the techniques of fuzzy control for the piloting an aircraft p 2758 N95-31997
The control system design methodology of the STOL and maneuver technology demonstrator
p 2758 N95-31998
Control law design using H-infinity and mu-synthesis short-period controller for a tail-airplane
p 2758 N95-31999
Model following control for tailoring handling qualities: ACT experience with ATTHeS p 2758 N95-32000
X-29 flight control system: Lessons learned
p 2759 N95-32001
The FCS-structural coupling problem and its solution
p 2759 N95-32005
Flight test results of the F-16 aircraft modified with axisymmetric vectoring exhaust nozzle
p 2752 N95-32007
Catapult-launching of the RAFALE design and experimentation p 2752 N95-32008
Digital autopilot design for combat aircraft in ALENIA
p 2760 N95-32009
Experimental Aircraft Programme (EAP): Flight control system design and test p 2760 N95-32010
An investigation of pilot induced oscillation phenomena in digital-flight control systems p 2760 N95-32011
Flight demonstration of an advanced pitch control law in the VAAC Harrier aircraft p 2760 N95-32012
Advanced flight control technology achievements at Boeing Helicopters p 2761 N95-32014
Flying qualities of civil transport aircraft with electrical flight control p 2761 N95-32016
Pilot Induced Oscillation: A report on the AGARD Workshop on PIO p 2761 N95-32017
FLIGHT CREWS
STS-70 flight: Day 5
[NASA-TM-110663] p 2764 N95-30876
Controller resource management: What can we learn from aircrews?
[DOT/FAA/AM-95/21] p 2750 N95-32186
FLIGHT MANAGEMENT SYSTEMS
Results from tests of the Honeywell integrated flight management unit
[PB95-211355] p 2748 N95-30597
FLIGHT MECHANICS
Flight Vehicle Integration Panel Workshop on Pilot Induced Oscillations
[AGARD-AR-335] p 2745 N95-31061
FLIGHT OPERATIONS
Advanced gust management systems: Lessons learned and perspectives p 2759 N95-32002
FLIGHT PATHS
Apparatus and method for producing three-dimensional images
[AD-D017455] p 2847 N95-30727
Analysis of heads-up display quickening versus handling qualities
[AD-A293797] p 2753 N95-31584
FLIGHT SAFETY
The relation of handling qualities ratings to aircraft safety p 2746 N95-31067
Human factors at the FAA Technical Center: Bibliography
[AD-A288638] p 2930 N95-31399
Environmental support of naval aviation
[AD-A292873] p 2747 N95-31454
Special investigation report: Safety of the air tour industry in the United States
[PB95-917004] p 2748 N95-32185
FLIGHT SIMULATION
Moving base simulation of an integrated flight and propulsion control system for an ejector-augmentor STOVL aircraft in hover
[NASA-TM-108867] p 2750 N95-30646
Wide field of view helmet display systems mounted for helicopter simulation
[AD-A293123] p 2930 N95-30888
SCARLET: DLR rate saturation flight experiment
p 2746 N95-31068
Model following control for tailoring handling qualities: ACT experience with ATTHeS p 2758 N95-32000
FLIGHT SIMULATORS
Moving base simulation of an integrated flight and propulsion control system for an ejector-augmentor STOVL aircraft in hover
[NASA-TM-108867] p 2750 N95-30646
Development of advanced approach and departure procedures. Failure scenarios
[PB95-198123] p 2748 N95-30815
Human factors at the FAA Technical Center: Bibliography
[AD-A288638] p 2930 N95-31399
Contextual interference effects on acquisition and transfer of a complex motor task
[AD-A293788] p 2929 N95-31583
Image representation using fast algorithms based on the Zak transform
[AD-A293416] p 2942 N95-31684
Experiences with ADS-33 helicopter specification testing and contributions to refinement research
p 2757 N95-31993
Model following control for tailoring handling qualities: ACT experience with ATTHeS p 2758 N95-32000
Practical experiences in control systems design using the NCR Bell 205 Airborne Simulator
p 2761 N95-32015
FLIGHT STABILITY TESTS
Practical experiences in control systems design using the NCR Bell 205 Airborne Simulator
p 2761 N95-32015
FLIGHT TEST INSTRUMENTS
Preparation of S-70A-9 Black Hawk helicopter for flight tests to investigate cause of cracking of inner fuselage panel
[AD-A293891] p 2752 N95-31544
FLIGHT TESTS
Flight test evaluation of the Stanford University/United Airlines differential GPS Category 3 automatic landing system
[NASA-TM-110354] p 2743 N95-30788
SCARLET: DLR rate saturation flight experiment
p 2746 N95-31068
Flight assessment of the onboard propulsion system model for the Performance Seeking Control algorithm on an F-15 aircraft
[NASA-TM-4705] p 2756 N95-31425
Artificial intelligence techniques for flight test planning, phase 1
[AD-A293962] p 2751 N95-31525
Preparation of S-70A-9 Black Hawk helicopter for flight tests to investigate cause of cracking of inner fuselage panel
[AD-A293891] p 2752 N95-31544
Flight test validation of a frequency-based system identification method on an F-15 aircraft
[NASA-TM-4704] p 2757 N95-31848
Lavi flight control system: Design requirements, development and flight test results p 2758 N95-31994
The control system design methodology of the STOL and maneuver technology demonstrator
p 2758 N95-31998
X-29 flight control system: Lessons learned
p 2759 N95-32001
Advanced gust management systems: Lessons learned and perspectives p 2759 N95-32002
Flight evaluation of forebody vortex control in post-stall flight p 2752 N95-32003
Automatic flight control system for an unmanned helicopter system design and flight test results
p 2759 N95-32004
Flight test results of the F-16 aircraft modified with axisymmetric vectoring exhaust nozzle
p 2752 N95-32007
Experimental Aircraft Programme (EAP): Flight control system design and test p 2760 N95-32010
Flight demonstration of an advanced pitch control law in the VAAC Harrier aircraft p 2760 N95-32012
X-31: A program overview and flight test status
p 2753 N95-32013
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. Unmanned aerial vehicles: Performance of short-range system still in question
[GAO/NSIAD-94-65] p 2752 N95-32196
FLIGHT TIME
Modeling F/A-18 flight hour program costs using regression analysis
[AD-A293771] p 2752 N95-31579
FLIGHT TRAINING
Contextual interference effects on acquisition and transfer of a complex motor task
[AD-A293788] p 2929 N95-31583
Controller resource management: What can we learn from aircrews?
[DOT/FAA/AM-95/21] p 2750 N95-32186
FLOATING POINT ARITHMETIC
Implementation and performance of the pseudoknot problem in Sisal
[DE95-009573] p 2925 N95-32358

FLOW CHARACTERISTICS
Large-eddy simulation of turbulent flow using the finite element method
[DE95-009464] p 2875 N95-31591
Flow quality improvements in the NASA Lewis Research Center 9- by 15-foot Low Speed Wind Tunnel
[NASA-CR-195439] p 2763 N95-31653

FLOW DISTORTION
The study of flame-vortex interactions using a particle image velocimeter p 2796 N95-31709

FLOW DISTRIBUTION
An experimental study of planar heterogeneous supersonic confined jets
[AD-A290859] p 2867 N95-30557
Control of skin blood flow in the neutral zone of human body temperature regulation
[AD-A291499] p 2926 N95-30563
Modeling of thermal, electronic, hydrodynamic, and dynamic deposition processes for pulsed-laser deposition of thin films
[DE95-008906] p 2813 N95-30572
Axial loads on yawed rotors
[PB95-214193] p 2742 N95-30638
Computation of high-altitude hypersonic flow-field radiation p 2743 N95-30843
Navier-Stokes flow field analysis of compressible flow in a high pressure safety relief valve
[NASA-TM-110640] p 2868 N95-30862
Acceleration potential models PREDICHAT/PREDICDYN applied for calculation of axisymmetric dynamic inflow cases
[PB95-207015] p 2869 N95-30957
Patterns in the sky: Natural visualization of aircraft flow fields
[NASA-SP-514] p 2741 N95-31000
Numerical simulation of ram accelerator performance including transient effects during initiation of combustion and sensitivity studies p 2799 N95-31203
Investigating the use of smart acoustically active surfaces for flow separation control in turbomachinery
[AD-A292819] p 2874 N95-31443
Side force acting on blunted circular cylinder bodies at high angles of attack in supersonic flow
[NAL-TR-1255] p 2744 N95-31741
Laser anemometer measurements of the three-dimensional rotor flow field in the NASA low-speed centrifugal compressor
[NASA-TP-3527] p 2756 N95-31985

FLOW EQUATIONS
Simulation of viscous sintering
[PB95-197109] p 2868 N95-30836
A study of numerical solutions of conservation laws
[TRITA-NA-9315] p 2960 N95-31361

FLOW GEOMETRY
Large-eddy simulation of turbulent flow using the finite element method
[DE95-009464] p 2875 N95-31591

FLOW MEASUREMENT
Nearly steady flows in GONG prototype data
[NASA-CR-198935] p 2869 N95-30863
Compressible turbulence measurement in low-angle injection into a supersonic flow
[AD-A293836] p 2874 N95-31516
Spatially-resolved velocity measurements in steady, high-speed, reacting flows using laser-induced OH fluorescence p 2877 N95-32109

FLOW NETS
France --- modeling and verification of parallel computer systems
[PB95-208385] p 2949 N95-32371

FLOW STABILITY
Numerical simulation of time dependent viscoelastic fluid flow
[TRITA-NA-9311] p 2873 N95-31414

FLOW THEORY
Robust fixed-structure control
[AD-A292883] p 2952 N95-30961

FLOW VELOCITY
Numerical study of shear-induced heating in high-speed nozzle flow of liquid monopropellant p 2828 N95-31207
Design and testing of an oxidizer-rich preburner p 2799 N95-31212
Chaos-enhanced transport and aggregation in chaotic flows
[AD-A293892] p 3020 N95-31545
Laser anemometer measurements of the three-dimensional rotor flow field in the NASA low-speed centrifugal compressor
[NASA-TP-3527] p 2756 N95-31985

FLOW VISUALIZATION
Nearly steady flows in GONG prototype data
[NASA-CR-198935] p 2869 N95-30863
Analysis of planar laser-induced fluorescence images obtained during shakedown testing of the AEDC impulse facility
[AD-A293237] p 2884 N95-30906
Patterns in the sky: Natural visualization of aircraft flow fields
[NASA-SP-514] p 2741 N95-31000
An investigation of the side-dump dual in-line ramjet combustor p 2756 N95-31199
Enhanced energy release and soot reduction in actively controlled flames p 2799 N95-31200
Experiments in a 120-mm ram accelerator including flow visualization p 2799 N95-31202
Chaos-enhanced transport and aggregation in chaotic flows
[AD-A293892] p 3020 N95-31545

FLUENCE
Formation of cavities in Si and their chemisorption of materials
[DE95-009586] p 2980 N95-30708
Method for laser-assisted silicon etching using halocarbon ambients
[AD-D017426] p 2883 N95-30744

FLUID FILLED SHELLS
Calculations of the sound scattering from fluid-filled spherical shell sonar targets
[DSTO-RR-0020] p 2974 N95-31365

FLUID FILMS
Fluid-film lubrication with an application to piston rings p 2890 N95-32119
An efficient numerical procedure for thermohydrodynamic analysis of cavitating bearings
[NASA-CR-195476] p 2878 N95-32210
Film temperatures in the presence of cavitation
[NASA-CR-195481] p 2878 N95-32216

FLUID FLOW
Gear pump with reduced fluid-borne noise
[AD-D017362] p 2887 N95-30399
Self-adaptive multilevel methods for fluid flow problems p 2873 N95-31412
Computational methods for control and optimal design of aerospace systems
[AD-A292861] p 2751 N95-31451
Chaos-enhanced transport and aggregation in chaotic flows
[AD-A293892] p 3020 N95-31545
MPI implementation of PHOENICS: A general purpose computational fluid dynamics code
[DE95-009810] p 2877 N95-32033
The HYLIFE-2 inertial fusion energy power plant concept and implications for IFE
[DE95-010561] p 2994 N95-32074

FLUID JETS
Jet mixing in a reacting cylindrical crossflow
[NASA-TM-106975] p 2755 N95-30853
Primary atomization of liquid jets issuing from rocket engine coaxial injectors p 2769 N95-31716

FLUID MECHANICS
Electromagnetically activated compliant wavy-wall
[AD-D017340] p 2866 N95-30412
Semiannual report
[NASA-CR-198172] p 2931 N95-30657
Method and system for reducing drag on a body moving through a fluid medium
[AD-D017336] p 2867 N95-30672

FLUIDICS
Electrified microheterogeneous catalysis
[AD-D017446] p 2794 N95-31271

FLUIDIZED BED PROCESSORS
Robotic weld overlay coatings for erosion control
[DE95-009643] p 2809 N95-32098

FLUORESCENCE
Ultrasensitive fluorescence detection and photophysics in microdroplets
[DE95-010283] p 2798 N95-32086

FLUORIDES
Self-lubricating, TiN-MoS2 composite coatings produced by simultaneous deposition from Ti((CH3))2N4/NH3/MoF6H2S gas mixture
[DE95-010359] p 2788 N95-31403

FLUORINE
The one-dimensional model of the off-centre potential of the fluorine ion in the NaBr lattice
[DE95-614310] p 3010 N95-30647
Recoil longitudinal momentum spectroscopy of electron capture from He by O(7+) and F(8+)
[DE95-010823] p 2990 N95-32274

FLUORINE COMPOUNDS
Method for laser-assisted silicon etching using halocarbon ambients
[AD-D017426] p 2883 N95-30744
Laser properties of Yb(3+)-doped Sr5(PO4)3F crystals
[DE95-010686] p 3016 N95-32268

FLUOROCARBONS
Compatibility of Single Hydraulic Fluid with military specification fluids, seals and metallurgy
[AD-A292954] p 2821 N95-31683

FLUTTER
FPCAS3D User's guide: A three dimensional full potential aeroelastic program, version 1
[NASA-CR-198367] p 2899 N95-32205

FLUTTER ANALYSIS
FPCAS3D User's guide: A three dimensional full potential aeroelastic program, version 1
[NASA-CR-198367] p 2899 N95-32205

FLUX DENSITY
A general non-perturbative estimate of the energy density of lattice Hamiltonians
[DE95-616283] p 2965 N95-30435
Approximate analytic diagonalization of lattice QCD
[DE95-616332] p 3018 N95-30444
Synthesis of carbo-nitride films using high-energy shock plasma deposition
[DE95-615231] p 2811 N95-30450
TV-VI semiconductor quantum well lasers, physics and engineering p 2883 N95-30805
Mobile electric power
[AD-A292721] p 2860 N95-30940
Pulse power for high energy density physics experiments
[DE95-010888] p 2992 N95-31232
Proceedings of the high energy density matter (HEDM) contractor's conference
[AD-A292988] p 2836 N95-31470
Effects of temperature, frequency, flux density, and excitation waveform on the core loss and dynamic B-H loops of supermalloy
[NASA-TM-106982] p 2865 N95-32207

FLUXES
The 19th Annual Electronics Manufacturing Seminar
[AD-A293067] p 2863 N95-31674

FLY BY WIRE CONTROL
SCARLET: DLR rate saturation flight experiment p 2746 N95-31068
Model following control for tailoring handling qualities: ACT experience with ATTHeS p 2758 N95-32000
Digital autopilot design for combat aircraft in ALENIA p 2760 N95-32009
Advanced flight control technology achievements at Boeing Helicopters p 2761 N95-32014

FLYBY MISSIONS
Radiation effects in space: The Clementine 1 mission
[DE95-011513] p 3032 N95-32282

FOAMS
Simple model of foam spreading on liquid surfaces
[PB95-211207] p 2838 N95-30630
Urethane foam process improvements
[DE95-008957] p 2815 N95-30798
A water blown urethane insulation for use in cryogenic environments p 2775 N95-31765
Evaluation of HFC 245ca and HFC 236ea as foam blowing agents p 2775 N95-31766

FOCAL PLANE DEVICES
Inductively coupled IR staring array based on photofluxonic pixels
[AD-A292784] p 2998 N95-31435
Performance of residual carrier array-feed combining in correlated noise p 2856 N95-32232

FOCUSING
Spotsize measurements of a focused CW Nd: YAG laser
[DE95-007746] p 2884 N95-31139
IR materials producibility
[AD-A293330] p 2998 N95-31141

FOKKER-PLANCK EQUATION
Longitudinal losses of charged particles from an open configuration with arbitrary beta ratio
[DE95-614187] p 2987 N95-32055

FOLIAGE
Comparisons of target detection clutter using data from the 1993 FOPEN experiments
[AD-A293052] p 2852 N95-31606

FORCED CONVECTION
Fundamental topics in heat transfer through deformable two-phase media p 2874 N95-31532

FORCED VIBRATION
Dynamical systems as models for flow-induced vibrations
[PB95-206991] p 2869 N95-30956

FOREBODIES
Computational methods for control and optimal design of aerospace systems
[AD-A292861] p 2751 N95-31451
Flight evaluation of forebody vortex control in post-stall flight p 2752 N95-32003

FORECASTING
Clouds: Their prediction and simulation
[AD-A292864] p 2920 N95-31453

Patient/aircraft forecasting for the strategic aeromedical evacuation lift-bed process
[AD-A293902] p 2747 N95-31512
FAA aviation forecasts: Fiscal year 1995-2006
[AD-A293682] p 2741 N95-31598

FORESTS
Analysis of variation embedding tests with 17 MM dowel: Densified veneer wood FOREST project, part 7
[PB95-206876] p 2963 N95-30680
Field performance of the Walker Branch throughfall displacement experiment
[DE95-008677] p 2908 N95-30793

FORGING
Hot compression testing of tungsten
[AD-A293683] p 2807 N95-31599

FORM FACTORS
On explanation of proton electromagnetic form Factor near p (anti p)-threshold from the PS-170 experiment
[DE95-613766] p 2977 N95-30508
Unitarization of Koerner-Kuroda model of electromagnetic structure of octet 1/2(+) baryons
[DE95-613765] p 2984 N95-31548
Form factor of the process gamma(*) gamma(*) yields pi(sup 0) for small virtuality of one of the photons and QCD sum rules (2): Sum rule
[DE95-613629] p 2988 N95-32078
Search for anomalous ZZ(sub gamma) and Z(sub (gamma, gamma)) couplings with D0
[DE95-010457] p 2989 N95-32162

FORMALISM
Six-vector formalism in electromagnetics of bianisotropic media
[PB95-207130] p 2846 N95-30567
Gravitational waves from inspiralling compact binaries: Energy loss and waveform to second-post-Newtonian order
[PB95-207890] p 2913 N95-30590
On the theory of hole propagation in an antiferromagnetic background
[DE95-614469] p 3010 N95-30650
Properties of a multichannel resonant-level model
[DE95-614482] p 2979 N95-30652
The quantum interference effect in semiconductor space charge layers studied by Feynman path integrals: General formalism and illustrative examples
[DE95-614483] p 3010 N95-30653
Non-critical string field theory with non-orientable string interactions
[DE95-737160] p 3020 N95-31281
Formalization of the ramified type theory
[PB95-206785] p 2961 N95-31422

FORMING TECHNIQUES
Texture development in aluminium extrusion
[PB95-196598] p 2979 N95-30666
Gelcasting of sintered reaction-bonded silicon nitride for improved mechanical properties
[DE95-010282] p 2822 N95-32085

FORTRAN
Recommendations for developing portable parallel I/O facilities for scientific applications
[DE95-009384] p 2947 N95-30578
Hadronic production of B(sub c)-mesons
[DE95-620536] p 2983 N95-31216
Towards increased productivity of algorithm implementation
[AD-A292662] p 2940 N95-31452

FORWARD SCATTERING
The TEVA experiment cruise report
[AD-A293025] p 2923 N95-31701
A boundary integral equation approach to three dimensional electromagnetic wave scattering problems
p 2853 N95-31839

FOSSIL FUELS
Producing usable fuel from municipal solid waste
[DE95-008405] p 2902 N95-30375
Publications of the Fossil Energy Advanced Research and Technology Development Materials Program: April 1, 1993-March 31, 1995
[DE95-009200] p 2903 N95-30745

FOSSILS
Publications of the Fossil Energy Advanced Research and Technology Development Materials Program: April 1, 1993-March 31, 1995
[DE95-009200] p 2903 N95-30745

FOUR-WAVE MIXING
Photo-refractive Bi12SiO20: Spatial light modulator
[AD-A293084] p 3001 N95-32153

FOURIER ANALYSIS
Torus bundles and the group cohomology of GL(N,Z)
[PB95-208120] p 2965 N95-30489
On the degree of approximation by Jackson type operators
[DE95-613383] p 2958 N95-30821
Fourier analysis of a robust multigrid method for convection-diffusion equations
[PB95-197091] p 2958 N95-30835

FOURIER SERIES
On the degree of approximation by Jackson type operators
[DE95-613383] p 2958 N95-30821
Fourier series methods for cracks in polygonal plates and shells of revolution p 2893 N95-30825
Application of shallow shell stability to plant morphogenesis by Fourier series p 2897 N95-31734

FOURIER TRANSFORMATION
A real time method for Fourier transform holographic information storage
[AD-A293186] p 2880 N95-30980
Derivation of two-dimensional (2-D) conduction equation in generalized coordinates with constant and anisotropic physical properties
[AD-A293896] p 3020 N95-31511
Standardization of surface contamination analysis systems p 2781 N95-31798
Surface inspection using FTIR spectroscopy p 2782 N95-31803
Cleanliness evaluation of rough surfaces with diffuse IR reflectance p 2782 N95-31804
Statistical properties of chaotic scattering with one open channel
[DE95-613370] p 3020 N95-32150

FOURIER-BESSEL TRANSFORMATIONS
Apparatus and method for producing three-dimensional images
[AD-D017455] p 2847 N95-30727

FRACTALS
Analysis on fractals, laplacians on self-similar sets, noncommutative geometry and spectral dimensions
[PB95-208005] p 2956 N95-30556
Fractal quantum well heterostructures for broadband light emitters
[DE95-009579] p 2860 N95-30707
Local fractal dimension estimation
[AD-A293354] p 2959 N95-30953
Optical correlator optimizations and extensions for automated optical target recognition
[AD-A293013] p 3000 N95-31697
Newton Raphson method, scaling at fractal boundaries and mathematica
[DE95-613374] p 2962 N95-32095

FRACTOGRAPHY
Thermal-mechanical fatigue crack growth in aircraft engine materials
[ISBN-0-315-86543-1] p 2894 N95-31098
Life prediction methodology for ceramic components of advanced heat engines. Phase 1: Volume 2. Appendices
[DE95-010806] p 2817 N95-31136

FRACTURE MECHANICS
Fourier series methods for cracks in polygonal plates and shells of revolution p 2893 N95-30825
Effects of hydrostatic pressure on the mechanical behavior of composite materials
[AD-A293162] p 2787 N95-30963
Sea ice stress research
[AD-A293164] p 2923 N95-30964
Control of interfacial chemistry and mechanical properties in metal/ceramic composites p 2790 N95-31976
A numerical analysis of crack growth in microcracking ceramic and ceramic composites
[DE95-010132] p 2897 N95-32024
Simulation of fracture in compression using a field-theory model
[DE95-009874] p 2898 N95-32102
Validation of favor code linear elastic fracture solutions for finite-length flaw geometries
[DE95-009034] p 2898 N95-32157
Numerical evaluation of three-dimensional crack-tip integrals for layered anisotropic solids p 2898 N95-32191

FRACTURE STRENGTH
Room temperature fracture and high temperature creep deformation properties of alumina reinforced with 20 vol% particulate niobium
[DE95-010234] p 2815 N95-30897
Sea ice stress research
[AD-A293164] p 2923 N95-30964
Life prediction methodology for ceramic components of advanced heat engines. Phase 1: Volume 2. Appendices
[DE95-010806] p 2817 N95-31136
Cracking during nanoindentation and its use in the measurement of fracture toughness
[DE95-008839] p 2818 N95-31175
Initial survey on fracture toughness of commercial Nd2Fe14B
[DE95-009813] p 2808 N95-31643
Influence of fiber content on mechanical performance of SiC-fiber-reinforced reaction-bonded silicon nitride composites
[NASA-TM-110639] p 2790 N95-32060

FRACTURING
Life prediction methodology for ceramic components of advanced heat engines. Phase 1: Volume 2. Appendices
[DE95-010806] p 2817 N95-31136
Observations of star fracture and longitudinal splitting in BIS 812 EMA and Q1N submarine construction steels
[DSTO-RR-0014] p 2806 N95-31344
Failure analysis for polycarbonate transparencies
[AD-A292992] p 2820 N95-31471
Large deformation failure mechanisms in nonlinear solids
[AD-A293010] p 2896 N95-31474

FRAGMENTATION
Properties of new materials relevant to energy and fuel research
[AD-A289734] p 2825 N95-31149

FRAMES
Influence of adhesives and bonding techniques on the properties of glued timber-steelplate joints
[PB95-211470] p 2813 N95-30599
Nonlinear dynamics and chaotic motions of a singularly perturbed nonlinear viscoelastic beam p 2897 N95-31706

FREDHOLM EQUATIONS
Existence of solutions in plane quasistationary stokes flow driven by surface tension
[PB95-197935] p 2868 N95-30810

FREE BOUNDARIES
Existence of solutions in plane quasistationary stokes flow driven by surface tension
[PB95-197935] p 2868 N95-30810
Selected flows with free surfaces: Streams and drops
[IFTR-3/1995] p 2876 N95-31817

FREE CONVECTION
Fundamental topics in heat transfer through deformable two-phase media p 2874 N95-31532

FREE ELECTRON LASERS
Free electron laser as energy driver for inertial confinement fusion
[DE95-614252] p 2884 N95-30914
Harmonic gyrotron amplifiers and phase-locked oscillators
[AD-A293185] p 2861 N95-30979
Prime power for shipboard high-average power FELs
[AD-A293718] p 2886 N95-31833

FREE ELECTRONS
Selected problems of the identification of weak double layers in plasma on a background of different aperiodic non-collision structures
[IFTR-4/1995] p 3006 N95-31737

FREE ENERGY
The topological string associated with a simple singularity of type D
[DE95-737229] p 2983 N95-31225

FREE MOLECULAR FLOW
The passage from transitional to free molecular plumes p 2871 N95-30994

FREE VIBRATION
New Fermi-liquid approach for the theory of disordered magnetics
[DE95-613448] p 2967 N95-30739
Finite element analysis of damped vibrations of laminated composite plates
[ISBN-0-315-84928-2] p 2789 N95-31731

FREEZING
Study of melting and freezing processes of water for application to ice thermal energy storage system p 2905 N95-31735

FREQUENCIES
Noise signal processor
[AD-D017430] p 2974 N95-30747
Statistical interface for chaotic signal in noise
[AD-A290271] p 2848 N95-30932
Inverse and control problems in electromagnetics
[AD-A292993] p 2849 N95-30962
PIO: A historical perspective p 2745 N95-31062
Use of a variable frequency source with a single-mode cavity to process ceramic filaments
[DE95-010992] p 2817 N95-31152
Effects of temperature, frequency, flux density, and excitation waveform on the core loss and dynamic B-H loops of supermalloy
[NASA-TM-106982] p 2865 N95-32207
Custom Turnkey Time and Frequency Systems: A structured, expandable approach p 2969 N95-32330

FREQUENCY DISTRIBUTION
Fiber optic reference frequency distribution to remote beam waveguide antennas p 2972 N95-32346

FREQUENCY MEASUREMENT
Optical frequency standards: Hertz-level working standards and their absolute frequency measurement
[AD-A293930] p 2999 N95-31515

FREQUENCY MODULATION
Degradation in finite-harmonic subcarrier demodulation p 2855 N95-32228

FREQUENCY RANGES
Handling qualities analysis on rate limiting elements in flight control systems p 2746 N95-31071
FREQUENCY RESPONSE
Advanced system identification techniques for wind turbine structures
[DE95-004049] p 2902 N95-30505
Radiometer measurements of sea ice in the Gulf of Bothnia 1992
[PB95-206611] p 2900 N95-30718
Handling qualities analysis on rate limiting elements in flight control systems p 2746 N95-31071
Calspan experience of PIO and the effects of rate limiting p 2746 N95-31072
FREQUENCY SHIFT
Acousto-optical frequency shifters in dual-core optical fibres
[AD-A293979] p 2999 N95-31529
FREQUENCY STABILITY
Digital signal processing in the radio science stability analyzer p 2857 N95-32240
Review of longitudinal perturbation formalism
[DE95-010894] p 2990 N95-32278
A globally efficient means of distributing UTC time and frequency through GPS p 2970 N95-32335
Monte Carlo simulations of precise timekeeping in the Milstar communication satellite system p 2970 N95-32336
Automated delay measurement system for an Earth station for Two-Way Satellite Time and Frequency Transfer p 2971 N95-32337
Prospects for high accuracy time dissemination and synchronization using coded radar pulses from a low-earth orbiting spacecraft p 2971 N95-32339
Metafitting: Weight optimization for least-squares fitting of PTTI data p 2971 N95-32340
Methodologies for steering clocks p 2971 N95-32341
The effects of clock errors on timescale stability p 2971 N95-32342
Relativistic theory for syntonization of clocks in the vicinity of the Earth p 2971 N95-32343
FREQUENCY STANDARDS
Optical frequency standards: Hertz-level working standards and their absolute frequency measurement
[AD-A293930] p 2999 N95-31515
The 26th Annual Precise Time and Time Interval (PTTI) Applications and Planning Meeting
[NASA-CP-3302] p 2967 N95-32319
The 1994 international transatlantic two-way satellite time and frequency transfer experiment: Preliminary results p 2858 N95-32320
High accuracy time transfer synchronization p 2968 N95-32321
European plans for new clocks in space p 2968 N95-32324
High resolution time interval counter p 2969 N95-32331
Investigation into the effects of VHF and UHF band radiation on Hewlett-Packard (HP) Cesium Beam Frequency Standards p 2970 N95-32332
The Deep Space Network stability analyzer p 2858 N95-32334
A globally efficient means of distributing UTC time and frequency through GPS p 2970 N95-32335
Metafitting: Weight optimization for least-squares fitting of PTTI data p 2971 N95-32340
Methodologies for steering clocks p 2971 N95-32341
Allan deviation computations of a linear frequency synthesizer system using frequency domain techniques p 2972 N95-32344
SVN 9 End-Of-Life testing p 2767 N95-32345
Fiber optic reference frequency distribution to remote beam waveguide antennas p 2972 N95-32346
FREQUENCY SYNCHRONIZATION
Relativistic theory for syntonization of clocks in the vicinity of the Earth p 2971 N95-32343
FREQUENCY SYNTHESIZERS
Allan deviation computations of a linear frequency synthesizer system using frequency domain techniques p 2972 N95-32344
FRICTION
Simple model of foam spreading on liquid surfaces
[PB95-211207] p 2838 N95-30630
Evaluation of alternative pavement marking materials
[AD-A292973] p 2763 N95-31468
FRONTS (METEOROLOGY)
A numerical study of the effect of the Gulf Stream and the Appalachian Mountains on Carolina coastal frontogenesis
[AD-A293765] p 2921 N95-31577
FRUSTRATION
Evaluation of calibration parameters and performance of the video imaging technique of assessing exposure (VITAE system)
[AD-A289023] p 2927 N95-30998
FUEL CELLS
Electrochemical vapour deposition of SOFC interconnection materials
[PB95-197844] p 2812 N95-30459
Mobile electric power
[AD-A292721] p 2860 N95-30940
Prospector 7: Small fuel cells for portable power workshop
[AD-A292729] p 2904 N95-30947
FUEL COMBUSTION
Preliminary assessment of combustion modes for internal combustion wave rotors
[NASA-TM-107000] p 2754 N95-30632
An investigation of the side-dump dual in-line ramjet combustor p 2756 N95-31199
Enhanced energy release and soot reduction in actively controlled flames p 2799 N95-31200
A pulsed liquid fuel ramjet p 2756 N95-31201
Experiments in a 120-mm ram accelerator including flow visualization p 2799 N95-31202
Numerical simulation of ram accelerator performance including transient effects during initiation of combustion and sensitivity studies p 2799 N95-31203
Spectral element method for numerical simulation of unsteady laminar diffusion flames p 2794 N95-31333
FUEL CONSUMPTION
Wave rotor-enhanced gas turbine engines
[NASA-TM-106998] p 2754 N95-30517
FUEL INJECTION
An investigation of the side-dump dual in-line ramjet combustor p 2756 N95-31199
Enhanced energy release and soot reduction in actively controlled flames p 2799 N95-31200
A pulsed liquid fuel ramjet p 2756 N95-31201
Numerical simulation of ram accelerator performance including transient effects during initiation of combustion and sensitivity studies p 2799 N95-31203
Numerical study of shear-induced heating in high-speed nozzle flow of liquid monopropellant p 2828 N95-31207
Atomization simulations using an Eulerian-VOF-Lagrangian method p 2828 N95-31210
Design and testing of an oxidizer-rich preburner p 2799 N95-31212
Primary atomization of liquid jets issuing from rocket engine coaxial injectors p 2769 N95-31716
Combustion response to acoustic perturbation in liquid rocket engines p 2770 N95-31972
FUEL PRODUCTION
BioFacts: Fueling a stronger economy, thermochemical conversion of biomass
[DE94-006866] p 2905 N95-31822
FUEL SPRAYS
Experimental investigation of turbulent particle dispersion in swirling flows
[DLR-FB-94-20] p 2873 N95-31355
FUEL SYSTEMS
Prospector 7: Small fuel cells for portable power workshop
[AD-A292729] p 2904 N95-30947
FUELS
Prospector 7: Small fuel cells for portable power workshop
[AD-A292729] p 2904 N95-30947
Fuel-type classification and parameters prediction by Gas Liquid Chromatography analysis
[AD-A293442] p 2794 N95-31368
Natural gas liquefier for vehicle fuel
[AD-A293619] p 2836 N95-31564
FULL SCALE TESTS
Generation of earthquake signals
[PB95-211223] p 2913 N95-30631
FULLERENES
Studies of C(60) and C(70) and other fullurenes: Synthesis, derivation, electrochemistry, lubricant properties and new composition materials
[AD-A292726] p 3012 N95-30944
Materials with controllable signature properties
[PB95-222964] p 2857 N95-32313
Superconducting and normal-state properties of novel materials
[DE95-012368] p 3017 N95-32366
FUNCTION GENERATORS
Voltage controlled MESFET pulse shape generator
[DE95-011656] p 2865 N95-32300
FUNCTION SPACE
Local index formula in noncommutative geometry
[PB95-208146] p 2955 N95-30490
FUNCTIONAL ANALYSIS
Enhancements to the SSME transfer function modeling code
[NASA-CR-198957] p 2958 N95-30754
FUNCTIONALS
Some functional solutions of the Yang-Baxter equation
[DE95-613584] p 2966 N95-30635
FUNCTIONS (MATHEMATICS)
On the degree of approximation by Jackson type operators
[DE95-613383] p 2958 N95-30821
FUSELAGES
Development of stitched/RTM primary structures for transport aircraft
[NASA-CR-191441] p 2789 N95-31421
Preparation of S-70A-9 Black Hawk helicopter for flight tests to investigate cause of cracking of inner fuselage panel
[AD-A293891] p 2752 N95-31544
FUSION REACTORS
Development of a tokamak plasma optimized for stability and confinement
[DE95-009609] p 3003 N95-30641
Development of plasma diagnostics technologies: A study on nuclear fusion reactor
[DE95-614180] p 3005 N95-31004
Workshop on transport for a common ion driver
[DE95-007298] p 2992 N95-31166
The development of the tokamak system technology: A study on the fusion reactor
[DE95-614256] p 3005 N95-31366
Design study of prototype accelerator and MeV test facility for demonstration of 1 MeV, 1 A negative ion beam production
[DE95-737208] p 2995 N95-32262
Development of integrated insulation joint for cooling pipe in tokamak reactor
[DE95-737220] p 3007 N95-32264
FUZZY SETS
Analysis of the final result from the image template matching method with fuzzy logic
[PB95-222915] p 2946 N95-32311
FUZZY SYSTEMS
Evaluation of the techniques of fuzzy control for the piloting an aircraft p 2758 N95-31997
Analysis of the final result from the image template matching method with fuzzy logic
[PB95-222915] p 2946 N95-32311

G

GALACTIC COSMIC RAYS
Radiation effects in space: The Clementine 1 mission
[DE95-011513] p 3032 N95-32282
GALACTIC EVOLUTION
Large scale periodicity of the universe and baryogenesis
[DE95-613461] p 3028 N95-30366
GALERKIN METHOD
Potential integral equations of the 2D Laplace operator in wavelet basis
[TRITA-NA-9401] p 2957 N95-30713
GALLIUM
Conjugated aromatic polyimines. 2. Synthesis, structure, and properties of new aromatic polyazomethines
[AD-A292955] p 2819 N95-31461
GALLIUM ARSENIDES
Magnetoluminescence characterization of quantum well structures
[DE95-008527] p 3008 N95-30381
NIR High-efficiency subwavelength diffractive structures in semiconductors
[DE95-008535] p 3008 N95-30391
The junction characteristics and current conduction mechanisms of GaInP2 n(+)p diodes and solar cells
[AD-A290857] p 2902 N95-30408
Finite element simulation of GaAs MESFET's
[PB95-208062] p 3009 N95-30485
Semiconductor nanocrystals formed in SiO2 by ion implantation
[DE95-008900] p 2978 N95-30546
Direct sublattice imaging of interface dislocation structures in CdTe/GaAs(001)
[DE95-009031] p 3010 N95-30576
Vertical transport in GaAs/AlGaAs superlattices p 3012 N95-30822
New material for high average power infrared generation: QPM-DB GaAs
[AD-A292714] p 2967 N95-30939
Opto-electronic components from non-stoichiometric 3-5 materials
[AD-A293206] p 3013 N95-30985
Self-consistent, 2D simulations of filament propagation in photoconducting switches
[DE95-010794] p 2961 N95-31133

Carrier dynamics and optical properties of GaAs- and InP-based strained quantum well lasers
p 2886 N95-31848
Investigation of the basic physics of high efficiency semiconductor hot carrier solar cell
[NASA-CR-198945] p 2906 N95-32212

GALLIUM COMPOUNDS
Langasite crystals growth with quality factor Q, that exceeds the Q of quartz, and which are suitable for high-precision resonators
[AD-A293397] p 3013 N95-30969

GALLIUM NITRIDES
Hydrogen diffusion and passivation in InGaAlN alloys
[DE95-010689] p 2806 N95-31150
Pseudomorphic heterostructure materials for high performance devices
[AD-A292906] p 2788 N95-31384
Degradation of blue AlGaN/InGaN/GaN LEDs subjected to high current pulses
[DE95-008824] p 2863 N95-31611

GALLIUM PHOSPHIDES
The junction characteristics and current conduction mechanisms of GaInP2 n(+)p diodes and solar cells
[AD-A290857] p 2902 N95-30408

GAME THEORY
Structural design using equilibrium programming formulations
[NASA-TM-110175] p 2893 N95-30682

GAMMA RAY ASTRONOMY
Observations of accreting pulsars
[NASA-CR-198931] p 3028 N95-30469

GAMMA RAY BURSTS
Studying the thermal/non-thermal crossover in solar flares
[NASA-CR-189436] p 3031 N95-30785

GAMMA RAY LASERS
Basic study of the pumping of a gamma-ray laser
[AD-A293561] p 2886 N95-31563

GAMMA RAY OBSERVATORY
Studying the thermal/non-thermal crossover in solar flares
[NASA-CR-189436] p 3031 N95-30785

GAMMA RAY SPECTRA
Observations of accreting pulsars
[NASA-CR-198931] p 3028 N95-30469
Holistic analysis of gamma-ray spectra in instrumental neutron activation analysis
[PB95-214458] p 2979 N95-30639

GAMMA RAYS
Computer vision for detecting and quantifying gamma-ray sources in coded-aperture images
[DE95-008810] p 2900 N95-30472
Studying the thermal/non-thermal crossover in solar flares
[NASA-CR-189436] p 3031 N95-30785
Basic study of the pumping of a gamma-ray laser
[AD-A293561] p 2886 N95-31563
Search for anomalous ZZ(sub gamma) and Z(sub (gamma, gamma)) couplings with D0
[DE95-010457] p 2989 N95-32162

GAS ANALYSIS
Micromachined sensor and actuator research at the Microelectronics Development Laboratory
[DE95-008540] p 2878 N95-30384
Hydrogen sulfide analyzer with protective barrier
[AD-D017412] p 2793 N95-31009
Experiments in a 120-mm ram accelerator including flow visualization p 2799 N95-31202
Fuel-type classification and parameters prediction by Gas Liquid Chromatography analysis
[AD-A293442] p 2794 N95-31368
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
[DE95-000047] p 2881 N95-31694

GAS CHROMATOGRAPHY
Specific rate coefficients from vibrational overtone activation of 1-methylcyclopropene
[AD-A288755] p 2793 N95-31014
Fuel-type classification and parameters prediction by Gas Liquid Chromatography analysis
[AD-A293442] p 2794 N95-31368
Analytical instrumentation for environmental research
[AD-A292832] p 2908 N95-31447

GAS DETECTORS
Experimental characterisation of gas microstrip detectors. Part 3: Lifetime characteristics
[PB95-192845] p 2880 N95-30691
Development of a new instrument for rocket engine combustion diagnostics p 2799 N95-31211
The development of a pulsed laser imaging system for natural gas leak detection
[DE95-011407] p 2887 N95-32280

GAS DISCHARGES
Synthesis of carbo-nitride films using high-energy shock plasma deposition
[DE95-615231] p 2811 N95-30450

GAS DYNAMICS
Numerical simulation of ram accelerator performance including transient effects during initiation of combustion and sensitivity studies p 2799 N95-31203
Atomization simulations using an Eulerian-VOF-Lagrangian method p 2828 N95-31210

GAS EXPANSION
Properties of a multichannel resonant-level model
[DE95-614482] p 2979 N95-30652

GAS FLOW
State resolved dynamics of ion-molecule collisions in a flowing afterglow
[AD-A290895] p 2976 N95-30410
Kinetic theory model predictions compared with low-thrust axisymmetric nozzle plume data
[NASA-CR-198934] p 2768 N95-30864

GAS GENERATORS
A numerical model for dynamic wave rotor analysis
[NASA-TM-106997] p 2754 N95-30617
Preliminary assessment of combustion modes for internal combustion wave rotors
[NASA-TM-107000] p 2754 N95-30632

GAS INJECTION
Enhanced energy release and soot reduction in actively controlled flames p 2799 N95-31200

GAS IONIZATION
Kinematical threshold of recoil-ion longitudinal momentum distribution in single ionization of helium by protons and alpha particles
[DE95-010803] p 2990 N95-32271
Ionization of He by highly charged ions at low velocity
[DE95-010815] p 2990 N95-32273
Recoil longitudinal momentum spectroscopy of electron capture from He by O(7+) and F(8+)
[DE95-010823] p 2990 N95-32274

GAS JETS
An experimental study of planar heterogeneous supersonic confined jets
[AD-A290859] p 2867 N95-30557
Hot jet/wake turbulent structure and laser propagaion. Part 1: Jet/wake turbulence modeling
p 2871 N95-30991

GAS MIXTURES
Investigation of ram accelerator performance capabilities p 2799 N95-31204
Evaluation of halon alternatives in inerting experiments
[AD-A293774] p 2795 N95-31580

GAS PRESSURE
Shuttle redesigned solid rocket motor aluminum oxide investigations p 2770 N95-30989
Shuttle Redesigned Solid Rocket Motor aluminum oxide investigations p 2770 N95-31197
Fourier Transform (FT) Raman spectroscopy of nitrogen at high pressure
[AD-A293051] p 2796 N95-31670

GAS STREAMS
CO2 (dry ice) cleaning system p 2778 N95-31785

GAS TEMPERATURE
Advanced oxidizers diffusion flames structure
p 2801 N95-31307

GAS TUNGSTEN ARC WELDING
Hydrogen absorption in iron and steel during gas tungsten arc welding
[PB95-197018] p 2804 N95-30776
Residual stress distribution in FeAl weld overlay on steel
[DE95-009178] p 2899 N95-32317

GAS TURBINE ENGINES
Wave rotor-enhanced gas turbine engines
[NASA-TM-106998] p 2754 N95-30517
Object-oriented approach for gas turbine engine simulation
[NASA-TM-106970] p 2754 N95-30594
A numerical model for dynamic wave rotor analysis
[NASA-TM-106997] p 2754 N95-30617
Preliminary assessment of combustion modes for internal combustion wave rotors
[NASA-TM-107000] p 2754 N95-30632
Jet mixing and emission characteristics of transverse jets in annular and cylindrical confined crossflow
[NASA-TM-106976] p 2755 N95-30698
Thermal-mechanical fatigue crack growth in aircraft engine materials
[ISBN-0-315-86543-1] p 2894 N95-31098
Advanced turbine systems program conceptual design and product development
[DE95-000088] p 2890 N95-32163

GAS TURBINES
Achieving improved cycle efficiency via pressure gain combustors
[DE95-008945] p 2792 N95-30762
Jet mixing in a reacting cylindrical crossflow
[NASA-TM-106975] p 2755 N95-30853
Prime power for shipboard high-average power FELs
[AD-A293718] p 2686 N95-31833

GAS-ION INTERACTIONS
State resolved dynamics of ion-molecule collisions in a flowing afterglow
[AD-A290895] p 2976 N95-30410

GAS-LIQUID INTERACTIONS
Atomization simulations using an Eulerian-VOF-Lagrangian method p 2828 N95-31210

GASEOUS DIFFUSION
Network user's guide
[DE95-009185] p 2942 N95-31634

GASES
Tunable composite membranes for gas separations
[DE95-010602] p 2822 N95-32075

GASIFICATION
BioFacts: Fueling a stronger economy, thermochemical conversion of biomass
[DE94-006866] p 2905 N95-31822

GAUGE INVARIANCE
What's wrong with anomalous chiral gauge theory?
[DE95-616285] p 3018 N95-30437
Chiral gauge theory in four dimensions
[DE95-616288] p 3018 N95-30440
Equivalence of two non-commutative geometry approaches
[DE95-613469] p 2957 N95-30642
Recoil correction in the Dirac-Coulomb problem
[DE95-619241] p 2959 N95-31137
Instability of weak vacuum
[DE95-613590] p 2985 N95-31620
Electroweak flavor-conserving gauge processes: Virtual effects
[DE95-009922] p 3020 N95-32106

GAUGE THEORY
A general non-perturbative estimate of the energy density of lattice Hamiltonians
[DE95-616283] p 2965 N95-30435
Two-loop vacuum amplitudes in a non-Abelian gauge theory on S(sub 4)
[DE95-616284] p 3018 N95-30436
What's wrong with anomalous chiral gauge theory?
[DE95-616285] p 3018 N95-30437
Chiral gauge theory in four dimensions
[DE95-616288] p 3018 N95-30440
Research progress report
[DE95-010726] p 3030 N95-32269

GEAR TEETH
Gear pump with reduced fluid-borne noise
[AD-D017362] p 2887 N95-30399

GEARS
Gear pump with reduced fluid-borne noise
[AD-D017362] p 2887 N95-30399

GELS
Composite polymer electrolyte for lithium batteries
[AD-A293924] p 2820 N95-31514

GENERAL AVIATION AIRCRAFT
Annual review of aircraft accident data: US general aviation calendar year 1993
[PB95-215828] p 2747 N95-31712
Special investigation report: Safety of the air tour industry in the United States
[PB95-917004] p 2748 N95-32185

GENETIC ALGORITHMS
Application of a genetic algorithm to optimize staffing levels in software development
[AD-A293725] p 2943 N95-31835

GEOCENTRIC COORDINATES
A feedback linearization approach to orbital maneuvers p 2765 N95-30841

GEOCHEMISTRY
Laboratory simulated hydrothermal alteration of sedimentary organic matter from Guaymas Basin, Gulf of California
[NASA-CR-198951] p 2914 N95-30865

GEODESIC LINES
On drawing complicated 3D surfaces
[DE95-619199] p 2939 N95-31257

GEODESY
Digital Mapping Charting and Geodesy Analysis Program technical review of Vector Product Format (VPF)
[AD-A289766] p 2901 N95-31390
PTTI applications at the limits of GPS
p 2969 N95-32327

GEODETIC SURVEYS
Visit to Ionospheric Modeling and Remote Sensing Branch, Phillips Laboratory in Hanscom AFB, MA
[AD-A292339] p 2901 N95-31265
Digital Mapping Charting and Geodesy Analysis Program technical review of Vector Product Format (VPF)
[AD-A289766] p 2901 N95-31390

GEOGRAPHIC DISTRIBUTION
FISHFINDE: Interactive software package to predict fish locations using satellite image data and fish species behavior rules
[AD-A293394] p 2935 N95-30968

GEOGRAPHIC INFORMATION SYSTEMS
An overview of high-speed networking for workstations
[DE95-009076] p 2947 N95-30577
FISHFINDE: Interactive software package to predict fish locations using satellite image data and fish species behavior rules
[AD-A293394] p 2935 N95-30968
Brief review of remote sensing literature pertaining to classification and geostatistics
[AD-A290932] p 2901 N95-31156
Management, visualization, and analysis of environmental and geotechnical data
[DE95-000063] p 3026 N95-31823

GEOLOGICAL FAULTS
Studies in marine tectonics: Propagating rifts, depth anomalies and subduction zone anisotropy
p 2923 N95-31719

GEOLOGY
Directory of global environmental sciences in Japan
p 2899 N95-31413

GEOMAGNETIC TAIL
Study of cross-tail current carriers in magnetotail
p 3005 N95-30804
Analysis of plasma measurements for the Geotail mission
[NASA-CR-199074] p 3032 N95-32218

GEOMAGNETISM
Kiruna geophysical data. Data summary 94/4-6, April-June 1994
[PB95-210365] p 2913 N95-30627
Kiruna geophysical data. Data summary 94/1-3, January-March 1994
[PB95-210373] p 2913 N95-30628
Low-latitude boundary layer near noon: An open field line model
[ATR-93(7270)-1] p 2914 N95-30773
Study of cross-tail current carriers in magnetotail
p 3005 N95-30804
Environmental conditions responsible for solar activity
[AD-A292859] p 3031 N95-31450
Underdense heating of the ionosphere using oblique high power HF radiowaves p 2917 N95-31951

GEOMETRICAL OPTICS
Physical optics polarization scattering matrix for a right-angle dihedral
[AD-A293036] p 3000 N95-31665

GEOMETRY
Local index formula in noncommutative geometry
[PB95-208146] p 2955 N95-30490

GEOPHYSICS
Kiruna geophysical data. Data summary 94/4-6, April-June 1994
[PB95-210365] p 2913 N95-30627
Kiruna geophysical data. Data summary 94/1-3, January-March 1994
[PB95-210373] p 2913 N95-30628
Solar-geophysical data number 604, December 1994. Part 2: (Comprehensive reports). Data for June 1994, and miscellaneous
[PB95-191995] p 3031 N95-30690
Development of the Multi-Level Seismic Receiver (MLSR)
[DE95-008823] p 2916 N95-31610

GEOSYNCHRONOUS ORBITS
Time aspects of the European Complement to GPS: Continental and transatlantic experimental phases
p 2969 N95-32328

GEOTHERMAL ENERGY CONVERSION
Data on development of new energy technologies
[DE95-764135] p 2904 N95-31155

GEOTHERMAL RESOURCES
Sleeping renewable beauty: Will the prince ever come
[PB95-214573] p 2903 N95-30640

GEOTHERMAL TECHNOLOGY
Sleeping renewable beauty: Will the prince ever come
[PB95-214573] p 2903 N95-30640

GERMANATES
Germanate glass ceramic
[AD-D017418] p 2816 N95-31011

GERMANIUM
Development of germanium-silicon growth technology
[AD-A293199] p 3013 N95-30983

GERMANIUM ALLOYS
Amorphization threshold in Si-implanted strained SiGe alloy layers
[DE95-008901] p 2804 N95-30797
Comprehensive research on the stability and electronic properties of a-Si:H and a-SiGe:H alloys and devices
[DE95-004088] p 2810 N95-32154

GERMANY
Psychological pilot selection in the US Air Force, the Luftwaffe, and the German Aerospace Research Establishment
[AD-A293779] p 2928 N95-31376

GIANT STARS
Chromospherically active stars. 6: Giants with compact hot companions and the barium star scenario
[NASA-TM-110641] p 3028 N95-30466

GLASS
Ion implantation and thermal stress resistance of ceramics
[DE95-615349] p 2812 N95-30451
State-of-the-art low-cost solar reflector materials
[DE95-000260] p 2902 N95-30526
Ionic conductivities of lithium phosphorus oxynitride glasses, polycrystals, and thin films
[DE95-008898] p 2812 N95-30545
A Monte-Carlo model of ionic transport across a solid interface
[DE95-613447] p 3011 N95-30737
Simulation of viscous sintering
[PB95-197109] p 2868 N95-30836
Picosecond phase conjugation: New applications, devices, and materials
[AD-A293195] p 3013 N95-30982
Glass matrix doped with activated luminescent nanocrystalline particles
[AD-D017416] p 2816 N95-31010
Germanate glass ceramic
[AD-D017418] p 2816 N95-31011
High strain rate properties and constitutive modeling of glass
[DE95-008434] p 2816 N95-31058
Nonlinear optics in novel composite media
[AD-A293886] p 2999 N95-31542
Whisker reinforced glass ceramic
[DE95-010542] p 2823 N95-32305

GLASS FIBER REINFORCED PLASTICS
Interfacial studies of coated fiber reinforced glass-ceramic matrix composites
[AD-A290780] p 2783 N95-30433

GLASS FIBERS
Technique to prepare high-reflectance optical fiber Bragg gratings with single exposure in-line or fiber draw tower
[AD-D017445] p 2998 N95-31270

GLASSY CARBON
Structural investigation of xenon ion-beam-irradiated glassy carbon
[DE95-616777] p 2977 N95-30474

GLINT
Point reflector model for the simulation of radar target glint and Doppler phenomena
[PB95-222980] p 2857 N95-32314

GLOBAL POSITIONING SYSTEM
Signal-processing theory for the TurboRogue receiver
[NASA-CR-198882] p 2846 N95-30581
Flight test evaluation of the Stanford University/United Airlines differential GPS Category 3 automatic landing system
[NASA-TM-110354] p 2743 N95-30788
Guidelines for the design of GPS and LORAN receiver controls and displays
[AD-A293753] p 2749 N95-31572
Fine tuning GPS clock estimation in the MCS
p 2968 N95-32322
Implementation of a standard format for GPS common view data p 2968 N95-32323
Time activities at the BIPM p 2968 N95-32325
PTTI applications at the limits of GPS
p 2969 N95-32327
Time aspects of the European Complement to GPS: Continental and transatlantic experimental phases
p 2969 N95-32328
Network time synchronization servers at the US Naval Observatory p 2969 N95-32329
A globally efficient means of distributing UTC time and frequency through GPS p 2970 N95-32335
Study of tropospheric correction for intercontinental GPS common-view time transfer p 2971 N95-32338
SVN 9 End-Of-Life testing p 2767 N95-32345
Laser retroreflector experiment on NAVSTAR 35 and 36 p 2887 N95-32347
(T2L2) Time Transfer by Laser Link
p 2887 N95-32348

GLOBAL WARMING
Economical analysis relating to the global warming issue
[DE95-764072] p 2908 N95-30677
Biomass production by fescue and switchgrass alone and in mixed swards with legumes
[DE95-009137] p 2909 N95-31612
Atmospheric environmental implications of propulsion systems p 2771 N95-31747
BioFacts: Fueling a stronger economy, global warming and biofuels emissions
[DE94-006864] p 2910 N95-31821

GLONASS
The 26th Annual Precise Time and Time Interval (PTTI) Applications and Planning Meeting
[NASA-CP-3302] p 2967 N95-32319

GLUCOSE
Biosensors based on cross-linking of biotinylated Glucose Oxidase by avidin
[AD-A290439] p 2925 N95-30452

GLUES
Influence of adhesives and bonding techniques on the properties of glued timber-steelplate joints
[PB95-211470] p 2813 N95-30599

GLUONS
Theoretical high energy physics
[DE95-003107] p 2991 N95-30527
A measurement of quark and gluon jet differences at the Z(sup 0) resonance
[DE95-010666] p 2989 N95-32266
Charm photoproduction dynamics
[DE95-009106] p 2990 N95-32303
Thermal rho's in the quark-gluon plasma
[DE95-009543] p 3008 N95-32357

GOES SATELLITES
Solar-geophysical data number 606, February 1995. Part 2: (Comprehensive reports). Data for August 1994, and miscellaneous
[PB95-200861] p 3031 N95-30817

GOLD
Optimization of a thermoelectric IR-detector for low working temperature
[NASA-CR-198933] p 2880 N95-30752
Electron transfer kinetics of self-assembled ferrocene C(12) alkanethiol monolayers on gold electrodes from 125K to 175K
[AD-A292754] p 2984 N95-31427
Observation of intensity dependent losses in Au(15+) beams
[DE95-010845] p 2987 N95-32032

GOODNESS OF FIT
A new goodness-of-fit test for the gamma distribution based on sample spacings from complete and censored samples
[AD-A293875] p 2961 N95-31518

GOVERNMENT PROCUREMENT
Quality assurance tendering and awarding contracts
[PB95-197760] p 2891 N95-31362
A case study of the teaming concept in the procurement of the V-22 aircraft
[AD-A293770] p 2752 N95-31578
Report to the Secretary of Defense. Acquisition reform: Comparison of Army's commerical helicopter buy and private sector buys
[GAO/NSIAD-95-54] p 3021 N95-31659
Report to Congressional Committees. Military airlift: C-17 settlement is not a good deal
[GAO/NSIAD-94-141] p 2741 N95-32198

GOVERNMENT/INDUSTRY RELATIONS
A case study of the teaming concept in the procurement of the V-22 aircraft
[AD-A293770] p 2752 N95-31578
Development of a CFC Critical Area Response (CAR) package p 2783 N95-31814
Report to the Vice Chairman, Joint Economic Committee, US Congress. Technology transfers: Benefits of cooperative R and D agreements
[GAO/RCED-95-52] p 3027 N95-32201

GRADIENTS
Phase object display by using acousto-optical Bragg diffraction
[AD-A293153] p 2998 N95-31006

GRAIN BOUNDARIES
Direct determination of grain boundary atomic structure in SrTiO3
[DE95-008847] p 3010 N95-30544
Spectral response of a polycrystalline silicon solar cell
[DE95-614370] p 2903 N95-30723
Mechanisms of enhanced ionic conduction at interfaces in ceramics
[DE95-009125] p 2814 N95-30730
The 10th International Conference on the Strength of Materials
[AD-A292335] p 2994 N95-31263
Modeling of grain boundary stresses in Alloy 600
[DE95-009033] p 2808 N95-31825

GRAIN SIZE
Spectral response of a polycrystalline silicon solar cell
[DE95-614370] p 2903 N95-30723
Physical modelling of microstructural evolution during thermomechanical processing of aluminium alloys
[PB95-196341] p 2805 N95-31053
The effect of grain refinement on the room-temperature ductility of as-cast Fe3Al-based alloys
[DE95-010121] p 2805 N95-31107

Rationale and summary of methods for determining ultrasonic properties of materials at Lawrence Livermore National Laboratory
[DE95-009475] p 2795 N95-31593
Modeling of stress distributions on the microstructural level in Alloy 600
[DE95-009135] p 2807 N95-31632
A study of switching behavior in Pb(Zr,Ti)O3 thin films using x-ray diffraction
[DE95-010859] p 2808 N95-31689
The influence of matrix microstructure and temperature on cyclic deformation and fatigue of particle-reinforced 2219 aluminum p 2808 N95-31974
On the possibility of a two-state magnetic structure for nanocrystalline chromium
[DE95-009914] p 3015 N95-32062

GRAPH THEORY
Periodically Specified Problems: An Exponential Complexity Gap Between Exact and Approximate Solutions
[DE95-009435] p 2934 N95-30603
Compact location problems with budget and communication constraints
[DE95-010676] p 2948 N95-32277

GRAPHICAL USER INTERFACE
A graphical programming language for service robots in semi-structured environments p 2935 N95-30831
Planning board generator. Part 1: Problem instances and types
[PB95-197075] p 3021 N95-30834
Geometric modeling for computer aided design
[NASA-CR-198828] p 2943 N95-31982

GRAPHITE
Effects of particle fueling and plasma wall interactions on D3-D discharges
[DE95-009608] p 3003 N95-30612
Intermodulation Interference (IMI) testing of composite materials
[AD-A288621] p 2787 N95-31146
Self-lubricating, TiN-MoS2 composite coatings produced by simultaneous deposition from Ti((CH3))2N4/NH3/MoF6H2S gas mixture
[DE95-010359] p 2788 N95-31403
Effects of mosaicity on Parametric X-Radiation production
[AD-A293677] p 2985 N95-31597

GRAPHITE-EPOXY COMPOSITES
An evaluation of the Iosipescu specimen for composite materials shear property measurement
[NASA-CR-198755] p 2896 N95-31418

GRAPHITE-POLYIMIDE COMPOSITES
Evaluation of static strength of T800H/PMR-15 carbon/polyimide laminates at room temperature and 300 C
[NAL-TR-1254] p 2789 N95-31740

GRAPHS (CHARTS)
Periodically Specified Problems: An Exponential Complexity Gap Between Exact and Approximate Solutions
[DE95-009435] p 2934 N95-30603

GRATINGS (SPECTRA)
Extended tuning range semiconductor lasers with sampled gratings p 2883 N95-30498
Integrated X-ray testing of the electro-optical breadboard model for the XMM reflection grating spectrometer
[DE95-008829] p 2879 N95-30507
Laser-induced holographic surface relief gratings on nonlinear optical polymer films
[AD-A293169] p 2997 N95-30973
Polarized laser induced holographic surface relief gratings on polymer films
[AD-A293275] p 2817 N95-31126

GRAVIMETRY
Visit to Ionospheric Modeling and Remote Sensing Branch, Phillips Laboratory in Hanscom AFB, MA
[AD-A292339] p 2901 N95-31265
Investigation of cleanliness verification techniques for rocket engine hardware p 2770 N95-31806

GRAVITATION
Field performance of the Walker Branch throughfall displacement experiment
[DE95-008677] p 2908 N95-30793
The topological string associated with a simple singularity of type D
[DE95-737229] p 2983 N95-31225

GRAVITATION THEORY
Top quark and Higgs boson masses from wormhole physics
[DE95-616384] p 2978 N95-30580
Review of Gravity Probe B
[NASA-CR-198959] p 3019 N95-30781
Partons and black holes
[DE95-009921] p 3029 N95-31102

GRAVITATIONAL COLLAPSE
Phase transitions and gravitational collapse
[DE95-011732] p 3021 N95-32359

GRAVITATIONAL EFFECTS
On convective effects in sedimentation of concentrated suspensions with high effective gravity
[TRITA-NA-9316] p 2794 N95-31356
The effect of gravity on the deposition of thin films: The physical vapor transport of copper phthalocyanine
[AD-A292997] p 2838 N95-31472

GRAVITATIONAL FIELDS
Harmonic coordinates in the problem on static gravitational and massless scalar fields with a point source
[DE95-623632] p 3020 N95-32295
Relativistic theory for syntonization of clocks in the vicinity of the Earth p 2971 N95-32343

GRAVITATIONAL LENSES
Strange-matter stars
[DE95-008446] p 3028 N95-30361

GRAVITATIONAL WAVES
Gravitational-radiation damping of compact binary systems to second post-Newtonian order
[PB95-207882] p 2912 N95-30588
Gravitational waves from inspiralling compact binaries: Energy loss and waveform to second-post-Newtonian order
[PB95-207890] p 2913 N95-30590
Electromagnetic-gravitational conversion cross sections in external electromagnetic fields
[DE95-613589] p 2979 N95-30637

GRAVITONS
Electromagnetic-gravitational conversion cross sections in external electromagnetic fields
[DE95-613589] p 2979 N95-30637

GRAVITY PROBE B
Review of Gravity Probe B
[NASA-CR-198959] p 3019 N95-30781

GRAVITY WAVES
Modeling and parameterization of gravity wave breaking, interactions, and instability processes in the lower and middle atmosphere
[AD-A292740] p 2914 N95-31278
Middle atmosphere structure and dynamics: Lidar studies at the South Pole, Syowa and Urbana p 2916 N95-31736

GREEN'S FUNCTIONS
On the theory of hole propagation in an antiferromagnetic background
[DE95-614469] p 3010 N95-30650
Instantaneous chiral quark model for relativistic mesons in a hot and dense medium
[DE95-613782] p 2980 N95-30911
Irreducible Green's Functions method in the theory of highly correlated systems
[DE95-614446] p 3019 N95-31186

GREENHOUSE EFFECT
Economical analysis relating to the global warming issue
[DE95-764072] p 2908 N95-30677
Global change research: Summaries of research in FY 1994
[DE95-009660] p 2908 N95-30755

GRID GENERATION (MATHEMATICS)
Multidimensional discretization of conservation laws for unstructured polyhedral grids
[DE95-008796] p 2955 N95-30470
Three-D mesh optimization methods for unstructured polyhedra
[DE95-008808] p 2955 N95-30471
Self-adaptive multilevel methods for fluid flow problems p 2873 N95-31412
Automated volumetric grid generation for finite element modeling of human hand joints
[DE95-009575] p 2928 N95-32097
Numerical solution of the full potential equation using a chimera grid approach
[NASA-TM-110360] p 2744 N95-32188

GROUND BASED CONTROL
FAA aviation forecasts: Fiscal year 1995-2006
[AD-A293682] p 2741 N95-31598

GROUND EFFECT (COMMUNICATIONS)
Investigation of ground target detection methods in fully polarimetric wide angle synthetic aperture radar images
[AD-A293922] p 2851 N95-31513

GROUND SPEED
Apparent size passive range method
[AD-D017360] p 2753 N95-31180

GROUND STATE
Ferromagnetic Potts model in a magnetic field: Finite lattice extrapolation of the (1 + 1)-dimensional Hamiltonian
[DE95-614447] p 3012 N95-30958
Relativistic non-interacting electron gas in a magnetic field
[DE95-616903] p 2967 N95-31177
Excited-state complexes of conjugated polymers: Novel photophysical processes and optoelectronic materials
[AD-A292958] p 2819 N95-31462

GROUND STATIONS
High Frequency (HF) upgrade study for the Canadian Regional Operations Control Center (ROCC) AWACS Digital Information Link (RADIL) project
[AD-A293435] p 2850 N95-31367
Environmental projects. Volume 16: Waste minimization assessment
[NASA-CR-198861] p 2909 N95-31651
Portable digital Satellite News Gathering (SNG) RF terminal using a flat antenna
[NHK-LABS-NOTE-436] p 2853 N95-31744
Automated delay measurement system for an Earth station for Two-Way Satellite Time and Frequency Transfer p 2971 N95-32337

GROUND SUPPORT EQUIPMENT
Space systems environmental interaction studies
[AD-A293826] p 2766 N95-31553

GROUND TESTS
CFD assessment of the pollutant environment from RD-170 propulsion system testing p 2772 N95-31749

GROUND TRUTH
Flight test evaluation of the Stanford University/United Airlines differential GPS Category 3 automatic landing system
[NASA-TM-110354] p 2743 N95-30788
Satellite multisensor data techniques for sea ice mapping
[AD-A289729] p 2901 N95-31148

GROUND WATER
Spatial time-series: Pollution pattern recognition under irregular interventions
[AD-A293830] p 2909 N95-31556

GROUND WIND
Validation of special sensor microwave/imager ocean surface wind retrievals in equatorial regions
[AD-A293750] p 2920 N95-31571

GROUP THEORY
Generalized Kummer surfaces and differentiable invariants of Noether-Horikawa surfaces 1
[DE95-613382] p 2956 N95-30608
Co-groups on sequentially complete, locally convex, topological vector spaces in particular on strict LF-spaces
[PB95-206918] p 2966 N95-30681
Reduced heat kernels on nilpotent lie groups
[PB95-206926] p 2958 N95-30778
Frobenius algebras and quantum Yang-Baxter equation 2
[PB95-212130] p 2960 N95-31229
SO(8) color as possible origin of generations
[DE95-613560] p 2988 N95-32069

GUIDANCE SENSORS
Guidance and Control for Future Air-Defence Systems
[AGARD-CP-555] p 2839 N95-32123

GULF STREAM
A numerical study of the effect of the Gulf Stream and the Appalachian Mountains on Carolina coastal frontogenesis
[AD-A293765] p 2921 N95-31577

GUN PROPELLANTS
The 31st JANNAF Combustion Subcommittee Meeting, volume 1 p 2825 N95-31194
Investigation of ram accelerator performance capabilities p 2799 N95-31204
Condensed-phase processes during solid propellant combustion. 5: Further observations on depth profiling of burned surfaces of XM39 and M43 propellants p 2800 N95-31295
Assessment of dynamic burning behavior for JA-2 propellant rods p 2800 N95-31299
Embedded infrared fiber optic absorption studies of nitramine propellant strand burning p 2801 N95-31305

GUST LOADS
Advanced gust management systems: Lessons learned and perspectives p 2759 N95-32002

GYROCOMPASSES
Results from tests of the Honeywell integrated flight management unit
[PB95-211355] p 2748 N95-30597

GYROSCOPES
Harmonic gyrotron amplifiers and phase-locked oscillators
[AD-A293185] p 2861 N95-30979
Global stabilization of nonlinear gyroscopic systems p 2881 N95-31836

GYROSCOPIC STABILITY
Global stabilization of nonlinear gyroscopic systems p 2881 N95-31836

H

H LINES
Analytic cross sections for collisions of H, H2, He and Li atoms and ions with atoms and molecules
[DE95-722055] p 2979 N95-30654
HST-FOC observations of a remarkable UV auroral event on Jupiter p 3030 N95-30806

H-INFINITY CONTROL
System identification for robust process control. Nominal models and error bounds
[PB95-197026] p 2839 N95-30777
Control of flexible spacecraft structures using H-infinity wave absorbing control
[AD-A293141] p 2766 N95-30919

HADRONS
Current issues in perturbative QCD
[DE95-008448] p 2975 N95-30388
Backgrounds and detector performance at a 2 x 2 TeV (mu)(+)(mu)(-) collider
[DE95-009107] p 2992 N95-30800
Period doubling dynamics in hadron physics: Exact calculations
[DE95-620535] p 2982 N95-31215
Hadronic production of B(sub c)-mesons
[DE95-620536] p 2983 N95-31216
B(sub c)-meson production in hadron-hadron collisions
[DE95-620537] p 2983 N95-31217
The coupling impedance of a toroidal beam pipe with circular cross section
[DE95-010442] p 2993 N95-31405
Electromagnetic hadron mass differences and estimation of isotopic symmetry violation parameters of QCD vacuum from quark model
[DE95-613628] p 2985 N95-31621
Studies of the strong and electroweak interactions at the Z(sub 0) pole
[DE95-010353] p 2986 N95-31682
The antiproton-hydrogen atom interaction
[DE95-010252] p 2987 N95-32039
A search for jet handedness in hadronic Z-0 decays
[DE95-010099] p 2988 N95-32083
On the search for exotic hadrons in the experiments with high energy hyperon beam
[DE95-620534] p 2989 N95-32261
On hadronic production of the B(sub c) meson
[DE95-613726] p 2991 N95-32304

HAFNIUM
Localization in tungsten heavy alloys subjected to shearing deformations under superimposed high pressures
[AD-A293177] p 2804 N95-30977

HALF PLANES
Reduced heat kernels on nilpotent lie groups
[PB95-206926] p 2958 N95-30778

HALIDES
Preparation of diisopropyl stibines and use thereof
[AD-D017419] p 2771 N95-30418

HALOCARBONS
Chemical kinetics and photochemical data for use in stratospheric modeling: Evaluation number 11
[NASA-CR-198863] p 2912 N95-30525
Method for laser-assisted silicon etching using halocarbon ambients
[AD-D017426] p 2883 N95-30744
Chemical options to halons for aircraft use
[AD-A293741] p 2747 N95-31569

HALOGENS
Determination of halogens in a petroleum product by ion chromatography
[DE95-002056] p 2797 N95-31840

HALOS
Backgrounds and detector performance at a 2 x 2 TeV (mu)(+)(mu)(-) collider
[DE95-009107] p 2992 N95-30800

HAMILTONIAN FUNCTIONS
A queer reduction of degrees of freedom
[DE95-613471] p 2964 N95-30369
The Foldy-Wouthuysen transformation
[DE95-616277] p 2976 N95-30427
Integrals of motion in the two Killing vector reduction of general relativity
[DE95-616281] p 3018 N95-30431
Plaquette expansion proof and interpretation
[DE95-616282] p 2965 N95-30432
A general non-perturbative estimate of the energy density of lattice Hamiltonians
[DE95-616283] p 2965 N95-30435
Beyond the variational principle in quantum field theory
[DE95-616286] p 3018 N95-30438
Approximate analytic diagonalization of lattice QCD
[DE95-616332] p 3018 N95-30444
Gibbs measures and quasi-periodic solutions for nonlinear Hamiltonian partial differential equations
[PB95-207932] p 2956 N95-30506
New tensor interactions in micron-decay
[DE95-613760] p 2978 N95-30528
Quasi-periodic solutions of Hamiltonian perturbations of 2D linear Schroedinger equations
[PB95-208443] p 2957 N95-30624
Hamiltonian dynamics of the condensed media with spontaneously broken symmetry
[DE95-614448] p 3010 N95-30648
The iteration formula of the Maslov-type index theory with applications to nonlinear Hamiltonian systems
[DE95-613379] p 2957 N95-30676
Light-front dynamics of Chern-Simons systems
[DE95-613467] p 3019 N95-30741
Singular eigenfunctions for shearing fluids I
[DE95-008952] p 2868 N95-30763
Exact smooth classification of Hamiltonian vector fields on symplectic 2-manifolds
[DE95-613378] p 2958 N95-30803
Ferromagnetic Potts model in a magnetic field: Finite lattice extrapolation of the (1 + 1)-dimensional Hamiltonian
[DE95-614447] p 3012 N95-30958
Effective chiral-spin Hamiltonian for odd-numbered coupled Heisenberg chains
[DE95-614445] p 2982 N95-31168
Hamiltonian formulation of two body problem in Wheeler-Feynman electrodynamics
[DE95-620526] p 3019 N95-31193
Quantization of a relativistic particle on the SL(2,R) manifold based on Hamiltonian reduction
[DE95-737163] p 2983 N95-31224
Removal of the Energy Dependence from the Resolvent Like Energy Dependent Interactions
[DE95-613385] p 2961 N95-31619
Variational optimization in quantum field theory p 3020 N95-31646
Notes on lie algebraic analysis of achromats
[DE95-009524] p 3002 N95-32356

HANDBOOKS
Operator's handbook: NAWC Software Production Facility
[AD-A290216] p 2935 N95-31001
Management of major system programs and projects. Handbook
[NHB-7120.5] p 3021 N95-31380

HANDEDNESS
A search for jet handedness in hadronic Z-0 decays
[DE95-010099] p 2988 N95-32083

HANDLES
A stochastic difference equation approach to inference with missing data: Some new results
[DE95-010327] p 2944 N95-32088

HANDLING EQUIPMENT
An overview of high-speed networking for workstations
[DE95-009076] p 2947 N95-30577

HANKEL FUNCTIONS
Plaquette expansion proof and interpretation
[DE95-616282] p 2965 N95-30432

HARDNESS
An explanation for the shape of nanoindentation unloading curves based on finite element simulation
[DE95-008905] p 2812 N95-30548
Cracking during nanoindentation and its use in the measurement of fracture toughness
[DE95-008839] p 2818 N95-31175

HARDWARE DESCRIPTION LANGUAGES
RASSP benchmark 1 executable requirements user's manual
[AD-A290060] p 2935 N95-30931
Mission critical failure effects analysis using quantitative techniques
[AD-A293098] p 2864 N95-31844

HARMONIC ANALYSIS
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 2
[NASA-CR-195435-VOL-2] p 2769 N95-31170

HARMONIC EXCITATION
Studies in non-linear multi-mode responses of harmonically excited rectangular plates with internal resonances p 2895 N95-31331

HARMONIC GENERATIONS
Harmonic gyrotron amplifiers and phase-locked oscillators
[AD-A293185] p 2861 N95-30979
Experimental investigation of optical nonlinearities in conjugated polymers
[AD-A288353] p 2884 N95-31145
Nonlinear optics in novel composite media
[AD-A293886] p 2999 N95-31542
Towards optimum demodulation of bandwidth-limited and low SNR square-wave subcarrier signals p 2855 N95-32229

HARMONIC GENERATORS
Stable high-power harmonic gyro-amplifiers
[AD-A293697] p 2881 N95-31828

HARMONIC MOTION
Degradation in finite-harmonic subcarrier demodulation p 2855 N95-32228

HARMONIC OSCILLATORS
The one-dimensional model of the off-centre potential of the fluorine ion in the NaBr lattice
[DE95-614310] p 3010 N95-30647
Dynamical systems as models for flow-induced vibrations
[PB95-206991] p 2869 N95-30956
Harmonic gyrotron amplifiers and phase-locked oscillators
[AD-A293185] p 2861 N95-30979
Instanton - antiinstanton interaction and asymptotics of perturbation theory expansion of in double well oscillator
[DE95-619245] p 2966 N95-31259
Instability of weakly nonlinear chaotic structures
[DE95-613441] p 2966 N95-32066
Method of normal coordinates in the formulation of a system with dissipation: The harmonic oscillator
[DE95-613372] p 3020 N95-32094

HARNESSES
Releaseable unconstrained inflatable body protector
[AD-D017350] p 2930 N95-30552

HARRIER AIRCRAFT
Flight demonstration of an advanced pitch control law in the VAAC Harrier aircraft p 2760 N95-32012

HARTREE APPROXIMATION
On the theory of hole propagation in an antiferromagnetic background
[DE95-614469] p 3010 N95-30650

HASTELLOY (TRADEMARK)
Evaluation on materials performance of Hastelloy Alloy XR for HTTR uses. 4: Tensile properties of base metals and welded joints
[DE95-721871] p 2804 N95-30761
Effect of cold work on creep properties of Hastelloy XR
[DE95-722056] p 2806 N95-31154

HAZARDS
Environmental conditions responsible for solar activity
[AD-A292859] p 3031 N95-31450
Enhanced alkaline hydrolysis and biodegradability studies of nitrocellulose-bearing missile propellant p 2772 N95-31752
Environmentally Safe and Effective Processes for Paint Removal
[AGARD-LS-201] p 2843 N95-32165

HEAD-UP DISPLAYS
Analysis of heads-up display quickening versus handling qualities
[AD-A293797] p 2753 N95-31584

HEALTH
Summaries of fiscal year 1994 projects in medical applications and biophysical research
[DE95-010405] p 2925 N95-32040

HEALTH PHYSICS
Electromagnetic field exposure dosimeter
[AD-A293191] p 2927 N95-30981

HEAT BALANCE
Control of skin blood flow in the neutral zone of human body temperature regulation
[AD-A291499] p 2926 N95-30563
Global Ultraviolet Imager (GUVI) investigation
[NASA-CR-189430] p 2917 N95-31820

HEAT ENGINES
Publications of the Fossil Energy Advanced Research and Technology Development Materials Program: April 1, 1993-March 31, 1995
[DE95-009200] p 2903 N95-30745
Life prediction methodology for ceramic components of advanced heat engines: Phase 1. Volume 1
[DE95-010805] p 2817 N95-31135
Life prediction methodology for ceramic components of advanced heat engines. Phase 1: Volume 2. Appendices
[DE95-010806] p 2817 N95-31136

HEAT EXCHANGERS
Thermoacoustic sound generator
[AD-D017342] p 2973 N95-30413
Simultaneous heat and mass transfer in a horizontal tube absorber: Numerical tools for present and future absorber designs
[PB95-196978] p 2869 N95-30872
Experimental investigation of the effectiveness of flow-through modules for electronics cooling
[AD-A293284] p 2861 N95-30950
Comparison of cathodic protection currents on 70/30 copper-nickel and alloy 625 piping systems
[AD-A292953] p 2807 N95-31561
Whisker reinforced glass ceramic
[DE95-010542] p 2823 N95-32305

HEAT FLUX
Diamond thin film temperature and heat-flux sensors
[NASA-CR-198859] p 3012 N95-30847
HEAT OF FORMATION
Estimating heat of formation of energetic compounds using corrected semiempirical molecular orbital theory
p 2800 N95-31294
HEAT OF SOLUTION
The influence of microstructure on creep deformation in near-gamma TiAl alloys p 2808 N95-31975
HEAT PIPES
10 kW heat pipe-heat sink development
[AD-A293167] p 2870 N95-30965
HEAT RESISTANT ALLOYS
Influence of strain rate and temperature on the mechanical behavior of iron aluminide-based alloys
[DE95-009426] p 2808 N95-31636
HEAT SINKS
10 kW heat pipe-heat sink development
[AD-A293167] p 2870 N95-30965
Global Ultraviolet Imager (GUVI) investigation
[NASA-CR-189430] p 2917 N95-31820
HEAT SOURCES
GPHS-RTGs in support of the Cassini RTG Program
[DE95-010306] p 2768 N95-30674
Welding isotopic heat sources for the cassini mission to Saturn
[DE95-060104] p 2890 N95-32367
HEAT STORAGE
CALORSTOCK 1994: Thermal energy storage. Better economy, environment, technology
[DE95-772422] p 2904 N95-31138
Study of melting and freezing processes of water for application to ice thermal energy storage system
p 2905 N95-31735
HEAT STROKE
Membrane transport: A cellular probe of heat stroke
[AD-A293327] p 2926 N95-30924
HEAT TRANSFER
Jet mixing in a reacting cylindrical crossflow
[NASA-TM-106975] p 2755 N95-30853
Electrically heated tube investigation of cooling channel geometry effects
[NASA-TM-106985] p 2768 N95-30856
Simultaneous heat and mass transfer in a horizontal tube absorber: Numerical tools for present and future absorber designs
[PB95-196978] p 2869 N95-30872
Experimental investigation of the effectiveness of flow-through modules for electronics cooling
[AD-A293284] p 2861 N95-30950
10 kW heat pipe-heat sink development
[AD-A293167] p 2870 N95-30965
Investigation of ram accelerator performance capabilities p 2799 N95-31204
Fundamental topics in heat transfer through deformable two-phase media p 2874 N95-31532
MPI implementation of PHOENICS: A general purpose computational fluid dynamics code
[DE95-009810] p 2877 N95-32033
Optimal heat transfer design of chemical vapor deposition reactors
[DE95-010997] p 2878 N95-32309
HEAT TRANSFER COEFFICIENTS
Effect of velocity and temperature distribution at the hole exit on film cooling of turbine blades
[NASA-TM-106954] p 2755 N95-30702
HEAT TREATMENT
Process for producing hydrophilic polymer membranes
[AD-D017355] p 2811 N95-30415
Interface degradation in CAS/Nicalon during elevated temperature aging
[DE95-006843] p 2812 N95-30543
Phase transformations in melt-spun Y-Ba-Cu-O bulk superconductor
[DE95-010237] p 3011 N95-30667
A metallurgical approach toward alloying in rare earth permanent magnet systems
[DE95-010242] p 2966 N95-30668
Effects of temperature ramp rate during heat treatment on hysteresis loss and critical current density of internal tin processed wires
[DE95-009551] p 2803 N95-30706
HEATING
Substrate heating measurements in pulsed ion beam film deposition
[DE95-010862] p 2818 N95-31377
CALORSTOCK'94. Thermal energy storage. Better economy, environment, technology
[DE95-772421] p 2907 N95-32368
HEAVY ELEMENTS
Mechanical alloying processing with application to structural materials
[AD-A290788] p 2802 N95-30404
HEAVY IONS
Theoretical high energy physics
[DE95-003107] p 2991 N95-30527
Observation of intensity dependent losses in Au(15+) beams
[DE95-010845] p 2987 N95-32032
Generalized Ramsauer-Townsend minima in heavy-ion induced electron continua
[DE95-010913] p 2989 N95-32120
KRAKEN, a numerical model of RHIC impedances
[DE95-011563] p 2994 N95-32242
HEISENBERG THEORY
Integrals of motion in the two Killing vector reduction of general relativity
[DE95-616281] p 3018 N95-30431
A general non-perturbative estimate of the energy density of lattice Hamiltonians
[DE95-616283] p 2965 N95-30435
On the theory of hole propagation in an antiferromagnetic background
[DE95-614469] p 3010 N95-30650
Dynamics of an inhomogeneous anisotropic antiferromagnetic spin chain
[DE95-614449] p 3013 N95-30959
Effective chiral-spin Hamiltonian for odd-numbered coupled Heisenberg chains
[DE95-614445] p 2982 N95-31168
Schwinger-boson studies of the single hole motion in a 2D quantum antiferromagnet
[DE95-614444] p 3016 N95-32071
HELICOPTER CONTROL
Experiences with ADS-33 helicopter specification testing and contributions to refinement research
p 2757 N95-31993
Model following control for tailoring handling qualities: ACT experience with ATTHeS p 2758 N95-32000
Practical experiences in control systems design using the NCR Bell 205 Airborne Simulator
p 2761 N95-32015
HELICOPTER DESIGN
A novel instrumentation system for measurement of helicopter rotor motions and loads data, phase 1
[AD-A293309] p 2751 N95-30923
Automatic flight control system for an unmanned helicopter system design and flight test results
p 2759 N95-32004
HELICOPTER WAKES
Validation of the helicopter rotor code HERO
[PB95-198040] p 2751 N95-30838
HELICOPTERS
Simulation of airborne electromagnetic measurements in three dimensional environments
[DE95-008546] p 2900 N95-30363
Probabilistic reliability modeling of fatigue on the H-46 tie bar
[AD-A289926] p 2751 N95-30927
Application of multigrid computational fluid dynamics (CFD) methods to rotor analysis
[AD-A293012] p 2874 N95-31475
Report to the Secretary of Defense. Acquisition reform: Comparison of Army's commerical helicopter buy and private sector buys
[GAO/NSIAD-95-54] p 3021 N95-31659
Advanced flight control technology achievements at Boeing Helicopters p 2761 N95-32014
Vibration reduction in helicopter rotors using an actively controlled partial span trailing edge flap located on the blade p 2762 N95-32111
HELIUM
Reducing process noise in superconducting helium liquid level probes
[DE95-008956] p 2814 N95-30765
Kinematical threshold of recoil-ion longitudinal momentum distribution in single ionization of helium by protons and alpha particles
[DE95-010803] p 2990 N95-32271
Ionization of He by highly charged ions at low velocity
[DE95-010815] p 2990 N95-32273
Recoil longitudinal momentum spectroscopy of electron capture from He by O(7+) and F(8+)
[DE95-010823] p 2990 N95-32274
HELIUM ATOMS
Atomic approaches in metastable antiprotonic helium atoms. Reply to Analysis of the lifetimes and fractions of antiprotons trapped in metastable antiprotonic helium states by I. Shimamhura and M. Kimura --- mura
[DE95-737228] p 2986 N95-31658
HELIUM ISOTOPES
Hamiltonian dynamics of the condensed media with spontaneously broken symmetry
[DE95-614448] p 3010 N95-30648
HELIUM PLASMA
Helium transport and exhaust studies in enhanced confinement regimes in DIII-D
[DE95-009134] p 3004 N95-30685
HELMET MOUNTED DISPLAYS
Wide field of view helmet display systems mounted for helicopter simulation
[AD-A293123] p 2930 N95-30888
Synthetic Terrain Imagery for Helmet-Mounted Display. Volume 3: Software user's manual
[AD-A293613] p 2753 N95-31463
Design and integration issues of visually-coupled evaluation
[AD-A293521] p 2931 N95-31538
Synthetic Terrain Imagery for Helmet-Mounted Display. Volume 2: Software design document
[AD-A293611] p 2753 N95-31655
Synthetic Terrain Imagery for Helmet-Mounted Display, volume 1
[AD-A293612] p 2753 N95-31656
Vertical impact testing of two helmet-mounted night vision systems
[AD-A293055] p 2931 N95-31671
HELMETS
Vertical impact testing of two helmet-mounted night vision systems
[AD-A293055] p 2931 N95-31671
HELMHOLTZ EQUATIONS
Solution of the three-dimensional Helmholtz equation with nonlocal boundary conditions
[NASA-TM-110174] p 2974 N95-30850
HERCULES ENGINE
Environmentally compatible solid rocket propellants
p 2772 N95-31753
HERMITIAN POLYNOMIAL
Image representation using fast algorithms based on the Zak transform
[AD-A293416] p 2942 N95-31684
HESSIAN MATRICES
Multipoint quadratic approximation for numerical optimization
[AD-A293837] p 2961 N95-31557
HETEROCYCLIC COMPOUNDS
Acidity and basicidity of nitro substituted imidazoles
[AD-A293969] p 2836 N95-31526
HETEROGENEITY
Catalytic reactions of synthesis gas. Part 4: Heterogeneous hydroformylation
[PB95-195558] p 2791 N95-30537
An experimental study of planar heterogeneous supersonic confined jets
[AD-A290859] p 2867 N95-30557
Integrated high performance distributed system
[AD-A292821] p 2947 N95-31445
Clouds: Their prediction and simulation
[AD-A292864] p 2920 N95-31453
Particle filtration: A comparison between theory and experiment
[DE95-009442] p 2875 N95-31637
Processing and microstructural evolution of alumina/aluminum alloy and aluminum nitride/aluminum alloy composites by directed melt oxidation
p 2789 N95-31973
MPI implementation of PHOENICS: A general purpose computational fluid dynamics code
[DE95-009810] p 2877 N95-32033
HETEROJUNCTION DEVICES
Minority and majority carrier transport characterization in compound semiconductors
[DE95-010873] p 3014 N95-31233
HETEROJUNCTIONS
The quantum interference effect in semiconductor space charge layers studied by Feynman path integrals: General formalism and illustrative examples
[DE95-614483] p 3010 N95-30653
Development of germanium-silicon growth technology
[AD-A293199] p 3013 N95-30983
Investigation of polycrystalline thin film CuInSe2 solar cells based on ZnSe windows
[DE95-004068] p 2904 N95-31164
HEURISTIC METHODS
A Heuristic and complete planner for the classical mover's problem
[DE95-008440] p 2949 N95-30377
Dynamic routation in distributed environments
[PB95-197968] p 2847 N95-30812
Unification of LARCH and Z-based object models to support algebraically-based design refinement: The LARCH perspective
[AD-A289235] p 2935 N95-30999
Aspects of the search time in binary search trees modified according to the move-to-root heuristic
[PB95-212148] p 2963 N95-31396
Compact location problems with budget and communication constraints
[DE95-010876] p 2948 N95-32277
HF LASERS
Advances in high-power chemical lasers
[AD-A289737] p 2885 N95-31389

HIERARCHIES
The topological string associated with a simple singularity of type D
[DE95-737229] p 2983 N95-31225
HIGGS BOSONS
Real Higgs singlet and electroweak phase transition in the standard model
[DE95-616315] p 2976 N95-30442
Effective Lagrangian approach to the fermion mass problem
[DE95-616316] p 2976 N95-30443
Phenomenology of the two Higgs doublet sector of a quark-lepton symmetric model
[DE95-616337] p 2976 N95-30446
Top quark and Higgs boson masses from wormhole physics
[DE95-616384] p 2978 N95-30580
Minijet veto: A tool for the heavy Higgs search at the LHC
[PB95-196234] p 2979 N95-30695
Testing vector boson dominance of electroweak interactions via e(+)e(-) (yields) f-bar f
[DE95-620528] p 2982 N95-31214
Instability of weak vacuum
[DE95-613590] p 2985 N95-31620
Physics goals of a mu(+) mu(-) collider
[DE95-009546] p 2994 N95-32059
Renormalization group analyses of particle masses in full four-generation fermion condensate scheme
[DE95-613595] p 2988 N95-32070
HIGH ACCELERATION
A RASCAL in-bore dynamic analysis of the task B and task C electromagnetic railguns
[AD-A292742] p 2764 N95-30948
HIGH ALTITUDE
Computation of high-altitude hypersonic flow-field radiation p 2743 N95-30843
HIGH ALTITUDE BALLOONS
The High Altitude Balloon Experiment demonstration of acquisition, tracking, and pointing technologies (HABE-ATP) p 2841 N95-32132
HIGH ASPECT RATIO
High aspect ratio metal microstructures and method for preparing the same
[AD-D017463] p 2803 N95-30750
Electrically heated tube investigation of cooling channel geometry effects
[NASA-TM-106985] p 2768 N95-30856
HIGH CURRENT
Degradation of blue AlGaN/InGaN/GaN LEDs subjected to high current pulses
[DE95-008824] p 2863 N95-31611
HIGH ELECTRON MOBILITY TRANSISTORS
Hyperfrequency components
[PB95-208302] p 2866 N95-32369
HIGH ENERGY ELECTRONS
Convoy electron emission from surfaces
[DE95-010298] p 2984 N95-31402
HIGH ENERGY INTERACTIONS
The search for the decay of Z boson into two gamma as a test of Bose statistics
[DE95-616373] p 2976 N95-30393
Theoretical high energy physics
[DE95-003107] p 2991 N95-30527
The activities of the high energy physics program
[DE95-010155] p 2991 N95-30615
On perturbative asymptotic of Regge trajectories
[DE95-613585] p 3018 N95-30636
The 10th INS Scientific Computational Programs
[DE95-717864] p 2982 N95-31178
Spin structure in high energy processes
[DE95-008628] p 2993 N95-31627
Physics goals of a mu(+) mu(-) collider
[DE95-009546] p 2994 N95-32059
Research progress report
[DE95-010726] p 3030 N95-32269
Radiative corrections to the three quantum annihilation cross section in high energy electron-positron collisions
[DE95-623675] p 2995 N95-32296
HIGH FREQUENCIES
Interference rejection techniques in a DS spread-spectrum HF radio system
[PB95-211660] p 2846 N95-30479
HIGH LEVEL LANGUAGES
ASSIST user manual
[NASA-TM-4592] p 2948 N95-32250
HIGH POLYMERS
Processing of polymers using supercritical fluids
[AD-A292880] p 2819 N95-31410
HIGH POWER LASERS
Reflectivity of plasmas created by high-intensity, ultra-short laser pulses
[DE95-009536] p 3004 N95-30742
Future scientific applications for high-energy lasers
[DE95-009380] p 2885 N95-31230
Advances in high-power chemical lasers
[AD-A289737] p 2885 N95-31389
Prime power for shipboard high-average power FELs
[AD-A293718] p 2886 N95-31833
HIGH PRESSURE
Navier-Stokes flow field analysis of compressible flow in a high pressure safety relief valve
[NASA-TM-110640] p 2868 N95-30862
Localization in tungsten heavy alloys subjected to shearing deformations under superimposed high pressures
[AD-A293177] p 2804 N95-30977
Low temperature fabrication from nano-size ceramic powders
[DE95-010995] p 2818 N95-31153
Fourier Transform (FT) Raman spectroscopy of nitrogen at high pressure
[AD-A293051] p 2796 N95-31670
Evaluation of pressurized water cleaning systems for hardware refurbishment p 2778 N95-31782
HIGH PRESSURE OXYGEN
Investigation of cleanliness verification techniques for rocket engine hardware p 2770 N95-31806
HIGH RESOLUTION
Direct determination of grain boundary atomic structure in SrTiO3
[DE95-008847] p 3010 N95-30544
Satellite multisensor data techniques for sea ice mapping
[AD-A289729] p 2901 N95-31148
Method and apparatus for a high resolution, flat panel cathodoluminescent display device
[AD-D017434] p 2862 N95-31342
Middle atmosphere structure and dynamics: Lidar studies at the South Pole, Syowa and Urbana p 2916 N95-31736
Growth, characterization and device development in monocrystalline diamond films
[AD-A293106] p 3015 N95-32018
Wavelengths measurements of the He-like krypton K-shell spectrum
[DE95-010264] p 2987 N95-32041
High-resolution superconducting x-ray spectrometers with aluminum trapping layers of different thicknesses
[DE95-010253] p 2881 N95-32047
High resolution time interval counter p 2969 N95-32331
HIGH REYNOLDS NUMBER
Large-eddy simulation of turbulent flow using the finite element method
[DE95-009464] p 2875 N95-31591
Control of high Reynolds number round jets p 2876 N95-31733
HIGH SPEED
An overview of high-speed networking for workstations
[DE95-009076] p 2947 N95-30577
DEPSCOR92-Wide field spectral imager
[AD-A293079] p 2997 N95-31005
HTS Josephson technology on silicon with application to high speed digital microelectronics
[AD-A288627] p 2861 N95-31147
Numerical study of shear-induced heating in high-speed nozzle flow of liquid monopropellant p 2828 N95-31207
A high-speed photonic clock and carrier regenerator p 2856 N95-32236
HIGH STRENGTH STEELS
Observations of star fracture and longitudinal splitting in BIS 812 EMA and Q1N submarine construction steels
[DSTO-RR-0014] p 2806 N95-31344
HIGH TEMPERATURE
Theoretical absorption spectroscopy of high-temperature metal vapors: Model and experiment compared
[AD-A290872] p 2791 N95-30409
Interface degradation in CAS/Nicalon during elevated temperature aging
[DE95-008843] p 2812 N95-30543
NASA Lewis Research Center's preheated combustor and materials test facility
[NASA-TM-106676] p 2762 N95-30592
High-temperature oxidation behavior of iridium-rhenium alloys
[NASA-TM-106720] p 2803 N95-30593
Stress relaxation of silicon nitride at elevated temperatures
[DE95-009177] p 2814 N95-30732
Reflectivity of plasmas created by high-intensity, ultra-short laser pulses
[DE95-009536] p 3004 N95-30742
Innovative processing of composites for ultra-high temperature applications, book 2
[AD-A290890] p 2786 N95-30898
Phthalonitrile prepolymer as high temperature sizing material for composite fibers
[AD-D017447] p 2818 N95-31272
Advanced thin-film deposition and physical properties of high-temperature and other novel superconducting materials
[AD-A292798] p 2795 N95-31439
SDIO: Discovering superconducting materials at high temperatures
[AD-A292820] p 3015 N95-31444
Hot compression testing of tungsten
[AD-A293683] p 2807 N95-31599
Dielectric property measurement of zirconia fibers at high temperatures
[DE95-010991] p 2821 N95-31705
Predictions of tensile behavior and strengths of a Si3N4 ceramic at high temperatures based on a viscoplastic model
[DE95-010220] p 2821 N95-32025
HIGH TEMPERATURE ENVIRONMENTS
Effects of thermal and electrical stressing on the breakdown behavior of space wiring
[NASA-CR-198360] p 2768 N95-30860
Pressure transducer performance and measurement trade-offs in a transient, high temperature, combustion environment p 2799 N95-31209
HIGH TEMPERATURE GASES
Computation of high-altitude hypersonic flow-field radiation p 2743 N95-30843
HIGH TEMPERATURE PLASMAS
Synthesis of carbo-nitride films using high-energy shock plasma deposition
[DE95-615231] p 2811 N95-30450
Calibration of multichannel analyzer of charge-exchange atoms
[DE95-614178] p 2987 N95-32053
Lower hybrid accessibility in a large, hot reversed field pinch
[DE95-011001] p 3007 N95-32310
HIGH TEMPERATURE SUPERCONDUCTORS
High-temperature superconducting current leads
[DE95-008404] p 2858 N95-30374
On the theory of hole propagation in an antiferromagnetic background
[DE95-614469] p 3010 N95-30650
Structural, chemical and electronic properties of superconducting thin films and junctions
[AD-A292700] p 3012 N95-30933
Optimization of high-temperature superconductor current leads
[DE95-005838] p 2861 N95-30942
Performance evaluation of high-temperature superconducting current leads for micro-SMES systems
[DE95-005843] p 2861 N95-30943
SDIO: Discovering superconducting materials at high temperatures
[AD-A292820] p 3015 N95-31444
An active magnetic bearing with high T(sub c) superconducting coils and ferromagnetic cores
[NASA-TM-106995] p 2864 N95-31847
Schwinger-boson studies of the single hole motion in a 2D quantum antiferromagnet
[DE95-614444] p 3016 N95-32071
Superconducting and normal-state properties of novel materials
[DE95-012368] p 3017 N95-32366
HIGH TEMPERATURE TESTS
Fatigue crack growth behavior of a titanium matrix composite under thermomechanical loading p 2784 N95-30491
Pressure transducer performance and measurement trade-offs in a transient, high temperature, combustion environment p 2799 N95-31209
Differences in creep performance of a HIPed silicon nitride in ambient air and inert environments
[DE95-009172] p 2796 N95-31633
Influence of strain rate and temperature on the mechanical behavior of iron aluminide-based alloys
[DE95-009426] p 2806 N95-31636
Evaluation of static strength of T800H/PMR-15 carbon/polyimide laminates at room temperature and 300 C
[NAL-TR-1254] p 2789 N95-31740
A study of elevated temperature testing techniques for the fatigue behavior of PMCS: Application to T650-35/AMB21
[NASA-TM-106927] p 2791 N95-32209
HIGHLY MANEUVERABLE AIRCRAFT
Computational methods for control and optimal design of aerospace systems
[AD-A292861] p 2751 N95-31451
HILBERT SPACE
Local index formula in noncommutative geometry
[PB95-208146] p 2955 N95-30490

Quantization of a relativistic particle on the SL(2,R) manifold based on Hamiltonian reduction
[DE95-737163] p 2983 N95-31224
HISTORIES
The art and science of magnet design: Selected notes of Klaus Halbach, volume 2
[DE95-008450] p 2861 N95-31059
PIO: A historical perspective p 2745 N95-31062
Space Shuttle Orbiter corrosion history, 1981-1993: A review and analysis of issues involving structures and subsystems
[NASA-TM-104810] p 2810 N95-32183
HOHLRAUMS
Target diagnostics for intense lithium ion hohlraum experiments on PBFA 2
[DE95-008517] p 3006 N95-31626
HOLES (ELECTRON DEFICIENCIES)
Alloying effects of Kondo insulators
[DE95-614308] p 3010 N95-30644
Schwinger-boson studies of the single hole motion in a 2D quantum antiferromagnet
[DE95-614444] p 3016 N95-32071
HOLES (MECHANICS)
Analysis of stress concentration at holes in components made of 2195 aluminum-lithium
[NASA-TP-3554] p 2893 N95-30613
Failure mechanisms in composite plates subjected to in-plane compressive loading p 2790 N95-32108
Contributions to the design of neutral cutouts in laminated plates and shells p 2790 N95-32113
HOLLOW CATHODES
Hollow cathode electron gun research and development
[DE95-010262] p 2992 N95-31127
HOLOGRAPHY
Application of computer generated holograms to optical transformations
[AD-A293146] p 2880 N95-30921
Optical feature recognition
[AD-A293168] p 2997 N95-30966
High speed random access, Fourier transform holographic associative and high density two-photon three-dimensional optical memories based on bacteriorhodopsin
[AD-A293389] p 2931 N95-30967
Laser-induced holographic surface relief gratings on nonlinear optical polymer films
[AD-A293169] p 2997 N95-30973
Polarized laser induced holographic surface relief gratings on polymer films
[AD-A293275] p 2817 N95-31126
Theoretical aspects of electron emission holography
[DE95-614371] p 2880 N95-31167
Temporal feature extraction in photorefractive resonators
[AD-A292908] p 2881 N95-31385
Photorefractive nonlinear optics
[AD-A292913] p 2999 N95-31458
HOMING DEVICES
System considerations for efficient communication and storage of MSTI image data
[NASA-CR-198869] p 3024 N95-30858
Feasibility study concerning an active millimeterwave sensor. Project phase MMS2.1
[PB95-210399] p 2882 N95-32245
The dynamic range of radar signal generation in the MSS-2 simulation facility
[AD-A293856] p 2857 N95-32259
HOMODYNE RECEPTION
Demodulators for optical fiber interferometers with (3 x 3) outputs
[AD-D017415] p 2995 N95-30402
HOMOGENEITY
Quantum 1/f noise in high technology applications including ultrasmall structures and devices
[AD-A292812] p 2862 N95-31442
A unified interpretation of singular and near-singular integrals in the boundary element method
[ISBN-0-315-86297-1] p 2962 N95-31947
HOMOGENEOUS TURBULENCE
Numerical simulation of the Langevin equation for skewed turbulence
[DE95-009477] p 2877 N95-32049
HOMOLOGY
Torus bundles and the group cohomology of GL(N,Z)
[PB95-208120] p 2965 N95-30489
4-manifold topology 2: Dwyer's filtration and surgery kernels
[PB95-207940] p 2965 N95-30509
HOMOTOPY THEORY
Strange compactification theorem: Infinite processes and the 3-dimensional poincare conjecture 6. Part A
[PB95-207924] p 2965 N95-30504
The iteration formula of the Maslov-type index theory with applications to nonlinear Hamiltonian systems
[DE95-613379] p 2957 N95-30676
Pi1(sup infinity) and infinite simple homotopy type in dimension three: A research announcement
[PB95-196283] p 2957 N95-30696
HOT ELECTRONS
Vertical transport in GaAs/AlGaAs superlattices p 3012 N95-30822
HOT ISOSTATIC PRESSING
Processing and characterization of nanocrystalline molybdenum disilicide (MoSi2) consolidated by hot isostatic pressing (HIP)
[DE95-010243] p 3012 N95-30756
Differences in creep performance of a HIPed silicon nitride in ambient air and inert environments
[DE95-009172] p 2796 N95-31633
HOVERING
Moving base simulation of an integrated flight and propulsion control system for an ejector-augmentor STOVL aircraft in hover
[NASA-TM-108867] p 2750 N95-30646
HTPB PROPELLANTS
Oscillatory combustion of aluminized AP/HTPB propellants p 2800 N95-31286
Laser pyrolysis of HTPB p 2800 N95-31298
HUBBLE SPACE TELESCOPE
The future of space imaging. Report of a community-based study of an advanced camera for the Hubble Space Telescope
[NASA-CR-198818] p 3028 N95-31364
The Wide Field/Planetary Camera 2 (WFPC-2) molecular adsorber
[NASA-CR-198866] p 2881 N95-31456
HUMAN BEHAVIOR
Temporal information processing mechanisms
[PB95-208344] p 3027 N95-32370
HUMAN BODY
Control of skin blood flow in the neutral zone of human body temperature regulation
[AD-A291499] p 2926 N95-30563
HUMAN FACTORS ENGINEERING
Specific method for task-based interaction design
[PB95-196440] p 2929 N95-30522
Precision manipulation with a dextrous robot hand p 2888 N95-30829
Virtual Reality Software and Technology '94
[AD-A292334] p 2939 N95-31262
The development of human behaviour analysis techniques and the development of human factors technologies
[DE95-613356] p 2930 N95-31267
Impact of task properties, data display format and cognitive characteristics on recall performance: A cumulative research investigation p 3025 N95-31334
Human factors at the FAA Technical Center: Bibliography
[AD-A288638] p 2930 N95-31399
Design and integration issues of visually-coupled evaluation
[AD-A293521] p 2931 N95-31538
Guidelines for the design of GPS and LORAN receiver controls and displays
[AD-A293753] p 2749 N95-31572
Analysis of heads-up display quickening versus handling qualities
[AD-A293797] p 2753 N95-31584
Dynamical analysis of the coriolis effect which causes space disorientation
[NAL-TR-1258] p 2928 N95-31714
Aircraft evacuations through Type-3 exits I: Effects of seat placement at the exit
[DOT/FAA/AM-95/22] p 2748 N95-31845
HUMAN PERFORMANCE
Training metacognitive skills for problem solving
[AD-A290310] p 2959 N95-31002
The development of human behaviour analysis techniques and the development of human factors technologies
[DE95-613356] p 2930 N95-31267
Impact of task properties, data display format and cognitive characteristics on recall performance: A cumulative research investigation p 3025 N95-31334
Forward rapid rotation shiftwork in USAF air traffic controllers: Sleep, activity, fatigue and mood analyses
[AD-A293448] p 2927 N95-31373
Contextual interference effects on acquisition and transfer of a complex motor task
[AD-A293788] p 2929 N95-31583
HUMAN RESOURCES
Application of a genetic algorithm to optimize staffing levels in software development
[AD-A293725] p 2943 N95-31835
HUMAN-COMPUTER INTERFACE
The Technology Information Environment with Industry (TIE-In): A mechanism for accessing laboratory solutions
[DE95-008542] p 3027 N95-30385
Specific method for task-based interaction design
[PB95-196440] p 2929 N95-30522
Automation of the control of acoustic parameters in a digital speech synthesizer
[IFTR-2/1995] p 2850 N95-31357
Visual tracking of self-occluding articulated objects
[AD-A292894] p 2928 N95-31383
Human-computer interaction (HCI) specialization track Masters of Software Engineering (MSE) program
[AD-A292895] p 2930 N95-31401
Guidelines for the design of GPS and LORAN receiver controls and displays
[AD-A293753] p 2749 N95-31572
User-friendly microcomputer interface with optimization languages AF94-007
[AD-A293184] p 2932 N95-32257
HUMIDITY
Patterns in the sky: Natural visualization of aircraft flow fields
[NASA-SP-514] p 2741 N95-31000
HURRICANES
Forecast of Atlantic seasonal hurricane activity for 1994 p 2918 N95-30832
Summary of 1993 Atlantic tropical cyclone activity and verification of author's forecast. A year of unanticipated light hurricane activity and a poor forecast: The expected dissipation of the El Nino did not take place and Caribbean basin surface pressure became quite high p 2918 N95-30842
Early August updated forecast of Atlantic seasonal hurricane activity for 1994 p 2919 N95-30844
LAWS hurricane studies
[NASA-CR-189438] p 2919 N95-31128
HYBRID CIRCUITS
Space qualified hybrid superconductor/semiconductor planar oscillator circuit
[NASA-TM-106978] p 3011 N95-30703
HYBRID PROPELLANTS
Improved hybrid rocket fuel p 2773 N95-31755
HYDRAULIC FLUIDS
Compatibility of Single Hydraulic Fluid with military specification fluids, seals and metallurgy
[AD-A292954] p 2821 N95-31663
Recycling MIL-H-46170 hydraulic fluid to extend fluid service life
[AD-A293035] p 2821 N95-31664
Evaluation of Environmentally Acceptable hydraulic fluids
[AD-A293037] p 2821 N95-31666
HYDRAULIC JETS
Evaluating the cost effectiveness of environmental projects: Case studies in aerospace and defense p 2774 N95-31762
Waterjet processes for coating removal p 2777 N95-31779
Ultra-high pressure water jetting for coating removal and surface preparation p 2778 N95-31780
Evaluation of pressurized water cleaning systems for hardware refurbishment p 2778 N95-31782
Cleaning verification by air/water impingement p 2782 N95-31805
Aquastrip p 2844 N95-32173
HYDRIDES
Preparation of diisopropyl stibines and use thereof
[AD-D017419] p 2771 N95-30418
Mobile electric power
[AD-A292721] p 2860 N95-30940
HYDROCARBON COMBUSTION
Non-intrusive combustion diagnostics of premixed hydrocarbon flames using FT-IR spectrometry p 2797 N95-31732
HYDROCARBON FUELS
Detailed chemical kinetic modeling of premixed hydrocarbon flames supported by NO2 p 2801 N95-31311
CFD assessment of the pollutant environment from RD-170 propulsion system testing p 2772 N95-31749
HYDROCARBONS
Photochemistry of intermolecular C-H bond activation reactions
[DE95-008991] p 2978 N95-30574
Evaluation of HFC 245ca and HFC 236ea as foam blowing agents p 2775 N95-31766
HYDROCHLORIC ACID
Environmentally compatible solid rocket propellants p 2772 N95-31753
Low acid producing solid propellants p 2773 N95-31754
HYDRODYNAMIC EQUATIONS
Particle filtration: A comparison between theory and experiment
[DE95-009442] p 2875 N95-31637
An efficient numerical procedure for thermohydrodynamic analysis of cavitating bearings
[NASA-CR-195476] p 2878 N95-32210
Film temperatures in the presence of cavitation
[NASA-CR-195481] p 2878 N95-32216

HYDRODYNAMICS
Multidimensional discretization of conservation laws for unstructured polyhedral grids
[DE95-008796] p 2955 N95-30470
Modeling of thermal, electronic, hydrodynamic, and dynamic deposition processes for pulsed-laser deposition of thin films
[DE95-008906] p 2813 N95-30572
Hamiltonian dynamics of the condensed media with spontaneously broken symmetry
[DE95-614448] p 3010 N95-30648
Future scientific applications for high-energy lasers
[DE95-009380] p 2885 N95-31230
Phase transitions and gravitational collapse
[DE95-011732] p 3021 N95-32359

HYDROELECTRICITY
Sleeping renewable beauty: Will the prince ever come
[PB95-214573] p 2903 N95-30640

HYDROFLUORIC ACID
Evaluation of halon alternatives in inerting experiments
[AD-A293774] p 2795 N95-31580

HYDROGEN
Scaling of cross sections in ion-atom collisions
[DE95-008938] p 2978 N95-30573
Low-density ionization behavior
[DE95-009495] p 2980 N95-30705
A search for interstellar CH3D: Limits to the methane abundance in Orion-KL
[NASA-CR-198932] p 3029 N95-30751
Hydrogen absorption in iron and steel during gas tungsten arc welding
[PB95-197018] p 2804 N95-30776
Mobile electric power
[AD-A292721] p 2860 N95-30940
Properties of new materials relevant to energy and fuel research
[AD-A289734] p 2825 N95-31149
Hydrogen diffusion and passivation in InGaAlN alloys
[DE95-010889] p 2806 N95-31150
Neutronic methods for determination of very low concentrations of hydrogen in metals
[DE95-623967] p 2807 N95-31409
An analysis of gas phase ethanol/water chemistry for diamond CVD
[AD-A293009] p 2795 N95-31473
The antiproton-hydrogen atom interaction
[DE95-010252] p 2987 N95-32039
The 26th Annual Precise Time and Time Interval (PTTI) Applications and Planning Meeting
[NASA-CP-3302] p 2967 N95-32319

HYDROGEN ATOMS
The antiproton-hydrogen atom interaction
[DE95-010252] p 2987 N95-32039

HYDROGEN EMBRITTLEMENT
Review of environmental effects in intermetallics
[DE95-010120] p 2805 N95-31106

HYDROGEN ISOTOPES
Mobile electric power
[AD-A292721] p 2860 N95-30940
Determination of electric and magnetic fields in open trap plasmas by means of atomic-molecular beam hydrogen isotopes
[DE95-614177] p 3006 N95-31680

HYDROGEN MASERS
Anticipated uncertainty budgets of PRARETIME and T2L2 techniques as applied to ExTRAS
p 2968 N95-32326
Metafitting: Weight optimization for least-squares fitting of PTTI data p 2971 N95-32340
The effects of clock errors on timescale stability
p 2971 N95-32342
Satellite test of the isotropy of the one-way spe ed of light using ExTRAS p 2973 N95-32349

HYDROGEN SULFIDE
Hydrogen sulfide analyzer with protective barrier
[AD-D017412] p 2793 N95-31009
Self-lubricating, TiN-MoS2 composite coatings produced by simultaneous deposition from Ti(((CH3))2N4/NH3/MoF6H2S gas mixture
[DE95-010359] p 2788 N95-31403

HYDROLOGICAL CYCLE
NASA Tropical Rainfall Measurement Mission (TRMM): Effects of tropical rainfall on upper ocean dynamics, air-sea coupling and hydrologic cycle
[NASA-CR-189437] p 2919 N95-31123
The role of the hydrological cycle and the ocean's thermohaline circulation in climate change: A multicomponent climate model study
p 2909 N95-31720

HYDROLOGY
Multiparameter radar measurements of precipitation in complex terrain: Meteorological and hydrological applications
[AD-A290786] p 2918 N95-30403
Geostatistics and hydrology. Part 3. Hydro-meteorological network design
[PB95-206462] p 2900 N95-30818
Geostatistics and hydrology. Part 1: Spatial and temporal variability. Communications of the Sanitary Engineering and Water Management Division
[PB95-206470] p 2900 N95-30819

HYDROLYSIS
Enhanced alkaline hydrolysis and biodegradability studies of nitrocellulose-bearing missile propellant
p 2772 N95-31752
Base hydrolysis and hydrothermal processing of PBX-9404 explosive
[DE95-009437] p 2836 N95-32048
Base hydrolysis and hydrothermal processing of PBX-9404 explosive
[DE95-009497] p 2837 N95-32355

HYDROSTATIC PRESSURE
Effects of hydrostatic pressure on the mechanical behavior of composite materials
[AD-A293162] p 2787 N95-30963
Localization in tungsten heavy alloys subjected to shearing deformations under superimposed high pressures
[AD-A293177] p 2804 N95-30977

HYDROSTATICS
Experimental determination of probability distributions for parameters of a Salem limestone cap plasticity model
[AD-A290878] p 2892 N95-30559
Hydrostatic extrusion of BSCCO/Ag composite wire
[DE95-007862] p 2805 N95-31121

HYDROTHERMAL SYSTEMS
Laboratory simulated hydrothermal alteration of sedimentary organic matter from Guaymas Basin, Gulf of California
[NASA-CR-198951] p 2914 N95-30865

HYDROXIDES
An ab initio study of the reaction HNO + NO yields OH + N2O: Preliminary results p 2801 N95-31308

HYDROXYL RADICALS
A study of catalysts and mechanisms in synthesis reactions
[DE95-010177] p 2793 N95-30766
Spatially-resolved velocity measurements in steady, high-speed, reacting flows using laser-induced OH fluorescence p 2877 N95-32109

HYGRAL PROPERTIES
A theory for predicting and minimizing the effects of matrix degradation on the thermomechanical properties of general laminates p 2785 N95-30768

HYPERBOLIC DIFFERENTIAL EQUATIONS
Representation of feedback operators for hyperbolic systems
[NASA-CR-198171] p 2960 N95-31319

HYPERONS
On the search for exotic hadrons in the experiments with high energy hyperon beam
[DE95-620534] p 2989 N95-32261

HYPERSONIC FLIGHT
Computation of high-altitude hypersonic flow-field radiation p 2743 N95-30843

HYPERSONIC FLOW
Flow models for the design of a hypersonic iodine vapor wind tunnel nozzle with chemical and vibrational nonequilibrium effects p 2742 N95-30448
A numerical study of the starting process in a hypersonic shock tunnel p 2762 N95-30493
Computation of high-altitude hypersonic flow-field radiation p 2743 N95-30843
Analysis of planar laser-induced fluorescence images obtained during shakedown testing of the AEDC impulse facility
[AD-A293237] p 2884 N95-30906

HYPERSONIC WIND TUNNELS
Flow models for the design of a hypersonic iodine vapor wind tunnel nozzle with chemical and vibrational nonequilibrium effects p 2742 N95-30448

HYPERTEXT
Effectiveness of an electronic performance support system for use with computer-aided design software
[AD-A293757] p 2941 N95-31573

HYPERVELOCITY GUNS
The 31st JANNAF Combustion Subcommittee Meeting, volume 1 p 2825 N95-31194
Pressure transducer performance and measurement trade-offs in a transient, high temperature, combustion environment p 2799 N95-31209

HYPERVELOCITY IMPACT
Hypervelocity wind tunnel number 9, high Mach number development program
[AD-A289934] p 2743 N95-30929
Aerophysics test program 1
[AD-A293890] p 2963 N95-31543

HYPERVELOCITY LAUNCHERS
Experiments in a 120-mm ram accelerator including flow visualization p 2799 N95-31202

HYPERVELOCITY PROJECTILES
Experiments in a 120-mm ram accelerator including flow visualization p 2799 N95-31202
Numerical simulation of ram accelerator performance including transient effects during initiation of combustion and sensitivity studies p 2799 N95-31203
Investigation of ram accelerator performance capabilities p 2799 N95-31204
Pressure transducer performance and measurement trade-offs in a transient, high temperature, combustion environment p 2799 N95-31209

HYPERVELOCITY WIND TUNNELS
Hypervelocity wind tunnel number 9, high Mach number development program
[AD-A289934] p 2743 N95-30929

HYPOTHESES
A hypothesis-testing approach to discriminant analysis with mixed categorical and continuous variables when data are missing
[AD-A293714] p 2964 N95-31831

HYSTERESIS
Effects of temperature ramp rate during heat treatment on hysteresis loss and critical current density of internal tin processed wires
[DE95-009551] p 2803 N95-30706
Investigations of YBaCuO materials with near-room-temperature resistivity transitions
[AD-A293405] p 3013 N95-31008
Effects of temperature, frequency, flux density, and excitation waveform on the core loss and dynamic B-H loops of supermalloy
[NASA-TM-106982] p 2865 N95-32207

I

ICE
A laser-based ice shape profilometer for use in icing wind tunnels
[NASA-TM-106936] p 2880 N95-30851
Study of melting and freezing processes of water for application to ice thermal energy storage system
p 2905 N95-31735
Paint removal and surface cleaning using ice particles
p 2844 N95-32171
Stripping with dry ice p 2844 N95-32172

ICE CLOUDS
Icing simulation in the aeropropulsion systems test facility propulsion development test cell C-2
[AD-A293039] p 2747 N95-31667
Middle atmosphere structure and dynamics: Lidar studies at the South Pole, Syowa and Urbana
p 2916 N95-31736

ICE FORMATION
A laser-based ice shape profilometer for use in icing wind tunnels
[NASA-TM-106936] p 2880 N95-30851
Sea ice stress research
[AD-A293164] p 2923 N95-30964
Study of melting and freezing processes of water for application to ice thermal energy storage system
p 2905 N95-31735

ICE MAPPING
Weather influence on passive microwave brightness temperatures
[PB95-195384] p 2900 N95-30536
Sea ice stress research
[AD-A293164] p 2923 N95-30964
Satellite multisensor data techniques for sea ice mapping
[AD-A289729] p 2901 N95-31148

ICE REPORTING
Satellite multisensor data techniques for sea ice mapping
[AD-A289729] p 2901 N95-31148

IFF SYSTEMS (IDENTIFICATION)
Reply-frequency interference/jamming detector
[AD-D017428] p 2847 N95-30746
AIDEX: An expert system for aircraft identification
p 2842 N95-32138

IGNITION
Preliminary assessment of combustion modes for internal combustion wave rotors
[NASA-TM-107000] p 2754 N95-30632
Viscous heating of liquid layers under intense shear
p 2827 N95-31206
Design and testing of an oxidizer-rich preburner
p 2799 N95-31212
The 25th International Symposium on Combustion
[AD-A286825] p 2794 N95-31268
An ignition model for modern double base propellants
p 2800 N95-31292

Investigation of cleanliness verification techniques for rocket engine hardware p 2770 N95-31806

IGNITION LIMITS

Evaluation of halon alternatives in inerting experiments [AD-A293774] p 2795 N95-31580

IGNITION TEMPERATURE

Numerical computation of one-dimensional detonation waves [PB95-197950] p 2868 N95-30811

Viscous heating of liquid layers under intense shear p 2827 N95-31206

ILL-CONDITIONED PROBLEMS (MATHEMATICS)

A modification to the GMRES method for ill-conditioned linear systems [DE95-010661] p 2962 N95-32076

ILLUSIONS

Dynamical analysis of the coriolis effect which causes space disorientation [NAL-TR-1258] p 2928 N95-31714

IMAGE ANALYSIS

Direct sublattice imaging of interface dislocation structures in CdTe/GaAs(001) [DE95-009031] p 3010 N95-30576

Multiresolution signal and system analysis and the analysis and control of discrete-event dynamic systems [AD-A292775] p 2851 N95-31430

Artificial neural networks and model-based recognition of 3-D objects from 2-D images p 2954 N95-31838

Texture based methods for image analysis: A review [PB95-211595] p 2945 N95-32251

IMAGE CLASSIFICATION

Computer vision for detecting and quantifying gamma-ray sources in coded-aperture images [DE95-008810] p 2900 N95-30472

Brief review of remote sensing literature pertaining to classification and geostatistics [AD-A290932] p 2901 N95-31156

Texture based methods for image analysis: A review [PB95-211595] p 2945 N95-32251

IMAGE CONTRAST

Analysis of target contrast improvement using polarization filtering in the infrared region [AD-A293085] p 3001 N95-31841

IMAGE ENHANCEMENT

Adaptive image enhancement of text images that contain touching or broken characters [DE95-010173] p 3023 N95-30620

Image enhancement by edge-preserving filtering [DE95-008077] p 2936 N95-31056

IMAGE FILTERS

Analysis of target contrast improvement using polarization filtering in the infrared region [AD-A293085] p 3001 N95-31841

IMAGE PROCESSING

BASIS image processor PR5200: Module Common Part [PB95-212023] p 2933 N95-30501

Detecting intravascular gas bubbles in ultrasonic images [PB95-195301] p 2926 N95-30513

Unconventional imaging field experiment plan [AD-A291492] p 2846 N95-30562

Adaptive image enhancement of text images that contain touching or broken characters [DE95-010173] p 3023 N95-30620

Apparatus and method for producing three-dimensional images [AD-D017455] p 2847 N95-30727

Machine learning for a toolkit for image mining [AD-A293137] p 2951 N95-30890

Analysis of planar laser-induced fluorescence images obtained during shakedown testing of the AEDC impulse facility [AD-A293237] p 2884 N95-30906

Local fractal dimension estimation [AD-A293354] p 2959 N95-30953

Optical feature recognition [AD-A293168] p 2997 N95-30966

Image enhancement by edge-preserving filtering [DE95-008077] p 2936 N95-31056

Brief review of remote sensing literature pertaining to classification and geostatistics [AD-A290932] p 2901 N95-31156

Nonparametric recognition of nonrigid motion [AD-A293630] p 2963 N95-31565

Folded compact range development and coherent change detection measurement project [DE95-009082] p 2853 N95-31628

A simple and efficient procedure for polyhedral assembly partitioning under infinitesimal motions [DE95-009638] p 2942 N95-31644

Image representation using fast algorithms based on the Zak transform [AD-A293416] p 2942 N95-31684

Video conferencing using DAVE user's guide [DE95-010341] p 2854 N95-32045

Scannerless Range Imaging with a square wave [DE95-009840] p 2854 N95-32145

Photo-refractive Bi12SiO20: Spatial light modulator [AD-A293084] p 3001 N95-32153

BRUTUS: A program for conversion between image formats [PB95-211421] p 2945 N95-32246

Texture based methods for image analysis: A review [PB95-211595] p 2945 N95-32251

The Coprocessor Manager in the BASIS processor system [PB95-211611] p 2945 N95-32252

Gigabit testbed research project [DE95-010728] p 2945 N95-32270

Analysis of the final result from the image template matching method with fuzzy logic [PB95-222915] p 2946 N95-32311

IMAGE RECONSTRUCTION

Image representation using fast algorithms based on the Zak transform [AD-A293416] p 2942 N95-31684

IMAGE RESOLUTION

Multiresolution signal and system analysis and the analysis and control of discrete-event dynamic systems [AD-A292775] p 2851 N95-31430

IMAGERY

Synthetic Terrain Imagery for Helmet-Mounted Display. Volume 3: Software user's manual [AD-A293613] p 2753 N95-31463

Functions for processing synthetic aperture radar imagery [AD-A293895] p 2851 N95-31510

Synthetic Terrain Imagery for Helmet-Mounted Display, volume 1 [AD-A293612] p 2753 N95-31656

IMAGES

Analysis of the final result from the image template matching method with fuzzy logic [PB95-222915] p 2946 N95-32311

IMAGING RADAR

Unconventional imaging field experiment plan [AD-A291492] p 2846 N95-30562

Research in ground-to-air microwave imaging [AD-A292907] p 2852 N95-31551

Prospects for high accuracy time dissemination and synchronization using coded radar pulses from a low-earth orbiting spacecraft p 2971 N95-32339

IMAGING SPECTROMETERS

Data collection at the Lockheed Santa Cruz facility using midwave hyperspectral imagers [AD-A293057] p 3000 N95-31672

IMAGING TECHNIQUES

Visualization of circuit card electromagnetic fields [AD-A291491] p 2845 N95-30398

Multiparameter radar measurements of precipitation in complex terrain: Meteorological and hydrological applications [AD-A290786] p 2918 N95-30403

Computer vision for detecting and quantifying gamma-ray sources in coded-aperture images [DE95-008810] p 2900 N95-30472

Decompression illness, observable bubbles. (Session K) [PB95-195285] p 2926 N95-30511

Apparatus for producing images acoustically [AD-D017365] p 2973 N95-30530

Direct determination of grain boundary atomic structure in SrTiO3 [DE95-008847] p 3010 N95-30544

Unconventional imaging field experiment plan [AD-A291492] p 2846 N95-30562

Direct sublattice imaging of interface dislocation structures in CdTe/GaAs(001) [DE95-009031] p 3010 N95-30576

A laser-based ice shape profilometer for use in icing wind tunnels [NASA-TM-106936] p 2880 N95-30851

Nearly steady flows in GONG prototype data [NASA-CR-198935] p 2869 N95-30863

Analysis of planar laser-induced fluorescence images obtained during shakedown testing of the AEDC impulse facility [AD-A293237] p 2884 N95-30906

Evaluation of calibration parameters and performance of the video imaging technique of assessing exposure (VITAE system) [AD-A289023] p 2927 N95-30998

DEPSCOR92-Wide field spectral imager [AD-A293079] p 2997 N95-31005

Theoretical aspects of electron emission holography [DE95-614371] p 2880 N95-31167

The future of space imaging. Report of a community-based study of an advanced camera for the Hubble Space Telescope [NASA-CR-195818] p 3028 N95-31364

Adaptive optics design for the advanced electro-optical system (AEOS) [AD-A293972] p 2974 N95-31527

Research in ground-to-air microwave imaging [AD-A292907] p 2852 N95-31551

Validation of the atmospheric transmission large-area analysis system (ATLAS) [AD-A293810] p 2916 N95-31589

An investigation of a novel approach to elemental imaging in three dimensions [DE95-010340] p 3000 N95-31681

Contamination detection NDE for cleaning process inspection p 2781 N95-31802

Diagnosing high density, fast-evolving plasmas using x-ray lasers [DE95-010734] p 3006 N95-32028

Enhanced brightness x-ray lasers [DE95-010735] p 2886 N95-32029

Scannerless Range Imaging with a square wave [DE95-009840] p 2854 N95-32145

The development of a pulsed laser imaging system for natural gas leak detection [DE95-011407] p 2887 N95-32280

IMMUNOLOGY

Conference perspective. Neuroimmunomodulation: Stress and immune function [AD-A291351] p 2926 N95-30870

IMPACT ACCELERATION

Design of digital low-pass filters for time-domain recursive filtering of impact acceleration signals [AD-A293086] p 2864 N95-31842

Structural analyses of the JPL Mars Pathfinder impact [DE95-009581] p 2767 N95-32081

IMPACT DAMAGE

Characterization and prediction of post-impact fatigue damage in stitched composites p 2785 N95-30826

Characterization of compressive damage mechanisms in ceramic and polymeric matrix composite materials [AD-A293171] p 2787 N95-30975

Post-impact fatigue of cross-plied, through-the-thickness reinforced carbon/epoxy composites [NASA-TM-110625] p 2896 N95-31419

IMPACT TESTS

High strain rate properties and constitutive modeling of glass [DE95-008434] p 2816 N95-31058

Aerophysics test program 1 [AD-A293890] p 2963 N95-31543

Vertical impact testing of two helmet-mounted night vision systems [AD-A293055] p 2931 N95-31671

IMPEDANCE

KRAKEN, a numerical model of RHIC impedances [DE95-011563] p 2994 N95-32242

IMPEDANCE MATCHING

Response of dual-layered structures subjected to shock pressure wave [AD-A293731] p 2896 N95-31568

IMPEDANCE MEASUREMENT

The impact of microbiologically influenced corrosion on protective polymer coatings [AD-A288896] p 2816 N95-30997

IMPELLERS

Laser anemometer measurements of the three-dimensional rotor flow field in the NASA low-speed centrifugal compressor [NASA-TP-3527] p 2756 N95-31985

IMPLANTATION

Formation of cavities in Si and their chemisorption of materials [DE95-009586] p 2980 N95-30708

Plasma source ion implantation of metal ions: Synchronization of cathodic-arc plasma production and target bias pulses [DE95-009431] p 3006 N95-31613

IMPLOSIONS

Ultrasonic cleaning: Fundamental theory and application p 2778 N95-31783

Basic science with pulsed power and some off-the-wall ideas [DE95-009486] p 2854 N95-32050

IMPULSE GENERATORS

Minimizing structural vibrations with Input Shaping (TM) [NASA-CR-189439] p 2893 N95-30786

IMPULSES

Worldwide intercomparison of impulse voltage measuring systems at 600 kV level [PB95-195574] p 2858 N95-30538

IMPURITIES

Power oscillator in the tokamaks training [DE95-616538] p 3003 N95-30473

Effects of particle fueling and plasma wall interactions on D3-D discharges [DE95-009608] p 3003 N95-30612

Alloying effects of Kondo insulators
[DE95-614308] p 3010 N95-30644
IR materials producibility
[AD-A293330] p 2998 N95-31141
Removal of impurity ions from a magnetic trap with a two-component plasma on their collision with fast component ions
[DE95-614171] p 2984 N95-31550

IN SITU MEASUREMENT
Experiments in a 120-mm ram accelerator including flow visualization p 2799 N95-31202

INCIDENT RADIATION
Theory of unsteady combustion of solids: Investigation of Quasi-steady assumption p 2800 N95-31285

INCOMPRESSIBLE FLOW
Velocity boundary conditions for vorticity formulations of the incompressible Navier-Stokes equations
[DE95-008715] p 2866 N95-30464
Axial loads on yawed rotors
[PB95-214193] p 2742 N95-30638
Acceleration potential models PREDICHAT/PREDICDYN applied for calculation of axisymmetric dynamic inflow cases
[PB95-207015] p 2869 N95-30957

INCONEL (TRADEMARK)
Modeling of stress distributions on the microstructural level in Alloy 600
[DE95-009135] p 2807 N95-31632
Modeling of grain boundary stresses in Alloy 600
[DE95-009033] p 2808 N95-31825

INDENTATION
Cracking during nanoindentation and its use in the measurement of fracture toughness
[DE95-008839] p 2818 N95-31175

INDEXES (DOCUMENTATION)
Research proposal
[AD-A293207] p 3032 N95-30899
SeaWiFS technical report series. Volume 24: SeaWiFS technical report series cumulative index, volumes 1-23
[NASA-TM-104566-VOL-24] p 2924 N95-32122

INDIUM ALLOYS
Volumetric and electro analytical techniques for chemical characterization of nuclear grade Ag-In-Cd alloys
[DE95-620664] p 2807 N95-31407

INDIUM GALLIUM ARSENIDES
Pseudomorphic heterostructure materials for high performance devices
[AD-A292906] p 2788 N95-31384

INDIUM PHOSPHIDES
The junction characteristics and current conduction mechanisms of GaInP2 n(+)p diodes and solar cells
[AD-A290857] p 2902 N95-30408
InP solar cell development on inexpensive Si substrates
[AD-A293255] p 2903 N95-30893
Carrier dynamics and optical properties of GaAs- and InP-based strained quantum well lasers
p 2886 N95-31848
Investigation of the basic physics of high efficiency semiconductor hot carrier solar cell
[NASA-CR-198945] p 2906 N95-32212

INDIUM SELENIDES
Investigation of polycrystalline thin film CuInSe2 solar cells based on ZnSe windows
[DE95-004068] p 2904 N95-31164

INDUCTANCE
A time stepping coupled finite element-state space modeling environment for synchronous machine performance and design analysis in the ABC frame of reference p 2864 N95-31948

INDUCTION (MATHEMATICS)
Data analysis: Naive inductivism
[PB95-212213] p 3026 N95-32254

INDUCTORS
Operational characteristics of a 200 C LC parallel resonant circuit
[NASA-TM-106983] p 2864 N95-31742

INDUSTRIAL MANAGEMENT
Manufacturing waste disposal practices of the chemical propulsion industry p 2771 N95-31748

INDUSTRIAL PLANTS
Network user's guide
[DE95-009185] p 2942 N95-31634

INDUSTRIAL WASTES
Manufacturing waste disposal practices of the chemical propulsion industry p 2771 N95-31748
Enhanced alkaline hydrolysis and biodegradability studies of nitrocellulose-bearing missile propellant
p 2772 N95-31752
National Center for Manufacturing Sciences: Environmentally conscious manufacturing
p 2773 N95-31758

INDUSTRIES
The Technology Information Environment with Industry (TIE-In): A mechanism for accessing laboratory solutions
[DE95-008542] p 3027 N95-30385
Metrics in method engineering
[PB95-197687] p 2838 N95-30455
An overview of high-speed networking for workstations
[DE95-009076] p 2947 N95-30577
The role of advanced engineering simulation in model-based design
[DE95-008815] p 2934 N95-30796
National Laboratories: Are their R and D activities related to commercial product development? Report to Congressional Requesters
[GAO/PEMD-95-2] p 3027 N95-31345
Development of the Multi-Level Seismic Receiver (MLSR)
[DE95-008823] p 2916 N95-31610
Industry participation workshop: Chromium electroplating of superconductor strand. Proceedings
[DE95-009629] p 2807 N95-31615

INELASTIC SCATTERING
Inelastic plasmon and inter-band electron-scattering potentials for Si from dielectric matrix calculations
[DE95-616778] p 2977 N95-30475
The effect of a non-Hermitian crystal potential on the scattering matrix in reflection electron diffraction
[DE95-616779] p 2977 N95-30476
Theoretical high energy physics
[DE95-003107] p 2991 N95-30527
May multiple inelastic scattering in CBED patterns be removed analytically
[PB95-196333] p 2992 N95-30717
Zone axis backscattered electron contrast for fast electrons
[DE95-616775] p 2980 N95-30790
K-shell ionization under zone axis electron diffraction conditions
[DE95-616780] p 2981 N95-30916

INEQUALITIES
Newton methods for large-scale linear inequality-constrained minimization: Optimization and systems theory
[PB95-210332] p 2956 N95-30499
The complexity and approximability of finding maximum feasible subsystems of linear relations
[TRITA-NA-9313] p 2961 N95-31648

INERTIA
Speed control of an elastic two-mass system: Optimization and systems theory
[PB95-212106] p 2888 N95-30701
Particle filtration: An analysis using the method of volume averaging
[DE95-009467] p 2875 N95-31592

INERTIAL CONFINEMENT FUSION
Porous spherical shells and microspheres by electrodispersion precipitation
[DE95-009073] p 2815 N95-30799
Free electron laser as energy driver for inertial confinement fusion
[DE95-614252] p 2884 N95-30914

INERTIAL GUIDANCE
Results from tests of the Kearfott T16-B Inertial Measurement Unit
[PB95-212031] p 2879 N95-30502

INERTIAL NAVIGATION
Results from tests of the Honeywell integrated flight management unit
[PB95-211355] p 2748 N95-30597

INFERENCE
A Stochastic EM algorithm for approximating the maximum likelihood estimate
[DE95-010328] p 2943 N95-32044
A stochastic difference equation approach to inference with missing data: Some new results
[DE95-010327] p 2944 N95-32088
A stochastic EM estimator in the presence of missing data: Theory and applications
[DE95-010329] p 2944 N95-32089

INFLATABLE STRUCTURES
Releaseable unconstrained inflatable body protector
[AD-D017350] p 2930 N95-30552

INFORMATION DISSEMINATION
The Los Alamos accelerator code group
[DE95-010989] p 2992 N95-31151
Report to Congressional Committees. Federal research: Interim report on the pilot technology access program
[GAO/RCED-94-75] p 3022 N95-32195

INFORMATION FLOW
Development of a CFC Critical Area Response (CAR) package p 2783 N95-31814

INFORMATION MANAGEMENT
Development of technical information processing systems
[DE95-613311] p 3024 N95-30882
Adaptiveness in information systems integration
p 3025 N95-31348
Defining manually enactable processes using the process definition information organizer templates (Software Technology for Adaptable, Reliable Systems (STARS) program)
[AD-A292854] p 2946 N95-32293

INFORMATION PROCESSING (BIOLOGY)
Physiology and physiopathology of equilibration
[PB95-208328] p 2926 N95-30494
Neurodynamical systems for cognition and target identification
[AD-A293111] p 2951 N95-30884
Temporal information processing mechanisms
[PB95-208344] p 3027 N95-32370

INFORMATION RETRIEVAL
Development of technical information processing systems
[DE95-613311] p 3024 N95-30882
An evaluation of an automatic markup system
[DE95-009885] p 3026 N95-32149
UNLV: Information Science Research Institute
[DE95-011941] p 3027 N95-32362

INFORMATION SYSTEMS
Protocols for integrity constraint checking in federated databases
[PB95-197695] p 3022 N95-30456
Data storage modeling and management for multimedia information systems p 3022 N95-30483
Proceedings of the CSCW 1994 workshop collaborative hypermedia systems
[PB95-208393] p 3023 N95-30496
Supporting data intensive applications with medium grained parallelism
[DE95-010164] p 3023 N95-30619
JPL Physical Oceanography Distributed Active Archive Center (PO.DAAC) data availability, version 1-94
[NASA-CR-198871] p 2922 N95-30859
An architectural approach to strategic information systems planning for the Office of Naval Intelligence
[AD-A289930] p 3024 N95-30928
Adaptiveness in information systems integration
p 3025 N95-31348
The quad-service satellite transmitting and receiving system for medical supply support: A battlefield interoperability and communications system prototype, volume 2. User documentation
[AD-A292835] p 2851 N95-31448
The quad-service satellite transmitting and receiving system for medical supply support: A battlefield interoperability and communications system prototype, volume 1
[AD-A292836] p 2851 N95-31449
The ATC operational evaluation of the prototype integrated terminal weather system (ITWS) at Dallas/Fort Worth and Orlando airports (May-September 1993)
[AD-A293808] p 2921 N95-31587
Requirements for security signalling
[DE95-008714] p 2948 N95-31605
Toward a risk-based approach to the assessment of the surety of information systems
[DE95-008821] p 3025 N95-31662
NEIS (NASA Environmental Information System)
p 2783 N95-31811
Multi-sensor data fusion in command and control and the merit of artificial intelligence p 2842 N95-32137
AIDEX: An expert system for aircraft identification
p 2842 N95-32138
The Telecommunications and Data Acquisition Report
[NASA-CR-198911] p 2854 N95-32221
Recommendations for protecting National Library of Medicine Computing and Networking Resources
[DE95-011554] p 3026 N95-32285

INFRARED ABSORPTION
Species and temperature profiles of propellant flames obtained from FTIR absorption spectroscopy
p 2801 N95-31303
Embedded infrared fiber optic absorption studies of nitramine propellant strand burning
p 2801 N95-31305
Improvements in infrared absorption of solid propellant flames p 2801 N95-31306
The development of a pulsed laser imaging system for natural gas leak detection
[DE95-011407] p 2867 N95-32260

INFRARED ASTRONOMY
XV NSO/Sac Peak Solar workshop
[AD-A292319] p 3030 N95-30482
Stratospheric Observatory For Infrared Astronomy (SOFIA). Phase A: System concept description
[NASA-TM-110669] p 3002 N95-32187

INFRARED DETECTORS
Optimization of a thermoelectric IR-detector for low working temperature
[NASA-CR-198933] p 2880 N95-30752

Apparent size passive range method
[AD-D017360] p 2753 N95-31180
Pseudomorphic heterostructure materials for high performance devices
[AD-A292906] p 2788 N95-31384
Quantum 1/f noise in high technology applications including ultrasmall structures and devices
[AD-A292812] p 2862 N95-31442
Data collection at the Lockheed Santa Cruz facility using midwave hyperspectral imagers
[AD-A293057] p 3000 N95-31672
TMD detection and tracking using improved AWACS sensors p 2840 N95-32128
Infrared and millimeter wave detection using thin films of Pb doped BiSrCaCuO superconductor
p 2840 N95-32129
Optimal infrared detector configurations for air target detection p 2841 N95-32130
The High Altitude Balloon Experiment demonstration of acquisition, tracking, and pointing technologies (HABE-ATP) p 2841 N95-32132
Feasibility of tropospheric water vapor profiling using infrared heterodyne differential absorption lidar
[DE95-009647] p 2917 N95-32142

INFRARED IMAGERY
Data collection at the Lockheed Santa Cruz facility using midwave hyperspectral imagers
[AD-A293057] p 3000 N95-31672
Analysis of target contrast improvement using polarization filtering in the infrared region
[AD-A293085] p 3001 N95-31841

INFRARED INSPECTION
Surface contamination analysis technology team overview p 2781 N95-31797

INFRARED INSTRUMENTS
Millimeter wave radiometer utility study
[AD-A293811] p 2852 N95-31590

INFRARED RADIATION
Optimization of a thermoelectric IR-detector for low working temperature
[NASA-CR-198933] p 2880 N95-30752
New material for high average power infrared generation: QPM-DB GaAs
[AD-A292714] p 2967 N95-30939
IR materials producibility
[AD-A293330] p 2998 N95-31141
Measurement and analysis related to infrared emissions
[AD-A293296] p 2998 N95-31192
Inductively coupled IR staring array based on photofluxonic pixels
[AD-A292784] p 2998 N95-31435
Use of body surface heat patterns for predicting and evaluating acute lower extremity pain among soldiers
[AD-A292829] p 2927 N95-31446
Annual meeting of the Advanced Light Source Users' Association
[DE95-009373] p 3000 N95-31635
Cleanliness evaluation of rough surfaces with diffuse IR reflectance p 2782 N95-31804
Design of an immersion echelle-prism mid-IR spectrograph for chemical remote sensing
[DE95-010729] p 2901 N95-32027
Infrared and millimeter wave detection using thin films of Pb doped BiSrCaCuO superconductor
p 2840 N95-32129
The theoretical calculation of vibrational circular dichroism spectra
[AD-A293614] p 2798 N95-32258
Spectral sky background in the IR: Measurements with FTIR
[PB95-222998] p 2922 N95-32315

INFRARED REFLECTION
Cleanliness evaluation of rough surfaces with diffuse IR reflectance p 2782 N95-31804

INFRARED SCANNERS
Next generation fire suppressants
p 2775 N95-31769

INFRARED SIGNATURES
Shiptracks in the Californian stratus region: Dependency on marine atmospheric boundary layer depth
[AD-A293272] p 2901 N95-31125

INFRARED SPECTRA
XV NSO/Sac Peak Solar workshop
[AD-A292319] p 3030 N95-30482
Cepheid temperature and the Blazhko effect
[NASA-CR-189433] p 3030 N95-31819
Growth, characterization and device development in monocrystalline diamond films
[AD-A293106] p 3015 N95-32018
Infrared and millimeter wave detection using thin films of Pb doped BiSrCaCuO superconductor
p 2840 N95-32129
GCMS and FTIR studies of by-product inhibited growth and the rate-limiting step in TEOS-based SiO2 CVD
[DE95-009863] p 3016 N95-32147
The theoretical calculation of vibrational circular dichroism spectra
[AD-A293614] p 2798 N95-32258

INFRARED SPECTROMETERS
Data collection at the Lockheed Santa Cruz facility using midwave hyperspectral imagers
[AD-A293057] p 3000 N95-31672
Cleanliness evaluation of rough surfaces with diffuse IR reflectance p 2782 N95-31804

INFRARED SPECTROSCOPY
Overview of IEA biomass combustion activities
[PB95-196374] p 2902 N95-30519
Species and temperature profiles of propellant flames obtained from FTIR absorption spectroscopy
p 2801 N95-31303
Non-intrusive combustion diagnostics of premixed hydrocarbon flames using FT-IR spectrometry
p 2797 N95-31732
Surface contamination analysis technology team overview p 2781 N95-31797
Standardization of surface contamination analysis systems p 2781 N95-31798
Study of surfaces using near infrared optical fiber spectrometry p 2781 N95-31801
Surface inspection using FTIR spectroscopy
p 2782 N95-31803
Growth, characterization and device development in monocrystalline diamond films
[AD-A293106] p 3015 N95-32018

INFRARED TELESCOPES
Stratospheric Observatory For Infrared Astronomy (SOFIA). Phase A: System concept description
[NASA-TM-110669] p 3002 N95-32187

INFRARED TRACKING
Apparent size passive range method
[AD-D017360] p 2753 N95-31180

INHOMOGENEITY
Solvability of a class of hypersingular nonlinear integral equations
[PB95-207031] p 3011 N95-30720
Dynamics of an inhomogeneous anisotropic antiferromagnetic spin chain
[DE95-614449] p 3013 N95-30959

INJECTION
Visible light emitting materials and injection devices
[AD-A292701] p 2786 N95-30934
Active control of combustion instability using injection techniques p 2800 N95-31288
Compressible turbulence measurement in low-angle injection into a supersonic flow
[AD-A293836] p 2874 N95-31516

INJECTION LASERS
Carrier dynamics and optical properties of GaAs- and InP-based strained quantum well lasers
p 2886 N95-31848

INJECTORS
Design and testing of an oxidizer-rich preburner
p 2799 N95-31212

INLET FLOW
Effects of initial conditions on a single jet in crossflow
[NASA-TM-107002] p 2754 N95-30589
An investigation of the side-dump dual in-line ramjet combustor p 2756 N95-31199
A pulsed liquid fuel ramjet p 2756 N95-31201

INNER RADIATION BELT
Oxygen charge state abundance in the inner magnetosphere
[AD-A293497] p 2915 N95-31536

INPUT/OUTPUT ROUTINES
Selecting optimal experiments for feedforward multilayer perceptrons
[AD-A290856] p 2949 N95-30406
Operator's handbook: NAWC Software Production Facility
[AD-A290216] p 2935 N95-31001

INSERTS
Gear pump with reduced fluid-borne noise
[AD-D017362] p 2887 N95-30399

INSPECTION
Metrology of chrome on quartz photomasks using low voltage scanning electron microscopy. Part 1: Physical SEM parameters
[PB95-195780] p 2880 N95-30693
Applying program comprehension techniques to improve software inspections p 2937 N95-31241
An experiment to assess the cost-benefits of code inspections in large scale software development
p 2937 N95-31242
Computer-aided inspection process definition: Development of an expert planning and programming system for coordinate metrology
[DE95-010411] p 2940 N95-31404
Cleanliness inspection tool for RSRM bond surfaces
p 2781 N95-31799
Contamination detection NDE for cleaning process inspection p 2781 N95-31802
Surface inspection using FTIR spectroscopy
p 2782 N95-31803
Verification of surface preparation for adhesive bonding p 2782 N95-31807
Space Shuttle Orbiter corrosion history, 1981-1993: A review and analysis of issues involving structures and subsystems
[NASA-TM-104810] p 2810 N95-32183
Nondestructive testing of ceramic components: Cooperative Research and Development Agreement completion report
[DE95-009510] p 2823 N95-32352

INSPIRATION
The art and science of magnet design: Selected notes of Klaus Halbach, volume 2
[DE95-008450] p 2861 N95-31059

INSTALLING
RASSP benchmark 1 executable requirements user's manual
[AD-A290060] p 2935 N95-30931

INSTANTONS
Instanton - antiinstanton interaction and asymptotics of perturbation theory expansion of in double well oscillator
[DE95-619245] p 2966 N95-31259

INSTRUMENT APPROACH
Aviation capacity enhancement plan 1994
[AD-A292758] p 2747 N95-31428
An exploratory survey of information requirements for instrument approach charts
[AD-A293882] p 2749 N95-31520

INSTRUMENT ERRORS
The effects of clock errors on timescale stability
p 2971 N95-32342
Allan deviation computations of a linear frequency synthesizer system using frequency domain techniques
p 2972 N95-32344

INSTRUMENT LANDING SYSTEMS
An exploratory survey of information requirements for instrument approach charts
[AD-A293882] p 2749 N95-31520

INSTRUMENT TRANSFORMERS
Operational characteristics of a 200 C LC parallel resonant circuit
[NASA-TM-106983] p 2864 N95-31742

INSULATION
Behaviour of polymers in radioactive environments: Effects of dose speed
[DE95-621008] p 2818 N95-31221
Thin-film edge field emitter device and method of manufacture therefor
[AD-D017453] p 2862 N95-31275
Waterjet processes for coating removal
p 2777 N95-31779

INSURANCE (CONTRACTS)
Workflow literature guide, version 1
[PB95-207080] p 2947 N95-30721

INTEGERS
Analysis of symbolic parameter models
[AD-A292916] p 2940 N95-31459

INTEGRAL EQUATIONS
Extensions and results from a method for evaluating fractional integrals
[DE95-616272] p 2954 N95-30425
Potential integral equations of the 2D Laplace operator in wavelet basis
[TRITA-NA-9401] p 2957 N95-30713
Solvability of a class of hypersingular nonlinear integral equations
[PB95-207031] p 3011 N95-30720
Relativistic non-interacting electron gas in a magnetic field
[DE95-616903] p 2967 N95-31177
Quasi-Newton updating for large scale nonlinear systems
[AD-A292776] p 2940 N95-31431
Review of longitudinal perturbation formalism
[DE95-010894] p 2990 N95-32278

INTEGRAL TRANSFORMATIONS
Singular eigenfunctions for shearing fluids I
[DE95-008952] p 2868 N95-30763

INTEGRALS
Extensions and results from a method for evaluating fractional integrals
[DE95-616272] p 2954 N95-30425
Integrals of motion in the two Killing vector reduction of general relativity
[DE95-616281] p 3018 N95-30431
The quantum interference effect in semiconductor space charge layers studied by Feynman path integrals: General formalism and illustrative examples
[DE95-614483] p 3010 N95-30653
Antipodes and integrals in Hopf algebras over rings and quantum Yang-Baxter equation
[PB95-212155] p 2961 N95-31397

A unified interpretation of singular and near-singular integrals in the boundary element method
[ISBN-0-315-86297-1] p 2962 N95-31947

INTEGRATED CIRCUITS
Space qualified hybrid superconductor/semiconductor planar oscillator circuit
[NASA-TM-106978] p 3011 N95-30703
Coherent integrator
[AD-D017422] p 2847 N95-30743
Diamond thin film temperature and heat-flux sensors
[NASA-CR-198859] p 3012 N95-30847
Intelligent finite element submodeling of multichip modules for reliability analysis
[AD-A292911] p 2940 N95-31455
Feasibility study concerning an active millimeterwave sensor. Project phase MMS2.1
[PB95-210399] p 2882 N95-32245
Hyperfrequency components
[PB95-208302] p 2866 N95-32369

INTEGRATED LIBRARY SYSTEMS
Development of technical information processing systems
[DE95-613311] p 3024 N95-30882

INTEGRATED MISSION CONTROL CENTER
FAA aviation forecasts: Fiscal year 1995-2006
[AD-A293682] p 2741 N95-31598

INTEGRATED OPTICS
A study of end-fire coupling of single-mode fiber to Ti: LiNbO3-single-mode planar waveguide
[AD-A293249] p 2997 N95-30909

INTEGRATORS
Coherent integrator
[AD-D017422] p 2847 N95-30743

INTELLIGENCE
An architectural approach to strategic information systems planning for the Office of Naval Intelligence
[AD-A289930] p 3024 N95-30928

INTELLIGENCE TESTS
Selection of Swedish scholastic aptitude test takers as a function of socioeconomic background and ability: Evaluation through follow-up
[PB95-212072] p 3021 N95-30699
Non-comparability of female and male admission test takers: Evaluation through follow-up
[PB95-212080] p 3021 N95-30700

INTERATOMIC FORCES
Molecular dynamics simulations of high energy cascades in iron
[DE95-010116] p 2982 N95-31104

INTERCALATION
Lithium ion aqueous cells
[AD-A293828] p 2905 N95-31554

INTERFACE STABILITY
Dissolution of eutectic microstructures
[DE95-010244] p 2804 N95-30757

INTERFACES
TEM-examination of ceramic-metal interfaces
[PB95-196531] p 2813 N95-30664
Computer interface development for the petite amateur navy satellite (PANSAT) simulator
[AD-A293263] p 2766 N95-31388
A programming interface for application-aware adaptation in mobile computing
[AD-A293107] p 2943 N95-32019

INTERFACIAL ENERGY
Control of interfacial chemistry and mechanical properties in metal/ceramic composites
p 2790 N95-31976

INTERFACIAL TENSION
Existence of solutions in plane quasistationary stokes flow driven by surface tension
[PB95-197935] p 2868 N95-30810

INTERFERENCE IMMUNITY
Interference rejection techniques in a DS spread-spectrum HF radio system
[PB95-211660] p 2846 N95-30479

INTERFEROMETERS
Demodulators for optical fiber interferometers with (3 x 3) outputs
[AD-D017415] p 2995 N95-30402
Fiber optic accelerometer with centrally supported flexural disk
[AD-D017369] p 2879 N95-30658
Fiber optic interferometric electric field and voltage sensor utilizing and electrostrictive transducer
[AD-D017433] p 2996 N95-30753
Microwave electro-optic mixer
[AD-D017328] p 2862 N95-31179
Photorefractive nonlinear optics
[AD-A292913] p 2999 N95-31458

INTERFEROMETRY
Multi-particle correlations in quaternionic quantum systems
[DE95-616271] p 3018 N95-30424
Interferometry with particles of non-zero rest mass: Topological experiments
[DE95-616244] p 2979 N95-30689
Fiber optic interferometric electric field and voltage sensor utilizing and electrostrictive transducer
[AD-D017433] p 2996 N95-30753
X-ray standing wave interferometry-optics at 1 angstrom with applications to surface and material sciences
[DE95-011453] p 2998 N95-31114
Photorefractive nonlinear optics
[AD-A292913] p 2999 N95-31458
Diagnosing high density, fast-evolving plasmas using x-ray lasers
[DE95-010734] p 3006 N95-32028

INTERGRANULAR CORROSION
Modeling of stress distributions on the microstructural level in Alloy 600
[DE95-009135] p 2807 N95-31632
Modeling of grain boundary stresses in Alloy 600
[DE95-009033] p 2808 N95-31825

INTERIOR BALLISTICS
The 31st JANNAF Combustion Subcommittee Meeting, volume 1 p 2825 N95-31194

INTERLAYERS
Diffraction-line broadening analysis and stress relaxation in thin metal layers
[PB95-213898] p 2893 N95-30634
Ultrasonic characterization of fiber-matrix interphasial properties and damage in high-temperature composites
p 2785 N95-30823
Control of interfacial chemistry and mechanical properties in metal/ceramic composites
p 2790 N95-31976

INTERMETALLICS
Reaction synthesis of intermetallics
[DE95-009029] p 2803 N95-30575
Determination of site-occupancies in aluminide intermetallics by ALCHEMI
[DE95-009179] p 2803 N95-30733
Ultrasonic characterization of fiber-matrix interphasial properties and damage in high-temperature composites
p 2785 N95-30823
Innovative processing of composites for ultra-high temperature applications, book 2
[AD-A290890] p 2786 N95-30898
Review of environmental effects in intermetallics
[DE95-010120] p 2805 N95-31106
The 10th International Conference on the Strength of Materials
[AD-A292335] p 2894 N95-31263
Control of interfacial chemistry and mechanical properties in metal/ceramic composites
p 2790 N95-31976
Defect configurations in neutron-irradiated U3Si2
[DE95-009896] p 3016 N95-32105
Comprehensive research on the stability and electronic properties of a-Si:H and a-SiGe:H alloys and devices
[DE95-004088] p 2810 N95-32154

INTERMODULATION
Intermodulation Interference (IMI) testing of composite materials
[AD-A288621] p 2787 N95-31146

INTERNAL COMBUSTION ENGINES
Low vibration polymeric composite engine
[AD-D017332] p 2887 N95-30386
Implementation of KIVA-3 on distributed memory MIMD computers
[DE95-010288] p 2931 N95-31130

INTERNAL ENERGY
Computation of high-altitude hypersonic flow-field radiation p 2743 N95-30843

INTERNAL FLOW
Effects of cavity bleed and its configuration on aerodynamic characteristics of supersonic internal flow
[NAL-TR-1247] p 2744 N95-31715

INTERNATIONAL COOPERATION
Mars together and FIRE and ICE: Report of the joint US/Russian technical working groups
[NASA-CR-198864] p 3030 N95-30845
Mir 18 post flight presentation
[NASA-TM-110657] p 2766 N95-30854

INTERNETS
The Los Alamos accelerator code group
[DE95-010989] p 2992 N95-31151
Recommendations for protecting National Library of Medicine Computing and Networking Resources
[DE95-011554] p 3026 N95-32285

INTERORBITAL TRAJECTORIES
A feedback linearization approach to orbital maneuvers p 2765 N95-30841

INTERPLANETARY MAGNETIC FIELDS
Low-latitude boundary layer near noon: An open field line model
[ATR-93(7270)-1] p 2914 N95-30773

INTERPLANETARY SPACE
Radiation effects in space: The Clementine 1 mission
[DE95-011513] p 3032 N95-32282

INTERPLANETARY SPACECRAFT
The application of noncoherent Doppler data types for Deep Space Navigation p 2765 N95-32226

INTERPLANETARY TRAJECTORIES
The application of noncoherent Doppler data types for Deep Space Navigation p 2765 N95-32226

INTERPOLATION
Complex mean value interpolation
[PB95-211629] p 2956 N95-30601
Analytic cross sections for collisions of H, H2, He and Li atoms and ions with atoms and molecules
[DE95-722055] p 2979 N95-30654
Preservation theorems on finite structures
[DE95-613442] p 2962 N95-32067
Evaluation of discretization procedures for transition elements in adaptive mesh refinement
[NASA-CR-199037] p 2944 N95-32190

INTERPROCESSOR COMMUNICATION
Compact location problems with budget and communication constraints
[DE95-010876] p 2948 N95-32277

INTERSTELLAR GAS
A search for interstellar CH3D: Limits to the methane abundance in Orion-KL
[NASA-CR-198932] p 3029 N95-30751

INTERSTITIALS
Molecular dynamics simulations of high energy cascades in iron
[DE95-010116] p 2982 N95-31104
The influence of microstructure on creep deformation in near-gamma TiAl alloys p 2808 N95-31975

INTERVALS
The remainder form and the cord-slope form in global optimization with interval methods p 2941 N95-31533

INTRAVASCULAR SYSTEM
Decompression illness, observable bubbles. (Session K)
[PB95-195285] p 2926 N95-30511
Detecting intravascular gas bubbles in ultrasonic images
[PB95-195301] p 2926 N95-30513
Arterial gas bubbles after decompression in pigs with Patent Foramen Ovale
[PB95-195319] p 2925 N95-30515

INTRUSION
Arithmetic features of rational conformal field theory
[PB95-207908] p 2966 N95-30591

INVARIANCE
The search for the decay of Z boson into two gamma as a test of Bose statistics
[DE95-616373] p 2976 N95-30393
CP violating effects in e(+) e(-) yields ZH and their optimization
[DE95-616302] p 2976 N95-30441
Canonical symmetric invariant pairings in vertex operator super algebras and gramians
[PB95-208112] p 2955 N95-30488
Dressing symmetry of the uniformization solution of Liouville equation
[DE95-613380] p 2956 N95-30607
The iteration formula of the Maslov-type index theory with applications to nonlinear Hamiltonian systems
[DE95-613379] p 2957 N95-30676
Generalized controlled invariance for nonlinear systems
[PB95-197901] p 2950 N95-30807
Studies of the strong and electroweak interactions at the Z(sub 0) pole
[DE95-010353] p 2986 N95-31682

INVERSE SCATTERING
Inversion of the total cross sections for electron-molecule and electron-atom scattering
[DE95-616466] p 2978 N95-30583
Inverse and control problems in electromagnetics
[AD-A292993] p 2849 N95-30962
Fast algorithms for three-dimensional inverse scattering problems
[AD-A293510] p 2852 N95-31537

INVERSIONS
Dynamic inversion: An evolving methodology for flight control design p 2758 N95-31996

INVERTERS
Operational characteristics of a 200 C LC parallel resonant circuit
[NASA-TM-106963] p 2884 N95-31742

INVISCID FLOW
Development of a linearized unsteady Euler analysis for turbomachinery blade rows
[NASA-CR-4677] p 2742 N95-30611
Axial loads on yawed rotors
[PB95-214193] p 2742 N95-30638

Parametrics on 2D Navier-Stokes analysis of a Mach 2.68 bifurcated rectangular mixed-compression inlet
[NASA-TM-107003] p 2755 N95-30861
Wave propagation in a fluid-loaded homogeneous, transversely isotropic, elastic cylinder of arbitrary thickness
[AD-A292728] p 2869 N95-30946
Acceleration potential models PREDICHAT/PREDICDYN applied for calculation of axisymmetric dynamic inflow cases
[PB95-207015] p 2869 N95-30957

IODIDES
Evaluation of halon alternatives in inerting experiments
[AD-A293774] p 2795 N95-31580

IODINE
Flow models for the design of a hypersonic iodine vapor wind tunnel nozzle with chemical and vibrational nonequilibrium effects p 2742 N95-30448
Optical frequency standards: Hertz-level working standards and their absolute frequency measurement
[AD-A293930] p 2999 N95-31515

ION ACCELERATORS
Workshop on transport for a common ion driver
[DE95-007298] p 2992 N95-31166
Skew chromaticity in large accelerators
[DE95-011564] p 2994 N95-32243

ION BEAMS
Fabrication and modification of metal nanocluster composites using ion and laser beams
[DE95-009131] p 2784 N95-30731
Hollow cathode electron gun research and development
[DE95-010262] p 2992 N95-31127
Workshop on transport for a common ion driver
[DE95-007298] p 2992 N95-31166
Experiments with highly charged ions up to bare U(sup 92+) on the electron beam ion trap
[DE95-008827] p 2982 N95-31174
Substrate heating measurements in pulsed ion beam film deposition
[DE95-010862] p 2818 N95-31377
Ion-Assisted Pulsed Laser Deposition of amorphous tetrahedral-coordinated carbon films
[DE95-010861] p 2885 N95-31394
Target diagnostics for intense lithium ion hohlraum experiments on PBFA 2
[DE95-008517] p 3006 N95-31626
A study of ion trapping and instability in the Fermilab antiproton accumulator p 2993 N95-31647
Growth, characterization and device development in monocrystalline diamond films
[AD-A293106] p 3015 N95-32018
Studies of highly charged ions with EBIT and Super-EBIT
[DE95-010251] p 2987 N95-32038
Excitation mechanisms of 2s(sub 1/2)-2p(sub 3/2) and 2p(sub 1/2)-2p(sub 3/2)in U(82+) through U(89+)
[DE95-010265] p 2993 N95-32042
Microstructure of Al2O3 irradiated with an applied electric field
[DE95-010278] p 2822 N95-32043
Skew chromaticity in large accelerators
[DE95-011564] p 2994 N95-32243
Design study of prototype accelerator and MeV test facility for demonstration of 1 MeV, 1 A negative ion beam production
[DE95-737208] p 2995 N95-32262
STM measurements of the interaction of vacancies and steps during low-energy-ion bombardment of Si(001)
[DE95-010935] p 3017 N95-32308

ION CONCENTRATION
Membrane transport: A cellular probe of heat stroke
[AD-A293327] p 2926 N95-30924

ION CURRENTS
Mechanisms of enhanced ionic conduction at interfaces in ceramics
[DE95-009125] p 2814 N95-30730

ION DENSITY (CONCENTRATION)
Energy spectra of charge-exchange atoms from a rotating plasma
[DE95-614179] p 3006 N95-32054

ION ENGINES
Beam-centroid tracking instrument for ion thrusters
[AD-A293654] p 2769 N95-31567

ION EXCHANGING
Laboratory robotics: An automated tool for preparing Ion Chromatography calibration standards
[DE95-009441] p 2798 N95-32318

ION IMPLANTATION
Ion implantation and thermal stress resistance of ceramics
[DE95-615349] p 2812 N95-30451
Structural investigation of xenon ion-beam-irradiated glassy carbon
[DE95-616777] p 2977 N95-30474
Semiconductor nanocrystals formed in SiO2 by ion implantation
[DE95-008900] p 2978 N95-30546
Fabrication and modification of metal nanocluster composites using ion and laser beams
[DE95-009131] p 2784 N95-30731
Amorphization threshold in Si-implanted strained SiGe alloy layers
[DE95-008901] p 2804 N95-30797
Plasma source ion implantation of metal ions: Synchronization of cathodic-arc plasma production and target bias pulses
[DE95-009431] p 3006 N95-31613
Suppression of self-interstitials in silicon during ion implantation via in-situ photoexcitation
[DE95-009173] p 3016 N95-32301

ION IRRADIATION
Structural investigation of xenon ion-beam-irradiated glassy carbon
[DE95-616777] p 2977 N95-30474
Effect of irradiation spectrum on the microstructure of ion-irradiated Al2O3
[DE95-010225] p 2806 N95-31188
Cascade damage in the ordered alloy Ni3Al
[DE95-009893] p 2809 N95-32104

ION SCATTERING
Theoretical high energy physics
[DE95-003107] p 2991 N95-30527
Kinematical threshold of recoil-ion longitudinal momentum distribution in single ionization of helium by protons and alpha particles
[DE95-010803] p 2990 N95-32271

ION TEMPERATURE
Shear flow effects on ion thermal transport in tokamaks
[DE95-009115] p 3005 N95-30801

ION TRAPS (INSTRUMENTATION)
EBIT: Electron Beam Ion Trap V-division experimental physics
[DE95-010207] p 3004 N95-30769
Experiments with highly charged ions up to bare U(sup 92+) on the electron beam ion trap
[DE95-008827] p 2982 N95-31174

IONIC COLLISIONS
State resolved dynamics of ion-molecule collisions in a flowing afterglow
[AD-A290895] p 2976 N95-30410
Analytic cross sections for collisions of H, H2, He and Li atoms and ions with atoms and molecules
[DE95-722055] p 2979 N95-30654
EBIT: Electron Beam Ion Trap V-division experimental physics
[DE95-010207] p 3004 N95-30769
Convoy electron emission from surfaces
[DE95-010298] p 2984 N95-31402
Removal of impurity ions from a magnetic trap with a two-component plasma on their collision with fast component ions
[DE95-614171] p 2984 N95-31550
Applications of chiral symmetry
[DE95-009552] p 2988 N95-32079
Generalized Ramsauer-Townsend minima in heavy-ion induced electron continua
[DE95-010913] p 2989 N95-32120
Kinematical threshold of recoil-ion longitudinal momentum distribution in single ionization of helium by protons and alpha particles
[DE95-010803] p 2990 N95-32271
Study of aligned states in ion-atom collisions
[DE95-010825] p 2990 N95-32275

IONIC MOBILITY
State resolved dynamics of ion-molecule collisions in a flowing afterglow
[AD-A290895] p 2976 N95-30410

IONIC REACTIONS
Laboratory simulated hydrothermal alteration of sedimentary organic matter from Guaymas Basin, Gulf of California
[NASA-CR-198951] p 2914 N95-30865
Amorphization and the effect of implanted ions in SiC
[DE95-009699] p 2985 N95-31642

IONIZATION
Low-density ionization behavior
[DE95-009495] p 2980 N95-30705
Determination of site-occupancies in aluminide intermetallics by ALCHEMI
[DE95-009179] p 2803 N95-30733
K-shell ionization under zone axis electron diffraction conditions
[DE95-616780] p 2981 N95-30916
The antiproton-hydrogen atom interaction
[DE95-010252] p 2987 N95-32039
Validity of the differential equations for ionization cooling
[DE95-010438] p 2989 N95-32160

IONIZATION CROSS SECTIONS
Ionization of He by highly charged ions at low velocity
[DE95-010815] p 2990 N95-32273

IONIZATION POTENTIALS
Absorption and ionization spectra of model rubredoxins
[AD-A293668] p 2796 N95-31691

IONIZED GASES
Low-density ionization behavior
[DE95-009495] p 2980 N95-30705

IONOSPHERIC DISTURBANCES
Measurements of ionospheric variability
[AD-A293495] p 2915 N95-31535

IONOSPHERIC ELECTRON DENSITY
A prototype ionospheric tomography system (ITS)
[AD-A293015] p 2916 N95-31698

IONOSPHERIC PROPAGATION
Kiruna geophysical data. Data summary 94/4-6, April-June 1994
[PB95-210365] p 2913 N95-30627
Kiruna geophysical data. Data summary 94/1-3, January-March 1994
[PB95-210373] p 2913 N95-30628
Measurements of ionospheric variability
[AD-A293495] p 2915 N95-31535
Underdense heating of the ionosphere using oblique high power HF radiowaves p 2917 N95-31951

IONOSPHERIC SOUNDING
A prototype ionospheric tomography system (ITS)
[AD-A293015] p 2916 N95-31698

IONS
Study of cross-tail current carriers in magnetotail p 3005 N95-30804
Studies of C(60) and C(70) and other fullurenes: Synthesis, derivation, electrochemistry, lubricant properties and new composition materials
[AD-A292726] p 3012 N95-30944
Effect of irradiation spectrum on the microstructure of ion-irradiated Al2O3
[DE95-010225] p 2806 N95-31188
Convoy electron emission from surfaces
[DE95-010298] p 2984 N95-31402
Amorphization and the effect of implanted ions in SiC
[DE95-009699] p 2985 N95-31642
A study of ion trapping and instability in the Fermilab antiproton accumulator p 2993 N95-31647
Studies of highly charged ions with EBIT and Super-EBIT
[DE95-010251] p 2987 N95-32038
Microstructure of Al2O3 irradiated with an applied electric field
[DE95-010278] p 2822 N95-32043

IRIDIUM
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 1
[NASA-CR-195435-VOL-1] p 2768 N95-31169

IRIDIUM ALLOYS
High-temperature oxidation behavior of iridium-rhenium alloys
[NASA-TM-106720] p 2803 N95-30593

IRON
Reaction synthesis of intermetallics
[DE95-009029] p 2803 N95-30575
Hydrogen absorption in iron and steel during gas tungsten arc welding
[PB95-197018] p 2804 N95-30776
Localization in tungsten heavy alloys subjected to shearing deformations under superimposed high pressures
[AD-A293177] p 2804 N95-30977
Molecular dynamics simulations of high energy cascades in iron
[DE95-010116] p 2982 N95-31104
Measurements of quantum electrodynamic sensitive transitions in Na-like and Cu-like ions
[DE95-011593] p 3007 N95-32299

IRON ALLOYS
Effect of local melting on tribology in metal cutting
[PB95-195392] p 2804 N95-31052
Molecular dynamics simulations of high energy cascades in iron
[DE95-010116] p 2982 N95-31104
Review of environmental effects in intermetallics
[DE95-010120] p 2805 N95-31106
The effect of grain refinement on the room-temperature ductility of as-cast Fe3Al-based alloys
[DE95-010121] p 2805 N95-31107
Shape memory properties of an iron modified nickel aluminide alloy
[DE95-010223] p 2805 N95-31111
Influence of strain rate and temperature on the mechanical behavior of iron aluminide-based alloys
[DE95-009426] p 2808 N95-31836
Residual stress distribution in FeAl weld overlay on steel
[DE95-009178] p 2899 N95-32317

IRON OXIDES
Investigation of Fe3O4 colloid behaviour in a magnetic field by polarized neutron transmission
[DE95-614351] p 2981 N95-30915
IRRADIANCE
Optimum truncation of a Gaussian beam for propagation through atmospheric turbulence
[AD-A291156] p 2883 N95-30394
IRRADIATION
Behaviour of polymers in radioactive environments: Effects of dose speed
[DE95-621008] p 2818 N95-31221
Microstructure of Al2O3 irradiated with an applied electric field
[DE95-010278] p 2822 N95-32043
ISING MODEL
Simulation with complex measures
[DE95-616333] p 2955 N95-30445
Multisite antiferromagnetic Ising spin model: Phase transition through doubling bifurcation
[DE95-614311] p 3011 N95-30722
ISOELECTRONIC SEQUENCE
Inner- and outer-shell excitation in lithium isoelectronic sequence
[DE95-614107] p 2981 N95-31003
ISOLATION
Microwave repeater with broadband active and/or passive isolation control
[AD-D017358] p 2846 N95-30417
Faster, cheaper radioanalytical methods
[DE95-009913] p 2797 N95-32061
ISOMERIZATION
Specific rate coefficients from vibrational overtone activation of 1-methylcyclopropene
[AD-A288755] p 2793 N95-31014
ISOMERS
Enantioselectivity of quinoprotein alcohol dehydrogenases: Production of enantiomerically pure C3-alcohol synthons
[PB95-196960] p 2771 N95-30734
ISOMORPHISM
Around Ratner --- applications of Ratner's measure and topological theorems on unipotent homogeneous actions
[DE95-613377] p 2958 N95-30770
ISOSTATIC PRESSURE
Gelcasting of sintered reaction-bonded silicon nitride for improved mechanical properties
[DE95-010282] p 2822 N95-32085
ISOTOPIC SPIN
Electromagnetic hadron mass differences and estimation of isotopic symmetry violation parameters of QCD vacuum from quark model
[DE95-613628] p 2985 N95-31621
Spin puzzle in nucleon
[DE95-613654] p 2991 N95-32353
ISOTROPIC TURBULENCE
Analysis and modeling of subgrid scalar mixing using numerical data
[NASA-CR-198169] p 2877 N95-31978
ISOTROPY
Structural, chemical and electronic properties of superconducting thin films and junctions
[AD-A292700] p 3012 N95-30933
Wave propagation in a fluid-loaded homogeneous, transversely isotropic, elastic cylinder of arbitrary thickness
[AD-A292728] p 2869 N95-30946
Satellite test of the isotropy of the one-way spe ed of light using ExTRAS p 2973 N95-32349
ITERATION
Convergence properties of an augmented lagrangian algorithm for optimization with a combination of general equality and linear constraints
[PB95-208039] p 2956 N95-30570
Pseudo-time methods for constrained optimization problems governed by PDE
[NASA-CR-195081] p 2959 N95-31120
A stochastic EM estimator in the presence of missing data: Theory and applications
[DE95-010329] p 2944 N95-32089
ITERATIVE SOLUTION
Semi-iterative method for estimation of the dipole parameters using the knowledge of the dipole orientation
[PB95-211736] p 2858 N95-30480
Use of element-by-element preconditioners to solve large scale partially separable optimization problems
[PB95-195772] p 2957 N95-30692
Effect of the stopping of the Newton iteration in implicit linear multistep methods
[PB95-207056] p 2959 N95-31184
Quasi-Newton updating for large scale nonlinear systems
[AD-A292776] p 2940 N95-31431
Multipoint quadratic approximation for numerical optimization
[AD-A293837] p 2961 N95-31557

J

J INTEGRAL
Numerical evaluation of three-dimensional crack-tip integrals for layered anisotropic solids
p 2898 N95-32191
JAHN-TELLER EFFECT
Calculated structures and electronic absorption spectroscopy for magnesium phthalocyanine and its anion radical
[AD-A293672] p 2796 N95-31596
On the Jahn-Teller effect of Mn(2+) in zinc-blende ZnS crystal
[AD-A293711] p 2797 N95-31830
JAPAN
Directory of global environmental sciences in Japan
p 2899 N95-31413
An assessment of worldwide supercomputer usage
[DE95-009879] p 2932 N95-31645
Translation workbench for generating subtitles for English TV news
[NHK-435] p 3026 N95-32182
JAPANESE SPACECRAFT
Evaluation of static strength of T800H/PMR-15 carbon/polyimide laminates at room temperature and 300 C
[NAL-TR-1254] p 2789 N95-31740
JAS-39 AIRCRAFT
SAAB experience with PIO p 2746 N95-31069
JET CONTROL
Control of high Reynolds number round jets
p 2876 N95-31733
JET ENGINES
An active liner system for jet engine exhaust silencers, phase 1
[AD-A293277] p 2756 N95-31191
JET EXHAUST
Hot jet/wake turbulent structure and laser propagation. Part 3: Laser propagation measurements and modeling
p 2871 N95-30992
JET FLAPS
A wind tunnel investigation of the effects of micro-vortex generators and Gurney flaps on the high-lift characteristics of a business jet wing
[NASA-TM-110626] p 2750 N95-30827
JET FLOW
Simulation of chemical kinetics in turbulent natural gas combustion. Volume 2: Experimental studies of nitric oxide production in gas flames
[PB95-196721] p 2791 N95-30541
Effects of initial conditions on a single jet in crossflow
[NASA-TM-107002] p 2754 N95-30589
Hot jet/wake turbulent structure and laser propagaion. Part 1: Jet/wake turbulence modeling
p 2871 N95-30991
Hot jet/wake turbulent structure and laser propagation. Part 3: Laser propagation measurements and modeling
p 2871 N95-30992
Large eddy simulation of jets using structured upwind numerics p 2871 N95-30993
Control of high Reynolds number round jets
p 2876 N95-31733
JET IMPINGEMENT
Cleaning verification by air/water impingement
p 2782 N95-31805
JET MIXING FLOW
An experimental study of planar heterogeneous supersonic confined jets
[AD-A290859] p 2867 N95-30557
Effects of initial conditions on a single jet in crossflow
[NASA-TM-107002] p 2754 N95-30589
Jet mixing and emission characteristics of transverse jets in annular and cylindrical confined crossflow
[NASA-TM-106976] p 2755 N95-30698
Jet mixing in a reacting cylindrical crossflow
[NASA-TM-106975] p 2755 N95-30853
Large eddy simulation of jets using structured upwind numerics p 2871 N95-30993
JET NOZZLES
An experimental study of planar heterogeneous supersonic confined jets
[AD-A290859] p 2867 N95-30557
JOINTS (ANATOMY)
Automated volumetric grid generation for finite element modeling of human hand joints
[DE95-009575] p 2928 N95-32097
JOINTS (JUNCTIONS)
Photochemistry of intermolecular C-H bond activation reactions
[DE95-008991] p 2978 N95-30574
Response of mechanically fastened composite joints under multiple bypass loads p 2785 N95-30824
New material for high average power infrared generation: QPM-DB GaAs
[AD-A292714] p 2967 N95-30939
Development of integrated insulation joint for cooling pipe in tokamak reactor
[DE95-737220] p 3007 N95-32264
JOSEPHSON JUNCTIONS
A simple model for the dc flux transformer in layered superconductors with Josephson coupling
[DE95-614468] p 2859 N95-30649
Josephson break junction thin film device
[AD-D017343] p 3011 N95-30673
HTS Josephson technology on silicon with application to high speed digital microelectronics
[AD-A288627] p 2861 N95-31147
Dynamics of Current Driven Disordered Josephson Junction Arrays
[DE95-009418] p 3014 N95-31231
High-resolution superconducting x-ray spectrometers with aluminum trapping layers of different thicknesses
[DE95-010253] p 2881 N95-32047
JOURNAL BEARINGS
An efficient numerical procedure for thermohydrodynamic analysis of cavitating bearings
[NASA-CR-195476] p 2878 N95-32210
Film temperatures in the presence of cavitation
[NASA-CR-195481] p 2878 N95-32216
JUPITER (PLANET)
HST-FOC observations of a remarkable UV auroral event on Jupiter p 3030 N95-30806
Determination of the position of Jupiter from radio metric tracking of Voyager 1 p 2854 N95-32222
JUPITER ATMOSPHERE
HST-FOC observations of a remarkable UV auroral event on Jupiter p 3030 N95-30806

K

K-EPSILON TURBULENCE MODEL
Numerical simulation of flow in a whirling annular seal and comparison with experiments
[NASA-TM-106961] p 2867 N95-30710
Hot jet/wake turbulent structure and laser propagaion. Part 1: Jet/wake turbulence modeling
p 2871 N95-30991
Advanced k-epsilon modeling of heat transfer
[NASA-CR-4679] p 2874 N95-31423
KALMAN FILTERS
Multiple Target Tracking based on constellation matching and Kalman filter p 2842 N95-32136
KAONS
New tensor interaction and the K(sub L) - K(sub S)mass difference
[DE95-613597] p 2845 N95-30370
Pion-nucleon and kaon-nucleon scattering lengths in QCD sum rules
[DE95-737278] p 2983 N95-31227
Atomic approaches in metastable antiprotonic helium atoms. Reply to Analysis of the lifetimes and fractions of antiprotons trapped in metastable antiprotonic helium states by I. Shimamhura and M. Kimura --- mura
[DE95-737228] p 2986 N95-31658
The superconducting kaon spectrometer
[DE95-010436] p 2882 N95-32159
KARMAN VORTEX STREET
The study of flame-vortex interactions using a particle image velocimeter p 2796 N95-31709
KERNEL FUNCTIONS
Operating system support for distributed multimedia applications: A survey of current research
[PB95-207098] p 2964 N95-30565
Singular eigenfunctions for shearing fluids I
[DE95-008952] p 2868 N95-30763
Reduced heat kernels on nilpotent lie groups
[PB95-206926] p 2958 N95-30778
A stochastic EM estimator in the presence of missing data: Theory and applications
[DE95-010329] p 2944 N95-32089
KINEMATICS
Hamiltonian dynamics of the condensed media with spontaneously broken symmetry
[DE95-614448] p 3010 N95-30648
Control of mechanical systems with rolling contacts: Applications to robotics p 2889 N95-31332
On the kinematic performance of mechanical manipulators operating in the presence of an obstruction
p 2890 N95-31710
A computational procedure for multibody systems including flexible beam dynamics
[NASA-CR-199035] p 2897 N95-31730

KINETIC ENERGY
Numerical study of shear-induced heating in high-speed nozzle flow of liquid monopropellant p 2828 N95-31207
Aerophysics test program 1
[AD-A293890] p 2963 N95-31543
KINETIC EQUATIONS
Kinetic theory model predictions compared with low-thrust axisymmetric nozzle plume data
[NASA-CR-198934] p 2768 N95-30864
A simplified technique for determining the symmetry groups of non-linear plasma kinetic equations
[IFTR-8/1995] p 2960 N95-31337
KINETIC HEATING
Viscous heating of liquid layers under intense shear p 2827 N95-31206
Numerical study of shear-induced heating in high-speed nozzle flow of liquid monopropellant p 2828 N95-31207
KINETIC THEORY
Kinetic theory model predictions compared with low-thrust axisymmetric nozzle plume data
[NASA-CR-198934] p 2768 N95-30864
KINETICS
Fabrication and modification of metal nanocluster composites using ion and laser beams
[DE95-009131] p 2784 N95-30731
Enantioselectivity of quinoprotein alcohol dehydrogenases: Production of enantiomerically pure C3-alcohol synthons
[PB95-196960] p 2771 N95-30734
Physical modelling of microstructural evolution during thermomechanical processing of aluminium alloys
[PB95-196341] p 2805 N95-31053
Electron transfer kinetics of self-assembled ferrocene C(12) alkanethiol monolayers on gold electrodes from 125K to 175K
[AD-A292754] p 2984 N95-31427
KITS
Hydrogen sulfide analyzer with protective barrier
[AD-D017412] p 2793 N95-31009
KNOWLEDGE BASED SYSTEMS
Selecting optimal experiments for feedforward multilayer perceptrons
[AD-A290856] p 2949 N95-30406
Machine learning for a toolkit for image mining
[AD-A293137] p 2951 N95-30690
Acquiring consistent knowledge for Bayesian Forests
[AD-A293858] p 2952 N95-31517
Nonparametric recognition of nonrigid motion
[AD-A293630] p 2963 N95-31565
Production matching for large learning systems
[AD-A293105] p 2953 N95-31827
Evaluation of the techniques of fuzzy control for the piloting an aircraft p 2758 N95-31997
Using a Red Team to devise countermeasures p 2842 N95-32141
KNOWLEDGE BASES (ARTIFICIAL INTELLIGENCE)
Workflow literature guide, version 1
[PB95-207080] p 2947 N95-30721
Adaptiveness in information systems integration p 3025 N95-31348
AIDEX: An expert system for aircraft identification p 2842 N95-32138
KNOWLEDGE REPRESENTATION
Adaptiveness in information systems integration p 3025 N95-31348
PORK object system programmer's guide
[AD-A293596] p 2942 N95-31688
Evaluation of the techniques of fuzzy control for the piloting an aircraft p 2758 N95-31997
KONDO EFFECT
Alloying effects of Kondo insulators
[DE95-614306] p 3010 N95-30644
On the theory of hole propagation in an antiferromagnetic background
[DE95-614469] p 3010 N95-30650
Properties of a multichannel resonant-level model
[DE95-614482] p 2979 N95-30652
KROOK EQUATION
Kinetic theory model predictions compared with low-thrust axisymmetric nozzle plume data
[NASA-CR-198934] p 2768 N95-30864
KRYPTON
Wavelengths measurements of the He-like krypton K-shell spectrum
[DE95-010264] p 2987 N95-32041

L

LABORATORIES
Worldwide intercomparison of impulse voltage measuring systems at 600 kV level
[PB95-195574] p 2858 N95-30538
National Laboratories: Are their R and D activities related to commercial product development? Report to Congressional Requesters
[GAO/PEMD-95-2] p 3027 N95-31345
High strain-rate testing of parachute materials
[DE95-009577] p 2897 N95-31614
LAGRANGE COORDINATES
Multidimensional discretization of conservation laws for unstructured polyhedral grids
[DE95-008796] p 2955 N95-30470
Staggered solution procedures for multibody dynamics simulation
[NASA-CR-199034] p 2899 N95-32202
LAGRANGIAN FUNCTION
Effective Lagrangian approach to the fermion mass problem
[DE95-616316] p 2976 N95-30443
Convergence properties of an augmented lagrangian algorithm for optimization with a combination of general equality and linear constraints
[PB95-208039] p 2956 N95-30570
Hamiltonian dynamics of the condensed media with spontaneously broken symmetry
[DE95-614448] p 3010 N95-30648
Interferometry with particles of non-zero rest mass: Topological experiments
[DE95-616244] p 2979 N95-30689
On the quasihydrostatic flows of radiatively cooling self-gravitating gas clouds
[DE95-009116] p 3029 N95-30729
Light-front dynamics of Chern-Simons systems
[DE95-613467] p 3019 N95-30741
Atomization simulations using an Eulerian-VOF-Lagrangian method p 2828 N95-31210
Global aspects of the WZNW reduction to Toda theories
[DE95-737230] p 3019 N95-31226
A survey of the core-congruential formulation for geometrically nonlinear TL finite elements
[NASA-CR-199044] p 2944 N95-32203
LAMINAR FLOW
An experimental and numerical study on the structure and extinction of laminar premixed flames p 2792 N95-30670
Method and system for reducing drag on a body moving through a fluid medium
[AD-D017336] p 2867 N95-30672
Simultaneous heat and mass transfer in a horizontal tube absorber: Numerical tools for present and future absorber designs
[PB95-196978] p 2869 N95-30872
Numerical study of shear-induced heating in high-speed nozzle flow of liquid monopropellant p 2828 N95-31207
Role of free-surface boundary conditions and nonlinearities in wave/boundary-layer and wake interaction p 2872 N95-31317
Spectral element method for numerical simulation of unsteady laminar diffusion flames p 2794 N95-31333
Vorticity dynamics and control of dynamic stall
[AD-A288658] p 2756 N95-31400
The study of flame-vortex interactions using a particle image velocimeter p 2796 N95-31709
LAMINATES
Large area smart piezoelectric and pyroelectric sensors
[AD-A291487] p 2859 N95-30561
Influence of adhesives and bonding techniques on the properties of glued timber-steelplate joints
[PB95-211470] p 2813 N95-30599
Vibration-damping structural component
[AD-D017376] p 2784 N95-30661
A theory for predicting and minimizing the effects of matrix degradation on the thermomechanical properties of general laminates p 2785 N95-30768
Ultrasonic characterization of fiber-matrix interphasial properties and damage in high-temperature composites p 2785 N95-30823
Response of mechanically fastened composite joints under multiple bypass loads p 2785 N95-30824
Characterization and prediction of post-impact fatigue damage in stitched composites p 2785 N95-30826
Propagation and scattering of elastic waves in laminated circular cylinders
[ISBN-0-315-85957-1] p 2848 N95-30828
Innovative processing of composites for ultra-high temperature applications, book 4
[AD-A290892] p 2786 N95-30867
Development and computer implementation of design/analysis techniques for multilayered composite structures. Probabilistic fiber composite micromechanics
[NASA-CR-198979] p 2930 N95-31134
Advanced oxidizers diffusion flames structure p 2801 N95-31307
Elastic and inelastic micromechanical analysis of functionally graded materials and laminated structures using transformation fields p 2787 N95-31347
An evaluation of the Iosipescu specimen for composite materials shear property measurement
[NASA-CR-198755] p 2896 N95-31418
Finite element analysis of damped vibrations of laminated composite plates
[ISBN-0-315-84928-2] p 2789 N95-31731
Evaluation of static strength of T800H/PMR-15 carbon/polyimide laminates at room temperature and 300 C
[NAL-TR-1254] p 2789 N95-31740
Failure mechanisms in composite plates subjected to in-plane compressive loading p 2790 N95-32108
Contributions to the design of neutral cutouts in laminated plates and shells p 2790 N95-32113
Metallic multilayers at the nanoscale
[DE95-011534] p 3016 N95-32284
LANDAU DAMPING
Lower hybrid accessibility in a large, hot reversed field pinch
[DE95-011001] p 3007 N95-32310
LANDAU-GINZBURG EQUATIONS
The topological string associated with a simple singularity of type D
[DE95-737229] p 2983 N95-31225
LANDFILLS
Producing usable fuel from municipal solid waste
[DE95-008405] p 2902 N95-30375
LANDING AIDS
Automatic flight control system for an unmanned helicopter system design and flight test results p 2759 N95-32004
LANGEVIN FORMULA
Numerical simulation of the Langevin equation for skewed turbulence
[DE95-009477] p 2877 N95-32049
LANGMUIR-BLODGETT FILMS
Device for low electric-field induced switching of Langmuir-Blodgett ferroelectric liquid crystal polymer films
[AD-D017457] p 3011 N95-30728
Electronic structure of Donor-Spacer-Acceptor molecules of potential interest for molecular electronics 4. Geometry and device properties of P3CNQ and Q3CNQ
[AD-A293717] p 2986 N95-31832
Materials with controllable signature properties
[PB95-222964] p 2857 N95-32313
LANGUAGES
Extending a multi-set relational algebra to a parallel environment
[PB95-207106] p 3023 N95-30566
Unification of LARCH and Z-based object models to support algebraically-based design refinement: The LARCH perspective
[AD-A289235] p 2935 N95-30999
LANTHANUM
Lanthanide(III) catalyzed reactions: Structure an d thermodynamics of intermediate complexes, and implications for reactivity
[PB95-197000] p 3019 N95-30775
An experimental search for high ZT semiconductors: A survey of the preparation and properties of several alloy systems
[DE95-010232] p 2865 N95-32084
LANTHANUM COMPOUNDS
Fiber optic interferometric electric field and voltage sensor utilizing and electrostrictive transducer
[AD-D017433] p 2996 N95-30753
Langasite crystals growth with quality factor Q, that exceeds the Q of quartz, and which are suitable for high-precision resonators
[AD-A293397] p 3013 N95-30969
LAPLACE EQUATION
Analysis on fractals, laplacians on self-similar sets, noncommutative geometry and spectral dimensions
[PB95-208005] p 2956 N95-30556
Potential integral equations of the 2D Laplace operator in wavelet basis
[TRITA-NA-9401] p 2957 N95-30713
LAPLACE TRANSFORMATION
Extensions and results from a method for evaluating fractional integrals
[DE95-616272] p 2954 N95-30425
Relativistic non-interacting electron gas in a magnetic field
[DE95-616903] p 2967 N95-31177
LARGE SPACE STRUCTURES
Vibration control of spacecrafts and space structures from lift-off to on-orbit environments p 2767 N95-32110
Computational methods and software systems for dynamics and control of large space structures
[NASA-CR-199036] p 2767 N95-32204

LASER ABLATION
Modeling of thermal, electronic, hydrodynamic, and dynamic deposition processes for pulsed-laser deposition of thin films
[DE95-008906] p 2813 N95-30572
LASER ANEMOMETERS
Experimental and computational investigation of the tip clearance flow in a transonic axial compressor rotor
[NASA-TM-106711] p 2876 N95-31738
Laser anemometer measurements of the three-dimensional rotor flow field in the NASA low-speed centrifugal compressor
[NASA-TP-3527] p 2756 N95-31985
LASER APPLICATIONS
Unconventional imaging field experiment plan
[AD-A291492] p 2846 N95-30562
Smart active multiwave sensing with zero background amplitude modulated probes
[DE95-008813] p 2792 N95-30714
A laser-based ice shape profilometer for use in icing wind tunnels
[NASA-TM-106936] p 2880 N95-30851
Laser-induced holographic surface relief gratings on nonlinear optical polymer films
[AD-A293169] p 2997 N95-30973
Hot jet/wake turbulent structure and laser propagaion. Part 1: Jet/wake turbulence modeling
p 2871 N95-30991
Hot jet/wake turbulent structure and laser propagation. Part 3: Laser propagation measurements and modeling
p 2871 N95-30992
Comparison of DSMC predictions with temporally resolved vibrational state measurements in NO
p 2872 N95-30996
Polarized laser induced holographic surface relief gratings on polymer films
[AD-A293275] p 2817 N95-31126
Future scientific applications for high-energy lasers
[DE95-009380] p 2885 N95-31230
Unsteady laser augmented combustion of pure oxidizers AP and RDX p 2799 N95-31284
Oscillatory combustion of aluminized AP/HTPB propellants p 2800 N95-31286
Laser pyrolysis of HTPB p 2800 N95-31298
RDX laser-assisted flame structure
p 2801 N95-31314
A study of the gas-phase processes of RDX combustion using a triple quadrupole mass-spectrometer
p 2801 N95-31315
The physical and chemical processes governing CO2 laser-induced pyrolysis and combustion of the solid propellants RDX, ADN, XM39, and M43
p 2836 N95-31531
Nonlinear optics in novel composite media
[AD-A293886] p 2999 N95-31542
Contamination detection NDE for cleaning process inspection p 2781 N95-31802
TMD detection and tracking using improved AWACS sensors p 2840 N95-32128
Sandia National Lab's precision laser tracking systems
[DE95-009837] p 2886 N95-32143
Stripping by laser p 2844 N95-32174
The development of a pulsed laser imaging system for natural gas leak detection
[DE95-011407] p 2887 N95-32280
Nondestructive testing of ceramic components: Cooperative Research and Development Agreement completion report
[DE95-009510] p 2823 N95-32352
LASER ARRAYS
Picosecond phase conjugation: New applications, devices, and materials
[AD-A293195] p 3013 N95-30982
Laser retroreflector experiment on NAVSTAR 35 and 36 p 2887 N95-32347
LASER BEAMS
Laser Tracker 3: Sandia National Laboratories' third generation laser tracking system
[DE95-008525] p 2882 N95-30379
Optimum truncation of a Gaussian beam for propagation through atmospheric turbulence
[AD-A291156] p 2883 N95-30394
Demodulators for optical fiber interferometers with (3 x 3) outputs
[AD-D017415] p 2995 N95-30402
Magneto-optical transmission-reflection beam splitter for multi-level atoms
[DE95-616267] p 2976 N95-30423
Fabrication and modification of metal nanocluster composites using ion and laser beams
[DE95-009131] p 2784 N95-30731
Free electron laser as energy driver for inertial confinement fusion
[DE95-614252] p 2884 N95-30914
Reflection and diffraction of atomic de Broglie waves by evanescent laser waves. Bare-state method
[DE95-616458] p 2992 N95-30960
Laser-induced holographic surface relief gratings on nonlinear optical polymer films
[AD-A293169] p 2997 N95-30973
Picosecond phase conjugation: New applications, devices, and materials
[AD-A293195] p 3013 N95-30982
Polarized laser induced holographic surface relief gratings on polymer films
[AD-A293275] p 2817 N95-31126
Spotsize measurements of a focused CW Nd: YAG laser
[DE95-007746] p 2884 N95-31139
A 1.94 micrometer laser apparatus, system and method using a thulium-doped yttrium-lithium-fluoride laser crystal pumped with a diode laser
[AD-D017435] p 2884 N95-31213
Direct and inverse problems in random media
[AD-A293033] p 2850 N95-31280
Contactless characterization of semiconductors using laser-induced surface photo-charge voltage measurements
[AD-A293618] p 2863 N95-31725
Sandia National Lab's precision laser tracking systems
[DE95-009837] p 2886 N95-32143
Stripping by laser p 2844 N95-32174
LASER CAVITIES
Polarization characteristics, control, and modulation of vertical-cavity surface emitting lasers
[DE95-008526] p 2882 N95-30380
Many-body effects in semiconductor lasers
[DE95-008534] p 2883 N95-30390
TV-VI semiconductor quantum well lasers, physics and engineering p 2883 N95-30805
A 1.94 micrometer laser apparatus, system and method using a thulium-doped yttrium-lithium-fluoride laser crystal pumped with a diode laser
[AD-D017435] p 2884 N95-31213
Diode-pumped, continuously tunable, 2.3 micron CW laser
[AD-D017448] p 2885 N95-31273
Tunable ytterbium-doped solid state laser
[AD-D017449] p 2885 N95-31274
Advances in high-power chemical lasers
[AD-A289737] p 2885 N95-31389
LASER DAMAGE
Laser induced vitreoretinal scarring. Evaluation of causative factors and a therapeutic approach
[AD-A293742] p 2928 N95-31570
Z-scan using a dye laser
[PB95-222923] p 3002 N95-32312
LASER GYROSCOPES
Results from tests of the Honeywell integrated flight management unit
[PB95-211355] p 2748 N95-30597
LASER INDUCED FLUORESCENCE
State resolved dynamics of ion-molecule collisions in a flowing afterglow
[AD-A290895] p 2976 N95-30410
Analysis of planar laser-induced fluorescence images obtained during shakedown testing of the AEDC impulse facility
[AD-A293237] p 2884 N95-30906
Spatially-resolved velocity measurements in steady, high-speed, reacting flows using laser-induced OH fluorescence p 2877 N95-32109
LASER INTERFEROMETRY
Magneto-optical transmission-reflection beam splitter for multi-level atoms
[DE95-616267] p 2976 N95-30423
LASER MATERIALS
Solid state research
[AD-A293083] p 3015 N95-31826
Laser properties of Yb(3+)-doped Sr5(PO4)3F crystals
[DE95-010686] p 3016 N95-32268
LASER MODE LOCKING
Femtosecond, Cr(4+):YAG laser
[DE95-004964] p 2887 N95-32155
LASER OUTPUTS
Polarization characteristics, control, and modulation of vertical-cavity surface emitting lasers
[DE95-008526] p 2882 N95-30380
Spotsize measurements of a focused CW Nd: YAG laser
[DE95-007746] p 2884 N95-31139
Diode-pumped, continuously tunable, 2.3 micron CW laser
[AD-D017448] p 2885 N95-31273
A compact and efficient violet laser source
[AD-A292782] p 2885 N95-31434
Prime power for shipboard high-average power FELs
[AD-A293718] p 2886 N95-31833
Luminescence properties of ZnWO4:Cr(3+) laser crystals
[AD-A293065] p 2887 N95-32152
Femtosecond, Cr(4+):YAG laser
[DE95-004964] p 2887 N95-32155
Z-scan using a dye laser
[PB95-222923] p 3002 N95-32312
LASER PLASMAS
Enhanced brightness x-ray lasers
[DE95-010735] p 2886 N95-32029
LASER PUMPING
Free electron laser as energy driver for inertial confinement fusion
[DE95-614252] p 2884 N95-30914
A 1.94 micrometer laser apparatus, system and method using a thulium-doped yttrium-lithium-fluoride laser crystal pumped with a diode laser
[AD-D017435] p 2884 N95-31213
Ultraviolet and visible lasers: Rare earth-doped waveguide devices and non-linear optical extraction techniques
[AD-A293976] p 2885 N95-31528
Basic study of the pumping of a gamma-ray laser
[AD-A293561] p 2886 N95-31563
Laser properties of Yb(3+)-doped Sr5(PO4)3F crystals
[DE95-010686] p 3016 N95-32268
LASER RANGE FINDERS
(T2L2) Time Transfer by Laser Link
p 2887 N95-32348
LASER RANGER/TRACKER
Laser Tracker 3: Sandia National Laboratories' third generation laser tracking system
[DE95-008525] p 2882 N95-30379
TMD detection and tracking using improved AWACS sensors p 2840 N95-32128
Laser retroreflector experiment on NAVSTAR 35 and 36 p 2887 N95-32347
(T2L2) Time Transfer by Laser Link
p 2887 N95-32348
Satellite test of the isotropy of the one-way spe ed of light using ExTRAS p 2973 N95-32349
LASER SPECTROSCOPY
Fourier Transform (FT) Raman spectroscopy of nitrogen at high pressure
[AD-A293051] p 2796 N95-31670
LASER WEAPONS
The High Altitude Balloon Experiment demonstration of acquisition, tracking, and pointing technologies (HABE-ATP) p 2841 N95-32132
LASERS
A phenomenological finite element model of part building in the stereolithography process
[DE95-008437] p 2932 N95-30376
Electron-optical nonlinear interaction in asymmetric quantum-well laser heterostructures
[DE95-613443] p 2883 N95-30609
Method for laser-assisted silicon etching using halocarbon ambients
[AD-D017426] p 2883 N95-30744
A laser-based ice shape profilometer for use in icing wind tunnels
[NASA-TM-106936] p 2880 N95-30851
Airborne ocean water lidar (OWL) real time processor (RTP)
[AD-A293226] p 2848 N95-30904
Specific rate coefficients from vibrational overtone activation of 1-methylcyclopropene
[AD-A288755] p 2793 N95-31014
Diode-pumped, continuously tunable, 2.3 micron CW laser
[AD-D017448] p 2885 N95-31273
Tunable ytterbium-doped solid state laser
[AD-D017449] p 2885 N95-31274
Diagnosing high density, fast-evolving plasmas using x-ray lasers
[DE95-010734] p 3006 N95-32028
LATERAL STABILITY
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept
[NASA-TM-108489] p 2742 N95-30712
LATTICE PARAMETERS
Electroweak interactions on the lattice
[DE95-616287] p 2965 N95-30439
Approximate analytic diagonalization of lattice QCD
[DE95-616332] p 3018 N95-30444
Simulation with complex measures
[DE95-616333] p 2955 N95-30445
LATTICE VIBRATIONS
The one-dimensional model of the off-centre potential of the fluorine ion in the NaBr lattice
[DE95-614310] p 3010 N95-30647
LATTICES (MATHEMATICS)
Plaquette expansion proof and interpretation
[DE95-616282] p 2965 N95-30432

Theoretical high energy physics
[DE95-003107] p 2991 N95-30527
Direct sublattice imaging of interface dislocation structures in CdTe/GaAs(001)
[DE95-009031] p 3010 N95-30576
On the string equation at c=1
[DE95-737161] p 3014 N95-31222
Phase stability, point defects and site preference of FeAl and NiAl with ternary additions
[DE95-009694] p 3015 N95-31641

LAUNCHERS
Fast-acting valve for projective launching systems
[AD-D017357] p 2888 N95-30416

LAW (JURISPRUDENCE)
Prioritization methodology for chemical replacement
p 2773 N95-31757
Environmental databases and other computerized information tools p 2783 N95-31810

LAY-UP
Design of fibre reinforced composite panels for aerospace applications
[PB95-197851] p 2784 N95-30460

LAYERS
Impact behavior of the active zone within a frozen soil profile
[AD-A292909] p 2915 N95-31386

LC CIRCUITS
Operational characteristics of a 200 C LC parallel resonant circuit
[NASA-TM-106983] p 2864 N95-31742

LEAD (METAL)
Infrared and millimeter wave detection using thin films of Pb doped BiSrCaCuO superconductor
p 2840 N95-32129
Nuclear-spin-dependent parity-nonconserving effects in thallium, lead and bismuth atoms
[DE95-614120] p 2991 N95-32354

LEAD COMPOUNDS
Synthesis of novel precursors for PMN powders and the thin films obtained from them
[DE95-008543] p 2811 N95-30362
Molecular modeling of PMN ceramics
[AD-A290879] p 2813 N95-30560

LEAD TELLURIDES
Numerical modeling of Bridgman growth of PbSnTe in a magnetic field
[NASA-TM-106996] p 2837 N95-31359

LEAD TITANATES
Large area smart piezoelectric and pyroelectric sensors
[AD-A291487] p 2859 N95-30561

LEAD ZIRCONATE TITANATES
Crystallization of sol-gel derived lead zirconate titanate thin films in argon and oxygen atmospheres
[DE95-615230] p 3009 N95-30421
Orientation of rapid thermally annealed lead zirconate titanate thin films on (111) Pt substrate
[DE95-615232] p 2811 N95-30422
Deposition and characterization of photoconductive PZT thin films
[ATR-93(8308)-7] p 2819 N95-31417
A study of switching behavior in Pb(Zr,Ti)O3 thin films using x-ray diffraction
[DE95-010859] p 2808 N95-31689
The pyrochlore-to-perovskite transformation in solution-derived lead zirconate titanate thin films
[DE95-010453] p 2822 N95-32161

LEADING EDGES
Reply-frequency interference/jamming detector
[AD-D017426] p 2847 N95-30746
A laser-based ice shape profilometer for use in icing wind tunnels
[NASA-TM-106936] p 2880 N95-30851
Vorticity dynamics and control of dynamic stall
[AD-A286658] p 2756 N95-31400
Control of unsteady separated flow associated with the dynamic stall of airfoils
[NASA-CR-196972] p 2744 N95-32193

LEARNING
Optimizing the long-term retention of skills: Structural and analytic approaches to skill maintenance
[AD-A293798] p 2929 N95-31585
The sociology of megaprogramming: Experiences in generating an organizational learning enterprise (Software Technology for Adaptable, Reliable Systems(STARS) program)
[AD-A292998] p 2946 N95-32294

LEAST SQUARES METHOD
Apparatus and method for producing three-dimensional images
[AD-D017455] p 2847 N95-30727
Nonparametric methods for incomplete data in reliability and for changepoints in smooth functions
[AD-A292773] p 2963 N95-31429
The effect of repeatedly sampling an embedded metamodel on the simulation response
[AD-A293783] p 2953 N95-31582
An efficient implementation of Forward-Backward Least-Mean-Square Adaptive Line Enhancers
p 2855 N95-32224
Metafitting: Weight optimization for least-squares fitting of PTTI data p 2971 N95-32340

LECTURES
Experience with a course on architectures for software systems. Part 2: Educational materials
[AD-A293090] p 2943 N95-31843

LEG (ANATOMY)
Electromyostimulation, circuits and monitoring
[NASA-TM-110741] p 2926 N95-30846

LEGIBILITY
Adaptive image enhancement of text images that contain touching or broken characters
[DE95-010173] p 3023 N95-30620

LENGTH
Simultaneity and length of the moving rod
[DE95-613369] p 3017 N95-30364
Einstein's length concept
[DE95-613368] p 3019 N95-30972

LENSES
Ceramics derived from metal-organic precursors
[AD-A290791] p 2811 N95-30405
Spotsize measurements of a focused CW Nd: YAG laser
[DE95-007746] p 2884 N95-31139

LEPTONS
Phenomenology of the two Higgs doublet sector of a quark-lepton symmetric model
[DE95-616337] p 2976 N95-30446
Confronting left-right symmetric models with electroweak precision data at the Z peak
[PB95-208054] p 2977 N95-30484
Possible reason why leptons are lighter than quarks
[DE95-616383] p 2978 N95-30579
The design and construction of the muon arm in PHENIX
[DE95-010156] p 2978 N95-30616
Testing vector boson dominance of electroweak interactions via e(+)e(-) (yields) f-bar f
[DE95-620528] p 2982 N95-31214
B(sub c)-meson production in hadron-hadron collisions
[DE95-620537] p 2983 N95-31217
SO(8) color as possible origin of generations
[DE95-613560] p 2988 N95-32069

LESIONS
Laser induced vitreoretinal scarring. Evaluation of causative factors and a therapeutic approach
[AD-A293742] p 2928 N95-31570

LETHALITY
Aerophysics test program 1
[AD-A293890] p 2963 N95-31543

LEVITATION
An active magnetic bearing with high T(sub c) superconducting coils and ferromagnetic cores
[NASA-TM-106995] p 2864 N95-31847

LIBRARIES
MPI implementation of PHOENICS: A general purpose computational fluid dynamics code
[DE95-009810] p 2877 N95-32033

LIE GROUPS
Some functional solutions of the Yang-Baxter equation
[DE95-613584] p 2966 N95-30635
Around Ratner --- applications of Ratner's measure and topological theorems on unipotent homogeneous actions
[DE95-613377] p 2958 N95-30770
Reduced heat kernels on nilpotent lie groups
[PB95-206926] p 2958 N95-30778
Frobenius algebras and quantum Yang-Baxter equation 2
[PB95-212130] p 2960 N95-31229
Ricci-flat Kaehler metrics on symmetric varieties
[DE95-613459] p 2962 N95-32068
Notes on lie algebraic analysis of achromats
[DE95-009524] p 3002 N95-32356

LIFE (DURABILITY)
Ageing control no. 3 of propellants for rocket motors RB 27 and RB 28
[PB95-210357] p 2825 N95-30626
Experimental characterisation of gas microstrip detectors. Part 3: Lifetime characteristics
[PB95-192845] p 2880 N95-30691
A simple and accurate technique for monitoring crack growth behavior using a wave form analyzer
[AD-A293161] p 2894 N95-31007
Life prediction methodology for ceramic components of advanced heat engines: Phase 1. Volume 1
[DE95-010805] p 2817 N95-31135
Life prediction methodology for ceramic components of advanced heat engines. Phase 1: Volume 2. Appendices
[DE95-010806] p 2817 N95-31136

LIFE CYCLE COSTS
Major weapon system environmental life-cycle cost estimating for Conservation, Cleanup, Compliance and Pollution Prevention (C3P2) p 2774 N95-31761

LIFE SCIENCES
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-025] p 2771 N95-31360
FBIS report: Science and technology. Central Eurasia
[FBIS-UST-95-026] p 2839 N95-31729

LIFE SPAN
SVN 9 End-Of-Life testing p 2767 N95-32345

LIFT
Multigrid convergence acceleration for the 2D Euler equations applied to high-lift systems
[PB95-196081] p 2743 N95-30814
A wind tunnel investigation of the effects of micro-vortex generators and Gurney flaps on the high-lift characteristics of a business jet wing
[NASA-TM-110626] p 2750 N95-30827
Validation of the helicopter rotor code HERO
[PB95-198040] p 2751 N95-30838

LIFT DEVICES
A wind tunnel investigation of the effects of micro-vortex generators and Gurney flaps on the high-lift characteristics of a business jet wing
[NASA-TM-110626] p 2750 N95-30827

LIGANDS
A theoretical treatment of the absorption and emission properties of Cu(2) porphyrin
[AD-A293669] p 2795 N95-31595
Absorption and ionization spectra of model rubredoxins
[AD-A293668] p 2796 N95-31691

LIGHT (VISIBLE RADIATION)
Degradation of blue AlGaN/InGaN/GaN LEDs subjected to high current pulses
[DE95-008824] p 2863 N95-31611

LIGHT BEAMS
Technique to prepare high-reflectance optical fiber Bragg gratings with single exposure in-line or fiber draw tower
[AD-D017445] p 2998 N95-31270

LIGHT EMISSION
Study of surfaces using near infrared optical fiber spectrometry p 2781 N95-31801

LIGHT EMITTING DIODES
Optical logic and signal processing using a semiconductor laser diode-based optical bistability device
[AD-A293248] p 2997 N95-30908
Opto-electronic components from non-stoichiometric 3-5 materials
[AD-A293206] p 3013 N95-30985
Degradation of blue AlGaN/InGaN/GaN LEDs subjected to high current pulses
[DE95-008824] p 2863 N95-31611

LIGHT MODULATION
Smart active multiwave sensing with zero background amplitude modulated probes
[DE95-008813] p 2792 N95-30714
Real time correlating operation on diffuse objects
[AD-A293220] p 2997 N95-30901
Application of computer generated holograms to optical transformations
[AD-A293146] p 2880 N95-30921
Improved linear dynamic range in externally modulated fiber-optic links p 3001 N95-31950
Photo-refractive Bi12SiO20: Spatial light modulator
[AD-A293084] p 3001 N95-32153

LIGHT SCATTERING
A 1.94 micrometer laser apparatus, system and method using a thulium-doped yttrium-lithium-fluoride laser crystal pumped with a diode laser
[AD-D017435] p 2884 N95-31213
Method and apparatus for a high resolution, flat panel cathodoluminescent display device
[AD-D017434] p 2862 N95-31342

LIGHT SOURCES
Demodulators for optical fiber interferometers with (3 x 3) outputs
[AD-D017415] p 2995 N95-30402
A real time method for Fourier transform holographic information storage
[AD-A293186] p 2880 N95-30980
The Los Alamos accelerator code group
[DE95-010989] p 2992 N95-31151
Method and apparatus for non-destructively measuring local resistivity of semiconductors
[AD-D017436] p 2862 N95-31343
Annual meeting of the Advanced Light Source Users' Association
[DE95-009373] p 3000 N95-31835
Scannerless Range Imaging with a square wave
[DE95-009840] p 2854 N95-32145

LIGHT TRANSMISSION
Optimum truncation of a Gaussian beam for propagation through atmospheric turbulence
[AD-A291156] p 2883 N95-30394
Passive, multi-channel fiber optic rotary joint assembly
[AD-D017353] p 2996 N95-30529
A study of end-fire coupling of single-mode fiber to Ti: LiNbO3-single-mode planar waveguide
[AD-A293249] p 2997 N95-30909
Satellite test of the isotropy of the one-way spe ed of light using ExTRAS p 2973 N95-32349

LIGHT VALVES
A real time method for Fourier transform holographic information storage
[AD-A293186] p 2880 N95-30980

LIGHT WATER REACTORS
Microstructural and mechanical property changes in model Fe-Cu alloys
[DE95-010117] p 2805 N95-31105

LIGHT-CONE EXPANSION
Light-front dynamics of Chern-Simons systems
[DE95-613467] p 3019 N95-30741

LIKELIHOOD RATIO
A hypothesis-testing approach to discriminant analysis with mixed categorical and continuous variables when data are missing
[AD-A293714] p 2964 N95-31831

LIMESTONE
Experimental determination of probability distributions for parameters of a Salem limestone cap plasticity model
[AD-A290878] p 2892 N95-30559

LINE OF SIGHT
Validation of the atmospheric transmission large-area analysis system (ATLAS)
[AD-A293810] p 2916 N95-31589

LINE SPECTRA
Molecular gas in starburst galaxies: Line intensities and physical conditions
[PB95-208021] p 3029 N95-30569
An efficient implementation of Forward-Backward Least-Mean-Square Adaptive Line Enhancers p 2855 N95-32224
Measurements of quantum electrodynamic sensitive transitions in Na-like and Cu-like ions
[DE95-011593] p 3007 N95-32299

LINEAR ACCELERATORS
X-band magnicon amplifier research at the Naval Research Laboratory
[AD-A293203] p 3013 N95-30984
Measurement of the effect of collimator generated wakefields on the beams in the SLC
[DE95-012101] p 2993 N95-31256
Spin structure in high energy processes
[DE95-008628] p 2993 N95-31627
RFQ-DTL matching solutions for different requirements
[DE95-010897] p 2995 N95-32306

LINEAR ARRAYS
Passive, multi-channel fiber optic rotary joint assembly
[AD-D017353] p 2996 N95-30529

LINEAR EQUATIONS
Quasi-periodic solutions of Hamiltonian perturbations of 2D linear Schroedinger equations
[PB95-208443] p 2957 N95-30624
Numerical stability investigations of processes for solving linear initial value problems
[PB95-207023] p 2959 N95-31183
The complexity and approximability of finding maximum feasible subsystems of linear relations
[TRITA-NA-9313] p 2961 N95-31648

LINEAR FILTERS
Automatic Target Recognition (ATR): Background statistics and the detection of targets in clutter
[AD-A293062] p 2853 N95-31673

LINEAR POLARIZATION
Plane wave reflection from a uniaxial chiral quarter-wave polarization transformer
[PB95-206512] p 2849 N95-31159

LINEAR PREDICTION
Sensor Fusion and Nonlinear Prediction for Anomalous Event Detection
[DE95-009429] p 2933 N95-30602

LINEAR PROGRAMMING
Simplex method for semi-definite programming: Optimization and systems theory
[PB95-212122] p 2934 N95-30792
Analysis of symbolic parameter models
[AD-A292916] p 2940 N95-31459
Minimal trellises for linear block codes and their duals p 2856 N95-32233

LINEAR QUADRATIC REGULATOR
Representation of feedback operators for hyperbolic systems
[NASA-CR-198171] p 2960 N95-31319

LINEAR SYSTEMS
Potential integral equations of the 2D Laplace operator in wavelet basis
[TRITA-NA-9401] p 2957 N95-30713
Apparatus and method for producing three-dimensional images
[AD-D017455] p 2847 N95-30727
Enhancements to the SSME transfer function modeling code
[NASA-CR-198957] p 2958 N95-30754
Solution of the three-dimensional Helmholtz equation with nonlocal boundary conditions
[NASA-TM-110174] p 2974 N95-30850
QMR methods in computational fluid dynamics
[DE95-010293] p 2872 N95-31132
Linear Motor Free Piston Compressor
[AD-A293452] p 2889 N95-31374
Stability analysis of linear control systems with uncertain parameters p 2954 N95-31949
A modification to the GMRES method for ill-conditioned linear systems
[DE95-010661] p 2962 N95-32076
Allan deviation computations of a linear frequency synthesizer system using frequency domain techniques p 2972 N95-32344

LINEAR TRANSFORMATIONS
Robust control: A structured approach to solve aircraft flight control problems p 2758 N95-31995

LINEARIZATION
Development of a linearized unsteady Euler analysis for turbomachinery blade rows
[NASA-CR-4677] p 2742 N95-30611
A feedback linearization approach to orbital maneuvers p 2765 N95-30841
Improved linear dynamic range in externally modulated fiber-optic links p 3001 N95-31950

LININGS
Ageing control no. 3 of propellants for rocket motors RB 27 and RB 28
[PB95-210357] p 2825 N95-30626
Composite structure forming a wear surface
[AD-D017462] p 2785 N95-30749
An active liner system for jet engine exhaust silencers, phase 1
[AD-A293277] p 2756 N95-31191

LINKAGES
Erect, neutral and slump sitting postures: A study of the torso linkage system from shoulder to hip joint
[AD-A293239] p 2930 N95-30907
Probabilistic reliability modeling of fatigue on the H-46 tie bar
[AD-A289926] p 2751 N95-30927
Conjugated aromatic polyimines. 2. Synthesis, structure, and properties of new aromatic polyazomethines
[AD-A292955] p 2819 N95-31461

LIOUVILLE EQUATIONS
Dressing symmetry of the uniformization solution of Liouville equation
[DE95-613380] p 2956 N95-30607

LIQUEFIED NATURAL GAS
Natural gas liquefier for vehicle fuel
[AD-A293619] p 2836 N95-31564
Liquid natural gas as a transportation fuel in the heavy trucking industry
[DE95-010376] p 2837 N95-32158

LIQUID CHROMATOGRAPHY
Fuel-type classification and parameters prediction by Gas Liquid Chromatography analysis
[AD-A293442] p 2794 N95-31368
Analytical instrumentation for environmental research
[AD-A292832] p 2908 N95-31447
Waste minimization via preparative scale high performance gel permeation chromatography
[DE95-011797] p 2798 N95-32360

LIQUID CRYSTALS
Hamiltonian dynamics of the condensed media with spontaneously broken symmetry
[DE95-614448] p 3010 N95-30648
Device for low electric-field induced switching of Langmuir-Blodgett ferroelectric liquid crystal polymer films
[AD-D017457] p 3011 N95-30728
Real time correlating operation on diffuse objects
[AD-A293220] p 2997 N95-30901
Application of computer generated holograms to optical transformations
[AD-A293146] p 2880 N95-30921
From molecular to macromolecular liquid crystals
[AD-A293170] p 2816 N95-30974
A real time method for Fourier transform holographic information storage
[AD-A293186] p 2880 N95-30980
Processing of polymers using supercritical fluids
[AD-A292880] p 2819 N95-31410

LIQUID FILLED SHELLS
An analysis of the cover of a liquid-filled circular container
[IFTR-1/1995] p 2895 N95-31338

LIQUID FUELS
A pulsed liquid fuel ramjet p 2756 N95-31201
Atomization simulations using an Eulerian-VOF-Lagrangian method p 2828 N95-31210

LIQUID HELIUM
High-temperature superconducting current leads
[DE95-008404] p 2858 N95-30374
Atomic approaches in metastable antiprotonic helium atoms. Reply to Analysis of the lifetimes and fractions of antiprotons trapped in metastable antiprotonic helium states by I. Shimamhura and M. Kimura --- mura
[DE95-737228] p 2986 N95-31658

LIQUID HYDROGEN
Design and testing of an oxidizer-rich preburner p 2799 N95-31212

LIQUID LEVELS
Optical fiber pressure sensor for liquid level monitoring
[AD-D017346] p 2996 N95-30679
Reducing process noise in superconducting helium liquid level probes
[DE95-008956] p 2814 N95-30765

LIQUID OXYGEN
Design and testing of an oxidizer-rich preburner p 2799 N95-31212
Primary atomization of liquid jets issuing from rocket engine coaxial injectors p 2769 N95-31716
Combustion of LOX with H2(sub g) under subcritical and supercritical conditions p 2797 N95-31717

LIQUID PHASES
Porous spherical shells and microspheres by electrodispersion precipitation
[DE95-009073] p 2815 N95-30799

LIQUID PROPELLANT ROCKET ENGINES
The 31st JANNAF Combustion Subcommittee Meeting, volume 1 p 2825 N95-31194
Primary atomization of liquid jets issuing from rocket engine coaxial injectors p 2769 N95-31716
Experiment of rocket-ram combined combustor
[NAL-TR-1249] p 2769 N95-31739
Combustion response to acoustic perturbation in liquid rocket engines p 2770 N95-31972

LIQUID ROCKET PROPELLANTS
The 31st JANNAF Combustion Subcommittee Meeting, volume 1 p 2825 N95-31194
Workshop report: Measurement techniques in highly transient, spectrally rich combustion environments p 2799 N95-31208
Design and testing of an oxidizer-rich preburner p 2799 N95-31212

LIQUID SURFACES
Simple model of foam spreading on liquid surfaces
[PB95-211207] p 2838 N95-30630

LIQUID WASTES
Determination of halogens in a petroleum product by ion chromatography
[DE95-002056] p 2797 N95-31840

LIQUID-SOLID INTERFACES
Study of melting and freezing processes of water for application to ice thermal energy storage system p 2905 N95-31735

LIQUIDS
Fast-acting valve for projective launching systems
[AD-D017357] p 2888 N95-30416
Sonic apparatus for degassing liquids
[AD-D017352] p 2791 N95-30554
Ultrasensitive fluorescence detection and photophysics in microdroplets
[DE95-010283] p 2798 N95-32086

LISP (PROGRAMMING LANGUAGE)
PORK object system programmer's guide
[AD-A293596] p 2942 N95-31668

LITHIUM
Ionic conductivities of lithium phosphorus oxynitride glasses, polycrystals, and thin films
[DE95-008898] p 2812 N95-30545
A Monte-Carlo model of ionic transport across a solid interface
[DE95-613447] p 3011 N95-30737
Inner- and outer-shell excitation in lithium isoelectronic sequence
[DE95-614107] p 2981 N95-31003
Convoy electron emission from surfaces
[DE95-010298] p 2984 N95-31402
Composite polymer electrolyte for lithium batteries
[AD-A293924] p 2820 N95-31514
Lithium ion aqueous cells
[AD-A293828] p 2905 N95-31554
Target diagnostics for intense lithium ion hohlraum experiments on PBFA 2
[DE95-008517] p 3006 N95-31626

LITHIUM COMPOUNDS
Lithium ion aqueous cells
[AD-A293828] p 2905 N95-31554
LITHIUM NIOBATES
A study of end-fire coupling of single-mode fiber to Ti: LiNbO3-single-mode planar waveguide
[AD-A293249] p 2997 N95-30909
LITHOGRAPHY
A phenomenological finite element model of part building in the stereolithography process
[DE95-008437] p 2932 N95-30376
Epoxy and acrylate stereolithography resins: In-situ measurements of cure shrinkage and stress relaxation
[DE95-008506] p 2811 N95-30389
NIR High-efficiency subwavelength diffractive structures in semiconductors
[DE95-008535] p 3008 N95-30391
LITHOSPHERE
Studies in marine tectonics: Propagating rifts, depth anomalies and subduction zone anisotropy
p 2923 N95-31719
LOAD CARRYING CAPACITY
Analysis of stress concentration at holes in components made of 2195 aluminum-lithium
[NASA-TP-3554] p 2893 N95-30613
LOAD DISTRIBUTION (FORCES)
Impact behavior of the active zone within a frozen soil profile
[AD-A292909] p 2915 N95-31386
LOAD TESTS
Round-robin validation exercise for plate twist test method
[PB95-208088] p 2812 N95-30487
Electrical short circuit and current overload tests on aircraft wiring
[AD-A293308] p 2860 N95-30922
Confederation Verification, Validation, and Accreditation Master Plan (CVVAMP). Technical test plan
[AD-A289717] p 2936 N95-31050
LOADING RATE
Rationale and summary of methods for determining ultrasonic properties of materials at Lawrence Livermore National Laboratory
[DE95-009475] p 2795 N95-31593
LOADS (FORCES)
Speed control of an elastic two-mass system: Optimization and systems theory
[PB95-212106] p 2888 N95-30701
A theory for predicting and minimizing the effects of matrix degradation on the thermomechanical properties of general laminates p 2785 N95-30768
Robust position and force tracking control for a robot in contract p 2888 N95-30830
LOCAL AREA NETWORKS
Email: Why and how
[PB95-195327] p 2846 N95-30516
Integrated high performance distributed system
[AD-A292821] p 2947 N95-31445
Gigabit testbed research project
[DE95-010728] p 2945 N95-32270
Recommendations for protecting National Library of Medicine Computing and Networking Resources
[DE95-011554] p 3026 N95-32285
LOCKING
Locking device for fluid coupling
[AD-D017354] p 2888 N95-30414
Vibration isolation mount with locking means
[AD-D017367] p 2888 N95-30532
LOCKS (FASTENERS)
Locking device for fluid coupling
[AD-D017354] p 2888 N95-30414
LOGIC PROGRAMMING
Barendregt cube with definitions and generalized reduction
[PB95-206793] p 2966 N95-30719
The occurrence of continuation parameters in CPS terms
[AD-A292952] p 2941 N95-31460
LOGISTICS MANAGEMENT
Fact sheet for Congressional Committees. Air traffic control: Status of FAA's modernization program
[GAO/RCED-94-167FS] p 2750 N95-32197
LONG WAVE RADIATION
Suprioius semi-diurnal variation in the E.R.B.E. outgoing longwave radiation
[NOAA-TR-NESDIS-84] p 2913 N95-30643
LONGITUDINAL CONTROL
Flight Vehicle Integration Panel Workshop on Pilot Induced Oscillations
[AGARD-AR-335] p 2745 N95-31061
LONGITUDINAL STABILITY
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept
[NASA-TM-108489] p 2742 N95-30712
Unified criteria for ACT aircraft longitudinal dynamics
p 2745 N95-31065
LORAN
Guidelines for the design of GPS and LORAN receiver controls and displays
[AD-A293753] p 2749 N95-31572
LORENTZ TRANSFORMATIONS
Simultaneity and length of the moving rod
[DE95-613369] p 3017 N95-30364
Einstein's length concept
[DE95-613368] p 3019 N95-30972
LOSSES
Effects of temperature ramp rate during heat treatment on hysteresis loss and critical current density of internal tin processed wires
[DE95-009551] p 2803 N95-30706
On the quasihydrostatic flows of radiatively cooling self-gravitating gas clouds
[DE95-009116] p 3029 N95-30729
Polarized proton beams
[DE95-010843] p 2987 N95-32031
Effects of temperature, frequency, flux density, and excitation waveform on the core loss and dynamic B-H loops of supermalloy
[NASA-TM-106982] p 2865 N95-32207
Testing the performance of feedback concatenated decoder with a nonideal receiver p 2856 N95-32231
LOW ALTITUDE
Improved altimeter settings for A-10 aircraft
[AD-A293142] p 2753 N95-30920
Synthetic Terrain Imagery for Helmet-Mounted Display, volume 1
[AD-A293612] p 2753 N95-31656
Advanced gust management systems: Lessons learned and perspectives p 2759 N95-32002
LOW CONCENTRATIONS
Neutronic methods for determination of very low concentrations of hydrogen in metals
[DE95-623967] p 2807 N95-31409
LOW COST
State-of-the-art low-cost solar reflector materials
[DE95-000260] p 2902 N95-30526
Rationale and summary of methods for determining ultrasonic properties of materials at Lawrence Livermore National Laboratory
[DE95-009475] p 2795 N95-31593
Low cost fabrication of silicon carbide based ceramics and fiber reinforced composites
[NASA-TM-107001] p 2822 N95-32208
LOW DENSITY MATERIALS
Simple model of foam spreading on liquid surfaces
[PB95-211207] p 2838 N95-30630
LOW EARTH ORBITS
Assessment of the NASA orbital debris engineering model
[AD-A293350] p 2766 N95-31143
The NASA/JPL Evaluation of Oxygen Interactions with Materials-3 (EOIM-3)
[NASA-CR-198865] p 2796 N95-31660
Operation of the computer model for direct atomic oxygen exposure of Earth satellites
[NASA-CR-198188] p 2767 N95-32189
LOW FREQUENCIES
Fiber optic interferometric electric field and voltage sensor utilizing and electrostrictive transducer
[AD-D017433] p 2996 N95-30753
LOW PASS FILTERS
Design of digital low-pass filters for time-domain recursive filtering of impact acceleration signals
[AD-A293086] p 2864 N95-31842
LOW REYNOLDS NUMBER
Advanced k-epsilon modeling of heat transfer
[NASA-CR-4679] p 2874 N95-31423
LOW SPEED WIND TUNNELS
Flow quality improvements in the NASA Lewis Research Center 9- by 15-foot Low Speed Wind Tunnel
[NASA-CR-195439] p 2763 N95-31653
LOW TEMPERATURE
Optimization of a thermoelectric IR-detector for low working temperature
[NASA-CR-198933] p 2880 N95-30752
Low temperature fabrication from nano-size ceramic powders
[DE95-010995] p 2818 N95-31153
LOW VOLTAGE
Thin-film edge field emitter device and method of manufacture therefor
[AD-D017453] p 2862 N95-31275
LOWER ATMOSPHERE
Modeling and parameterization of gravity wave breaking, interactions, and instability processes in the lower and middle atmosphere
[AD-A292740] p 2914 N95-31278
Calculation of a residual mean meridional circulation for a zonal-mean tracer transport model
[DE95-009474] p 2911 N95-32350
LUBRICANTS
Enhancement of perfluoropolyether boundary lubrication performance: I. Preliminary results
[NASA-TM-106937] p 2813 N95-30621
Compatibility of refrigerants and lubricants with motor materials under retrofit conditions
[DE95-010185] p 2814 N95-30767
Studies of C(60) and C(70) and other fullurenes: Synthesis, derivation, electrochemistry, lubricant properties and new composition materials
[AD-A292726] p 3012 N95-30944
Compatibility of manufacturing process fluids with HFC refrigerants and ester lubricants
[DE95-012152] p 2911 N95-32364
LUBRICATING OILS
Spectroscopic ellipsometry as a sensitive monitor of materials contamination p 2782 N95-31808
LUBRICATION
Fluid-film lubrication with an application to piston rings
p 2890 N95-32119
An efficient numerical procedure for thermohydrodynamic analysis of cavitating bearings
[NASA-CR-195476] p 2878 N95-32210
Film temperatures in the presence of cavitation
[NASA-CR-195481] p 2878 N95-32216
LUMINANCE
Luminance effects on visual acuity and small letter contrast sensitivity
[AD-A293310] p 2928 N95-31140
LUMINESCENCE
Glass matrix doped with activated luminescent nanocrystalline particles
[AD-D017416] p 2816 N95-31010
Excited-state complexes of conjugated polymers: Novel photophysical processes and optoelectronic materials
[AD-A292958] p 2819 N95-31462
Excited-state complexes of conjugated polymers
[AD-A292960] p 2819 N95-31466
Luminescence properties of ZnWO4:Cr(3+) laser crystals
[AD-A293065] p 2887 N95-32152
LUNAR ORBITS
Radiation effects in space: The Clementine 1 mission
[DE95-011513] p 3032 N95-32282
LYMAN ALPHA RADIATION
SSUSI single sensor auroral E-layer algorithm: Functional description
[AD-A288630] p 2914 N95-31012
LYRA CONSTELLATION
Cepheid temperature and the Blazhko effect
[NASA-CR-189433] p 3030 N95-31819

M

MACH NUMBER
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept
[NASA-TM-108489] p 2742 N95-30712
Unsteady transonic wind tunnel test on a semispan straked delta wing, oscillating in pitch. Part 1: Description of the model, test setup, data acquisition, and data processing
[AD-A293113] p 2743 N95-30885
Hypervelocity wind tunnel number 9, high Mach number development program
[AD-A289934] p 2743 N95-30929
Investigation of ram accelerator performance capabilities p 2799 N95-31204
Side force acting on blunted circular cylinder bodies at high angles of attack in supersonic flow
[NAL-TR-1255] p 2744 N95-31741
Control of unsteady separated flow associated with the dynamic stall of airfoils
[NASA-CR-198972] p 2744 N95-32193
MACHINE LEARNING
Learning in an intentional system
[AD-A291158] p 2949 N95-30395
Selecting optimal experiments for feedforward multilayer perceptrons
[AD-A290856] p 2949 N95-30406
Adaptive path planning: Algorithm and analysis
[DE95-008549] p 2950 N95-30463
Machine learning for a toolkit for image mining
[AD-A293137] p 2951 N95-30890
Neural networks for real-time terrain typing
[AD-A293569] p 2953 N95-31540
Neural network false alarm filter, volume 1
[AD-A293097] p 2953 N95-31562
Finite-sample based learning algorithms for feedforward networks
[DE95-009123] p 2941 N95-31631
An analysis of hierarchical genetic programming
[AD-A293964] p 2942 N95-31657
Production matching for large learning systems
[AD-A293105] p 2953 N95-31827

MACHINE TOOLS
Computer-aided inspection process definition: Development of an expert planning and programming system for coordinate metrology
[DE95-010411] p 2940 N95-31404
MACHINE TRANSLATION
Translation workbench for generating subtitles for English TV news
[NHK-435] p 3026 N95-32182
MACHINING
Effect of local melting on tribology in metal cutting
[PB95-195392] p 2804 N95-31052
MACROMOLECULES
From molecular to macromolecular liquid crystals
[AD-A293170] p 2816 N95-30974
MAGNESIUM
Electrochemical vapour deposition of SOFC interconnection materials
[PB95-197844] p 2812 N95-30459
Calculated structures and electronic absorption spectroscopy for magnesium phthalocyanine and its anion radical
[AD-A293672] p 2796 N95-31596
MAGNESIUM ALLOYS
Effect of local melting on tribology in metal cutting
[PB95-195392] p 2804 N95-31052
Interfacial segregation and deformation of superplastically deformed Al-Mg-Mn alloys
[DE95-009572] p 2809 N95-32052
MAGNESIUM CELLS
Magnesium battery disposal characteristics
[AD-A293053] p 2863 N95-31607
MAGNESIUM COMPOUNDS
Synthesis of novel precursors for PMN powders and the thin films obtained from them
[DE95-008543] p 2811 N95-30362
Molecular modeling of PMN ceramics
[AD-A290879] p 2813 N95-30560
MAGNESIUM FLUORIDES
High performance YBCO films
[AD-A293045] p 2863 N95-31669
MAGNESIUM OXIDES
The pyrochlore-to-perovskite transformation in solution-derived lead zirconate titanate thin films
[DE95-010453] p 2822 N95-32161
MAGNET COILS
An active magnetic bearing with high T(sub c) superconducting coils and ferromagnetic cores
[NASA-TM-106995] p 2864 N95-31847
MAGNETIC ANOMALIES
Studies in marine tectonics: Propagating rifts, depth anomalies and subduction zone anisotropy
p 2923 N95-31719
MAGNETIC BEARINGS
An active magnetic bearing with high T(sub c) superconducting coils and ferromagnetic cores
[NASA-TM-106995] p 2864 N95-31847
MAGNETIC CORES
Effects of temperature, frequency, flux density, and excitation waveform on the core loss and dynamic B-H loops of supermalloy
[NASA-TM-106982] p 2865 N95-32207
MAGNETIC DISTURBANCES
Environmental conditions responsible for solar activity
[AD-A292859] p 3031 N95-31450
MAGNETIC EFFECTS
The interaction of magnetizations with an external electromagnetic field and a time-dependent magnetic Aharonov-Bohm effect
[DE95-613463] p 2845 N95-30368
Magnetoluminescence characterization of quantum well structures
[DE95-008527] p 3008 N95-30381
Underdense heating of the ionosphere using oblique high power HF radiowaves p 2917 N95-31951
MAGNETIC ENERGY STORAGE
Performance evaluation of high-temperature superconducting current leads for micro-SMES systems
[DE95-005843] p 2861 N95-30943
MAGNETIC FIELD CONFIGURATIONS
On the possibility of a two-state magnetic structure for nanocrystalline chromium
[DE95-009914] p 3015 N95-32062
MAGNETIC FIELD RECONNECTION
Analysis of plasma measurements for the Geotail mission
[NASA-CR-199074] p 3032 N95-32218
MAGNETIC FIELDS
Electromagnetically activated compliant wavy-wall
[AD-D017340] p 2866 N95-30412
Magneto-optical transmission-reflection beam splitter for multi-level atoms
[DE95-616267] p 2976 N95-30423
Multisite antiferromagnetic Ising spin model: Phase transition through doubling bifurcation
[DE95-614311] p 3011 N95-30722
New Fermi-liquid approach for the theory of disordered magnetics
[DE95-613448] p 2967 N95-30739
Shear flow effects on ion thermal transport in tokamaks
[DE95-009115] p 3005 N95-30801
Ferromagnetic Potts model in a magnetic field: Finite lattice extrapolation of the (1 + 1)-dimensional Hamiltonian
[DE95-614447] p 3012 N95-30958
Relativistic non-interacting electron gas in a magnetic field
[DE95-616903] p 2967 N95-31177
Numerical modeling of Bridgman growth of PbSnTe in a magnetic field
[NASA-TM-106996] p 2837 N95-31359
Determination of electric and magnetic fields in open trap plasmas by means of atomic-molecular beam hydrogen isotopes
[DE95-614177] p 3006 N95-31680
MAGNETIC FLUX
A simple model for the dc flux transformer in layered superconductors with Josephson coupling
[DE95-614468] p 2859 N95-30649
MAGNETIC MATERIALS
New Fermi-liquid approach for the theory of disordered magnetics
[DE95-613448] p 2967 N95-30739
Initial survey on fracture toughness of commercial Nd2Fe14B
[DE95-009813] p 2808 N95-31643
Effects of temperature, frequency, flux density, and excitation waveform on the core loss and dynamic B-H loops of supermalloy
[NASA-TM-106982] p 2865 N95-32207
MAGNETIC MEASUREMENT
Damage dosimetry and embrittlement monitoring of nuclear pressure vessels in real time by magnetic properties measurement
[DE95-011454] p 2894 N95-31254
MAGNETIC MIRRORS
Removal of impurity ions from a magnetic trap with a two-component plasma on their collision with fast component ions
[DE95-614171] p 2984 N95-31550
Optimization of an expander of a gas-dynamic trap
[DE95-614172] p 3006 N95-31679
Longitudinal losses of charged particles from an open configuration with arbitrary beta ratio
[DE95-614187] p 2987 N95-32055
MAGNETIC MOMENTS
Supersymmetric magnetic moments sum rules and spontaneous supersymmetry breaking
[DE95-613771] p 2989 N95-32096
MAGNETIC PROPERTIES
Acoustoelastic stress evaluation in metal plate using absolute shear and longitudinal time-of-flight data
[PB95-197810] p 2892 N95-30458
A metallurgical approach toward alloying in rare earth permanent magnet systems
[DE95-010242] p 2966 N95-30668
Damage dosimetry and embrittlement monitoring of nuclear pressure vessels in real time by magnetic properties measurement
[DE95-011454] p 2894 N95-31254
Influence of layer order and composition on the magnetic anisotropy of ultra-thin Co sandwiches
[DE95-010608] p 2810 N95-32265
MAGNETIC RESONANCE
Lanthanide(III) catalyzed reactions: Structure an d thermodynamics of intermediate complexes, and implications for reactivity
[PB95-197000] p 3019 N95-30775
Magnetic resonance spectroscopy of fullerenes and (pi)-conjugated polymers
[DE95-010131] p 2817 N95-31108
MAGNETIC SIGNATURES
Kiruna geophysical data. Data summary 94/4-6, April-June 1994
[PB95-210365] p 2913 N95-30627
Kiruna geophysical data. Data summary 94/1-3, January-March 1994
[PB95-210373] p 2913 N95-30628
MAGNETIC STORMS
Environmental conditions responsible for solar activity
[AD-A292859] p 3031 N95-31450
Analysis of plasma measurements for the Geotail mission
[NASA-CR-199074] p 3032 N95-32218
MAGNETICALLY TRAPPED PARTICLES
Study of cross-tail current carriers in magnetotail
p 3005 N95-30804
MAGNETIZATION
The interaction of magnetizations with an external electromagnetic field and a time-dependent magnetic Aharonov-Bohm effect
[DE95-613463] p 2845 N95-30368
Multisite antiferromagnetic Ising spin model: Phase transition through doubling bifurcation
[DE95-614311] p 3011 N95-30722
Investigation of Fe3O4 colloid behaviour in a magnetic field by polarized neutron transmission
[DE95-614351] p 2981 N95-30915
Investigations of YBaCuO materials with near-room-temperature resistivity transitions
[AD-A293405] p 3013 N95-31008
MAGNETO-OPTICS
Magneto-optical transmission-reflection beam splitter for multi-level atoms
[DE95-616267] p 2976 N95-30423
MAGNETOHYDRODYNAMIC FLOW
Nearly steady flows in GONG prototype data
[NASA-CR-198935] p 2869 N95-30863
DE-1 observations of polar O(+) stream bulk parameters and comparison with a model of the centrifugally-accelerated polar wind
[NASA-CR-198930] p 2917 N95-31743
MAGNETOHYDRODYNAMIC STABILITY
Advances in the simulation of toroidal gyro Landau fluid model turbulence
[DE95-008387] p 3003 N95-30359
Development of a tokamak plasma optimized for stability and confinement
[DE95-009609] p 3003 N95-30641
Physics and application of high density Z-pinches
[NIFS-PROC-14] p 3004 N95-30671
Reynolds stress of localized toroidal modes
[DE95-008750] p 3004 N95-30795
Design considerations for a Density-Channel-Guided laser wake-field accelerator
[AD-A292876] p 2884 N95-31190
Stabilization of ballooning modes with sheared toroidal rotation
[DE95-008388] p 3006 N95-31624
A study of ion trapping and instability in the Fermilab antiproton accumulator p 2993 N95-31647
Optimization of an expander of a gas-dynamic trap
[DE95-614172] p 3006 N95-31679
Radial mode evolution in longitudinal bunched beam instability
[DE95-010895] p 2994 N95-32092
Wall stabilization of high beta plasmas in D3-D
[DE95-009607] p 3007 N95-32116
Skew chromaticity in large accelerators
[DE95-011564] p 2994 N95-32243
Onset of ELMs in JT-60U
[DE95-737209] p 3007 N95-32263
MAGNETOHYDRODYNAMIC TURBULENCE
Theory and simulation of electrostatic wave turbulence in the space shuttle-induced plasma environment
[AD-A293467] p 3005 N95-31534
MAGNETOHYDRODYNAMICS
Electromagnetically activated compliant wavy-wall
[AD-D017340] p 2866 N95-30412
Stabilization of ballooning modes with sheared toroidal rotation
[DE95-008388] p 3006 N95-31624
MAGNETOSHEATH
Low-latitude boundary layer near noon: An open field line model
[ATR-93(7270)-1] p 2914 N95-30773
MAGNETOSPHERIC INSTABILITY
Environmental conditions responsible for solar activity
[AD-A292859] p 3031 N95-31450
MAGNETOSTATIC FIELDS
A time stepping coupled finite element-state space modeling environment for synchronous machine performance and design analysis in the ABC frame of reference p 2864 N95-31948
MAGNETOSTRICTION
Transitions, defects, and whiskered microstructures
[AD-A292796] p 3014 N95-31438
MAGNETRON SPUTTERING
Structural, chemical and electronic properties of superconducting thin films and junctions
[AD-A292700] p 3012 N95-30933
MAGNETS
The art and science of magnet design: Selected notes of Klaus Halbach, volume 2
[DE95-008450] p 2861 N95-31059
Initial survey on fracture toughness of commercial Nd2Fe14B
[DE95-009813] p 2808 N95-31643
MAIN SEQUENCE STARS
Cepheid temperature and the Blazhko effect
[NASA-CR-189433] p 3030 N95-31819

MAINTAINABILITY
Recommended techniques for effective maintainability. A continuous improvement initiative of the NASA Reliability and Maintainability Steering Committee
[NASA-TM-4628] p 2892 N95-31530
MAINTENANCE
Design of fibre reinforced composite panels for aerospace applications
[PB95-197851] p 2784 N95-30460
Measures of reliability and RCM
[PB95-192985] p 2891 N95-30510
Dynamic maintenance scheduling for a stochastic telecommunication network: Determination of performance factors
[AD-A293829] p 2852 N95-31555
MAJORITY CARRIERS
Minority and majority carrier transport characterization in compound semiconductors
[DE95-010873] p 3014 N95-31233
MAMMALS
AASERT-92 augmentation of research training in chronobiology: Regulation of the mammalian circadian clock by neurotransmitters
[AD-A288243] p 2925 N95-31144
MAN ENVIRONMENT INTERACTIONS
National Institute for Global Environmental Change
[DE95-008333] p 2907 N95-30358
MAN MACHINE SYSTEMS
Human factors at the FAA Technical Center: Bibliography
[AD-A288638] p 2930 N95-31399
Guidance and Control for Future Air-Defence Systems
[AGARD-CP-555] p 2839 N95-32123
AIDEX: An expert system for aircraft identification
p 2842 N95-32138
MANAGEMENT
Planning board generator. Part 1: Problem instances and types
[PB95-197075] p 3021 N95-30834
MANAGEMENT ANALYSIS
Annual report to the Chairman and Ranking Minority Members, House and Senate Committees on Appropriations. Status of open recommendations: Improving operations of federal departments and agencies
[GAO/OP-95-1] p 3022 N95-31986
MANAGEMENT INFORMATION SYSTEMS
The development of KAERI management information system 2: The development of Time Sheet Management System
[DE95-613355] p 3024 N95-30883
MANAGEMENT METHODS
Domain analysis for the reuse of software development experiences p 2936 N95-31236
Building an experience factory for maintenance
p 2937 N95-31237
Closing the loop on improvement: Packaging experience in the Software Engineering Laboratory
p 2937 N95-31238
Process maturity progress at Motorola Cellular Systems Division p 2937 N95-31239
The Personal Software Process: Downscaling the factory p 2937 N95-31240
Management of major system programs and projects. Handbook
[NHB-7120.5] p 3021 N95-31380
Recommended techniques for effective maintainability. A continuous improvement initiative of the NASA Reliability and Maintainability Steering Committee
[NASA-TM-4628] p 2892 N95-31530
The Oak Ridge Refrigerant Management Program
p 2774 N95-31763
Application of a genetic algorithm to optimize staffing levels in software development
[AD-A293725] p 2943 N95-31835
MANAGEMENT PLANNING
An architectural approach to strategic information systems planning for the Office of Naval Intelligence
[AD-A289930] p 3024 N95-30928
Management of major system programs and projects. Handbook
[NHB-7120.5] p 3021 N95-31380
Unmanned aerial vehicles. 1994 master plan
p 2751 N95-31416
The Oak Ridge Refrigerant Management Program
p 2774 N95-31763
Westinghouse Hanford Company Data Management Plan Template, revision 1
[DE95-010046] p 3026 N95-32107
MANEUVERABILITY
Dynamic inversion: An evolving methodology for flight control design p 2758 N95-31996
X-31: A program overview and flight test status
p 2753 N95-32013
MANEUVERS
Synthetic Terrain Imagery for Helmet-Mounted Display, volume 1
[AD-A293612] p 2753 N95-31656
MANGANESE
On the Jahn-Teller effect of Mn(2+) in zinc-blende ZnS crystal
[AD-A293711] p 2797 N95-31830
MANGANESE ALLOYS
Interfacial segregation and deformation of superplastically deformed Al-Mg-Mn alloys
[DE95-009572] p 2809 N95-32052
MANIFOLDS (MATHEMATICS)
Local index formula in noncommutative geometry
[PB95-208146] p 2955 N95-30490
4-manifold topology 2: Dwyer's filtration and surgery kernels
[PB95-207940] p 2965 N95-30509
The 4-manifold topology 1: Subexponential groups
[PB95-207957] p 2965 N95-30555
Generalized Kummer surfaces and differentiable invariants of Noether-Horikawa surfaces 1
[DE95-613382] p 2956 N95-30608
Good metric spaces without good parameterizations
[PB95-208427] p 2957 N95-30622
Pi1(sup infinity) and infinite simple homotopy type in dimension three: A research announcement
[PB95-196283] p 2957 N95-30696
Introduction to the theory of Goyaks: Operator manifold approach to geometry and particle physics
[DE95-613460] p 2980 N95-30740
Exact smooth classification of Hamiltonian vector fields on symplectic 2-manifolds
[DE95-613378] p 2958 N95-30803
Quantization of a relativistic particle on the SL(2,R) manifold based on Hamiltonian reduction
[DE95-737163] p 2983 N95-31224
Global aspects of the WZNW reduction to Toda theories
[DE95-737230] p 3019 N95-31226
Bifurcations of contracting singular cycles
[DE95-613371] p 2962 N95-32117
MANIPULATORS
Force and vision resolvability for assimilating disparate sensory feedback
[AD-A293581] p 2929 N95-31685
On the kinematic performance of mechanical manipulators operating in the presence of an obstruction
p 2890 N95-31710
On-orbit truss structure tele-operation experiment by Engineering Test Satellite-7
[NAL-TR-1246] p 2767 N95-31980
MANNED SPACE FLIGHT
Aeronautics and space report of the President
[NASA-TM-110743] p 3028 N95-31979
MANUALS
A manual for the economic evaluation of energy efficiency and renewable energy technologies
[DE95-000211] p 2903 N95-30896
A manual for pyrotechnic design, development and qualification
[NASA-TM-110172] p 2766 N95-31358
Video conferencing using DAVE user's guide
[DE95-010341] p 2854 N95-32045
MANUFACTURING
The role of advanced engineering simulation in model-based design
[DE95-008815] p 2934 N95-30796
Photovoltaic Czochralski silicon manufacturing technology improvements
[DE95-004066] p 2904 N95-31162
Large-area, triple-junction a-Si alloy production scale-up
[DE95-004067] p 2904 N95-31163
Photovoltaic module certification/laboratory accreditation criteria development
[DE95-004063] p 2905 N95-31381
The 19th Annual Electronics Manufacturing Seminar
[AD-A293067] p 2863 N95-31674
Manufacturing waste disposal practices of the chemical propulsion industry p 2771 N95-31748
Technology transfer into the solid propulsion industry
p 2770 N95-31756
National Center for Manufacturing Sciences: Environmentally conscious manufacturing
p 2773 N95-31758
The search for CFC alternatives is over?
p 2774 N95-31760
Prepsolv (TM): The optimum alternative to 1,1,1-trichloroethane and methyl ethyl ketone for hand-wipe cleaning of aerospace materials
p 2774 N95-31764
Evaluation and analysis survey on new energy introduction, part 3
[DE95-769806] p 2906 N95-32072
Vibration control for precision manufacturing at Sandia National Laboratories
[DE95-009582] p 2839 N95-32082
MANY BODY PROBLEM
Many-body effects in semiconductor lasers
[DE95-008534] p 2883 N95-30390
Multi-particle correlations in quaternionic quantum systems
[DE95-616271] p 3018 N95-30424
Study of the generalized solutions of n-body type problems with weak forces
[DE95-613381] p 2958 N95-30820
Irreducible Green's Functions method in the theory of highly correlated systems
[DE95-614446] p 3019 N95-31186
Removal of the Energy Dependence from the Resolvent Like Energy Dependent Interactions
[DE95-613385] p 2961 N95-31619
MAPPING
Associators in generalized octonionic maps
[DE95-616243] p 2957 N95-30688
Synthetic Terrain Imagery for Helmet-Mounted Display. Volume 3: Software user's manual
[AD-A293613] p 2753 N95-31463
MAPS
Digital Mapping Charting and Geodesy Analysis Program technical review of Vector Product Format (VPF)
[AD-A289766] p 2901 N95-31390
MARINE ENVIRONMENTS
Analysis of target contrast improvement using polarization filtering in the infrared region
[AD-A293085] p 3001 N95-31841
Multisensor data fusion for integrated maritime surveillance p 2842 N95-32135
MARINE METEOROLOGY
Aerosol measurements over the Pacific Ocean in support of the IR aerosol backscatter program
[NASA-CR-198925] p 2918 N95-30782
QTSAW (Quick Typhoon Surge and Waves). Wave information studies of US coastlines
[AD-A293172] p 2919 N95-30976
Shiptracks in the Californian stratus region: Dependency on marine atmospheric boundary layer depth
[AD-A293272] p 2901 N95-31125
Modern methods in meteorological and oceanographic data acquisition and analyses
[AD-A293884] p 2920 N95-31541
Validation of special sensor microwave/imager ocean surface wind retrievals in equatorial regions
[AD-A293750] p 2920 N95-31571
A numerical study of the effect of the Gulf Stream and the Appalachian Mountains on Carolina coastal frontogenesis
[AD-A293765] p 2921 N95-31577
Diagnosis of the kinematics and dynamics of rapidly developing maritime cyclones
[AD-A293919] p 2921 N95-31675
MARINE TECHNOLOGY
Active turbulence control using microelectrodes, permanent magnets in microgrooves
[AD-D017351] p 2867 N95-30553
Static behaviour of axially loaded uniplanar and multiplanar tubular x-joints
[PB95-207866] p 2892 N95-30585
Fatigue behaviour of multiplanar tubular joints
[PB95-207874] p 2893 N95-30586
EMC requirements for type approval of marine electronics. Nordtest project 1157-94
[PB95-211330] p 2859 N95-30596
MARINER MARK 2 SPACECRAFT
Welding isotopic heat sources for the cassini mission to Saturn
[DE95-060104] p 2890 N95-32367
MARKET RESEARCH
Photovoltaic Energy Program overview: Fiscal year 1994
[DE94-011871] p 2905 N95-31661
MARKOV CHAINS
Analyzing GI/Erlang-r/1 queues
[PB95-197034] p 2949 N95-30400
A stochastic EM estimator in the presence of missing data: Theory and applications
[DE95-010329] p 2944 N95-32089
MARKOV PROCESSES
Analysis and modeling of an airport departure process
[AD-A293782] p 2749 N95-31581
MARS (PLANET)
Mars together and FIRE and ICE: Report of the joint US/Russian technical working groups
[NASA-CR-198864] p 3030 N95-30845
MARS EXPLORATION
Mars together and FIRE and ICE: Report of the joint US/Russian technical working groups
[NASA-CR-198864] p 3030 N95-30845

MARS SURFACE
Mars together and FIRE and ICE: Report of the joint US/Russian technical working groups
[NASA-CR-198864] p 3030 N95-30845
MARTENSITE
Transitions, defects, and whiskered microstructures
[AD-A292796] p 3014 N95-31438
MARTENSITIC TRANSFORMATION
Shape memory properties of an iron modified nickel aluminide alloy
[DE95-010223] p 2805 N95-31111
Transitions, defects, and whiskered microstructures
[AD-A292796] p 3014 N95-31438
MASERS
Enhanced brightness x-ray lasers
[DE95-010735] p 2886 N95-32029
MASS DISTRIBUTION
Dissolution of eutectic microstructures
[DE95-010244] p 2804 N95-30757
Assessment of the NASA orbital debris engineering model
[AD-A293350] p 2766 N95-31143
MASS FLOW
An experimental study of planar heterogeneous supersonic confined jets
[AD-A290859] p 2867 N95-30557
Existence of solutions in plane quasistationary stokes flow driven by surface tension
[PB95-197935] p 2868 N95-30810
MASS RATIOS
Proceedings of the high energy density matter (HEDM) contractor's conference
[AD-A292988] p 2836 N95-31470
MASS SPECTROMETERS
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
[DE95-000047] p 2881 N95-31694
MASS SPECTROSCOPY
Standardization of (13)CO2 production procedure from organic matter for mass spectrometric analysis
[DE95-614629] p 2791 N95-30420
A study of gas-phase processes during the deflagration of RDX composite propellants using a triple quadrupole mass spectrometer p 2801 N95-31304
A study of the gas-phase processes of RDX combustion using a triple quadrupole mass-spectrometer p 2801 N95-31315
Analytical instrumentation for environmental research
[AD-A292832] p 2908 N95-31447
MASS TRANSFER
Simultaneous heat and mass transfer in a horizontal tube absorber: Numerical tools for present and future absorber designs
[PB95-196978] p 2869 N95-30872
MASSIVELY PARALLEL PROCESSORS
Algorithm comparison and benchmarking using a parallel spectra transform shallow water model
[DE95-009124] p 2913 N95-30683
Advanced computational research in materials processing for design and manufacturing
[DE95-009130] p 2838 N95-30684
Three-dimensional (3D) large fluid flow computations for US Army applications on KSR-1, CM-200, CM-5, and Cray C-90
[AD-A293125] p 2869 N95-30889
A two-dimensional finite difference algorithm on the KSR1
[AD-A293576] p 2941 N95-31594
MPI implementation of PHOENICS: A general purpose computational fluid dynamics code
[DE95-009810] p 2877 N95-32033
MATCHING
Production matching for large learning systems
[AD-A293105] p 2953 N95-31827
Multiple Target Tracking based on constellation matching and Kalman filter p 2842 N95-32136
MATERIALS RECOVERY
Recycling MIL-H-46170 hydraulic fluid to extend fluid service life
[AD-A293035] p 2821 N95-31664
Responsive copolymers for enhanced petroleum recovery
[DE95-011857] p 2823 N95-32361
MATERIALS SCIENCE
Metallurgical and Materials Transactions
[AD-A293617] p 2807 N95-31464
Laboratory directed research and development report
[DE95-011405] p 3032 N95-32279
MATERIALS TESTS
Localization in tungsten heavy alloys subjected to shearing deformations under superimposed high pressures
[AD-A293177] p 2804 N95-30977
MATHEMATICAL LOGIC
Preservation theorems on finite structures
[DE95-613442] p 2962 N95-32067
MATHEMATICAL MODELS
A phenomenological finite element model of part building in the stereolithography process
[DE95-008437] p 2932 N95-30376
Theoretical absorption spectroscopy of high-temperature metal vapors: Model and experiment compared
[AD-A290872] p 2791 N95-30409
Covariant phase space formulations of superparticles and supersymmetric WZW models
[DE95-616278] p 2964 N95-30428
Finite element simulation of GaAs MESFET's
[PB95-208062] p 3009 N95-30485
Advanced system identification techniques for wind turbine structures
[DE95-004049] p 2902 N95-30505
Overview of IEA biomass combustion activities
[PB95-196374] p 2902 N95-30519
Experimental determination of probability distributions for parameters of a Salem limestone cap plasticity model
[AD-A290878] p 2892 N95-30559
Molecular modeling of PMN ceramics
[AD-A290879] p 2813 N95-30560
Feature-based modeling of product families
[PB95-207148] p 2933 N95-30568
A numerical model for dynamic wave rotor analysis
[NASA-TM-106997] p 2754 N95-30617
Quasi-periodic solutions of Hamiltonian perturbations of 2D linear Schroedinger equations
[PB95-208443] p 2957 N95-30624
Simple model of foam spreading on liquid surfaces
[PB95-211207] p 2838 N95-30630
Axial loads on yawed rotors
[PB95-214193] p 2742 N95-30638
Alloying effects of Kondo insulators
[DE95-614306] p 3010 N95-30644
The one-dimensional model of the off-centre potential of the fluorine ion in the NaBr lattice
[DE95-614310] p 3010 N95-30647
A simple model for the dc flux transformer in layered superconductors with Josephson coupling
[DE95-614468] p 2859 N95-30649
On the theory of hole propagation in an antiferromagnetic background
[DE95-614469] p 3010 N95-30650
Properties of a multichannel resonant-level model
[DE95-614482] p 2979 N95-30652
Economical analysis relating to the global warming issue
[DE95-764072] p 2908 N95-30677
Advanced computational research in materials processing for design and manufacturing
[DE95-009130] p 2838 N95-30684
Associators in generalized octonionic maps
[DE95-616243] p 2957 N95-30688
Potential integral equations of the 2D Laplace operator in wavelet basis
[TRITA-NA-9401] p 2957 N95-30713
Enhancements to the SSME transfer function modeling code
[NASA-CR-198957] p 2958 N95-30754
A theory for predicting and minimizing the effects of matrix degradation on the thermomechanical properties of general laminates p 2785 N95-30768
TV-VI semiconductor quantum well lasers, physics and engineering p 2883 N95-30805
A viscoelastic anisotropic wave propagation model for composite cure evaluation p 2786 N95-30839
Computation of high-altitude hypersonic flow-field radiation p 2743 N95-30843
Calculated coupling efficiency between an elliptical-core optical fiber and an optical waveguide over temperature
[NASA-TM-107005] p 2997 N95-30849
Kinetic theory model predictions compared with low-thrust axisymmetric nozzle plume data
[NASA-CR-198934] p 2768 N95-30864
Validation of the FLAGSOL parabolic trough solar power plant performance model
[DE95-000263] p 2903 N95-30887
Multi-valued neural network modified model and its optical realization.
[AD-A293140] p 2951 N95-30891
Failure analysis of a repairable system: The case study of a cam-driven reciprocating pump
[AD-A293144] p 2889 N95-30949
Dynamical systems as models for flow-induced vibrations
[PB95-206991] p 2869 N95-30956
Acceleration potential models PREDICHAT/PREDICDYN applied for calculation of axisymmetric dynamic inflow cases
[PB95-207015] p 2869 N95-30957
Ferromagnetic Potts model in a magnetic field: Finite lattice extrapolation of the (1' + 1)-dimensional Hamiltonian
[DE95-614447] p 3012 N95-30958
Dynamics of an inhomogeneous anisotropic antiferromagnetic spin chain
[DE95-614449] p 3013 N95-30959
SSUSI single sensor auroral E-layer algorithm: Functional description
[AD-A288630] p 2914 N95-31012
Workshop on diffusion approximation in communication and stochastic systems theory
[AD-A292872] p 2952 N95-31055
High strain rate properties and constitutive modeling of glass
[DE95-008434] p 2816 N95-31058
Looking for the simple PIO model p 2745 N95-31066
Calspan experience of PIO and the effects of rate limiting p 2746 N95-31072
Effect of cyclic loading on the creep performance of silicon nitride
[DE95-010289] p 2894 N95-31131
Effective bandwidth techniques in bufferless and buffered ATM multiplexers
[PB95-207072] p 2862 N95-31185
Numerical simulation of ram accelerator performance including transient effects during initiation of combustion and sensitivity studies p 2799 N95-31203
Viscous heating of liquid layers under intense shear p 2827 N95-31206
Numerical study of shear-induced heating in high-speed nozzle flow of liquid monopropellant p 2828 N95-31207
Dynamics of Current Driven Disordered Josephson Junction Arrays
[DE95-009418] p 3014 N95-31231
The 2nd Japan-US Symposium on Finite Element Methods in Large Scale Computational Fluid Dynamics
[AD-A292337] p 2960 N95-31264
Advances in robust control
[AD-A291126] p 2952 N95-31266
The 25th International Symposium on Combustion
[AD-A286825] p 2794 N95-31268
Theory of unsteady combustion of solids: Investigation of Quasi-steady assumption p 2800 N95-31285
An ignition model for modern double base propellants p 2800 N95-31292
Control of mechanical systems with rolling contacts: Applications to robotics p 2889 N95-31332
Modeling multi-beam structures for control p 2895 N95-31346
Numerical modeling of Bridgman growth of PbSnTe in a magnetic field
[NASA-TM-106996] p 2837 N95-31359
Visual tracking of self-occluding articulated objects
[AD-A292894] p 2928 N95-31383
Numerical studies of nonlinear optical pulse propagation p 2998 N95-31411
Numerical simulation of time dependent viscoelastic fluid flow
[TRITA-NA-9311] p 2873 N95-31414
Some aspects on the modelling of non-Newtonian fluid flow
[TRITA-NA-9317] p 2873 N95-31415
Nonparametric methods for incomplete data in reliability and for changepoints in smooth functions
[AD-A292773] p 2963 N95-31429
Visual processing of object velocity and acceleration
[AD-A292789] p 2929 N95-31436
Clouds: Their prediction and simulation
[AD-A292864] p 2920 N95-31453
Analysis of symbolic parameter models
[AD-A292916] p 2940 N95-31459
Derivation of two-dimensional (2-D) conduction equation in generalized coordinates with constant and anisotropic physical properties
[AD-A293896] p 3020 N95-31511
A new goodness-of-fit test for the gamma distribution based on sample spacings from complete and censored samples
[AD-A293875] p 2961 N95-31518
Fast algorithms for three-dimensional inverse scattering problems
[AD-A293510] p 2852 N95-31537
Spatial time-series: Pollution pattern recognition under irregular interventions
[AD-A293830] p 2909 N95-31556
Multipoint quadratic approximation for numerical optimization
[AD-A293837] p 2961 N95-31557
Nonlinear time series analysis
[AD-A293841] p 2963 N95-31558
Nonparametric recognition of nonrigid motion
[AD-A293630] p 2963 N95-31565

Analytic and experimental investigation of rotordynamic response and backward whirl induced by split resonance
[AD-A293639] p 2889 N95-31566
Analysis and modeling of an airport departure process
[AD-A293782] p 2749 N95-31581
The effect of repeatedly sampling an embedded metamodel on the simulation response
[AD-A293783] p 2953 N95-31582
Large-eddy simulation of turbulent flow using the finite element method
[DE95-009464] p 2875 N95-31591
Network user's guide
[DE95-009185] p 2942 N95-31634
Fractional delay waveguide modeling of acoustic tubes
[PB95-206637] p 2975 N95-31650
Study of melting and freezing processes of water for application to ice thermal energy storage system
p 2905 N95-31735
Selected flows with free surfaces: Streams and drops
[IFTR-3/1995] p 2876 N95-31817
Modeling of grain boundary stresses in Alloy 600
[DE95-009033] p 2808 N95-31825
A hypothesis-testing approach to discriminant analysis with mixed categorical and continuous variables when data are missing
[AD-A293714] p 2964 N95-31831
The GCRC two-dimensional zonally averaged statistical dynamical climate model: Development, model performance, and climate sensitivity
p 2910 N95-31851
A time stepping coupled finite element-state space modeling environment for synchronous machine performance and design analysis in the ABC frame of reference p 2864 N95-31948
Preservation theorems on finite structures
[DE95-613442] p 2962 N95-32067
Vibration control for precision manufacturing at Sandia National Laboratories
[DE95-009582] p 2839 N95-32082
Estimation in second order dependency model for multivariate binary data
[DE95-010326] p 2944 N95-32087
A stochastic difference equation approach to inference with missing data: Some new results
[DE95-010327] p 2944 N95-32088
Automated volumetric grid generation for finite element modeling of human hand joints
[DE95-009575] p 2928 N95-32097
Models of transport, gas-phase and surface chemistry in diamond chemical vapor deposition
[DE95-009861] p 2822 N95-32101
Simulation of fracture in compression using a field-theory model
[DE95-009874] p 2898 N95-32102
A mode decomposition based finite element formulation for the nonlinear dynamics of flexible spatial structures and mechanisms p 2898 N95-32118
Optimal infrared detector configurations for air target detection p 2841 N95-32130
Architecture and implementation of a multi-sensor data fusion demonstration model within the real-time combat system of the Canadian Patrol Frigate
p 2842 N95-32139
Using a Red Team to devise countermeasures
p 2842 N95-32141
KRAKEN, a numerical model of RHIC impedances
[DE95-011563] p 2994 N95-32242
Study of tropospheric correction for intercontinental GPS common-view time transfer p 2971 N95-32338
Phase transitions and gravitational collapse
[DE95-011732] p 3021 N95-32359
Objective analysis of oceanic data for Coast Guard trajectory models
[AD-A292884] p 2924 N95-32363

MATHEMATICAL PROGRAMMING
Numerical solution of a singular integral equation arising from a sequential probability ratio test
[AD-A293463] p 2963 N95-31375

MATRICES (MATHEMATICS)
Density dependent effective interactions
[DE95-616348] p 2977 N95-30447
Control of flexible spacecraft structures using H-infinity wave absorbing control
[AD-A293141] p 2766 N95-30919
A scalable parallel Strassen's matrix multiply algorithm for distributed memory computers
[DE95-010213] p 2936 N95-31109
Advances in robust control
[AD-A291126] p 2952 N95-31266
Non-critical string field theory with non-orientable string interactions
[DE95-737160] p 3020 N95-31281
A modification to the GMRES method for ill-conditioned linear systems
[DE95-010661] p 2962 N95-32076
Normal mode tunes for linear coupled motion in six dimensional phase space
[DE95-011565] p 2994 N95-32244
Texture based methods for image analysis: A review
[PB95-211595] p 2945 N95-32251

MATRIX MATERIALS
A theory for predicting and minimizing the effects of matrix degradation on the thermomechanical properties of general laminates p 2785 N95-30768
Metallurgical and Materials Transactions
[AD-A293617] p 2807 N95-31464
Influence of fiber content on mechanical performance of SiC-fiber-reinforced reaction-bonded silicon nitride composites
[NASA-TM-110639] p 2790 N95-32060

MATRIX METHODS
Fourier series methods for cracks in polygonal plates and shells of revolution p 2893 N95-30825

MATRIX THEORY
Dynamical analogy of Cabibbo-Kobayashi-Maskawa matrices
[DE95-613462] p 2975 N95-30367

MAXIMUM ENTROPY METHOD
Direct sublattice imaging of interface dislocation structures in CdTe/GaAs(001)
[DE95-009031] p 3010 N95-30576
Robust fixed-structure control
[AD-A292883] p 2952 N95-30961

MAXIMUM LIKELIHOOD ESTIMATES
Expert system for assessing accuracy of models of physical phenomena and for selecting alternate models in the presence of noise
[AD-D017348] p 2974 N95-30550
Failure analysis of a repairable system: The case study of a cam-driven reciprocating pump
[AD-A293144] p 2889 N95-30949
Nonparametric methods for incomplete data in reliability and for changepoints in smooth functions
[AD-A292773] p 2963 N95-31429
A new goodness-of-fit test for the gamma distribution based on sample spacings from complete and censored samples
[AD-A293875] p 2961 N95-31518
A hypothesis-testing approach to discriminant analysis with mixed categorical and continuous variables when data are missing
[AD-A293714] p 2964 N95-31831
A Stochastic EM algorithm for approximating the maximum likelihood estimate
[DE95-010328] p 2943 N95-32044
Multiple turbo codes for deep-space communications
p 2855 N95-32227

MAXIMUM PRINCIPLE
An extremum principle for the analysis and design of constitutively nonlinear systems p 2898 N95-32112

MAXWELL EQUATION
Many-body effects in semiconductor lasers
[DE95-008534] p 2883 N95-30390
Six-vector formalism in electromagnetics of bianisotropic media
[PB95-207130] p 2846 N95-30567
Numerical studies of nonlinear optical pulse propagation p 2998 N95-31411
Two-dimensional Finite Difference Time Domain (FD-TD) model of electromagnetic (EM) scattering from a buried rectangular object
[AD-A293685] p 2852 N95-31601

MCDONNELL DOUGLAS AIRCRAFT
Report to Congressional Committees. Military airlift: C-17 settlement is not a good deal
[GAO/NSIAD-94-141] p 2741 N95-32198

MEAN
Complex mean value interpolation
[PB95-211629] p 2956 N95-30601

MEAN SQUARE VALUES
An efficient implementation of Forward-Backward Least-Mean-Square Adaptive Line Enhancers
p 2855 N95-32224

MEASUREMENT
Survey of US burning rate measurement methods for solid propulsion applications p 2800 N95-31291

MEASURING INSTRUMENTS
Light-front dynamics of Chern-Simons systems
[DE95-613467] p 3019 N95-30741
Tunable composite membranes for gas separations
[DE95-010602] p 2822 N95-32075

MECHANICAL DEVICES
Locking device for fluid coupling
[AD-D017354] p 2888 N95-30414
Speed control of an elastic two-mass system: Optimization and systems theory
[PB95-212106] p 2888 N95-30701

MECHANICAL ENGINEERING
Advanced small rocket chambers. Option 3: 110 1bf lr-Re rocket, volume 1
[NASA-CR-195435-VOL-1] p 2768 N95-31169
Advanced small rocket chambers. Option 3: 110 1bf lr-Re rocket, volume 2
[NASA-CR-195435-VOL-2] p 2769 N95-31170

MECHANICAL IMPEDANCE
The coupling impedance of a toroidal beam pipe with circular cross section
[DE95-010442] p 2993 N95-31405

MECHANICAL MEASUREMENT
An inverse method to measure the axial modulus of composite materials under tension
[AD-A293042] p 2789 N95-31668

MECHANICAL PROPERTIES
Interface degradation in CAS/Nicalon during elevated temperature aging
[DE95-008843] p 2812 N95-30543
Analysis of variation embedding tests with 17 MM dowel: Densified veneer wood FOREST project, part 7
[PB95-206876] p 2963 N95-30680
Processing and characterization of nanocrystalline molybdenum disilicide (MoSi2) consolidated by hot isostatic pressing (HIP)
[DE95-010243] p 3012 N95-30756
The effect of interface properties on nickel base alloy composites
[NASA-CR-198363] p 2785 N95-30787
Innovative processing of composites for ultra-high temperature applications, book 4
[AD-A290892] p 2786 N95-30867
Innovative processing of composites for ultra-high temperature applications, book 2
[AD-A290890] p 2786 N95-30898
Synthesis and selected micro-mechanical properties of titanium nitride thin films by the pyrolysis of tetrakis titanium in ammonia
[DE95-010224] p 2818 N95-31187
Behaviour of polymers in radioactive environments: Effects of dose speed
[DE95-621008] p 2818 N95-31221
Damage dosimetry and embrittlement monitoring of nuclear pressure vessels in real time by magnetic properties measurement
[DE95-011454] p 2894 N95-31254
The 10th International Conference on the Strength of Materials
[AD-A292335] p 2894 N95-31263
Metallurgical and Materials Transactions
[AD-A293617] p 2807 N95-31464
In situ composites in the aluminum nitride-alumina system
[AD-A293776] p 2789 N95-31509
High strain-rate testing of parachute materials
[DE95-009577] p 2897 N95-31614
Influence of fiber content on mechanical performance of SiC-fiber-reinforced reaction-bonded silicon nitride composites
[NASA-TM-110639] p 2790 N95-32060
Gelcasting of sintered reaction-bonded silicon nitride for improved mechanical properties
[DE95-010282] p 2822 N95-32085

MECHANICAL SHOCK
Releaseable unconstrained inflatable body protector
[AD-D017350] p 2930 N95-30552

MECHANICAL TWINNING
Characterization of /11'01/ twin dislocation structures in evaporated titanium thin films by HREM
[DE95-615391] p 2820 N95-31623

MECHANORECEPTORS
Physiology and physiopathology of equilibration
[PB95-208328] p 2926 N95-30494

MEDICAL SCIENCE
Summaries of fiscal year 1994 projects in medical applications and biophysical research
[DE95-010405] p 2925 N95-32040

MEDICAL SERVICES
Patient/aircraft forecasting for the strategic aeromedical evacuation lift-bed process
[AD-A293902] p 2747 N95-31512

MELT SPINNING
Phase transformations in melt-spun Y-Ba-Cu-O bulk superconductor
[DE95-010237] p 3011 N95-30667

MELTING
Dissolution of eutectic microstructures
[DE95-010244] p 2804 N95-30757
Effect of local melting on tribology in metal cutting
[PB95-195392] p 2804 N95-31052
Fundamental topics in heat transfer through deformable two-phase media p 2874 N95-31532
Study of melting and freezing processes of water for application to ice thermal energy storage system
p 2905 N95-31735

MEMBRANE STRUCTURES
Structural analyses of the JPL Mars Pathfinder impact
[DE95-009581] p 2767 N95-32081

MEMBRANES
Process for producing hydrophilic polymer membranes
[AD-D017355] p 2811 N95-30415
On-line surfactant monitoring
[DE95-009417] p 2792 N95-30735
Metal nanotubule membranes with electrochemically switchable ion-transport selectivity
[AD-A292712] p 2793 N95-30938
Faster, cheaper radioanalytical methods
[DE95-009913] p 2797 N95-32061
Tunable composite membranes for gas separations
[DE95-010602] p 2822 N95-32075

MEMORY
Contextual interference effects on acquisition and transfer of a complex motor task
[AD-A293788] p 2929 N95-31583

MEMORY (COMPUTERS)
Implementation of KIVA-3 on distributed memory MIMD computers
[DE95-010288] p 2931 N95-31130

MENTAL PERFORMANCE
Training metacognitive skills for problem solving
[AD-A290310] p 2959 N95-31002
Impact of task properties, data display format and cognitive characteristics on recall performance: A cumulative research investigation p 3025 N95-31334
Forward rapid rotation shiftwork in USAF air traffic controllers: Sleep, activity, fatigue and mood analyses
[AD-A293448] p 2927 N95-31373
Optimizing the long-term retention of skills: Structural and analytic approaches to skill maintenance
[AD-A293798] p 2929 N95-31585

MERIDIONAL FLOW
Global Ultraviolet Imager (GUVI) investigation
[NASA-CR-189430] p 2917 N95-31820

MESOMETEOROLOGY
Clouds: Their prediction and simulation
[AD-A292864] p 2920 N95-31453

MESON-NUCLEON INTERACTIONS
Pion-nucleon and kaon-nucleon scattering lengths in QCD sum rules
[DE95-737278] p 2983 N95-31227

MESONS
Hadronic production of S-wave and P-wave charmed beauty mesons via heavy quark fragmentation
[DE95-008737] p 2977 N95-30465
Instantaneous chiral quark model for relativistic mesons in a hot and dense medium
[DE95-613782] p 2980 N95-30911
Multichannel resonances in coupled channels of meson scattering: Scalar sector
[DE95-613783] p 2981 N95-30912
B(sub c)-meson production in hadron-hadron collisions
[DE95-620537] p 2983 N95-31217
Scaling behaviour of leptonic decay constants for heavy quarkonia and heavy mesons
[DE95-620539] p 2983 N95-31218
Mixing phases of unstable two-level systems
[DE95-613844] p 2989 N95-32151
Charm photoproduction dynamics
[DE95-009106] p 2990 N95-32303
On hadronic production of the B(sub c) meson
[DE95-613726] p 2991 N95-32304

MESOPAUSE
Middle atmosphere structure and dynamics: Lidar studies at the South Pole, Syowa and Urbana
p 2916 N95-31736

MESOSCALE PHENOMENA
Clouds: Their prediction and simulation
[AD-A292864] p 2920 N95-31453
A numerical study of the effect of the Gulf Stream and the Appalachian Mountains on Carolina coastal frontogenesis
[AD-A293765] p 2921 N95-31577
Brightness temperature simulations for the physical and synoptic interpretation of advanced microwave sounding unit moisture channels p 2921 N95-31721
Simulation of katabatic flow and mountain waves
[DE95-010863] p 2911 N95-32276

MESSAGE PROCESSING
An executable specification for the message processor in a simple combining network
[NASA-CR-198174] p 2933 N95-30584
Universal message passing library, or how to writea truly portable code for parallel computers
[PB95-212221] p 2948 N95-32255

MESSAGES
MPI implementation of PHOENICS: A general purpose computational fluid dynamics code
[DE95-009810] p 2877 N95-32033

METAL BONDING
Influence of adhesives and bonding techniques on the properties of glued timber-steelplate joints
[PB95-211470] p 2813 N95-30599
New material for high average power infrared generation: QPM-DB GaAs
[AD-A292714] p 2967 N95-30939
Cleanliness inspection tool for RSRM bond surfaces
p 2781 N95-31799

METAL COATINGS
High temperature barrier coatings for refractory metals
[NASA-CR-195475] p 2802 N95-30531
High aspect ratio metal microstructures and method for preparing the same
[AD-D017463] p 2803 N95-30750
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 1
[NASA-CR-195435-VOL-1] p 2768 N95-31169
Self-lubricating, TiN-MoS2 composite coatings produced by simultaneous deposition from Ti((CH3))2N4/NH3/MoF6H2S gas mixture
[DE95-010359] p 2788 N95-31403

METAL COMBUSTION
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures
p 2799 N95-30990
The Al and Al2O3 droplet cloud in solid rocket motors
p 2770 N95-31196
Shuttle Redesigned Solid Rocket Motor aluminum oxide investigations p 2770 N95-31197
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures
p 2799 N95-31198
Characterization of an improved Rijke burner as prelude to measurements of aluminum distributed combustion
p 2800 N95-31287

METAL CRYSTALS
Picosecond phase conjugation: New applications, devices, and materials
[AD-A293195] p 3013 N95-30982

METAL CUTTING
Effect of local melting on tribology in metal cutting
[PB95-195392] p 2804 N95-31052

METAL FATIGUE
Ultrasonic characterization of fiber-matrix interphasial properties and damage in high-temperature composites
p 2785 N95-30823
The influence of matrix microstructure and temperature on cyclic deformation and fatigue of particle-reinforced 2219 aluminum p 2808 N95-31974

METAL FILMS
Diffraction-line broadening analysis and stress relaxation in thin metal layers
[PB95-213898] p 2893 N95-30634
Synthesis and selected micro-mechanical properties of titanium nitride thin films by the pyrolysis of tetrakis titanium in ammonia
[DE95-010224] p 2818 N95-31187
Characterization of /11'01/ twin dislocation structures in evaporated titanium thin films by HREM
[DE95-615391] p 2820 N95-31623
Influence of layer order and composition on the magnetic anisotropy of ultra-thin Co sandwiches
[DE95-010608] p 2810 N95-32265
Metallic multilayers at the nanoscale
[DE95-011534] p 3016 N95-32284

METAL FINISHING
SSME Main Combustion Chamber (MCC) hot oil dewaxing p 2777 N95-31777
Minutes of the fourth annual workshop on chromate replacements in light metal finishing
[DE95-010937] p 2810 N95-32241

METAL FOILS
Optimization of a thermoelectric IR-detector for low working temperature
[NASA-CR-198933] p 2880 N95-30752
Surface inspection using FTIR spectroscopy
p 2782 N95-31803

METAL IONS
On-line surfactant monitoring
[DE95-009417] p 2792 N95-30735
Lithium ion aqueous cells
[AD-A293828] p 2905 N95-31554
Plasma source ion implantation of metal ions: Synchronization of cathodic-arc plasma production and target bias pulses
[DE95-009431] p 3006 N95-31613
Target diagnostics for intense lithium ion hohlraum experiments on PBFA 2
[DE95-008517] p 3006 N95-31626
Generalized Ramsauer-Townsend minima in heavy-ion induced electron continua
[DE95-010913] p 2989 N95-32120
Measurements of quantum electrodynamic sensitive transitions in Na-like and Cu-like ions
[DE95-011593] p 3007 N95-32299

METAL JOINTS
Cleanliness evaluation of rough surfaces with diffuse IR reflectance p 2782 N95-31804
Verification of surface preparation for adhesive bonding p 2782 N95-31807

METAL MATRIX COMPOSITES
Fatigue crack growth behavior of a titanium matrix composite under thermomechanical loading
p 2784 N95-30491
TEM-examination of ceramic-metal interfaces
[PB95-196531] p 2813 N95-30664
Ultrasonic characterization of fiber-matrix interphasial properties and damage in high-temperature composites
p 2785 N95-30823
Innovative processing of composites for ultra-high temperature applications, book 2
[AD-A290890] p 2786 N95-30898
Localization in tungsten heavy alloys subjected to shearing deformations under superimposed high pressures
[AD-A293177] p 2804 N95-30977
Ceramic/Metal Composite Circuit-Board-Level Technology for Application Specific Electronic Modules (ASEM's)
[AD-A293183] p 2787 N95-30978
Microstructure and aging response of SiCp reinforced A356 Al metal matrix composite subject to post fabrication thermomechanical processing
[AD-A292975] p 2789 N95-31469
Processing and microstructural evolution of alumina/aluminum alloy and aluminum nitride/aluminum alloy composites by directed melt oxidation
p 2789 N95-31973
The influence of matrix microstructure and temperature on cyclic deformation and fatigue of particle-reinforced 2219 aluminum p 2808 N95-31974
Control of interfacial chemistry and mechanical properties in metal/ceramic composites
p 2790 N95-31976

METAL OXIDES
Voltage surge suppression power circuits
[AD-D017454] p 2860 N95-30726
A study of catalysts and mechanisms in synthesis reactions
[DE95-010177] p 2793 N95-30766
Porous spherical shells and microspheres by electrodispersion precipitation
[DE95-009073] p 2815 N95-30799

METAL PARTICLES
Glass matrix doped with activated luminescent nanocrystalline particles
[AD-D017416] p 2816 N95-31010
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures
p 2799 N95-31198

METAL PLATES
Acoustoelastic stress evaluation in metal plate using absolute shear and longitudinal time-of-flight data
[PB95-197810] p 2892 N95-30458
Influence of adhesives and bonding techniques on the properties of glued timber-steelplate joints
[PB95-211470] p 2813 N95-30599

METAL POWDER
Mechanical alloying processing with application to structural materials
[AD-A290788] p 2802 N95-30404
Optimization of high-temperature superconductor current leads
[DE95-005838] p 2861 N95-30942
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures
p 2799 N95-30990
Operational characteristics of a 200 C LC parallel resonant circuit
[NASA-TM-106983] p 2864 N95-31742

METAL PROPELLANTS
The Al and Al2O3 droplet cloud in solid rocket motors
p 2770 N95-31196
Shuttle Redesigned Solid Rocket Motor aluminum oxide investigations p 2770 N95-31197
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures
p 2799 N95-31198

METAL SHEETS
Surface inspection using FTIR spectroscopy
p 2782 N95-31803

METAL SURFACES
Observation of a low-binding-energy peak in the 2p core-level photoemission from oxidized Al(111)
[PB95-195350] p 2802 N95-30534
STM studies of clean, CO- and O2-exposed Pt(100)-hex-R0.7 deg
[PB95-195376] p 3009 N95-30535
NaK pool-boiler solar receiver durability bench test. Volume 2: Metallurgical analysis
[DE95-010338] p 2905 N95-31640
Compatibility of Single Hydraulic Fluid with military specification fluids, seals and metallurgy
[AD-A292954] p 2821 N95-31663

A design of experiments test to define critical spray cleaning parameters for Brulin 815 GD and Jettacin cleaners p 2779 N95-31790
Standardization of surface contamination analysis systems p 2781 N95-31798
Cleanliness inspection tool for RSRM bond surfaces p 2781 N95-31799
Surface inspection using FTIR spectroscopy p 2782 N95-31803
Cleanliness evaluation of rough surfaces with diffuse IR reflectance p 2782 N95-31804
Verification of surface preparation for adhesive bonding p 2782 N95-31807
The role of surface chemical analysis in a study to select replacement processes for TCA vapor degreasing p 2782 N95-31809

METAL VAPORS
Theoretical absorption spectroscopy of high-temperature metal vapors: Model and experiment compared
[AD-A290872] p 2791 N95-30409

METAL WORKING
Texture development in aluminium extrusion
[PB95-196598] p 2979 N95-30666

METAL-GAS SYSTEMS
Neutronic methods for determination of very low concentrations of hydrogen in metals
[DE95-623967] p 2807 N95-31409

METALLIC STARS
Chromospherically active stars. 6: Giants with compact hot companions and the barium star scenario
[NASA-TM-110641] p 3028 N95-30466

METALLICITY
Chromospherically active stars. 6: Giants with compact hot companions and the barium star scenario
[NASA-TM-110641] p 3028 N95-30466

METALLIZING
High aspect ratio metal microstructures and method for preparing the same
[AD-D017463] p 2803 N95-30750

METALLURGY
Metallurgical and Materials Transactions
[AD-A293617] p 2807 N95-31464

METALORGANIC CHEMICAL VAPOR DEPOSITION
Investigation of polycrystalline thin film CuInSe2 solar cells based on ZnSe windows
[DE95-004068] p 2904 N95-31164

METALS
Mechanical alloying processing with application to structural materials
[AD-A290788] p 2802 N95-30404
Wettability of boron carbide
[PB95-196358] p 2802 N95-30518
TEM-examination of ceramic-metal interfaces
[PB95-196531] p 2813 N95-30664
On-line surfactant monitoring
[DE95-009417] p 2792 N95-30735
Studies of C(60) and C(70) and other fullurenes: Synthesis, derivation, electrochemistry, lubricant properties and new composition materials
[AD-A292726] p 3012 N95-30944
Aqueous TiO2 photocatalysis of metal-EDTA complexes
[DE95-011058] p 2793 N95-31113

METASTABLE ATOMS
Atomic approaches in metastable antiprotonic helium atoms. Reply to Analysis of the lifetimes and fractions of antiprotons trapped in metastable antiprotonic helium states by I. Shimamhura and M. Kimura --- mura
[DE95-737228] p 2986 N95-31658

METASTABLE STATE
Atomic approaches in metastable antiprotonic helium atoms. Reply to Analysis of the lifetimes and fractions of antiprotons trapped in metastable antiprotonic helium states by I. Shimamhura and M. Kimura --- mura
[DE95-737228] p 2986 N95-31658

METEOROLOGICAL BALLOONS
Mexico Wind Resource Assessment Project
[DE95-009202] p 2921 N95-31726

METEOROLOGICAL INSTRUMENTS
Modern methods in meteorological and oceanographic data acquisition and analyses
[AD-A293884] p 2920 N95-31541

METEOROLOGICAL PARAMETERS
Initial evaluation of the Oregon State University planetary boundary layer column model for ITWS applications
[AD-A293775] p 2920 N95-31465
Modern methods in meteorological and oceanographic data acquisition and analyses
[AD-A293884] p 2920 N95-31541
Arabian Sea mixed layer dynamics experiment: Mooring deployment cruise report
[AD-A293684] p 2923 N95-31600
Comparison of satellite-derived MSU brightness temperatures and conventionally-derived fields
[AD-A293692] p 2901 N95-31603
Mexico Wind Resource Assessment Project
[DE95-009202] p 2921 N95-31726

METEOROLOGICAL RADAR
Multiparameter radar measurements of precipitation in complex terrain: Meteorological and hydrological applications
[AD-A290786] p 2918 N95-30403
Offshore next generation weather radar (NEXRAD) OT&E integration and OT&E operational test
[AD-A293223] p 2848 N95-30902
Terminal doppler weather radar (TDWR) build 5B operational test and evaluation (OT&E) integration and OT&E operational test plan
[AD-A293251] p 2848 N95-30910
LAWS hurricane studies
[NASA-CR-189438] p 2919 N95-31128
Initial evaluation of the Oregon State University planetary boundary layer column model for ITWS applications
[AD-A293775] p 2920 N95-31465

METEOROLOGICAL SATELLITES
Support of environmental requirements for cloud analysis and archive (SERCAA): Database management facility
[AD-A293938] p 2920 N95-31522
Anticipated uncertainty budgets of PRARETIME and T2L2 techniques as applied to ExTRAS p 2968 N95-32326

METEOROLOGICAL SERVICES
Integrated terminal weather system (ITWS) demonstration and validation operational test and evaluation
[AD-A293932] p 2749 N95-31521
The ATC operational evaluation of the prototype integrated terminal weather system (ITWS) at Dallas/Fort Worth and Orlando airports (May-September 1993)
[AD-A293808] p 2921 N95-31587

METEOROLOGY
Geostatistics and hydrology. Part 3. Hydro-meteorological network design
[PB95-206462] p 2900 N95-30818
JPL Physical Oceanography Distributed Active Archive Center (PO.DAAC) data availability, version 1-94
[NASA-CR-198871] p 2922 N95-30859
Directory of global environmental sciences in Japan p 2899 N95-31413
Preliminary design for Arctic atmospheric radiative transfer experiments
[DE95-009580] p 2917 N95-32080

METHANE
A search for interstellar CH3D: Limits to the methane abundance in Orion-KL
[NASA-CR-198932] p 3029 N95-30751
Self-lubricating, TiN-MoS2 composite coatings produced by simultaneous deposition from Ti((CH3))2N4/NH3/MoF6H2S gas mixture
[DE95-010359] p 2788 N95-31403

METHOD OF CHARACTERISTICS
Holistic analysis of gamma-ray spectra in instrumental neutron activation analysis
[PB95-214458] p 2979 N95-30639

METHYL ALCOHOL
BioFacts: Fueling a stronger economy. Methanol from biomass, revision 2
[DE95-010302] p 2836 N95-31638
BioFacts: Fueling a stronger economy, global warming and biofuels emissions
[DE94-006864] p 2910 N95-31821

METHYL COMPOUNDS
A study of catalysts and mechanisms in synthesis reactions
[DE95-010177] p 2793 N95-30766
Specific rate coefficients from vibrational overtone activation of 1-methylcyclopropene
[AD-A288755] p 2793 N95-31014

METRIC SPACE
Generalized Kummer surfaces and differentiable invariants of Noether-Horikawa surfaces 1
[DE95-613382] p 2956 N95-30608
Good metric spaces without good parameterizations
[PB95-208427] p 2957 N95-30622
Determination of the position of Jupiter from radio metric tracking of Voyager 1 p 2854 N95-32222
Data reduction of piecewise linear curves
[PB95-212270] p 2962 N95-32256

METROLOGY
Metrology of chrome on quartz photomasks using low voltage scanning electron microscopy. Part 1: Physical SEM parameters
[PB95-195780] p 2880 N95-30693
Computer-aided inspection process definition: Development of an expert planning and programming system for coordinate metrology
[DE95-010411] p 2940 N95-31404

MICROANALYSIS
Crystallization of sol-gel derived lead zirconate titanate thin films in argon and oxygen atmospheres
[DE95-615230] p 3009 N95-30421
Orientation of rapid thermally annealed lead zirconate titanate thin films on (111) Pt substrate
[DE95-615232] p 2811 N95-30422
Synthesis of carbo-nitride films using high-energy shock plasma deposition
[DE95-615231] p 2811 N95-30450
Interface degradation in CAS/Nicalon during elevated temperature aging
[DE95-008843] p 2812 N95-30543
Determination of site-occupancies in aluminide intermetallics by ALCHEMI
[DE95-009179] p 2803 N95-30733
A study of the gas-phase processes of RDX combustion using a triple quadrupole mass-spectrometer p 2801 N95-31315
Interfacial segregation and deformation of superplastically deformed Al-Mg-Mn alloys
[DE95-009572] p 2809 N95-32052

MICROCHANNEL PLATES
Calibration of multichannel analyzer of charge-exchange atoms
[DE95-614178] p 2987 N95-32053

MICROCOMPUTERS
User-friendly microcomputer interface with optimization languages AF94-007
[AD-A293184] p 2932 N95-32257

MICROCRACKS
Characterization of compressive damage mechanisms in ceramic and polymeric matrix composite materials
[AD-A293171] p 2787 N95-30975
A numerical analysis of crack growth in microcracking ceramic and ceramic composites
[DE95-010132] p 2897 N95-32024

MICROELECTRONICS
Micromachined sensor and actuator research at the Microelectronics Development Laboratory
[DE95-008540] p 2878 N95-30384
System considerations for efficient communication and storage of MSTI image data
[NASA-CR-198869] p 3024 N95-30858
HTS Josephson technology on silicon with application to high speed digital microelectronics
[AD-A288627] p 2861 N95-31147
Solid state research
[AD-A293083] p 3015 N95-31826
The potential for microtechnology applications in energy systems: Results of an experts workshop
[DE95-009103] p 2865 N95-32077

MICROGRAVITY
Numerical modeling of Bridgman growth of PbSnTe in a magnetic field
[NASA-TM-106996] p 2837 N95-31359
Microgravity research opportunities for the 1990s
[NASA-CR-199109] p 2838 N95-31983

MICROGRAVITY APPLICATIONS
Microgravity research opportunities for the 1990s
[NASA-CR-199109] p 2838 N95-31983

MICROHARDNESS
Synthesis of carbo-nitride films using high-energy shock plasma deposition
[DE95-615231] p 2811 N95-30450
Microstructural and mechanical property changes in model Fe-Cu alloys
[DE95-010117] p 2805 N95-31105

MICROMACHINING
Micromachined sensor and actuator research at the Microelectronics Development Laboratory
[DE95-008540] p 2878 N95-30384
Annual meeting of the Advanced Light Source Users' Association
[DE95-009373] p 3000 N95-31635
Terahertz spectroscopy of silicon micromachined three-dimensional photonic bandgap crystal
[DE95-010233] p 3015 N95-32037

MICROMECHANICS
Micromachined sensor and actuator research at the Microelectronics Development Laboratory
[DE95-008540] p 2878 N95-30384
Review of environmental effects in intermetallics
[DE95-010120] p 2805 N95-31106
Modeling of fiber-reinforced composites incorporating distinct interface properties p 2787 N95-31110
Development and computer implementation of design/analysis techniques for multilayered composite structures. Probabilistic fiber composite micromechanics
[NASA-CR-198979] p 2930 N95-31134
Elastic and inelastic micromechanical analysis of functionally graded materials and laminated structures using transformation fields p 2787 N95-31347

MICROPARTICLES
Porous spherical shells and microspheres by electrodiapersion precipitation
[DE95-009073] p 2815 N95-30799
Particle filtration: An analysis using the method of volume averaging
[DE95-009467] p 2875 N95-31592
Particle filtration: A comparison between theory and experiment
[DE95-009442] p 2875 N95-31637

MICROPHONES
Method for extracting forward acoustic wave components from rotating microphone measurements in the inlets of turbofan engines
[NASA-CR-195457] p 2755 N95-30779

MICROSCOPY
Tunable composite membranes for gas separations
[DE95-010602] p 2822 N95-32075

MICROSTRIP ANTENNAS
Scattering and radiation from cylindrically conformal antennas p 2847 N95-30669
Proceedings of the antenna applications symposium. volume 2
[AD-A293259] p 2850 N95-31387
Portable digital Satellite News Gathering (SNG) RF terminal using a flat antenna
[NHK-LABS-NOTE-436] p 2853 N95-31744

MICROSTRIP DEVICES
Experimental characterisation of gas microstrip detectors. Part 3: Lifetime characteristics
[PB95-192845] p 2880 N95-30691

MICROSTRUCTURE
Interfacial studies of coated fiber reinforced glass-ceramic matrix composites
[AD-A290780] p 2783 N95-30433
Synthesis of carbo-nitride films using high-energy shock plasma deposition
[DE95-615231] p 2811 N95-30450
Morphology and microstructure of (111) crystalline CeO2 films grown on amorphous SiO2 substrates by pulsed-laser ablation
[DE95-008842] p 3009 N95-30542
Semiconductor nanocrystals formed in SiO2 by ion implantation
[DE95-008900] p 2978 N95-30546
Diffraction-line broadening analysis and stress relaxation in thin metal layers
[PB95-213898] p 2893 N95-30634
TEM-examination of ceramic-metal interfaces
[PB95-196531] p 2813 N95-30664
A metallurgical approach toward alloying in rare earth permanent magnet systems
[DE95-010242] p 2966 N95-30668
Formation of cavities in Si and their chemisorption of materials
[DE95-009586] p 2980 N95-30708
High aspect ratio metal microstructures and method for preparing the same
[AD-D017463] p 2803 N95-30750
Dissolution of eutectic microstructures
[DE95-010244] p 2804 N95-30757
TV-VI semiconductor quantum well lasers, physics and engineering p 2883 N95-30805
Physical modelling of microstructural evolution during thermomechanical processing of aluminium alloys
[PB95-196341] p 2805 N95-31053
Microstructural and mechanical property changes in model Fe-Cu alloys
[DE95-010117] p 2805 N95-31105
Effect of cyclic loading on the creep performance of silicon nitride
[DE95-010289] p 2894 N95-31131
Effect of irradiation spectrum on the microstructure of ion-irradiated Al2O3
[DE95-010225] p 2806 N95-31188
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures p 2799 N95-31198
Self-lubricating, TiN-MoS2 composite coatings produced by simultaneous deposition from Ti((CH3))2N4/NH3/MoF6H2S gas mixture
[DE95-010359] p 2788 N95-31403
Transitions, defects, and whiskered microstructures
[AD-A292796] p 3014 N95-31438
Microstructure and aging response of SiCp reinforced A356 Al metal matrix composite subject to post fabrication thermomechanical processing
[AD-A292975] p 2789 N95-31469
In situ composites in the aluminum nitride-alumina system
[AD-A293776] p 2789 N95-31509
Modeling of stress distributions on the microstructural level in Alloy 600
[DE95-009135] p 2807 N95-31632
Differences in creep performance of a HIPed silicon nitride in ambient air and inert environments
[DE95-009172] p 2796 N95-31633
Annual meeting of the Advanced Light Source Users' Association
[DE95-009373] p 3000 N95-31635
Influence of strain rate and temperature on the mechanical behavior of iron aluminide-based alloys
[DE95-009426] p 2808 N95-31636
Modeling of grain boundary stresses in Alloy 600
[DE95-009033] p 2808 N95-31825
Processing and microstructural evolution of alumina/aluminum alloy and aluminum nitride/aluminum alloy composites by directed melt oxidation p 2789 N95-31973
The influence of matrix microstructure and temperature on cyclic deformation and fatigue of particle-reinforced 2219 aluminum p 2808 N95-31974
The influence of microstructure on creep deformation in near-gamma TiAl alloys p 2808 N95-31975
A study of Damascus steel
[DE95-010127] p 2809 N95-32023
Microstructure of Al2O3 irradiated with an applied electric field
[DE95-010278] p 2822 N95-32043
Synthesis and characterization of nanophase face-centered-cubic titanium
[DE95-009533] p 2809 N95-32051
Interfacial segregation and deformation of superplastically deformed Al-Mg-Mn alloys
[DE95-009572] p 2809 N95-32052
Creep of a fine-grained, fully-lamellar, two-phase TiAl alloy at 760 C
[DE95-009531] p 2810 N95-32272

MICROWAVE ABSORPTION
Microwave coupling into a slotted cavity. Additional results
[PB95-210381] p 2847 N95-30629

MICROWAVE AMPLIFIERS
Microwave repeater with broadband active and/or passive isolation control
[AD-D017358] p 2846 N95-30417
X-band magnicon amplifier research at the Naval Research Laboratory
[AD-A293203] p 3013 N95-30984
High energy pulsed microwave sources
[AD-A293334] p 2849 N95-31142
Stable high-power harmonic gyro-amplifiers
[AD-A293697] p 2881 N95-31828

MICROWAVE ANTENNAS
Microwave repeater with broadband active and/or passive isolation control
[AD-D017358] p 2846 N95-30417
Proceedings of the antenna applications symposium. volume 2
[AD-A293259] p 2850 N95-31387
DSS-24 microwave holography measurements p 2857 N95-32239

MICROWAVE CIRCUITS
Space qualified hybrid superconductor/semiconductor planar oscillator circuit
[NASA-TM-106978] p 3011 N95-30703
High performance YBCO films
[AD-A293045] p 2863 N95-31669
Hyperfrequency components
[PB95-208302] p 2866 N95-32369

MICROWAVE COUPLING
Microwave coupling into a slotted cavity. Additional results
[PB95-210381] p 2847 N95-30629

MICROWAVE EQUIPMENT
Microwave electro-optic mixer
[AD-D017328] p 2862 N95-31179
Millimeter wave radiometer utility study
[AD-A293811] p 2852 N95-31590
Hyperfrequency components
[PB95-208302] p 2866 N95-32369

MICROWAVE FREQUENCIES
Microwave coupling into a slotted cavity. Additional results
[PB95-210381] p 2847 N95-30629
High energy pulsed microwave sources
[AD-A293334] p 2849 N95-31142

MICROWAVE HOLOGRAPHY
The Telecommunications and Data Acquisition Report
[NASA-CR-198911] p 2854 N95-32221
DSS-24 microwave holography measurements p 2857 N95-32239

MICROWAVE IMAGERY
Weather influence on passive microwave brightness temperatures
[PB95-195384] p 2900 N95-30536
Research in ground-to-air microwave imaging
[AD-A292907] p 2852 N95-31551
Validation of special sensor microwave/imager ocean surface wind retrievals in equatorial regions
[AD-A293750] p 2920 N95-31571
Millimeter wave radiometer utility study
[AD-A293811] p 2852 N95-31590

MICROWAVE LANDING SYSTEMS
Flight test evaluation of the Stanford University/United Airlines differential GPS Category 3 automatic landing system
[NASA-TM-110354] p 2743 N95-30788
Development of advanced approach and departure procedures. Failure scenarios
[PB95-198123] p 2748 N95-30815

MICROWAVE OSCILLATORS
Space qualified hybrid superconductor/semiconductor planar oscillator circuit
[NASA-TM-106978] p 3011 N95-30703

MICROWAVE RADIOMETERS
Radiometer measurements of sea ice in the Gulf of Bothnia 1992
[PB95-206611] p 2900 N95-30718
Millimeter wave radiometer utility study
[AD-A293811] p 2852 N95-31590

MICROWAVE SCATTERING
Investigation of microwave backscatter from the air-sea interface
[NASA-CR-198854] p 2851 N95-31457

MICROWAVE SENSORS
Feasibility study concerning an active millimeterwave sensor. Project phase MMS2.1
[PB95-210399] p 2882 N95-32245

MICROWAVE SIGNATURES
Weather influence on passive microwave brightness temperatures
[PB95-195384] p 2900 N95-30536

MICROWAVE SOUNDING
Comparison of satellite-derived MSU brightness temperatures and conventionally-derived fields
[AD-A293692] p 2901 N95-31603
Brightness temperature simulations for the physical and synoptic interpretation of advanced microwave sounding unit moisture channels p 2921 N95-31721

MICROWAVE TRANSMISSION
Microwave repeater with broadband active and/or passive isolation control
[AD-D017358] p 2846 N95-30417

MICROWAVES
Microwave coupling into a slotted cavity. Additional results
[PB95-210381] p 2847 N95-30629
High energy pulsed microwave sources
[AD-A293334] p 2849 N95-31142
Use of a variable frequency source with a single-mode cavity to process ceramic filaments
[DE95-010992] p 2817 N95-31152
A microwave plasma cleaning apparatus p 2779 N95-31786

MID-OCEAN RIDGES
Studies in marine tectonics: Propagating rifts, depth anomalies and subduction zone anisotropy p 2923 N95-31719

MIDDLE ATMOSPHERE
Modeling and parameterization of gravity wave breaking, interactions, and instability processes in the lower and middle atmosphere
[AD-A292740] p 2914 N95-31278
Calculation of a residual mean meridional circulation for a zonal-mean tracer transport model
[DE95-009474] p 2911 N95-32350

MILITARY AIRCRAFT
Catapult-launching of the RAFALE design and experimentation p 2752 N95-32008
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. C-17 Aircraft program: Improvements in initial provisioning process
[GAO/NSIAD-94-63] p 2741 N95-32194

MILITARY AVIATION
Environmental support of naval aviation
[AD-A292873] p 2747 N95-31454

MILITARY HELICOPTERS
Wide field of view helmet display systems mounted for helicopter simulation
[AD-A293123] p 2930 N95-30688
Preparation of S-70A-9 Black Hawk helicopter for flight tests to investigate cause of cracking of inner fuselage panel
[AD-A293891] p 2752 N95-31544

MILITARY OPERATIONS
Unmanned aerial vehicles. 1994 master plan p 2751 N95-31416

MILITARY PSYCHOLOGY
Psychological pilot selection in the US Air Force, the Luftwaffe, and the German Aerospace Research Establishment
[AD-A293779] p 2928 N95-31376

MILLIMETER WAVES
Millimeter wave radiometer utility study
[AD-A293811] p 2852 N95-31590
Infrared and millimeter wave detection using thin films of Pb doped BiSrCaCuO superconductor
p 2840 N95-32129
Feasibility study concerning an active millimeterwave sensor. Project phase MMS2.1
[PB95-210399] p 2882 N95-32245
MIMD (COMPUTERS)
Implementation of KIVA-3 on distributed memory MIMD computers
[DE95-010288] p 2931 N95-31130
MINERAL OILS
Spectroscopic ellipsometry as a sensitive monitor of materials contamination p 2782 N95-31808
MINIATURIZATION
The potential for microtechnology applications in energy systems: Results of an experts workshop
[DE95-009103] p 2865 N95-32077
MINIMA
Properties of new materials relevant to energy and fuel research
[AD-A289734] p 2825 N95-31149
Generalized Ramsauer-Townsend minima in heavy-ion induced electron continua
[DE95-010913] p 2989 N95-32120
MINIMAX TECHNIQUE
Representation of feedback operators for hyperbolic systems
[NASA-CR-198171] p 2960 N95-31319
MINKOWSKI SPACE
The solutions of affine and conformal affine Toda field theory
[DE95-616280] p 2965 N95-30430
On drawing complicated 3D surfaces
[DE95-619199] p 2939 N95-31257
A compact expression for bilinear combination of Dirac spinors via world tensors
[DE95-619200] p 2960 N95-31258
MINORITY CARRIERS
Minority and majority carrier transport characterization in compound semiconductors
[DE95-010873] p 3014 N95-31233
MIR SPACE STATION
STS-71 post flight presentation
[NASA-TM-110658] p 2764 N95-30852
Mir 18 post flight presentation
[NASA-TM-110657] p 2766 N95-30854
MIRRORS
Tunable ytterbium-doped solid state laser
[AD-D017449] p 2885 N95-31274
The effect of ray curvature on Lloyd's mirror fringe estimates and source localisation
[DSTO-TR-0064] p 3001 N95-31745
Enhanced brightness x-ray lasers
[DE95-010735] p 2886 N95-32029
Sandia National Lab's precision laser tracking systems
[DE95-009837] p 2886 N95-32143
MISSILE CONTROL
Results from tests of the Kearfott T16-B Inertial Measurement Unit
[PB95-212031] p 2879 N95-30502
Results from tests of the Honeywell integrated flight management unit
[PB95-211355] p 2748 N95-30597
Guidance and Control for Future Air-Defence Systems
[AGARD-CP-555] p 2839 N95-32123
MISSILE DEFENSE
Guidance and Control for Future Air-Defence Systems
[AGARD-CP-555] p 2839 N95-32123
Possible allied ballistic missile defense systems: Related guidance and control requirements
p 2840 N95-32126
TMD detection and tracking using improved AWACS sensors p 2840 N95-32128
Acquisition, tracking, pointing and fire control for Ballistic Missile Defense p 2841 N95-32131
Using a Red Team to devise countermeasures
p 2842 N95-32141
MISSILE DETECTION
TMD detection and tracking using improved AWACS sensors p 2840 N95-32128
Optimal infrared detector configurations for air target detection p 2841 N95-32130
MISSILE SYSTEMS
Electronic combat and lethal defense suppression
p 2842 N95-32140
MISSILE TRACKING
TMD detection and tracking using improved AWACS sensors p 2840 N95-32128
Acquisition, tracking, pointing and fire control for Ballistic Missile Defense p 2841 N95-32131
The High Altitude Balloon Experiment demonstration of acquisition, tracking, and pointing technologies (HABE-ATP) p 2841 N95-32132
MISSION PLANNING
An architectural approach to strategic information systems planning for the Office of Naval Intelligence
[AD-A289930] p 3024 N95-30928
Integration issues in modular mission management aid development p 2841 N95-32133
Electronic combat and lethal defense suppression
p 2842 N95-32140
Stratospheric Observatory For Infrared Astronomy (SOFIA). Phase A: System concept description
[NASA-TM-110669] p 3002 N95-32187
MIXERS
Microwave electro-optic mixer
[AD-D017328] p 2862 N95-31179
MIXING
Effects of initial conditions on a single jet in crossflow
[NASA-TM-107002] p 2754 N95-30589
MIXING LAYERS (FLUIDS)
Small scale turbulence in a plane mixing layer
p 2866 N95-30449
Study of effect of bubbles on a free-shear layer
p 2872 N95-31100
Viscous heating of liquid layers under intense shear
p 2827 N95-31206
Chaos-enhanced transport and aggregation in chaotic flows
[AD-A293892] p 3020 N95-31545
Global Ultraviolet Imager (GUVI) investigation
[NASA-CR-189430] p 2917 N95-31820
MIXING LENGTH FLOW THEORY
A turbulence model for steady and unsteady boundary layers in strong pressure gradients p 2868 N95-30840
A turbulence module for the NPARC code
[NASA-CR-198358] p 2959 N95-30855
MOBILITY
In situ composites in the aluminum nitride-alumina system
[AD-A293776] p 2789 N95-31509
MODAL RESPONSE
Finite element analysis of smart structures and modal testing of a flexible spacecraft arm
[AD-A293761] p 2890 N95-31576
MODEL REFERENCE ADAPTIVE CONTROL
New adaptive methods for reconfigurable flight control systems, appendix 1
[AD-A292711] p 2756 N95-30937
MODELS
Expert system for assessing accuracy of models of physical phenomena and for selecting alternate models in the presence of noise
[AD-D017348] p 2974 N95-30550
The effect of interface properties on nickel base alloy composites
[NASA-CR-198363] p 2785 N95-30787
Unification of LARCH and Z-based object models to support algebraically-based design refinement: The LARCH perspective
[AD-A289235] p 2935 N95-30999
Solid Modeling Aerospace Research Tool (SMART) user's guide, version 2.0
[NASA-TM-4431] p 2940 N95-31420
Thermal rho's in the quark-gluon plasma
[DE95-009543] p 3008 N95-32357
MODEMS
High resolution time interval counter
p 2969 N95-32331
MODES (STANDING WAVES)
Harmonic gyrotron amplifiers and phase-locked oscillators
[AD-A293185] p 2861 N95-30979
MODULARITY
Development of flexible feeder techniques
[PB95-196317] p 2934 N95-30663
MODULATION
Development of a novel wind lidar, phase 1
[AD-A292703] p 2849 N95-30935
Tune modulation due to synchrotron oscillations and chromaticity, and the dynamic aperture
[DE95-011566] p 2995 N95-32297
MODULATORS
Microwave electro-optic mixer
[AD-D017328] p 2862 N95-31179
Improved linear dynamic range in externally modulated fiber-optic links p 3001 N95-31950
MODULES
Intelligent finite element submodeling of multichip modules for reliability analysis
[AD-A292911] p 2940 N95-31455
MODULUS OF ELASTICITY
Optical fiber pressure sensor for liquid level monitoring
[AD-D017346] p 2996 N95-30679
Rationale and summary of methods for determining ultrasonic properties of materials at Lawrence Livermore National Laboratory
[DE95-009475] p 2795 N95-31593
An inverse method to measure the axial modulus of composite materials under tension
[AD-A293042] p 2789 N95-31668
MOIRE INTERFEROMETRY
An evaluation of the Iosipescu specimen for composite materials shear property measurement
[NASA-CR-198755] p 2896 N95-31418
MOJAVE DESERT (CA)
Environmental projects. Volume 16: Waste minimization assessment
[NASA-CR-198861] p 2909 N95-31651
MOLECULAR BEAM EPITAXY
Visible light emitting materials and injection devices
[AD-A292701] p 2786 N95-30934
Pseudomorphic heterostructure materials for high performance devices
[AD-A292906] p 2788 N95-31384
MOLECULAR BEAMS
Determination of electric and magnetic fields in open trap plasmas by means of atomic-molecular beam hydrogen isotopes
[DE95-614177] p 3006 N95-31680
MOLECULAR BIOLOGY
Implementation and performance of the pseudoknot problem in Sisal
[DE95-009573] p 2925 N95-32358
MOLECULAR CLOUDS
Molecular gas in starburst galaxies: Line intensities and physical conditions
[PB95-208021] p 3029 N95-30569
A search for interstellar CH3D: Limits to the methane abundance in Orion-KL
[NASA-CR-198932] p 3029 N95-30751
MOLECULAR CLUSTERS
Molecular nanoclusters as precursors to conductive thin films and crystals
[AD-A290278] p 3014 N95-31189
X-ray diffraction study of clusters in a-tC films
[DE95-010860] p 2794 N95-31393
MOLECULAR COLLISIONS
State resolved dynamics of ion-molecule collisions in a flowing afterglow
[AD-A290895] p 2976 N95-30410
Inversion of the total cross sections for electron-molecule and electron-atom scattering
[DE95-616466] p 2978 N95-30583
Analytic cross sections for collisions of H, H2, He and Li atoms and ions with atoms and molecules
[DE95-722055] p 2979 N95-30654
Energy transfer dynamics in isolated and colliding highly vibrationally excited molecules
[AD-A293304] p 2981 N95-30952
The passage from transitional to free molecular plumes p 2871 N95-30994
MOLECULAR DIFFUSION
Fischer-tropsch synthesis in supercritical fluids
[DE95-009631] p 2792 N95-30709
MOLECULAR DYNAMICS
Energy transfer dynamics in isolated and colliding highly vibrationally excited molecules
[AD-A293304] p 2981 N95-30952
Molecular dynamics simulations of high energy cascades in iron
[DE95-010116] p 2982 N95-31104
Molecular models for nitro compounds
p 2831 N95-31293
MOLECULAR ELECTRONICS
Electronic structure of Donor-Spacer-Acceptor molecules of potential interest for molecular electronics III: Geometry and absorption spectrum of CH3-Alpha P3CNQ
[AD-A293662] p 2985 N95-31609
Electronic structure of Donor-Spacer-Acceptor molecules of potential interest for molecular electronics 4. Geometry and device properties of P3CNQ and Q3CNQ
[AD-A293717] p 2986 N95-31832
MOLECULAR ENERGY LEVELS
Electronic structure of Donor-Spacer-Acceptor molecules of potential interest for molecular electronics 4. Geometry and device properties of P3CNQ and Q3CNQ
[AD-A293717] p 2986 N95-31832
MOLECULAR EXCITATION
Molecular gas in starburst galaxies: Line intensities and physical conditions
[PB95-208021] p 3029 N95-30569
Energy transfer dynamics in isolated and colliding highly vibrationally excited molecules
[AD-A293304] p 2981 N95-30952
Ferromagnetic Potts model in a magnetic field: Finite lattice extrapolation of the (1 + 1)-dimensional Hamiltonian
[DE95-614447] p 3012 N95-30958

Dynamics of an inhomogeneous anisotropic antiferromagnetic spin chain
[DE95-614449] p 3013 N95-30959
Comparison of DSMC predictions with temporally resolved vibrational state measurements in NO
p 2872 N95-30996

MOLECULAR GASES
State resolved dynamics of ion-molecule collisions in a flowing afterglow
[AD-A290895] p 2976 N95-30410
Molecular gas in starburst galaxies: Line intensities and physical conditions
[PB95-208021] p 3029 N95-30589
A search for interstellar CH3D: Limits to the methane abundance in Orion-KL
[NASA-CR-198932] p 3029 N95-30751
SSUSI single sensor auroral E-layer algorithm: Functional description
[AD-A288630] p 2914 N95-31012
An analysis of gas phase ethanol/water chemistry for diamond CVD
[AD-A293009] p 2795 N95-31473

MOLECULAR INTERACTIONS
Photochemistry of intermolecular C-H bond activation reactions
[DE95-008991] p 2978 N95-30574
Excited-state complexes of conjugated polymers: Novel photophysical processes and optoelectronic materials
[AD-A292958] p 2819 N95-31462

MOLECULAR IONS
State resolved dynamics of ion-molecule collisions in a flowing afterglow
[AD-A290895] p 2976 N95-30410

MOLECULAR ORBITALS
Molecular modeling of PMN ceramics
[AD-A290879] p 2813 N95-30560
Estimating heat of formation of energetic compounds using corrected semiempirical molecular orbital theory
p 2800 N95-31294
An ab initio study of the reaction HNO+NO yields OH+N2O: Preliminary results p 2801 N95-31308

MOLECULAR PHYSICS
Analytic cross sections for collisions of H, H2, He and Li atoms and ions with atoms and molecules
[DE95-722055] p 2979 N95-30654
From molecular to macromolecular liquid crystals
[AD-A293170] p 2816 N95-30974

MOLECULAR SPECTROSCOPY
The 49th International Symposium on Molecular Spectroscopy
[AD-A292708] p 2793 N95-30936

MOLECULAR STRUCTURE
Lanthanide(III) catalyzed reactions: Structure an d thermodynamics of intermediate complexes, and implications for reactivity
[PB95-197000] p 3019 N95-30775
X-ray diffraction study of clusters in a-tC films
[DE95-010860] p 2794 N95-31393
Conjugated aromatic polyimines. 2. Synthesis, structure, and properties of new aromatic polyazomethines
[AD-A292955] p 2819 N95-31461
Effects of molecular structure on the electroactive and optical properties of conjugated rigid-rod polybenzobisazoles
[AD-A292968] p 2819 N95-31467
Absorption and ionization spectra of model rubredoxins
[AD-A293668] p 2796 N95-31691
Electronic structure of Donor-Spacer-Acceptor molecules of potential interest for molecular electronics 4. Geometry and device properties of P3CNQ and Q3CNQ
[AD-A293717] p 2986 N95-31832

MOLECULES
State resolved dynamics of ion-molecule collisions in a flowing afterglow
[AD-A290895] p 2976 N95-30410
Photophysical properties of opto-electric molecules studied by time-resolved microwave conductivity
[PB95-196994] p 2980 N95-30774
The 49th International Symposium on Molecular Spectroscopy
[AD-A292708] p 2793 N95-30936
Experimental investigation of optical nonlinearities in conjugated polymers
[AD-A288353] p 2884 N95-31145
Properties of new materials relevant to energy and fuel research
[AD-A289734] p 2825 N95-31149
Electronic structure of Donor-Spacer-Acceptor molecules of potential interest for molecular electronics III: Geometry and absorption spectrum of CH3-Alpha P3CNQ
[AD-A293662] p 2985 N95-31609
Ultrasensitive fluorescence detection and photophysics in microdroplets
[DE95-010283] p 2798 N95-32086

MOLYBDENUM
Processing and characterization of nanocrystalline molybdenum disilicide (MoSi2) consolidated by hot isostatic pressing (HIP)
[DE95-010243] p 3012 N95-30756
The electrodeposition of low contraction chromium/molybdenum alloys using pulse-reverse plating
[AD-A292727] p 2804 N95-30945

MOLYBDENUM COMPOUNDS
Processing and characterization of nanocrystalline molybdenum disilicide (MoSi2) consolidated by hot isostatic pressing (HIP)
[DE95-010243] p 3012 N95-30756

MOLYBDENUM DISULFIDES
Self-lubricating, TiN-MoS2 composite coatings produced by simultaneous deposition from Ti((CH3))2N4/NH3/MoF6H2S gas mixture
[DE95-010359] p 2788 N95-31403

MOLYBDENUM SULFIDES
Self-lubricating, TiN-MoS2 composite coatings produced by simultaneous deposition from Ti((CH3))2N4/NH3/MoF6H2S gas mixture
[DE95-010359] p 2788 N95-31403

MOMENTUM
Shear flow effects on ion thermal transport in tokamaks
[DE95-009115] p 3005 N95-30801
Instantaneous chiral quark model for relativistic mesons in a hot and dense medium
[DE95-613782] p 2980 N95-30911
Spin momentum correlation (handedness) in the process of four pion production in the electron-positron collisions
[DE95-613690] p 2988 N95-32093

MOMENTUM THEORY
Velocity boundary conditions for vorticity formulations of the incompressible Navier-Stokes equations
[DE95-008715] p 2866 N95-30464
On convective effects in sedimentation of concentrated suspensions with high effective gravity
[TRITA-NA-9316] p 2794 N95-31356

MOMENTUM TRANSFER
Renormcharges in V-A theories
[DE95-613689] p 2985 N95-31622
Recoil longitudinal momentum spectroscopy of electron capture from He by O(7+) and F(8+)
[DE95-010823] p 2990 N95-32274

MONOMERS
Phthalonitrile prepolymer as high temperature sizing material for composite fibers
[AD-D017447] p 2818 N95-31272
Novel unsymmetrical polydiacetylenes as materials for second and third order nonlinear optics
[AD-A293020] p 3001 N95-31700

MONOMOLECULAR FILMS
Metallic multilayers at the nanoscale
[DE95-011534] p 3016 N95-32284

MONOPOLES
Design of systems for active sound control
[PB95-197869] p 2973 N95-30461

MONOPROPELLANTS
Viscous heating of liquid layers under intense shear
p 2827 N95-31206
Numerical study of shear-induced heating in high-speed nozzle flow of liquid monopropellant
p 2828 N95-31207

MONTE CARLO METHOD
MVP/GMVP: General purpose Monte Carlo codes for neutron and photon transport calculations based on continuous energy and multigroup methods
[DE95-722072] p 2979 N95-30656
A Monte-Carlo model of ionic transport across a solid interface
[DE95-613447] p 3011 N95-30737
The passage from transitional to free molecular plumes p 2871 N95-30994
Comparison of DSMC predictions with temporally resolved vibrational state measurements in NO
p 2872 N95-30996
X-ray performance of the engineering prototype Stellar x-ray polarimeter
[DE95-010268] p 3028 N95-31129
Development and computer implementation of design/analysis techniques for multilayered composite structures. Probabilistic fiber composite micromechanics
[NASA-CR-198979] p 2930 N95-31134
MCNP analyses of criticality calculation results
[DE95-010886] p 2960 N95-31253
A new goodness-of-fit test for the gamma distribution based on sample spacings from complete and censored samples
[AD-A293875] p 2961 N95-31518
Monte Carlo code for evaluating the Boundary Layer Illumination and Radiation Balance model (BLIRB)
[AD-A293963] p 2915 N95-31560
Monte Carlo tests of the ELIPGRID-PC algorithm
[DE95-010811] p 2943 N95-32030
Monte Carlo simulations of muon production
[DE95-009554] p 2988 N95-32063
A stochastic EM estimator in the presence of missing data: Theory and applications
[DE95-010329] p 2944 N95-32089
Optimal infrared detector configurations for air target detection p 2841 N95-32130
LES, DNS and RANS for the analysis of high-speed turbulent reacting flows
[NASA-CR-199075] p 2878 N95-32219
Monte Carlo simulations of precise timekeeping in the Milstar communication satellite system
p 2970 N95-32336

MOODS
Forward rapid rotation shiftwork in USAF air traffic controllers: Sleep, activity, fatigue and mood analyses
[AD-A293448] p 2927 N95-31373

MOON
DEPSCOR92-Wide field spectral imager
[AD-A293079] p 2997 N95-31005
Relativistic timescale analysis suggests lunar theory revision p 2970 N95-32333

MOORING
Arabian Sea mixed layer dynamics experiment: Mooring deployment cruise report
[AD-A293684] p 2923 N95-31600

MORPHOLOGY
Morphology and microstructure of (111) crystalline CeO2 films grown on amorphous SiO2 substrates by pulsed-laser ablation
[DE95-008842] p 3009 N95-30542
Dissolution of eutectic microstructures
[DE95-010244] p 2804 N95-30757
Molecular nanoclusters as precursors to conductive thin films and crystals
[AD-A290278] p 3014 N95-31189
Excited-state complexes of conjugated polymers
[AD-A292960] p 2819 N95-31466

MORSE POTENTIAL
Study of the generalized solutions of n-body type problems with weak forces
[DE95-613381] p 2958 N95-30820

MORTALITY
Particulate air pollution and increased mortality: Biological plausibility for causal relationship
[DE95-006161] p 2909 N95-31703

MOSAICS
Effects of mosaicity on Parametric X-Radiation production
[AD-A293677] p 2985 N95-31597

MOTION
Nonparametric recognition of nonrigid motion
[AD-A293630] p 2963 N95-31565

MOTOR VEHICLES
Natural gas liquefier for vehicle fuel
[AD-A293619] p 2836 N95-31564

MSM (SEMICONDUCTORS)
Opto-electronic components from non-stoichiometric 3-5 materials
[AD-A293206] p 3013 N95-30985

MULTIBEAM ANTENNAS
Proceedings of the antenna applications symposium. volume 2
[AD-A293259] p 2850 N95-31387

MULTIBLOCK GRIDS
Numerical solution of the full potential equation using a chimera grid approach
[NASA-TM-110360] p 2744 N95-32188

MULTICHANNEL COMMUNICATION
Passive, multi-channel fiber optic rotary joint assembly
[AD-D017353] p 2996 N95-30529

MULTIDISCIPLINARY DESIGN OPTIMIZATION
Robust Rocket Engine Concept
[NASA-TM-107010] p 2770 N95-32121

MULTIDISCIPLINARY RESEARCH
Microgravity research opportunities for the 1990s
[NASA-CR-199109] p 2838 N95-31983

MULTIGRID METHODS
Multigrid convergence acceleration for the 2D Euler equations applied to high-lift systems
[PB95-196061] p 2743 N95-30614
Fourier analysis of a robust multigrid method for convection-diffusion equations
[PB95-197091] p 2958 N95-30835

MULTILAYER INSULATION
Supplemental multilayer insulation research facility
[NASA-TM-106991] p 2768 N95-30595

MULTIMEDIA
Data storage modeling and management for multimedia information systems p 3022 N95-30483

Proceedings of the CSCW 1994 workshop collaborative hypermedia systems
[PB96-206393] p 3023 N95-30496
Operating system support for distributed multimedia applications: A survey of current research
[PB95-207098] p 2964 N95-30565

MULTIPHASE FLOW
Atomization simulations using an Eulerian-VOF-Lagrangian method p 2828 N95-31210

MULTIPLE TARGET TRACKING
Multiple Target Tracking based on constellation matching and Kalman filter p 2842 N95-32136

MULTIPLEXING
Smart active multiwave sensing with zero background amplitude modulated probes
[DE95-008813] p 2792 N95-30714
Effective bandwidth techniques in bufferless and buffered ATM multiplexers
[PB95-207072] p 2862 N95-31185

MULTIPLICATION
A scalable parallel Strassen's matrix multiply algorithm for distributed memory computers
[DE95-010213] p 2936 N95-31109

MULTIPLIERS
Coherent integrator
[AD-D017422] p 2847 N95-30743

MULTIPOLES
Gravitational-radiation damping of compact binary systems to second post-Newtonian order
[PB95-207882] p 2912 N95-30588
Potential integral equations of the 2D Laplace operator in wavelet basis
[TRITA-NA-9401] p 2957 N95-30713
Fast multipole methods for scattering computations
[AD-A291093] p 2848 N95-30869

MULTIPROCESSING (COMPUTERS)
Algorithms for categorizing multiprocessor communication under invalidate and update-based coherence protocols
[AD-A290022] p 2947 N95-30930
Implementation and performance of the pseudoknot problem in Sisal
[DE95-009573] p 2925 N95-32358

MULTISENSOR APPLICATIONS
Diamond thin film temperature and heat-flux sensors
[NASA-CR-198858] p 3012 N95-30847
Force and vision resolvability for assimilating disparate sensory feedback
[AD-A293581] p 2929 N95-31685
Design of surveillance and multisensor anti-aerial systems p 2841 N95-32134
Multi-sensor data fusion in command and control and the merit of artificial intelligence p 2842 N95-32137
Architecture and implementation of a multi-sensor data fusion demonstration model within the real-time combat system of the Canadian Patrol Frigate p 2842 N95-32139

MULTISENSOR FUSION
Sensor Fusion and Nonlinear Prediction for Anomalous Event Detection
[DE95-009429] p 2933 N95-30602
Neural network based data fusion system
[AD-D017440] p 2953 N95-31692
Neural network based three dimensional ocean modeler
[AD-D017441] p 2953 N95-31693
Integration issues in modular mission management aid development p 2841 N95-32133
Multisensor data fusion for integrated maritime surveillance p 2842 N95-32135
Multi-sensor data fusion in command and control and the merit of artificial intelligence p 2842 N95-32137
AIDEX: An expert system for aircraft identification p 2842 N95-32138
Architecture and implementation of a multi-sensor data fusion demonstration model within the real-time combat system of the Canadian Patrol Frigate p 2842 N95-32139

MULTIVARIATE STATISTICAL ANALYSIS
The remainder form and the cord-slope form in global optimization with interval methods p 2941 N95-31533
Nonlinear time series analysis
[AD-A293841] p 2963 N95-31558
Topics in exploratory and speculative data analysis
[AD-A290505] p 3025 N95-31618
Estimation in second order dependency model for multivariate binary data
[DE95-010325] p 2944 N95-32087

MUONS
Phenomenology of the two Higgs doublet sector of a quark-lepton symmetric model
[DE95-616337] p 2976 N95-30446
New tensor interactions in micron-decay
[DE95-613760] p 2978 N95-30528
The design and construction of the muon arm in PHENIX
[DE95-010156] p 2978 N95-30616
Backgrounds and detector performance at a 2 x 2 TeV (mu)(+)(mu)(-) collider
[DE95-009107] p 2992 N95-30800
Physics goals of a mu(+) mu(-) collider
[DE95-009546] p 2994 N95-32059
Monte Carlo simulations of muon production
[DE95-009554] p 2988 N95-32063

MUSCLES
Electromyostimulation, circuits and monitoring
[NASA-TM-110741] p 2926 N95-30846

MUSCULOSKELETAL SYSTEM
Erect, neutral and slump sitting postures: A study of the torso linkage system from shoulder to hip joint
[AD-A293239] p 2930 N95-30907

MUSIC
Fractional delay waveguide modeling of acoustic tubes
[PB95-206637] p 2975 N95-31650

N

N ELECTRONS
Excitation mechanisms of 2s(sub 1/2)-2p(sub 3/2) and 2p(sub 1/2)-2p(sub 3/2)in U(82+) through U(89+)
[DE95-010265] p 2993 N95-32042

N-TYPE SEMICONDUCTORS
Optimization of a thermoelectric IR-detector for low working temperature
[NASA-CR-198933] p 2880 N95-30752

NARCOSIS
Effect of oxygen and decompression bubbles on inert gas washout
[PB95-196556] p 2925 N95-30865

NASA PROGRAMS
Changes and challenges in the Software Engineering Laboratory p 2936 N95-31235
Profile of software engineering within the National Aeronautics and Space Administration (NASA) p 2939 N95-31252
SeaWiFS technical report series. Volume 24: SeaWiFS technical report series cumulative index, volumes 1-23
[NASA-TM-104566-VOL-24] p 2924 N95-32122

NASA SPACE PROGRAMS
NASA space astronomy update 6
[NASA-CR-197664] p 3028 N95-31099

NATIONAL AIRSPACE SYSTEM
A NASPAC-Based analysis of the delay and cost effects of the western-pacific region preliminary resectorization effort of 1993
[AD-A288696] p 2748 N95-31013
Effects of civil tiltrotor service in the northeast corridor on en route airspace loads
[AD-A293586] p 2747 N95-31687

NATIONAL AVIATION SYSTEM
FAA aviation forecasts: Fiscal year 1995-2006
[AD-A293682] p 2741 N95-31598

NATURAL GAS
Simulation of chemical kinetics in turbulent natural gas combustion. Volume 2: Experimental studies of nitric oxide production in gas flames
[PB95-196721] p 2791 N95-30541
A study of catalysts and mechanisms in synthesis reactions
[DE95-010177] p 2793 N95-30766
Combatting urban air pollution through Natural Gas Vehicle (NGV) analysis, testing, and demonstration
[DE95-008300] p 2911 N95-32156
The development of a pulsed laser imaging system for natural gas leak detection
[DE95-011407] p 2887 N95-32280

NAVIER-STOKES EQUATION
Velocity boundary conditions for vorticity formulations of the incompressible Navier-Stokes equations
[DE95-008715] p 2866 N95-30464
Computation of high-altitude hypersonic flow-field radiation p 2743 N95-30843
Parametrics on 2D Navier-Stokes analysis of a Mach 2.68 bifurcated rectangular mixed-compression inlet
[NASA-TM-107003] p 2755 N95-30861
Navier-Stokes flow field analysis of compressible flow in a high pressure safety relief valve
[NASA-TM-110640] p 2868 N95-30862
Numerical simulation of ram accelerator performance including transient effects during initiation of combustion and sensitivity studies p 2799 N95-31203
The 2nd Japan-US Symposium on Finite Element Methods in Large Scale Computational Fluid Dynamics
[AD-A292337] p 2960 N95-31264
The 25th International Symposium on Combustion
[AD-A286825] p 2794 N95-31268
Numerical simulation of shock/turbulent boundary layer interaction
[NASA-CR-198846] p 2872 N95-31341
Compressible turbulence measurement in low-angle injection into a supersonic flow
[AD-A293836] p 2874 N95-31516
Unsteady flow simulations about moving boundary configurations using dynamic domain decomposition techniques p 2877 N95-31837
LES, DNS and RANS for the analysis of high-speed turbulent reacting flows
[NASA-CR-199075] p 2878 N95-32219

NAVIGATION
A Heuristic and complete planner for the classical mover's problem
[DE95-008440] p 2949 N95-30377
Qualitative environmental navigation: Theory and practice --- robot navigation p 2748 N95-30486
Time aspects of the European Complement to GPS: Continental and transatlantic experimental phases p 2969 N95-32328

NAVIGATION AIDS
An exploratory survey of information requirements for instrument approach charts
[AD-A293882] p 2749 N95-31520

NAVIGATION INSTRUMENTS
EMC requirements for type approval of marine electronics. Nordtest project 1157-94
[PB95-211330] p 2859 N95-30596
System considerations for efficient communication and storage of MSTI image data
[NASA-CR-198869] p 3024 N95-30858
Guidelines for the design of GPS and LORAN receiver controls and displays
[AD-A293753] p 2749 N95-31572

NAVIGATION SATELLITES
SVN 9 End-Of-Life testing p 2767 N95-32345
(T2L2) Time Transfer by Laser Link p 2887 N95-32348

NAVSTAR SATELLITES
Laser retroreflector experiment on NAVSTAR 35 and 36 p 2887 N95-32347

NAVY
Environmental support of naval aviation
[AD-A292873] p 2747 N95-31454

NEAR FIELDS
Far field acoustic radiation reduction
[AD-D017452] p 2974 N95-30725

NEAR INFRARED RADIATION
Fractal quantum well heterostructures for broadband light emitters
[DE95-009579] p 2860 N95-30707
Study of surfaces using near infrared optical fiber spectrometry p 2781 N95-31801

NECK (ANATOMY)
Vertical impact testing of two helmet-mounted night vision systems
[AD-A293055] p 2931 N95-31671

NEEL TEMPERATURE
On the possibility of a two-state magnetic structure for nanocrystalline chromium
[DE95-009914] p 3015 N95-32062

NEGATIVE FEEDBACK
Pre-amplifier with multi-stage feedback
[AD-D017371] p 2859 N95-30659

NEGATIVE IONS
Design study of prototype accelerator and MeV test facility for demonstration of 1 MeV, 1 A negative ion beam production
[DE95-737208] p 2995 N95-32262

NEODYMIUM COMPOUNDS
A metallurgical approach toward alloying in rare earth permanent magnet systems
[DE95-010242] p 2966 N95-30668

NEODYMIUM LASERS
Spotsize measurements of a focused CW Nd: YAG laser
[DE95-007746] p 2884 N95-31139

NERVOUS SYSTEM
Conference perspective. Neuroimmunomodulation: Stress and immune function
[AD-A291351] p 2926 N95-30870

NETHERLANDS
Development of advanced approach and departure procedures. Failure scenarios
[PB95-198123] p 2748 N95-30815

NETWORK ANALYSIS
Periodically Specified Problems: An Exponential Complexity Gap Between Exact and Approximate Solutions
[DE95-009435] p 2934 N95-30603
Noisy-network acceptors
[PB95-197976] p 2951 N95-30813
Nordic symposium on analysis of electromagnetic transient phenomena using EMTP, part 3
[PB95-206504] p 2849 N95-31158

Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 2
[PB95-206579] p 2849 N95-31160
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 4
[PB95-206587] p 2849 N95-31181
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 1
[PB95-206595] p 2850 N95-31182
Dynamic maintenance scheduling for a stochastic telecommunication network: Determination of performance factors
[AD-A293829] p 2852 N95-31555
The Deep Space Network stability analyzer
p 2858 N95-32334

NETWORK SYNTHESIS
Compact location problems with budget and communication constraints
[DE95-010876] p 2948 N95-32277

NEURAL NETS
The Technology Information Environment with Industry (TIE-In): A mechanism for accessing laboratory solutions
[DE95-008542] p 3027 N95-30385
Selecting optimal experiments for feedforward multilayer perceptrons
[AD-A290856] p 2949 N95-30406
Noisy-network acceptors
[PB95-197976] p 2951 N95-30813
Neurodynamical systems for cognition and target identification
[AD-A293111] p 2951 N95-30884
Neural network false alarm filter, volume 2
[AD-A293114] p 2860 N95-30886
Multi-valued neural network modified model and its optical realization.
[AD-A293140] p 2951 N95-30891
High-tech controls for energy and environment
[DE95-011702] p 2952 N95-31255
Temporal feature extraction in photorefractive resonators
[AD-A292908] p 2881 N95-31385
Acquiring consistent knowledge for Bayesian Forests
[AD-A293858] p 2952 N95-31517
Neural networks for real-time terrain typing
[AD-A293569] p 2953 N95-31540
Simulation of oculomotor post-inhibitory rebound burst firing using a Hodgkin-Huxley model of a neuron
[AD-A293821] p 2927 N95-31552
Nonlinear time series analysis
[AD-A293841] p 2963 N95-31558
Neural network false alarm filter, volume 1
[AD-A293097] p 2953 N95-31562
Evaluation of nonlinear structural dynamic responses using a fast-running spring-mass formulation
[DE95-008503] p 2967 N95-31625
Finite-sample based learning algorithms for feedforward networks
[DE95-009123] p 2941 N95-31631
Neural network based data fusion system
[AD-D017440] p 2953 N95-31692
Neural network based three dimensional ocean modeler
[AD-D017441] p 2953 N95-31693
Artificial neural networks and model-based recognition of 3-D objects from 2-D images p 2954 N95-31838

NEUROLOGY
Conference perspective. Neuroimmunomodulation: Stress and immune function
[AD-A291351] p 2926 N95-30870

NEURONS
Simulation of oculomotor post-inhibitory rebound burst firing using a Hodgkin-Huxley model of a neuron
[AD-A293821] p 2927 N95-31552

NEUROPHYSIOLOGY
Physiology and physiopathology of equilibration
[PB95-208328] p 2926 N95-30494

NEUROPSYCHIATRY
Using computerized neuropsychological testing to assess aviator skills
[AD-A293227] p 2928 N95-30905

NEUTRAL ATOMS
Optical frequency standards: Hertz-level working standards and their absolute frequency measurement
[AD-A293930] p 2999 N95-31515

NEUTRAL BEAMS
Design study of prototype accelerator and MeV test facility for demonstration of 1 MeV, 1 A negative ion beam production
[DE95-737208] p 2995 N95-32262

NEUTRAL PARTICLES
Unitarization of Koerner-Kuroda model of electromagnetic structure of octet 1/2(+) baryons
[DE95-613765] p 2984 N95-31548

NEUTRALIZERS
Enhanced alkaline hydrolysis and biodegradability studies of nitrocellulose-bearing missile propellant
p 2772 N95-31752

NEUTRINO BEAMS
Study of different type neutrino oscillations based on neutrino beams from 600 GeV
[DE95-619267] p 2983 N95-31260
On possibility to study neutrino oscillations by detectors located at Gran Sasso (Italy) using beams from 600 GeV UNK-1 machine
[DE95-619268] p 2983 N95-31261

NEUTRINOS
Signatures of virtual LSP's at the TEVATRON
[DE95-613798] p 2982 N95-31060
Study of different type neutrino oscillations based on neutrino beams from 600 GeV
[DE95-619267] p 2983 N95-31260
On possibility to study neutrino oscillations by detectors located at Gran Sasso (Italy) using beams from 600 GeV UNK-1 machine
[DE95-619268] p 2983 N95-31261
Structure formation with majoron supermultiplet
[DE95-613596] p 2984 N95-31546
Long baseline neutrino oscillation experiment at the AGS
[DE95-004378] p 2986 N95-31702

NEUTRON ACTIVATION ANALYSIS
Holistic analysis of gamma-ray spectra in instrumental neutron activation analysis
[PB95-214458] p 2979 N95-30639

NEUTRON BEAMS
Background event discrimination in neutron time-of-flight measurements at beams of relativistic nuclei of the JINR synchrotron
[DE95-613006] p 2991 N95-30604
Investigation of Fe3O4 colloid behaviour in a magnetic field by polarized neutron transmission
[DE95-614351] p 2981 N95-30915
Neutronic methods for determination of very low concentrations of hydrogen in metals
[DE95-623967] p 2807 N95-31409

NEUTRON DIFFRACTION
The neutron powder diffraction and acoustic investigations of the NH4SCN phase diagram
[DE95-614372] p 3009 N95-30419
Acoustoelastic stress evaluation in metal plate using absolute shear and longitudinal time-of-flight data
[PB95-197810] p 2892 N95-30458
Ionic conductivities of lithium phosphorus oxynitride glasses, polycrystals, and thin films
[DE95-008898] p 2812 N95-30545
Residual stresses and stress corrosion cracking in pipe fittings
[DE95-009332] p 2894 N95-31054
On the possibility of a two-state magnetic structure for nanocrystalline chromium
[DE95-009914] p 3015 N95-32062
Residual stress distribution in FeAl weld overlay on steel
[DE95-009178] p 2899 N95-32317

NEUTRON IRRADIATION
Defect configurations in neutron-irradiated U3Si2
[DE95-009896] p 3016 N95-32105

NEUTRON SCATTERING
IPNS neutron scattering instrumentation. A: Existing and planned. B: Possibilities for IPNS upgrade, a 1-MW spallation source
[DE95-004119] p 2985 N95-31616
Defect configurations in neutron-irradiated U3Si2
[DE95-009896] p 3016 N95-32105

NEUTRON SOURCES
IPNS neutron scattering instrumentation. A: Existing and planned. B: Possibilities for IPNS upgrade, a 1-MW spallation source
[DE95-004119] p 2985 N95-31616
Defect configurations in neutron-irradiated U3Si2
[DE95-009896] p 3016 N95-32105

NEUTRON STARS
Observations of accreting pulsars
[NASA-CR-198931] p 3028 N95-30469

NEUTRONS
Background event discrimination in neutron time-of-flight measurements at beams of relativistic nuclei of the JINR synchrotron
[DE95-613006] p 2991 N95-30604
Development of BERMUDA: A radiation transport code system. Part 3: A one-dimensional adjoint neutron transport code
[DE95-717875] p 2934 N95-30759
Neutron shielding point kernel integral calculation code for personal computer: PKN-pc
[DE95-717876] p 2980 N95-30760
Investigation of Fe3O4 colloid behaviour in a magnetic field by polarized neutron transmission
[DE95-614351] p 2981 N95-30915
IPNS neutron scattering instrumentation. A: Existing and planned. B: Possibilities for IPNS upgrade, a 1-MW spallation source
[DE95-004119] p 2985 N95-31616

NEWTON METHODS
Elliptic deformed classical mechanics in three-dimensional phase space
[DE95-613384] p 3017 N95-30365
Newton methods for large-scale linear inequality-constrained minimization: Optimization and systems theory
[PB95-210332] p 2956 N95-30499
Effect of the stopping of the Newton iteration in implicit linear multistep methods
[PB95-207056] p 2959 N95-31184
Quasi-Newton updating for large scale nonlinear systems
[AD-A292778] p 2940 N95-31431

NEWTON-RAPHSON METHOD
Newton Raphson method, scaling at fractal boundaries and mathematica
[DE95-613374] p 2962 N95-32095

NEWTONIAN FLUIDS
Simulation of viscous sintering
[PB95-197109] p 2868 N95-30836
Numerical simulation of time dependent viscoelastic fluid flow
[TRITA-NA-9311] p 2873 N95-31414

NICKEL
Reaction synthesis of intermetallics
[DE95-009029] p 2803 N95-30575
Localization in tungsten heavy alloys subjected to shearing deformations under superimposed high pressures
[AD-A293177] p 2804 N95-30977

NICKEL ALLOYS
The effect of interface properties on nickel base alloy composites
[NASA-CR-198363] p 2785 N95-30787
Innovative processing of composites for ultra-high temperature applications, book 4
[AD-A290892] p 2786 N95-30867
Review of environmental effects in intermetallics
[DE95-010120] p 2805 N95-31106
Shape memory properties of an iron modified nickel aluminide alloy
[DE95-010223] p 2805 N95-31111
Comparison of cathodic protection currents on 70/30 copper-nickel and alloy 625 piping systems
[AD-A292953] p 2807 N95-31561
Cadmium plating replacements p 2776 N95-31773
Synthesis and characterization of nanophase face-centered-cubic titanium
[DE95-009533] p 2809 N95-32051
Cascade damage in the ordered alloy Ni3Al
[DE95-009893] p 2809 N95-32104

NIOBATES
Synthesis of novel precursors for PMN powders and the thin films obtained from them
[DE95-006543] p 2811 N95-30362
Molecular modeling of PMN ceramics
[AD-A290879] p 2813 N95-30560
A compact and efficient violet laser source
[AD-A292782] p 2885 N95-31434

NIOBIUM
Orientation of rapid thermally annealed lead zirconate titanate thin films on (111) Pt substrate
[DE95-615232] p 2811 N95-30422
High-resolution superconducting x-ray spectrometers with aluminum trapping layers of different thicknesses
[DE95-010253] p 2881 N95-32047

NIOBIUM ALLOYS
Room temperature fracture and high temperature creep deformation properties of alumina reinforced with 20 vol% particulate niobium
[DE95-010234] p 2815 N95-30897
Measurements of stability margins and current distribution in large-scale Nb3Sn cable-in-conduit conductors
[DE95-009869] p 3007 N95-32148

NITRAMINE PROPELLANTS
Molecular models for nitro compounds
p 2831 N95-31293
Embedded infrared fiber optic absorption studies of nitramine propellant strand burning
p 2801 N95-31305
Flame structure studies of neat and NH3 doped H2/N2O flames employing molecular beam mass spectrometry and modeling p 2801 N95-31313

NITRATES
Global climatology and variability of potential new production estimated from remote sensing of sea-surface temperature
[NASA-CR-198840] p 2910 N95-31981

NITRATION
Acidity and basicity of nitro substituted imidazoles
p 2832 N95-31301
Acidity and basicidity of nitro substituted imidazoles
[AD-A293969] p 2836 N95-31526
NITRIC OXIDE
Simulation of chemical kinetics in turbulent natural gas combustion. Volume 2: Experimental studies of nitric oxide production in gas flames
[PB95-196721] p 2791 N95-30541
An ab initio study of the reaction HNO + NO yields OH + N2O: Preliminary results p 2801 N95-31308
NITRIDES
The neutron powder diffraction and acoustic investigations of the NH4SCN phase diagram
[DE95-614372] p 3009 N95-30419
Low temperature fabrication from nano-size ceramic powders
[DE95-010995] p 2818 N95-31153
Degradation of blue AlGaN/InGaN/GaN LEDs subjected to high current pulses
[DE95-008824] p 2863 N95-31611
An experimental search for high ZT semiconductors: A survey of the preparation and properties of several alloy systems
[DE95-010232] p 2865 N95-32084
NITRIDING
Gelcasting of sintered reaction-bonded silicon nitride for improved mechanical properties
[DE95-010282] p 2822 N95-32085
NITRILES
Mode I large strain viscoelastic crack behavior in nitrile rubber sheets
[AD-A289984] p 2820 N95-31617
Compatibility of Single Hydraulic Fluid with military specification fluids, seals and metallurgy
[AD-A292954] p 2821 N95-31663
NITRO COMPOUNDS
Molecular models for nitro compounds
p 2831 N95-31293
Estimating heat of formation of energetic compounds using corrected semiempirical molecular orbital theory
p 2800 N95-31294
NITROGEN
State resolved dynamics of ion-molecule collisions in a flowing afterglow
[AD-A290895] p 2976 N95-30410
Synthesis of carbo-nitride films using high-energy shock plasma deposition
[DE95-615231] p 2811 N95-30450
Flame structure studies of neat and NH3 doped H2/N2O flames employing molecular beam mass spectrometry and modeling p 2801 N95-31313
Fourier Transform (FT) Raman spectroscopy of nitrogen at high pressure
[AD-A293051] p 2796 N95-31670
NITROGEN COMPOUNDS
Acidity and basicidity of nitro substituted imidazoles
[AD-A293969] p 2836 N95-31526
NITROGEN DIOXIDE
The oxidation of carbon monoxide by nitrogen dioxide
p 2801 N95-31310
NITROGEN HYDRIDES
The neutron powder diffraction and acoustic investigations of the NH4SCN phase diagram
[DE95-614372] p 3009 N95-30419
NITROGEN OXIDES
No-thermal plasma processing of VOCs and NO(x) at LLNL
[DE95-011445] p 2911 N95-32281
NITROUS OXIDES
Comparison of DSMC predictions with temporally resolved vibrational state measurements in NO
p 2872 N95-30996
An ab initio study of the reaction HNO + NO yields OH + N2O: Preliminary results p 2801 N95-31308
The oxidation of carbon monoxide by nitrous oxide
p 2801 N95-31309
Detailed chemical kinetic modeling of premixed hydrocarbon flames supported by NO2
p 2801 N95-31311
NOISE
Electromagnetically activated compliant wavy-wall
[AD-D017340] p 2866 N95-30412
NOISE GENERATORS
Gear pump with reduced fluid-borne noise
[AD-D017362] p 2887 N95-30399
NOISE MEASUREMENT
Advanced system identification techniques for wind turbine structures
[DE95-004049] p 2902 N95-30505
NOISE REDUCTION
Gear pump with reduced fluid-borne noise
[AD-D017362] p 2887 N95-30399
Method and system for suppressing noise induced in a fluid medium by a body moving therethrough
[AD-D017339] p 2973 N95-30411
Smart active multiwave sensing with zero background amplitude modulated probes
[DE95-008813] p 2792 N95-30714
Energy absorption apparatus
[AD-D017361] p 2814 N95-30715
Reducing process noise in superconducting helium liquid level probes
[DE95-008956] p 2814 N95-30765
An active liner system for jet engine exhaust silencers, phase 1
[AD-A293277] p 2756 N95-31191
An efficient implementation of Forward-Backward Least-Mean-Square Adaptive Line Enhancers
p 2855 N95-32224
NOISE SPECTRA
The contextual variance of devoiced fricatives in polish
[IFTR-7/1995] p 2854 N95-32192
NONDESTRUCTIVE TESTS
Method and apparatus for non-destructively measuring local resistivity of semiconductors
[AD-D017436] p 2862 N95-31343
An evaluation of the losipescu specimen for composite materials shear property measurement
[NASA-CR-198755] p 2896 N95-31418
Surface contamination analysis technology team overview p 2781 N95-31797
Study of surfaces using near infrared optical fiber spectrometry p 2781 N95-31801
Contamination detection NDE for cleaning process inspection p 2781 N95-31802
Mapping hidden aircraft defects with dual-band infrared computed tomography
[DE95-011531] p 2741 N95-32164
Metallic multilayers at the nanoscale
[DE95-011534] p 3016 N95-32284
Nondestructive testing of ceramic components: Cooperative Research and Development Agreement completion report
[DE95-009510] p 2823 N95-32352
NONEQUILIBRIUM CONDITIONS
Modeling of thermal, electronic, hydrodynamic, and dynamic deposition processes for pulsed-laser deposition of thin films
[DE95-008906] p 2813 N95-30572
NONEQUILIBRIUM FLOW
Flow models for the design of a hypersonic iodine vapor wind tunnel nozzle with chemical and vibrational nonequilibrium effects p 2742 N95-30448
NONFLAMMABLE MATERIALS
The HYLIFE-2 inertial fusion energy power plant concept and implications for IFE
[DE95-010561] p 2994 N95-32074
NONINTRUSIVE MEASUREMENT
An investigation of the side-dump dual in-line ramjet combustor p 2756 N95-31199
Non-intrusive combustion diagnostics of premixed hydrocarbon flames using FT-IR spectrometry
p 2797 N95-31732
Contamination detection NDE for cleaning process inspection p 2781 N95-31802
Spatially-resolved velocity measurements in steady, high-speed, reacting flows using laser-induced OH fluorescence p 2877 N95-32109
NONLINEAR EQUATIONS
Gibbs measures and quasi-periodic solutions for nonlinear Hamiltonian partial differential equations
[PB95-207932] p 2956 N95-30506
Higher Schwarzian operatörs and combinatorics of Schwarzian derivative
[PB95-208435] p 2957 N95-30623
Solvability of a class of hypersingular nonlinear integral equations
[PB95-207031] p 3011 N95-30720
Effect of the stopping of the Newton iteration in implicit linear multistep methods
[PB95-207056] p 2959 N95-31184
Determination of the symmetry of a non-linear Schroedinger equation
[IFTR-10/1995] p 2960 N95-31339
Numerical simulation of shock/turbulent boundary layer interaction
[NASA-CR-198846] p 2872 N95-31341
Numerical studies of nonlinear optical pulse propagation p 2998 N95-31411
Quasi-Newton updating for large scale nonlinear systems
[AD-A292776] p 2940 N95-31431
NONLINEAR EVOLUTION EQUATIONS
Gibbs measures and quasi-periodic solutions for nonlinear Hamiltonian partial differential equations
[PB95-207932] p 2956 N95-30506
NONLINEAR OPTICS
Ceramics derived from metal-organic precursors
[AD-A290791] p 2811 N95-30405
Fabrication and modification of metal nanocluster composites using ion and laser beams
[DE95-009131] p 2784 N95-30731
Nonlinear optical processes in polymer films
[AD-A293384] p 2815 N95-30955
Laser-induced holographic surface relief gratings on nonlinear optical polymer films
[AD-A293169] p 2997 N95-30973
Experimental investigation of optical nonlinearities in conjugated polymers
[AD-A288353] p 2884 N95-31145
Temporal feature extraction in photorefractive resonators
[AD-A292908] p 2881 N95-31385
Numerical studies of nonlinear optical pulse propagation p 2998 N95-31411
Nonlinear organized materials for optical devices
[AD-A292809] p 2999 N95-31441
Photorefractive nonlinear optics
[AD-A292913] p 2999 N95-31458
Quantum and nonlinear optics research
[AD-A293879] p 2999 N95-31519
Ultraviolet and visible lasers: Rare earth-doped waveguide devices and non-linear optical extraction techniques
[AD-A293976] p 2885 N95-31528
Nonlinear optics in novel composite media
[AD-A293886] p 2999 N95-31542
An interpenetrating polymer network for second-order nonlinear optics
[AD-A293019] p 2821 N95-31699
Novel unsymmetrical polydiacetylenes as materials for second and third order nonlinear optics
[AD-A293020] p 3001 N95-31700
Z-scan using a dye laser
[PB95-222923] p 3002 N95-32312
NONLINEAR PROGRAMMING
Convergence properties of an augmented lagrangian algorithm for optimization with a combination of general equality and linear constraints
[PB95-208039] p 2956 N95-30570
Structural design using equilibrium programming formulations
[NASA-TM-110175] p 2893 N95-30682
NONLINEAR SYSTEMS
Nonlinear dynamical systems: Elements of a complex system analysis
[PB95-211652] p 2950 N95-30478
Fixed modes in quasi-static state feedback decoupling
[PB95-206850] p 2950 N95-30564
The iteration formula of the Maslov-type index theory with applications to nonlinear Hamiltonian systems
[DE95-613379] p 2957 N95-30676
Cascading synchronized chaotic systems
[AD-D017458] p 2860 N95-30748
Generalized controlled invariance for nonlinear systems
[PB95-197901] p 2950 N95-30807
Workshop on diffusion approximation in communication and stochastic systems theory
[AD-A292872] p 2952 N95-31055
A two-timescale approach to nonlinear Model Predictive Control
[DE95-000943] p 2952 N95-31161
Role of free-surface boundary conditions and nonlinearities in wave/boundary-layer and wake interaction p 2872 N95-31317
Control of mechanical systems with rolling contacts: Applications to robotics p 2889 N95-31332
Quasi-Newton updating for large scale nonlinear systems
[AD-A292776] p 2940 N95-31431
Quantum 1/f noise in high technology applications including ultrasmall structures and devices
[AD-A292812] p 2862 N95-31442
Multipoint quadratic approximation for numerical optimization
[AD-A293837] p 2961 N95-31557
Evaluation of nonlinear structural dynamic responses using a fast-running spring-mass formulation
[DE95-008503] p 2967 N95-31625
Global stabilization of nonlinear gyroscopic systems
p 2881 N95-31836
An extremum principle for the analysis and design of constitutively nonlinear systems p 2898 N95-32112
A mode decomposition based finite element formulation for the nonlinear dynamics of flexible spatial structures and mechanisms p 2898 N95-32118
A survey of the core-congruential formulation for geometrically nonlinear TL finite elements
[NASA-CR-199044] p 2944 N95-32203

NONLINEARITY
Direct determination of grain boundary atomic structure in SrTiO3
[DE95-008847] p 3010 N95-30544
Electron-optical nonlinear interaction in asymmetric quantum-well laser heterostructures
[DE95-613443] p 2883 N95-30609
Cascading synchronized chaotic systems
[AD-D017458] p 2860 N95-30748
Fiber optic interferometric electric field and voltage sensor utilizing and electrostrictive transducer
[AD-D017433] p 2996 N95-30753
New adaptive methods for reconfigurable flight control systems, appendix 1
[AD-A292711] p 2756 N95-30937
Robust fixed-structure control
[AD-A292883] p 2952 N95-30961
IR materials producibility
[AD-A293330] p 2998 N95-31141
Self-adaptive multilevel methods for fluid flow problems p 2873 N95-31412
Nonlinear organized materials for optical devices
[AD-A292809] p 2999 N95-31441
Quantum 1/f noise in high technology applications including ultrasmall structures and devices
[AD-A292812] p 2862 N95-31442
Computational methods for control and optimal design of aerospace systems
[AD-A292861] p 2751 N95-31451
Photorefractive nonlinear optics
[AD-A292913] p 2999 N95-31458
Large deformation failure mechanisms in nonlinear solids
[AD-A293010] p 2896 N95-31474
Nonlinear time series analysis
[AD-A293841] p 2963 N95-31558
Removal of the Energy Dependence from the Resolvent Like Energy Dependent Interactions
[DE95-613385] p 2961 N95-31619
Spectral methods and sum acceleration algorithms
[DE95-009689] p 2941 N95-31630
Dynamic inversion: An evolving methodology for flight control design p 2758 N95-31996

NONNEWTONIAN FLOW
Numerical simulation of time dependent viscoelastic fluid flow
[TRITA-NA-9311] p 2873 N95-31414
Some aspects on the modelling of non-Newtonian fluid flow
[TRITA-NA-9317] p 2873 N95-31415

NONNEWTONIAN FLUIDS
Numerical simulation of time dependent viscoelastic fluid flow
[TRITA-NA-9311] p 2873 N95-31414
Some aspects on the modelling of non-Newtonian fluid flow
[TRITA-NA-9317] p 2873 N95-31415

NONPARAMETRIC STATISTICS
Nonparametric methods for incomplete data in reliability and for changepoints in smooth functions
[AD-A292773] p 2963 N95-31429
Nonparametric recognition of nonrigid motion
[AD-A293630] p 2963 N95-31565

NORMAL DENSITY FUNCTIONS
A stochastic EM estimator in the presence of missing data: Theory and applications
[DE95-010329] p 2944 N95-32089

NORMALIZING
Barendregt cube with definitions and generalized reduction
[PB95-206793] p 2966 N95-30719

NORTH ATLANTIC TREATY ORGANIZATION (NATO)
Study of Extended Air Defence Post 2000 p 2839 N95-32124

NOSES (FOREBODIES)
Side force acting on blunted circular cylinder bodies at high angles of attack in supersonic flow
[NAL-TR-1255] p 2744 N95-31741
Flight evaluation of forebody vortex control in post-stall flight p 2752 N95-32003

NOTCH TESTS
The effect of interface properties on nickel base alloy composites
[NASA-CR-198383] p 2785 N95-30787
Initial survey on fracture toughness of commercial Nd2Fe14B
[DE95-009813] p 2808 N95-31643

NOTCHES
A simple and accurate technique for monitoring crack growth behavior using a wave form analyzer
[AD-A293161] p 2894 N95-31007

NOWCASTING
Comparison of satellite-derived MSU brightness temperatures and conventionally-derived fields
[AD-A293692] p 2901 N95-31603

NOZZLE DESIGN
Flow models for the design of a hypersonic iodine vapor wind tunnel nozzle with chemical and vibrational nonequilibrium effects p 2742 N95-30448
Advanced small rocket chambers. Option 3: 110 lbf Ir-Re rocket, volume 2
[NASA-CR-195435-VOL-2] p 2769 N95-31170
Numerical study of shear-induced heating in high-speed nozzle flow of liquid monopropellant p 2828 N95-31207

NOZZLE FLOW
Flow models for the design of a hypersonic iodine vapor wind tunnel nozzle with chemical and vibrational nonequilibrium effects p 2742 N95-30448
Validation of the NPARC code for nozzle afterbody flows at transonic speeds
[NASA-TM-106971] p 2742 N95-30704
Kinetic theory model predictions compared with low-thrust axisymmetric nozzle plume data
[NASA-CR-198934] p 2768 N95-30864
Numerical study of shear-induced heating in high-speed nozzle flow of liquid monopropellant p 2828 N95-31207

NUCLEAR BINDING ENERGY
Applications of SXPS for studying surface structure, reaction mechanisms and kinetics
[DE95-008903] p 2803 N95-30547

NUCLEAR FUSION
Development of plasma diagnostics technologies: A study on nuclear fusion reactor
[DE95-614180] p 3005 N95-31004
The development of the tokamak system technology: A study on the fusion reactor
[DE95-614256] p 3005 N95-31366
Electroweak baryogenesis
[DE95-012169] p 2991 N95-32365

NUCLEAR INTERACTIONS
Experimental results on charge exchange reactions with delta excitations and polarization studies of delta and N(sup *) (1440) resonances
[DE95-614022] p 2981 N95-30913

NUCLEAR MEDICINE
Summaries of fiscal year 1994 projects in medical applications and biophysical research
[DE95-010405] p 2925 N95-32040

NUCLEAR PHYSICS
The design and construction of the muon arm in PHENIX
[DE95-010156] p 2978 N95-30616
Abstracts of Annual Physics Conference of Iran
[DE95-611717] p 2768 N95-30881

NUCLEAR POWER PLANTS
SHEAT: A computer code for probabilistic seismic hazard analysis, user's manual
[DE95-717874] p 2913 N95-30758
Damage dosimetry and embrittlement monitoring of nuclear pressure vessels in real time by magnetic properties measurement
[DE95-011454] p 2894 N95-31254
Development and implementation of a computer facility for nuclear data updating and reactor calculations using personal computers
[DE95-623577] p 2940 N95-31408
Validation of favor code linear elastic fracture solutions for finite-length flaw geometries
[DE95-009034] p 2898 N95-32157

NUCLEAR REACTORS
Development and implementation of a computer facility for nuclear data updating and reactor calculations using personal computers
[DE95-623577] p 2940 N95-31408
Validation of favor code linear elastic fracture solutions for finite-length flaw geometries
[DE95-009034] p 2898 N95-32157

NUCLEAR SPIN
Nuclear-spin-dependent parity-nonconserving effects in thallium, lead and bismuth atoms
[DE95-614120] p 2991 N95-32354

NUCLEAR WEAPONS
The Technology Information Environment with Industry (TIE-In): A mechanism for accessing laboratory solutions
[DE95-008542] p 3027 N95-30385

NUCLEATION
Orientation of rapid thermally annealed lead zirconate titanate thin films on (111) Pt substrate
[DE95-615232] p 2811 N95-30422
Molecular nanoclusters as precursors to conductive thin films and crystals
[AD-A290278] p 3014 N95-31189
Clouds: Their prediction and simulation
[AD-A292864] p 2920 N95-31453
Large deformation failure mechanisms in nonlinear solids
[AD-A293010] p 2896 N95-31474
NaK pool-boiler solar receiver durability bench test. Volume 2: Metallurgical analysis
[DE95-010338] p 2905 N95-31640
A numerical analysis of crack growth in microcracking ceramic and ceramic composites
[DE95-010132] p 2897 N95-32024

NUCLEIC ACIDS
Implementation and performance of the pseudoknot problem in Sisal
[DE95-009573] p 2925 N95-32358

NUCLEON-NUCLEON INTERACTIONS
Complex conjugate pairs in stationary Sturmians
[DE95-616279] p 2976 N95-30429
Density dependent effective interactions
[DE95-616348] p 2977 N95-30447
Coulomb correction calculations of pp Bremsstrahlung
[DE95-616349] p 2982 N95-31176
Search for exotic baryons with the SPHINX facility
[DE95-613774] p 2984 N95-31549

NUCLEONS
Complex conjugate pairs in stationary Sturmians
[DE95-616279] p 2976 N95-30429
Pion-nucleon and kaon-nucleon scattering lengths in QCD sum rules
[DE95-737278] p 2983 N95-31227
Spin puzzle in nucleon
[DE95-613654] p 2991 N95-32353

NUMERICAL ANALYSIS
Semiannual report
[NASA-CR-198172] p 2931 N95-30657
Achieving improved cycle efficiency via pressure gain combustors
[DE95-008945] p 2792 N95-30762
Residual stresses and stress corrosion cracking in pipe fittings
[DE95-009032] p 2894 N95-31054
Theory & numerical methods for problems in shape reconstruction and large deviations
[AD-A292874] p 2952 N95-31279
Numerical studies of nonlinear optical pulse propagation p 2998 N95-31411
Self-adaptive multilevel methods for fluid flow problems p 2873 N95-31412
A numerical analysis of crack growth in microcracking ceramic and ceramic composites
[DE95-010132] p 2897 N95-32024

NUMERICAL CONTROL
DEPSCOR92-Wide field spectral imager
[AD-A293079] p 2997 N95-31005
Catapult-launching of the RAFALE design and experimentation p 2752 N95-32008

NUMERICAL INTEGRATION
A finite element formulation for the time domain vibration analysis of an elastic-viscoelastic structure p 2895 N95-31318
Staggered solution procedures for multibody dynamics simulation
[NASA-CR-199034] p 2899 N95-32202

NUMERICAL STABILITY
Numerical stability investigations of processes for solving linear initial value problems
[PB95-207023] p 2959 N95-31183

NYLON (TRADEMARK)
High strain-rate testing of parachute materials
[DE95-009577] p 2897 N95-31614

O

OBJECT-ORIENTED PROGRAMMING
ESAA: Environment for Seismic Activity Analysis
[DE95-612416] p 2913 N95-30675
Leveraging object-oriented development at Ames p 2938 N95-31244
Nonparametric recognition of nonrigid motion
[AD-A293630] p 2963 N95-31565
PORK object system programmer's guide
[AD-A293596] p 2942 N95-31688

OBSERVATION AIRCRAFT
Special investigation report: Safety of the air tour industry in the United States
[PB95-917004] p 2748 N95-32185

OBSTACLE AVOIDANCE
On the kinematic performance of mechanical manipulators operating in the presence of an obstruction p 2890 N95-31710

OCCUPATION
An assessment of worldwide supercomputer usage
[DE95-009879] p 2932 N95-31645

OCEAN BOTTOM
Multiple scatter theory of ocean sediments
[AD-A293951] p 2923 N95-31523
Studies in marine tectonics: Propagating rifts, depth anomalies and subduction zone anisotropy p 2923 N95-31719

OCEAN CURRENTS
Arabian Sea mixed layer dynamics experiment: Mooring deployment cruise report
[AD-A293684] p 2923 N95-31600
The role of the hydrological cycle and the ocean's thermohaline circulation in climate change: A multicomponent climate model study
p 2909 N95-31720
Objective analysis of oceanic data for Coast Guard trajectory models
[AD-A292884] p 2924 N95-32363

OCEAN DATA ACQUISITIONS SYSTEMS
SeaWiFS technical report series. Volume 28: SeaWiFS algorithms, part 1
[NASA-TM-104566-VOL-28] p 2924 N95-31850
SeaWiFS technical report series. Volume 24: SeaWiFS technical report series cumulative index, volumes 1-23
[NASA-TM-104566-VOL-24] p 2924 N95-32122
SeaWiFS technical report series. Volume 13: Case studies for SeaWiFS calibration and validation, part 1
[NASA-TM-104566-VOL-13] p 2924 N95-32220

OCEAN DYNAMICS
NASA Tropical Rainfall Measurement Mission (TRMM): Effects of tropical rainfall on upper ocean dynamics, air-sea coupling and hydrologic cycle
[NASA-CR-189437] p 2919 N95-31123
Arabian Sea mixed layer dynamics experiment: Mooring deployment cruise report
[AD-A293684] p 2923 N95-31600
The role of the hydrological cycle and the ocean's thermohaline circulation in climate change: A multicomponent climate model study
p 2909 N95-31720

OCEAN MODELS
QTSAW (Quick Typhoon Surge and Waves). Wave information studies of US coastlines
[AD-A293172] p 2919 N95-30976
The role of the hydrological cycle and the ocean's thermohaline circulation in climate change: A multicomponent climate model study
p 2909 N95-31720
Objective analysis of oceanic data for Coast Guard trajectory models
[AD-A292884] p 2924 N95-32363

OCEAN SURFACE
NASA Tropical Rainfall Measurement Mission (TRMM): Effects of tropical rainfall on upper ocean dynamics, air-sea coupling and hydrologic cycle
[NASA-CR-189437] p 2919 N95-31123
Investigation of microwave backscatter from the air-sea interface
[NASA-CR-198854] p 2851 N95-31457
Validation of special sensor microwave/imager ocean surface wind retrievals in equatorial regions
[AD-A293750] p 2920 N95-31571
The determination of wave group parameters from the resolution of incident and reflected waves
[AD-A293703] p 2924 N95-31829
Objective analysis of oceanic data for Coast Guard trajectory models
[AD-A292884] p 2924 N95-32363

OCEAN TEMPERATURE
Ocean mass density calculations from temperature and salinity data
[DSTO-TR-0023] p 2922 N95-30711

OCEAN THERMAL ENERGY CONVERSION
Data on development of new energy technologies
[DE95-764135] p 2904 N95-31155

OCEANOGRAPHIC PARAMETERS
Ocean mass density calculations from temperature and salinity data
[DSTO-TR-0023] p 2922 N95-30711
Bibliography of technical reports, 1993
[AD-A292741] p 2923 N95-30918
NASA Tropical Rainfall Measurement Mission (TRMM): Effects of tropical rainfall on upper ocean dynamics, air-sea coupling and hydrologic cycle
[NASA-CR-189437] p 2919 N95-31123
Modern methods in meteorological and oceanographic data acquisition and analyses
[AD-A293884] p 2920 N95-31541
Objective analysis of oceanic data for Coast Guard trajectory models
[AD-A292884] p 2924 N95-32363

OCEANOGRAPHY
JPL Physical Oceanography Distributed Active Archive Center (PO.DAAC) data availability, version 1-94
[NASA-CR-198871] p 2922 N95-30859
Bibliography of technical reports, 1993
[AD-A292741] p 2923 N95-30918
Directory of global environmental sciences in Japan
p 2899 N95-31413
Arabian Sea mixed layer dynamics experiment: Mooring deployment cruise report
[AD-A293684] p 2923 N95-31600
SeaWiFS technical report series. Volume 28: SeaWiFS algorithms, part 1
[NASA-TM-104566-VOL-28] p 2924 N95-31850

OCEANS
Airborne ocean water lidar (OWL) real time processor (RTP)
[AD-A293226] p 2848 N95-30904
SeaWiFS technical report series. Volume 28: SeaWiFS algorithms, part 1
[NASA-TM-104566-VOL-28] p 2924 N95-31850
Inversion of ERS-1 wavemode spectra. User's and programmer's guide
[PB95-223582] p 2902 N95-32316

OCTETS
Unitarization of Koerner-Kuroda model of electromagnetic structure of octet 1/2(+) baryons
[DE95-613765] p 2984 N95-31548

OCULOMOTOR NERVES
Simulation of oculomotor post-inhibitory rebound burst firing using a Hodgkin-Huxley model of a neuron
[AD-A293821] p 2927 N95-31552

OFFSHORE PLATFORMS
Fatigue behaviour of multiplanar tubular joints
[PB95-207874] p 2893 N95-30586

OHMIC DISSIPATION
Energy absorption apparatus
[AD-D017361] p 2814 N95-30715

OIL EXPLORATION
Development of the Multi-Level Seismic Receiver (MLSR)
[DE95-008823] p 2916 N95-31610

OIL RECOVERY
Development of the Multi-Level Seismic Receiver (MLSR)
[DE95-008823] p 2916 N95-31610

OILS
Evaluation of Environmentally Acceptable hydraulic fluids
[AD-A293037] p 2821 N95-31666
Determination of halogens in a petroleum product by ion chromatography
[DE95-002056] p 2797 N95-31840

OMEGA-MESONS
Applications of chiral symmetry
[DE95-009552] p 2988 N95-32079

ON-LINE SYSTEMS
On-line surfactant monitoring
[DE95-009417] p 2792 N95-30735
Support of environmental requirements for cloud analysis and archive (SERCAA): Database management facility
[AD-A293938] p 2920 N95-31522
Laboratory robotics: An automated tool for preparing Ion Chromatography calibration standards
[DE95-009441] p 2798 N95-32318

ONBOARD DATA PROCESSING
Experience report: Using formal methods for requirements analysis of critical spacecraft software
p 2938 N95-31247
Information Switching Processor (ISP) contention analysis and control
[NASA-CR-195471] p 2765 N95-31849

ONBOARD EQUIPMENT
System considerations for efficient communication and storage of MSTI image data
[NASA-CR-198869] p 3024 N95-30858

ONE DIMENSIONAL FLOW
Simple model of foam spreading on liquid surfaces
[PB95-211207] p 2838 N95-30630
Study of cross-tail current carriers in magnetotail
p 3005 N95-30804

OPERATING COSTS
Modeling F/A-18 flight hour program costs using regression analysis
[AD-A293771] p 2752 N95-31579

OPERATING SYSTEMS (COMPUTERS)
SodaBot: A software agent environment and construction system
[AD-A290056] p 2939 N95-31277
The occurrence of continuation parameters in CPS terms
[AD-A292952] p 2941 N95-31460
The Linux operating system: An introduction
[NASA-CR-198178] p 2932 N95-31988

OPERATIONAL AMPLIFIERS
Pre-amplifier with multi-stage feedback
[AD-D017371] p 2859 N95-30659

OPERATIONS RESEARCH
Symmetric longest queue system
[PB95-197919] p 2950 N95-30808

OPERATOR PERFORMANCE
The development of human behaviour analysis techniques and the development of human factors technologies
[DE95-613356] p 2930 N95-31267
Automatic Target Recognition (ATR): Background statistics and the detection of targets in clutter
[AD-A293062] p 2853 N95-31673

OPERATORS (MATHEMATICS)
Generalized Kummer surfaces and differentiable invariants of Noether-Horikawa surfaces 1
[DE95-613382] p 2956 N95-30608
Higher Schwarzian operators and combinatorics of Schwarzian derivative
[PB95-208435] p 2957 N95-30623
Co-groups on sequentially complete, locally convex, topological vector spaces in particular on strict LF-spaces
[PB95-206918] p 2966 N95-30681
Potential integral equations of the 2D Laplace operator in wavelet basis
[TRITA-NA-9401] p 2957 N95-30713
On the degree of approximation by Jackson type operators
[DE95-613383] p 2958 N95-30821
Representation of feedback operators for hyperbolic systems
[NASA-CR-198171] p 2960 N95-31319

OPTICAL BISTABILITY
Optical logic and signal processing using a semiconductor laser diode-based optical bistability device
[AD-A293248] p 2997 N95-30908

OPTICAL COMMUNICATION
Passive, multi-channel fiber optic rotary joint assembly
[AD-D017353] p 2996 N95-30529
Design and testing of an optimal digital link capable of 14-channel transmission
[AD-A288505] p 3000 N95-31652
A high-speed photonic clock and carrier regenerator
p 2856 N95-32236

OPTICAL COMPUTERS
Optical logic and signal processing using a semiconductor laser diode-based optical bistability device
[AD-A293248] p 2997 N95-30908

OPTICAL CORRECTION PROCEDURE
SeaWiFS technical report series. Volume 13: Case studies for SeaWiFS calibration and validation, part 1
[NASA-TM-104566-VOL-13] p 2924 N95-32220

OPTICAL CORRELATORS
Real time correlating operation on diffuse objects
[AD-A293220] p 2997 N95-30901
Optical correlator optimizations and extensions for automated optical target recognition
[AD-A293013] p 3000 N95-31697

OPTICAL COUPLING
Calculated coupling efficiency between an elliptical-core optical fiber and an optical waveguide over temperature
[NASA-TM-107005] p 2997 N95-30849
The coupling impedance of a toroidal beam pipe with circular cross section
[DE95-010442] p 2993 N95-31405

OPTICAL DATA PROCESSING
SeaWiFS Technical Report Series. Volume 29: SeaWiFS CZCS-type pigment algorithm
[NASA-TM-104566] p 2922 N95-30857
Multi-valued neural network modified model and its optical realization.
[AD-A293140] p 2951 N95-30891
Optical logic and signal processing using a semiconductor laser diode-based optical bistability device
[AD-A293248] p 2997 N95-30908
Application of computer generated holograms to optical transformations
[AD-A293146] p 2880 N95-30921
Optical feature recognition
[AD-A293168] p 2997 N95-30966
Temporal feature extraction in photorefractive resonators
[AD-A292908] p 2881 N95-31385
Optical correlator optimizations and extensions for automated optical target recognition
[AD-A293013] p 3000 N95-31697

OPTICAL DATA STORAGE MATERIALS
High speed random access, Fourier transform holographic associative and high density two-photon three-dimensional optical memories based on bacteriorhodopsin
[AD-A293389] p 2931 N95-30967

OPTICAL EQUIPMENT
Multi-color pyrometer temperature measurement system
[DE95-009825] p 2879 N95-30687
Nonlinear organized materials for optical devices
[AD-A292809] p 2999 N95-31441
Scannerless Range Imaging with a square wave
[DE95-009840] p 2854 N95-32145

OPTICAL FIBERS
Demodulators for optical fiber interferometers with (3 x 3) outputs
| AD-D017415 | p 2995 N95-30402
Passive, multi-channel fiber optic rotary joint assembly
| AD-D017353 | p 2996 N95-30529
Fiber optic accelerometer with centrally supported flexural disk
| AD-D017369 | p 2879 N95-30658
Optical fiber pressure sensor for liquid level monitoring
| AD-D017346 | p 2996 N95-30679
Fiber optic interferometric electric field and voltage sensor utilizing and electrostrictive transducer
| AD-D017433 | p 2996 N95-30753
Calculated coupling efficiency between an elliptical-core optical fiber and an optical waveguide over temperature
| NASA-TM-107005 | p 2997 N95-30849
Technique to prepare high-reflectance optical fiber Bragg gratings with single exposure in-line or fiber draw tower
| AD-D017445 | p 2998 N95-31270
Numerical studies of nonlinear optical pulse propagation p 2998 N95-31411
Acousto-optical frequency shifters in dual-core optical fibres
| AD-A293979 | p 2999 N95-31529
Standardization of surface contamination analysis systems p 2781 N95-31798
Study of surfaces using near infrared optical fiber spectrometry p 2781 N95-31801
Influence of storage on the maximal pull-out force of three different optical fibers from three epoxides
| PB95-211777 | p 2822 N95-32253
Fiber optic reference frequency distribution to remote beam waveguide antennas p 2972 N95-32346

OPTICAL FILTERS
Optical correlator optimizations and extensions for automated optical target recognition
| AD-A293013 | p 3000 N95-31697

OPTICAL GYROSCOPES
FOG --- evaluation test of a fiber optic gyroscope (FOG)
| PB95-211546 | p 2879 N95-30600

OPTICAL MATERIALS
State-of-the-art low-cost solar reflector materials
| DE95-000260 | p 2902 N95-30526
Nonlinear optical processes in polymer films
| AD-A293384 | p 2815 N95-30955
Laser-induced holographic surface relief gratings on nonlinear optical polymer films
| AD-A293169 | p 2997 N95-30973
IR materials producibility
| AD-A293330 | p 2998 N95-31141
An interpenetrating polymer network for second-order nonlinear optics
| AD-A293019 | p 2821 N95-31699
Novel unsymmetrical polydiacetylenes as materials for second and third order nonlinear optics
| AD-A293020 | p 3001 N95-31700

OPTICAL MEASUREMENT
Effects of molecular structure on the electroactive and optical properties of conjugated rigid-rod polybenzobisazoles
| AD-A292968 | p 2819 N95-31467

OPTICAL MEASURING INSTRUMENTS
Fiber optic accelerometer with centrally supported flexural disk
| AD-D017369 | p 2879 N95-30658

OPTICAL MEMORY (DATA STORAGE)
High speed random access, Fourier transform holographic associative and high density two-photon three-dimensional optical memories based on bacteriorhodopsin
| AD-A293389 | p 2931 N95-30967

OPTICAL POLARIZATION
Polarization characteristics, control, and modulation of vertical-cavity surface emitting lasers
| DE95-008526 | p 2882 N95-30380

OPTICAL PROPERTIES
Effects of molecular structure on the electroactive and optical properties of conjugated rigid-rod polybenzobisazoles
| AD-A292968 | p 2819 N95-31467
An interpenetrating polymer network for second-order nonlinear optics
| AD-A293019 | p 2821 N95-31699
Novel unsymmetrical polydiacetylenes as materials for second and third order nonlinear optics
| AD-A293020 | p 3001 N95-31700
Carrier dynamics and optical properties of GaAs- and InP-based strained quantum well lasers p 2886 N95-31848

OPTICAL PYROMETERS
Multi-color pyrometer temperature measurement system
| DE95-009825 | p 2879 N95-30687

OPTICAL RADAR
Unconventional imaging field experiment plan
| AD-A291492 | p 2846 N95-30562
Airborne ocean water lidar (OWL) real time processor (RTP)
| AD-A293226 | p 2848 N95-30904
Development of a novel wind lidar, phase 1
| AD-A292703 | p 2849 N95-30935
LAWS hurricane studies
| NASA-CR-189438 | p 2919 N95-31128
Middle atmosphere structure and dynamics: Lidar studies at the South Pole, Syowa and Urbana p 2916 N95-31736
Scannerless Range Imaging with a square wave
| DE95-009840 | p 2854 N95-32145

OPTICAL REFLECTION
Technique to prepare high-reflectance optical fiber Bragg gratings with single exposure in-line or fiber draw tower
| AD-D017445 | p 2998 N95-31270

OPTICAL RESONATORS
Temporal feature extraction in photorefractive resonators
| AD-A292908 | p 2881 N95-31385

OPTICAL SCANNERS
An evaluation of an automatic markup system
| DE95-009885 | p 3026 N95-32149

OPTICAL SWITCHING
A study of end-fire coupling of single-mode fiber to Ti: LiNbO3-single-mode planar waveguide
| AD-A293249 | p 2997 N95-30909

OPTICAL TRACKING
Laser Tracker 3: Sandia National Laboratories' third generation laser tracking system
| DE95-008525 | p 2882 N95-30379
Visual tracking of self-occluding articulated objects
| AD-A292894 | p 2928 N95-31383
The High Altitude Balloon Experiment demonstration of acquisition, tracking, and pointing technologies (HABE-ATP) p 2841 N95-32132
Sandia National Lab's precision laser tracking systems
| DE95-009837 | p 2886 N95-32143

OPTICAL WAVEGUIDES
Ceramics derived from metal-organic precursors
| AD-A290791 | p 2811 N95-30405
Calculated coupling efficiency between an elliptical-core optical fiber and an optical waveguide over temperature
| NASA-TM-107005 | p 2997 N95-30849
A study of end-fire coupling of single-mode fiber to Ti: LiNbO3-single-mode planar waveguide
| AD-A293249 | p 2997 N95-30909
Ultraviolet and visible lasers: Rare earth-doped waveguide devices and non-linear optical extraction techniques
| AD-A293976 | p 2885 N95-31528

OPTIMAL CONTROL
H(sub 2) optimal controllers with observer based architecture for continuous-time systems: Separation principle
| PB95-197067 | p 2951 N95-30833
A feedback linearization approach to orbital maneuvers p 2765 N95-30841
Inverse and control problems in electromagnetics
| AD-A292993 | p 2849 N95-30962
SCARLET: DLR rate saturation flight experiment p 2746 N95-31068
A two-timescale approach to nonlinear Model Predictive Control
| DE95-000943 | p 2952 N95-31161
Theory & numerical methods for problems in shape reconstruction and large deviations
| AD-A292874 | p 2952 N95-31279
Global stabilization of nonlinear gyroscopic systems p 2881 N95-31836
Robust control: A structured approach to solve aircraft flight control problems p 2758 N95-31995
Model following control for tailoring handling qualities: ACT experience with ATTHeS p 2758 N95-32000

OPTIMIZATION
Three-D mesh optimization methods for unstructured polyhedra
| DE95-008808 | p 2955 N95-30471
A general inverse design procedure for aerodynamic bodies p 2750 N95-30497
Newton methods for large-scale linear inequality-constrained minimization: Optimization and systems theory
| PB95-210332 | p 2956 N95-30499
Speed control of an elastic two-mass system: Optimization and systems theory
| PB95-212106 | p 2888 N95-30701
Join processing in relational database systems p 3023 N95-30764
Robust position and force tracking control for a robot in contract p 2888 N95-30830
Robust fixed-structure control
| AD-A292883 | p 2952 N95-30961
Pseudo-time methods for constrained optimization problems governed by PDE
| NASA-CR-195081 | p 2959 N95-31120
Solderability enhancement of copper through chemical etching
| DE95-010514 | p 2806 N95-31406
The remainder form and the cord-slope form in global optimization with interval methods p 2941 N95-31533
Variational optimization in quantum field theory p 3020 N95-31646
Using case-based reasoning as a Reinforcement Learning framework for optimization with changing criteria
| AD-A293602 | p 2953 N95-31654
Optimization of an expander of a gas-dynamic trap
| DE95-614172 | p 3006 N95-31679
The design and development of a third generation OSEE instrument p 2781 N95-31800
Polarized proton beams
| DE95-010843 | p 2987 N95-32031
An efficient implementation of Forward-Backward Least-Mean-Square Adaptive Line Enhancers p 2855 N95-32224

OPTOELECTRONIC DEVICES
Opto-electronic components from non-stoichiometric 3-5 materials
| AD-A293206 | p 3013 N95-30985
Method and apparatus for non-destructively measuring local resistivity of semiconductors
| AD-D017436 | p 2862 N95-31343
Excited-state complexes of conjugated polymers
| AD-A292960 | p 2819 N95-31466
Degradation of blue AlGaN/InGaN/GaN LEDs subjected to high current pulses
| DE95-008824 | p 2863 N95-31611
Current trends in the packaging of photonic devices
| DE95-009583 | p 3001 N95-32064
A high-speed photonic clock and carrier regenerator p 2856 N95-32236
Fiber optic reference frequency distribution to remote beam waveguide antennas p 2972 N95-32346

ORBITAL ELEMENTS
Observations of accreting pulsars
| NASA-CR-198931 | p 3028 N95-30469
Assessment of the NASA orbital debris engineering model
| AD-A293350 | p 2766 N95-31143

ORBITAL MANEUVERS
A feedback linearization approach to orbital maneuvers p 2765 N95-30841

ORBITAL RENDEZVOUS
On-orbit truss structure tele-operation experiment by Engineering Test Satellite-7
| NAL-TR-1246 | p 2767 N95-31980

ORDER-DISORDER TRANSFORMATIONS
Structural investigation of xenon ion-beam-irradiated glassy carbon
| DE95-616777 | p 2977 N95-30474
New Fermi-liquid approach for the theory of disordered magnetics
| DE95-613448 | p 2967 N95-30739
Cascade damage in the ordered alloy Ni3Al
| DE95-009893 | p 2809 N95-32104
First-principles approaches to materials stability
| DE95-011533 | p 2810 N95-32283

ORDNANCE
Aerophysics test program 1
| AD-A293890 | p 2963 N95-31543

ORGANIC COMPOUNDS
Preparation of diisopropyl stibines and use thereof
| AD-D017419 | p 2771 N95-30418
Laboratory simulated hydrothermal alteration of sedimentary organic matter from Guaymas Basin, Gulf of California
| NASA-CR-198951 | p 2914 N95-30865
No-thermal plasma processing of VOCs and NO(x) at LLNL
| DE95-011445 | p 2911 N95-32281

ORGANIC MATERIALS
Standardization of (13)CO2 production procedure from organic matter for mass spectrometric analysis
| DE95-614629 | p 2791 N95-30420
Laboratory simulated hydrothermal alteration of sedimentary organic matter from Guaymas Basin, Gulf of California
| NASA-CR-198951 | p 2914 N95-30865
Molecular nanoclusters as precursors to conductive thin films and crystals
| AD-A290278 | p 3014 N95-31189

ORGANIC SEMICONDUCTORS
Magnetic resonance spectroscopy of fullerenes and (pi)-conjugated polymers
| DE95-010131 | p 2817 N95-31108

ORGANIZATIONS
Contribution of groupware to corporate communication: Towards the horizontal organization
| PB95-197661 | p 3022 N95-30453
An architectural approach to strategic information systems planning for the Office of Naval Intelligence
| AD-A289930 | p 3024 N95-30928
National Center for Manufacturing Sciences: Environmentally conscious manufacturing
p 2773 N95-31758
Federally funded R and D centers: Executive compensation at the Aerospace Corporation. Report to Congressional requestors
| GAO/NSIAD-95-75 | p 3022 N95-32213
The sociology of megaprogramming: Experiences in generating an organizational learning enterprise (Software Technology for Adaptable, Reliable Systems(STARS) program)
| AD-A292998 | p 2946 N95-32294
ORGANOMETALLIC COMPOUNDS
Ceramics derived from metal-organic precursors
| AD-A290791 | p 2811 N95-30405
ORIFICES
Investigation of cleanliness verification techniques for rocket engine hardware p 2770 N95-31806
ORION CONSTELLATION
A search for interstellar CH3D: Limits to the methane abundance in Orion-KL
| NASA-CR-198932 | p 3029 N95-30751
ORTHOGONAL FUNCTIONS
Nearly steady flows in GONG prototype data
| NASA-CR-198935 | p 2869 N95-30863
OSCILLATING FLOW
Dynamical systems as models for flow-induced vibrations
| PB95-206991 | p 2869 N95-30956
OSCILLATIONS
New material for high average power infrared generation: QPM-DB GaAs
| AD-A292714 | p 2967 N95-30939
Study of different type neutrino oscillations based on neutrino beams from 600 GeV
| DE95-619267 | p 2983 N95-31260
On possibility to study neutrino oscillations by detectors located at Gran Sasso (Italy) using beams from 600 GeV UNK-1 machine
| DE95-619268 | p 2983 N95-31261
Long baseline neutrino oscillation experiment at the AGS
| DE95-004378 | p 2986 N95-31702
OSCILLATORS
Elliptic deformed classical mechanics in three-dimensional phase space
| DE95-613384 | p 3017 N95-30365
Generalized deformed para-Bose oscillator and its coherent states
| DE95-613444 | p 2963 N95-30610
A high-speed photonic clock and carrier regenerator
p 2856 N95-32236
OSMIUM
An experimental search for high ZT semiconductors: A survey of the preparation and properties of several alloy systems
| DE95-010232 | p 2865 N95-32084
OUTGASSING
The Wide Field/Planetary Camera 2 (WFPC-2) molecular adsorber
| NASA-CR-198866 | p 2881 N95-31456
OXIDASE
Biosensors based on cross-linking of biotinylated Glucose Oxidase by avidin
| AD-A290439 | p 2925 N95-30452
OXIDATION
Observation of a low-binding-energy peak in the 2p core-level photoemission from oxidized Al(111)
| PB95-195350 | p 2802 N95-30534
Interface degradation in CAS/Nicalon during elevated temperature aging
| DE95-008843 | p 2812 N95-30543
High-temperature oxidation behavior of iridium-rhenium alloys
| NASA-TM-106720 | p 2803 N95-30593
A study of catalysts and mechanisms in synthesis reactions
| DE95-010177 | p 2793 N95-30766
The oxidation of carbon monoxide by nitrous oxide
p 2801 N95-31309
The oxidation of carbon monoxide by nitrogen dioxide
p 2801 N95-31310
Effects of molecular structure on the electroactive and optical properties of conjugated rigid-rod polybenzobisazoles
| AD-A292968 | p 2819 N95-31467
Processing and microstructural evolution of alumina/aluminum alloy and aluminum nitride/aluminum alloy composites by directed melt oxidation
p 2789 N95-31973
OXIDATION RESISTANCE
High temperature barrier coatings for refractory metals
| NASA-CR-195475 | p 2802 N95-30531
Evaluation of Environmentally Acceptable hydraulic fluids
| AD-A293037 | p 2821 N95-31666
OXIDE FILMS
Observation of a low-binding-energy peak in the 2p core-level photoemission from oxidized Al(111)
| PB95-195350 | p 2802 N95-30534
Plasma source ion implantation of metal ions: Synchronization of cathodic-arc plasma production and target bias pulses
| DE95-009431 | p 3006 N95-31613
Solution based temperature of Perovskite-type oxide films and powders
| DE95-009089 | p 2820 N95-31629
OXIDES
Electrochemical vapour deposition of SOFC interconnection materials
| PB95-197844 | p 2812 N95-30459
Chemical kinetics and photochemical data for use in stratospheric modeling: Evaluation number 11
| NASA-CR-198863 | p 2912 N95-30525
Low temperature synthesis of YBa2Cu3O(8-x) and other crystalline oxides
| AD-D017370 | p 3009 N95-30533
Structural, chemical and electronic properties of superconducting thin films and junctions
| AD-A292700 | p 3012 N95-30933
OXIDIZERS
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures
p 2799 N95-31198
Development of a new instrument for rocket engine combustion diagnostics p 2799 N95-31211
Advanced oxidizers diffusion flames structure
p 2801 N95-31307
OXYGEN
Power oscillator in the tokamaks training
| DE95-616538 | p 3003 N95-30473
STM studies of clean, CO- and O2-exposed Pt(100)-hex-R0.7 deg
| PB95-195376 | p 3009 N95-30535
Effect of oxygen and decompression bubbles on inert gas washout
| PB95-196556 | p 2925 N95-30665
Phase transformations in melt-spun Y-Ba-Cu-O bulk superconductor
| DE95-010237 | p 3011 N95-30667
Navier-Stokes flow field analysis of compressible flow in a high pressure safety relief valve
| NASA-TM-110640 | p 2868 N95-30862
Investigations of YBaCuO materials with near-room-temperature resistivity transitions
| AD-A293405 | p 3013 N95-31008
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures
p 2799 N95-31198
The structure and reactivity of boron and carbon surfaces
| AD-A292804 | p 2795 N95-31440
A microwave plasma cleaning apparatus
p 2779 N95-31786
OXYGEN ATOMS
The NASA/JPL Evaluation of Oxygen Interactions with Materials-3 (EOIM-3)
| NASA-CR-198865 | p 2796 N95-31660
Operation of the computer model for direct atomic oxygen exposure of Earth satellites
| NASA-CR-198188 | p 2767 N95-32189
OXYGEN IONS
Oxygen charge state abundance in the inner magnetosphere
| AD-A293497 | p 2915 N95-31536
DE-1 observations of polar O(+) stream bulk parameters and comparison with a model of the centrifugally-accelerated polar wind
| NASA-CR-198930 | p 2917 N95-31743
Recoil longitudinal momentum spectroscopy of electron capture from He by O(7+) and F(8+)
| DE95-010823 | p 2990 N95-32274
OXYGEN PLASMA
Process for producing hydrophilic polymer membranes
| AD-D017355 | p 2811 N95-30415
OXYGEN SUPPLY EQUIPMENT
Investigation of cleanliness verification techniques for rocket engine hardware p 2770 N95-31806
An overview of NASA testing requirements for alternate cleaning solvents used in liquid and gaseous oxygen environments p 2783 N95-31813
OXYNITRIDES
Ionic conductivities of lithium phosphorus oxynitride glasses, polycrystals, and thin films
| DE95-008898 | p 2812 N95-30545
OZONE DEPLETION
Aerospace Environmental Technology Conference: Exectutive summary
| NASA-CP-3297 | p 2771 N95-31350
Atmospheric environmental implications of propulsion systems p 2771 N95-31747
Manufacturing waste disposal practices of the chemical propulsion industry p 2771 N95-31748
Alternatives to ozone depleting refrigerants in test equipment p 2775 N95-31767
F-200(TM): The new solution for fire protection
p 2776 N95-31770
Aqueous cleaning design presentation
p 2778 N95-31781
The effect of environmental initiatives on NASA specifications and standards activities
p 2783 N95-31812
OZONOSPHERE
Chemical kinetics and photochemical data for use in stratospheric modeling: Evaluation number 11
| NASA-CR-198863 | p 2912 N95-30525

P

P WAVES
Hadronic production of S-wave and P-wave charmed beauty mesons via heavy quark fragmentation
| DE95-008737 | p 2977 N95-30465
P-N JUNCTIONS
The junction characteristics and current conduction mechanisms of GaInP2 n(+)p diodes and solar cells
| AD-A290857 | p 2902 N95-30408
Spectral response of a polycrystalline silicon solar cell
| DE95-614370 | p 2903 N95-30723
InP solar cell development on inexpensive Si substrates
| AD-A293255 | p 2903 N95-30893
P-TYPE SEMICONDUCTORS
Optimization of a thermoelectric IR-detector for low working temperature
| NASA-CR-198933 | p 2880 N95-30752
PACIFIC ISLANDS
Seismic studies of subducted lithosphere
p 2915 N95-31335
PACIFIC OCEAN
Aerosol measurements over the Pacific Ocean in support of the IR aerosol backscatter program
| NASA-CR-198925 | p 2918 N95-30782
QTSAW (Quick Typhoon Surge and Waves). Wave information studies of US coastlines
| AD-A293172 | p 2919 N95-30976
The impact of microbiologically influenced corrosion on protective polymer coatings
| AD-A288696 | p 2816 N95-30997
PACKAGING
Current trends in the packaging of photonic devices
| DE95-009583 | p 3001 N95-32064
PACKET SWITCHING
Information Switching Processor (ISP) contention analysis and control
| NASA-CR-195471 | p 2765 N95-31849
PACKETS (COMMUNICATION)
Information Switching Processor (ISP) contention analysis and control
| NASA-CR-195471 | p 2765 N95-31849
PAIN
Use of body surface heat patterns for predicting and evaluating acute lower extremity pain among soldiers
| AD-A292829 | p 2927 N95-31446
PAINTS
Demonstration of split-flow ventilation and recirculation as flow-reduction methods in an Air Force paint spray booth, volume 2
| AD-A286808 | p 2762 N95-30926
Demonstration of split-flow ventilation and recirculation as flow-reduction methods in an Air Force paint spray booth, volume 1
| AD-A286807 | p 2763 N95-31101
A comparison of coating alternatives for US Coast Guard aircraft
| AD-A293270 | p 2817 N95-31124
Air pollution control system research: An iterative approach to developing affordable systems
p 2773 N95-31759
Cadmium plating replacements p 2776 N95-31773
Replacement of corrosion protection chromate primers and paints used in cryogenic applications on the Space Shuttle with wire arc sprayed aluminum coatings
p 2776 N95-31774
Bicarbonate of soda paint stripping process validation and material characterization p 2777 N95-31778

Ultra-high pressure water jetting for coating removal and surface preparation p 2778 N95-31780
A centrifuge CO2 pellet cleaning system p 2778 N95-31784
Environmentally Safe and Effective Processes for Paint Removal
| AGARD-LS-201 | p 2843 N95-32165
Overview of paint removal methods p 2843 N95-32166
Paint removal principles p 2843 N95-32167
Background to plastic media blasting p 2843 N95-32168
Dry media blasting with wheat starch p 2843 N95-32169
Water blasting paint removal methods p 2843 N95-32170
Paint removal and surface cleaning using ice particles p 2844 N95-32171
Stripping with dry ice p 2844 N95-32172
Aquastrip p 2844 N95-32173
Stripping by laser p 2844 N95-32174
Selective chemical stripping p 2844 N95-32175
Treatment of plastic media waste p 2844 N95-32177
Bioremediation of wheat starch media waste p 2845 N95-32178
Operational parameters and material effects p 2845 N95-32179
Process evaluation p 2845 N95-32180
Standardization work p 2845 N95-32181

PAIR PRODUCTION
Complex conjugate pairs in stationary Sturmians
| DE95-616279 | p 2976 N95-30429
Signatures of virtual LSP's at the TEVATRON
| DE95-613798 | p 2982 N95-31060
Pion-pair production by two photons
| DE95-737162 | p 2983 N95-31223

PANELS
Design of fibre reinforced composite panels for aerospace applications
| PB95-197851 | p 2784 N95-30460
Verification of surface preparation for adhesive bonding p 2782 N95-31807

PAPER (MATERIAL)
Effect of local melting on tribology in metal cutting
| PB95-195392 | p 2804 N95-31052

PARABOLIC REFLECTORS
Validation of the FLAGSOL parabolic trough solar power plant performance model
| DE95-000263 | p 2903 N95-30887

PARACHUTE FABRICS
High strain-rate testing of parachute materials
| DE95-009577 | p 2897 N95-31614

PARACHUTES
High strain-rate testing of parachute materials
| DE95-009577 | p 2897 N95-31614

PARALLEL COMPUTERS
Recommendations for developing portable parallel I/O facilities for scientific applications
| DE95-009384 | p 2947 N95-30578
An executable specification for the message processor in a simple combining network
| NASA-CR-198174 | p 2933 N95-30584
France --- modeling and verification of parallel computer systems
| PB95-208385 | p 2949 N95-32371

PARALLEL PROCESSING (COMPUTERS)
Extending a multi-set relational algebra to a parallel environment
| PB95-207106 | p 3023 N95-30566
Supporting data intensive applications with medium grained parallelism
| DE95-010164 | p 3023 N95-30619
Algorithm comparison and benchmarking using a parallel spectra transform shallow water model
| DE95-009124 | p 2913 N95-30683
Advanced computational research in materials processing for design and manufacturing
| DE95-009130 | p 2838 N95-30684
Three-dimensional (3D) large fluid flow computations for US Army applications on KSR-1, CM-200, CM-5, and Cray C-90
| AD-A293125 | p 2869 N95-30689
Algorithms for categorizing multiprocessor communication under invalidate and update-based coherence protocols
| AD-A290022 | p 2947 N95-30930
A scalable parallel Strassen's matrix multiply algorithm for distributed memory computers
| DE95-010213 | p 2936 N95-31109
Shear-free turbulent boundary layers p 2873 N95-31349
Integrated high performance distributed system
| AD-A292821 | p 2947 N95-31445
A two-dimensional finite difference algorithm on the KSR1
| AD-A293576 | p 2941 N95-31594
A microeconomic scheduler for parallel computers
| NASA-CR-198153 | p 2932 N95-32046
Computational methods and software systems for dynamics and control of large space structures
| NASA-CR-199036 | p 2767 N95-32204
A transient FETI methodology for large-scale parallel implicit computations in structural mechanics
| NASA-CR-199040 | p 2945 N95-32214
Implementation and performance of the pseudoknot problem in Sisal
| DE95-009573 | p 2925 N95-32358
France --- modeling and verification of parallel computer systems
| PB95-208385 | p 2949 N95-32371

PARALLEL PROGRAMMING
Recommendations for developing portable parallel I/O facilities for scientific applications
| DE95-009384 | p 2947 N95-30578
Universal message passing library, or how to writea truly portable code for parallel computers
| PB95-212221 | p 2948 N95-32255

PARAMETER IDENTIFICATION
Advanced system identification techniques for wind turbine structures
| DE95-004049 | p 2902 N95-30505
New adaptive methods for reconfigurable flight control systems, appendix 1
| AD-A292711 | p 2756 N95-30937
Failure analysis of a repairable system: The case study of a cam-driven reciprocating pump
| AD-A293144 | p 2889 N95-30949
Handling qualities analysis on rate limiting elements in flight control systems p 2746 N95-31071

PARAMETERIZATION
Good metric spaces without good parameterizations
| PB95-208427 | p 2957 N95-30622

PARASITES
HTS Josephson technology on silicon with application to high speed digital microelectronics
| AD-A288627 | p 2861 N95-31147

PARASITIC DISEASES
Services to develop, standardize, and validate Polymerase Chain Reaction (PCR) protocols for the detection of leishmaniasis in clinical samples
| AD-A290155 | p 2817 N95-31115

PARSING ALGORITHMS
Unification of LARCH and Z-based object models to support algebraically-based design refinement: The LARCH perspective
| AD-A289235 | p 2935 N95-30999

PARTIAL DIFFERENTIAL EQUATIONS
Gibbs measures and quasi-periodic solutions for nonlinear Hamiltonian partial differential equations
| PB95-207932 | p 2956 N95-30506
Quasi-periodic solutions of Hamiltonian perturbations of 2D linear Schroedinger equations
| PB95-208443 | p 2957 N95-30624
Use of element-by-element preconditioners to solve large scale partially separable optimization problems
| PB95-195772 | p 2957 N95-30692
Pseudo-time methods for constrained optimization problems governed by PDE
| NASA-CR-195081 | p 2959 N95-31120
Numerical stability investigations of processes for solving linear initial value problems
| PB95-207023 | p 2959 N95-31183
Self-adaptive multilevel methods for fluid flow problems p 2873 N95-31412
Some aspects on the modelling of non-Newtonian fluid flow
| TRITA-NA-9317 | p 2873 N95-31415
Quasi-Newton updating for large scale nonlinear systems
| AD-A292776 | p 2940 N95-31431
Derivation of two-dimensional (2-D) conduction equation in generalized coordinates with constant and anisotropic physical properties
| AD-A293896 | p 3020 N95-31511

PARTICLE ACCELERATION
Studying the thermal/non-thermal crossover in solar flares
| NASA-CR-189436 | p 3031 N95-30785

PARTICLE ACCELERATOR TARGETS
Target diagnostics for intense lithium ion hohlraum experiments on PBFA 2
| DE95-008517 | p 3006 N95-31626

PARTICLE ACCELERATORS
Minijet veto: A tool for the heavy Higgs search at the LHC
| PB95-196234 | p 2979 N95-30695
The Los Alamos accelerator code group
| DE95-010989 | p 2992 N95-31151
The coupling impedance of a toroidal beam pipe with circular cross section
| DE95-010442 | p 2993 N95-31405
Target diagnostics for intense lithium ion hohlraum experiments on PBFA 2
| DE95-008517 | p 3006 N95-31626
A study of ion trapping and instability in the Fermilab antiproton accumulator p 2993 N95-31647
KRAKEN, a numerical model of RHIC impedances
| DE95-011563 | p 2994 N95-32242
Normal mode tunes for linear coupled motion in six dimensional phase space
| DE95-011565 | p 2994 N95-32244
Design study of prototype accelerator and MeV test facility for demonstration of 1 MeV, 1 A negative ion beam production
| DE95-737208 | p 2995 N95-32262

PARTICLE BEAMS
Target diagnostics for intense lithium ion hohlraum experiments on PBFA 2
| DE95-008517 | p 3006 N95-31626
Radial mode evolution in longitudinal bunched beam instability
| DE95-010895 | p 2994 N95-32092
Validity of the differential equations for ionization cooling
| DE95-010438 | p 2989 N95-32160
Review of longitudinal perturbation formalism
| DE95-010894 | p 2990 N95-32278
Tune modulation due to synchrotron oscillations and chromaticity, and the dynamic aperture
| DE95-011566 | p 2995 N95-32297

PARTICLE COLLISIONS
The mechanism of particle production process in hadron-nucleon collisions
| DE95-613727 | p 2975 N95-30372
On perturbative asymptotic of Regge trajectories
| DE95-613585 | p 3018 N95-30636
WW and WZ production at the tevatron
| DE95-011014 | p 2981 N95-30970
Spin momentum correlation (handedness) in the process of four pion production in the electron-positron collisions
| DE95-613690 | p 2988 N95-32093
Radiative corrections to the three quantum annihilation cross section in high energy electron-positron collisions
| DE95-623675 | p 2995 N95-32296

PARTICLE DECAY
The search for the decay of Z boson into two gamma as a test of Bose statistics
| DE95-616373 | p 2976 N95-30393
Confronting left-right symmetric models with electroweak precision data at the Z peak
| PB95-208054 | p 2977 N95-30484
New tensor interactions in micron-decay
| DE95-613760 | p 2978 N95-30528
Minijet veto: A tool for the heavy Higgs search at the LHC
| PB95-196234 | p 2979 N95-30695
Instantaneous chiral quark model for relativistic mesons in a hot and dense medium
| DE95-613782 | p 2980 N95-30911
Signatures of virtual LSP's at the TEVATRON
| DE95-613798 | p 2982 N95-31060
B(sub c)-meson production in hadron-hadron collisions
| DE95-620537 | p 2983 N95-31217
Do the narrow cryptoexotic baryon resonances exist?
| DE95-619291 | p 2984 N95-31378
Structure formation with majoron supermultiplet
| DE95-613596 | p 2984 N95-31546
Studies of the strong and electroweak interactions at the Z(sub 0) pole
| DE95-010353 | p 2986 N95-31682
Monte Carlo simulations of muon production
| DE95-009554 | p 2988 N95-32063
A search for jet handedness in hadronic Z-0 decays
| DE95-010099 | p 2988 N95-32083
A measurement of quark and gluon jet differences at the Z(sup 0) resonance
| DE95-010666 | p 2989 N95-32266
An experimental study of QCD and jets in e(+)e(-) annihilation
| DE95-010667 | p 2989 N95-32267

PARTICLE ENERGY
Beam-beam effects
| DE95-008443 | p 2991 N95-30360
Lower hybrid accessibility in a large, hot reversed field pinch
| DE95-011001 | p 3007 N95-32310

PARTICLE IMAGE VELOCIMETRY
The study of flame-vortex interactions using a particle image velocimeter p 2796 N95-31709

PARTICLE INTERACTIONS
On the string equation at c=1
| DE95-737161 | p 3014 N95-31222
Pion-pair production by two photons
| DE95-737162 | p 2983 N95-31223

The topological string associated with a simple singularity of type D
[DE95-737229] p 2983 N95-31225
Global aspects of the WZNW reduction to Toda theories
[DE95-737230] p 3019 N95-31226
Instanton - antiinstanton interaction and asymptotics of perturbation theory expansion of in double well oscillator
[DE95-619245] p 2986 N95-31259

PARTICLE MASS
Effective Lagrangian approach to the fermion mass problem
[DE95-616316] p 2976 N95-30443
Top quark and Higgs boson masses from wormhole physics
[DE95-616384] p 2978 N95-30580
Electromagnetic hadron mass differences and estimation of isotopic symmetry violation parameters of QCD vacuum from quark model
[DE95-613628] p 2985 N95-31621
Renormalization group analyses of particle masses in full four-generation fermion condensate scheme
[DE95-613595] p 2988 N95-32070
Applications of chiral symmetry
[DE95-009552] p 2988 N95-32079
Charm photoproduction dynamics
[DE95-009106] p 2990 N95-32303
Thermal rho's in the quark-gluon plasma
[DE95-009543] p 3008 N95-32357

PARTICLE MOTION
Particle filtration: A comparison between theory and experiment
[DE95-009442] p 2875 N95-31637

PARTICLE PRODUCTION
The mechanism of particle production process in hadron-nucleon collisions
[DE95-613727] p 2975 N95-30372
Current issues in perturbative QCD
[DE95-008448] p 2975 N95-30388
Hadronic production of S-wave and P-wave charmed beauty mesons via heavy quark fragmentation
[DE95-008737] p 2977 N95-30465
Experimental results on charge exchange reactions with delta excitations and polarization studies of delta and N(sup *) (1440) resonances
[DE95-614022] p 2981 N95-30913
WW and WZ production at the tevatron
[DE95-011014] p 2981 N95-30970
Signatures of virtual LSP's at the TEVATRON
[DE95-613798] p 2982 N95-31060
Period doubling dynamics in hadron physics: Exact calculations
[DE95-620535] p 2982 N95-31215
B(sub c)-meson production in hadron-hadron collisions
[DE95-620537] p 2983 N95-31217
Double charmed baryons production at B-factory
[DE95-620540] p 2983 N95-31219
Do the narrow cryptoexotic baryon resonances exist?
[DE95-619291] p 2984 N95-31378
Search for exotic baryons with the SPHINX facility
[DE95-613774] p 2984 N95-31549
A search for millicharged particles at SLAC
[DE95-010694] p 2987 N95-32026
Physics goals of a mu(+) mu(-) collider
[DE95-009546] p 2994 N95-32059
Monte Carlo simulations of muon production
[DE95-009554] p 2988 N95-32063
Spin momentum correlation (handedness) in the process of four pion production in the electron-positron collisions
[DE95-613690] p 2988 N95-32093
On the search for exotic hadrons in the experiments with high energy hyperon beam
[DE95-620534] p 2989 N95-32261
A measurement of quark and gluon jet differences at the Z(sup 0) resonance
[DE95-010666] p 2989 N95-32266
Charm photoproduction dynamics
[DE95-009106] p 2990 N95-32303
On hadronic production of the B(sub c) meson
[DE95-613726] p 2991 N95-32304

PARTICLE SIZE DISTRIBUTION
The Al and Al2O3 droplet cloud in solid rocket motors p 2770 N95-31196
Model for defining propellant burn rate performance boundaries p 2800 N95-31290
Particle filtration: A comparison between theory and experiment
[DE95-009442] p 2875 N95-31637

PARTICLE SPIN
The search for the decay of Z boson into two gamma as a test of Bose statistics
[DE95-616373] p 2976 N95-30393
Multi-particle correlations in quaternionic quantum systems
[DE95-616271] p 3018 N95-30424
Plaquette expansion proof and interpretation
[DE95-616282] p 2965 N95-30432
Application of spin-sensitive electron spectroscopies to investigations of electronic and magnetic properties of solid surfaces and epitaxial systems
[DE95-010154] p 2792 N95-30614
Effective chiral-spin Hamiltonian for odd-numbered coupled Heisenberg chains
[DE95-614445] p 2982 N95-31168

PARTICLE THEORY
Possible reason why leptons are lighter than quarks
[DE95-616383] p 2978 N95-30579
The activities of the high energy physics program
[DE95-010155] p 2991 N95-30615
Abstracts of Annual Physics Conference of Iran
[DE95-611717] p 2768 N95-30881
Structure formation with majoron supermultiplet
[DE95-613596] p 2984 N95-31546

PARTICLE TRAJECTORIES
On perturbative asymptotic of Regge trajectories
[DE95-613585] p 3018 N95-30636

PARTICLES
On the interactions between particles and turbulence in a fully-developed channel flow in air p 2875 N95-31707

PARTICULATE SAMPLING
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
[DE95-000047] p 2881 N95-31694

PARTICULATES
Hydrogen sulfide analyzer with protective barrier
[AD-D017412] p 2793 N95-31009
Preventing cracking of anodized coatings
[NASA-TM-104622] p 2839 N95-31690
Particulate air pollution and increased mortality: Biological plausibility for causal relationship
[DE95-006161] p 2909 N95-31703

PARTONS
Minijet veto: A tool for the heavy Higgs search at the LHC
[PB95-196234] p 2979 N95-30695
Partons and black holes
[DE95-009921] p 3029 N95-31102
Hadronic production of B(sub c)-mesons
[DE95-620536] p 2983 N95-31216

PASSAGEWAYS
Aircraft evacuations through Type-3 exits I: Effects of seat placement at the exit
[DOT/FAA/AM-95/22] p 2748 N95-31845

PASSENGER AIRCRAFT
Special investigation report: Safety of the air tour industry in the United States
[PB95-917004] p 2748 N95-32185

PASSIVITY
Hydrogen diffusion and passivation in InGaAlN alloys
[DE95-010889] p 2806 N95-31150

PATCH TESTS
The individual element test revisited
[NASA-CR-199039] p 2945 N95-32215

PATIENTS
Patient/aircraft forecasting for the strategic aeromedical evacuation lift-bed process
[AD-A293902] p 2747 N95-31512

PATROLS
Objective analysis of oceanic data for Coast Guard trajectory models
[AD-A292884] p 2924 N95-32363

PATTERN RECOGNITION
Selecting optimal experiments for feedforward multilayer perceptrons
[AD-A290856] p 2949 N95-30406
Computer vision for detecting and quantifying gamma-ray sources in coded-aperture images
[DE95-008810] p 2900 N95-30472
Unconventional imaging field experiment plan
[AD-A291492] p 2846 N95-30562
Feature-based modeling of product families
[PB95-207148] p 2933 N95-30568
Noisy-network acceptors
[PB95-197976] p 2951 N95-30813
Neurodynamical systems for cognition and target identification
[AD-A293111] p 2951 N95-30884
Neural network false alarm filter, volume 2
[AD-A293114] p 2860 N95-30886
Machine learning for a toolkit for image mining
[AD-A293137] p 2951 N95-30890
Nonparametric recognition of nonrigid motion
[AD-A293630] p 2963 N95-31565
Optical correlator optimizations and extensions for automated optical target recognition
[AD-A293013] p 3000 N95-31697
Artificial neural networks and model-based recognition of 3-D objects from 2-D images p 2954 N95-31838
PADO: Learning tree structured algorithms for orchestration into an object recognition system
[AD-A293109] p 2943 N95-32020

PATTERN REGISTRATION
Navier-Stokes flow field analysis of compressible flow in a high pressure safety relief valve
[NASA-TM-110640] p 2868 N95-30862

PAVEMENTS
Impact behavior of the active zone within a frozen soil profile
[AD-A292909] p 2915 N95-31386
Evaluation of alternative pavement marking materials
[AD-A292973] p 2763 N95-31468

PAYLOAD DELIVERY (STS)
STS-70 flight: Day 1
[NASA-TM-110659] p 2765 N95-30880

PAYLOADS
The High Altitude Balloon Experiment demonstration of acquisition, tracking, and pointing technologies (HABE-ATP) p 2841 N95-32132

PEARLITE
A study of Damascus steel
[DE95-010127] p 2809 N95-32023

PECLET NUMBER
Heat transfer in shear-free turbulent boundary layers p 2876 N95-31708

PENDULUMS
Dynamical systems as models for flow-induced vibrations
[PB95-206991] p 2869 N95-30956

PENETRATION
HTS Josephson technology on silicon with application to high speed digital microelectronics
[AD-A288627] p 2861 N95-31147
Comparisons of target detection clutter using data from the 1993 FOPEN experiments
[AD-A293052] p 2852 N95-31606

PERFLUORO COMPOUNDS
Enhancement of perfluoropolyether boundary lubrication performance: I. Preliminary results
[NASA-TM-106937] p 2813 N95-30621
Evaluation of halon alternatives in inerting experiments
[AD-A293774] p 2795 N95-31580

PERFORMANCE PREDICTION
Generation of earthquake signals
[PB95-211223] p 2913 N95-30631
Validation of the FLAGSOL parabolic trough solar power plant performance model
[DE95-000263] p 2903 N95-30887
Probabilistic reliability modeling of fatigue on the H-46 tie bar
[AD-A289926] p 2751 N95-30927
Performance evaluation of high-temperature superconducting current leads for micro-SMES systems
[DE95-005843] p 2861 N95-30943
Hot jet/wake turbulent structure and laser propagation. Part 3: Laser propagation measurements and modeling p 2871 N95-30992
Life prediction methodology for ceramic components of advanced heat engines: Phase 1. Volume 1
[DE95-010805] p 2817 N95-31135
Life prediction methodology for ceramic components of advanced heat engines. Phase 1: Volume 2. Appendices
[DE95-010806] p 2817 N95-31136
Centrifugal and axial pump design and off-design performance prediction p 2830 N95-31289
Experiment of rocket-ram combined combustor
[NAL-TR-1249] p 2769 N95-31739
Evaluation of static strength of T800H/PMR-15 carbon/polyimide laminates at room temperature and 300 C
[NAL-TR-1254] p 2789 N95-31740
The application of noncoherent Doppler data types for Deep Space Navigation p 2765 N95-32226

PERFORMANCE TESTS
Integrated X-ray testing of the electro-optical breadboard model for the XMM reflection grating spectrometer
[DE95-008829] p 2879 N95-30507
Results from tests of the Honeywell integrated flight management unit
[PB95-211355] p 2748 N95-30597
FOG --- evaluation test of a fiber optic gyroscope (FOG)
[PB95-211546] p 2879 N95-30600
A novel instrumentation system for measurement of helicopter rotor motions and loads data, phase 1
[AD-A293309] p 2751 N95-30923
On the use of electronic tilt sensors as angle encoders for synchrotron applications
[DE95-005836] p 2880 N95-30941
10 kW heat pipe-heat sink development
[AD-A293167] p 2870 N95-30965
Construction and performance measurement of a portable thermoacoustic refrigerator demonstration apparatus
[AD-A293265] p 2839 N95-31122

Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 1
| NASA-CR-195435-VOL-1 | p 2768 N95-31169
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 2
| NASA-CR-195435-VOL-2 | p 2769 N95-31170
Investigation of ram accelerator performance capabilities p 2799 N95-31204
Pressure transducer performance and measurement trade-offs in a transient, high temperature, combustion environment p 2799 N95-31209
Natural gas liquefier for vehicle fuel
| AD-A293619 | p 2836 N95-31564
Alternatives to ozone depleting refrigerants in test equipment p 2775 N95-31767
Environmentally safe aviation fuels p 2775 N95-31768
Cadmium plating replacements p 2776 N95-31773
Ultrasonic frequency selection for aqueous fine cleaning p 2779 N95-31788
A design of experiments test to define critical spray cleaning parameters for Brulin 815 GD and Jettacin cleaners p 2779 N95-31790
Environmentally compatible hand wipe cleaning solvents p 2780 N95-31795
Surface inspection using FTIR spectroscopy p 2782 N95-31803
Cleaning verification by air/water impingement p 2782 N95-31805
An overview of NASA testing requirements for alternate cleaning solvents used in liquid and gaseous oxygen environments p 2783 N95-31813
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. Unmanned aerial vehicles: Performance of short-range system still in question
| GAO/NSIAD-94-65 | p 2752 N95-32196
Assessment of computer aids during communication exercise 1991
| PB95-211462 | p 2945 N95-32248
Thermoplastic elastomers as a binder in composite propellants
| PB95-211553 | p 2837 N95-32249
A globally efficient means of distributing UTC time and frequency through GPS p 2970 N95-32335
SVN 9 End-Of-Life testing p 2767 N95-32345
Fiber optic reference frequency distribution to remote beam waveguide antennas p 2972 N95-32346

PERIOD DOUBLING
Multisite antiferromagnetic Ising spin model: Phase transition through doubling bifurcation
| DE95-614311 | p 3011 N95-30722
Period doubling dynamics in hadron physics: Exact calculations
| DE95-620535 | p 2982 N95-31215

PERIODIC VARIATIONS
Large scale periodicity of the universe and baryogenesis
| DE95-613461 | p 3028 N95-30366
On reflection of Alfven waves in the solar wind
| NASA-TM-110642 | p 3031 N95-30582
Acoustomagnetoelectric effect in a superlattice
| DE95-613445 | p 3011 N95-30736

PERMAFROST
Impact behavior of the active zone within a frozen soil profile
| AD-A292909 | p 2915 N95-31386

PERMANENT MAGNETS
Active turbulence control using microelectrodes, permanent magnets in microgrooves
| AD-D017351 | p 2867 N95-30553
A metallurgical approach toward alloying in rare earth permanent magnet systems
| DE95-010242 | p 2966 N95-30668

PERMEABILITY
Membrane transport: A cellular probe of heat stroke
| AD-A293327 | p 2926 N95-30924
Extension of the pore tree model to describe pore interconnectivity
| AD-A290366 | p 2793 N95-30971

PERMITTIVITY
Dielectric property measurement of zirconia fibers at high temperatures
| DE95-010991 | p 2821 N95-31705

PERMUTATIONS
Size of Fulton's essential set
| PB95-211645 | p 2955 N95-30477
Combination of Fulton's essential set
| PB95-211637 | p 2956 N95-30500

PEROVSKITES
Orientation of rapid thermally annealed lead zirconate titanate thin films on (111) Pt substrate
| DE95-615232 | p 2811 N95-30422
Deposition and characterization of photoconductive PZT thin films
| ATR-93(8308)-7 | p 2819 N95-31417
The pyrochlore-to-perovskite transformation in solution-derived lead zirconate titanate thin films
| DE95-010453 | p 2822 N95-32161

PERSONAL COMPUTERS
UNIX and PC security in a network environment. UNINETT
| PB95-196291 | p 2934 N95-30662
UNIX and PC security in a network environment. LOKALNETT 1993
| PB95-196309 | p 2934 N95-30697

PERSONNEL MANAGEMENT
The development of KAERI management information system 2: The development of Time Sheet Management System
| DE95-613355 | p 3024 N95-30883
Application of a genetic algorithm to optimize staffing levels in software development
| AD-A293725 | p 2943 N95-31835

PERTURBATION
Large scale periodicity of the universe and baryogenesis
| DE95-613461 | p 3028 N95-30366
Gravitational-radiation damping of compact binary systems to second post-Newtonian order
| PB95-207882 | p 2912 N95-30588
Removal of the Energy Dependence from the Resolvent Like Energy Dependent Interactions
| DE95-613385 | p 2961 N95-31619
Combustion response to acoustic perturbation in liquid rocket engines p 2770 N95-31972

PERTURBATION THEORY
Current issues in perturbative QCD
| DE95-008448 | p 2975 N95-30388
Quasi-periodic solutions of Hamiltonian perturbations of 2D linear Schroedinger equations
| PB95-208443 | p 2957 N95-30624
The iteration formula of the Maslov-type index theory with applications to nonlinear Hamiltonian systems
| DE95-613379 | p 2957 N95-30676
Solvability of a class of hypersingular nonlinear integral equations
| PB95-207031 | p 3011 N95-30720
Effective chiral-spin Hamiltonian for odd-numbered coupled Heisenberg chains
| DE95-614445 | p 2982 N95-31168
Hadronic production of B(sub c)-mesons
| DE95-620536 | p 2983 N95-31216
Instanton - antiinstanton interaction and asymptotics of perturbation theory expansion of in double well oscillator
| DE95-619245 | p 2966 N95-31259
Instability of weakly nonlinear chaotic structures
| DE95-613441 | p 2966 N95-32066
Renormalization group analyses of particle masses in full four-generation fermion condensate scheme
| DE95-613595 | p 2988 N95-32070
Review of longitudinal perturbation formalism
| DE95-010894 | p 2990 N95-32278

PETROLEUM PRODUCTS
Determination of halogens in a petroleum product by ion chromatography
| DE95-002056 | p 2797 N95-31840

PH
On-line surfactant monitoring
| DE95-009417 | p 2792 N95-30735

PHASE CONJUGATION
Picosecond phase conjugation: New applications, devices, and materials
| AD-A293195 | p 3013 N95-30982
Photorefractive nonlinear optics
| AD-A292913 | p 2999 N95-31458

PHASE DIAGRAMS
The neutron powder diffraction and acoustic investigations of the NH4SCN phase diagram
| DE95-614372 | p 3009 N95-30419
Phase transformations in melt-spun Y-Ba-Cu-O bulk superconductor
| DE95-010237 | p 3011 N95-30667
A proposed phase equilibrium diagram for Pt-Zr system
| DE95-620904 | p 2806 N95-31220

PHASE LOCKED SYSTEMS
Harmonic gyrotron amplifiers and phase-locked oscillators
| AD-A293185 | p 2861 N95-30979

PHASE MODULATION
Demodulators for optical fiber interferometers with (3 x 3) outputs
| AD-D017415 | p 2995 N95-30402
Computer simulation results for PCM/PM/NRZ receivers in nonideal channels p 2765 N95-32225

PHASE SHIFT
Microwave repeater with broadband active and/or passive isolation control
| AD-D017358 | p 2846 N95-30417
Interferometry with particles of non-zero rest mass: Topological experiments
| DE95-616244 | p 2979 N95-30689
Detection of the phase shift which accompanies the excitation of an atomic beam by N. F. Ramsey's method
| IFTR-5/1995 | p 2986 N95-31818
Satellite test of the isotropy of the one-way spe ed of light using ExTRAS p 2973 N95-32349

PHASE SHIFT KEYING
Rate considerations in deep space telemetry p 2765 N95-32223
Fast identification of some typical digital modulation schemes
| PB95-211454 | p 2857 N95-32247

PHASE STABILITY (MATERIALS)
First-principles approaches to materials stability
| DE95-011533 | p 2810 N95-32283

PHASE TRANSFORMATIONS
The neutron powder diffraction and acoustic investigations of the NH4SCN phase diagram
| DE95-614372 | p 3009 N95-30419
Real Higgs singlet and electroweak phase transition in the standard model
| DE95-616315 | p 2976 N95-30442
Theoretical high energy physics
| DE95-003107 | p 2991 N95-30527
Modeling of thermal, electronic, hydrodynamic, and dynamic deposition processes for pulsed-laser deposition of thin films
| DE95-008906 | p 2813 N95-30572
Phase transformations in melt-spun Y-Ba-Cu-O bulk superconductor
| DE95-010237 | p 3011 N95-30667
Multisite antiferromagnetic Ising spin model: Phase transition through doubling bifurcation
| DE95-614311 | p 3011 N95-30722
Fundamental topics in heat transfer through deformable two-phase media p 2874 N95-31532
The pyrochlore-to-perovskite transformation in solution-derived lead zirconate titanate thin films
| DE95-010453 | p 2822 N95-32161
First-principles approaches to materials stability
| DE95-011533 | p 2810 N95-32283
Thermal rho's in the quark-gluon plasma
| DE95-009543 | p 3008 N95-32357
Phase transitions and gravitational collapse
| DE95-011732 | p 3021 N95-32359

PHASE VELOCITY
Dissolution of eutectic microstructures
| DE95-010244 | p 2804 N95-30757
Vertical transport in GaAs/AlGaAs superlattices p 3012 N95-30822
Ultrasonic characterization of fiber-matrix interphasial properties and damage in high-temperature composites p 2785 N95-30823

PHASE-SPACE INTEGRAL
Covariant phase space formulations of superparticles and supersymmetric WZW models
| DE95-616278 | p 2964 N95-30428

PHENOMENOLOGY
Phenomenology of the two Higgs doublet sector of a quark-lepton symmetric model
| DE95-616337 | p 2976 N95-30446

PHOSPHATES
Laser properties of Yb(3+)-doped Sr5(PO4)3F crystals
| DE95-010686 | p 3016 N95-32268

PHOSPHORS
Low-voltage cathodoluminescence of europium-activated yttrium orthovanadate
| DE95-008536 | p 3008 N95-30382

PHOSPHORUS
Ionic conductivities of lithium phosphorus oxynitride glasses, polycrystals, and thin films
| DE95-008898 | p 2812 N95-30545

PHOTOCHEMICAL REACTIONS
Chemical kinetics and photochemical data for use in stratospheric modeling: Evaluation number 11
| NASA-CR-198863 | p 2912 N95-30525
Photochemistry of intermolecular C-H bond activation reactions
| DE95-008991 | p 2978 N95-30574

PHOTOCONDUCTIVE CELLS
Self-consistent, 2D simulations of filament propagation in photoconducting switches
| DE95-010794 | p 2861 N95-31133

PHOTOCONDUCTIVITY
Photophysical properties of opto-electric molecules studied by time-resolved microwave conductivity
| PB95-196994 | p 2980 N95-30774

Self-consistent, 2D simulations of filament propagation in photoconducting switches
| DE95-010794 | p 2861 N95-31133
Deposition and characterization of photoconductive PZT thin films
| ATR-93(8308)-7 | p 2819 N95-31417
Contactless characterization of semiconductors using laser-induced surface photo-charge voltage measurements
| AD-A293618 | p 2863 N95-31725

PHOTOCONDUCTORS
High aspect ratio metal microstructures and method for preparing the same
| AD-D017463 | p 2803 N95-30750
Deposition and characterization of photoconductive PZT thin films
| ATR-93(8308)-7 | p 2819 N95-31417

PHOTODIODES
A room temperature LSO/PIN photodiode PET detector module that measures depth of interaction
| DE95-008447 | p 2878 N95-30378

PHOTOELASTICITY
Acoustoelastic stress evaluation in metal plate using absolute shear and longitudinal time-of-flight data
| PB95-197810 | p 2892 N95-30458

PHOTOELECTRIC EFFECT
Contactless characterization of semiconductors using laser-induced surface photo-charge voltage measurements
| AD-A293618 | p 2863 N95-31725

PHOTOELECTRIC EMISSION
A theoretical analysis of steady-state photocurrents in simple silicon diodes
| NASA-CR-198885 | p 2859 N95-30651
Development of germanium-silicon growth technology
| AD-A293199 | p 3013 N95-30983
Theoretical aspects of electron emission holography
| DE95-614371 | p 2880 N95-31167
Annual meeting of the Advanced Light Source Users' Association
| DE95-009373 | p 3000 N95-31635

PHOTOELECTRIC MATERIALS
Photophysical properties of opto-electric molecules studied by time-resolved microwave conductivity
| PB95-196994 | p 2980 N95-30774

PHOTOELECTRON SPECTROSCOPY
Observation of a low-binding-energy peak in the 2p core-level photoemission from oxidized Al(111)
| PB95-195350 | p 2802 N95-30534
Applications of SXPS for studying surface structure, reaction mechanisms and kinetics
| DE95-008903 | p 2803 N95-30547
The structure and reactivity of boron and carbon surfaces
| AD-A292804 | p 2795 N95-31440

PHOTOELECTRONS
Photophysical properties of opto-electric molecules studied by time-resolved microwave conductivity
| PB95-196994 | p 2980 N95-30774
Cleanliness inspection tool for RSRM bond surfaces p 2781 N95-31799

PHOTOEXCITATION
Magnetic resonance spectroscopy of fullerenes and (pi)-conjugated polymers
| DE95-010131 | p 2817 N95-31108
Suppression of self-interstitials in silicon during ion implantation via in-situ photoexcitation
| DE95-009173 | p 3016 N95-32301

PHOTOLUMINESCENCE
Magnetoluminescence characterization of quantum well structures
| DE95-008527 | p 3008 N95-30381
Fractal quantum well heterostructures for broadband light emitters
| DE95-009579 | p 2660 N95-30707
Magnetic resonance spectroscopy of fullerenes and (pi)-conjugated polymers
| DE95-010131 | p 2817 N95-31108
Investigation of polycrystalline thin film CuInSe2 solar cells based on ZnSe windows
| DE95-004068 | p 2904 N95-31164
Investigation of the basic physics of high efficiency semiconductor hot carrier solar cell
| NASA-CR-198945 | p 2906 N95-32212

PHOTOLYSIS
Aqueous TiO2 photocatalysis of metal-EDTA complexes
| DE95-011058 | p 2793 N95-31113

PHOTOMASKS
Metrology of chrome on quartz photomasks using low voltage scanning electron microscopy. Part 1: Physical SEM parameters
| PB95-195780 | p 2880 N95-30693

PHOTON BEAMS
A room temperature LSO/PIN photodiode PET detector module that measures depth of interaction
| DE95-008447 | p 2878 N95-30378

PHOTON DENSITY
Beam stability at SRRC storage ring
| DE95-010842 | p 2995 N95-32260

PHOTONICS
Current trends in the packaging of photonic devices
| DE95-009583 | p 3001 N95-32064
The Telecommunications and Data Acquisition Report
| NASA-CR-198911 | p 2854 N95-32221

PHOTONS
On the Compton twist-3 asymmetries
| DE95-613627 | p 3017 N95-30371
The search for the decay of Z boson into two gamma as a test of Bose statistics
| DE95-616373 | p 2976 N95-30393
Electromagnetic-gravitational conversion cross sections in external electromagnetic fields
| DE95-613589 | p 2979 N95-30637
Pion-pair production by two photons
| DE95-737162 | p 2983 N95-31223
Inductively coupled IR staring array based on photofluxonic pixels
| AD-A292784 | p 2998 N95-31435
Integrated high performance distributed system
| AD-A292821 | p 2947 N95-31445
Monte Carlo code for evaluating the Boundary Layer Illumination and Radiation Balance model (BLIRB)
| AD-A293963 | p 2915 N95-31560
Effects of mosaicity on Parametric X-Radiation production
| AD-A293677 | p 2985 N95-31597
Form factor of the process gamma(*) gamma(*) yields pi(sup 0) for small virtuality of one of the photons and QCD sum rules (2): Sum rule
| DE95-613629 | p 2988 N95-32078

PHOTOPRODUCTION
Electromagnetic-gravitational conversion cross sections in external electromagnetic fields
| DE95-613589 | p 2979 N95-30637
The 10th INS Scientific Computational Programs
| DE95-717864 | p 2982 N95-31178
Charm photoproduction dynamics
| DE95-009106 | p 2990 N95-32303

PHOTOREFRACTIVITY
Photo-refractive Bi12SiO20: Spatial light modulator
| AD-A293084 | p 3001 N95-32153

PHOTOSPHERE
Nearly steady flows in GONG prototype data
| NASA-CR-198935 | p 2869 N95-30863

PHOTOTHERMAL CONVERSION
Extra focal convective suppressing solar collector
| DE95-010170 | p 2907 N95-32288

PHOTOVOLTAIC CELLS
Photovoltaic module certification/laboratory accreditation criteria development
| DE95-004063 | p 2905 N95-31381
Space systems environmental interaction studies
| AD-A293826 | p 2766 N95-31553
Photovoltaic Energy Program overview: Fiscal year 1994
| DE94-011871 | p 2905 N95-31661
Development of large-area monolithically integrated Silicon-Film(trademark) photovoltaic modules
| DE95-004089 | p 2906 N95-32057
Evaluation and analysis survey on new energy introduction, part 3
| DE95-769806 | p 2906 N95-32072

PHOTOVOLTAIC CONVERSION
Photovoltaic Energy Program overview: Fiscal year 1994
| DE94-011871 | p 2905 N95-31661
Evaluation and analysis survey on new energy introduction, part 3
| DE95-769806 | p 2906 N95-32072
Outlook for renewable energy technologies: Assessment of international programs and policies
| DE95-009084 | p 2907 N95-32302

PHOTOVOLTAIC EFFECT
The junction characteristics and current conduction mechanisms of GaInP2 n(+)p diodes and solar cells
| AD-A290857 | p 2902 N95-30408

PHTHALOCYANIN
The effect of gravity on the deposition of thin films: The physical vapor transport of copper phthalocyanine
| AD-A292997 | p 2838 N95-31472
Calculated structures and electronic absorption spectroscopy for magnesium phthalocyanine and its anion radical
| AD-A293672 | p 2798 N95-31596

PHYSICAL OPTICS
Physical optics polarization scattering matrix for a right-angle dihedral
| AD-A293036 | p 3000 N95-31665

PHYSICAL PROPERTIES
Advanced thin-film deposition and physical properties of high-temperature and other novel superconducting materials
| AD-A292798 | p 2795 N95-31439
Excited-state complexes of conjugated polymers: Novel photophysical processes and optoelectronic materials
| AD-A292958 | p 2819 N95-31462
Whisker reinforced glass ceramic
| DE95-010542 | p 2823 N95-32305

PHYSIOLOGICAL RESPONSES
Electromyostimulation, circuits and monitoring
| NASA-TM-110741 | p 2926 N95-30846
Electromagnetic field exposure dosimeter
| AD-A293191 | p 2927 N95-30981

PIEZOELECTRIC CERAMICS
Large area smart piezoelectric and pyroelectric sensors
| AD-A291487 | p 2859 N95-30561
Materials for adaptive structural acoustic control, volume 1
| AD-A293444 | p 2788 N95-31369
Materials for adaptive structural acoustic control, volume 2
| AD-A293445 | p 2788 N95-31370
Materials for adaptive structural acoustic control, volume 3
| AD-A293446 | p 2788 N95-31371
Materials for adaptive structural acoustic control, volume 4
| AD-A293447 | p 2788 N95-31372
Poisson's ratio for hexagonal crystals
| AD-A293556 | p 3015 N95-31539

PIEZOELECTRIC CRYSTALS
Langasite crystals growth with quality-factor Q, that exceeds the Q of quartz, and which are suitable for high-precision resonators
| AD-A293397 | p 3013 N95-30969
Materials for adaptive structural acoustic control, volume 1
| AD-A293444 | p 2788 N95-31369

PIEZOELECTRIC TRANSDUCERS
Large area smart piezoelectric and pyroelectric sensors
| AD-A291487 | p 2859 N95-30561
Energy absorption apparatus
| AD-D017361 | p 2814 N95-30715
Finite element analysis of smart structures and modal testing of a flexible spacecraft arm
| AD-A293761 | p 2890 N95-31576

PIEZOELECTRICITY
Energy absorption apparatus
| AD-D017361 | p 2814 N95-30715
Materials for adaptive structural acoustic control, volume 2
| AD-A293445 | p 2788 N95-31370
Materials for adaptive structural acoustic control, volume 3
| AD-A293446 | p 2788 N95-31371
Materials for adaptive structural acoustic control, volume 4
| AD-A293447 | p 2788 N95-31372

PIGMENTS
Treatment of plastic media waste p 2844 N95-32177

PILOT INDUCED OSCILLATION
Flight Vehicle Integration Panel Workshop on Pilot Induced Oscillations
| AGARD-AR-335 | p 2745 N95-31061
PIO: A historical perspective p 2745 N95-31062
The process for addressing the challenges of aircraft pilot coupling p 2745 N95-31063
Observations on PIO p 2745 N95-31064
Unified criteria for ACT aircraft longitudinal dynamics p 2745 N95-31065
Looking for the simple PIO model p 2745 N95-31066
SCARLET: DLR rate saturation flight experiment p 2746 N95-31068
SAAB experience with PIO p 2746 N95-31069
Aeroelastic pilot-in-the-loop oscillations p 2746 N95-31070
Calspan experience of PIO and the effects of rate limiting p 2746 N95-31072
The role of handling qualities specifications in flight control system design p 2757 N95-31990
The prevention of PIO by design p 2757 N95-31991
An investigation of pilot induced oscillation phenomena in digital-flight control systems p 2760 N95-32011
Pilot Induced Oscillation: A report on the AGARD Workshop on PIO p 2761 N95-32017

PILOT PERFORMANCE
PIO: A historical perspective p 2745 N95-31062
Looking for the simple PIO model p 2745 N95-31066

PILOT SELECTION
Using computerized neuropsychological testing to assess aviator skills
| AD-A293227 | p 2928 N95-30905
Psychological pilot selection in the US Air Force, the Luftwaffe, and the German Aerospace Research Establishment
| AD-A293779 | p 2928 N95-31376
PILOTLESS AIRCRAFT
Unmanned aerial vehicles. 1994 master plan
p 2751 N95-31416
Automatic flight control system for an unmanned helicopter system design and flight test results
p 2759 N95-32004
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. Unmanned aerial vehicles: Performance of short-range system still in question
| GAO/NSIAD-94-65 | p 2752 N95-32196
PIONS
Experimental results on charge exchange reactions with delta excitations and polarization studies of delta and N(sup *) (1440) resonances
| DE95-614022 | p 2981 N95-30913
Pion-nucleon and kaon-nucleon scattering lengths in QCD sum rules
| DE95-737278 | p 2983 N95-31227
Atomic approaches in metastable antiprotonic helium atoms. Reply to Analysis of the lifetimes and fractions of antiprotons trapped in metastable antiprotonic helium states by I. Shimamhura and M. Kimura --- mura
| DE95-737228 | p 2986 N95-31658
Monte Carlo simulations of muon production
| DE95-009554 | p 2988 N95-32063
Spin momentum correlation (handedness) in the process of four pion production in the electron-positron collisions
| DE95-613690 | p 2988 N95-32093
PIPES (TUBES)
Residual stresses and stress corrosion cracking in pipe fittings
| DE95-009332 | p 2894 N95-31054
Comparison of cathodic protection currents on 70/30 copper-nickel and alloy 625 piping systems
| AD-A292953 | p 2807 N95-31561
Development of integrated insulation joint for cooling pipe in tokamak reactor
| DE95-737220 | p 3007 N95-32264
Nondestructive testing of ceramic components: Cooperative Research and Development Agreement completion report
| DE95-009510 | p 2823 N95-32352
PISTON ENGINES
Linear Motor Free Piston Compressor
| AD-A293452 | p 2889 N95-31374
PISTONS
Fluid-film lubrication with an application to piston rings
p 2890 N95-32119
PITCH (INCLINATION)
Flight demonstration of an advanced pitch control law in the VAAC Harrier aircraft p 2760 N95-32012
PIXELS
Inductively coupled IR staring array based on photofluxonic pixels
| AD-A292784 | p 2998 N95-31435
PLANAR STRUCTURES
Analysis of planar laser-induced fluorescence images obtained during shakedown testing of the AEDC impulse facility
| AD-A293237 | p 2884 N95-30906
PLANE WAVES
Six-vector formalism in electromagnetics of bianisotropic media
| PB95-207130 | p 2846 N95-30567
Plane wave reflection from a uniaxial chiral quarter-wave polarization transformer
| PB95-206512 | p 2849 N95-31159
Fast algorithms for three-dimensional inverse scattering problems
| AD-A293510 | p 2852 N95-31537
Reflection and transmission of electromagnetic plane waves from a uniaxial chiro-omega slab
| PB95-206629 | p 2853 N95-31649
PLANETARY ATMOSPHERES
Mars together and FIRE and ICE: Report of the joint US/Russian technical working groups
| NASA-CR-198864 | p 3030 N95-30845
PLANETARY BOUNDARY LAYER
Initial evaluation of the Oregon State University planetary boundary layer column model for ITWS applications
| AD-A293775 | p 2920 N95-31465
PLANNING
Learning in an intentional system
| AD-A291158 | p 2949 N95-30395
Planning board generator. Part 1: Problem instances and types
| PB95-197075 | p 3021 N95-30834
PLASMA ARC WELDING
Robotic weld overlay coatings for erosion control
| DE95-009643 | p 2809 N95-32098
PLASMA COMPOSITION
Removal of impurity ions from a magnetic trap with a two-component plasma on their collision with fast component ions
| DE95-614171 | p 2984 N95-31550
PLASMA CONTROL
Advances in the simulation of toroidal gyro Landau fluid model turbulence
| DE95-008387 | p 3003 N95-30359
Effects of particle fueling and plasma wall interactions on D3-D discharges
| DE95-009608 | p 3003 N95-30612
Development of a tokamak plasma optimized for stability and confinement
| DE95-009609 | p 3003 N95-30641
Helium transport and exhaust studies in enhanced confinement regimes in DIII-D
| DE95-009134 | p 3004 N95-30685
Stabilization of ballooning modes with sheared toroidal rotation
| DE95-008388 | p 3006 N95-31624
Target diagnostics for intense lithium ion hohlraum experiments on PBFA 2
| DE95-008517 | p 3006 N95-31626
Optimization of an expander of a gas-dynamic trap
| DE95-614172 | p 3006 N95-31679
Onset of ELMs in JT-60U
| DE95-737209 | p 3007 N95-32263
PLASMA DENSITY
Design considerations for a Density-Channel-Guided laser wake-field accelerator
| AD-A292876 | p 2884 N95-31190
A prototype ionospheric tomography system (ITS)
| AD-A293015 | p 2916 N95-31698
PLASMA DIAGNOSTICS
Physics and application of high density Z-pinches
| NIFS-PROC-14 | p 3004 N95-30671
EBIT: Electron Beam Ion Trap V-division experimental physics
| DE95-010207 | p 3004 N95-30769
Development of plasma diagnostics technologies: A study on nuclear fusion reactor
| DE95-614180 | p 3005 N95-31004
Target diagnostics for intense lithium ion hohlraum experiments on PBFA 2
| DE95-008517 | p 3006 N95-31626
Determination of electric and magnetic fields in open trap plasmas by means of atomic-molecular beam hydrogen isotopes
| DE95-614177 | p 3006 N95-31680
A prototype ionospheric tomography system (ITS)
| AD-A293015 | p 2916 N95-31698
Calibration of multichannel analyzer of charge-exchange atoms
| DE95-614178 | p 2987 N95-32053
Energy spectra of charge-exchange atoms from a rotating plasma
| DE95-614179 | p 3006 N95-32054
Analysis of plasma measurements for the Geotail mission
| NASA-CR-199074 | p 3032 N95-32218
PLASMA DIFFUSION
Lower hybrid accessibility in a large, hot reversed field pinch
| DE95-011001 | p 3007 N95-32310
PLASMA HEATING
Perpendicular electron heating by absorption of auroral kilometric radiation
| NASA-198815 | p 2914 N95-30848
A collisionless shock wave experiment
| DE95-009489 | p 3008 N95-32351
PLASMA INTERACTIONS
Effects of particle fueling and plasma wall interactions on D3-D discharges
| DE95-009608 | p 3003 N95-30612
Pulse forming network in the ETC combustion characterization of plasma augmented solid propellants
p 2799 N95-31205
PLASMA LAYERS
Selected problems of the identification of weak double layers in plasma on a background of different aperiodic non-collision structures
| IFTR-4/1995 | p 3006 N95-31737
PLASMA PHYSICS
Physics and application of high density Z-pinches
| NIFS-PROC-14 | p 3004 N95-30671
A simplified technique for determining the symmetry groups of non-linear plasma kinetic equations
| IFTR-8/1995 | p 2960 N95-31337
Selected problems of the identification of weak double layers in plasma on a background of different aperiodic non-collision structures
| IFTR-4/1995 | p 3006 N95-31737
PLASMA RADIATION
Physics and application of high density Z-pinches
| NIFS-PROC-14 | p 3004 N95-30671
PLASMA SHEATHS
Study of cross-tail current carriers in magnetotail
p 3005 N95-30804
PLASMA SPRAYING
A microwave plasma cleaning apparatus
p 2779 N95-31786
PLASMA TEMPERATURE
Shear flow effects on ion thermal transport in tokamaks
| DE95-009115 | p 3005 N95-30801
PLASMA TURBULENCE
Advances in the simulation of toroidal gyro Landau fluid model turbulence
| DE95-008387 | p 3003 N95-30359
PLASMA WAVES
On reflection of Alfven waves in the solar wind
| NASA-TM-110642 | p 3031 N95-30582
Bernstein-Green-Kruskal wave
| DE95-614201 | p 3007 N95-32056
PLASMA-PARTICLE INTERACTIONS
Study of cross-tail current carriers in magnetotail
p 3005 N95-30804
Perpendicular electron heating by absorption of auroral kilometric radiation
| NASA-198815 | p 2914 N95-30848
No-thermal plasma processing of VOCs and NO(x) at LLNL
| DE95-011445 | p 2911 N95-32281
PLASMAS (PHYSICS)
Advances in the simulation of toroidal gyro Landau fluid model turbulence
| DE95-008387 | p 3003 N95-30359
Theoretical absorption spectroscopy of high-temperature metal vapors: Model and experiment compared
| AD-A290872 | p 2791 N95-30409
Helium transport and exhaust studies in enhanced confinement regimes in DIII-D
| DE95-009134 | p 3004 N95-30685
On the quasihydrostatic flows of radiatively cooling self-gravitating gas clouds
| DE95-009116 | p 3029 N95-30729
Reflectivity of plasmas created by high-intensity, ultra-short laser pulses
| DE95-009536 | p 3004 N95-30742
Stabilization of the resistive shell mode in tokamaks
| DE95-008748 | p 3004 N95-30794
Shear flow effects on ion thermal transport in tokamaks
| DE95-009115 | p 3005 N95-30801
X-band magnicon amplifier research at the Naval Research Laboratory
| AD-A293203 | p 3013 N95-30984
Design considerations for a Density-Channel-Guided laser wake-field accelerator
| AD-A292876 | p 2884 N95-31190
Pulse forming network in the ETC combustion characterization of plasma augmented solid propellants
p 2799 N95-31205
Future scientific applications for high-energy lasers
| DE95-009380 | p 2885 N95-31230
Pulse power for high energy density physics experiments
| DE95-010868 | p 2992 N95-31232
Plasma source ion implantation of metal ions: Synchronization of cathodic-arc plasma production and target bias pulses
| DE95-009431 | p 3006 N95-31613
Diagnosing high density, fast-evolving plasmas using x-ray lasers
| DE95-010734 | p 3006 N95-32028
Enhanced brightness x-ray lasers
| DE95-010735 | p 2886 N95-32029
Thermal rho's in the quark-gluon plasma
| DE95-009543 | p 3008 N95-32357
PLASMONS
Inelastic plasmon and inter-band electron-scattering potentials for Si from dielectric matrix calculations
| DE95-616778 | p 2977 N95-30475
May multiple inelastic scattering in CBED patterns be removed analytically
| PB95-196333 | p 2992 N95-30717
PLASTIC DEFORMATION
Characterization of compressive damage mechanisms in ceramic and polymeric matrix composite materials
| AD-A293171 | p 2787 N95-30975
The 10th International Conference on the Strength of Materials
| AD-A292335 | p 2894 N95-31263

Interfacial segregation and deformation of superplastically deformed Al-Mg-Mn alloys
| DE95-009572 | p 2809 N95-32052

PLASTIC FLOW

Dynamics of Current Driven Disordered Josephson Junction Arrays
| DE95-009418 | p 3014 N95-31231

PLASTIC PLATES

An analysis of the cover of a liquid-filled circular container
| IFTR-1/1995 | p 2895 N95-31338

PLASTICS

Background to plastic media blasting
p 2843 N95-32168

Facilities used for plastic media blasting
p 2763 N95-32176

Treatment of plastic media waste
p 2844 N95-32177

PLATE THEORY

A theory for predicting and minimizing the effects of matrix degradation on the thermomechanical properties of general laminates p 2785 N95-30768

Elastic and inelastic micromechanical analysis of functionally graded materials and laminated structures using transformation fields p 2787 N95-31347

Contributions to the design of neutral cutouts in laminated plates and shells p 2790 N95-32113

PLATES (STRUCTURAL MEMBERS)

Finite element analysis of damped vibrations of laminated composite plates
| ISBN-0-315-84928-2 | p 2789 N95-31731

Failure mechanisms in composite plates subjected to in-plane compressive loading p 2790 N95-32108

PLATING

High temperature barrier coatings for refractory metals
| NASA-CR-195475 | p 2802 N95-30531

The electrodeposition of low contraction chromium/molybdenum alloys using pulse-reverse plating
| AD-A292727 | p 2804 N95-30945

Assessment of pollution prevention and control technology for plating operations p 2776 N95-31771

Cadmium plating replacements p 2776 N95-31773

PLATINUM

Orientation of rapid thermally annealed lead zirconate titanate thin films on (111) Pt substrate
| DE95-615232 | p 2811 N95-30422

STM studies oi clean, CO- and O2-exposed Pt(100)-hex-R0.7 deg
| PB95-195376 | p 3009 N95-30535

Energetics of Pt adsorption on Pt(111)
| DE95-010933 | p 3017 N95-32307

PLATINUM ALLOYS

A proposed phase equilibrium diagram for Pt-Zr system
| DE95-620904 | p 2806 N95-31220

PLUMES

Modeling of thermal, electronic, hydrodynamic, and dynamic deposition processes for pulsed-laser deposition of thin films
| DE95-008906 | p 2813 N95-30572

Kinetic theory model predictions compared with low-thrust axisymmetric nozzle plume data
| NASA-CR-198934 | p 2768 N95-30864

Cloud condensation nuclei measurements in shiptrails
| AD-A293302 | p 2919 N95-30951

The passage from transitional to free molecular plumes p 2871 N95-30994

Vacuum plume backflow and rarefaction
p 2871 N95-30995

Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-31195

Vorticity dynamics and control of dynamic stall
| AD-A288658 | p 2756 N95-31400

Beam-centroid tracking instrument for ion thrusters
| AD-A293654 | p 2769 N95-31567

PLUTO (PLANET)

Mars together and FIRE and ICE: Report of the joint US/Russian technical working groups
| NASA-CR-198864 | p 3030 N95-30845

POINCARE PROBLEM

Strange compactification theorem: Infinite processes and the 3-dimensional poincare conjecture 6. Part A
| PB95-207924 | p 2965 N95-30504

Good metric spaces without good parameterizations
| PB95-208427 | p 2957 N95-30622

POINCARE SPHERES

Strange compactification theorem: Infinite processes and the 3-dimensional poincare conjecture 6. Part A
| PB95-207924 | p 2965 N95-30504

POINT DEFECTS

Molecular dynamics simulations of high energy cascades in iron
| DE95-010116 | p 2982 N95-31104

IR materials producibility
| AD-A293330 | p 2998 N95-31141

Phase stability, point defects and site preference of FeAl and NiAl with ternary additions
| DE95-009694 | p 3015 N95-31641

POINT SOURCES

Solution of the three-dimensional Helmholtz equation with nonlocal boundary conditions
| NASA-TM-110174 | p 2974 N95-30850

Optimal infrared detector configurations for air target detection p 2841 N95-32130

Harmonic coordinates in the problem on static gravitational and massless scalar fields with a point source
| DE95-623632 | p 3020 N95-32295

POINT SPREAD FUNCTIONS

Optimal infrared detector configurations for air target detection p 2841 N95-32130

POINTING CONTROL SYSTEMS

Guidance and Control for Future Air-Defence Systems
| AGARD-CP-555 | p 2839 N95-32123

Acquisition, tracking, pointing and fire control for Ballistic Missile Defense p 2841 N95-32131

The High Altitude Balloon Experiment demonstration of acquisition, tracking, and pointing technologies (HABE-ATP) p 2841 N95-32132

POISSON DENSITY FUNCTIONS

Failure analysis of a repairable system: The case study of a cam-driven reciprocating pump
| AD-A293144 | p 2889 N95-30949

Poisson approximation using the Stein-Chen method and coupling: Number of exceedances of a discrete-time-chi-squared process
| PB95-212205 | p 2961 N95-31398

POISSON EQUATION

Hamiltonian dynamics of the condensed media with spontaneously broken symmetry
| DE95-614448 | p 3010 N95-30648

Self-adaptive multilevel methods for fluid flow problems p 2873 N95-31412

POISSON RATIO

Poisson's ratio for hexagonal crystals
| AD-A293556 | p 3015 N95-31539

POLAND

Automation of the control of acoustic parameters in a digital speech synthesizer
| IFTR-2/1995 | p 2850 N95-31357

POLAR CAPS

DE-1 observations of polar O(+) stream bulk parameters and comparison with a model of the centrifugally-accelerated polar wind
| NASA-CR-198930 | p 2917 N95-31743

POLAR METEOROLOGY

Kiruna geophysical data. Data summary 94/4-6, April-June 1994
| PB95-210365 | p 2913 N95-30627

Kiruna geophysical data. Data summary 94/1-3, January-March 1994
| PB95-210373 | p 2913 N95-30628

Middle atmosphere structure and dynamics: Lidar studies at the South Pole, Syowa and Urbana
p 2916 N95-31736

POLAR REGIONS

Kiruna geophysical data. Data summary 94/4-6, April-June 1994
| PB95-210365 | p 2913 N95-30627

Satellite multisensor data techniques for sea ice mapping
| AD-A289729 | p 2901 N95-31148

Environmental conditions responsible for solar activity
| AD-A292859 | p 3031 N95-31450

POLARIMETERS

X-ray performance of the engineering prototype Stellar x-ray polarimeter
| DE95-010268 | p 3028 N95-31129

POLARIMETRY

Photorefractive nonlinear optics
| AD-A292913 | p 2999 N95-31458

Investigation of ground target detection methods in fully polarimetric wide angle synthetic aperture radar images
| AD-A293922 | p 2851 N95-31513

POLARIZATION

Six-vector formalism in electromagnetics of bianisotropic media
| PB95-207130 | p 2846 N95-30567

POLARIZATION (CHARGE SEPARATION)

Experimental results on charge exchange reactions with delta excitations and polarization studies of delta and N(sup *) (1440) resonances
| DE95-614022 | p 2981 N95-30913

POLARIZATION (SPIN ALIGNMENT)

On the Compton twist-3 asymmetries
| DE95-613627 | p 3017 N95-30371

Application of spin-sensitive electron spectroscopies to investigations of electronic and magnetic properties of solid surfaces and epitaxial systems
| DE95-010154 | p 2792 N95-30614

Investigation of Fe3O4 colloid behaviour in a magnetic field by polarized neutron transmission
| DE95-614351 | p 2981 N95-30915

Spin momentum correlation (handedness) in the process of four pion production in the electron-positron collisions
| DE95-613690 | p 2988 N95-32093

POLARIZATION (WAVES)

Polarized Raman spectroscopy of chemically vapour deposited diamond films
| DE95-616776 | p 2815 N95-30791

Physical optics polarization scattering matrix for a right-angle dihedral
| AD-A293036 | p 3000 N95-31665

Analysis of target contrast improvement using polarization filtering in the infrared region
| AD-A293085 | p 3001 N95-31841

POLARIZATION CHARACTERISTICS

Polarization characteristics, control, and modulation of vertical-cavity surface emitting lasers
| DE95-008526 | p 2882 N95-30380

POLARIZATION MODULATION

Polarization characteristics, control, and modulation of vertical-cavity surface emitting lasers
| DE95-008526 | p 2882 N95-30380

POLARIZED RADIATION

Magneto-optical transmission-reflection beam splitter for multi-level atoms
| DE95-616267 | p 2976 N95-30423

Polarized laser induced holographic surface relief gratings on polymer films
| AD-A293275 | p 2817 N95-31126

POLARIZERS

Plane wave reflection from a uniaxial chiral quarter-wave polarization transformer
| PB95-206512 | p 2849 N95-31159

POLICIES

Economical analysis relating to the global warming issue
| DE95-764072 | p 2908 N95-30677

Management of major system programs and projects. Handbook
| NHB-7120.5 | p 3021 N95-31380

Environmental benefits of chemical propulsion
p 2772 N95-31750

Process evaluation p 2845 N95-32180

Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. C-17 Aircraft program: Improvements in initial provisioning process
| GAO/NSIAD-94-63 | p 2741 N95-32194

POLLUTION CONTROL

Economical analysis relating to the global warming issue
| DE95-764072 | p 2908 N95-30677

Demonstration of split-flow ventilation and recirculation as flow-reduction methods in an Air Force paint spray booth, volume 1
| AD-A286807 | p 2763 N95-31101

Enhanced alkaline hydrolysis and biodegradability studies of nitrocellulose-bearing missile propellant
p 2772 N95-31752

Technology transfer into the solid propulsion industry
p 2770 N95-31756

Air pollution control system research: An iterative approach to developing affordable systems
p 2773 N95-31759

Major weapon system environmental life-cycle cost estimating for Conservation, Cleanup, Compliance and Pollution Prevention (C3P2) p 2774 N95-31761

Assessment of pollution prevention and control technology for plating operations p 2776 N95-31771

Environmentally regulated aerospace coatings
p 2777 N95-31775

No-thermal plasma processing of VOCs and NO(x) at LLNL
| DE95-011445 | p 2911 N95-32281

POLLUTION MONITORING

Cloud condensation nuclei measurements in shiptrails
| AD-A293302 | p 2919 N95-30951

Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
| DE95-000047 | p 2881 N95-31694

POLLUTION TRANSPORT

Calculation of a residual mean meridional circulation for a zonal-mean tracer transport model
| DE95-009474 | p 2911 N95-32350

POLYBUTADIENE

Laser pyrolysis of HTPB p 2800 N95-31298

POLYCARBONATES

Failure analysis for polycarbonate transparencies
| AD-A292992 | p 2820 N95-31471

POLYCRYSTALS

Ionic conductivities of lithium phosphorus oxynitride glasses, polycrystals, and thin films
| DE95-008898 | p 2812 N95-30545

Spectral response of a polycrystalline silicon solar cell
| DE95-614370 | p 2903 N95-30723
Investigation of polycrystalline thin film CuInSe2 solar cells based on ZnSe windows
| DE95-004068 | p 2904 N95-31164
Effect of irradiation spectrum on the microstructure of ion-irradiated Al2O3
| DE95-010225 | p 2806 N95-31188
Development of large-area monolithically integrated Silicon-Film(trademark) photovoltaic modules
| DE95-004089 | p 2906 N95-32057

POLYIMIDE RESINS
A study of elevated temperature testing techniques for the fatigue behavior of PMCS: Application to T650-35/AMB21
| NASA-TM-106927 | p 2791 N95-32209

POLYMER BLENDS
Processing of polymers using supercritical fluids
| AD-A292880 | p 2819 N95-31410

POLYMER CHEMISTRY
Process for producing hydrophilic polymer membranes
| AD-D017355 | p 2811 N95-30415
Progress in developing propellant ignition systems based upon electrically conductive polymers
p 2800 N95-31300
Intelligent synthetic polymers
| AD-A292905 | p 2819 N95-31395

POLYMER MATRIX COMPOSITES
Low vibration polymeric composite engine
| AD-D017332 | p 2887 N95-30386
Round-robin validation exercise for plate twist test method
| PB95-208088 | p 2812 N95-30487
Characterization of compressive damage mechanisms in ceramic and polymeric matrix composite materials
| AD-A293171 | p 2787 N95-30975

POLYMERIC FILMS
State-of-the-art low-cost solar reflector materials
| DE95-000260 | p 2902 N95-30526
Electrical conductivity study on polythiophenes films
| DE95-614309 | p 2813 N95-30645
Nonlinear optical processes in polymer films
| AD-A293384 | p 2815 N95-30955
Laser-induced holographic surface relief gratings on nonlinear optical polymer films
| AD-A293169 | p 2997 N95-30973
Polarized laser induced holographic surface relief gratings on polymer films
| AD-A293275 | p 2817 N95-31126
Intelligent synthetic polymers
| AD-A292905 | p 2819 N95-31395
An interpenetrating polymer network for second-order nonlinear optics
| AD-A293019 | p 2821 N95-31699
Novel unsymmetrical polydiacetylenes as materials for second and third order nonlinear optics
| AD-A293020 | p 3001 N95-31700

POLYMERIZATION
Intelligent synthetic polymers
| AD-A292905 | p 2819 N95-31395
Responsive copolymers for enhanced petroleum recovery
| DE95-011857 | p 2823 N95-32361

POLYMERS
Process for producing hydrophilic polymer membranes
| AD-D017355 | p 2811 N95-30415
Effects of hydrostatic pressure on the mechanical behavior of composite materials
| AD-A293162 | p 2787 N95-30963
From molecular to macromolecular liquid crystals
| AD-A293170 | p 2816 N95-30974
Tunable composite membranes for gas separations
| DE95-010602 | p 2822 N95-32075

POLYNOMIALS
Size of Fulton's essential set
| PB95-211645 | p 2955 N95-30477
Spectral methods in complex geometries
| PB95-208336 | p 2955 N95-30495
Co-groups on sequentially complete, locally convex, topological vector spaces in particular on strict LF-spaces
| PB95-206918 | p 2966 N95-30681
The complexity and approximability of finding maximum feasible subsystems of linear relations
| TRITA-NA-9313 | p 2961 N95-31648
Newton Raphson method, scaling at fractal boundaries and mathematica
| DE95-613374 | p 2962 N95-32095

POLYPEPTIDES
Design and processing of materials by biomimicking. Sections 1. Publications
| AD-A293852 | p 2820 N95-31559

POLYSACCHARIDES
Design and processing of materials by biomimicking. Sections 1. Publications
| AD-A293852 | p 2820 N95-31559

POLYTETRAFLUOROETHYLENE
Enhancement of perfluoropolyether boundary lubrication performance: I. Preliminary results
| NASA-TM-106937 | p 2813 N95-30621

POLYURETHANE RESINS
Compatibility of Single Hydraulic Fluid with military specification fluids, seals and metallurgy
| AD-A292954 | p 2821 N95-31663

POPULATION INVERSION
Many-body effects in semiconductor lasers
| DE95-008534 | p 2883 N95-30390

POROSITY
Porous spherical shells and microspheres by electrodispersion precipitation
| DE95-009073 | p 2815 N95-30799
Electrified microheterogeneous catalysis
| AD-D017446 | p 2794 N95-31271
In situ composites in the aluminum nitride-alumina system
| AD-A293776 | p 2789 N95-31509
Effects of gas-phase thermal expansion on the stability of deflagration through a porous energetic material
| DE95-004382 | p 2797 N95-31824

POROUS MATERIALS
Process for producing hydrophilic polymer membranes
| AD-D017355 | p 2811 N95-30415
Extension of the pore tree model to describe pore interconnectivity
| AD-A290366 | p 2793 N95-30971
Particle filtration: A comparison between theory and experiment
| DE95-009442 | p 2875 N95-31637
Effects of gas-phase thermal expansion on the stability of deflagration through a porous energetic material
| DE95-004382 | p 2797 N95-31824

PORPHYRINS
A theoretical treatment of the absorption and emission properties of Cu(2) porphyrin
| AD-A293669 | p 2795 N95-31595

PORTABLE EQUIPMENT
Prospector 7: Small fuel cells for portable power workshop
| AD-A292729 | p 2904 N95-30947
Construction and performance measurement of a portable thermoacoustic refrigerator demonstration apparatus
| AD-A293265 | p 2839 N95-31122
Portable digital Satellite News Gathering (SNG) RF terminal using a flat antenna
| NHK-LABS-NOTE-436 | p 2853 N95-31744

PORTS (OPENINGS)
Fast-acting valve for projective launching systems
| AD-D017357 | p 2868 N95-30416

POSITION (LOCATION)
Ultrasonic two probe system for locating and sizing
| AD-D017438 | p 2996 N95-30724
Demonstration of split-flow ventilation and recirculation as flow-reduction methods in an Air Force paint spray booth, volume 2
| AD-A286808 | p 2762 N95-30926
FISHFINDE: Interactive software package to predict fish locations using satellite image data and fish species behavior rules
| AD-A293394 | p 2935 N95-30968
Dynamic maintenance scheduling for a stochastic telecommunication network: Determination of performance factors
| AD-A293829 | p 2852 N95-31555
Determination of the position of Jupiter from radio metric tracking of Voyager 1 p 2854 N95-32222

POSITION ERRORS
Robust position and force tracking control for a robot in contract p 2888 N95-30830
Laser retroreflector experiment on NAVSTAR 35 and 36 p 2887 N95-32347

POSITRON ANNIHILATION
CP violating effects in e(+) e(-) yields ZH and their optimization
| DE95-616302 | p 2976 N95-30441
Search for new physics indirect effects in e(+)e(-) yields W(+)W(-) at linear colliders with polarized beams
| DE95-613688 | p 2984 N95-31547
An experimental study of QCD and jets in e(+)e(-) annihilation
| DE95-010667 | p 2989 N95-32267

POSITRONS
A room temperature LSO/PIN photodiode PET detector module that measures depth of interaction
| DE95-008447 | p 2878 N95-30378
New tensor interactions in micron-decay
| DE95-613760 | p 2978 N95-30528
Radiative corrections to the three quantum annihilation cross section in high energy electron-positron collisions
| DE95-623675 | p 2995 N95-32296

POSTURE
Erect, neutral and slump sitting postures: A study of the torso linkage system from shoulder to hip joint
| AD-A293239 | p 2930 N95-30907

POTASSIUM
Membrane transport: A cellular probe of heat stroke
| AD-A293327 | p 2926 N95-30924
A compact and efficient violet laser source
| AD-A292782 | p 2885 N95-31434

POTASSIUM ALLOYS
NaK pool-boiler solar receiver durability bench test. Volume 2: Metallurgical analysis
| DE95-010338 | p 2905 N95-31640

POTENTIAL FLOW
Axial loads on yawed rotors
| PB95-214193 | p 2742 N95-30638
Acceleration potential models PREDICHAT/PREDICDYN applied for calculation of axisymmetric dynamic inflow cases
| PB95-207015 | p 2869 N95-30957
Numerical solution of the full potential equation using a chimera grid approach
| NASA-TM-110360 | p 2744 N95-32188

POWDER (PARTICLES)
The neutron powder diffraction and acoustic investigations of the NH4SCN phase diagram
| DE95-614372 | p 3009 N95-30419
Phase transformations in melt-spun Y-Ba-Cu-O bulk superconductor
| DE95-010237 | p 3011 N95-30667
Processing and characterization of nanocrystalline molybdenum disilicide (MoSi2) consolidated by hot isostatic pressing (HIP)
| DE95-010243 | p 3012 N95-30756
Low temperature fabrication from nano-size ceramic powders
| DE95-010995 | p 2818 N95-31153
Composite polymer electrolyte for lithium batteries
| AD-A293924 | p 2820 N95-31514
Gelcasting of sintered reaction-bonded silicon nitride for improved mechanical properties
| DE95-010282 | p 2822 N95-32085

POWDER METALLURGY
Mechanical alloying processing with application to structural materials
| AD-A290788 | p 2802 N95-30404

POWER AMPLIFIERS
High energy pulsed microwave sources
| AD-A293334 | p 2849 N95-31142
Stable high-power harmonic gyro-amplifiers
| AD-A293697 | p 2881 N95-31828

POWER LINES
Electromagnetic field exposure dosimeter
| AD-A293191 | p 2927 N95-30981
Nordic Symposium on Analysis of Electromagnetic Transient Phenomena Using EMTP, part 1
| PB95-206595 | p 2850 N95-31182

POWER SERIES
Golden ten equations of motion
| PB95-197927 | p 2967 N95-30809

POWER SPECTRA
Allan deviation computations of a linear frequency synthesizer system using frequency domain techniques
p 2972 N95-32344

POWER SUPPLY CIRCUITS
Operational characteristics of a 200 C LC parallel resonant circuit
| NASA-TM-106983 | p 2864 N95-31742

POWERED LIFT AIRCRAFT
Moving base simulation of an integrated flight and propulsion control system for an ejector-augmentor STOVL aircraft in hover
| NASA-TM-108867 | p 2750 N95-30646

PRANDTL NUMBER
Heat transfer in shear-free turbulent boundary layers
p 2876 N95-31708

PREAMPLIFIERS
Pre-amplifier with multi-stage feedback
| AD-D017371 | p 2859 N95-30659

PREBURNERS
Design and testing of an oxidizer-rich preburner
p 2799 N95-31212

PRECIPITATION (METEOROLOGY)
Multiparameter radar measurements of precipitation in complex terrain: Meteorological and hydrological applications
| AD-A290786 | p 2918 N95-30403
Forecast of Atlantic seasonal hurricane activity for 1994 p 2918 N95-30832

PRECIPITATION HARDENING
Microstructural and mechanical property changes in model Fe-Cu alloys
| DE95-010117 | p 2805 N95-31105
Modeling of grain boundary stresses in Alloy 600
| DE95-009033 | p 2808 N95-31825

PRECISION
Precision manipulation with a dextrous robot hand p 2888 N95-30829
Wavelengths measurements of the He-like krypton K-shell spectrum
|DE95-010264| p 2987 N95-32041
PRECONDITIONING
Use of element-by-element preconditioners to solve large scale partially separable optimization problems
|PB95-195772| p 2957 N95-30692
PREDICTION ANALYSIS TECHNIQUES
Experimental determination of probability distributions for parameters of a Salem limestone cap plasticity model
|AD-A290878| p 2892 N95-30559
A theory for predicting and minimizing the effects of matrix degradation on the thermomechanical properties of general laminates p 2785 N95-30768
Acceleration potential models PREDICHAT/PREDICDYN applied for calculation of axisymmetric dynamic inflow cases
|PB95-207015| p 2869 N95-30957
Hot jet/wake turbulent structure and laser propagation. Part 3: Laser propagation measurements and modeling p 2871 N95-30992
Vacuum plume backflow and rarefaction p 2871 N95-30995
Comparison of DSMC predictions with temporally resolved vibrational state measurements in NO p 2872 N95-30996
An ignition model for modern double base propellants p 2800 N95-31292
Clouds: Their prediction and simulation
|AD-A292864| p 2920 N95-31453
PREDICTIONS
SHEAT: A computer code for probabilistic seismic hazard analysis, user's manual
|DE95-717874| p 2913 N95-30758
Achieving improved cycle efficiency via pressure gain combustors
|DE95-008945| p 2792 N95-30762
Use of body surface heat patterns for predicting and evaluating acute lower extremity pain among soldiers
|AD-A292829| p 2927 N95-31446
Failure analysis for polycarbonate transparencies
|AD-A292992| p 2820 N95-31471
PREFORMS
Characterization and prediction of post-impact fatigue damage in stitched composites p 2785 N95-30826
PRELAUNCH SUMMARIES
STS-70 flight: Day 1
|NASA-TM-110659| p 2765 N95-30880
PRELAUNCH TESTS
STS-71 post flight presentation
|NASA-TM-110658| p 2764 N95-30852
PREMIXED FLAMES
An experimental and numerical study on the structure and extinction of laminar premixed flames p 2792 N95-30670
Detailed chemical kinetic modeling of premixed hydrocarbon flames supported by NO2 p 2801 N95-31311
Flame structure studies of neat and NH3 doped H2/N2O flames employing molecular beam mass spectrometry and modeling p 2801 N95-31313
The study of flame-vortex interactions using a particle image velocimeter p 2796 N95-31709
Non-intrusive combustion diagnostics of premixed hydrocarbon flames using FT-IR spectrometry p 2797 N95-31732
PREPARATION
Standardization of (13)CO2 production procedure from organic matter for mass spectrometric analysis
|DE95-614629| p 2791 N95-30420
PREPOLYMERS
Phthalonitrile prepolymer as high temperature sizing material for composite fibers
|AD-D017447| p 2818 N95-31272
PREPROCESSING
Analog preprocessing in a SNS 2 micrometers low-noise CMOS folding ADC
|AD-A293356| p 2849 N95-30954
PRESIDENTIAL REPORTS
Aeronautics and space report of the President
|NASA-TM-110743| p 3028 N95-31979
PRESSES
Low temperature fabrication from nano-size ceramic powders
|DE95-010995| p 2818 N95-31153
PRESSURE
Application of multigrid computational fluid dynamics (CFD) methods to rotor analysis
|AD-A293012| p 2874 N95-31475
PRESSURE DEPENDENCE
Low-density ionization behavior
|DE95-009495| p 2980 N95-30705
Hydrostatic extrusion of BSCCO/Ag composite wire
|DE95-007862| p 2805 N95-31121
PRESSURE DISTRIBUTION
Calculations of the sound scattering from fluid-filled spherical shell sonar targets
|DSTO-RR-0020| p 2974 N95-31365
Application of wavelet-filtering techniques to intermittent turbulent and wall pressure events. Part 2. Detection of cluster patterns
|AD-A293805| p 2875 N95-31586
Afterbody/nozzle pressure distributions of a twin-tail twin-engine fighter with axisymmetric nozzles at Mach numbers from 0.6 to 1.2
|NASA-TP-3509| p 2744 N95-31984
PRESSURE EFFECTS
Effects of hydrostatic pressure on the mechanical behavior of composite materials
|AD-A293162| p 2787 N95-30963
Assessment of dynamic burning behavior for JA-2 propellant rods p 2800 N95-31299
Combustion of LOX with H2(sub g) under subcritical and supercritical conditions p 2797 N95-31717
PRESSURE GRADIENTS
A turbulence model for steady and unsteady boundary layers in strong pressure gradients p 2868 N95-30840
PRESSURE ICE
Sea ice stress research
|AD-A293164| p 2923 N95-30964
PRESSURE MEASUREMENT
Method and system for reducing drag on a body moving through a fluid medium
|AD-D017336| p 2867 N95-30672
Workshop report: Measurement techniques in highly transient, spectrally rich combustion environments p 2799 N95-31208
Pressure transducer performance and measurement trade-offs in a transient, high temperature, combustion environment p 2799 N95-31209
PRESSURE OSCILLATIONS
Method and system for suppressing noise induced in a fluid medium by a body moving therethrough
|AD-D017339| p 2973 N95-30411
Forecast of Atlantic seasonal hurricane activity for 1994 p 2918 N95-30832
Early August updated forecast of Atlantic seasonal hurricane activity for 1994 p 2919 N95-30844
PRESSURE PULSES
A pulsed liquid fuel ramjet p 2756 N95-31201
Pulse forming network in the ETC combustion characterization of plasma augmented solid propellants p 2799 N95-31205
PRESSURE RATIO
Application of multigrid computational fluid dynamics (CFD) methods to rotor analysis
|AD-A293012| p 2874 N95-31475
PRESSURE RECOVERY
Linear Motor Free Piston Compressor
|AD-A293452| p 2889 N95-31374
PRESSURE REDUCTION
Effect of oxygen and decompression bubbles on inert gas washout
|PB95-196556| p 2925 N95-30665
Effects of cavity bleed and its configuration on aerodynamic characteristics of supersonic internal flow
|NAL-TR-1247| p 2744 N95-31715
PRESSURE SENSORS
Micromachined sensor and actuator research at the Microelectronics Development Laboratory
|DE95-008540| p 2878 N95-30384
Method and system for suppressing noise induced in a fluid medium by a body moving therethrough
|AD-D017339| p 2973 N95-30411
Method and system for reducing drag on a body moving through a fluid medium
|AD-D017336| p 2867 N95-30672
Optical fiber pressure sensor for liquid level monitoring
|AD-D017346| p 2996 N95-30679
Calculated coupling efficiency between an elliptical-core optical fiber and an optical waveguide over temperature
|NASA-TM-107005| p 2997 N95-30849
Workshop report: Measurement techniques in highly transient, spectrally rich combustion environments p 2799 N95-31208
Pressure transducer performance and measurement trade-offs in a transient, high temperature, combustion environment p 2799 N95-31209
PRESSURE VESSELS
Damage dosimetry and embrittlement monitoring of nuclear pressure vessels in real time by magnetic properties measurement
|DE95-011454| p 2894 N95-31254
Validation of favor code linear elastic fracture solutions for finite-length flaw geometries
|DE95-009034| p 2898 N95-32157
PRESSURIZING
Linear Motor Free Piston Compressor
|AD-A293452| p 2889 N95-31374
PREVENTION
The prevention of PIO by design p 2757 N95-31991
PRINCIPAL COMPONENTS ANALYSIS
Sensor Fusion and Nonlinear Prediction for Anomalous Event Detection
|DE95-009429| p 2933 N95-30602
PRIVACY
UNIX and PC security in a network environment. LOKALNETT 1993
|PB95-196309| p 2934 N95-30697
PROBABILITY DENSITY FUNCTIONS
Experimental determination of probability distributions for parameters of a Salem limestone cap plasticity model
|AD-A290878| p 2892 N95-30559
PROBABILITY DISTRIBUTION FUNCTIONS
Design of systems for active sound control
|PB95-197869| p 2973 N95-30461
Fitting discrete distributions on the first two moments
|PB95-197885| p 2950 N95-30462
Experimental determination of probability distributions for parameters of a Salem limestone cap plasticity model
|AD-A290878| p 2892 N95-30559
Equivalence of two non-commutative geometry approaches
|DE95-613469| p 2957 N95-30642
PROBABILITY THEORY
Probabilistic reliability modeling of fatigue on the H-46 tie bar
|AD-A289926| p 2751 N95-30927
Effective bandwidth techniques in bufferless and buffered ATM multiplexers
|PB95-207072| p 2862 N95-31185
Numerical solution of a singular integral equation arising from a sequential probability ratio test
|AD-A293463| p 2963 N95-31375
Emerging applications in probability (Sensor management)
|AD-A292781| p 2749 N95-31433
Visual processing of object velocity and acceleration
|AD-A292789| p 2929 N95-31436
Monte Carlo tests of the ELIPGRID-PC algorithm
|DE95-010811| p 2943 N95-32030
A probabilistic design method applied to smart composite structures
|NASA-TM-106715| p 2899 N95-32206
PROBLEM SOLVING
Integrals of motion in the two Killing vector reduction of general relativity
|DE95-616281| p 3018 N95-30431
Use of element-by-element preconditioners to solve large scale partially separable optimization problems
|PB95-195772| p 2957 N95-30692
Study of the generalized solutions of n-body type problems with weak forces
|DE95-613381| p 2958 N95-30820
Training metacognitive skills for problem solving
|AD-A290310| p 2959 N95-31002
Pseudo-time methods for constrained optimization problems governed by PDE
|NASA-CR-195081| p 2959 N95-31120
QMR methods in computational fluid dynamics
|DE95-010293| p 2872 N95-31132
Local solutions of harmonical and bi-harmonical equations, universal field equation and self-dual configurations of Yang-Mills fields in four dimensions
|DE95-620521| p 2966 N95-31379
Multipoint quadratic approximation for numerical optimization
|AD-A293837| p 2961 N95-31557
A cognitive architecture for solving ill-defined problems
|AD-A293582| p 2929 N95-31686
PROCESS CONTROL (INDUSTRY)
System identification for robust process control. Nominal models and error bounds
|PB95-197026| p 2839 N95-30777
Network user's guide
|DE95-009185| p 2942 N95-31694
France --- modeling and verification of parallel computer systems
|PB95-208385| p 2949 N95-32371
Synthesis of separation systems: Methods and applications in downstream gas processes
|PB95-208518| p 2798 N95-32372
PROCESSING
Innovative processing of composites for ultra-high temperature applications, book 4
|AD-A290892| p 2786 N95-30867

PROCUREMENT MANAGEMENT
A case study of the teaming concept in the procurement of the V-22 aircraft
| AD-A293770 | p 2752 N95-31578
Report to the Secretary of Defense. Acquisition reform: Comparison of Army's commerical helicopter buy and private sector buys
| GAO/NSIAD-95-54 | p 3021 N95-31659
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. C-17 Aircraft program: Improvements in initial provisioning process
| GAO/NSIAD-94-63 | p 2741 N95-32194
PRODUCT DEVELOPMENT
Feature-based modeling of product families
| PB95-207148 | p 2933 N95-30568
The role of advanced engineering simulation in model-based design
| DE95-008815 | p 2934 N95-30796
National Laboratories: Are their R and D activities related to commercial product development? Report to Congressional Requesters
| GAO/PEMD-95-2 | p 3027 N95-31345
Computational methods for control and optimal design of aerospace systems
| AD-A292861 | p 2751 N95-31451
Initial evaluation of the Oregon State University planetary boundary layer column model for ITWS applications
| AD-A293775 | p 2920 N95-31465
F-200(TM): The new solution for fire protection p 2776 N95-31770
Advanced turbine systems program conceptual design and product development
| DE95-000088 | p 2890 N95-32163
PRODUCTION COSTS
An assessment of the cost of microwave sintering ceramic tiles for armor applications. Phase 2 report
| DE95-010000 | p 2816 N95-31103
Large-area, triple-junction a-Si alloy production scale-up
| DE95-004067 | p 2904 N95-31163
PRODUCTION ENGINEERING
Development of flexible feeder techniques
| PB95-196317 | p 2934 N95-30663
Processing of polymers using supercritical fluids
| AD-A292880 | p 2819 N95-31410
PRODUCTION PLANNING
Feature-based modeling of product families
| PB95-207148 | p 2933 N95-30568
PRODUCTIVITY
Experimental research into usability and organization impact of workflow software
| PB95-197679 | p 2933 N95-30454
Towards increased productivity of algorithm implementation
| AD-A292862 | p 2940 N95-31452
Biomass production by fescue and switchgrass alone and in mixed swards with legumes
| DE95-009137 | p 2909 N95-31612
PROFILOMETERS
A laser-based ice shape profilometer for use in icing wind tunnels
| NASA-TM-106936 | p 2880 N95-30851
PROGRAM VERIFICATION (COMPUTERS)
Validation of the NPARC code for nozzle afterbody flows at transonic speeds
| NASA-TM-106971 | p 2742 N95-30704
An approach to automated reasoning about operational semantics
| AD-A291127 | p 2936 N95-31228
Proceedings of the 19th Annual Software Engineering Workshop
| NASA-CR-189411 | p 2936 N95-31234
Applying program comprehension techniques to improve software inspections p 2937 N95-31241
An experiment to assess the cost-benefits of code inspections in large scale software development p 2937 N95-31242
A process improvement model for software verification and validation p 2938 N95-31243
Experimental control in software reliability certification p 2938 N95-31248
Penelope reference manual: Version 3-3 (C001). Includes Larch/Ada specification manual for sequential Ada (C002)
| AD-A289828 | p 2942 N95-31683
Automatic verification and synthesis of finite-state hard real-time systems
| AD-A291279 | p 2964 N95-32287
France --- modeling and verification of parallel computer systems
| PB95-208385 | p 2949 N95-32371
PROGRAMMERS
A graphical programming language for service robots in semi-structured environments p 2935 N95-30831
Integrated high performance distributed system
| AD-A292821 | p 2947 N95-31445
PROGRAMMING ENVIRONMENTS
Leveraging object-oriented development at Ames p 2938 N95-31244
Integrated high performance distributed system
| AD-A292821 | p 2947 N95-31445
Using process to integrate Software Engineering Environments (Software Technology for Adaptable, Reliable Systems (STARS) program)
| AD-A292816 | p 2946 N95-32290
Integrating a SEE for megaprogramming: Lessons learned (Software Technology for Adaptable, Reliable Systems (STARS) program)
| AD-A292838 | p 2946 N95-32292
PROGRAMMING LANGUAGES
C++ as an introductory programming language
| PB95-195715 | p 2933 N95-30539
A graphical programming language for service robots in semi-structured environments p 2935 N95-30831
Unification of LARCH and Z-based object models to support algebraically-based design refinement: The LARCH perspective
| AD-A289235 | p 2935 N95-30999
An approach to automated reasoning about operational semantics
| AD-A291127 | p 2936 N95-31228
Development of a structured design and programming methodology for expert systems shells utilizing a visual programming language: Application of structured methodology to the MK92 maintenance advisor expert system, performance module prototype
| AD-A289897 | p 2939 N95-31391
Towards increased productivity of algorithm implementation
| AD-A292862 | p 2940 N95-31452
The occurrence of continuation parameters in CPS terms
| AD-A292952 | p 2941 N95-31460
PORK object system programmer's guide
| AD-A293596 | p 2942 N95-31688
Integration issues in modular mission management aid development p 2841 N95-32133
PROJECT MANAGEMENT
A system simulation development project: Leveraging resources through partnerships
| NASA-TM-106962 | p 2753 N95-30514
Domain analysis for the reuse of software development experiences p 2936 N95-31236
Lessons learned in transitioning to an open systems environment p 2938 N95-31245
Unmanned aerial vehicles. 1994 master plan p 2751 N95-31416
Recommended techniques for effective maintainability. A continuous improvement initiative of the NASA Reliability and Maintainability Steering Committee
| NASA-TM-4628 | p 2892 N95-31530
A case study of the teaming concept in the procurement of the V-22 aircraft
| AD-A293770 | p 2752 N95-31578
Software Process Framework. Tool to determine consistency with the CMM (Software Technology for Adaptable, Reliable Systems (STARS) program)
| AD-A292815 | p 2946 N95-32289
PROJECT PLANNING
Defining manually enactable processes using the process definition information organizer templates (Software Technology for Adaptable, Reliable Systems (STARS) program)
| AD-A292854 | p 2946 N95-32293
PROJECTILES
Fast-acting valve for projective launching systems
| AD-D017357 | p 2888 N95-30416
Scaling of cross sections in ion-atom collisions
| DE95-008938 | p 2978 N95-30573
Three-dimensional (3D) large fluid flow computations for US Army applications on KSR-1, CM-200, CM-5, and Cray C-90
| AD-A293125 | p 2869 N95-30889
PROPELLANT ADDITIVES
Oscillatory combustion of aluminized AP/HTPB propellants p 2800 N95-31286
Flame structure studies of neat and NH3 doped H2/N2O flames employing molecular beam mass spectrometry and modeling p 2801 N95-31313
PROPELLANT BINDERS
Laser pyrolysis of HTPB p 2800 N95-31298
A study of gas-phase processes during the deflagration of RDX composite propellants using a triple quadrupole mass spectrometer p 2801 N95-31304
AP reclamation and reuse in RSRM propellant p 2772 N95-31751
Thermoplastic elastomers as a binder in composite propellants
| PB95-211553 | p 2837 N95-32249
PROPELLANT COMBUSTION
Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-31195
Viscous heating of liquid layers under intense shear p 2827 N95-31206
Development of a new instrument for rocket engine combustion diagnostics p 2799 N95-31211
Design and testing of an oxidizer-rich preburner p 2799 N95-31212
Unsteady laser augmented combustion of pure oxidizers AP and RDX p 2799 N95-31284
An ignition model for modern double base propellants p 2800 N95-31292
Progress in developing propellant ignition systems based upon electrically conductive polymers p 2800 N95-31300
The oxidation of carbon monoxide by nitrous oxide p 2801 N95-31309
Flame structure studies of neat and NH3 doped H2/N2O flames employing molecular beam mass spectrometry and modeling p 2801 N95-31313
RDX laser-assisted flame structure p 2801 N95-31314
Combustion of LOX with H2(sub g) under subcritical and supercritical conditions p 2797 N95-31717
Effects of gas-phase thermal expansion on the stability of deflagration through a porous energetic material
| DE95-004382 | p 2797 N95-31824
Combustion response to acoustic perturbation in liquid rocket engines p 2770 N95-31972
PROPELLANT DECOMPOSITION
Flame structure studies of neat and NH3 doped H2/N2O flames employing molecular beam mass spectrometry and modeling p 2801 N95-31313
The physical and chemical processes governing CO2 laser-induced pyrolysis and combustion of the solid propellants RDX, ADN, XM39, and M43 p 2836 N95-31531
PROPELLANT TESTS
Pulse forming network in the ETC combustion characterization of plasma augmented solid propellants p 2799 N95-31205
Viscous heating of liquid layers under intense shear p 2827 N95-31206
PROPELLANTS
Analytical instrumentation for environmental research
| AD-A292832 | p 2908 N95-31447
PROPELLERS
Computational modeling of coating integrity effects on impressed current cathodic protection system
| AD-A293256 | p 2815 N95-30894
PROPORTIONAL COUNTERS
Low energy solar neutrino experiments: The Soviet American Gallium Experiment (SAGE)
| DE95-010159 | p 3031 N95-30618
Experimental characterisation of gas microstrip detectors. Part 3: Lifetime characteristics
| PB95-192845 | p 2880 N95-30691
PROPOSALS
Research proposal
| AD-A293207 | p 3032 N95-30899
PROPULSION
A turbulence module for the NPARC code
| NASA-CR-198358 | p 2959 N95-30855
Catapult-launching of the RAFALE design and experimentation p 2752 N95-32008
PROPULSION SYSTEM CONFIGURATIONS
Numerical simulation of ram accelerator performance including transient effects during initiation of combustion and sensitivity studies p 2799 N95-31203
PROPULSION SYSTEM PERFORMANCE
Object-oriented approach for gas turbine engine simulation
| NASA-TM-106970 | p 2754 N95-30594
Investigation of ram accelerator performance capabilities p 2799 N95-31204
Flight assessment of the onboard propulsion system model for the Performance Seeking Control algorithm on an F-15 aircraft
| NASA-TM-4705 | p 2756 N95-31425
Experiment of rocket-ram combined combustor
| NAL-TR-1249 | p 2769 N95-31739
CFD assessment of the pollutant environment from RD-170 propulsion system testing p 2772 N95-31749
PROPULSIVE EFFICIENCY
Investigation of ram accelerator performance capabilities p 2799 N95-31204
PROPYLENE
Composite polymer electrolyte for lithium batteries
| AD-A293924 | p 2820 N95-31514
PROTECTIVE COATINGS
Interfacial studies of coated fiber reinforced glass-ceramic matrix composites
| AD-A290780 | p 2783 N95-30433
High temperature barrier coatings for refractory metals
| NASA-CR-195475 | p 2802 N95-30531

Computational modeling of coating integrity effects on impressed current cathodic protection system
[AD-A293256] p 2815 N95-30894
The impact of microbiologically influenced corrosion on protective polymer coatings
[AD-A288896] p 2816 N95-30997
Brush seal shaft wear resistant coatings
[NASA-CR-198950] p 2889 N95-31382
Comparison of cathodic protection currents on 70/30 copper-nickel and alloy 625 piping systems
[AD-A292953] p 2807 N95-31561
Response of dual-layered structures subjected to shock pressure wave
[AD-A293731] p 2896 N95-31568
Assessment of pollution prevention and control technology for plating operations p 2776 N95-31771
Thin-film sulfuric acid anodizing as a replacement for chromic acid anodizing p 2776 N95-31772
Environmentally regulated aerospace coatings p 2777 N95-31775
Convergent spray process for environmentally friendly coatings p 2777 N95-31776
Robotic weld overlay coatings for erosion control
[DE95-009643] p 2809 N95-32098
Minutes of the fourth annual workshop on chromate replacements in light metal finishing
[DE95-010937] p 2810 N95-32241

PROTECTORS
Releaseable unconstrained inflatable body protector
[AD-D017350] p 2930 N95-30552

PROTEINS
Absorption and ionization spectra of model rubredoxins
[AD-A293668] p 2796 N95-31691

PROTOCOL (COMPUTERS)
Protocols for integrity constraint checking in federated databases
[PB95-197695] p 3022 N95-30456
Holistic analysis of gamma-ray spectra in instrumental neutron activation analysis
[PB95-214458] p 2979 N95-30639
Wide area networking R&D
[AD-A291057] p 2947 N95-30868
Algorithms for categorizing multiprocessor communication under invalidate and update-based coherence protocols
[AD-A290022] p 2947 N95-30930
Client server architecture for multidatabase access. Ingres SQL server
[PB95-192852] p 2947 N95-31051
Gigabit testbed research project
[DE95-010728] p 2945 N95-32270

PROTON BEAMS
Polarized proton beams
[DE95-010843] p 2987 N95-32031
Monte Carlo simulations of muon production
[DE95-009554] p 2988 N95-32063

PROTON IMPACT
Scaling of cross sections in ion-atom collisions
[DE95-008938] p 2978 N95-30573

PROTON SCATTERING
Coulomb correction calculations of pp Bremsstrahlung
[DE95-616349] p 2982 N95-31176

PROTON-PROTON REACTIONS
WW and WZ production at the tevatron
[DE95-011014] p 2981 N95-30970

PROTONS
On explanation of proton electromagnetic form Factor near p (anti p)-threshold from the PS-170 experiment
[DE95-613766] p 2977 N95-30508
Study of cross-tail current carriers in magnetotail p 3005 N95-30804
Experimental results on charge exchange reactions with delta excitations and polarization studies of delta and N(sup *) (1440) resonances
[DE95-614022] p 2981 N95-30913
The superconducting kaon spectrometer
[DE95-010436] p 2982 N95-32159
Spin puzzle in nucleon
[DE95-613654] p 2991 N95-32353

PROTOTYPES
Development of a novel wind lidar, phase 1
[AD-A292703] p 2849 N95-30935
Mobile electric power
[AD-A292721] p 2860 N95-30940
IR materials producibility
[AD-A293330] p 2998 N95-31141
The quad-service satellite transmitting and receiving system for medical supply support: A battlefield interoperability and communications system prototype, volume 2. User documentation
[AD-A292835] p 2851 N95-31448
The quad-service satellite transmitting and receiving system for medical supply support: A battlefield interoperability and communications system prototype, volume 1
[AD-A292836] p 2851 N95-31449
Catapult-launching of the RAFALE design and experimentation p 2752 N95-32008
A programming interface for application-aware adaptation in mobile computing
[AD-A293107] p 2943 N95-32019

PROVING
Plaquette expansion proof and interpretation
[DE95-616282] p 2965 N95-30432
Strange compactification theorem: Infinite processes and the 3-dimensional poincare conjecture 6. Part A
[PB95-207924] p 2965 N95-30504
Extension to higher dimensions of the Jaeschke-Eicker result on the standardized empirical process
[PB95-206868] p 2965 N95-30523
Summary of 1993 Atlantic tropical cyclone activity and verification of author's forecast. A year of unanticipated light hurricane activity and a poor forecast: The expected dissipation of the El Nino did not take place and Caribbean basin surface pressure became quite high p 2918 N95-30842
The occurrence of continuation parameters in CPS terms
[AD-A292952] p 2941 N95-31460
Investigation of cleanliness verification techniques for rocket engine hardware p 2770 N95-31806

PROVISIONING
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. C-17 Aircraft program: Improvements in initial provisioning process
[GAO/NSIAD-94-63] p 2741 N95-32194

PSEUDOMONAS
Degradation of TCE using sequential anaerobic biofilm and aerobic immobilized bed reactor p 2780 N95-31791

PSYCHOLOGICAL TESTS
Selection of Swedish scholastic aptitude test takers as a function of socioeconomic background and ability: Evaluation through follow-up
[PB95-212072] p 3021 N95-30699
Non-comparability of female and male admission test takers: Evaluation through follow-up
[PB95-212080] p 3021 N95-30700
Using computerized neuropsychological testing to assess aviator skills
[AD-A293227] p 2928 N95-30905
Psychological pilot selection in the US Air Force, the Luftwaffe, and the German Aerospace Research Establishment
[AD-A293779] p 2928 N95-31376
Optimizing the long-term retention of skills: Structural and analytic approaches to skill maintenance
[AD-A293798] p 2929 N95-31585

PSYCHOMOTOR PERFORMANCE
Psychological pilot selection in the US Air Force, the Luftwaffe, and the German Aerospace Research Establishment
[AD-A293779] p 2928 N95-31376
Contextual interference effects on acquisition and transfer of a complex motor task
[AD-A293788] p 2929 N95-31583

PUBLIC HEALTH
Particulate air pollution and increased mortality: Biological plausibility for causal relationship
[DE95-006161] p 2909 N95-31703
Combatting urban air pollution through Natural Gas Vehicle (NGV) analysis, testing, and demonstration
[DE95-008300] p 2911 N95-32156

PULSARS
Observations of accreting pulsars
[NASA-CR-198931] p 3028 N95-30469

PULSE AMPLITUDE
Electromyostimulation, circuits and monitoring
[NASA-TM-110741] p 2926 N95-30846

PULSE CODE MODULATION
Computer simulation results for PCM/PM/NRZ receivers in nonideal channels p 2765 N95-32225

PULSE COMMUNICATION
Design and testing of an optimal digital link capable of 14-channel transmission
[AD-A288505] p 3000 N95-31652

PULSE DURATION
Electromyostimulation, circuits and monitoring
[NASA-TM-110741] p 2926 N95-30846
Free electron laser as energy driver for inertial confinement fusion
[DE95-614252] p 2884 N95-30914
Diagnosing high density, fast-evolving plasmas using x-ray lasers
[DE95-010734] p 3006 N95-32028
Infrared and millimeter wave detection using thin films of Pb doped BiSrCaCuO superconductor p 2840 N95-32129

PULSE GENERATORS
Pulse power for high energy density physics experiments
[DE95-010868] p 2992 N95-31232
Basic science with pulsed power and some off-the-wall ideas
[DE95-009486] p 2854 N95-32050
Voltage controlled MESFET pulse shape generator
[DE95-011656] p 2865 N95-32300

PULSE RADAR
Prospects for high accuracy time dissemination and synchronization using coded radar pulses from a low-earth orbiting spacecraft p 2971 N95-32339

PULSE RATE
The HYLIFE-2 inertial fusion energy power plant concept and implications for IFE
[DE95-010561] p 2994 N95-32074

PULSED LASER DEPOSITION
Modeling of thermal, electronic, hydrodynamic, and dynamic deposition processes for pulsed-laser deposition of thin films
[DE95-008906] p 2813 N95-30572
Fabrication and modification of metal nanocluster composites using ion and laser beams
[DE95-009131] p 2784 N95-30731
Substrate heating measurements in pulsed ion beam film deposition
[DE95-010862] p 2818 N95-31377
Ion-Assisted Pulsed Laser Deposition of amorphous tetrahedral-coordinated carbon films
[DE95-010861] p 2885 N95-31394

PULSED LASERS
Morphology and microstructure of (111) crystalline CeO2 films grown on amorphous SiO2 substrates by pulsed-laser ablation
[DE95-008842] p 3009 N95-30542
Reflectivity of plasmas created by high-intensity, ultra-short laser pulses
[DE95-009536] p 3004 N95-30742
Picosecond phase conjugation: New applications, devices, and materials
[AD-A293195] p 3013 N95-30982
Design considerations for a Density-Channel-Guided laser wake-field accelerator
[AD-A292876] p 2884 N95-31190
Theory of unsteady combustion of solids: Investigation of Quasi-steady assumption p 2800 N95-31285
Infrared and millimeter wave detection using thin films of Pb doped BiSrCaCuO superconductor p 2840 N95-32129
Femtosecond, Cr(4+):YAG laser
[DE95-004964] p 2887 N95-32155
The development of a pulsed laser imaging system for natural gas leak detection
[DE95-011407] p 2887 N95-32280

PULSED RADIATION
Numerical studies of nonlinear optical pulse propagation p 2998 N95-31411

PUMPING
Spatial time-series: Pollution pattern recognition under irregular interventions
[AD-A293830] p 2909 N95-31556

PUMPS
Gear pump with reduced fluid-borne noise
[AD-D017362] p 2887 N95-30399
Failure analysis of a repairable system: The case study of a cam-driven reciprocating pump
[AD-A293144] p 2889 N95-30949

PYRIDINES
Electronic structure of Donor-Spacer-Acceptor molecules of potential interest for molecular electronics 4. Geometry and device properties of P3CNQ and Q3CNQ
[AD-A293717] p 2986 N95-31832

PYROELECTRICITY
Large area smart piezoelectric and pyroelectric sensors
[AD-A291487] p 2859 N95-30561
Nonlinear optics in novel composite media
[AD-A293886] p 2999 N95-31542

PYROLYSIS
Laboratory simulated hydrothermal alteration of sedimentary organic matter from Guaymas Basin, Gulf of California
[NASA-CR-198951] p 2914 N95-30865
Synthesis and selected micro-mechanical properties of titanium nitride thin films by the pyrolysis of tetrakis titanium in ammonia
[DE95-010224] p 2818 N95-31187
Laser pyrolysis of HTPB p 2800 N95-31298

The physical and chemical processes governing CO2 laser-induced pyrolysis and combustion of the solid propellants RDX, ADN, XM39, and M43
p 2836 N95-31531
BioFacts: Fueling a stronger economy, thermochemical conversion of biomass
|DE94-006866| p 2905 N95-31822

PYROTECHNICS
A manual for pyrotechnic design, development and qualification
|NASA-TM-110172| p 2766 N95-31358

Q

Q FACTORS
Langasite crystals growth with quality factor Q, that exceeds the Q of quartz, and which are suitable for high-precision resonators
|AD-A293397| p 3013 N95-30969

QUADRATIC EQUATIONS
Multipoint quadratic approximation for numerical optimization
|AD-A293837| p 2961 N95-31557

QUADRATURES
Spectral methods in complex geometries
|PB95-208336| p 2955 N95-30495

QUADRUPOLES
Gravitational-radiation damping of compact binary systems to second post-Newtonian order
|PB95-207882| p 2912 N95-30588
Gravitational waves from inspiralling compact binaries: Energy loss and waveform to second-post-Newtonian order
|PB95-207890| p 2913 N95-30590

QUALITATIVE ANALYSIS
A study of gas-phase processes during the deflagration of RDX composite propellants using a triple quadrupole mass spectrometer p 2801 N95-31304
Contactless characterization of semiconductors using laser-induced surface photo-charge voltage measurements
|AD-A293618| p 2863 N95-31725

QUALITY
The role of advanced engineering simulation in model-based design
|DE95-008815| p 2934 N95-30796

QUALITY CONTROL
Quality in applied science
|PB95-196390| p 2891 N95-30520
Building an experience factory for maintenance
p 2937 N95-31237
Closing the loop on improvement: Packaging experience in the Software Engineering Laboratory
p 2937 N95-31238
Process maturity progress at Motorola Cellular Systems Division p 2937 N95-31239
The Personal Software Process: Downscaling the factory p 2937 N95-31240
An experiment to assess the cost-benefits of code inspections in large scale software development
p 2937 N95-31242
A process improvement model for software verification and validation p 2938 N95-31243
Experimental control in software reliability certification
p 2938 N95-31248
Profile of software engineering within the National Aeronautics and Space Administration (NASA)
p 2939 N95-31252
Quality assurance tendering and awarding contracts
|PB95-197760| p 2891 N95-31362
Management of major system programs and projects. Handbook
|NHB-7120.5| p 3021 N95-31380
Photovoltaic module certification/laboratory accreditation criteria development
|DE95-004063| p 2905 N95-31381
Recommended techniques for effective maintainability. A continuous improvement initiative of the NASA Reliability and Maintainability Steering Committee
|NASA-TM-4628| p 2892 N95-31530

QUANTITATIVE ANALYSIS
A study of gas-phase processes during the deflagration of RDX composite propellants using a triple quadrupole mass spectrometer p 2801 N95-31304
Volumetric and electro analytical techniques for chemical characterization of nuclear grade Ag-In-Cd alloys
|DE95-620664| p 2807 N95-31407
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
|DE95-000047| p 2881 N95-31694
Cleaning verification by air/water impingement
p 2782 N95-31805
Investigation of cleanliness verification techniques for rocket engine hardware p 2770 N95-31806
Determination of halogens in a petroleum product by ion chromatography
|DE95-002056| p 2797 N95-31840

QUANTUM CHEMISTRY
Acidity and basicidity of nitro substituted imidazoles
|AD-A293969| p 2836 N95-31526

QUANTUM CHROMODYNAMICS
On the Compton twist-3 asymmetries
|DE95-613627| p 3017 N95-30371
Current issues in perturbative QCD
|DE95-008448| p 2975 N95-30388
Approximate analytic diagonalization of lattice QCD
|DE95-616332| p 3018 N95-30444
Simulation with complex measures
|DE95-616333| p 2955 N95-30445
Theoretical high energy physics
|DE95-003107| p 2991 N95-30527
HERA and the asymptotic behaviour of F2(sup rho)
|PB95-195764| p 2956 N95-30540
Multichannel resonances in coupled channels of meson scattering: Scalar sector
|DE95-613783| p 2981 N95-30912
Hadronic production of B(sub c)-mesons
|DE95-620536| p 2983 N95-31216
Scaling behaviour of leptonic decay constants for heavy quarkonia and heavy mesons
|DE95-620539| p 2983 N95-31218
Double charmed baryons production at B-factory
|DE95-620540| p 2983 N95-31219
Pion-pair production by two photons
|DE95-737162| p 2983 N95-31223
Pion-nucleon and kaon-nucleon scattering lengths in QCD sum rules
|DE95-737278| p 2983 N95-31227
Electromagnetic hadron mass differences and estimation of isotopic symmetry violation parameters of QCD vacuum from quark model
|DE95-613628| p 2985 N95-31621
Spin structure in high energy processes
|DE95-008628| p 2993 N95-31627
Form factor of the process gamma(*) gamma(*) yields pi(sup 0) for small virtuality of one of the photons and QCD sum rules (2): Sum rule
|DE95-613629| p 2988 N95-32078
Applications of chiral symmetry
|DE95-009552| p 2988 N95-32079
A search for jet handedness in hadronic Z-0 decays
|DE95-010099| p 2988 N95-32083
A measurement of quark and gluon jet differences at the Z(sup 0) resonance
|DE95-010666| p 2989 N95-32266
An experimental study of QCD and jets in e(+)e(-) annihilation
|DE95-010667| p 2989 N95-32267
On hadronic production of the B(sub c) meson
|DE95-613726| p 2991 N95-32304
Spin puzzle in nucleon
|DE95-613654| p 2991 N95-32353

QUANTUM EFFICIENCY
Photochemistry of intermolecular C-H bond activation reactions
|DE95-008991| p 2978 N95-30574

QUANTUM ELECTRODYNAMICS
Experiments with highly charged ions up to bare U(sup 92+) on the electron beam ion trap
|DE95-008827| p 2982 N95-31174
Quantum 1/f noise in high technology applications including ultrasmall structures and devices
|AD-A292812| p 2862 N95-31442

QUANTUM ELECTRONICS
Development of germanium-silicon growth technology
|AD-A293199| p 3013 N95-30983
Quantum and nonlinear optics research
|AD-A293879| p 2999 N95-31519
Solid state research
|AD-A293083| p 3015 N95-31826

QUANTUM MECHANICS
Theoretical absorption spectroscopy of high-temperature metal vapors: Model and experiment compared
|AD-A290872| p 2791 N95-30409
Multi-particle correlations in quaternionic quantum systems
|DE95-616271| p 3018 N95-30424
Quantum dynamics in regions of quaternionic curvature
|DE95-616276| p 3018 N95-30426
The Foldy-Wouthuysen transformation
|DE95-616277| p 2976 N95-30427
Dynamics of Current Driven Disordered Josephson Junction Arrays
|DE95-009418| p 3014 N95-31231
Atomic approaches in metastable antiprotonic helium atoms. Reply to Analysis of the lifetimes and fractions of antiprotons trapped in metastable antiprotonic helium states by I. Shimamhura and M. Kimura --- mura
|DE95-737228| p 2986 N95-31658

QUANTUM OPTICS
Quantum and nonlinear optics research
|AD-A293879| p 2999 N95-31519

QUANTUM STATISTICS
The search for the decay of Z boson into two gamma as a test of Bose statistics
|DE95-616373| p 2976 N95-30393
Shnirelman peak in the level spacing statistics
|DE95-623599| p 3019 N95-31276

QUANTUM THEORY
Covariant phase space formulations of superparticles and supersymmetric WZW models
|DE95-616278| p 2964 N95-30428
The solutions of affine and conformal affine Toda field theory
|DE95-616280| p 2965 N95-30430
Two-loop vacuum amplitudes in a non-Abelian gauge theory on S(sub 4)
|DE95-616284| p 3018 N95-30436
Beyond the variational principle in quantum field theory
|DE95-616286| p 3018 N95-30438
Top quark and Higgs boson masses from wormhole physics
|DE95-616384| p 2978 N95-30580
Some functional solutions of the Yang-Baxter equation
|DE95-613584| p 2966 N95-30635
Introduction to the theory of Goyaks: Operator manifold approach to geometry and particle physics
|DE95-613460| p 2980 N95-30740
Light-front dynamics of Chern-Simons systems
|DE95-613467| p 3019 N95-30741
A BRST charge for non-critical W2(s) strings
|DE95-613470| p 3019 N95-30771
Partons and black holes
|DE95-009921| p 3029 N95-31102
Irreducible Green's Functions method in the theory of highly correlated systems
|DE95-614446| p 3019 N95-31186
Quantization of a relativistic particle on the SL(2,R) manifold based on Hamiltonian reduction
|DE95-737163| p 2983 N95-31224
Frobenius algebras and quantum Yang-Baxter equation 2
|PB95-212130| p 2960 N95-31229
Antipodes and integrals in Hopf algebras over rings and quantum Yang-Baxter equation
|PB95-212155| p 2961 N95-31397
Variational optimization in quantum field theory
p 3020 N95-31646
Research progress report
|DE95-010726| p 3030 N95-32269

QUANTUM WELL LASERS
Electron-optical nonlinear interaction in asymmetric quantum-well laser heterostructures
|DE95-613443| p 2883 N95-30609
TV-VI semiconductor quantum well lasers, physics and engineering p 2883 N95-30805
Carrier dynamics and optical properties of GaAs- and InP-based strained quantum well lasers
p 2886 N95-31848

QUANTUM WELLS
Magnetoluminescence characterization of quantum well structures
|DE95-008527| p 3008 N95-30381
Electron-optical nonlinear interaction in asymmetric quantum-well laser heterostructures
|DE95-613443| p 2863 N95-30609
The quantum interference effect in semiconductor space charge layers studied by Feynman path integrals: General formalism and illustrative examples
|DE95-614483| p 3010 N95-30653
Fractal quantum well heterostructures for broadband light emitters
|DE95-009579| p 2860 N95-30707
TV-VI semiconductor quantum well lasers, physics and engineering p 2883 N95-30805
Visible light emitting materials and injection devices
|AD-A292701| p 2786 N95-30934
Development of germanium-silicon growth technology
|AD-A293199| p 3013 N95-30983
Quantum and nonlinear optics research
|AD-A293879| p 2999 N95-31519
Carrier dynamics and optical properties of GaAs- and InP-based strained quantum well lasers
p 2886 N95-31848
Investigation of the basic physics of high efficiency semiconductor hot carrier solar cell
|NASA-CR-198945| p 2906 N95-32212

QUARK MODELS
Large scale periodicity of the universe and baryogenesis
[DE95-613461] p 3028 N95-30366
Phenomenology of the two Higgs doublet sector of a quark-lepton symmetric model
[DE95-616337] p 2976 N95-30446
Instantaneous chiral quark model for relativistic mesons in a hot and dense medium
[DE95-613782] p 2980 N95-30911
Electromagnetic hadron mass differences and estimation of isotopic symmetry violation parameters of QCD vacuum from quark model
[DE95-613628] p 2985 N95-31621

QUARKS
Strange-matter stars
[DE95-008446] p 3028 N95-30361
Dynamical analogy of Cabibbo-Kobayashi-Maskawa matrices
[DE95-613462] p 2975 N95-30367
Current issues in perturbative QCD
[DE95-008448] p 2975 N95-30388
Approximate analytic diagonalization of lattice QCD
[DE95-616332] p 3018 N95-30444
Phenomenology of the two Higgs doublet sector of a quark-lepton symmetric model
[DE95-616337] p 2976 N95-30446
Hadronic production of S-wave and P-wave charmed beauty mesons via heavy quark fragmentation
[DE95-008737] p 2977 N95-30465
Theoretical high energy physics
[DE95-003107] p 2991 N95-30527
Possible reason why leptons are lighter than quarks
[DE95-616383] p 2978 N95-30579
Top quark and Higgs boson masses from wormhole physics
[DE95-616384] p 2978 N95-30580
Introduction to the theory of Goyaks: Operator manifold approach to geometry and particle physics
[DE95-613460] p 2980 N95-30740
Instantaneous chiral quark model for relativistic mesons in a hot and dense medium
[DE95-613782] p 2980 N95-30911
Testing vector boson dominance of electroweak interactions via e(+)e(-) (yields) f-bar f
[DE95-620528] p 2982 N95-31214
Scaling behaviour of leptonic decay constants for heavy quarkonia and heavy mesons
[DE95-620539] p 2983 N95-31218
Electromagnetic hadron mass differences and estimation of isotopic symmetry violation parameters of QCD vacuum from quark model
[DE95-613628] p 2985 N95-31621
SO(8) color as possible origin of generations
[DE95-613560] p 2988 N95-32069
Renormalization group analyses of particle masses in full four-generation fermion condensate scheme
[DE95-613595] p 2988 N95-32070
A search for jet handedness in hadronic Z-0 decays
[DE95-010099] p 2988 N95-32083
A measurement of quark and gluon jet differences at the Z(sup 0) resonance
[DE95-010666] p 2989 N95-32266
Charm photoproduction dynamics
[DE95-009106] p 2990 N95-32303
Thermal rho's in the quark-gluon plasma
[DE95-009543] p 3008 N95-32357

QUARTZ
Metrology of chrome on quartz photomasks using low voltage scanning electron microscopy. Part 1: Physical SEM parameters
[PB95-195780] p 2880 N95-30693

QUATERNIONS
Quantum dynamics in regions of quaternionic curvature
[DE95-616276] p 3018 N95-30426

QUERY LANGUAGES
Extending a multi-set relational algebra to a parallel environment
[PB95-207106] p 3023 N95-30566
Client server architecture for multidatabase access. Ingres SQL server
[PB95-192852] p 2947 N95-31051

QUEUEING THEORY
Analyzing GI/Erlang-r/1 queues
[PB95-197034] p 2949 N95-30400
Fitting discrete distributions on the first two moments
[PB95-197885] p 2950 N95-30462
Symmetric longest queue system
[PB95-197919] p 2950 N95-30808
Workshop on diffusion approximation in communication and stochastic systems theory
[AD-A292672] p 2952 N95-31055
Theory & numerical methods for problems in shape reconstruction and large deviations
[AD-A292674] p 2952 N95-31279
Analysis and modeling of an airport departure process
[AD-A293782] p 2749 N95-31581

QUINOLINE
Electronic structure of Donor-Spacer-Acceptor molecules of potential interest for molecular electronics 4. Geometry and device properties of P3CNQ and Q3CNQ
[AD-A293717] p 2986 N95-31832

R

RADAR APPROACH CONTROL
Integrated terminal weather system (ITWS) demonstration and validation operational test and evaluation
[AD-A293932] p 2749 N95-31521

RADAR ASTRONOMY
The Telecommunications and Data Acquisition Report
[NASA-CR-198911] p 2854 N95-32221

RADAR CORNER REFLECTORS
Physical optics polarization scattering matrix for a right-angle dihedral
[AD-A293036] p 3000 N95-31665

RADAR CROSS SECTIONS
Fast multipole methods for scattering computations
[AD-A291093] p 2848 N95-30869

RADAR DATA
Multisensor data fusion for integrated maritime surveillance p 2842 N95-32135
The application of noncoherent Doppler data types for Deep Space Navigation p 2765 N95-32226

RADAR DETECTION
Unconventional imaging field experiment plan
[AD-A291492] p 2846 N95-30562
Folded compact range development and coherent change detection measurement project
[DE95-009082] p 2853 N95-31628
Adaptive space-time processing for airborne radars based on Doppler pre-processing
[PB95-205464] p 2854 N95-32114

RADAR ECHOES
Point reflector model for the simulation of radar target glint and Doppler phenomena
[PB95-222980] p 2857 N95-32314

RADAR EQUIPMENT
The dynamic range of radar signal generation in the MSS-2 simulation facility
[AD-A293856] p 2857 N95-32259

RADAR IMAGERY
Apparatus and method for producing three-dimensional images
[AD-D017455] p 2847 N95-30727
Functions for processing synthetic aperture radar imagery
[AD-A293895] p 2851 N95-31510
Investigation of ground target detection methods in fully polarimetric wide angle synthetic aperture radar images
[AD-A293922] p 2851 N95-31513
Research in ground-to-air microwave imaging
[AD-A292907] p 2852 N95-31551

RADAR MEASUREMENT
Multiparameter radar measurements of precipitation in complex terrain: Meteorological and hydrological applications
[AD-A290786] p 2918 N95-30403
Middle atmosphere structure and dynamics: Lidar studies at the South Pole, Syowa and Urbana p 2916 N95-31736

RADAR RANGE
The dynamic range of radar signal generation in the MSS-2 simulation facility
[AD-A293856] p 2857 N95-32259

RADAR SCATTERING
Physical optics polarization scattering matrix for a right-angle dihedral
[AD-A293036] p 3000 N95-31665

RADAR SIGNATURES
Fast multipole methods for scattering computations
[AD-A291093] p 2848 N95-30869
Materials with controllable signature properties
[PB95-222964] p 2857 N95-32313

RADAR TARGETS
Unconventional imaging field experiment plan
[AD-A291492] p 2846 N95-30562
Detection of radar targets using higher-order statistics
[AD-D017442] p 2850 N95-31392
Multisensor data fusion for integrated maritime surveillance p 2842 N95-32135
Multiple Target Tracking based on constellation matching and Kalman filter p 2842 N95-32136
Feasibility study concerning an active millimeterwave sensor. Project phase MMS2.1
[PB95-210399] p 2882 N95-32245
The dynamic range of radar signal generation in the MSS-2 simulation facility
[AD-A293856] p 2857 N95-32259
Point reflector model for the simulation of radar target glint and Doppler phenomena
[PB95-222980] p 2857 N95-32314

RADAR TRACKING
Detection of radar targets using higher-order statistics
[AD-D017442] p 2850 N95-31392
Investigation of ground target detection methods in fully polarimetric wide angle synthetic aperture radar images
[AD-A293922] p 2851 N95-31513
Research in ground-to-air microwave imaging
[AD-A292907] p 2852 N95-31551
Multiple Target Tracking based on constellation matching and Kalman filter p 2842 N95-32136
The dynamic range of radar signal generation in the MSS-2 simulation facility
[AD-A293856] p 2857 N95-32259
Point reflector model for the simulation of radar target glint and Doppler phenomena
[PB95-222980] p 2857 N95-32314

RADAR TRANSMISSION
Adaptive space-time processing for airborne radars based on Doppler pre-processing
[PB95-205464] p 2854 N95-32114

RADIAL FLOW
Localization in tungsten heavy alloys subjected to shearing deformations under superimposed high pressures
[AD-A293177] p 2804 N95-30977

RADIANT COOLING
High-temperature oxidation behavior of iridium-rhenium alloys
[NASA-TM-106720] p 2803 N95-30593
Validity of the differential equations for ionization cooling
[DE95-010438] p 2989 N95-32160

RADIANT FLUX DENSITY
Simple model of foam spreading on liquid surfaces
[PB95-211207] p 2838 N95-30630

RADIATION ABSORPTION
Optimization of a thermoelectric IR-detector for low working temperature
[NASA-CR-198933] p 2880 N95-30752
Perpendicular electron heating by absorption of auroral kilometric radiation
[NASA-198815] p 2914 N95-30848

RADIATION BELTS
Low-latitude boundary layer near noon: An open field line model
[ATR-93(7270)-1] p 2914 N95-30773

RADIATION COUNTERS
Sensor Fusion and Nonlinear Prediction for Anomalous Event Detection
[DE95-009429] p 2933 N95-30602
The activities of the high energy physics program
[DE95-010155] p 2991 N95-30615
The design and construction of the muon arm in PHENIX
[DE95-010156] p 2978 N95-30616

RADIATION DAMAGE
Molecular dynamics simulations of high energy cascades in iron
[DE95-010116] p 2982 N95-31104
Microstructural and mechanical property changes in model Fe-Cu alloys
[DE95-010117] p 2805 N95-31105
Cascade damage in the ordered alloy Ni3Al
[DE95-009893] p 2809 N95-32104

RADIATION DETECTORS
Backgrounds and detector performance at a 2 x 2 TeV (mu)(+)(mu)(-) collider
[DE95-009107] p 2992 N95-30800

RADIATION DISTRIBUTION
The radiation conditioned by the 'velocity part' of the electromagnetic field of a moving charge
[DE95-613366] p 2846 N95-30605
Basic study of the pumping of a gamma-ray laser
[AD-A293561] p 2886 N95-31563

RADIATION DOSAGE
Neutron shielding point kernel integral calculation code for personal computer: PKN-pc
[DE95-717876] p 2980 N95-30760
Electromagnetic field exposure dosimeter
[AD-A293191] p 2927 N95-30981

RADIATION EFFECTS
Structural investigation of xenon ion-beam-irradiated glassy carbon
[DE95-616777] p 2977 N95-30474
Amorphization threshold in Si-implanted strained SiGe alloy layers
[DE95-008901] p 2804 N95-30797

Damage dosimetry and embrittlement monitoring of nuclear pressure vessels in real time by magnetic properties measurement
[DE95-011454] p 2894 N95-31254
Cascade damage in the ordered alloy Ni3Al
[DE95-009893] p 2809 N95-32104
Defect configurations in neutron-irradiated U3Si2
[DE95-009896] p 3016 N95-32105
Radiation effects in space: The Clementine 1 mission
[DE95-011513] p 3032 N95-32282
Investigation into the effects of VHF and UHF band radiation on Hewlett-Packard (HP) Cesium Beam Frequency Standards p 2970 N95-32332

RADIATION HARDENING
Microwave coupling into a slotted cavity. Additional results
[PB95-210381] p 2847 N95-30629

RADIATION HAZARDS
Z-scan using a dye laser
[PB95-222923] p 3002 N95-32312

RADIATION MEASUREMENT
Low energy solar neutrino experiments: The Soviet American Gallium Experiment (SAGE)
[DE95-010159] p 3031 N95-30618
History and status of the atmospheric radiation measurement program
[DE95-009951] p 2908 N95-30802
Contamination detection NDE for cleaning process inspection p 2781 N95-31802

RADIATION SHIELDING
Development of BERMUDA: A radiation transport code system. Part 3: A one-dimensional adjoint neutron transport code
[DE95-717875] p 2934 N95-30759
Neutron shielding point kernel integral calculation code for personal computer: PKN-pc
[DE95-717876] p 2980 N95-30760

RADIATION SOURCES
High energy pulsed microwave sources
[AD-A293334] p 2849 N95-31142

RADIATION SPECTRA
Computation of high-altitude hypersonic flow-field radiation p 2743 N95-30843

RADIATION TRANSPORT
Simple model of foam spreading on liquid surfaces
[PB95-211207] p 2838 N95-30630
Development of BERMUDA: A radiation transport code system. Part 3: A one-dimensional adjoint neutron transport code
[DE95-717875] p 2934 N95-30759

RADIATIVE RECOMBINATION
Fractal quantum well heterostructures for broadband light emitters
[DE95-009579] p 2860 N95-30707

RADIATIVE TRANSFER
Proceedings of the 16th Annual Conference on Atmospheric Transmission Models, volume 1
[AD-A293807] p 2915 N95-31575
Proceedings of the 16th Annual Conference on Atmospheric Transmission Models, volume 2
[AD-A293806] p 2916 N95-31604
Brightness temperature simulations for the physical and synoptic interpretation of advanced microwave sounding unit moisture channels p 2921 N95-31721
Preliminary design for Arctic atmospheric radiative transfer experiments
[DE95-009580] p 2917 N95-32080
Use of arm measurements to improve radiative transfer models used in climate models
[NASA-CR-199014] p 2921 N95-32184

RADICALS
Laboratory simulated hydrothermal alteration of sedimentary organic matter from Guaymas Basin, Gulf of California
[NASA-CR-198951] p 2914 N95-30865
Calculated structures and electronic absorption spectroscopy for magnesium phthalocyanine and its anion radical
[AD-A293672] p 2796 N95-31596

RADII
On the string equation at c = 1
[DE95-737161] p 3014 N95-31222

RADIO ANTENNAS
Proceedings of the antenna applications symposium, volume 1
[AD-A293258] p 2848 N95-30895

RADIO ASTRONOMY
A search for interstellar CH3D: Limits to the methane abundance in Orion-KL
[NASA-CR-198932] p 3029 N95-30751
The Telecommunications and Data Acquisition Report
[NASA-CR-198911] p 2854 N95-32221

RADIO COMMUNICATION
Design and testing of an optimal digital link capable of 14-channel transmission
[AD-A288505] p 3000 N95-31652
Residual and suppressed-carrier arraying techniques for deep-space communications p 2856 N95-32235
Digital signal processing in the radio science stability analyzer p 2857 N95-32240
Fast identification of some typical digital modulation schemes
[PB95-211454] p 2857 N95-32247

RADIO EQUIPMENT
High Frequency (HF) upgrade study for the Canadian Regional Operations Control Center (ROCC) AWACS Digital Information Link (RADIL) project
[AD-A293435] p 2850 N95-31367

RADIO FREQUENCIES
Structural, chemical and electronic properties of superconducting thin films and junctions
[AD-A292700] p 3012 N95-30933
Use of a variable frequency source with a single-mode cavity to process ceramic filaments
[DE95-010992] p 2817 N95-31152

RADIO FREQUENCY HEATING
An assessment of the cost of microwave sintering ceramic tiles for armor applications. Phase 2 report
[DE95-010000] p 2816 N95-31103
Dielectric property measurement of zirconia fibers at high temperatures
[DE95-010991] p 2821 N95-31705

RADIO FREQUENCY INTERFERENCE
Interference rejection techniques in a DS spread-spectrum HF radio system
[PB95-211660] p 2846 N95-30479

RADIO NAVIGATION
The Telecommunications and Data Acquisition Report
[NASA-CR-198911] p 2854 N95-32221
Laser retroreflector experiment on NAVSTAR 35 and 36 p 2887 N95-32347

RADIO RECEIVERS
Demodulators for optical fiber interferometers with (3 x 3) outputs
[AD-D017415] p 2995 N95-30402
Signal-processing theory for the TurboRogue receiver
[NASA-CR-198882] p 2846 N95-30581
Guidelines for the design of GPS and LORAN receiver controls and displays
[AD-A293753] p 2749 N95-31572
Computer simulation results for PCM/PM/NRZ receivers in nonideal channels p 2765 N95-32225
Residual and suppressed-carrier arraying techniques for deep-space communications p 2856 N95-32235
Feasibility study concerning an active millimeterwave sensor. Project phase MMS2.1
[PB95-210399] p 2882 N95-32245

RADIO RELAY SYSTEMS
High Frequency (HF) upgrade study for the Canadian Regional Operations Control Center (ROCC) AWACS Digital Information Link (RADIL) project
[AD-A293435] p 2850 N95-31367

RADIO TELEMETRY
Computer simulation results for PCM/PM/NRZ receivers in nonideal channels p 2765 N95-32225

RADIO TRACKING
Determination of the position of Jupiter from radio metric tracking of Voyager 1 p 2854 N95-32222
Laser retroreflector experiment on NAVSTAR 35 and 36 p 2887 N95-32347

RADIO TRANSMISSION
Wavefront simulator for evaluating RF communication array signal processors
[AD-D017372] p 2847 N95-30660

RADIO WAVES
Underdense heating of the ionosphere using oblique high power HF radiowaves p 2917 N95-31951

RADIOACTIVE AGE DETERMINATION
Atomic approaches in metastable antiprotonic helium atoms. Reply to Analysis of the lifetimes and fractions of antiprotons trapped in metastable antiprotonic helium states by I. Shimamhura and M. Kimura --- mura
[DE95-737228] p 2986 N95-31658

RADIOACTIVE ISOTOPES
Faster, cheaper radioanalytical methods
[DE95-009913] p 2797 N95-32061

RADIOACTIVE WASTES
Simulation of airborne electromagnetic measurements in three dimensional environments
[DE95-008546] p 2900 N95-30363
LLW solidification in cement: Effect of dilution
[DE95-010108] p 2798 N95-32091
Waste minimization via preparative scale high performance gel permeation chromatography
[DE95-011797] p 2798 N95-32360

RADIOACTIVITY
Behaviour of polymers in radioactive environments: Effects of dose speed
[DE95-621008] p 2818 N95-31221

RADIOISOTOPE BATTERIES
GPHS-RTGs in support of the Cassini RTG Program
[DE95-010306] p 2768 N95-30674
Welding isotopic heat sources for the cassini mission to Saturn
[DE95-060104] p 2890 N95-32367

RADIOLOGY
Summaries of fiscal year 1994 projects in medical applications and biophysical research
[DE95-010405] p 2925 N95-32040

RADIOMETERS
SeaWiFS technical report series. Volume 28: SeaWiFS algorithms, part 1
[NASA-TM-104566-VOL-28] p 2924 N95-31850

RADIUM
Faster, cheaper radioanalytical methods
[DE95-009913] p 2797 N95-32061

RAILGUN ACCELERATORS
A RASCAL in-bore dynamic analysis of the task B and task C electromagnetic railguns
[AD-A292742] p 2764 N95-30948

RAIN
NASA Tropical Rainfall Measurement Mission (TRMM): Effects of tropical rainfall on upper ocean dynamics, air-sea coupling and hydrologic cycle
[NASA-CR-189437] p 2919 N95-31123

RAIN FORESTS
Comparisons of target detection clutter using data from the 1993 FOPEN experiments
[AD-A293052] p 2852 N95-31606

RAINSTORMS
Multiparameter radar measurements of precipitation in complex terrain: Meteorological and hydrological applications
[AD-A290786] p 2918 N95-30403

RAM ACCELERATORS
The 31st JANNAF Combustion Subcommittee Meeting, volume 1 p 2825 N95-31194
Experiments in a 120-mm ram accelerator including flow visualization p 2799 N95-31202
Numerical simulation of ram accelerator performance including transient effects during initiation of combustion and sensitivity studies p 2799 N95-31203
Investigation of ram accelerator performance capabilities p 2799 N95-31204

RAMAN SPECTRA
Polarized Raman spectroscopy of chemically vapour deposited diamond films
[DE95-616776] p 2815 N95-30791
Fourier Transform (FT) Raman spectroscopy of nitrogen at high pressure
[AD-A293051] p 2796 N95-31670

RAMAN SPECTROSCOPY
Polarized Raman spectroscopy of chemically vapour deposited diamond films
[DE95-616776] p 2815 N95-30791
Fourier Transform (FT) Raman spectroscopy of nitrogen at high pressure
[AD-A293051] p 2796 N95-31670

RAMJET ENGINES
An investigation of the side-dump dual in-line ramjet combustor p 2756 N95-31199
A pulsed liquid fuel ramjet p 2756 N95-31201
Workshop report: Measurement techniques in highly transient, spectrally rich combustion environments p 2799 N95-31208
Experiment of rocket-ram combined combustor
[NAL-TR-1249] p 2769 N95-31739

RAMSAUER EFFECT
Generalized Ramsauer-Townsend minima in heavy-ion induced electron continua
[DE95-010913] p 2989 N95-32120

RANDOM ACCESS MEMORY
High speed random access, Fourier transform holographic associative and high density two-photon three-dimensional optical memories based on bacteriorhodopsin
[AD-A293389] p 2931 N95-30967

RANDOM NOISE
Detection of radar targets using higher-order statistics
[AD-D017442] p 2850 N95-31392
Visual processing of object velocity and acceleration
[AD-A292789] p 2929 N95-31436
Automatic Target Recognition (ATR): Background statistics and the detection of targets in clutter
[AD-A293062] p 2853 N95-31673
Rate considerations in deep space telemetry p 2765 N95-32223
Metafitting: Weight optimization for least-squares fitting of PTTI data p 2971 N95-32340

RANDOM PROCESSES
Development and computer implementation of design/analysis techniques for multilayered composite structures. Probabilistic fiber composite micromechanics
[NASA-CR-198979] p 2930 N95-31134

RANDOM VARIABLES
Extension to higher dimensions of the Jaeschke-Eicker result on the standardized empirical process
[PB95-206868] p 2965 N95-30523

Nonparametric methods for incomplete data in reliability and for changepoints in smooth functions
[AD-A292773] p 2963 N95-31429

RANGE FINDERS
Folded compact range development and coherent change detection measurement project
[DE95-009082] p 2853 N95-31628

RANGEFINDING
Passive range measurement system
[AD-D017344] p 2996 N95-30678
Apparent size passive range method
[AD-D017360] p 2753 N95-31180
Proceedings of the 16th Annual Conference on Atmospheric Transmission Models, volume 1
[AD-A293807] p 2915 N95-31575

RAPID TRANSIT SYSTEMS
Energy storage and alternatives to improve train voltage on a mass transit system
[DE95-010344] p 2906 N95-32090

RARE EARTH ALLOYS
Ultraviolet and visible lasers: Rare earth-doped waveguide devices and non-linear optical extraction techniques
[AD-A293976] p 2885 N95-31528

RARE EARTH ELEMENTS
Lanthanide(III) catalyzed reactions: Structure an d thermodynamics of intermediate complexes, and implications for reactivity
[PB95-197000] p 3019 N95-30775

RARE GASES
Effect of oxygen and decompression bubbles on inert gas washout
[PB95-196556] p 2925 N95-30665

RAREFIED GAS DYNAMICS
Orbiter rarefied-flow reentry measurements from the OARE on STS-62
[NASA-TM-110182] p 2891 N95-30783
The passage from transitional to free molecular plumes p 2871 N95-30994

RATINGS
Decompression illness, observable bubbles. (Session K)
[PB95-195285] p 2926 N95-30511
The relation of handling qualities ratings to aircraft safety p 2746 N95-31067
Prioritization methodology for chemical replacement p 2773 N95-31757

RATIOS
Evaluation of calibration parameters and performance of the video imaging technique of assessing exposure (VITAE system)
[AD-A289023] p 2927 N95-30998

RAY TRACING
Ray trace model of sound propagation in range dependent media
[PB95-211751] p 2973 N95-30481
The effect of ray curvature on Lloyd's mirror fringe estimates and source localisation
[DSTO-TR-0064] p 3001 N95-31745

RDX
Unsteady laser augmented combustion of pure oxidizers AP and RDX p 2799 N95-31284
Modeling of thermal response of filament used in T-jump experiment p 2800 N95-31297
A study of gas-phase processes during the deflagration of RDX composite propellants using a triple quadrupole mass spectrometer p 2801 N95-31304
RDX laser-assisted flame structure p 2801 N95-31314
A study of the gas-phase processes of RDX combustion using a triple quadrupole mass-spectrometer p 2801 N95-31315

REACTING FLOW
Combustion response to acoustic perturbation in liquid rocket engines p 2770 N95-31972
Analysis and modeling of subgrid scalar mixing using numerical data
[NASA-CR-198169] p 2877 N95-31978
Spatially-resolved velocity measurements in steady, high-speed, reacting flows using laser-induced OH fluorescence p 2877 N95-32109
LES, DNS and RANS for the analysis of high-speed turbulent reacting flows
[NASA-CR-199075] p 2878 N95-32219

REACTION BONDING
TEM-examination of ceramic-metal interfaces
[PB95-196531] p 2813 N95-30664

REACTION KINETICS
Orientation of rapid thermally annealed lead zirconate titanate thin films on (111) Pt substrate
[DE95-615232] p 2811 N95-30422
Wettability of boron carbide
[PB95-196358] p 2802 N95-30518
Chemical kinetics and photochemical data for use in stratospheric modeling: Evaluation number 11
[NASA-CR-198863] p 2912 N95-30525
Catalytic reactions of synthesis gas. Part 4: Heterogeneous hydroformylation
[PB95-195558] p 2791 N95-30537
Simulation of chemical kinetics in turbulent natural gas combustion. Volume 2: Experimental studies of nitric oxide production in gas flames
[PB95-196721] p 2791 N95-30541
Applications of SXPS for studying surface structure, reaction mechanisms and kinetics
[DE95-008903] p 2803 N95-30547
Characterization of compressive damage mechanisms in ceramic and polymeric matrix composite materials
[AD-A293171] p 2787 N95-30975
Measurement and analysis related to infrared emissions
[AD-A293296] p 2998 N95-31192
Viscous heating of liquid layers under intense shear p 2827 N95-31206
The 25th International Symposium on Combustion
[AD-A286825] p 2794 N95-31268
An ignition model for modern double base propellants p 2800 N95-31292
Molecular models for nitro compounds p 2831 N95-31293
Observation and characterization of burning surface reaction zones of solid propellants p 2800 N95-31296
An ab initio study of the reaction HNO + NO yields OH + N2O: Preliminary results p 2801 N95-31308
The oxidation of carbon monoxide by nitrous oxide p 2801 N95-31309
The oxidation of carbon monoxide by nitrogen dioxide p 2801 N95-31310
Detailed chemical kinetic modeling of premixed hydrocarbon flames supported by NO2 p 2801 N95-31311
Studies of reactions pertaining to and development of a reduced mechanism for the double base propellant dark zone p 2801 N95-31312
Flame structure studies of neat and NH3 doped H2/N2O flames employing molecular beam mass spectrometry and modeling p 2801 N95-31313
RDX laser-assisted flame structure p 2801 N95-31314
Electron transfer kinetics of self-assembled ferrocene C(12) alkanethiol monolayers on gold electrodes from 125K to 175K
[AD-A292754] p 2984 N95-31427
Consequences of kinetic dispersion on the electrochemistry of an adsorbed redox-active monolayer
[AD-A292794] p 2795 N95-31437
An analysis of gas phase ethanol/water chemistry for diamond CVD
[AD-A293009] p 2795 N95-31473

REACTION PRODUCTS
Electrified microheterogeneous catalysis
[AD-D017446] p 2794 N95-31271
The oxidation of carbon monoxide by nitrogen dioxide p 2801 N95-31310

REACTIVITY
Formation of cavities in Si and their chemisorption of materials
[DE95-009586] p 2980 N95-30708
Numerical computation of one-dimensional detonation waves
[PB95-197950] p 2868 N95-30811
The structure and reactivity of boron and carbon surfaces
[AD-A292804] p 2795 N95-31440

REACTOR DESIGN
The development of the tokamak system technology: A study on the fusion reactor
[DE95-614256] p 3005 N95-31366
Optimal heat transfer design of chemical vapor deposition reactors
[DE95-010997] p 2878 N95-32309

REACTOR MATERIALS
Effects of particle fueling and plasma wall interactions on D3-D discharges
[DE95-009608] p 3003 N95-30612
Evaluation on materials performance of Hastelloy Alloy XR for HTTR uses. 4: Tensile properties of base metals and welded joints
[DE95-721871] p 2804 N95-30761
Microstructural and mechanical property changes in model Fe-Cu alloys
[DE95-010117] p 2805 N95-31105
Volumetric and electro analytical techniques for chemical characterization of nuclear grade Ag-In-Cd alloys
[DE95-620664] p 2807 N95-31407
Development of integrated insulation joint for cooling pipe in tokamak reactor
[DE95-737220] p 3007 N95-32264

REACTOR SAFETY
SHEAT: A computer code for probabilistic seismic hazard analysis, user's manual
[DE95-717874] p 2913 N95-30758

READOUT
Noise signal processor
[AD-D017430] p 2974 N95-30747

REAL TIME OPERATION
Data storage modeling and management for multimedia information systems p 3022 N95-30483
Smart active multiwave sensing with zero background amplitude modulated probes
[DE95-008813] p 2792 N95-30714
Log-polar binocular vision system
[NASA-CR-188375] p 2996 N95-30772
Foundations of technology for constructing highly reliable distributed realtime systems
[AD-A293254] p 2931 N95-30892
Real time correlating operation on diffuse objects
[AD-A293220] p 2997 N95-30901
Airborne ocean water lidar (OWL) real time processor (RTP)
[AD-A293226] p 2848 N95-30904
Application of computer generated holograms to optical transformations
[AD-A293146] p 2880 N95-30921
Making intelligent systems team players. A guide to developing intelligent monitoring systems
[NASA-TM-104807] p 2951 N95-30925
Visible light emitting materials and injection devices
[AD-A292701] p 2786 N95-30934
Development of a novel wind lidar,.phase 1
[AD-A292703] p 2849 N95-30935
New adaptive methods for reconfigurable flight control systems, appendix 1
[AD-A292711] p 2756 N95-30937
A real time method for Fourier transform holographic information storage
[AD-A293186] p 2880 N95-30980
Neural network false alarm filter, volume 1
[AD-A293097] p 2953 N95-31562
Nonparametric recognition of nonrigid motion
[AD-A293630] p 2963 N95-31565
Architecture and implementation of a multi-sensor data fusion demonstration model within the real-time combat system of the Canadian Patrol Frigate p 2842 N95-32139
Automatic verification and synthesis of finite-state hard real-time systems
[AD-A291279] p 2964 N95-32287
The Deep Space Network stability analyzer p 2858 N95-32334
A globally efficient means of distributing UTC time and frequency through GPS p 2970 N95-32335

RECEIVERS
Cascading synchronized chaotic systems
[AD-D017458] p 2860 N95-30748
The quad-service satellite transmitting and receiving system for medical supply support: A battlefield interoperability and communications system prototype, volume 2. User documentation
[AD-A292835] p 2851 N95-31448
The quad-service satellite transmitting and receiving system for medical supply support: A battlefield interoperability and communications system prototype, volume 1
[AD-A292836] p 2851 N95-31449
Development of the Multi-Level Seismic Receiver (MLSR)
[DE95-008823] p 2916 N95-31610
Testing the performance of feedback concatenated decoder with a nonideal receiver p 2856 N95-32231

RECIPROCATION
Linear Motor Free Piston Compressor
[AD-A293452] p 2889 N95-31374

RECLAMATION
AP reclamation and reuse in RSRM propellant p 2772 N95-31751

RECOIL IONS
Kinematical threshold of recoil-ion longitudinal momentum distribution in single ionization of helium by protons and alpha particles
[DE95-010803] p 2990 N95-32271
Recoil longitudinal momentum spectroscopy of electron capture from He by O(7+) and F(8+)
[DE95-010823] p 2990 N95-32274

RECOMBINATION COEFFICIENT
Spectral response of a polycrystalline silicon solar cell
[DE95-614370] p 2903 N95-30723

RECOMBINATION REACTIONS
The junction characteristics and current conduction mechanisms of GaInP2 n(+)p diodes and solar cells
[AD-A290857] p 2902 N95-30408

RECONNAISSANCE
Investigation of ground target detection methods in fully polarimetric wide angle synthetic aperture radar images
[AD-A293922] p 2851 N95-31513
RECONNAISSANCE AIRCRAFT
Unmanned aerial vehicles. 1994 master plan
p 2751 N95-31416
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. Unmanned aerial vehicles: Performance of short-range system still in question
[GAO/NSIAD-94-65] p 2752 N95-32196
RECRYSTALLIZATION
Physical modelling of microstructural evolution during thermomechanical processing of aluminium alloys
[PB95-196341] p 2805 N95-31053
RECTANGULAR PLATES
Studies in non-linear multi-mode responses of harmonically excited rectangular plates with internal resonances p 2895 N95-31331
RECYCLING
Biomass production by fescue and switchgrass alone and in mixed swards with legumes
[DE95-009137] p 2909 N95-31612
Recycling MIL-H-46170 hydraulic fluid to extend fluid service life
[AD-A293035] p 2821 N95-31664
REDUNDANCY
On the kinematic performance of mechanical manipulators operating in the presence of an obstruction
p 2890 N95-31710
REED-SOLOMON CODES
Enhanced decoding for the Galileo low-gain antenna mission: Viterbi redecoding with four decoding stages
p 2855 N95-32230
REFINING
Bravais classes, Voronoie cells, Delone symbols
[PB95-207916] p 3009 N95-30503
Refinement techniques in computer graphics
[PB95-208526] p 2934 N95-30625
REFLECTANCE
State-of-the-art low-cost solar reflector materials
[DE95-000260] p 2902 N95-30526
Reflectivity of plasmas created by high-intensity, ultra-short laser pulses
[DE95-009536] p 3004 N95-30742
REFLECTED WAVES
Reflection and transmission of electromagnetic plane waves from a uniaxial chiro-omega slab
[PB95-206629] p 2853 N95-31649
The effect of ray curvature on Lloyd's mirror fringe estimates and source localisation
[DSTO-TR-0064] p 3001 N95-31745
REFLECTING TELESCOPES
Stratospheric Observatory For Infrared Astronomy (SOFIA). Phase A: System concept description
[NASA-TM-110669] p 3002 N95-32187
REFLECTION
Real time correlating operation on diffuse objects
[AD-A293220] p 2997 N95-30901
REFLECTOMETERS
IPNS neutron scattering instrumentation. A: Existing and planned. B: Possibilities for IPNS upgrade, a 1-MW spallation source
[DE95-004119] p 2985 N95-31616
REFLECTOR ANTENNAS
Proceedings of the antenna applications symposium. volume 2
[AD-A293259] p 2850 N95-31387
DSS-24 microwave holography measurements
p 2857 N95-32239
REFLECTORS
Performance of residual carrier array-feed combining in correlated noise p 2856 N95-32232
Point reflector model for the simulation of radar target glint and Doppler phenomena
[PB95-222980] p 2857 N95-32314
REFRACTIVITY
Effects of molecular structure on the electroactive and optical properties of conjugated rigid-rod polybenzobisazoles
[AD-A292968] p 2819 N95-31467
Quantum and nonlinear optics research
[AD-A293879] p 2999 N95-31519
REFRACTORY COATINGS
High temperature barrier coatings for refractory metals
[NASA-CR-195475] p 2802 N95-30531
REFRACTORY MATERIALS
NASA Lewis Research Center's preheated combustor and materials test facility
[NASA-TM-106676] p 2762 N95-30592
Ultrasonic characterization of fiber-matrix interphasial properties and damage in high-temperature composites
p 2785 N95-30823
Innovative processing of composites for ultra-high temperature applications, book 4
[AD-A290892] p 2786 N95-30867
Innovative processing of composites for ultra-high temperature applications, book 2
[AD-A290890] p 2786 N95-30898
Phthalonitrile prepolymer as high temperature sizing material for composite fibers
[AD-D017447] p 2818 N95-31272
Whisker reinforced glass ceramic
[DE95-010542] p 2823 N95-32305
REFRACTORY METAL ALLOYS
High temperature barrier coatings for refractory metals
[NASA-CR-195475] p 2802 N95-30531
REFRACTORY METALS
High temperature barrier coatings for refractory metals
[NASA-CR-195475] p 2802 N95-30531
REFRIGERANTS
Compatibility of refrigerants and lubricants with motor materials under retrofit conditions
[DE95-010185] p 2814 N95-30767
CFC-replacement by natural working fluids: R&D and industrial challenges within the refrigeration, air conditioning amd heat pump areas
[PB95-195756] p 2815 N95-30871
ARTI Refrigerant Database
[DE95-008336] p 2816 N95-31057
The Oak Ridge Refrigerant Management Program
p 2774 N95-31763
Alternatives to ozone depleting refrigerants in test equipment p 2775 N95-31767
Compatibility of manufacturing process fluids with HFC refrigerants and ester lubricants
[DE95-012152] p 2911 N95-32364
REFRIGERATING
High-temperature superconducting current leads
[DE95-008404] p 2858 N95-30374
Reducing process noise in superconducting helium liquid level probes
[DE95-008956] p 2814 N95-30765
Simultaneous heat and mass transfer in a horizontal tube absorber: Numerical tools for present and future absorber designs
[PB95-196978] p 2869 N95-30872
Construction and performance measurement of a portable thermoacoustic refrigerator demonstration apparatus
[AD-A293265] p 2839 N95-31122
REFRIGERATING MACHINERY
Compatibility of refrigerants and lubricants with motor materials under retrofit conditions
[DE95-010185] p 2814 N95-30767
REFRIGERATORS
Reducing process noise in superconducting helium liquid level probes
[DE95-008956] p 2814 N95-30765
Construction and performance measurement of a portable thermoacoustic refrigerator demonstration apparatus
[AD-A293265] p 2839 N95-31122
Natural gas liquefier for vehicle fuel
[AD-A293619] p 2836 N95-31564
REGENERATORS
Natural gas liquefier for vehicle fuel
[AD-A293619] p 2836 N95-31564
REGRESSION ANALYSIS
Selecting optimal experiments for feedforward multilayer perceptrons
[AD-A290856] p 2949 N95-30406
Modeling F/A-18 flight hour program costs using regression analysis
[AD-A293771] p 2752 N95-31579
The effect of repeatedly sampling an embedded metamodel on the simulation response
[AD-A293783] p 2953 N95-31582
Finite-sample based learning algorithms for feedforward networks
[DE95-009123] p 2941 N95-31631
REGULATIONS
The Oak Ridge Refrigerant Management Program
p 2774 N95-31763
Environmentally regulated aerospace coatings
p 2777 N95-31775
NEIS (NASA Environmental Information System)
p 2783 N95-31811
REINFORCING FIBERS
Interfacial studies of coated fiber reinforced glass-ceramic matrix composites
[AD-A290780] p 2783 N95-30433
The effect of interface properties on nickel base alloy composites
[NASA-CR-198363] p 2785 N95-30787
Effects of hydrostatic pressure on the mechanical behavior of composite materials
[AD-A293162] p 2787 N95-30963
Post-impact fatigue of cross-plied, through-the-thickness reinforced carbon/epoxy composites
[NASA-TM-110625] p 2896 N95-31419
RELATIVISTIC EFFECTS
Relativistic timescale analysis suggests lunar theory revision p 2970 N95-32333
RELATIVISTIC ELECTRON BEAMS
The coupling impedance of a toroidal beam pipe with circular cross section
[DE95-010442] p 2993 N95-31405
RELATIVISTIC PARTICLES
Hamiltonian formulation of two body problem in Wheeler-Feynman electrodynamics
[DE95-620526] p 3019 N95-31193
Quantization of a relativistic particle on the SL(2,R) manifold based on Hamiltonian reduction
[DE95-737163] p 2983 N95-31224
RELATIVISTIC PLASMAS
Perpendicular electron heating by absorption of auroral kilometric radiation
[NASA-198815] p 2914 N95-30848
Instantaneous chiral quark model for relativistic mesons in a hot and dense medium
[DE95-613782] p 2980 N95-30911
RELATIVISTIC THEORY
Relativistic theory for syntonization of clocks in the vicinity of the Earth p 2971 N95-32343
RELATIVITY
Integrals of motion in the two Killing vector reduction of general relativity
[DE95-616281] p 3018 N95-30431
Gravitational waves from inspiralling compact binaries: Energy loss and waveform to second-post-Newtonian order
[PB95-207890] p 2913 N95-30590
Introduction to the theory of Goyaks: Operator manifold approach to geometry and particle physics
[DE95-613460] p 2980 N95-30740
Satellite test of the isotropy of the one-way spe ed of light using ExTRAS p 2973 N95-32349
RELAXATION METHOD (MATHEMATICS)
The one-dimensional model of the off-centre potential of the fluorine ion in the NaBr lattice
[DE95-614310] p 3010 N95-30647
RELIABILITY
Publications of the Fossil Energy Advanced Research and Technology Development Materials Program: April 1, 1993-March 31, 1995
[DE95-009200] p 2903 N95-30745
The role of advanced engineering simulation in model-based design
[DE95-008815] p 2934 N95-30796
Nonparametric methods for incomplete data in reliability and for changepoints in smooth functions
[AD-A292773] p 2963 N95-31429
Recommended techniques for effective maintainability. A continuous improvement initiative of the NASA Reliability and Maintainability Steering Committee
[NASA-TM-4628] p 2892 N95-31530
Data analysis: Naive inductivism
[PB95-212213] p 3026 N95-32254
RELIABILITY ANALYSIS
Probabilistic reliability modeling of fatigue on the H-46 tie bar
[AD-A289926] p 2751 N95-30927
A NASPAC-Based analysis of the delay and cost effects of the western-pacific region preliminary resectorization effort of 1993
[AD-A288696] p 2748 N95-31013
Intelligent finite element submodeling of multichip modules for reliability analysis
[AD-A292911] p 2940 N95-31455
Toward a risk-based approach to the assessment of the surety of information systems
[DE95-008821] p 3025 N95-31662
ASSIST user manual
[NASA-TM-4592] p 2948 N95-32250
RELIABILITY ENGINEERING
Measures of reliability and RCM
[PB95-192985] p 2891 N95-30510
Robust Rocket Engine Concept
[NASA-TM-107010] p 2770 N95-32121
RELIEF VALVES
Navier-Stokes flow field analysis of compressible flow in a high pressure safety relief valve
[NASA-TM-110640] p 2868 N95-30862
REMOTE CONTROL
On-orbit truss structure tele-operation experiment by Engineering Test Satellite-7
[NAL-TR-1246] p 2767 N95-31980
REMOTE SENSING
Simulation of airborne electromagnetic measurements in three dimensional environments
[DE95-008546] p 2900 N95-30363
IR DIAL performance modeling
[DE95-008377] p 2912 N95-30373

Computer vision for detecting and quantifying gamma-ray sources in coded-aperture images
[DE95-008810] p 2900 N95-30472
Weather influence on passive microwave brightness temperatures
[PB95-195384] p 2900 N95-30536
Smart active multiwave sensing with zero background amplitude modulated probes
[DE95-008813] p 2792 N95-30714
Radiometer measurements of sea ice in the Gulf of Bothnia 1992
[PB95-206611] p 2900 N95-30718
SSUSI single sensor auroral E-layer algorithm: Functional description
[AD-A288630] p 2914 N95-31012
Brief review of remote sensing literature pertaining to classification and geostatistics
[AD-A290932] p 2901 N95-31156
Visit to Ionospheric Modeling and Remote Sensing Branch, Phillips Laboratory in Hanscom AFB, MA
[AD-A292339] p 2901 N95-31265
Multiresolution signal and system analysis and the analysis and control of discrete-event dynamic systems
[AD-A292775] p 2851 N95-31430
Emerging applications in probability (Sensor management)
[AD-A292781] p 2749 N95-31433
Proceedings of the 16th Annual Conference on Atmospheric Transmission Models, volume 1
[AD-A293807] p 2915 N95-31575
Millimeter wave radiometer utility study
[AD-A293811] p 2852 N95-31590
Environmental benefits of chemical propulsion p 2772 N95-31750
Surface inspection using FTIR spectroscopy p 2782 N95-31803
Global climatology and variability of potential new production estimated from remote sensing of sea-surface temperature
[NASA-CR-198840] p 2910 N95-31981
Design of an immersion echelle-prism mid-IR spectrograph for chemical remote sensing
[DE95-010729] p 2901 N95-32027
Design of surveillance and multisensor anti-aerial systems p 2841 N95-32134
Multisensor data fusion for integrated maritime surveillance p 2842 N95-32135
The Telecommunications and Data Acquisition Report
[NASA-CR-198911] p 2854 N95-32221

REMOTE SENSORS
SeaWiFS Technical Report Series. Volume 29: SeaWiFS CZCS-type pigment algorithm
[NASA-TM-104566] p 2922 N95-30857
System considerations for efficient communication and storage of MSTI image data
[NASA-CR-198869] p 3024 N95-30858
SeaWiFS technical report series. Volume 28: SeaWiFS algorithms, part 1
[NASA-TM-104566-VOL-28] p 2924 N95-31850
TMD detection and tracking using improved AWACS sensors p 2840 N95-32128
Optimal infrared detector configurations for air target detection p 2841 N95-32130
Acquisition, tracking, pointing and fire control for Ballistic Missile Defense p 2841 N95-32131
Multisensor data fusion for integrated maritime surveillance p 2842 N95-32135
Architecture and implementation of a multi-sensor data fusion demonstration model within the real-time combat system of the Canadian Patrol Frigate p 2842 N95-32139

REMOVAL
Waterjet processes for coating removal p 2777 N95-31779
Environmentally Safe and Effective Processes for Paint Removal
[AGARD-LS-201] p 2843 N95-32165
Overview of paint removal methods p 2843 N95-32166
Paint removal principles p 2843 N95-32167
Background to plastic media blasting p 2843 N95-32168
Dry media blasting with wheat starch p 2843 N95-32169
Water blasting paint removal methods p 2843 N95-32170
Stripping with dry ice p 2844 N95-32172
Aquastrip p 2844 N95-32173
Stripping by laser p 2844 N95-32174
Selective chemical stripping p 2844 N95-32175
Process evaluation p 2845 N95-32180
Standardization work p 2845 N95-32181

RENORMALIZATION GROUP METHODS
Light-front dynamics of Chern-Simons systems
[DE95-613467] p 3019 N95-30741
Renormalization group analyses of particle masses in full four-generation fermion condensate scheme
[DE95-613595] p 2988 N95-32070

REPEATERS
Microwave repeater with broadband active and/or passive isolation control
[AD-D017358] p 2846 N95-30417

REPLACING
Urethane foam process improvements
[DE95-008957] p 2815 N95-30798
CFC-replacement by natural working fluids: R&D and industrial challenges within the refrigeration, air conditioning amd heat pump areas
[PB95-195756] p 2815 N95-30871
A comparison of coating alternatives for US Coast Guard aircraft
[AD-A293270] p 2817 N95-31124
Aerospace Environmental Technology Conference
[NASA-CP-3298] p 2771 N95-31746
Prioritization methodology for chemical replacement p 2773 N95-31757
Evaluating the cost effectiveness of environmental projects: Case studies in aerospace and defense p 2774 N95-31762
The Oak Ridge Refrigerant Management Program p 2774 N95-31763
A water blown urethane insulation for use in cryogenic environments p 2775 N95-31765
Evaluation of HFC 245ca and HFC 236ea as foam blowing agents p 2775 N95-31766
Environmentally safe aviation fuels p 2775 N95-31768
Thin-film sulfuric acid anodizing as a replacement for chromic acid anodizing p 2776 N95-31772
Cadmium plating replacements p 2776 N95-31773
Replacement of corrosion protection chromate primers and paints used in cryogenic applications on the Space Shuttle with wire arc sprayed aluminum coatings p 2776 N95-31774
SSME Main Combustion Chamber (MCC) hot oil dewaxing p 2777 N95-31777
Bicarbonate of soda paint stripping process validation and material characterization p 2777 N95-31778
Evaluation of pressurized water cleaning systems for hardware refurbishment p 2778 N95-31782
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. Tactical aircraft: F-15 replacement is premature as currently planned
[GAO/NSIAD-94-118] p 2964 N95-31987
Liquid natural gas as a transportation fuel in the heavy trucking industry
[DE95-010376] p 2837 N95-32158
Fact sheet for Congressional Committees. Air traffic control: Status of FAA's modernization program
[GAO/RCED-94-167FS] p 2750 N95-32197

REPRODUCTION (COPYING)
Operating system support for distributed multimedia applications: A survey of current research
[PB95-207098] p 2964 N95-30565

REQUIREMENTS
Selective chemical stripping p 2844 N95-32175

RESEARCH
Quality in applied science
[PB95-196390] p 2891 N95-30520
Metascientific problems in safety science
[PB95-196408] p 2838 N95-30521
The activities of the high energy physics program
[DE95-010155] p 2991 N95-30615
Research proposal
[AD-A293207] p 3032 N95-30899
Directory of global environmental sciences in Japan p 2899 N95-31413

RESEARCH AND DEVELOPMENT
A system simulation development project: Leveraging resources through partnerships
[NASA-TM-106962] p 2753 N95-30514
Wide area networking R&D
[AD-A291057] p 2947 N95-30868
Hollow cathode electron gun research and development
[DE95-010262] p 2992 N95-31127
FBIS report: Science and technology. Central Eurasia
[FBIS-UST-95-027] p 2839 N95-31727
FBIS report: Science and technology. Central Eurasia
[FBIS-UST-95-029] p 2863 N95-31728
Air pollution control system research: An iterative approach to developing affordable systems p 2773 N95-31759
Aeronautics and space report of the President
[NASA-TM-110743] p 3028 N95-31979
Microgravity research opportunities for the 1990s
[NASA-CR-199109] p 2838 N95-31983
Solar thermal electric: Program overview, fiscal years 1993-1994
[DE94-000240] p 2906 N95-32058
Report to Congressional Committees. Federal Research: Interim report on the small business innovation research program
[GAO/RCED-95-59] p 3022 N95-32200
Report to the Vice Chairman, Joint Economic Committee, US Congress. Technology transfers: Benefits of cooperative R and D agreements
[GAO/RCED-95-52] p 3027 N95-32201
Laboratory directed research and development report
[DE95-011405] p 3032 N95-32279

RESEARCH FACILITIES
Supplemental multilayer insulation research facility
[NASA-TM-106991] p 2768 N95-30595

RESEARCH MANAGEMENT
Research proposal
[AD-A293207] p 3032 N95-30899
Emerging applications in probability (Sensor management)
[AD-A292781] p 2749 N95-31433
Topics in exploratory and speculative data analysis
[AD-A290505] p 3025 N95-31618
The Oak Ridge Refrigerant Management Program p 2774 N95-31763
Report to Congressional Committees. Federal Research: Interim report on the small business innovation research program
[GAO/RCED-95-59] p 3022 N95-32200

RESEARCH PROJECTS
A system simulation development project: Leveraging resources through partnerships
[NASA-TM-106962] p 2753 N95-30514
Economical analysis relating to the global warming issue
[DE95-764072] p 2908 N95-30677
Sea ice stress research
[AD-A293164] p 2923 N95-30964
National Laboratories: Are their R and D activities related to commercial product development? Report to Congressional Requesters
[GAO/PEMD-95-2] p 3027 N95-31345
Microgravity research opportunities for the 1990s
[NASA-CR-199109] p 2838 N95-31983
The Telecommunications and Data Acquisition Report
[NASA-CR-198911] p 2854 N95-32221
UNLV: Information Science Research Institute
[DE95-011941] p 3027 N95-32362

RESIDUAL GAS
Power oscillator in the tokamaks training
[DE95-616538] p 3003 N95-30473

RESIDUAL STRESS
Residual stresses and stress corrosion cracking in pipe fittings
[DE95-009332] p 2894 N95-31054
Modeling of fiber-reinforced composites incorporating distinct interface properties p 2787 N95-31110
Development of integrated insulation joint for cooling pipe in tokamak reactor
[DE95-737220] p 3007 N95-32264
Residual stress distribution in FeAl weld overlay on steel
[DE95-009178] p 2899 N95-32317

RESIDUES
Observation and characterization of burning surface reaction zones of solid propellants p 2800 N95-31296
Overview of paint removal methods p 2843 N95-32166

RESIN TRANSFER MOLDING
Development of stitched/RTM primary structures for transport aircraft
[NASA-CR-191441] p 2789 N95-31421

RESINS
Characterization and prediction of post-impact fatigue damage in stitched composites p 2785 N95-30826
Faster, cheaper radioanalytical methods
[DE95-009913] p 2797 N95-32061

RESISTANCE HEATING
Electrically heated tube investigation of cooling channel geometry effects
[NASA-TM-106985] p 2768 N95-30856
Modeling of thermal response of filament used in T-jump experiment p 2800 N95-31297
Stability analysis of the TPX toroidal field coil
[DE95-009666] p 2865 N95-32100

RESISTORS
Pre-amplifier with multi-stage feedback
[AD-D017371] p 2859 N95-30659

RESOLVERS
Passive range measurement system
[AD-D017344] p 2996 N95-30678

RESONANCE
The mechanism of particle production process in hadron-nucleon collisions
[DE95-613727] p 2975 N95-30372
Polarisation resonance in X-ray diffraction
[DE95-616727] p 3012 N95-30789

Multichannel resonances in coupled channels of meson scattering: Scalar sector
[DE95-613783] p 2981 N95-30912
Resonance characteristics in the case of the excitation of a monoenergetic beam of free atoms by means of N. F. Ramsey's method
[IFTR-6/1995] p 2993 N95-31336
Aspects of the magnetospheric amplification phenomenon in ducted whistler-mode waves p 2916 N95-31718
Operational characteristics of a 200 C LC parallel resonant circuit
[NASA-TM-106983] p 2864 N95-31742
Polarized proton beams
[DE95-010843] p 2987 N95-32031
Physics goals of a mu(+) mu(-) collider
[DE95-009546] p 2994 N95-32059
Mixing phases of unstable two-level systems
[DE95-613844] p 2989 N95-32151
On the search for exotic hadrons in the experiments with high energy hyperon beam
[DE95-620534] p 2989 N95-32261

RESONANCE SCATTERING
Statistical properties of chaotic scattering with one open channel
[DE95-613370] p 3020 N95-32150

RESONANT FREQUENCIES
Minimizing structural vibrations with Input Shaping (TM)
[NASA-CR-189439] p 2893 N95-30786
Analytic and experimental investigation of rotordynamic response and backward whirl induced by split resonance
[AD-A293639] p 2889 N95-31566
Finite element analysis of smart structures and modal testing of a flexible spacecraft arm
[AD-A293761] p 2890 N95-31576
Detection of the phase shift which accompanies the excitation of an atomic beam by N. F. Ramsey's method
[IFTR-5/1995] p 2986 N95-31818

RESONANT VIBRATION
Dynamical systems as models for flow-induced vibrations
[PB95-206991] p 2869 N95-30956

RESONATORS
Thermoacoustic sound generator
[AD-D017342] p 2973 N95-30413
Langasite crystals growth with quality factor Q, that exceeds the Q of quartz, and which are suitable for high-precision resonators
[AD-A293397] p 3013 N95-30969

RESOURCE ALLOCATION
Dynamic routation in distributed environments
[PB95-197968] p 2847 N95-30812
A microeconomic scheduler for parallel computers
[NASA-CR-198153] p 2932 N95-32046

RESOURCES MANAGEMENT
A system simulation development project: Leveraging resources through partnerships
[NASA-TM-106962] p 2753 N95-30514
Magnesium battery disposal characteristics
[AD-A293053] p 2863 N95-31607
Sustainability protects resources for future generations
[DE95-000285] p 2909 N95-31695
Controller resource management: What can we learn from aircrews?
[DOT/FAA/AM-95/21] p 2750 N95-32186

RESPIRATION
Evaluation of calibration parameters and performance of the video imaging technique of assessing exposure (VITAE system)
[AD-A289023] p 2927 N95-30998

RESPIROMETERS
Analytical instrumentation for environmental research
[AD-A292832] p 2908 N95-31447

RESPONSE TIME (COMPUTERS)
A microeconomic scheduler for parallel computers
[NASA-CR-198153] p 2932 N95-32046

RETENTION (PSYCHOLOGY)
Impact of task properties, data display format and cognitive characteristics on recall performance: A cumulative research investigation p 3025 N95-31334
Optimizing the long-term retention of skills: Structural and analytic approaches to skill maintenance
[AD-A293798] p 2929 N95-31585

RETINA
Laser induced vitreoretinal scarring. Evaluation of causative factors and a therapeutic approach
[AD-A293742] p 2928 N95-31570

RETROREFLECTORS
Laser retroreflector experiment on NAVSTAR 35 and 36 p 2887 N95-32347

REUSABLE ROCKET ENGINES
Robust Rocket Engine Concept
[NASA-TM-107010] p 2770 N95-32121

REVERBERATION
The TEVA experiment cruise report
[AD-A293025] p 2923 N95-31701

REVERSE FIELD PINCH
Lower hybrid accessibility in a large, hot reversed field pinch
[DE95-011001] p 3007 N95-32310

REYNOLDS NUMBER
Heat transfer in shear-free turbulent boundary layers p 2876 N95-31708
Control of unsteady separated flow associated with the dynamic stall of airfoils
[NASA-CR-198972] p 2744 N95-32193

REYNOLDS STRESS
Reynolds stress of localized toroidal modes
[DE95-008750] p 3004 N95-30795
LES, DNS and RANS for the analysis of high-speed turbulent reacting flows
[NASA-CR-199075] p 2878 N95-32219

RHENIUM
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 1
[NASA-CR-195435-VOL-1] p 2768 N95-31169
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 2
[NASA-CR-195435-VOL-2] p 2769 N95-31170

RHENIUM ALLOYS
High-temperature oxidation behavior of iridium-rhenium alloys
[NASA-TM-106720] p 2803 N95-30593

RHEOLOGY
Low temperature fabrication from nano-size ceramic powders
[DE95-010995] p 2818 N95-31153
Fluid-film lubrication with an application to piston rings p 2890 N95-32119

RHO-MESONS
Thermal rho's in the quark-gluon plasma
[DE95-009543] p 3008 N95-32357

RHODIUM
Catalytic reactions of synthesis gas. Part 4: Heterogeneous hydroformylation
[PB95-195558] p 2791 N95-30537

RHYTHM (BIOLOGY)
AASERT-92 augmentation of research training in chronobiology: Regulation of the mammalian circadian clock by neurotransmitters
[AD-A288243] p 2925 N95-31144

RIEMANN MANIFOLD
Dressing symmetry of the uniformization solution of Liouville equation
[DE95-613380] p 2956 N95-30607
Multichannel resonances in coupled channels of meson scattering: Scalar sector
[DE95-613783] p 2981 N95-30912
On drawing complicated 3D surfaces
[DE95-619199] p 2939 N95-31257
Ricci-flat Kaehler metrics on symmetric varieties
[DE95-613459] p 2962 N95-32068

RIGID STRUCTURES
Control of mechanical systems with rolling contacts: Applications to robotics p 2889 N95-31332
A simple and efficient procedure for polyhedral assembly partitioning under infinitesimal motions
[DE95-009838] p 2942 N95-31644

RINGS (MATHEMATICS)
Frobenius algebras and quantum Yang-Baxter equation 2
[PB95-212130] p 2960 N95-31229
Antipodes and integrals in Hopf algebras over rings and quantum Yang-Baxter equation
[PB95-212155] p 2961 N95-31397

RISK
Definition of an anti-missile ballistic defense architecture for Europe p 2840 N95-32125

ROBOT ARMS
Log-polar binocular vision system
[NASA-CR-188375] p 2996 N95-30772
Precision manipulation with a dextrous robot hand p 2888 N95-30829

ROBOT CONTROL
Qualitative environmental navigation: Theory and practice --- robot navigation p 2748 N95-30486
Robust position and force tracking control for a robot in contract p 2888 N95-30830
A graphical programming language for service robots in semi-structured environments p 2935 N95-30831
Control of mechanical systems with rolling contacts: Applications to robotics p 2889 N95-31332
Force and vision resolvability for assimilating disparate sensory feedback
[AD-A293581] p 2929 N95-31685

ROBOT DYNAMICS
Control of mechanical systems with rolling contacts: Applications to robotics p 2889 N95-31332

ROBOTICS
Adaptive path planning: Algorithm and analysis
[DE95-008549] p 2950 N95-30463
Log-polar binocular vision system
[NASA-CR-188375] p 2996 N95-30772
Precision manipulation with a dextrous robot hand p 2888 N95-30829
Emerging applications in probability (Sensor management)
[AD-A292781] p 2749 N95-31433
Neural networks for real-time terrain typing
[AD-A293569] p 2953 N95-31540
A simple and efficient procedure for polyhedral assembly partitioning under infinitesimal motions
[DE95-009838] p 2942 N95-31644
Force and vision resolvability for assimilating disparate sensory feedback
[AD-A293581] p 2929 N95-31685
On the kinematic performance of mechanical manipulators operating in the presence of an obstruction p 2890 N95-31710
Robotic weld overlay coatings for erosion control
[DE95-009643] p 2809 N95-32098

ROBOTS
Qualitative environmental navigation: Theory and practice --- robot navigation p 2748 N95-30486
Log-polar binocular vision system
[NASA-CR-188375] p 2996 N95-30772
Robust position and force tracking control for a robot in contract p 2888 N95-30830
A graphical programming language for service robots in semi-structured environments p 2935 N95-30831
Neural networks for real-time terrain typing
[AD-A293569] p 2953 N95-31540
Laboratory robotics: An automated tool for preparing Ion Chromatography calibration standards
[DE95-009441] p 2798 N95-32318

ROBUSTNESS (MATHEMATICS)
System identification for robust process control. Nominal models and error bounds
[PB95-197026] p 2839 N95-30777
Robust position and force tracking control for a robot in contract p 2888 N95-30830
Fourier analysis of a robust multigrid method for convection-diffusion equations
[PB95-197091] p 2958 N95-30835
Advances in robust control
[AD-A291126] p 2952 N95-31266
Robust control: A structured approach to solve aircraft flight control problems p 2758 N95-31995

ROCK MECHANICS
Simulation of fracture in compression using a field-theory model
[DE95-009874] p 2898 N95-32102

ROCKET ENGINE DESIGN
Electrically heated tube investigation of cooling channel geometry effects
[NASA-TM-106985] p 2768 N95-30856
Side force acting on blunted circular cylinder bodies at high angles of attack in supersonic flow
[NAL-TR-1255] p 2744 N95-31741
Robust Rocket Engine Concept
[NASA-TM-107010] p 2770 N95-32121

ROCKET ENGINES
High-temperature oxidation behavior of iridium-rhenium alloys
[NASA-TM-106720] p 2803 N95-30593
Development of a new instrument for rocket engine combustion diagnostics p 2799 N95-31211

ROCKET EXHAUST
The 21st JANNAF Exhaust Plume Technology Meeting, volume 1
[CPIA-PUBL-621-VOL-1] p 2870 N95-30986
Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-30987
Atmospheric environmental implications of propulsion systems p 2771 N95-31747
CFD assessment of the pollutant environment from RD-170 propulsion system testing p 2772 N95-31749

ROCKET LAUNCHING
Atmospheric environmental implications of propulsion systems p 2771 N95-31747

ROCKET NOZZLES
Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-30987
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 2
[NASA-CR-195435-VOL-2] p 2769 N95-31170
Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-31195
Development of a new instrument for rocket engine combustion diagnostics p 2799 N95-31211
Cleanliness inspection tool for RSRM bond surfaces p 2761 N95-31799

ROCKET PROPELLANTS
Development of a new instrument for rocket engine combustion diagnostics p 2799 N95-31211
ROCKET THRUST
Experiment of rocket-ram combined combustor
|NAL-TR-1249| p 2769 N95-31739
Improved hybrid rocket fuel p 2773 N95-31755
ROCKS
Removal of scattered surface waves from seismic data
|PB95-197802| p 2922 N95-30457
ROCKY MOUNTAINS (NORTH AMERICA)
Simulation of katabatic flow and mountain waves
|DE95-010863| p 2911 N95-32276
RODS
Simultaneity and length of the moving rod
|DE95-613369| p 3017 N95-30364
Einstein's length concept
|DE95-613368| p 3019 N95-30972
ROLLING CONTACT LOADS
Control of mechanical systems with rolling contacts: Applications to robotics p 2889 N95-31332
ROOM TEMPERATURE
Visible light emitting materials and injection devices
|AD-A292701| p 2786 N95-30934
The effect of grain refinement on the room-temperature ductility of as-cast Fe3Al-based alloys
|DE95-010121| p 2805 N95-31107
Composite polymer electrolyte for lithium batteries
|AD-A293924| p 2820 N95-31514
Ultrasensitive fluorescence detection and photophysics in microdroplets
|DE95-010283| p 2798 N95-32086
ROOT-MEAN-SQUARE ERRORS
Towards optimum demodulation of bandwidth-limited and low SNR square-wave subcarrier signals p 2855 N95-32229
ROTARY WINGS
Validation of the helicopter rotor code HERO
|PB95-198040| p 2751 N95-30838
A novel instrumentation system for measurement of helicopter rotor motions and loads data, phase 1
|AD-A293309| p 2751 N95-30923
ROTATING BODIES
Robust fixed-structure control
|AD-A292883| p 2952 N95-30961
ROTATING PLASMAS
Development of a tokamak plasma optimized for stability and confinement
|DE95-009609| p 3003 N95-30641
Stabilization of ballooning modes with sheared toroidal rotation
|DE95-008388| p 3006 N95-31624
Energy spectra of charge-exchange atoms from a rotating plasma
|DE95-614179| p 3006 N95-32054
Wall stabilization of high beta plasmas in D3-D
|DE95-009607| p 3007 N95-32116
ROTATING SHAFTS
Analytic and experimental investigation of rotordynamic response and backward whirl induced by split resonance
|AD-A293639| p 2889 N95-31566
An active magnetic bearing with high T(sub c) superconducting coils and ferromagnetic cores
|NASA-TM-106995| p 2864 N95-31847
ROTATION
Composite structure forming a wear surface
|AD-D017462| p 2785 N95-30749
Stabilization of the resistive shell mode in tokamaks
|DE95-008748| p 3004 N95-30794
Validation of the helicopter rotor code HERO
|PB95-198040| p 2751 N95-30838
A simple and efficient procedure for polyhedral assembly partitioning under infinitesimal motions
|DE95-009838| p 2942 N95-31644
Dynamical analysis of the coriolis effect which causes space disorientation
|NAL-TR-1258| p 2928 N95-31714
ROTOR AERODYNAMICS
A numerical model for dynamic wave rotor analysis
|NASA-TM-106997| p 2754 N95-30617
Axial loads on yawed rotors
|PB95-214193| p 2742 N95-30638
A novel instrumentation system for measurement of helicopter rotor motions and loads data, phase 1
|AD-A293309| p 2751 N95-30923
Digital simulation of wind velocities for wind turbine rotors: General considerations
|PB95-206447| p 2904 N95-31157
ROTOR BLADES (TURBOMACHINERY)
Development of a linearized unsteady Euler analysis for turbomachinery blade rows
|NASA-CR-4677| p 2742 N95-30611
ROTOR DYNAMICS
Numerical simulation of flow in a whirling annular seal and comparison with experiments
|NASA-TM-106961| p 2867 N95-30710
Analytic and experimental investigation of rotordynamic response and backward whirl induced by split resonance
|AD-A293639| p 2889 N95-31566
Vibration reduction in helicopter rotors using an actively controlled partial span trailing edge flap located on the blade p 2762 N95-32111
ROTORS
Wave rotor-enhanced gas turbine engines
|NASA-TM-106998| p 2754 N95-30517
A numerical model for dynamic wave rotor analysis
|NASA-TM-106997| p 2754 N95-30617
Preliminary assessment of combustion modes for internal combustion wave rotors
|NASA-TM-107000| p 2754 N95-30632
Improved modeling of unsteady heat transfer (The first step)
|AD-A292777| p 2874 N95-31432
Application of multigrid computational fluid dynamics (CFD) methods to rotor analysis
|AD-A293012| p 2874 N95-31475
ROUTES
FAA aviation forecasts: Fiscal year 1995-2006
|AD-A293682| p 2741 N95-31598
RUBBER
Evaluation of alternative pavement marking materials
|AD-A292973| p 2763 N95-31468
RUBBER COATINGS
Response of dual-layered structures subjected to shock pressure wave
|AD-A293731| p 2896 N95-31568
RUBIDIUM
The 26th Annual Precise Time and Time Interval (PTTI) Applications and Planning Meeting
|NASA-CP-3302| p 2967 N95-32319
Monte Carlo simulations of precise timekeeping in the Milstar communication satellite system p 2970 N95-32336
SVN 9 End-Of-Life testing p 2767 N95-32345
RUN TIME (COMPUTERS)
The Coprocessor Manager in the BASIS processor system
|PB95-211611| p 2945 N95-32252
RUSSIAN FEDERATION
Mars together and FIRE and ICE: Report of the joint US/Russian technical working groups
|NASA-CR-198864| p 3030 N95-30845
FBIS report: Science and technology. Central Eurasia
|FBIS-UST-95-027| p 2839 N95-31727
FBIS report: Science and technology. Central Eurasia
|FBIS-UST-95-029| p 2863 N95-31728
FBIS report: Science and technology. Central Eurasia
|FBIS-UST-95-028| p 2839 N95-31729
RUSSIAN SPACE PROGRAM
Mir 18 post flight presentation
|NASA-TM-110657| p 2766 N95-30854

S

S MATRIX THEORY
Complex conjugate pairs in stationary Sturmians
|DE95-616279| p 2976 N95-30429
The solutions of affine and conformal affine Toda field theory
|DE95-616280| p 2965 N95-30430
Inelastic plasmon and inter-band electron-scattering potentials for Si from dielectric matrix calculations
|DE95-616778| p 2977 N95-30475
The effect of a non-Hermitian crystal potential on the scattering matrix in reflection electron diffraction
|DE95-616779| p 2977 N95-30476
Physical optics polarization scattering matrix for a right-angle dihedral
|AD-A293036| p 3000 N95-31665
S WAVES
Hadronic production of S-wave and P-wave charmed beauty mesons via heavy quark fragmentation
|DE95-008737| p 2977 N95-30465
A valence-fluctuation mechanism with highly anisotropic S-wave pairing
|DE95-009419| p 3010 N95-30571
SABOT PROJECTILES
A RASCAL in-bore dynamic analysis of the task B and task C electromagnetic railguns
|AD-A292742| p 2764 N95-30948
SACCADIC EYE MOVEMENTS
Simulation of oculomotor post-inhibitory rebound burst firing using a Hodgkin-Huxley model of a neuron
|AD-A293821| p 2927 N95-31552
SAFETY
Recommended techniques for effective maintainability. A continuous improvement initiative of the NASA Reliability and Maintainability Steering Committee
|NASA-TM-4628| p 2892 N95-31530
Data analysis: Naive inductivism
|PB95-212213| p 3026 N95-32254
SAFETY DEVICES
Releaseable unconstrained inflatable body protector
|AD-D017350| p 2930 N95-30552
SAFETY FACTORS
Metascientific problems in safety science
|PB95-196408| p 2838 N95-30521
SAFETY MANAGEMENT
Metascientific problems in safety science
|PB95-196408| p 2838 N95-30521
Generalized implementation of software safety policies p 2939 N95-31249
Fact sheet for Congressional Committees. Air traffic control: Status of FAA's modernization program
|GAO/RCED-94-167FS| p 2750 N95-32197
SALINITY
Ocean mass density calculations from temperature and salinity data
|DSTO-TR-0023| p 2922 N95-30711
The role of the hydrological cycle and the ocean's thermohaline circulation in climate change: A multicomponent climate model study p 2909 N95-31720
SAMPLERS
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
|DE95-000047| p 2881 N95-31694
SAMPLES
Standardization of (13)CO2 production procedure from organic matter for mass spectrometric analysis
|DE95-614629| p 2791 N95-30420
SAMPLING
Ultrasonic two probe system for locating and sizing
|AD-D017438| p 2996 N95-30724
Statistical interface for chaotic signal in noise
|AD-A290271| p 2848 N95-30932
Evaluation of calibration parameters and performance of the video imaging technique of assessing exposure (VITAE system)
|AD-A289023| p 2927 N95-30998
SANDWICH STRUCTURES
Design of fibre reinforced composite panels for aerospace applications
|PB95-197851| p 2784 N95-30460
Advanced oxidizers diffusion flames structure p 2801 N95-31307
Influence of layer order and composition on the magnetic anisotropy of ultra-thin Co sandwiches
|DE95-010608| p 2810 N95-32265
SAPPHIRE
Ion implantation and thermal stress resistance of ceramics
|DE95-615349| p 2812 N95-30451
The effect of interface properties on nickel base alloy composites
|NASA-CR-198363| p 2785 N95-30787
Germanate glass ceramic
|AD-D017418| p 2816 N95-31011
SATELLITE ANTENNAS
Proceedings of the antenna applications symposium. volume 2
|AD-A293259| p 2850 N95-31387
SATELLITE COMMUNICATION
STS-70 flight: Day 4
|NASA-TM-110662| p 2764 N95-30877
STS-70 flight: Day 3
|NASA-TM-110661| p 2765 N95-30878
STS-70 flight: Day 2
|NASA-TM-110660| p 2765 N95-30879
Computer interface development for the petite amateur navy satellite (PANSAT) simulator
|AD-A293263| p 2766 N95-31388
The quad-service satellite transmitting and receiving system for medical supply support: A battlefield interoperability and communications system prototype, volume 2. User documentation
|AD-A292835| p 2851 N95-31448
The quad-service satellite transmitting and receiving system for medical supply support: A battlefield interoperability and communications system prototype, volume 1
|AD-A292836| p 2851 N95-31449
Portable digital Satellite News Gathering (SNG) RF terminal using a flat antenna
|NHK-LABS-NOTE-436| p 2853 N95-31744
Information Switching Processor (ISP) contention analysis and control
|NASA-CR-195471| p 2765 N95-31849
Residual and suppressed-carrier arraying techniques for deep-space communications p 2856 N95-32235

SATELLITE CONSTELLATIONS
Fine tuning GPS clock estimation in the MCS
p 2968 N95-32322
SATELLITE IMAGERY
System considerations for efficient communication and storage of MSTI image data
|NASA-CR-198869| p 3024 N95-30858
FISHFINDE: Interactive software package to predict fish locations using satellite image data and fish species behavior rules
|AD-A293394| p 2935 N95-30968
Global Ultraviolet Imager (GUVI) investigation
|NASA-CR-189430| p 2917 N95-31820
SeaWiFS technical report series. Volume 13: Case studies for SeaWiFS calibration and validation, part 1
|NASA-TM-104566-VOL-13| p 2924 N95-32220
Prospects for high accuracy time dissemination and synchronization using coded radar pulses from a low-earth orbiting spacecraft p 2971 N95-32339
SATELLITE NAVIGATION SYSTEMS
A globally efficient means of distributing UTC time and frequency through GPS p 2970 N95-32335
SATELLITE NETWORKS
High accuracy time transfer synchronization
p 2968 N95-32321
SATELLITE OBSERVATION
Satellite multisensor data techniques for sea ice mapping
|AD-A289729| p 2901 N95-31148
Comparison of satellite-derived MSU brightness temperatures and conventionally-derived fields
|AD-A293692| p 2901 N95-31603
SATELLITE-BORNE INSTRUMENTS
Integrated X-ray testing of the electro-optical breadboard model for the XMM reflection grating spectrometer
|DE95-008829| p 2879 N95-30507
The future of space imaging. Report of a community-based study of an advanced camera for the Hubble Space Telescope
|NASA-CR-198818| p 3028 N95-31364
SATURN (PLANET)
Welding isotopic heat sources for the cassini mission to Saturn
|DE95-060104| p 2890 N95-32367
SCALARS
Light-front dynamics of Chern-Simons systems
|DE95-613467| p 3019 N95-30741
Instability of weak vacuum
|DE95-613590| p 2985 N95-31620
Analysis and modeling of subgrid scalar mixing using numerical data
|NASA-CR-198169| p 2877 N95-31978
Harmonic coordinates in the problem on static gravitational and massless scalar fields with a point source
|DE95-623632| p 3020 N95-32295
SCALING
Scaling behaviour of leptonic decay constants for heavy quarkonia and heavy mesons
|DE95-620539| p 2983 N95-31218
SCANNING ELECTRON MICROSCOPY
Direct sublattice imaging of interface dislocation structures in CdTe/GaAs(001)
|DE95-009031| p 3010 N95-30576
Metrology of chrome on quartz photomasks using low voltage scanning electron microscopy. Part 1: Physical SEM parameters
|PB95-195780| p 2880 N95-30693
High aspect ratio metal microstructures and method for preparing the same
|AD-D017463| p 2803 N95-30750
Processing and characterization of nanocrystalline molybdenum disilicide (MoSi2) consolidated by hot isostatic pressing (HIP)
|DE95-010243| p 3012 N95-30756
In situ composites in the aluminum nitride-alumina system
|AD-A293776| p 2789 N95-31509
SCANNING TUNNELING MICROSCOPY
STM studies of clean, CO- and O2-exposed Pt(100)-hex-R0.7 deg
|PB95-195376| p 3009 N95-30535
STM measurements of the interaction of vacancies and steps during low-energy-ion bombardment of Si(001)
|DE95-010935| p 3017 N95-32308
SCARS
Laser induced vitreoretinal scarring. Evaluation of causative factors and a therapeutic approach
|AD-A293742| p 2928 N95-31570
SCATTERING
Apparatus and method for producing three-dimensional images
|AD-D017455| p 2847 N95-30727
Polarisation resonance in X-ray diffraction
|DE95-616727| p 3012 N95-30789
Multichannel resonances in coupled channels of meson scattering: Scalar sector
|DE95-613783| p 2981 N95-30912
Effects of mosaicity on Parametric X-Radiation production
|AD-A293677| p 2985 N95-31597
Two-dimensional Finite Difference Time Domain (FD-TD) model of electromagnetic (EM) scattering from a buried rectangular object
|AD-A293685| p 2852 N95-31601
Removal of the Energy Dependence from the Resolvent Like Energy Dependent Interactions
|DE95-613385| p 2961 N95-31619
SCATTERING AMPLITUDE
On perturbative asymptotic of Regge trajectories
|DE95-613585| p 3018 N95-30636
A compact expression for bilinear combination of Dirac spinors via world tensors
|DE95-619200| p 2960 N95-31258
SCATTERING CROSS SECTIONS
Inversion of the total cross sections for electron-molecule and electron-atom scattering
|DE95-616466| p 2978 N95-30583
Analytic cross sections for collisions of H, H2, He and Li atoms and ions with atoms and molecules
|DE95-722055| p 2979 N95-30654
Fast multipole methods for scattering computations
|AD-A291093| p 2848 N95-30869
SCATTERING FUNCTIONS
The TEVA experiment cruise report
|AD-A293025| p 2923 N95-31701
SCATTEROMETERS
Investigation of microwave backscatter from the air-sea interface
|NASA-CR-198854| p 2851 N95-31457
SCHEDULES
Lessons learned in deploying software estimation technology and tools p 2938 N95-31246
Patient/aircraft forecasting for the strategic aeromedical evacuation lift-bed process
|AD-A293902| p 2747 N95-31512
SCHEDULING
Using case-based reasoning as a Reinforcement Learning framework for optimization with changing criteria
|AD-A293602| p 2953 N95-31654
A microeconomic scheduler for parallel computers
|NASA-CR-198153| p 2932 N95-32046
SCHOOLS
Selection of Swedish scholastic aptitude test takers as a function of socioeconomic background and ability: Evaluation through follow-up
|PB95-212072| p 3021 N95-30699
Non-comparability of female and male admission test takers: Evaluation through follow-up
|PB95-212080| p 3021 N95-30700
SCHROEDINGER EQUATION
Quantum dynamics in regions of quaternionic curvature
|DE95-616276| p 3018 N95-30426
Quasi-periodic solutions of Hamiltonian perturbations of 2D linear Schroedinger equations
|PB95-208443| p 2957 N95-30624
Determination of the symmetry of a non-linear Schroedinger equation
|IFTR-10/1995| p 2960 N95-31339
Fast algorithms for three-dimensional inverse scattering problems
|AD-A293510| p 2852 N95-31537
SCHWARTZ METHOD
Higher Schwarzian operators and combinatorics of Schwarzian derivative
|PB95-208435| p 2957 N95-30623
SCIENTIFIC VISUALIZATION
Management, visualization, and analysis of environmental and geotechnical data
|DE95-000063| p 3026 N95-31823
SCORING
Luminance effects on visual acuity and small letter contrast sensitivity
|AD-A293310| p 2928 N95-31140
SEA FLOOR SPREADING
Studies in marine tectonics: Propagating rifts, depth anomalies and subduction zone anisotropy
p 2923 N95-31719
SEA ICE
Weather influence on passive microwave brightness temperatures
|PB95-195384| p 2900 N95-30536
Radiometer measurements of sea ice in the Gulf of Bothnia 1992
|PB95-206611| p 2900 N95-30718
Sea ice stress research
|AD-A293164| p 2923 N95-30964
Satellite multisensor data techniques for sea ice mapping
|AD-A289729| p 2901 N95-31148
The role of the hydrological cycle and the ocean's thermohaline circulation in climate change: A multicomponent climate model study
p 2909 N95-31720
SEA STATES
The determination of wave group parameters from the resolution of incident and reflected waves
|AD-A293703| p 2924 N95-31829
SEA SURFACE TEMPERATURE
Yellow Sea thermal structure
|AD-A291159| p 2922 N95-30396
Arabian Sea mixed layer dynamics experiment: Mooring deployment cruise report
|AD-A293684| p 2923 N95-31600
Global climatology and variability of potential new production estimated from remote sensing of sea-surface temperature
|NASA-CR-198840| p 2910 N95-31981
SEA WATER
Yellow Sea thermal structure
|AD-A291159| p 2922 N95-30396
Active turbulence control using microelectrodes, permanent magnets in microgrooves
|AD-D017351| p 2867 N95-30553
Ocean mass density calculations from temperature and salinity data
|DSTO-TR-0023| p 2922 N95-30711
The impact of microbiologically influenced corrosion on protective polymer coatings
|AD-A288896| p 2816 N95-30997
Comparison of cathodic protection currents on 70/30 copper-nickel and alloy 625 piping systems
|AD-A292953| p 2807 N95-31561
Carbon dioxide concentrations in surface water and the atmosphere during 1986-1989 NOAA/PMEL cruises in the Pacific and Indian Oceans
|DE95-009659| p 2910 N95-32099
SEALING
Trivalent chromium solutions for sealing anodized aluminum
|AD-D017349| p 2803 N95-30551
SEALS (STOPPERS)
Numerical simulation of flow in a whirling annular seal and comparison with experiments
|NASA-TM-106961| p 2867 N95-30710
Compatibility of Single Hydraulic Fluid with military specification fluids, seals and metallurgy
|AD-A292954| p 2821 N95-31663
SEARCHING
Aspects of the search time in binary search trees modified according to the move-to-root heuristic
|PB95-212148| p 2963 N95-31396
SEATS
Fast-acting valve for projective launching systems
|AD-D017357| p 2888 N95-30416
SECONDARY INJECTION
Enhanced energy release and soot reduction in actively controlled flames p 2799 N95-31200
Pulse forming network in the ETC combustion characterization of plasma augmented solid propellants
p 2799 N95-31205
SECURITY
Requirements for security signalling
|DE95-008714| p 2948 N95-31605
SEDIMENT TRANSPORT
On convective effects in sedimentation of concentrated suspensions with high effective gravity
|TRITA-NA-9316| p 2794 N95-31356
SEDIMENTS
Laboratory simulated hydrothermal alteration of sedimentary organic matter from Guaymas Basin, Gulf of California
|NASA-CR-198951| p 2914 N95-30865
On convective effects in sedimentation of concentrated suspensions with high effective gravity
|TRITA-NA-9316| p 2794 N95-31356
Multiple scatter theory of ocean sediments
|AD-A293951| p 2923 N95-31523
SEISMIC WAVES
Removal of scattered surface waves from seismic data
|PB95-197802| p 2922 N95-30457
Generation of earthquake signals
|PB95-211223| p 2913 N95-30631
Direct and inverse problems in random media
|AD-A293033| p 2850 N95-31280
A seismic data compression system using subband coding p 2857 N95-32238
SEISMOGRAPHS
Fiber optic accelerometer with centrally supported flexural disk
|AD-D017369| p 2879 N95-30658

SEISMOLOGY
Removal of scattered surface waves from seismic data
[PB95-197802] p 2922 N95-30457
Generation of earthquake signals
[PB95-211223] p 2913 N95-30631
Seismic studies of subducted lithosphere p 2915 N95-31335
Development of the Multi-Level Seismic Receiver (MLSR)
[DE95-008823] p 2916 N95-31610

SELECTION
Numerical computation of one-dimensional detonation waves
[PB95-197950] p 2868 N95-30811
Operational parameters and material effects p 2845 N95-32179

SELECTIVE DISSEMINATION OF INFORMATION
Recommendations for protecting National Library of Medicine Computing and Networking Resources
[DE95-011554] p 3026 N95-32285

SELF ALIGNMENT
Photorefractive nonlinear optics
[AD-A292913] p 2999 N95-31458

SELF CONSISTENT FIELDS
Calculated structures and electronic absorption spectroscopy for magnesium phthalocyanine and its anion radical
[AD-A293672] p 2796 N95-31596
Electronic structure of Donor-Spacer-Acceptor molecules of potential interest for molecular electronics III: Geometry and absorption spectrum of CH3-Alpha P3CNQ
[AD-A293662] p 2985 N95-31609

SELF EXCITATION
Control of high Reynolds number round jets p 2876 N95-31733

SELF ORGANIZING SYSTEMS
Aspects of the search time in binary search trees modified according to the move-to-root heuristic
[PB95-212148] p 2963 N95-31396

SEMANTICS
Extending a multi-set relational algebra to a parallel environment
[PB95-207106] p 3023 N95-30566
An approach to automated reasoning about operational semantics
[AD-A291127] p 2936 N95-31228

SEMICONDUCTING FILMS
May multiple inelastic scattering in CBED patterns be removed analytically
[PB95-196333] p 2992 N95-30717

SEMICONDUCTOR DEVICES
Magnetoluminescence characterization of quantum well structures
[DE95-008527] p 3008 N95-30381
Contactless characterization of semiconductors using laser-induced surface photo-charge voltage measurements
[AD-A293618] p 2863 N95-31725

SEMICONDUCTOR DIODES
Picosecond phase conjugation: New applications, devices, and materials
[AD-A293195] p 3013 N95-30982
A 1.94 micrometer laser apparatus, system and method using a thulium-doped yttrium-lithium-fluoride laser crystal pumped with a diode laser
[AD-D017435] p 2884 N95-31213

SEMICONDUCTOR LASERS
Polarization characteristics, control, and modulation of vertical-cavity surface emitting lasers
[DE95-008526] p 2882 N95-30380
Many-body effects in semiconductor lasers
[DE95-008534] p 2883 N95-30390
Extended tuning range semiconductor lasers with sampled gratings p 2883 N95-30498
Optical logic and signal processing using a semiconductor laser diode-based optical bistability device
[AD-A293248] p 2997 N95-30908
Picosecond phase conjugation: New applications, devices, and materials
[AD-A293195] p 3013 N95-30982
A compact and efficient violet laser source
[AD-A292782] p 2885 N95-31434
Optical frequency standards: Hertz-level working standards and their absolute frequency measurement
[AD-A293930] p 2999 N95-31515

SEMICONDUCTORS (MATERIALS)
Magnetoluminescence characterization of quantum well structures
[DE95-008527] p 3008 N95-30381
NIR High-efficiency subwavelength diffractive structures in semiconductors
[DE95-008535] p 3008 N95-30391
Preparation of diisopropyl stibines and use thereof
[AD-D017419] p 2771 N95-30418
Semiconductor nanocrystals formed in SiO2 by ion implantation
[DE95-008900] p 2978 N95-30546
The quantum interference effect in semiconductor space charge layers studied by Feynman path integrals: General formalism and illustrative examples
[DE95-614483] p 3010 N95-30653
Acoustomagnetoelectric effect in a superlattice
[DE95-613445] p 3011 N95-30736
Photophysical properties of opto-electric molecules studied by time-resolved microwave conductivity
[PB95-196994] p 2980 N95-30774
Vertical transport in GaAs/AlGaAs superlattices p 3012 N95-30822
Glass matrix doped with activated luminescent nanocrystalline particles
[AD-D017416] p 2816 N95-31010
Method and apparatus for non-destructively measuring local resistivity of semiconductors
[AD-D017436] p 2862 N95-31343
Nonlinear organized materials for optical devices
[AD-A292809] p 2999 N95-31441
Poisson's ratio for hexagonal crystals
[AD-A293556] p 3015 N95-31539
Nonlinear optics in novel composite media
[AD-A293886] p 2999 N95-31542
Photovoltaic Energy Program overview: Fiscal year 1994
[DE94-011871] p 2905 N95-31661
Operational characteristics of a 200 C LC parallel resonant circuit
[NASA-TM-106983] p 2864 N95-31742
An experimental search for high ZT semiconductors: A survey of the preparation and properties of several alloy systems
[DE95-010232] p 2865 N95-32084
GCMS and FTIR studies of by-product inhibited growth and the rate-limiting step in TEOS-based SiO2 CVD
[DE95-009863] p 3016 N95-32147
Femtosecond, Cr(4+):YAG laser
[DE95-004964] p 2887 N95-32155
Investigation of the basic physics of high efficiency semiconductor hot carrier solar cell
[NASA-CR-198945] p 2906 N95-32212
Materials with controllable signature properties
[PB95-222964] p 2857 N95-32313

SEMISPAN MODELS
Unsteady transonic wind tunnel test on a semispan straked delta wing, oscillating in pitch. Part 1: Description of the model, test setup, data acquisition, and data processing
[AD-A293113] p 2743 N95-30885

SENSITIVITY
Josephson break junction thin film device
[AD-D017343] p 3011 N95-30673
Luminance effects on visual acuity and small letter contrast sensitivity
[AD-A293310] p 2928 N95-31140
Numerical simulation of ram accelerator performance including transient effects during initiation of combustion and sensitivity studies p 2799 N95-31203

SENSORS
Micromachined sensor and actuator research at the Microelectronics Development Laboratory
[DE95-008540] p 2878 N95-30384

SEPARATED FLOW
A turbulence module for the NPARC code
[NASA-CR-198358] p 2959 N95-30855
Vorticity dynamics and control of dynamic stall
[AD-A288658] p 2756 N95-31400
Investigating the use of smart acoustically active surfaces for flow separation control in turbomachinery
[AD-A292819] p 2874 N95-31443

SEPARATION
Synthesis of separation systems: Methods and applications in downstream gas processes
[PB95-208518] p 2798 N95-32372

SEPARATORS
Process for producing hydrophilic polymer membranes
[AD-D017355] p 2811 N95-30415
Reducing process noise in superconducting helium liquid level probes
[DE95-008956] p 2814 N95-30765

SEQUENCING
Automation of the control of acoustic parameters in a digital speech synthesizer
[IFTR-2/1995] p 2850 N95-31357

SERIES EXPANSION
Plaquette expansion proof and interpretation
[DE95-616282] p 2965 N95-30432
Approximate analytic diagonalization of lattice QCD
[DE95-616332] p 3018 N95-30444

SERVICE LIFE
Failure analysis of a repairable system: The case study of a cam-driven reciprocating pump
[AD-A293144] p 2889 N95-30949
Recycling MIL-H-46170 hydraulic fluid to extend fluid service life
[AD-A293035] p 2821 N95-31664
Robust Rocket Engine Concept
[NASA-TM-107010] p 2770 N95-32121

SERVOMECHANISMS
Passive range measurement system
[AD-D017344] p 2996 N95-30678

SET THEORY
Good metric spaces without good parameterizations
[PB95-208427] p 2957 N95-30622

SHAFTS (MACHINE ELEMENTS)
Brush seal shaft wear resistant coatings
[NASA-CR-198950] p 2889 N95-31382

SHALLOW SHELL EQUATIONS
Application of shallow shell stability to plant morphogenesis by Fourier series p 2897 N95-31734

SHALLOW SHELLS
Application of shallow shell stability to plant morphogenesis by Fourier series p 2897 N95-31734

SHALLOW WATER
Yellow Sea thermal structure
[AD-A291159] p 2922 N95-30396
Algorithm comparison and benchmarking using a parallel spectra transform shallow water model
[DE95-009124] p 2913 N95-30683
The TEVA experiment cruise report
[AD-A293025] p 2923 N95-31701

SHAPE MEMORY ALLOYS
Smart material joint band
[AD-D017374] p 2888 N95-30716
Shape memory properties of an iron modified nickel aluminide alloy
[DE95-010223] p 2805 N95-31111

SHAPES
An explanation for the shape of nanoindentation unloading curves based on finite element simulation
[DE95-008905] p 2812 N95-30548
Static behaviour of axially loaded uniplanar and multiplanar tubular x-joints
[PB95-207866] p 2892 N95-30585
A laser-based ice shape profilometer for use in icing wind tunnels
[NASA-TM-106936] p 2880 N95-30851
Theory & numerical methods for problems in shape reconstruction and large deviations
[AD-A292874] p 2952 N95-31279

SHEAR FLOW
Singular eigenfunctions for shearing fluids I
[DE95-008952] p 2868 N95-30763
Shear flow effects on ion thermal transport in tokamaks
[DE95-009115] p 3005 N95-30801
Large eddy simulation of jets using structured upwind numerics p 2871 N95-30993
Study of effect of bubbles on a free-shear layer p 2872 N95-31100
Numerical study of shear-induced heating in high-speed nozzle flow of liquid monopropellant p 2828 N95-31207

SHEAR LAYERS
Study of effect of bubbles on a free-shear layer p 2872 N95-31100

SHEAR PROPERTIES
An evaluation of the Iosipescu specimen for composite materials shear property measurement
[NASA-CR-198755] p 2896 N95-31418

SHEAR STRENGTH
Round-robin validation exercise for plate twist test method
[PB95-208088] p 2812 N95-30487
An evaluation of the Iosipescu specimen for composite materials shear property measurement
[NASA-CR-198755] p 2896 N95-31418

SHEAR STRESS
A turbulence model for steady and unsteady boundary layers in strong pressure gradients p 2868 N95-30840
Effects of hydrostatic pressure on the mechanical behavior of composite materials
[AD-A293162] p 2787 N95-30963
Viscous heating of liquid layers under intense shear p 2827 N95-31206
An evaluation of the Iosipescu specimen for composite materials shear property measurement
[NASA-CR-198755] p 2896 N95-31418

SHEARING
Singular eigenfunctions for shearing fluids I
[DE95-008952] p 2868 N95-30763

SHELL STABILITY
Application of shallow shell stability to plant morphogenesis by Fourier series p 2897 N95-31734

SHELL THEORY
Contributions to the design of neutral cutouts in laminated plates and shells p 2790 N95-32113
SHIP HULLS
Computational modeling of coating integrity effects on impressed current cathodic protection system
[AD-A293256] p 2815 N95-30894
SHIPS
Cloud condensation nuclei measurements in shiptrails
[AD-A293302] p 2919 N95-30951
Shiptracks in the Californian stratus region: Dependency on marine atmospheric boundary layer depth
[AD-A293272] p 2901 N95-31125
Mexico Wind Resource Assessment Project
[DE95-009202] p 2921 N95-31726
Prime power for shipboard high-average power FELs
[AD-A293718] p 2886 N95-31833
SHOCK TESTS
Ion implantation and thermal stress resistance of ceramics
[DE95-615349] p 2812 N95-30451
SHOCK TUBES
Computation of high-altitude hypersonic flow-field radiation p 2743 N95-30843
SHOCK TUNNELS
A numerical study of the starting process in a hypersonic shock tunnel p 2762 N95-30493
SHOCK WAVE INTERACTION
A numerical study of the starting process in a hypersonic shock tunnel p 2762 N95-30493
Numerical simulation of shock/turbulent boundary layer interaction
[NASA-CR-198846] p 2872 N95-31341
Experimental and computational investigation of the tip clearance flow in a transonic axial compressor rotor
[NASA-TM-106711] p 2876 N95-31738
SHOCK WAVES
Numerical simulation of ram accelerator performance including transient effects during initiation of combustion and sensitivity studies p 2799 N95-31203
Numerical simulation of shock/turbulent boundary layer interaction
[NASA-CR-198846] p 2872 N95-31341
A study of numerical solutions of conservation laws
[TRITA-NA-9315] p 2960 N95-31361
Response of dual-layered structures subjected to shock pressure wave
[AD-A293731] p 2896 N95-31568
Effects of cavity bleed and its configuration on aerodynamic characteristics of supersonic internal flow
[NAL-TR-1247] p 2744 N95-31715
Selected problems of the identification of weak double layers in plasma on a background of different aperiodic non-collision structures
[IFTR-4/1995] p 3006 N95-31737
Analysis of plasma measurements for the Geotail mission
[NASA-CR-199074] p 3032 N95-32218
A collisionless shock wave experiment
[DE95-009489] p 3008 N95-32351
SHORT CIRCUIT CURRENTS
Electrical short circuit and current overload tests on aircraft wiring
[AD-A293308] p 2860 N95-30922
SHORT CIRCUITS
Electrical short circuit and current overload tests on aircraft wiring
[AD-A293308] p 2860 N95-30922
SHORT TAKEOFF AIRCRAFT
The control system design methodology of the STOL and maneuver technology demonstrator p 2758 N95-31998
SHORT WAVE RADIATION
Arabian Sea mixed layer dynamics experiment: Mooring deployment cruise report
[AD-A293684] p 2923 N95-31600
SHOULDERS
Erect, neutral and slump sitting postures: A study of the torso linkage system from shoulder to hip joint
[AD-A293239] p 2930 N95-30907
SHRINKAGE
A phenomenological finite element model of part building in the stereolithography process
[DE95-008437] p 2932 N95-30376
Epoxy and acrylate stereolithography resins: In-situ measurements of cure shrinkage and stress relaxation
[DE95-008506] p 2811 N95-30389
Urethane foam process improvements
[DE95-008957] p 2815 N95-30798
SIDE INLETS
An investigation of the side-dump dual in-line ramjet combustor p 2756 N95-31199
SIDESLIP
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept
[NASA-TM-108489] p 2742 N95-30712
SIGNAL ANALYSIS
Multiresolution signal and system analysis and the analysis and control of discrete-event dynamic systems
[AD-A292775] p 2851 N95-31430
The Deep Space Network stability analyzer p 2858 N95-32334
SIGNAL ANALYZERS
Wavefront simulator for evaluating RF communication array signal processors
[AD-D017372] p 2847 N95-30660
Noise signal processor
[AD-D017430] p 2974 N95-30747
SIGNAL DETECTION
Generation of earthquake signals
[PB95-211223] p 2913 N95-30631
Optical feature recognition
[AD-A293168] p 2997 N95-30966
Detection of radar targets using higher-order statistics
[AD-D017442] p 2850 N95-31392
Visual processing of object velocity and acceleration
[AD-A292789] p 2929 N95-31436
SIGNAL DETECTORS
Method and system for suppressing noise induced in a fluid medium by a body moving therethrough
[AD-D017339] p 2973 N95-30411
Far field acoustic radiation reduction
[AD-D017452] p 2974 N95-30725
Coherent integrator
[AD-D017422] p 2847 N95-30743
SIGNAL DISTORTION
Rate considerations in deep space telemetry p 2765 N95-32223
SIGNAL ENCODING
A seismic data compression system using subband coding p 2857 N95-32238
SIGNAL PROCESSING
Method and system for suppressing noise induced in a fluid medium by a body moving therethrough
[AD-D017339] p 2973 N95-30411
Microwave repeater with broadband active and/or passive isolation control
[AD-D017358] p 2846 N95-30417
Signal-processing theory for the TurboRogue receiver
[NASA-CR-198882] p 2846 N95-30581
Sensor Fusion and Nonlinear Prediction for Anomalous Event Detection
[DE95-009429] p 2933 N95-30602
Wavefront simulator for evaluating RF communication array signal processors
[AD-D017372] p 2847 N95-30660
Coherent integrator
[AD-D017422] p 2847 N95-30743
Reply-frequency interference/jamming detector
[AD-D017428] p 2847 N95-30746
Noise signal processor
[AD-D017430] p 2974 N95-30747
Airborne ocean water lidar (OWL) real time processor (RTP)
[AD-A293226] p 2848 N95-30904
Advanced signal processing filter
[AD-D017324] p 2848 N95-30917
A novel instrumentation system for measurement of helicopter rotor motions and loads data, phase 1
[AD-A293309] p 2751 N95-30923
Analog preprocessing in a SNS 2 micrometers low-noise CMOS folding ADC
[AD-A293356] p 2849 N95-30954
Microwave electro-optic mixer
[AD-D017328] p 2862 N95-31179
Temporal feature extraction in photorefractive resonators
[AD-A292908] p 2881 N95-31385
Fractional delay waveguide modeling of acoustic tubes
[PB95-206637] p 2975 N95-31650
Automatic Target Recognition (ATR): Background statistics and the detection of targets in clutter
[AD-A293062] p 2853 N95-31673
Neural network based data fusion system
[AD-D017440] p 2953 N95-31692
Neural network based three dimensional ocean modeler
[AD-D017441] p 2953 N95-31693
Design of digital low-pass filters for time-domain recursive filtering of impact acceleration signals
[AD-A293086] p 2864 N95-31842
Adaptive space-time processing for airborne radars based on Doppler pre-processing
[PB95-205464] p 2854 N95-32114
The Telecommunications and Data Acquisition Report
[NASA-CR-198911] p 2854 N95-32221
An efficient implementation of Forward-Backward Least-Mean-Square Adaptive Line Enhancers p 2855 N95-32224
Towards optimum demodulation of bandwidth-limited and low SNR square-wave subcarrier signals p 2855 N95-32229
Testing the performance of feedback concatenated decoder with a nonideal receiver p 2856 N95-32231
Performance of residual carrier array-feed combining in correlated noise p 2856 N95-32232
Residual and suppressed-carrier arraying techniques for deep-space communications p 2856 N95-32235
A high-speed photonic clock and carrier regenerator p 2856 N95-32236
Effects of correlated noise on the full-spectrum combining and complex-symbol combining arraying techniques p 2856 N95-32237
Digital signal processing in the radio science stability analyzer p 2857 N95-32240
SIGNAL RECEPTION
Residual and suppressed-carrier arraying techniques for deep-space communications p 2856 N95-32235
SIGNAL TO NOISE RATIOS
Advanced signal processing filter
[AD-D017324] p 2848 N95-30917
Statistical interface for chaotic signal in noise
[AD-A290271] p 2848 N95-30932
Visual processing of object velocity and acceleration
[AD-A292789] p 2929 N95-31436
Optical frequency standards: Hertz-level working standards and their absolute frequency measurement
[AD-A293930] p 2999 N95-31515
Fast algorithms for three-dimensional inverse scattering problems
[AD-A293510] p 2852 N95-31537
Degradation in finite-harmonic subcarrier demodulation p 2855 N95-32228
Towards optimum demodulation of bandwidth-limited and low SNR square-wave subcarrier signals p 2855 N95-32229
Performance of residual carrier array-feed combining in correlated noise p 2856 N95-32232
Residual and suppressed-carrier arraying techniques for deep-space communications p 2856 N95-32235
SIGNAL TRANSMISSION
Method and system for suppressing noise induced in a fluid medium by a body moving therethrough
[AD-D017339] p 2973 N95-30411
Method and apparatus for locating an acoustic source
[AD-D017347] p 2974 N95-30549
Rate considerations in deep space telemetry p 2765 N95-32223
Fiber optic reference frequency distribution to remote beam waveguide antennas p 2972 N95-32346
(T2L2) Time Transfer by Laser Link p 2887 N95-32348
Satellite test of the isotropy of the one-way spe ed of light using ExTRAS p 2973 N95-32349
SIGNATURES
Far field acoustic radiation reduction
[AD-D017452] p 2974 N95-30725
Singular eigenfunctions for shearing fluids I
[DE95-008952] p 2868 N95-30763
Unification of LARCH and Z-based object models to support algebraically-based design refinement: The LARCH perspective
[AD-A289235] p 2935 N95-30999
Signatures of virtual LSP's at the TEVATRON
[DE95-613798] p 2982 N95-31060
A search for jet handedness in hadronic Z-0 decays
[DE95-010099] p 2988 N95-32083
SILENCERS
An active liner system for jet engine exhaust silencers, phase 1
[AD-A293277] p 2756 N95-31191
SILICA GLASS
Morphology and microstructure of (111) crystalline CeO2 films grown on amorphous SiO2 substrates by pulsed-laser ablation
[DE95-008842] p 3009 N95-30542
SILICATES
Langasite crystals growth with quality factor Q, that exceeds the Q of quartz, and which are suitable for high-precision resonators
[AD-A293397] p 3013 N95-30969
Global climatology and variability of potential new production estimated from remote sensing of sea-surface temperature
[NASA-CR-198840] p 2910 N95-31981
SILICIDES
Processing and characterization of nanocrystalline molybdenum disilicide (MoSi2) consolidated by hot isostatic pressing (HIP)
[DE95-010243] p 3012 N95-30756
An experimental search for high ZT semiconductors: A survey of the preparation and properties of several alloy systems
[DE95-010232] p 2865 N95-32084

Defect configurations in neutron-irradiated U3Si2
[DE95-009896] p 3016 N95-32105

SILICON

Inelastic plasmon and inter-band electron-scattering potentials for Si from dielectric matrix calculations
[DE95-616778] p 2977 N95-30475

Anodically enhanced diffusion in Cu/Ag thin film couples
[DE95-009198] p 2814 N95-30738

Method for laser-assisted silicon etching using halocarbon ambients
[AD-D017426] p 2883 N95-30744

Diamond thin film temperature and heat-flux sensors
[NASA-CR-198859] p 3012 N95-30847

Development of germanium-silicon growth technology
[AD-A293199] p 3013 N95-30983

Opto-electronic components from non-stoichiometric 3-5 materials
[AD-A293206] p 3013 N95-30985

HTS Josephson technology on silicon with application to high speed digital microelectronics
[AD-A288627] p 2861 N95-31147

Photovoltaic Czochralski silicon manufacturing technology improvements
[DE95-004066] p 2904 N95-31162

Synthetic Terrain Imagery for Helmet-Mounted Display. Volume 2: Software design document
[AD-A293611] p 2753 N95-31655

Silicon carbide-silicon heterostructure solar cells
p 2905 N95-31952

Terahertz spectroscopy of silicon micromachined three-dimensional photonic bandgap crystal
[DE95-010233] p 3015 N95-32037

Gelcasting of sintered reaction-bonded silicon nitride for improved mechanical properties
[DE95-010282] p 2822 N95-32085

Suppression of self-interstitials in silicon during ion implantation via in-situ photoexcitation
[DE95-009173] p 3016 N95-32301

STM measurements of the interaction of vacancies and steps during low-energy-ion bombardment of Si(001)
[DE95-010935] p 3017 N95-32308

SILICON ALLOYS

Amorphization threshold in Si-implanted strained SiGe alloy layers
[DE95-008901] p 2804 N95-30797

Comprehensive research on the stability and electronic properties of a-Si:H and a-SiGe:H alloys and devices
[DE95-004088] p 2810 N95-32154

SILICON CARBIDES

Interfacial studies of coated fiber reinforced glass-ceramic matrix composites
[AD-A290780] p 2783 N95-30433

TEM-examination of ceramic-metal interfaces
[PB95-196531] p 2813 N95-30664

Characterization of compressive damage mechanisms in ceramic and polymeric matrix composite materials
[AD-A293171] p 2787 N95-30975

An assessment of the cost of microwave sintering ceramic tiles for armor applications. Phase 2 report
[DE95-010000] p 2816 N95-31103

Band gap measurement of Si(1-x)C(x)/Si (0 less than or equal to x less than or equal to 0.014) alloys using photoluminescence and spectroscopic ellipsometry
[DE95-011020] p 3014 N95-31112

Pseudomorphic heterostructure materials for high performance devices
[AD-A292906] p 2788 N95-31384

Silicon carbide-silicon heterostructure solar cells
p 2905 N95-31952

Influence of fiber content on mechanical performance of SiC-fiber-reinforced reaction-bonded silicon nitride composites
[NASA-TM-110639] p 2790 N95-32060

Low cost fabrication of silicon carbide based ceramics and fiber reinforced composites
[NASA-TM-107001] p 2822 N95-32208

SILICON DIOXIDE

Morphology and microstructure of (111) crystalline CeO2 films grown on amorphous SiO2 substrates by pulsed-laser ablation
[DE95-008842] p 3009 N95-30542

Interface degradation in CAS/Nicalon during elevated temperature aging
[DE95-008843] p 2812 N95-30543

Semiconductor nanocrystals formed in SiO2 by ion implantation
[DE95-008900] p 2978 N95-30546

Mechanisms of enhanced ionic conduction at interfaces in ceramics
[DE95-009125] p 2814 N95-30730

Reflectivity of plasmas created by high-intensity, ultra-short laser pulses
[DE95-009536] p 3004 N95-30742

SILICON FILMS

Band gap measurement of Si(1-x)C(x)/Si (0 less than or equal to x less than or equal to 0.014) alloys using photoluminescence and spectroscopic ellipsometry
[DE95-011020] p 3014 N95-31112

SILICON JUNCTIONS

Spectral response of a polycrystalline silicon solar cell
[DE95-614370] p 2903 N95-30723

Large-area, triple-junction a-Si alloy production scale-up
[DE95-004067] p 2904 N95-31163

SILICON NITRIDES

Interfacial studies of coated fiber reinforced glass-ceramic matrix composites
[AD-A290780] p 2783 N95-30433

Stress relaxation of silicon nitride at elevated temperatures
[DE95-009177] p 2814 N95-30732

Characterization of compressive damage mechanisms in ceramic and polymeric matrix composite materials
[AD-A293171] p 2787 N95-30975

Effect of cyclic loading on the creep performance of silicon nitride
[DE95-010289] p 2894 N95-31131

Life prediction methodology for ceramic components of advanced heat engines. Phase 1: Volume 2. Appendices
[DE95-010806] p 2817 N95-31136

Differences in creep performance of a HIPed silicon nitride in ambient air and inert environments
[DE95-009172] p 2796 N95-31633

Predictions of tensile behavior and strengths of a Si3N4 ceramic at high temperatures based on a viscoplastic model
[DE95-010220] p 2821 N95-32025

Influence of fiber content on mechanical performance of SiC-fiber-reinforced reaction-bonded silicon nitride composites
[NASA-TM-110639] p 2790 N95-32060

Gelcasting of sintered reaction-bonded silicon nitride for improved mechanical properties
[DE95-010282] p 2822 N95-32085

SILICON OXIDES

Innovative processing of composites for ultra-high temperature applications, book 3
[AD-A290891] p 2786 N95-30866

GCMS and FTIR studies of by-product inhibited growth and the rate-limiting step in TEOS-based SiO2 CVD
[DE95-009863] p 3016 N95-32147

Photo-refractive Bi12SiO20: Spatial light modulator
[AD-A293084] p 3001 N95-32153

SILICON POLYMERS

An interpenetrating polymer network for second-order nonlinear optics
[AD-A293019] p 2821 N95-31699

SILICONE RUBBER

Compatibility of Single Hydraulic Fluid with military specification fluids, seals and metallurgy
[AD-A292954] p 2821 N95-31663

SILICONES

Hydrogen sulfide analyzer with protective barrier
[AD-D017412] p 2793 N95-31009

SILVER

State-of-the-art low-cost solar reflector materials
[DE95-000260] p 2902 N95-30526

Anodically enhanced diffusion in Cu/Ag thin film couples
[DE95-009198] p 2814 N95-30738

Optimization of high-temperature superconductor current leads
[DE95-005838] p 2861 N95-30942

SILVER ALLOYS

Optimization of high-temperature superconductor current leads
[DE95-005838] p 2861 N95-30942

Volumetric and electro analytical techniques for chemical characterization of nuclear grade Ag-In-Cd alloys
[DE95-620664] p 2807 N95-31407

Metallurgical and Materials Transactions
[AD-A293617] p 2807 N95-31464

SIMPLEX METHOD

Simplex method for semi-definite programming: Optimization and systems theory
[PB95-212122] p 2934 N95-30792

SIMPLIFICATION

An overview of high-speed networking for workstations
[DE95-009076] p 2947 N95-30577

SIMULATION

Advances in the simulation of toroidal gyro Landau fluid model turbulence
[DE95-008387] p 3003 N95-30359

Finite element simulation of GaAs MESFET's
[PB95-208062] p 3009 N95-30485

A system simulation development project: Leveraging resources through partnerships
[NASA-TM-106962] p 2753 N95-30514

Simulation of chemical kinetics in turbulent natural gas combustion. Volume 2: Experimental studies of nitric oxide production in gas flames
[PB95-196721] p 2791 N95-30541

An explanation for the shape of nanoindentation unloading curves based on finite element simulation
[DE95-008905] p 2812 N95-30548

The role of advanced engineering simulation in model-based design
[DE95-008815] p 2934 N95-30796

Simulation of viscous sintering
[PB95-197109] p 2868 N95-30836

RASSP benchmark 1 executable requirements user's manual
[AD-A290060] p 2935 N95-30931

Self-consistent, 2D simulations of filament propagation in photoconducting switches
[DE95-010794] p 2861 N95-31133

Dynamics of Current Driven Disordered Josephson Junction Arrays
[DE95-009418] p 3014 N95-31231

The development of human behaviour analysis techniques and the development of human factors technologies
[DE95-613356] p 2930 N95-31267

Clouds: Their prediction and simulation
[AD-A292864] p 2920 N95-31453

Large-eddy simulation of turbulent flow using the finite element method
[DE95-009464] p 2875 N95-31591

MPI implementation of PHOENICS: A general purpose computational fluid dynamics code
[DE95-009810] p 2877 N95-32033

SIMULATORS

Wavefront simulator for evaluating RF communication array signal processors
[AD-D017372] p 2847 N95-30660

Computational methods for control and optimal design of aerospace systems
[AD-A292861] p 2751 N95-31451

Hot compression testing of tungsten
[AD-A293683] p 2807 N95-31599

SOSIE: A pragmatic approach to the simulation of Broad Air Defense applied to the theater level
p 2840 N95-32127

Production simulator for wave power plants
[PB95-212262] p 2907 N95-32286

SINE WAVES

Statistical interface for chaotic signal in noise
[AD-A290271] p 2848 N95-30932

SINGLE CHANNEL PER CARRIER TRANSMISSION

Towards optimum demodulation of bandwidth-limited and low SNR square-wave subcarrier signals
p 2855 N95-32229

SINGLE CRYSTALS

Ion implantation and thermal stress resistance of ceramics
[DE95-615349] p 2812 N95-30451

STM studies of clean, CO- and O2-exposed Pt(100)-hex-R0.7 deg
[PB95-195376] p 3009 N95-30535

Josephson break junction thin film device
[AD-D017343] p 3011 N95-30673

Anodically enhanced diffusion in Cu/Ag thin film couples
[DE95-009198] p 2814 N95-30738

New material for high average power infrared generation: QPM-DB GaAs
[AD-A292714] p 2967 N95-30939

Investigations of YBaCuO materials with near-room-temperature resistivity transitions
[AD-A293405] p 3013 N95-31008

Synthesis and selected micro-mechanical properties of titanium nitride thin films by the pyrolysis of tetrakis titanium in ammonia
[DE95-010224] p 2818 N95-31187

Materials for adaptive structural acoustic control, volume 3
[AD-A293446] p 2788 N95-31371

Growth, characterization and device development in monocrystalline diamond films
[AD-A293106] p 3015 N95-32018

On the possibility of a two-state magnetic structure for nanocrystalline chromium
[DE95-009914] p 3015 N95-32062

The pyrochlore-to-perovskite transformation in solution-derived lead zirconate titanate thin films
[DE95-010453] p 2822 N95-32161

STM measurements of the interaction of vacancies and steps during low-energy-ion bombardment of Si(001)
[DE95-010935] p 3017 N95-32308

SINGLE STAGE TO ORBIT VEHICLES
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept
| NASA-TM-108489 | p 2742 N95-30712
SINGULAR INTEGRAL EQUATIONS
Numerical solution of a singular integral equation arising from a sequential probability ratio test
| AD-A293463 | p 2963 N95-31375
SINTERING
Simulation of viscous sintering
| PB95-197109 | p 2868 N95-30836
An assessment of the cost of microwave sintering ceramic tiles for armor applications. Phase 2 report
| DE95-010000 | p 2816 N95-31103
In situ composites in the aluminum nitride-alumina system
| AD-A293776 | p 2789 N95-31509
Gelcasting of sintered reaction-bonded silicon nitride for improved mechanical properties
| DE95-010282 | p 2822 N95-32085
SIZE (DIMENSIONS)
Gear pump with reduced fluid-borne noise
| AD-D017362 | p 2887 N95-30399
SIZE DISTRIBUTION
Fabrication and modification of metal nanocluster composites using ion and laser beams
| DE95-009131 | p 2784 N95-30731
Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-30987
The Al and A(lc)l2O3 droplet cloud in solid rocket motors p 2770 N95-30988
SIZING MATERIALS
Phthalonitrile prepolymer as high temperature sizing material for composite fibers
| AD-D017447 | p 2818 N95-31272
SKEWNESS
Numerical simulation of the Langevin equation for skewed turbulence
| DE95-009477 | p 2877 N95-32049
SKIN (ANATOMY)
Control of skin blood flow in the neutral zone of human body temperature regulation
| AD-A291499 | p 2926 N95-30563
Evaluation of calibration parameters and performance of the video imaging technique of assessing exposure (VITAE system)
| AD-A289023 | p 2927 N95-30998
SKIN FRICTION
Improved modeling of unsteady heat transfer (The first step)
| AD-A292777 | p 2874 N95-31432
SKIN TEMPERATURE (BIOLOGY)
Control of skin blood flow in the neutral zone of human body temperature regulation
| AD-A291499 | p 2926 N95-30563
SKY RADIATION
Spectral sky background in the IR: Measurements with FTIR
| PB95-222998 | p 2922 N95-32315
SLABS
Seismic studies of subducted lithosphere p 2915 N95-31335
Reflection and transmission of electromagnetic plane waves from a uniaxial chiro-omega slab
| PB95-206629 | p 2853 N95-31649
SLAGS
Shuttle redesigned solid rocket motor aluminum oxide investigations p 2770 N95-30989
SMART STRUCTURES
Large area smart piezoelectric and pyroelectric sensors
| AD-A291487 | p 2859 N95-30561
Smart material joint band
| AD-D017374 | p 2888 N95-30716
Finite element analysis of smart structures and modal testing of a flexible spacecraft arm
| AD-A293761 | p 2890 N95-31576
Structural aspects of active control technology p 2760 N95-32006
Vibration control for precision manufacturing at Sandia National Laboratories
| DE95-009582 | p 2839 N95-32082
SMOKE
Validation of the atmospheric transmission large-area analysis system (ATLAS)
| AD-A293810 | p 2916 N95-31589
SNAKES
Polarized proton beams
| DE95-010843 | p 2987 N95-32031
SNELLEN TESTS
Luminance effects on visual acuity and small letter contrast sensitivity
| AD-A293310 | p 2928 N95-31140
SOBOLEV SPACE
Good metric spaces without good parameterizations
| PB95-208427 | p 2957 N95-30622
SOCIAL FACTORS
The sociology of megaprogramming: Experiences in generating an organizational learning enterprise (Software Technology for Adaptable, Reliable Systems(STARS) program)
| AD-A292998 | p 2946 N95-32294
SODIUM
Membrane transport: A cellular probe of heat stroke
| AD-A293327 | p 2926 N95-30924
SODIUM ALLOYS
NaK pool-boiler solar receiver durability bench test. Volume 2: Metallurgical analysis
| DE95-010338 | p 2905 N95-31640
SODIUM BROMIDES
The one-dimensional model of the off-centre potential of the fluorine ion in the NaBr lattice
| DE95-614310 | p 3010 N95-30647
SODIUM NITRATES
Environmentally compatible solid rocket propellants p 2772 N95-31753
SOFIA (AIRBORNE OBSERVATORY)
Stratospheric Observatory For Infrared Astronomy (SOFIA). Phase A: System concept description
| NASA-TM-110669 | p 3002 N95-32187
SOFTWARE DEVELOPMENT TOOLS
Experimental research into usability and organization impact of workflow software
| PB95-197679 | p 2933 N95-30454
Recommendations for developing portable parallel I/O facilities for scientific applications
| DE95-009384 | p 2947 N95-30578
Summary of technical operations
| AD-A293224 | p 2935 N95-30903
Lessons learned in deploying software estimation technology and tools p 2938 N95-31246
Analysis of symbolic parameter models
| AD-A292916 | p 2940 N95-31459
The Linux operating system: An introduction
| NASA-CR-198178 | p 2932 N95-31988
The Coprocessor Manager in the BASIS processor system
| PB95-211611 | p 2945 N95-32252
Software Process Framework. Tool to determine consistency with the CMM (Software Technology for Adaptable, Reliable Systems (STARS) program)
| AD-A292815 | p 2946 N95-32289
SOFTWARE ENGINEERING
Experimental research into usability and organization impact of workflow software
| PB95-197679 | p 2933 N95-30454
Metrics in method engineering
| PB95-197667 | p 2838 N95-30455
MVP/GMVP: General purpose Monte Carlo codes for neutron and photon transport calculations based on continuous energy and multigroup methods
| DE95-722072 | p 2979 N95-30656
Fast multipole methods for scattering computations
| AD-A291093 | p 2848 N95-30869
Summary of technical operations
| AD-A293224 | p 2935 N95-30903
Operator's handbook: NAWC Software Production Facility
| AD-A290216 | p 2935 N95-31001
An approach to automated reasoning about operational semantics
| AD-A291127 | p 2936 N95-31228
Proceedings of the 19th Annual Software Engineering Workshop

| AD-A292334 | p 2939 N95-31262
SodaBot: A software agent environment and construction system
| AD-A290056 | p 2939 N95-31277
Development of a structured design and programming methodology for expert systems shells utilizing a visual programming language: Application of structured methodology to the MK92 maintenance advisor expert system, performance module prototype
| AD-A289897 | p 2939 N95-31391
Computational methods for control and optimal design of aerospace systems
| AD-A292861 | p 2751 N95-31451
Synthetic Terrain Imagery for Helmet-Mounted Display. Volume 2: Software design document
| AD-A293611 | p 2753 N95-31655
Proceedings of the 1st Annual Software Engineering Techniques Workshop on Software Reengineering
| AD-A293724 | p 2943 N95-31834
Application of a genetic algorithm to optimize staffing levels in software development
| AD-A293725 | p 2943 N95-31835
Experience with a course on architectures for software systems. Part 2: Educational materials
| AD-A293090 | p 2943 N95-31843
Analysis and extension of model-based software executives
| AD-A293834 | p 2944 N95-32073
Architecture and implementation of a multi-sensor data fusion demonstration model within the real-time combat system of the Canadian Patrol Frigate p 2842 N95-32139
An efficient implementation of Forward-Backward Least-Mean-Square Adaptive Line Enhancers p 2855 N95-32224
User-friendly microcomputer interface with optimization languages AF94-007
| AD-A293184 | p 2932 N95-32257
Software Process Framework. Tool to determine consistency with the CMM (Software Technology for Adaptable, Reliable Systems (STARS) program)
| AD-A292815 | p 2946 N95-32289
Using process to integrate Software Engineering Environments (Software Technology for Adaptable, Reliable Systems (STARS) program)
| AD-A292816 | p 2946 N95-32290
SWSC domain engineering experience (Software Technology for Adaptable, Reliable Systems (STARS) program)
| AD-A292817 | p 2946 N95-32291
Integrating a SEE for megaprogramming: Lessons learned (Software Technology for Adaptable, Reliable Systems (STARS) program)
| AD-A292838 | p 2946 N95-32292
Defining manually enactable processes using the process definition information organizer templates (Software Technology for Adaptable, Reliable Systems (STARS) program)
| AD-A292854 | p 2946 N95-32293
The sociology of megaprogramming: Experiences in generating an organizational learning enterprise (Software Technology for Adaptable, Reliable Systems(STARS) program)
| AD-A292998 | p 2946 N95-32294
SOFTWARE RELIABILITY
Proceedings of the 19th Annual Software Engineering Workshop
| NASA-CR-189411 | p 2936 N95-31234
Applying program comprehension techniques to improve software inspections p 2937 N95-31241
Lessons learned in deploying software estimation technology and tools p 2938 N95-31246
Experience report: Using formal methods for requirements analysis of critical spacecraft software p 2938 N95-31247
Experimental control in software reliability certification p 2938 N95-31248
Generalized implementation of software safety policies p 2939 N95-31249
A quantitative comparison of corrective and perfective maintenance p 2939 N95-31250
SOFTWARE REUSE
Domain analysis for the reuse of software development experiences p 2936 N95-31236

Proceedings of the 1st Annual Software Engineering Techniques Workshop on Software Reengineering
[AD-A293724] p 2943 N95-31834
SWSC domain engineering experience (Software Technology for Adaptable, Reliable Systems (STARS) program)
[AD-A292817] p 2946 N95-32291
Integrating a SEE for megaprogramming: Lessons learned (Software Technology for Adaptable, Reliable Systems (STARS) program)
[AD-A292838] p 2948 N95-32292
Defining manually enactable processes using the process definition information organizer templates (Software Technology for Adaptable, Reliable Systems (STARS) program)
[AD-A292854] p 2946 N95-32293

SOI (SEMICONDUCTORS)
Pseudomorphic heterostructure materials for high performance devices
[AD-A292906] p 2788 N95-31384

SOIL MOISTURE
Field performance of the Walker Branch throughfall displacement experiment
[DE95-008677] p 2908 N95-30793

SOILS
Impact behavior of the active zone within a frozen soil profile
[AD-A292909] p 2915 N95-31386
Biomass production by fescue and switchgrass alone and in mixed swards with legumes
[DE95-009137] p 2909 N95-31612
Faster, cheaper radioanalytical methods
[DE95-009913] p 2797 N95-32061

SOL-GEL PROCESSES
Synthesis of novel precursors for PMN powders and the thin films obtained from them
[DE95-008543] p 2811 N95-30362

SOLAR ACTIVITY
Solar-geophysical data number 604, December 1994. Part 2: (Comprehensive reports). Data for June 1994, and miscellaneous
[PB95-191995] p 3031 N95-30690
Solar-geophysical data number 606, February 1995. Part 1: (Prompt reports). Data for December 1994, January 1995, and late data
[PB95-200853] p 3031 N95-30816
Solar-geophysical data number 606, February 1995. Part 2: (Comprehensive reports). Data for August 1994, and miscellaneous
[PB95-200861] p 3031 N95-30817
Nearly steady flows in GONG prototype data
[NASA-CR-198935] p 2869 N95-30863
Environmental conditions responsible for solar activity
[AD-A292859] p 3031 N95-31450

SOLAR ARRAYS
Space systems environmental interaction studies
[AD-A293826] p 2766 N95-31553

SOLAR CELLS
The junction characteristics and current conduction mechanisms of GaInP2 n(+)p diodes and solar cells
[AD-A290857] p 2902 N95-30408
Spectral response of a polycrystalline silicon solar cell
[DE95-614370] p 2903 N95-30723
InP solar cell development on inexpensive Si substrates
[AD-A293255] p 2903 N95-30893
Photovoltaic Czochralski silicon manufacturing technology improvements
[DE95-004066] p 2904 N95-31162
Large-area, triple-junction a-Si alloy production scale-up
[DE95-004067] p 2904 N95-31163
Investigation of polycrystalline thin film CuInSe2 solar cells based on ZnSe windows
[DE95-004068] p 2904 N95-31164
Silicon carbide-silicon heterostructure solar cells
p 2905 N95-31952
Development of large-area monolithically integrated Silicon-Film(trademark) photovoltaic modules
[DE95-004069] p 2906 N95-32057
Evaluation and analysis survey on new energy introduction, part 3
[DE95-769806] p 2906 N95-32072
Comprehensive research on the stability and electronic properties of a-Si:H and a-SiGe:H alloys and devices
[DE95-004065] p 2810 N95-32154
Investigation of the basic physics of high efficiency semiconductor hot carrier solar cell
[NASA-CR-198945] p 2906 N95-32212

SOLAR COLLECTORS
NaK pool-boiler solar receiver durability bench test. Volume 2: Metallurgical analysis
[DE95-010338] p 2905 N95-31640
Extra focal convective suppressing solar collector
[DE95-010170] p 2907 N95-32288

SOLAR CORONA
XV NSO/Sac Peak Solar workshop
[AD-A292319] p 3030 N95-30482
Mars together and FIRE and ICE: Report of the joint US/Russian technical working groups
[NASA-CR-198864] p 3030 N95-30845
Environmental conditions responsible for solar activity
[AD-A292859] p 3031 N95-31450

SOLAR CORPUSCULAR RADIATION
Radiation effects in space: The Clementine 1 mission
[DE95-011513] p 3032 N95-32282

SOLAR DYNAMIC POWER SYSTEMS
Validation of the FLAGSOL parabolic trough solar power plant performance model
[DE95-000263] p 2903 N95-30887

SOLAR ELECTRONS
HST-FOC observations of a remarkable UV auroral event on Jupiter p 3030 N95-30806

SOLAR ENERGY
Studies of C(60) and C(70) and other fullurenes: Synthesis, derivation, electrochemistry, lubricant properties and new composition materials
[AD-A292726] p 3012 N95-30944

SOLAR ENERGY ABSORBERS
Extra focal convective suppressing solar collector
[DE95-010170] p 2907 N95-32288

SOLAR ENERGY CONVERSION
Data on development of new energy technologies
[DE95-764135] p 2904 N95-31155
Solar thermal electric: Program overview, fiscal years 1993-1994
[DE94-000240] p 2906 N95-32058
Outlook for renewable energy technologies: Assessment of international programs and policies
[DE95-009084] p 2907 N95-32302

SOLAR FLARES
On the relationship between sunspots number and the flare index
[NASA-TM-110643] p 3030 N95-30467
Solar-geophysical data number 604, December 1994. Part 2: (Comprehensive reports). Data for June 1994, and miscellaneous
[PB95-191995] p 3031 N95-30690
Studying the thermal/non-thermal crossover in solar flares
[NASA-CR-189436] p 3031 N95-30785
Solar-geophysical data number 606, February 1995. Part 1: (Prompt reports). Data for December 1994, January 1995, and late data
[PB95-200853] p 3031 N95-30816
Solar-geophysical data number 606, February 1995. Part 2: (Comprehensive reports). Data for August 1994, and miscellaneous
[PB95-200861] p 3031 N95-30817
Environmental conditions responsible for solar activity
[AD-A292859] p 3031 N95-31450

SOLAR FLUX DENSITY
Low energy solar neutrino experiments: The Soviet American Gallium Experiment (SAGE)
[DE95-010159] p 3031 N95-30618

SOLAR GENERATORS
State-of-the-art low-cost solar reflector materials
[DE95-000260] p 2902 N95-30526
Evaluation and analysis survey on new energy introduction, part 3
[DE95-769806] p 2906 N95-32072

SOLAR HEATING
CALORSTOCK 1994: Thermal energy storage. Better economy, environment, technology
[DE95-772422] p 2904 N95-31138

SOLAR MAGNETIC FIELD
Solar-geophysical data number 606, February 1995. Part 1: (Prompt reports). Data for December 1994, January 1995, and late data
[PB95-200853] p 3031 N95-30816

SOLAR NEUTRINOS
Low energy solar neutrino experiments: The Soviet American Gallium Experiment (SAGE)
[DE95-010159] p 3031 N95-30618
The 10th INS Scientific Computational Programs
[DE95-717864] p 2982 N95-31178

SOLAR PHYSICS
XV NSO/Sac Peak Solar workshop
[AD-A292319] p 3030 N95-30482
Solar-geophysical data number 606, February 1995. Part 1: (Prompt reports). Data for December 1994, January 1995, and late data
[PB95-200853] p 3031 N95-30816

SOLAR PROBES
Mars together and FIRE and ICE: Report of the joint US/Russian technical working groups
[NASA-CR-198864] p 3030 N95-30845

SOLAR PROMINENCES
Solar-geophysical data number 604, December 1994. Part 2: (Comprehensive reports). Data for June 1994, and miscellaneous
[PB95-191995] p 3031 N95-30690
Solar-geophysical data number 606, February 1995. Part 2: (Comprehensive reports). Data for August 1994, and miscellaneous
[PB95-200861] p 3031 N95-30817

SOLAR RADIO BURSTS
Solar-geophysical data number 604, December 1994. Part 2: (Comprehensive reports). Data for June 1994, and miscellaneous
[PB95-191995] p 3031 N95-30690
Solar-geophysical data number 606, February 1995. Part 2: (Comprehensive reports). Data for August 1994, and miscellaneous
[PB95-200861] p 3031 N95-30817

SOLAR RADIO EMISSION
Solar-geophysical data number 606, February 1995. Part 1: (Prompt reports). Data for December 1994, January 1995, and late data
[PB95-200853] p 3031 N95-30816

SOLAR REFLECTORS
State-of-the-art low-cost solar reflector materials
[DE95-000260] p 2902 N95-30526
Validation of the FLAGSOL parabolic trough solar power plant performance model
[DE95-000263] p 2903 N95-30887

SOLAR SENSORS
Extra focal convective suppressing solar collector
[DE95-010170] p 2907 N95-32288

SOLAR SPECTRA
XV NSO/Sac Peak Solar workshop
[AD-A292319] p 3030 N95-30482

SOLAR TERRESTRIAL INTERACTIONS
Analysis of plasma measurements for the Geotail mission
[NASA-CR-199074] p 3032 N95-32218

SOLAR THERMAL ELECTRIC POWER PLANTS
Validation of the FLAGSOL parabolic trough solar power plant performance model
[DE95-000263] p 2903 N95-30887
Solar thermal electric: Program overview, fiscal years 1993-1994
[DE94-000240] p 2906 N95-32058

SOLAR WIND
On reflection of Alfven waves in the solar wind
[NASA-TM-110642] p 3031 N95-30582
Mars together and FIRE and ICE: Report of the joint US/Russian technical working groups
[NASA-CR-198864] p 3030 N95-30845
Analysis of plasma measurements for the Geotail mission
[NASA-CR-199074] p 3032 N95-32218

SOLAR X-RAYS
Solar-geophysical data number 604, December 1994. Part 2: (Comprehensive reports). Data for June 1994, and miscellaneous
[PB95-191995] p 3031 N95-30690
Solar-geophysical data number 606, February 1995. Part 2: (Comprehensive reports). Data for August 1994, and miscellaneous
[PB95-200861] p 3031 N95-30817

SOLDERED JOINTS
The 19th Annual Electronics Manufacturing Seminar
[AD-A293067] p 2863 N95-31674

SOLDERING
The 19th Annual Electronics Manufacturing Seminar
[AD-A293067] p 2863 N95-31674

SOLDERS
The 19th Annual Electronics Manufacturing Seminar
[AD-A293067] p 2863 N95-31674

SOLID PHASES
Evidence for electronic energy loss processes stimulating solid phase epitaxial regrowth of spatially isolated amorphous regions in semiconductor systems
[DE95-009892] p 3016 N95-32103

SOLID PROPELLANT COMBUSTION
The 31st JANNAF Combustion Subcommittee Meeting, volume 1 p 2825 N95-31194
Pulse forming network in the ETC combustion characterization of plasma augmented solid propellants p 2799 N95-31205
Workshop report: Measurement techniques in highly transient, spectrally rich combustion environments p 2799 N95-31208
Theory of unsteady combustion of solids: Investigation of Quasi-steady assumption p 2800 N95-31285
Oscillatory combustion of aluminized AP/HTPB propellants p 2800 N95-31286
Characterization of an improved Rijke burner as prelude to measurements of aluminum distributed combustion p 2800 N95-31287
Active control of combustion instability using injection techniques p 2800 N95-31288

Model for defining propellant burn rate performance boundaries p 2800 N95-31290
Survey of US burning rate measurement methods for solid propulsion applications p 2800 N95-31291
Condensed-phase processes during solid propellant combustion. 5: Further observations on depth profiling of burned surfaces of XM39 and M43 propellants p 2800 N95-31295
Observation and characterization of burning surface reaction zones of solid propellants p 2800 N95-31296
Modeling of thermal response of filament used in T-jump experiment p 2800 N95-31297
Assessment of dynamic burning behavior for JA-2 propellant rods p 2800 N95-31299
Measurement of temperatures and OH concentrations of solid propellant flames using absorption spectroscopy p 2801 N95-31302
Species and temperature profiles of propellant flames obtained from FTIR absorption spectroscopy p 2801 N95-31303
Embedded infrared fiber optic absorption studies of nitramine propellant strand burning p 2801 N95-31305
A study of the gas-phase processes of RDX combustion using a triple quadrupole mass-spectrometer p 2801 N95-31315
The physical and chemical processes governing CO2 laser-induced pyrolysis and combustion of the solid propellants RDX, ADN, XM39, and M43 p 2836 N95-31531

SOLID PROPELLANT IGNITION
The 31st JANNAF Combustion Subcommittee Meeting, volume 1 p 2825 N95-31194
Studies of reactions pertaining to and development of a reduced mechanism for the double base propellant dark zone p 2801 N95-31312

SOLID PROPELLANT ROCKET ENGINES
Ageing control no. 3 of propellants for rocket motors RB 27 and RB 28
|PB95-210357| p 2825 N95-30626
Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-30987
Shuttle Redesigned Solid Rocket Motor aluminum oxide investigations p 2770 N95-31197
Technology transfer into the solid propulsion industry p 2770 N95-31756
Implementation of environmentally compliant cleaning and insulation bonding for MNASA p 2780 N95-31796
Cleanliness inspection tool for RSRM bond surfaces p 2781 N95-31799

SOLID PROPELLANTS
Pulse forming network in the ETC combustion characterization of plasma augmented solid propellants p 2799 N95-31205
Survey of US burning rate measurement methods for solid propulsion applications p 2800 N95-31291
Measurement of temperatures and OH concentrations of solid propellant flames using absorption spectroscopy p 2801 N95-31302
Improvements in infrared absorption of solid propellant flames p 2801 N95-31306
Advanced oxidizers diffusion flames structure p 2801 N95-31307
The physical and chemical processes governing CO2 laser-induced pyrolysis and combustion of the solid propellants RDX, ADN, XM39, and M43 p 2836 N95-31531

SOLID ROCKET BINDERS
Ageing control no. 3 of propellants for rocket motors RB 27 and RB 28
|PB95-210357| p 2825 N95-30626
Advanced oxidizers diffusion flames structure p 2801 N95-31307

SOLID ROCKET PROPELLANTS
Ageing control no. 3 of propellants for rocket motors RB 27 and RB 28
|PB95-210357| p 2825 N95-30626
The Al and A(lc)l2O3 droplet cloud in solid rocket motors p 2770 N95-30988
Shuttle redesigned solid rocket motor aluminum oxide investigations p 2770 N95-30989
The 31st JANNAF Combustion Subcommittee Meeting, volume 1 p 2825 N95-31194
Experiments in a 120-mm ram accelerator including flow visualization p 2799 N95-31202
Pulse forming network in the ETC combustion characterization of plasma augmented solid propellants p 2799 N95-31205
Workshop report: Measurement techniques in highly transient, spectrally rich combustion environments p 2799 N95-31208
Large deformation failure mechanisms in nonlinear solids
|AD-A293010| p 2896 N95-31474
AP reclamation and reuse in RSRM propellant p 2772 N95-31751
Enhanced alkaline hydrolysis and biodegradability studies of nitrocellulose-bearing missile propellant p 2772 N95-31752
Environmentally compatible solid rocket propellants p 2772 N95-31753
Low acid producing solid propellants p 2773 N95-31754
Thermoplastic elastomers as a binder in composite propellants
|PB95-211553| p 2837 N95-32249

SOLID STATE
Electronic structure of Donor-Spacer-Acceptor molecules of potential interest for molecular electronics III: Geometry and absorption spectrum of CH3-Alpha P3CNQ
|AD-A293662| p 2985 N95-31609
Solid state research
|AD-A293083| p 3015 N95-31826

SOLID STATE LASERS
Diode-pumped, continuously tunable, 2.3 micron CW laser
|AD-D017448| p 2885 N95-31273
Tunable ytterbium-doped solid state laser
|AD-D017449| p 2885 N95-31274
The High Altitude Balloon Experiment demonstration of acquisition, tracking, and pointing technologies (HABE-ATP) p 2841 N95-32132
Laser properties of Yb(3+)-doped Sr5(PO4)3F crystals
|DE95-010686| p 3016 N95-32268

SOLID SURFACES
Application of spin-sensitive electron spectroscopies to investigations of electronic and magnetic properties of solid surfaces and epitaxial systems
|DE95-010154| p 2792 N95-30614

SOLID WASTES
Producing usable fuel from municipal solid waste
|DE95-008405| p 2902 N95-30375

SOLID-SOLID INTERFACES
Interfacial studies of coated fiber reinforced glass-ceramic matrix composites
|AD-A290780| p 2783 N95-30433

SOLIDIFICATION
A phenomenological finite element model of part building in the stereolithography process
|DE95-008437| p 2932 N95-30376
Phase transformations in melt-spun Y-Ba-Cu-O bulk superconductor
|DE95-010237| p 3011 N95-30667
A metallurgical approach toward alloying in rare earth permanent magnet systems
|DE95-010242| p 2966 N95-30668
Fundamental topics in heat transfer through deformable two-phase media p 2874 N95-31532
LLW solidification in cement: Effect of dilution
|DE95-010108| p 2798 N95-32091

SOLIDIFIED GASES
CO2 (dry ice) cleaning system p 2778 N95-31785
Stripping with dry ice p 2844 N95-32172

SOLIDS
Acoustoelastic stress evaluation in metal plate using absolute shear and longitudinal time-of-flight data
|PB95-197810| p 2892 N95-30458
Thermoviscoelastic behaviour of solids
|PB95-196226| p 2784 N95-30694
Large deformation failure mechanisms in nonlinear solids
|AD-A293010| p 2896 N95-31474
Numerical evaluation of three-dimensional crack-tip integrals for layered anisotropic solids p 2898 N95-32191

SOLITARY WAVES
Integrals of motion in the two Killing vector reduction of general relativity
|DE95-616281| p 3018 N95-30431
Numerical studies of nonlinear optical pulse propagation p 2998 N95-31411

SOLUBILITY
Replacement of ozone depleting and toxic chemicals in gravimetric analysis of non-volatile residue p 2780 N95-31793

SOLUTES
Dissolution of eutectic microstructures
|DE95-010244| p 2804 N95-30757

SOLVATION
Processing of polymers using supercritical fluids
|AD-A292880| p 2819 N95-31410

SOLVENT EXTRACTION
Waste minimization via preparative scale high performance gel permeation chromatography
|DE95-011797| p 2798 N95-32380

SOLVENTS
Photochemistry of intermolecular C-H bond activation reactions
|DE95-008991| p 2978 N95-30574
Urethane foam process improvements
|DE95-008957| p 2815 N95-30798
Electron transfer kinetics of self-assembled ferrocene C(12) alkanethiol monolayers on gold electrodes from 125K to 175K
|AD-A292754| p 2984 N95-31427
Consequences of kinetic dispersion on the electrochemistry of an adsorbed redox-active monolayer
|AD-A292794| p 2795 N95-31437
The 19th Annual Electronics Manufacturing Seminar
|AD-A293067| p 2863 N95-31674
Prepsolv (TM): The optimum alternative to 1,1,1-trichloroethane and methyl ethyl ketone for hand-wipe cleaning of aerospace materials p 2774 N95-31764
Cleaning without chlorinated solvents p 2780 N95-31792
Replacement of ozone depleting and toxic chemicals in gravimetric analysis of non-volatile residue p 2780 N95-31793
Evaluation of control parameters for Spray-In-Air (SIA) aqueous cleaning for shuttle RSRM hardware p 2780 N95-31794
Environmentally compatible hand wipe cleaning solvents p 2780 N95-31795
An overview of NASA testing requirements for alternate cleaning solvents used in liquid and gaseous oxygen environments p 2783 N95-31813

SONAR
Calculations of the sound scattering from fluid-filled spherical shell sonar targets
|DSTO-RR-0020| p 2974 N95-31365

SOOT
Enhanced energy release and soot reduction in actively controlled flames p 2799 N95-31200

SORBENTS
Extension of the pore tree model to describe pore interconnectivity
|AD-A290366| p 2793 N95-30971

SOUND DETECTING AND RANGING
Apparatus for producing images acoustically
|AD-D017365| p 2973 N95-30530
Method and apparatus for locating an acoustic source
|AD-D017347| p 2974 N95-30549

SOUND FIELDS
User's manual for the Scanning Fast Field Program (SCAFFIP) EOSAEL version 1.0
|AD-A291445| p 2933 N95-30397
Design of systems for active sound control
|PB95-197869| p 2973 N95-30461
Ray trace model of sound propagation in range dependent media
|PB95-211751| p 2973 N95-30481
Far field acoustic radiation reduction
|AD-D017452| p 2974 N95-30725
Method for extracting forward acoustic wave components from rotating microphone measurements in the inlets of turbofan engines
|NASA-CR-195457| p 2755 N95-30779
Combustion response to acoustic perturbation in liquid rocket engines p 2770 N95-31972

SOUND GENERATORS
Thermoacoustic sound generator
|AD-D017342| p 2973 N95-30413
Method and apparatus for locating an acoustic source
|AD-D017347| p 2974 N95-30549
Solution of the three-dimensional Helmholtz equation with nonlocal boundary conditions
|NASA-TM-110174| p 2974 N95-30850

SOUND PRESSURE
Calculations of the sound scattering from fluid-filled spherical shell sonar targets
|DSTO-RR-0020| p 2974 N95-31365

SOUND PROPAGATION
Ray trace model of sound propagation in range dependent media
|PB95-211751| p 2973 N95-30481
Method for extracting forward, acoustic wave components from rotating microphone measurements in the inlets of turbofan engines
|NASA-CR-195457| p 2755 N95-30779
The effects of large and small scale turbulence on sound propagation in the atmosphere
|AD-A293657| p 2975 N95-31608

SOUND TRANSDUCERS
Investigating the use of smart acoustically active surfaces for flow separation control in turbomachinery
|AD-A292819| p 2874 N95-31443

SOUND TRANSMISSION
Ray trace model of sound propagation in range dependent media
|PB95-211751| p 2973 N95-30481

SOUND WAVES
Method and system for suppressing noise induced in a fluid medium by a body moving therethrough
|AD-D017339| p 2973 N95-30411

Thermoacoustic sound generator
[AD-D017342] p 2973 N95-30413
Apparatus for producing images acoustically
[AD-D017365] p 2973 N95-30530
Method and apparatus for locating an acoustic source
[AD-D017347] p 2974 N95-30549
Energy absorption apparatus
[AD-D017361] p 2814 N95-30715
Far field acoustic radiation reduction
[AD-D017452] p 2974 N95-30725
Acoustomagnetoelectric effect in a superlattice
[DE95-613445] p 3011 N95-30736
Temporal feature extraction in photorefractive resonators
[AD-A292908] p 2881 N95-31385
Acousto-optical frequency shifters in dual-core optical fibres
[AD-A293979] p 2999 N95-31529
The effects of large and small scale turbulence on sound propagation in the atmosphere
[AD-A293657] p 2975 N95-31608

SOUTHERN OSCILLATION
Forecast of Atlantic seasonal hurricane activity for 1994 p 2918 N95-30832
Early August updated forecast of Atlantic seasonal hurricane activity for 1994 p 2919 N95-30844

SPACE BASED RADAR
Guidance and Control for Future Air-Defence Systems
[AGARD-CP-555] p 2839 N95-32123

SPACE CHARGE
The quantum interference effect in semiconductor space charge layers studied by Feynman path integrals: General formalism and illustrative examples
[DE95-614483] p 3010 N95-30653
The coupling impedance of a toroidal beam pipe with circular cross section
[DE95-010442] p 2993 N95-31405

SPACE COMMUNICATION
The Telecommunications and Data Acquisition Report
[NASA-CR-196911] p 2854 N95-32221
Rate considerations in deep space telemetry p 2765 N95-32223
Effects of correlated noise on the full-spectrum combining and complex-symbol combining arraying techniques p 2856 N95-32237

SPACE DEBRIS
Assessment of the NASA orbital debris engineering model
[AD-A293350] p 2766 N95-31143

SPACE EXPLORATION
Aeronautics and space report of the President
[NASA-TM-110743] p 3028 N95-31979

SPACE HEATING (BUILDINGS)
Compatibility of manufacturing process fluids with HFC refrigerants and ester lubricants
[DE95-012152] p 2911 N95-32364

SPACE MISSIONS
Mars together and FIRE and ICE: Report of the joint US/Russian technical working groups
[NASA-CR-198864] p 3030 N95-30845
Mir 18 post flight presentation
[NASA-TM-110657] p 2766 N95-30854

SPACE NAVIGATION
Determination of the position of Jupiter from radio metric tracking of Voyager 1 p 2854 N95-32222
The application of noncoherent Doppler data types for Deep Space Navigation p 2765 N95-32226

SPACE PLASMAS
Operating in the space plasma environment: A spacecraft charging study of the Solar X-ray Imager
[NASA-TM-110644] p 3003 N95-30468
Theoretical high energy physics
[DE95-003107] p 2991 N95-30527
Theory and simulation of electrostatic wave turbulence in the space shuttle-induced plasma environment
[AD-A293467] p 3005 N95-31534

SPACE PROBES
Welding isotopic heat sources for the cassini mission to Saturn
[DE95-060104] p 2890 N95-32367

SPACE SHUTTLE BOOSTERS
Shuttle redesigned solid rocket motor aluminum oxide investigations p 2770 N95-30989
Evaluation of control parameters for Spray-In-Air (SIA) aqueous cleaning for shuttle RSRM hardware p 2780 N95-31794
Environmentally compatible hand wipe cleaning solvents p 2780 N95-31795
Verification of surface preparation for adhesive bonding p 2782 N95-31807

SPACE SHUTTLE MAIN ENGINE
Enhancements to the SSME transfer function modeling code
[NASA-CR-198957] p 2958 N95-30754
Replacement of corrosion protection chromate primers and paints used in cryogenic applications on the Space Shuttle with wire arc sprayed aluminum coatings p 2776 N95-31774
SSME Main Combustion Chamber (MCC) hot oil dewaxing p 2777 N95-31777

SPACE SHUTTLE MISSIONS
Orbiter rarefied-flow reentry measurements from the OARE on STS-62
[NASA-TM-110182] p 2891 N95-30783
STS-71 post flight presentation
[NASA-TM-110658] p 2764 N95-30852
STS-70 flight: Day 8
[NASA-TM-110666] p 2764 N95-30873
STS-70 flight: Day 7
[NASA-TM-110665] p 2764 N95-30874
STS-70 flight: Day 6
[NASA-TM-110664] p 2764 N95-30875
STS-70 flight: Day 5
[NASA-TM-110663] p 2764 N95-30876
STS-70 flight: Day 4
[NASA-TM-110662] p 2764 N95-30877
STS-70 flight: Day 3
[NASA-TM-110661] p 2765 N95-30878
STS-70 flight: Day 2
[NASA-TM-110660] p 2765 N95-30879
STS-70 flight: Day 1
[NASA-TM-110659] p 2765 N95-30880
Space Shuttle Orbiter corrosion history, 1981-1993: A review and analysis of issues involving structures and subsystems
[NASA-TM-104810] p 2810 N95-32183

SPACE SHUTTLE ORBITERS
Orbiter rarefied-flow reentry measurements from the OARE on STS-62
[NASA-TM-110182] p 2891 N95-30783
Theory and simulation of electrostatic wave turbulence in the space shuttle-induced plasma environment
[AD-A293467] p 3005 N95-31534
Space Shuttle Orbiter corrosion history, 1981-1993: A review and analysis of issues involving structures and subsystems
[NASA-TM-104810] p 2810 N95-32183

SPACE SHUTTLE PAYLOADS
STS-71 post flight presentation
[NASA-TM-110658] p 2764 N95-30852
STS-70 flight: Day 7
[NASA-TM-110665] p 2764 N95-30874
STS-70 flight: Day 6
[NASA-TM-110664] p 2764 N95-30875
STS-70 flight: Day 5
[NASA-TM-110663] p 2764 N95-30876
STS-70 flight: Day 4
[NASA-TM-110662] p 2764 N95-30877
STS-70 flight: Day 3
[NASA-TM-110661] p 2765 N95-30878
STS-70 flight: Day 2
[NASA-TM-110660] p 2765 N95-30879
STS-70 flight: Day 1
[NASA-TM-110659] p 2765 N95-30880
Vibration control of spacecrafts and space structures from lift-off to on-orbit environments p 2767 N95-32110

SPACE SHUTTLES
Analysis of stress concentration at holes in components made of 2195 aluminum-lithium
[NASA-TP-3554] p 2893 N95-30613
Mir 18 post flight presentation
[NASA-TM-110657] p 2766 N95-30854
STS-70 flight: Day 8
[NASA-TM-110666] p 2764 N95-30873
STS-70 flight: Day 7
[NASA-TM-110665] p 2764 N95-30874
STS-70 flight: Day 6
[NASA-TM-110664] p 2764 N95-30875
STS-70 flight: Day 5
[NASA-TM-110663] p 2764 N95-30876
STS-70 flight: Day 4
[NASA-TM-110662] p 2764 N95-30877
STS-70 flight: Day 3
[NASA-TM-110661] p 2765 N95-30878
STS-70 flight: Day 2
[NASA-TM-110660] p 2765 N95-30879
The effect of gravity on the deposition of thin films: The physical vapor transport of copper phthalocyanine
[AD-A292997] p 2838 N95-31472

SPACE TRANSPORTATION SYSTEM
STS-70 flight: Day 3
[NASA-TM-110661] p 2765 N95-30878
STS-70 flight: Day 2
[NASA-TM-110660] p 2765 N95-30879

SPACE TRANSPORTATION SYSTEM FLIGHTS
STS-71 post flight presentation
[NASA-TM-110658] p 2764 N95-30852
STS-70 flight: Day 8
[NASA-TM-110666] p 2764 N95-30873
STS-70 flight: Day 7
[NASA-TM-110665] p 2764 N95-30874
STS-70 flight: Day 6
[NASA-TM-110664] p 2764 N95-30875
STS-70 flight: Day 5
[NASA-TM-110663] p 2764 N95-30876
STS-70 flight: Day 4
[NASA-TM-110662] p 2764 N95-30877
STS-70 flight: Day 3
[NASA-TM-110661] p 2765 N95-30878
STS-70 flight: Day 2
[NASA-TM-110660] p 2765 N95-30879
STS-70 flight: Day 1
[NASA-TM-110659] p 2765 N95-30880

SPACE-TIME FUNCTIONS
Quantum dynamics in regions of quaternionic curvature
[DE95-616276] p 3018 N95-30426
The solutions of affine and conformal affine Toda field theory
[DE95-616280] p 2965 N95-30430
Integrals of motion in the two Killing vector reduction of general relativity
[DE95-616281] p 3018 N95-30431
A time stepping coupled finite element-state space modeling environment for synchronous machine performance and design analysis in the ABC frame of reference p 2964 N95-31948

SPACEBORNE ASTRONOMY
HST-FOC observations of a remarkable UV auroral event on Jupiter p 3030 N95-30806
NASA space astronomy update 6
[NASA-CR-197664] p 3028 N95-31099
The future of space imaging. Report of a community-based study of an advanced camera for the Hubble Space Telescope
[NASA-CR-198818] p 3028 N95-31364
Cepheid temperature and the Blazhko effect
[NASA-CR-189433] p 3030 N95-31819

SPACEBORNE EXPERIMENTS
STS-70 flight: Day 7
[NASA-TM-110665] p 2764 N95-30874
STS-70 flight: Day 6
[NASA-TM-110664] p 2764 N95-30875
STS-70 flight: Day 5
[NASA-TM-110663] p 2764 N95-30876
STS-70 flight: Day 4
[NASA-TM-110662] p 2764 N95-30877
STS-70 flight: Day 3
[NASA-TM-110661] p 2765 N95-30878
STS-70 flight: Day 2
[NASA-TM-110660] p 2765 N95-30879
The NASA/JPL Evaluation of Oxygen Interactions with Materials-3 (EOIM-3)
[NASA-CR-198865] p 2796 N95-31660
Satellite test of the isotropy of the one-way speed of light using ExTRAS p 2973 N95-32349

SPACECRAFT
Preventing cracking of anodized coatings
[NASA-TM-104622] p 2839 N95-31690

SPACECRAFT ANTENNAS
Enhanced decoding for the Galileo low-gain antenna mission: Viterbi redecoding with four decoding stages p 2855 N95-32230

SPACECRAFT CHARGING
Operating in the space plasma environment: A spacecraft charging study of the Solar X-ray Imager
[NASA-TM-110644] p 3003 N95-30468

SPACECRAFT CONSTRUCTION MATERIALS
Analysis of stress concentration at holes in components made of 2195 aluminum-lithium
[NASA-TP-3554] p 2893 N95-30613
Effects of thermal and electrical stressing on the breakdown behavior of space wiring
[NASA-CR-198360] p 2768 N95-30860
The NASA/JPL Evaluation of Oxygen Interactions with Materials-3 (EOIM-3)
[NASA-CR-198865] p 2796 N95-31660
Evaluation of static strength of T800H/PMR-15 carbon/polyimide laminates at room temperature and 300 C
[NAL-TR-1254] p 2789 N95-31740
Aerospace Environmental Technology Conference
[NASA-CP-3298] p 2771 N95-31746

SPACECRAFT CONTAMINATION
Vacuum plume backflow and rarefaction p 2871 N95-30995
Replacement of ozone depleting and toxic chemicals in gravimetric analysis of non-volatile residue p 2780 N95-31793
Evaluation of control parameters for Spray-In-Air (SIA) aqueous cleaning for shuttle RSRM hardware p 2780 N95-31794

SPACECRAFT DESIGN
Operating in the space plasma environment: A spacecraft charging study of the Solar X-ray Imager
|NASA-TM-110644| p 3003 N95-30468
GPHS-RTGs in support of the Cassini RTG Program
|DE95-010306| p 2768 N95-30674
Review of Gravity Probe B
|NASA-CR-198959| p 3019 N95-30781
Solid Modeling Aerospace Research Tool (SMART) user's guide, version 2.0
|NASA-TM-4431| p 2940 N95-31420
Side force acting on blunted circular cylinder bodies at high angles of attack in supersonic flow
|NAL-TR-1255| p 2744 N95-31741
Geometric modeling for computer aided design
|NASA-CR-198828| p 2943 N95-31982
SPACECRAFT DOCKING
On-orbit truss structure tele-operation experiment by Engineering Test Satellite-7
|NAL-TR-1246| p 2767 N95-31980
SPACECRAFT LAUNCHING
STS-71 post flight presentation
|NASA-TM-110658| p 2764 N95-30852
STS-70 flight: Day 1
|NASA-TM-110659| p 2765 N95-30880
Environmental benefits of chemical propulsion p 2772 N95-31750
Improved hybrid rocket fuel p 2773 N95-31755
Major weapon system environmental life-cycle cost estimating for Conservation, Cleanup, Compliance and Pollution Prevention (C3P2) p 2774 N95-31761
Vibration control of spacecrafts and space structures from lift-off to on-orbit environments p 2767 N95-32110
SPACECRAFT LUBRICATION
Enhancement of perfluoropolyether boundary lubrication performance: I. Preliminary results
|NASA-TM-106937| p 2813 N95-30621
SPACECRAFT MAINTENANCE
Cleanliness inspection tool for RSRM bond surfaces p 2781 N95-31799
The design and development of a third generation OSEE instrument p 2781 N95-31800
Space Shuttle Orbiter corrosion history, 1981-1993: A review and analysis of issues involving structures and subsystems
|NASA-TM-104810| p 2810 N95-32183
SPACECRAFT ORBITS
Assessment of the NASA orbital debris engineering model
|AD-A293350| p 2766 N95-31143
SPACECRAFT POWER SUPPLIES
GPHS-RTGs in support of the Cassini RTG Program
|DE95-010306| p 2768 N95-30674
SPACECRAFT PROPULSION
Beam-centroid tracking instrument for ion thrusters
|AD-A293654| p 2769 N95-31567
Environmental benefits of chemical propulsion p 2772 N95-31750
SPACECRAFT REENTRY
Orbiter rarefied-flow reentry measurements from the OARE on STS-62
|NASA-TM-110182| p 2891 N95-30783
SPACECRAFT STABILITY
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept
|NASA-TM-108489| p 2742 N95-30712
SPACECRAFT STRUCTURES
Control of flexible spacecraft structures using H-infinity wave absorbing control
|AD-A293141| p 2766 N95-30919
Vibration control of spacecrafts and space structures from lift-off to on-orbit environments p 2767 N95-32110
SPACING
Technique to prepare high-reflectance optical fiber Bragg gratings with single exposure in-line or fiber draw tower
|AD-D017445| p 2998 N95-31270
Shnirelman peak in the level spacing statistics
|DE95-623599| p 3019 N95-31276
SPALLATION
IPNS neutron scattering instrumentation. A: Existing and planned. B: Possibilities for IPNS upgrade, a 1-MW spallation source
|DE95-004119| p 2985 N95-31616
SPARE PARTS
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. C-17 Aircraft program: Improvements in initial provisioning process
|GAO/NSIAD-94-63| p 2741 N95-32194
SPATIAL DISTRIBUTION
Geostatistics and hydrology. Part 1: Spatial and temporal variability. Communications of the Sanitary Engineering and Water Management Division
|PB95-206470| p 2900 N95-30819
The Al and A(lc)I2O3 droplet cloud in solid rocket motors p 2770 N95-30988
Nonparametric recognition of nonrigid motion
|AD-A293630| p 2963 N95-31565
Validation of the atmospheric transmission large-area analysis system (ATLAS)
|AD-A293810| p 2916 N95-31589
Two-dimensional Finite Difference Time Domain (FD-TD) model of electromagnetic (EM) scattering from a buried rectangular object
|AD-A293685| p 2852 N95-31601
Image representation using fast algorithms based on the Zak transform
|AD-A293416| p 2942 N95-31684
Non-intrusive combustion diagnostics of premixed hydrocarbon flames using FT-IR spectrometry p 2797 N95-31732
SPATIAL FILTERING
Adaptive space-time processing for airborne radars based on Doppler pre-processing
|PB95-205464| p 2854 N95-32114
SPATIAL RESOLUTION
The land component of the global climate system with adequate spatial resolution
|DE95-009323| p 2908 N95-30686
Reflectivity of plasmas created by high-intensity, ultra-short laser pulses
|DE95-009536| p 3004 N95-30742
SPECIFIC HEAT
On the quasihydrostatic flows of radiatively cooling self-gravitating gas clouds
|DE95-009116| p 3029 N95-30729
SPECIFIC IMPULSE
Experiment of rocket-ram combined combustor
|NAL-TR-1249| p 2769 N95-31739
SPECIFICATIONS
Quality assurance tendering and awarding contracts
|PB95-197760| p 2891 N95-31362
Custom Turnkey Time and Frequency Systems: A structured, expandable approach p 2969 N95-32330
SPECKLE INTERFEROMETRY
Unconventional imaging field experiment plan
|AD-A291492| p 2846 N95-30562
SPECTRA
Analysis on fractals, laplacians on self-similar sets, noncommutative geometry and spectral dimensions
|PB95-208005| p 2956 N95-30556
DEPSCOR92-Wide field spectral imager
|AD-A293079| p 2997 N95-31005
A compact and efficient violet laser source
|AD-A292782| p 2885 N95-31434
Quantum 1/f noise in high technology applications including ultrasmall structures and devices
|AD-A292812| p 2862 N95-31442
Design of an immersion echelle-prism mid-IR spectrograph for chemical remote sensing
|DE95-010729| p 2901 N95-32027
Wavelengths measurements of the He-like krypton K-shell spectrum
|DE95-010264| p 2987 N95-32041
SPECTRAL METHODS
Spectral methods in complex geometries
|PB95-208336| p 2955 N95-30495
Enhancements to the SSME transfer function modeling code
|NASA-CR-198957| p 2958 N95-30754
Numerical stability investigations of processes for solving linear initial value problems
|PB95-207023| p 2959 N95-31183
Spectral element method for numerical simulation of unsteady laminar diffusion flames p 2794 N95-31333
Spectral methods and sum acceleration algorithms
|DE95-009689| p 2941 N95-31630
SPECTRAL SENSITIVITY
Spectral response of a polycrystalline silicon solar cell
|DE95-614370| p 2903 N95-30723
SPECTROGRAPHS
Design of an immersion echelle-prism mid-IR spectrograph for chemical remote sensing
|DE95-010729| p 2901 N95-32027
SPECTROMETERS
Integrated X-ray testing of the electro-optical breadboard model for the XMM reflection grating spectrometer
|DE95-008829| p 2879 N95-30507
The design and construction of the muon arm in PHENIX
|DE95-010156| p 2978 N95-30616
DEPSCOR92-Wide field spectral imager
|AD-A293079| p 2997 N95-31005
IPNS neutron scattering instrumentation. A: Existing and planned. B: Possibilities for IPNS upgrade, a 1-MW spallation source
|DE95-004119| p 2985 N95-31616
Wavelengths measurements of the He-like krypton K-shell spectrum
|DE95-010264| p 2987 N95-32041
High-resolution superconducting x-ray spectrometers with aluminum trapping layers of different thicknesses
|DE95-010253| p 2881 N95-32047
The superconducting kaon spectrometer
|DE95-010436| p 2882 N95-32159
SPECTROSCOPIC ANALYSIS
Modeling of thermal response of filament used in T-jump experiment p 2800 N95-31297
Species and temperature profiles of propellant flames obtained from FTIR absorption spectroscopy p 2801 N95-31303
A study of gas-phase processes during the deflagration of RDX composite propellants using a triple quadrupole mass spectrometer p 2801 N95-31304
Improvements in infrared absorption of solid propellant flames p 2801 N95-31306
Detailed chemical kinetic modeling of premixed hydrocarbon flames supported by NO2 p 2801 N95-31311
RDX laser-assisted flame structure p 2801 N95-31314
A study of the gas-phase processes of RDX combustion using a triple quadrupole mass-spectrometer p 2801 N95-31315
Non-intrusive combustion diagnostics of premixed hydrocarbon flames using FT-IR spectrometry p 2797 N95-31732
SPECTROSCOPY
Conjugated aromatic polyimines. 2. Synthesis, structure, and properties of new aromatic polyazomethines
|AD-A292955| p 2819 N95-31461
A theoretical treatment of the absorption and emission properties of Cu(2) porphyrin
|AD-A293669| p 2795 N95-31595
Contactless characterization of semiconductors using laser-induced surface photo-charge voltage measurements
|AD-A293618| p 2863 N95-31725
On the Jahn-Teller effect of Mn(2+) in zinc-blende ZnS crystal
|AD-A293711| p 2797 N95-31830
Terahertz spectroscopy of silicon micromachined three-dimensional photonic bandgap crystal
|DE95-010233| p 3015 N95-32037
SPECTRUM ANALYSIS
Fabry-Perot interferometer measurement of static temperature and velocity for ASTOVL model tests
|NASA-TM-107014| p 2879 N95-30587
Generation of earthquake signals
|PB95-211223| p 2913 N95-30631
Holistic analysis of gamma-ray spectra in instrumental neutron activation analysis
|PB95-214458| p 2979 N95-30639
Recoil correction in the Dirac-Coulomb problem
|DE95-619241| p 2959 N95-31137
SPEECH
Automation of the control of acoustic parameters in a digital speech synthesizer
|IFTR-2/1995| p 2850 N95-31357
The contextual variance of devoiced fricatives in polish
|IFTR-7/1995| p 2854 N95-32192
SPEED CONTROL
Speed control of an elastic two-mass system: Optimization and systems theory
|PB95-212106| p 2888 N95-30701
SPHERICAL HARMONICS
Nearly steady flows in GONG prototype data
|NASA-CR-198935| p 2869 N95-30863
SPHERICAL SHELLS
Porous spherical shells and microspheres by electrodispersion precipitation
|DE95-009073| p 2815 N95-30799
Calculations of the sound scattering from fluid-filled spherical shell sonar targets
|DSTO-RR-0020| p 2974 N95-31365
SPIN DYNAMICS
Spin structure in high energy processes
|DE95-008628| p 2993 N95-31627
SPINE
Erect, neutral and slump sitting postures: A study of the torso linkage system from shoulder to hip joint
|AD-A293239| p 2930 N95-30907
SPINEL
Germanate glass ceramic
|AD-D017418| p 2816 N95-31011

SPLASHING
Reducing process noise in superconducting helium liquid level probes
| DE95-008956 | p 2814 N95-30765
SPLITTING
Observations of star fracture and longitudinal splitting in BIS 812 EMA and Q1N submarine construction steels
| DSTO-RR-0014 | p 2806 N95-31344
SPRAYED COATINGS
Replacement of corrosion protection chromate primers and paints used in cryogenic applications on the Space Shuttle with wire arc sprayed aluminum coatings
p 2776 N95-31774
SPRAYERS
Demonstration of split-flow ventilation and recirculation as flow-reduction methods in an Air Force paint spray booth, volume 2
| AD-A286808 | p 2762 N95-30926
Convergent spray process for environmentally friendly coatings p 2777 N95-31776
SPRAYING
Demonstration of split-flow ventilation and recirculation as flow-reduction methods in an Air Force paint spray booth, volume 1
| AD-A286807 | p 2763 N95-31101
Icing simulation in the aeropropulsion systems test facility propulsion development test cell C-2
| AD-A293039 | p 2747 N95-31667
A design of experiments test to define critical spray cleaning parameters for Brulin 815 GD and Jettacin cleaners p 2779 N95-31790
Evaluation of control parameters for Spray-In-Air (SIA) aqueous cleaning for shuttle RSRM hardware
p 2780 N95-31794
SPREAD SPECTRUM TRANSMISSION
Interference rejection techniques in a DS spread-spectrum HF radio system
| PB95-211660 | p 2846 N95-30479
SPREADING
Simple model of foam spreading on liquid surfaces
| PB95-211207 | p 2838 N95-30630
SPRINGS (ELASTIC)
Vibration isolation mount with locking means
| AD-D017367 | p 2888 N95-30532
SPUTTERING
Anodically enhanced diffusion in Cu/Ag thin film couples
| DE95-009198 | p 2814 N95-30738
SQUARE WAVES
Scannerless Range Imaging with a square wave
| DE95-009840 | p 2854 N95-32145
SQUARES (MATHEMATICS)
Album of simple perfect squared squares of order 26
| PB95-197398 | p 2954 N95-30401
STABILITY
Fixed modes in quasi-static state feedback decoupling
| PB95-206850 | p 2950 N95-30564
Electron-optical nonlinear interaction in asymmetric quantum-well laser heterostructures
| DE95-613443 | p 2883 N95-30609
Mechanisms of enhanced ionic conduction at interfaces in ceramics
| DE95-009125 | p 2814 N95-30730
Cascading synchronized chaotic systems
| AD-D017458 | p 2860 N95-30748
Stabilization of the resistive shell mode in tokamaks
| DE95-008748 | p 3004 N95-30794
Robust fixed-structure control
| AD-A292883 | p 2952 N95-30961
Electrified microheterogeneous catalysis
| AD-D017446 | p 2794 N95-31271
A compact and efficient violet laser source
| AD-A292782 | p 2865 N95-31434
An analysis of gas phase ethanol/water chemistry for diamond CVD
| AD-A293009 | p 2795 N95-31473
Phase stability, point defects and site preference of FeAl and NiAl with ternary additions
| DE95-009694 | p 3015 N95-31641
Measurements of stability margins and current distribution in large-scale Nb3Sn cable-in-conduit conductors
| DE95-009869 | p 3007 N95-32148
Comprehensive research on the stability and electronic properties of a-Si:H and a-SiGe:H alloys and devices
| DE95-004068 | p 2810 N95-32154
STABILITY DERIVATIVES
Advanced gust management systems: Lessons learned and perspectives p 2759 N95-32002
STABILITY TESTS
Stability analysis of linear control systems with uncertain parameters p 2954 N95-31949
Stability analysis of the TPX toroidal field coil
| DE95-009666 | p 2865 N95-32100
The Deep Space Network stability analyzer
p 2858 N95-32334
STABILIZATION
Stabilization of the resistive shell mode in tokamaks
| DE95-008748 | p 3004 N95-30794
Robust fixed-structure control
| AD-A292883 | p 2952 N95-30961
Global stabilization of nonlinear gyroscopic systems
p 2881 N95-31836
Wall stabilization of high beta plasmas in D3-D
| DE95-009607 | p 3007 N95-32116
STACKS
Thermoacoustic sound generator
| AD-D017342 | p 2973 N95-30413
STAINLESS STEELS
Robotic weld overlay coatings for erosion control
| DE95-009643 | p 2809 N95-32098
Development of integrated insulation joint for cooling pipe in tokamak reactor
| DE95-737220 | p 3007 N95-32264
STANDARD MODEL (PARTICLE PHYSICS)
New tensor interaction and the K(sub L) - K(sub S)mass difference
| DE95-613597 | p 2845 N95-30370
Real Higgs singlet and electroweak phase transition in the standard model
| DE95-616315 | p 2976 N95-30442
Phenomenology of the two Higgs doublet sector of a quark-lepton symmetric model
| DE95-616337 | p 2976 N95-30446
Electroweak flavor-conserving gauge processes: Virtual effects
| DE95-009922 | p 3020 N95-32106
STANDARDIZATION
Standardization of (13)CO2 production procedure from organic matter for mass spectrometric analysis
| DE95-614629 | p 2791 N95-30420
Standardization of surface contamination analysis systems p 2781 N95-31798
Standardization work p 2845 N95-32181
Implementation of a standard format for GPS common view data p 2968 N95-32323
STANDING WAVES
X-ray standing wave interferometry-optics at 1 angstrom with applications to surface and material sciences
| DE95-011453 | p 2998 N95-31114
STAR TRACKERS
Extra focal convective suppressing solar collector
| DE95-010170 | p 2907 N95-32288
STARBURST GALAXIES
Molecular gas in starburst galaxies: Line intensities and physical conditions
| PB95-208021 | p 3029 N95-30569
STARCHES
Dry media blasting with wheat starch
p 2843 N95-32169
Bioremediation of wheat starch media waste
p 2845 N95-32178
STARS
Strange-matter stars
| DE95-008446 | p 3028 N95-30361
STARTING
A numerical study of the starting process in a hypersonic shock tunnel p 2762 N95-30493
STATE ESTIMATION
Neural network based data fusion system
| AD-D017440 | p 2953 N95-31692
Neural network based three dimensional ocean modeler
| AD-D017441 | p 2953 N95-31693
STATIC PRESSURE
Afterbody/nozzle pressure distributions of a twin-tail twin-engine fighter with axisymmetric nozzles at Mach numbers from 0.6 to 1.2
| NASA-TP-3509 | p 2744 N95-31984
STATIC TESTS
Evaluation of static strength of T800H/PMR-15 carbon/polyimide laminates at room temperature and 300 C
| NAL-TR-1254 | p 2789 N95-31740
STATISTICAL ANALYSIS
Thermoviscoelastic behaviour of solids
| PB95-196226 | p 2784 N95-30694
Brief review of remote sensing literature pertaining to classification and geostatistics
| AD-A290932 | p 2901 N95-31156
Detection of radar targets using higher-order statistics
| AD-D017442 | p 2850 N95-31392
Nonparametric methods for incomplete data in reliability and for changepoints in smooth functions
| AD-A292773 | p 2963 N95-31429
Multiresolution signal and system analysis and the analysis and control of discrete-event dynamic systems
| AD-A292775 | p 2851 N95-31430
Investigation of ground target detection methods in fully polarimetric wide angle synthetic aperture radar images
| AD-A293922 | p 2851 N95-31513
Comparison of satellite-derived MSU brightness temperatures and conventionally-derived fields
| AD-A293692 | p 2901 N95-31603
A stochastic difference equation approach to inference with missing data: Some new results
| DE95-010327 | p 2944 N95-32088
A stochastic EM estimator in the presence of missing data: Theory and applications
| DE95-010329 | p 2944 N95-32089
Optimal infrared detector configurations for air target detection p 2841 N95-32130
Objective analysis of oceanic data for Coast Guard trajectory models
| AD-A292884 | p 2924 N95-32363
STATISTICAL DISTRIBUTIONS
Shnirelman peak in the level spacing statistics
| DE95-623599 | p 3019 N95-31276
Statistical properties of chaotic scattering with one open channel
| DE95-613370 | p 3020 N95-32150
STATISTICAL MECHANICS
Gibbs measures and quasi-periodic solutions for nonlinear Hamiltonian partial differential equations
| PB95-207932 | p 2956 N95-30506
STATISTICAL TESTS
Experimental control in software reliability certification
p 2938 N95-31248
A new goodness-of-fit test for the gamma distribution based on sample spacings from complete and censored samples
| AD-A293875 | p 2961 N95-31518
A hypothesis-testing approach to discriminant analysis with mixed categorical and continuous variables when data are missing
| AD-A293714 | p 2964 N95-31831
STEADY FLOW
Axial loads on yawed rotors
| PB95-214193 | p 2742 N95-30638
A turbulence model for steady and unsteady boundary layers in strong pressure gradients p 2868 N95-30840
Selected flows with free surfaces: Streams and drops
| IFTR-3/1995 | p 2876 N95-31817
Spatially-resolved velocity measurements in steady, high-speed, reacting flows using laser-induced OH fluorescence p 2877 N95-32109
STEADY STATE
Development of a tokamak plasma optimized for stability and confinement
| DE95-009609 | p 3003 N95-30641
A theoretical analysis of steady-state photocurrents in simple silicon diodes
| NASA-CR-198885 | p 2859 N95-30651
Robust position and force tracking control for a robot in contract p 2888 N95-30830
Analytic and experimental investigation of rotordynamic response and backward whirl induced by split resonance
| AD-A293639 | p 2889 N95-31566
STEELS
Hydrogen absorption in iron and steel during gas tungsten arc welding
| PB95-197018 | p 2804 N95-30776
Wave propagation in a fluid-loaded homogeneous, transversely isotropic, elastic cylinder of arbitrary thickness
| AD-A292728 | p 2869 N95-30946
The impact of microbiologically influenced corrosion on protective polymer coatings
| AD-A288896 | p 2816 N95-30997
Microstructural and mechanical property changes in model Fe-Cu alloys
| DE95-010117 | p 2805 N95-31105
A study of Damascus steel
| DE95-010127 | p 2809 N95-32023
Validation of favor code linear elastic fracture solutions for finite-length flaw geometries
| DE95-009034 | p 2898 N95-32157
Residual stress distribution in FeAl weld overlay on steel
| DE95-009178 | p 2899 N95-32317
STELLAR ATMOSPHERES
Cepheid temperature and the Blazhko effect
| NASA-CR-189433 | p 3030 N95-31819
STELLAR COMPOSITION
Strange-matter stars
| DE95-008446 | p 3028 N95-30361
STELLAR EVOLUTION
Observations of accreting pulsars
| NASA-CR-198931 | p 3028 N95-30469
STELLAR LUMINOSITY
X-ray performance of the engineering prototype Stellar x-ray polarimeter
| DE95-010268 | p 3028 N95-31129
STELLAR MASS ACCRETION
Observations of accreting pulsars
| NASA-CR-198931 | p 3028 N95-30469

Partons and black holes
[DE95-009921] p 3029 N95-31102
STELLAR MASS EJECTION
Environmental conditions responsible for solar activity
[AD-A292859] p 3031 N95-31450
STELLAR MODELS
On reflection of Alfven waves in the solar wind
[NASA-TM-110642] p 3031 N95-30582
STELLAR OCCULTATION
Relativistic timescale analysis suggests lunar theory revision p 2970 N95-32333
STELLAR RADIATION
Voyager GO program
[NASA-CR-189435] p 3029 N95-31424
STELLAR SPECTRA
Chromospherically active stars. 6: Giants with compact hot companions and the barium star scenario
[NASA-TM-110641] p 3028 N95-30466
Voyager GO program
[NASA-CR-189435] p 3029 N95-31424
STELLAR STRUCTURE
Strange-matter stars
[DE95-008446] p 3028 N95-30361
STELLAR TEMPERATURE
Cepheid temperature and the Blazhko effect
[NASA-CR-189433] p 3030 N95-31819
STEREOCHEMISTRY
Enantioselectivity of quinoprotein alcohol dehydrogenases: Production of enantiomerically pure C3-alcohol synthons
[PB95-196960] p 2771 N95-30734
STEREOSCOPIC VISION
Log-polar binocular vision system
[NASA-CR-188375] p 2996 N95-30772
STIFFNESS
Vibration-damping structural component
[AD-D017376] p 2784 N95-30661
Analysis of variation embedding tests with 17 MM dowel: Densified veneer wood FOREST project, part 7
[PB95-206876] p 2963 N95-30680
An inverse method to measure the axial modulus of composite materials under tension
[AD-A293042] p 2789 N95-31668
STIFFNESS MATRIX
A survey of the core-congruential formulation for geometrically nonlinear TL finite elements
[NASA-CR-199044] p 2944 N95-32203
STILBENE
Conjugated aromatic polyimines. 2. Synthesis, structure, and properties of new aromatic polyazomethines
[AD-A292955] p 2819 N95-31461
STIMULATED EMISSION
Basic study of the pumping of a gamma-ray laser
[AD-A293561] p 2886 N95-31563
The design and development of a third generation OSEE instrument p 2781 N95-31800
Study of surfaces using near infrared optical fiber spectrometry p 2781 N95-31801
STIMULATION
Simulation of oculomotor post-inhibitory rebound burst firing using a Hodgkin-Huxley model of a neuron
[AD-A293821] p 2927 N95-31552
STIRLING CYCLE
Natural gas liquefier for vehicle fuel
[AD-A293619] p 2836 N95-31564
STOCHASTIC PROCESSES
Workshop on diffusion approximation in communication and stochastic systems theory
[AD-A292872] p 2952 N95-31055
Theory & numerical methods for problems in shape reconstruction and large deviations
[AD-A292874] p 2952 N95-31279
Aspects of the search time in binary search trees modified according to the move-to-root heuristic
[PB95-212148] p 2963 N95-31396
Nonlinear time series analysis
[AD-A293841] p 2963 N95-31558
Topics in exploratory and speculative data analysis
[AD-A290505] p 3025 N95-31618
Finite-sample based learning algorithms for feedforward networks
[DE95-009123] p 2941 N95-31631
Stability analysis of linear control systems with uncertain parameters p 2954 N95-31949
A Stochastic EM algorithm for approximating the maximum likelihood estimate
[DE95-010328] p 2943 N95-32044
Estimation in second order dependency model for multivariate binary data
[DE95-010326] p 2944 N95-32087
A stochastic difference equation approach to inference with missing data: Some new results
[DE95-010327] p 2944 N95-32088
A stochastic EM estimator in the presence of missing data: Theory and applications
[DE95-010329] p 2944 N95-32089
STOKES FLOW
Existence of solutions in plane quasistationary stokes flow driven by surface tension
[PB95-197935] p 2868 N95-30810
Simulation of viscous sintering
[PB95-197109] p 2868 N95-30836
STORAGE RINGS (PARTICLE ACCELERATORS)
Beam-beam effects
[DE95-008443] p 2991 N95-30360
HERA and the asymptotic behaviour of F2(sup rho)
[PB95-195764] p 2956 N95-30540
Beam stability at SRRC storage ring
[DE95-010842] p 2995 N95-32260
STORAGE STABILITY
Evaluation of Environmentally Acceptable hydraulic fluids
[AD-A293037] p 2821 N95-31666
STORAGE TANKS
Off-potential measurement systems for impressed current cathodic protection
[AD-A290876] p 2812 N95-30558
STORMS
QTSAW (Quick Typhoon Surge and Waves). Wave information studies of US coastlines
[AD-A293172] p 2919 N95-30976
STOVL AIRCRAFT
Moving base simulation of an integrated flight and propulsion control system for an ejector-augmentor STOVL aircraft in hover
[NASA-TM-108867] p 2750 N95-30646
STRAIN DISTRIBUTION
Stress and strain concentration factors of welded multiplanar joints between square hollow sections
[PB95-208260] p 2892 N95-30492
Seismic studies of subducted lithosphere p 2915 N95-31335
STRAIN ENERGY METHODS
Finite element analysis of damped vibrations of laminated composite plates
[ISBN-0-315-84928-2] p 2789 N95-31731
STRAIN RATE
High strain rate properties and constitutive modeling of glass
[DE95-008434] p 2816 N95-31058
High strain-rate testing of parachute materials
[DE95-009577] p 2897 N95-31614
Influence of strain rate and temperature on the mechanical behavior of iron aluminide-based alloys
[DE95-009426] p 2808 N95-31636
STRAKES
Unsteady transonic wind tunnel test on a semispan straked delta wing, oscillating in pitch. Part 1: Description of the model, test setup, data acquisition, and data processing
[AD-A293113] p 2743 N95-30885
STRANDS
Embedded infrared fiber optic absorption studies of nitramine propellant strand burning p 2801 N95-31305
Industry participation workshop: Chromium electroplating of superconductor strand. Proceedings
[DE95-009629] p 2807 N95-31615
STRATIFICATION
Ocean mass density calculations from temperature and salinity data
[DSTO-TR-0023] p 2922 N95-30711
STRATOCUMULUS CLOUDS
National Institute for Global Environmental Change
[DE95-008333] p 2907 N95-30358
STRATOSPHERE
Chemical kinetics and photochemical data for use in stratospheric modeling: Evaluation number 11
[NASA-CR-198863] p 2912 N95-30525
Forecast of Atlantic seasonal hurricane activity for 1994 p 2918 N95-30832
Early August updated forecast of Atlantic seasonal hurricane activity for 1994 p 2919 N95-30844
Middle atmosphere structure and dynamics: Lidar studies at the South Pole, Syowa and Urbana p 2916 N95-31736
STREAMS
Selected flows with free surfaces: Streams and drops
[IFTR-3/1995] p 2876 N95-31817
STRESS ANALYSIS
Fatigue behaviour of multiplanar tubular joints
[PB95-207874] p 2893 N95-30586
Analysis of stress concentration at holes in components made of 2195 aluminum-lithium
[NASA-TP-3554] p 2893 N95-30613
Response of mechanically fastened composite joints under multiple bypass loads p 2785 N95-30824
Probabilistic reliability modeling of fatigue on the H-46 tie bar
[AD-A289926] p 2751 N95-30927
Sea ice stress research
[AD-A293164] p 2923 N95-30964
An analysis of the cover of a liquid-filled circular container
[IFTR-1/1995] p 2895 N95-31338
Elastic and inelastic micromechanical analysis of functionally graded materials and laminated structures using transformation fields p 2787 N95-31347
Mode I large strain viscoelastic crack behavior in nitrile rubber sheets
[AD-A289984] p 2820 N95-31617
Modeling of stress distributions on the microstructural level in Alloy 600
[DE95-009135] p 2807 N95-31632
A computational procedure for multibody systems including flexible beam dynamics
[NASA-CR-199035] p 2897 N95-31730
Evaluation of static strength of T800H/PMR-15 carbon/polyimide laminates at room temperature and 300 C
[NAL-TR-1254] p 2789 N95-31740
Modeling of grain boundary stresses in Alloy 600
[DE95-009033] p 2808 N95-31825
An extremum principle for the analysis and design of constitutively nonlinear systems p 2898 N95-32112
Residual stress distribution in FeAl weld overlay on steel
[DE95-009178] p 2899 N95-32317
STRESS CONCENTRATION
Stress and strain concentration factors of welded multiplanar joints between square hollow sections
[PB95-208260] p 2892 N95-30492
Fatigue behaviour of multiplanar tubular joints
[PB95-207874] p 2893 N95-30586
Analysis of stress concentration at holes in components made of 2195 aluminum-lithium
[NASA-TP-3554] p 2893 N95-30613
Modeling of stress distributions on the microstructural level in Alloy 600
[DE95-009135] p 2807 N95-31632
STRESS CORROSION
Modeling of grain boundary stresses in Alloy 600
[DE95-009033] p 2808 N95-31825
STRESS CORROSION CRACKING
Residual stresses and stress corrosion cracking in pipe fittings
[DE95-009332] p 2894 N95-31054
Modeling of stress distributions on the microstructural level in Alloy 600
[DE95-009135] p 2807 N95-31632
Modeling of grain boundary stresses in Alloy 600
[DE95-009033] p 2808 N95-31825
STRESS DISTRIBUTION
An evaluation of the Iosipescu specimen for composite materials shear property measurement
[NASA-CR-198755] p 2896 N95-31418
Modeling of stress distributions on the microstructural level in Alloy 600
[DE95-009135] p 2807 N95-31632
Failure mechanisms in composite plates subjected to in-plane compressive loading p 2790 N95-32108
An extremum principle for the analysis and design of constitutively nonlinear systems p 2898 N95-32112
Residual stress distribution in FeAl weld overlay on steel
[DE95-009178] p 2899 N95-32317
STRESS INTENSITY FACTORS
Stress and strain concentration factors of welded multiplanar joints between square hollow sections
[PB95-208260] p 2892 N95-30492
Fourier series methods for cracks in polygonal plates and shells of revolution p 2893 N95-30825
STRESS RELAXATION
Epoxy and acrylate stereolithography resins: In-situ measurements of cure shrinkage and stress relaxation
[DE95-008506] p 2811 N95-30389
Diffraction-line broadening analysis and stress relaxation in thin metal layers
[PB95-213898] p 2893 N95-30634
Stress relaxation of silicon nitride at elevated temperatures
[DE95-009177] p 2814 N95-30732
STRESS WAVES
Response of dual-layered structures subjected to shock pressure wave
[AD-A293731] p 2896 N95-31568
STRESS-STRAIN RELATIONSHIPS
Epoxy and acrylate stereolithography resins: In-situ measurements of cure shrinkage and stress relaxation
[DE95-008506] p 2811 N95-30389
Experimental determination of probability distributions for parameters of a Salem limestone cap plasticity model
[AD-A290878] p 2892 N95-30559
Modeling of fiber-reinforced composites incorporating distinct interface properties p 2787 N95-31110

Impact behavior of the active zone within a frozen soil profile
| AD-A292909 | p 2915 N95-31386
Post-impact fatigue of cross-plied, through-the-thickness reinforced carbon/epoxy composites
| NASA-TM-110625 | p 2896 N95-31419
Multipoint quadratic approximation for numerical optimization
| AD-A293837 | p 2961 N95-31557
Modeling of stress distributions on the microstructural level in Alloy 600
| DE95-009135 | p 2807 N95-31632
Influence of strain rate and temperature on the mechanical behavior of iron aluminide-based alloys
| DE95-009426 | p 2808 N95-31636

STRING THEORY
Covariant phase space formulations of superparticles and supersymmetric WZW models
| DE95-616278 | p 2964 N95-30428
On the string equation at c = 1
| DE95-737161 | p 3014 N95-31222
Non-critical string field theory with non-orientable string interactions
| DE95-737160 | p 3020 N95-31281
Research progress report
| DE95-010726 | p 3030 N95-32269

STRINGS
Theoretical high energy physics
| DE95-003107 | p 2991 N95-30527
A BRST charge for non-critical W2(s) strings
| DE95-613470 | p 3019 N95-30771
On the string equation at c = 1
| DE95-737161 | p 3014 N95-31222
The topological string associated with a simple singularity of type D
| DE95-737229 | p 2983 N95-31225
Non-critical string field theory with non-orientable string interactions
| DE95-737160 | p 3020 N95-31281

STRIPPING
Paint removal principles p 2843 N95-32167
Background to plastic media blasting p 2843 N95-32168
Bioremediation of wheat starch media waste p 2845 N95-32178
Operational parameters and material effects p 2845 N95-32179
Process evaluation p 2845 N95-32180

STRONTIUM
Faster, cheaper radioanalytical methods
| DE95-009913 | p 2797 N95-32061

STRONTIUM COMPOUNDS
Laser properties of Yb(3+)-doped Sr5(PO4)3F crystals
| DE95-010686 | p 3016 N95-32268

STRUCTURAL ANALYSIS
Crystallization of sol-gel derived lead zirconate titanate thin films in argon and oxygen atmospheres
| DE95-615230 | p 3009 N95-30421
Fatigue behaviour of multiplanar tubular joints
| PB95-207874 | p 2893 N95-30586
Development and computer implementation of design/analysis techniques for multilayered composite structures. Probabilistic fiber composite micromechanics
| NASA-CR-198979 | p 2930 N95-31134
The 2nd Japan-US Symposium on Finite Element Methods in Large Scale Computational Fluid Dynamics
| AD-A292337 | p 2960 N95-31264
Modeling multi-beam structures for control p 2895 N95-31346
Multipoint quadratic approximation for numerical optimization
| AD-A293837 | p 2961 N95-31557
Topics in exploratory and speculative data analysis
| AD-A290505 | p 3025 N95-31618
Evaluation of nonlinear structural dynamic responses using a fast-running spring-mass formulation
| DE95-008503 | p 2967 N95-31625
Application of shallow shell stability to plant morphogenesis by Fourier series p 2897 N95-31734
Preservation theorems on finite structures
| DE95-613442 | p 2962 N95-32067
Structural analyses of the JPL Mars Pathfinder impact
| DE95-009581 | p 2767 N95-32081
Validation of favor code linear elastic fracture solutions for finite-length flaw geometries
| DE95-009034 | p 2898 N95-32157
A survey of the core-congruential formulation for geometrically nonlinear TL finite elements
| NASA-CR-199044 | p 2944 N95-32203

STRUCTURAL DESIGN
Structural design using equilibrium programming formulations
| NASA-TM-110175 | p 2893 N95-30682
Failure analysis for polycarbonate transparencies
| AD-A292992 | p 2820 N95-31471
The design and development of a third generation OSEE instrument p 2781 N95-31800
Structural aspects of active control technology p 2760 N95-32006
Contributions to the design of neutral cutouts in laminated plates and shells p 2790 N95-32113
A probabilistic design method applied to smart composite structures
| NASA-TM-106715 | p 2899 N95-32206

STRUCTURAL DESIGN CRITERIA
Selecting optimal experiments for feedforward multilayer perceptrons
| AD-A290856 | p 2949 N95-30406
A probabilistic design method applied to smart composite structures
| NASA-TM-106715 | p 2899 N95-32206

STRUCTURAL ENGINEERING
The 2nd Japan-US Symposium on Finite Element Methods in Large Scale Computational Fluid Dynamics
| AD-A292337 | p 2960 N95-31264

STRUCTURAL FAILURE
Fatigue behaviour of multiplanar tubular joints
| PB95-207874 | p 2893 N95-30586
Failure mechanisms in composite plates subjected to in-plane compressive loading p 2790 N95-32108
Validation of favor code linear elastic fracture solutions for finite-length flaw geometries
| DE95-009034 | p 2898 N95-32157

STRUCTURAL RELIABILITY
Measures of reliability and RCM
| PB95-192985 | p 2891 N95-30510
Analysis of stress concentration at holes in components made of 2195 aluminum-lithium
| NASA-TP-3554 | p 2893 N95-30613
A probabilistic design method applied to smart composite structures
| NASA-TM-106715 | p 2899 N95-32206

STRUCTURAL STABILITY
The determination of wave group parameters from the resolution of incident and reflected waves
| AD-A293703 | p 2924 N95-31829

STRUCTURAL VIBRATION
Minimizing structural vibrations with Input Shaping (TM)
| NASA-CR-189439 | p 2893 N95-30786
Energy flow analysis of coupled structures p 2895 N95-31316
A finite element formulation for the time domain vibration analysis of an elastic-viscoelastic structure p 2895 N95-31318
Studies in non-linear multi-mode responses of harmonically excited rectangular plates with internal resonances p 2895 N95-31331
Nonlinear dynamics and chaotic motions of a singularly perturbed nonlinear viscoelastic beam p 2897 N95-31706
Vibration control for precision manufacturing at Sandia National Laboratories
| DE95-009582 | p 2839 N95-32082
Vibration control of spacecrafts and space structures from lift-off to on-orbit environments p 2767 N95-32110
Vibration reduction in helicopter rotors using an actively controlled partial span trailing edge flap located on the blade p 2762 N95-32111

STRUCTURED PROGRAMMING
An analysis of hierarchical genetic programming
| AD-A293964 | p 2942 N95-31657
Using process to integrate Software Engineering Environments (Software Technology for Adaptable, Reliable Systems (STARS) program)
| AD-A292816 | p 2946 N95-32290
SWSC domain engineering experience (Software Technology for Adaptable, Reliable Systems (STARS) program)
| AD-A292817 | p 2946 N95-32291
Integrating a SEE for megaprogramming: Lessons learned (Software Technology for Adaptable, Reliable Systems (STARS) program)
| AD-A292838 | p 2946 N95-32292
The sociology of megaprogramming: Experiences in generating an organizational learning enterprise (Software Technology for Adaptable, Reliable Systems(STARS) program)
| AD-A292998 | p 2946 N95-32294

STUDENTS
Nonparametric methods for incomplete data in reliability and for changepoints in smooth functions
| AD-A292773 | p 2963 N95-31429
Use of body surface heat patterns for predicting and evaluating acute lower extremity pain among soldiers
| AD-A292829 | p 2927 N95-31446

STUDS (STRUCTURAL MEMBERS)
Coupling stud assembly
| AD-D017335 | p 2887 N95-30387

STURM-LIOUVILLE THEORY
Complex conjugate pairs in stationary Sturmians
| DE95-616279 | p 2976 N95-30429

SUBCRITICAL FLOW
Combustion of LOX with H2(sub g) under subcritical and supercritical conditions p 2757 N95-31717

SUBDUCTION (GEOLOGY)
Seismic studies of subducted lithosphere p 2915 N95-31335
Studies in marine tectonics: Propagating rifts, depth anomalies and subduction zone anisotropy p 2923 N95-31719

SUBGROUPS
Direct subiattice imaging of interface dislocation structures in CdTe/GaAs(001)
| DE95-009031 | p 3010 N95-30576
Phase stability, point defects and site preference of FeAl and NiAl with ternary additions
| DE95-009694 | p 3015 N95-31641

SUBMARINES
Failure analysis of a repairable system: The case study of a cam-driven reciprocating pump
| AD-A293144 | p 2889 N95-30949
Observations of star fracture and longitudinal splitting in BIS 812 EMA and Q1N submarine construction steels
| DSTO-RR-0014 | p 2806 N95-31344

SUBMERGING
Design of an immersion echelle-prism mid-IR spectrograph for chemical remote sensing
| DE95-010729 | p 2901 N95-32027

SUBROUTINE LIBRARIES (COMPUTERS)
Cesar3 MALU library
| PB95-211363 | p 2933 N95-30598

SUBSONIC SPEED
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept
| NASA-TM-108489 | p 2742 N95-30712

SUBSTITUTES
Conjugated aromatic polyimines. 2. Synthesis, structure, and properties of new aromatic polyazomethines
| AD-A292955 | p 2819 N95-31461
Assessment of pollution prevention and control technology for plating operations p 2776 N95-31771

SUBSTRATES
Orientation of rapid thermally annealed lead zirconate titanate thin films on (111) Pt substrate
| DE95-615232 | p 2811 N95-30422
Morphology and microstructure of (111) crystalline CeO2 films grown on amorphous SiO2 substrates by pulsed-laser ablation
| DE95-008842 | p 3009 N95-30542
Josephson break junction thin film device
| AD-D017343 | p 3011 N95-30673
Mechanisms of enhanced ionic conduction at interfaces in ceramics
| DE95-009125 | p 2814 N95-30730
Fabrication and modification of metal nanocluster composites using ion and laser beams
| DE95-009131 | p 2784 N95-30731
Anodically enhanced diffusion in Cu/Ag thin film couples
| DE95-009198 | p 2814 N95-30738
High aspect ratio metal microstructures and method for preparing the same
| AD-D017463 | p 2803 N95-30750
Opto-electronic components from non-stoichiometric 3-5 materials
| AD-A293206 | p 3013 N95-30985
IR materials producibility
| AD-A293330 | p 2998 N95-31141
Thin-film edge field emitter device and method of manufacture therefor
| AD-D017453 | p 2862 N95-31275
Substrate heating measurements in pulsed ion beam film deposition
| DE95-010862 | p 2818 N95-31377
Pseudomorphic heterostructure materials for high performance devices
| AD-A292906 | p 2788 N95-31384
Solderability enhancement of copper through chemical etching
| DE95-010514 | p 2806 N95-31406
Plasma source ion implantation of metal ions: Synchronization of cathodic-arc plasma production and target bias pulses
| DE95-009431 | p 3006 N95-31613
High performance YBCO films
| AD-A293045 | p 2863 N95-31669
Silicon carbide-silicon heterostructure solar cells p 2905 N95-31952
Growth, characterization and device development in monocrystalline diamond films
| AD-A293106 | p 3015 N95-32018
Operational parameters and material effects p 2845 N95-32179

SUBSTRUCTURES
Physical modelling of microstructural evolution during thermomechanical processing of aluminium alloys
| PB95-196341 | p 2805 N95-31053
Nonlinear dynamics and chaotic motions of a singularly perturbed nonlinear viscoelastic beam
p 2897 N95-31706
SUCCESS PROJECT
Nonparametric methods for incomplete data in reliability and for changepoints in smooth functions
| AD-A292773 | p 2963 N95-31429
SUDDEN IONOSPHERIC DISTURBANCES
Solar-geophysical data number 606, February 1995. Part 1: (Prompt reports). Data for December 1994, January 1995, and late data
| PB95-200853 | p 3031 N95-30816
SULFIDES
An experimental search for high ZT semiconductors: A survey of the preparation and properties of several alloy systems
| DE95-010232 | p 2865 N95-32084
SULFUR COMPOUNDS
The neutron powder diffraction and acoustic investigations of the NH4SCN phase diagram
| DE95-614372 | p 3009 N95-30419
SULFURIC ACID
Thin-film sulfuric acid anodizing as a replacement for chromic acid anodizing p 2776 N95-31772
SUM RULES
Scaling behaviour of leptonic decay constants for heavy quarkonia and heavy mesons
| DE95-620539 | p 2983 N95-31218
Pion-nucleon and kaon-nucleon scattering lengths in QCD sum rules
| DE95-737278 | p 2983 N95-31227
Form factor of the process gamma(*) gamma(*) yields pi(sup 0) for small virtuality of one of the photons and QCD sum rules (2): Sum rule
| DE95-613629 | p 2988 N95-32078
Supersymmetric magnetic moments sum rules and spontaneous supersymmetry breaking
| DE95-613771 | p 2989 N95-32096
SUMS
Spectral methods and sum acceleration algorithms
| DE95-009689 | p 2941 N95-31630
SUNLIGHT
Monte Carlo code for evaluating the Boundary Layer Illumination and Radiation Balance model (BLIRB)
| AD-A293963 | p 2915 N95-31560
SUNSPOT CYCLE
On the relationship between sunspots number and the flare index
| NASA-TM-110643 | p 3030 N95-30467
SUNSPOTS
On the relationship between sunspots number and the flare index
| NASA-TM-110643 | p 3030 N95-30467
SUPERCOMPUTERS
Algorithm comparison and benchmarking using a parallel spectra transform shallow water model
| DE95-009124 | p 2913 N95-30683
An assessment of worldwide supercomputer usage
| DE95-009879 | p 2932 N95-31645
SUPERCONDUCTING DEVICES
Dynamics of Current Driven Disordered Josephson Junction Arrays
| DE95-009418 | p 3014 N95-31231
Advanced thin-film deposition and physical properties of high-temperature and other novel superconducting materials
| AD-A292798 | p 2795 N95-31439
SUPERCONDUCTING FILMS
Space qualified hybrid superconductor/semiconductor planar oscillator circuit
| NASA-TM-106978 | p 3011 N95-30703
High performance YBCO films
| AD-A293045 | p 2863 N95-31669
SUPERCONDUCTING MAGNETS
An active magnetic bearing with high T(sub c) superconducting coils and ferromagnetic cores
| NASA-TM-106995 | p 2864 N95-31847
Stability analysis of the TPX toroidal field coil
| DE95-009666 | p 2865 N95-32100
SUPERCONDUCTING SUPER COLLIDER
RFQ-DTL matching solutions for different requirements
| DE95-010897 | p 2995 N95-32306
SUPERCONDUCTIVITY
High-temperature superconducting current leads
| DE95-008404 | p 2858 N95-30374
A valence-fluctuation mechanism with highly anisotropic S-wave pairing
| DE95-009419 | p 3010 N95-30571
Reducing process noise in superconducting helium liquid level probes
| DE95-008956 | p 2814 N95-30765
Structural, chemical and electronic properties of superconducting thin films and junctions
| AD-A292700 | p 3012 N95-30933
Optimization of high-temperature superconductor current leads
| DE95-005838 | p 2861 N95-30942
Studies of C(60) and C(70) and other fullurenes: Synthesis, derivation, electrochemistry, lubricant properties and new composition materials
| AD-A292726 | p 3012 N95-30944
Investigations of YBaCuO materials with near-room-temperature resistivity transitions
| AD-A293405 | p 3013 N95-31008
Advanced thin-film deposition and physical properties of high-temperature and other novel superconducting materials
| AD-A292798 | p 2795 N95-31439
High-resolution superconducting x-ray spectrometers with aluminum trapping layers of different thicknesses
| DE95-010253 | p 2881 N95-32047
Measurements of stability margins and current distribution in large-scale Nb3Sn cable-in-conduit conductors
| DE95-009869 | p 3007 N95-32148
The superconducting kaon spectrometer
| DE95-010436 | p 2882 N95-32159
SUPERCONDUCTORS (MATERIALS)
A valence-fluctuation mechanism with highly anisotropic S-wave pairing
| DE95-009419 | p 3010 N95-30571
A simple model for the dc flux transformer in layered superconductors with Josephson coupling
| DE95-614468 | p 2859 N95-30649
Josephson break junction thin film device
| AD-D017343 | p 3011 N95-30673
Minority and majority carrier transport characterization in compound semiconductors
| DE95-010873 | p 3014 N95-31233
Inductively coupled IR staring array based on photofluxonic pixels
| AD-A292784 | p 2998 N95-31435
Advanced thin-film deposition and physical properties of high-temperature and other novel superconducting materials
| AD-A292798 | p 2795 N95-31439
SDIO: Discovering superconducting materials at high temperatures
| AD-A292820 | p 3015 N95-31444
Industry participation workshop: Chromium electroplating of superconductor strand. Proceedings
| DE95-009629 | p 2807 N95-31615
Solution based temperature of Perovskite-type oxide films and powders
| DE95-009089 | p 2820 N95-31629
SUPERCRITICAL AIRFOILS
Control of unsteady separated flow associated with the dynamic stall of airfoils
| NASA-CR-198972 | p 2744 N95-32193
SUPERCRITICAL FLOW
Processing of polymers using supercritical fluids
| AD-A292880 | p 2819 N95-31410
Combustion of LOX with H2(sub g) under subcritical and supercritical conditions p 2797 N95-31717
SUPERCRITICAL FLUIDS
Fischer-tropsch synthesis in supercritical fluids
| DE95-009631 | p 2792 N95-30709
Processing of polymers using supercritical fluids
| AD-A292880 | p 2819 N95-31410
Combustion of LOX with H2(sub g) under subcritical and supercritical conditions p 2797 N95-31717
SUPERCRITICAL PRESSURES
Combustion of LOX with H2(sub g) under subcritical and supercritical conditions p 2797 N95-31717
SUPERHIGH FREQUENCIES
Multiparameter radar measurements of precipitation in complex terrain: Meteorological and hydrological applications
| AD-A290786 | p 2918 N95-30403
X-band magnicon amplifier research at the Naval Research Laboratory
| AD-A293203 | p 3013 N95-30984
High energy pulsed microwave sources
| AD-A293334 | p 2849 N95-31142
Portable digital Satellite News Gathering (SNG) RF terminal using a flat antenna
| NHK-LABS-NOTE-436 | p 2853 N95-31744
Hyperfrequency components
| PB95-208302 | p 2866 N95-32369
SUPERLATTICES
Acoustomagnetoelectric effect in a superlattice
| DE95-613445 | p 3011 N95-30736
Amorphization threshold in Si-implanted strained SiGe alloy layers
| DE95-008901 | p 2804 N95-30797
Vertical transport in GaAs/AlGaAs superlattices
p 3012 N95-30822
Pseudomorphic heterostructure materials for high performance devices
| AD-A292906 | p 2788 N95-31384
SUPERPLASTICITY
Interfacial segregation and deformation of superplastically deformed Al-Mg-Mn alloys
| DE95-009572 | p 2809 N95-32052
SUPERSONIC COMBUSTION
Numerical simulation of ram accelerator performance including transient effects during initiation of combustion and sensitivity studies p 2799 N95-31203
The 25th International Symposium on Combustion
| AD-A286825 | p 2794 N95-31268
SUPERSONIC COMBUSTION RAMJET ENGINES
An experimental study of planar heterogeneous supersonic confined jets
| AD-A290859 | p 2867 N95-30557
The 31st JANNAF Combustion Subcommittee Meeting, volume 1 p 2825 N95-31194
SUPERSONIC DIFFUSERS
Parametrics on 2D Navier-Stokes analysis of a Mach 2.68 bifurcated rectangular mixed-compression inlet
| NASA-TM-107003 | p 2755 N95-30861
SUPERSONIC FLOW
Numerical simulation of shock/turbulent boundary layer interaction
| NASA-CR-198846 | p 2872 N95-31341
Compressible turbulence measurement in low-angle injection into a supersonic flow
| AD-A293836 | p 2874 N95-31516
Effects of cavity bleed and its configuration on aerodynamic characteristics of supersonic internal flow
| NAL-TR-1247 | p 2744 N95-31715
Side force acting on blunted circular cylinder bodies at high angles of attack in supersonic flow
| NAL-TR-1255 | p 2744 N95-31741
SUPERSONIC INLETS
Parametrics on 2D Navier-Stokes analysis of a Mach 2.68 bifurcated rectangular mixed-compression inlet
| NASA-TM-107003 | p 2755 N95-30861
SUPERSONIC JET FLOW
An experimental study of planar heterogeneous supersonic confined jets
| AD-A290859 | p 2867 N95-30557
Spatially-resolved velocity measurements in steady, high-speed, reacting flows using laser-induced OH fluorescence p 2877 N95-32109
SUPERSONIC SPEED
Spatially-resolved velocity measurements in steady, high-speed, reacting flows using laser-induced OH fluorescence p 2877 N95-32109
SUPERSYMMETRY
Covariant phase space formulations of superparticles and supersymmetric WZW models
| DE95-616278 | p 2964 N95-30428
Signatures of virtual LSP's at the TEVATRON
| DE95-613798 | p 2982 N95-31060
Structure formation with majoron supermultiplet
| DE95-613596 | p 2984 N95-31546
Supersymmetric magnetic moments sum rules and spontaneous supersymmetry breaking
| DE95-613771 | p 2989 N95-32096
Research progress report
| DE95-010726 | p 3030 N95-32269
SUPPORT SYSTEMS
Planning board generator. Part 1: Problem instances and types
| PB95-197075 | p 3021 N95-30834
Making intelligent systems team players. A guide to developing intelligent monitoring systems
| NASA-TM-104807 | p 2951 N95-30925
Effectiveness of an electronic performance support system for use with computer-aided design software
| AD-A293757 | p 2941 N95-31573
SURFACE CRACKS
Ion implantation and thermal stress resistance of ceramics
| DE95-615349 | p 2812 N95-30451
SURFACE EMITTING LASERS
Polarization characteristics, control, and modulation of vertical-cavity surface emitting lasers
| DE95-008526 | p 2882 N95-30380
Many-body effects in semiconductor lasers
| DE95-008534 | p 2883 N95-30390
SURFACE ENERGY
Dissolution of eutectic microstructures
| DE95-010244 | p 2804 N95-30757
Transitions, defects, and whiskered microstructures
| AD-A292796 | p 3014 N95-31438
Study of the surface properties of ceramic materials by chromatography
| DE95-011578 | p 2823 N95-32296
SURFACE FINISHING
Solderability enhancement of copper through chemical etching
| DE95-010514 | p 2806 N95-31406

CO2 (dry ice) cleaning system p 2778 N95-31785
QFD analysis of RSRM aqueous cleaners p 2779 N95-31789
A design of experiments test to define critical spray cleaning parameters for Brulin 815 GD and Jettacin cleaners p 2779 N95-31790

SURFACE GEOMETRY
Gear pump with reduced fluid-borne noise
|AD-D017362| p 2887 N95-30399
A theoretical analysis of steady-state photocurrents in simple silicon diodes
|NASA-CR-198885| p 2859 N95-30651
Solid Modeling Aerospace Research Tool (SMART) user's guide, version 2.0
|NASA-TM-4431| p 2940 N95-31420

SURFACE LAYERS
Ion implantation and thermal stress resistance of ceramics
|DE95-615349| p 2812 N95-30451
Structural investigation of xenon ion-beam-irradiated glassy carbon
|DE95-616777| p 2977 N95-30474
Applications of SXPS for studying surface structure, reaction mechanisms and kinetics
|DE95-008903| p 2803 N95-30547
Condensed-phase processes during solid propellant combustion. 5: Further observations on depth profiling of burned surfaces of XM39 and M43 propellants p 2800 N95-31295

SURFACE PROPERTIES
Wettability of boron carbide
|PB95-196358| p 2802 N95-30518
Development of a linearized unsteady Euler analysis for turbomachinery blade rows
|NASA-CR-4677| p 2742 N95-30611
Application of spin-sensitive electron spectroscopies to investigations of electronic and magnetic properties of solid surfaces and epitaxial systems
|DE95-010154| p 2792 N95-30614
Refinement techniques in computer graphics
|PB95-208526| p 2934 N95-30625
Simple model of foam spreading on liquid surfaces
|PB95-211207| p 2838 N95-30630
Condensed-phase processes during solid propellant combustion. 5: Further observations on depth profiling of burned surfaces of XM39 and M43 propellants p 2800 N95-31295
Contactless characterization of semiconductors using laser-induced surface photo-charge voltage measurements
|AD-A293618| p 2863 N95-31725
Surface contamination analysis technology team overview p 2781 N95-31797
Standardization of surface contamination analysis systems p 2781 N95-31798
Study of surfaces using near infrared optical fiber spectrometry p 2781 N95-31801
Contamination detection NDE for cleaning process inspection p 2781 N95-31802
Surface inspection using FTIR spectroscopy p 2782 N95-31803
Verification of surface preparation for adhesive bonding p 2782 N95-31807
Selected flows with free surfaces: Streams and drops
|IFTR-3/1995| p 2876 N95-31817
Operational parameters and material effects p 2845 N95-32179

SURFACE REACTIONS
Observation of a low-binding-energy peak in the 2p core-level photoemission from oxidized Al(111)
|PB95-195350| p 2802 N95-30534
Polarized laser induced holographic surface relief gratings on polymer films
|AD-A293275| p 2817 N95-31126
Theory of unsteady combustion of solids: Investigation of Quasi-steady assumption p 2800 N95-31285
Condensed-phase processes during solid propellant combustion. 5: Further observations on depth profiling of burned surfaces of XM39 and M43 propellants p 2800 N95-31295
Observation and characterization of burning surface reaction zones of solid propellants p 2800 N95-31296
Convoy electron emission from surfaces
|DE95-010298| p 2984 N95-31402
The structure and reactivity of boron and carbon surfaces
|AD-A292804| p 2795 N95-31440
Models of transport, gas-phase and surface chemistry in diamond chemical vapor deposition
|DE95-009861| p 2822 N95-32101
Operational parameters and material effects p 2845 N95-32179

SURFACE ROUGHNESS
The effect of adding roughness and thickness to a transonic axial compressor rotor
|NASA-TM-106958| p 2867 N95-30524
Solderability enhancement of copper through chemical etching
|DE95-010514| p 2806 N95-31406
Cleanliness evaluation of rough surfaces with diffuse IR reflectance p 2782 N95-31804

SURFACE TEMPERATURE
Combustion of LOX with H2(sub g) under subcritical and supercritical conditions p 2797 N95-31717

SURFACE TO AIR MISSILES
Electronic combat and lethal defense suppression p 2842 N95-32140

SURFACE TREATMENT
Laser-induced holographic surface relief gratings on nonlinear optical polymer films
|AD-A293169| p 2997 N95-30973
A centrifuge CO2 pellet cleaning system p 2778 N95-31784
CO2 (dry ice) cleaning system p 2778 N95-31785
Aqueous cleaning and verification processes for precision cleaning of small parts p 2779 N95-31787
Evaluation of control parameters for Spray-In-Air (SIA) aqueous cleaning for shuttle RSRM hardware p 2780 N95-31794
Environmentally compatible hand wipe cleaning solvents p 2780 N95-31795
Implementation of environmentally compliant cleaning and insulation bonding for MNASA p 2780 N95-31796
The role of surface chemical analysis in a study to select replacement processes for TCA vapor degreasing p 2782 N95-31809

SURFACE WATER
Carbon dioxide concentrations in surface water and the atmosphere during 1986-1989 NOAA/PMEL cruises in the Pacific and Indian Oceans
|DE95-009659| p 2910 N95-32099

SURFACE WAVES
Removal of scattered surface waves from seismic data
|PB95-197802| p 2922 N95-30457

SURFACTANTS
On-line surfactant monitoring
|DE95-009417| p 2792 N95-30735
Aqueous cleaning and verification processes for precision cleaning of small parts p 2779 N95-31787

SURGES
Voltage surge suppression power circuits
|AD-D017454| p 2860 N95-30726
QTSAW (Quick Typhoon Surge and Waves). Wave information studies of US coastlines
|AD-A293172| p 2919 N95-30976

SURVEILLANCE
Millimeter wave radiometer utility study
|AD-A293811| p 2852 N95-31590
TMD detection and tracking using improved AWACS sensors p 2840 N95-32128
Optimal infrared detector configurations for air target detection p 2841 N95-32130
Design of surveillance and multisensor anti-aerial systems p 2841 N95-32134
Multisensor data fusion for integrated maritime surveillance p 2842 N95-32135
Multi-sensor data fusion in command and control and the merit of artificial intelligence p 2842 N95-32137

SURVEYS
Operating system support for distributed multimedia applications: A survey of current research
|PB95-207098| p 2964 N95-30565
Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-31195
Survey of US burning rate measurement methods for solid propulsion applications p 2800 N95-31291
Initial survey on fracture toughness of commercial Nd2Fe14B
|DE95-009813| p 2808 N95-31643
An experimental search for high ZT semiconductors: A survey of the preparation and properties of several alloy systems
|DE95-010232| p 2865 N95-32084

SWEDEN
Non-comparability of female and male admission test takers: Evaluation through follow-up
|PB95-212080| p 3021 N95-30700
Swedish polar bibliography: A guide to Swedish literature on polar research, 1945-1988 with supplement, 1989-1992
|PB95-208161| p 2902 N95-32115

SWEPT FORWARD WINGS
Flight evaluation of forebody vortex control in post-stall flight p 2752 N95-32003

SWIRLING
Effects of initial conditions on a single jet in crossflow
|NASA-TM-107002| p 2754 N95-30589
Experimental investigation of turbulent particle dispersion in swirling flows
|DLR-FB-94-20| p 2873 N95-31355
A study of Damascus steel
|DE95-010127| p 2809 N95-32023

SWITCHES
Self-consistent, 2D simulations of filament propagation in photoconducting switches
|DE95-010794| p 2861 N95-31133
Information Switching Processor (ISP) contention analysis and control
|NASA-CR-195471| p 2765 N95-31849

SWITCHING
Device for low electric-field induced switching of Langmuir-Blodgett ferroelectric liquid crystal polymer films
|AD-D017457| p 3011 N95-30728
A study of switching behavior in Pb(Zr,Ti)O3 thin films using x-ray diffraction
|DE95-010859| p 2808 N95-31689

SYMBOLS
Bravais classes, Voronoie cells, Delone symbols
|PB95-207916| p 3009 N95-30503

SYMMETRY
The search for the decay of Z boson into two gamma as a test of Bose statistics
|DE95-616373| p 2976 N95-30393
Arithmetic features of rational conformal field theory
|PB95-207908| p 2966 N95-30591
Dressing symmetry of the uniformization solution of Liouville equation
|DE95-613380| p 2956 N95-30607
A BRST charge for non-critical W2(s) strings
|DE95-613470| p 3019 N95-30771
Symmetric longest queue system
|PB95-197919| p 2950 N95-30808
A simplified technique for determining the symmetry groups of non-linear plasma kinetic equations
|IFTR-8/1995| p 2960 N95-31337
Determination of the symmetry of a non-linear Schroedinger equation
|IFTR-10/1995| p 2960 N95-31339
Poisson's ratio for hexagonal crystals
|AD-A293556| p 3015 N95-31539
Spin puzzle in nucleon
|DE95-613654| p 2991 N95-32353

SYNCHRONISM
An overview of high-speed networking for workstations
|DE95-009076| p 2947 N95-30577
Cascading synchronized chaotic systems
|AD-D017458| p 2860 N95-30748
Confederation Verification, Validation, and Accreditation Master Plan (CVVAMP). Technical test plan
|AD-A289717| p 2936 N95-31050
Plasma source ion implantation of metal ions: Synchronization of cathodic-arc plasma production and target bias pulses
|DE95-009431| p 3006 N95-31613
High accuracy time transfer synchronization p 2968 N95-32321
Network time synchronization servers at the US Naval Observatory p 2969 N95-32329
Automated delay measurement system for an Earth station for Two-Way Satellite Time and Frequency Transfer p 2971 N95-32337
Prospects for high accuracy time dissemination and synchronization using coded radar pulses from a low-earth orbiting spacecraft p 2971 N95-32339
(T2L2) Time Transfer by Laser Link p 2887 N95-32348

SYNCHRONOUS MOTORS
A time stepping coupled finite element-state space modeling environment for synchronous machine performance and design analysis in the ABC frame of reference p 2864 N95-31948

SYNCHRONOUS SATELLITES
Using satellites for radar performance monitoring and calibration
|AD-A293809| p 2852 N95-31588

SYNCHROTRON RADIATION
Annual meeting of the Advanced Light Source Users' Association
|DE95-009373| p 3000 N95-31635
Beam stability at SRRC storage ring
|DE95-010842| p 2995 N95-32260
Tune modulation due to synchrotron oscillations and chromaticity, and the dynamic aperture
|DE95-011566| p 2995 N95-32297

SYNCHROTRONS
Background event discrimination in neutron time-of-flight measurements at beams of relativistic nuclei of the JINR synchrotron
|DE95-613006| p 2991 N95-30604
On the use of electronic tilt sensors as angle encoders for synchrotron applications
|DE95-005836| p 2880 N95-30941

Radial mode evolution in longitudinal bunched beam instability
| DE95-010895 | p 2994 N95-32092
The superconducting kaon spectrometer
| DE95-010436 | p 2882 N95-32159

SYNOPTIC METEOROLOGY
Forecast of Atlantic seasonal hurricane activity for 1994 p 2918 N95-30832
Summary of 1993 Atlantic tropical cyclone activity and verification of author's forecast. A year of unanticipated light hurricane activity and a poor forecast: The expected dissipation of the El Nino did not take place and Caribbean basin surface pressure became quite high p 2918 N95-30842
Early August updated forecast of Atlantic seasonal hurricane activity for 1994 p 2919 N95-30844

SYNTAX
Unification of LARCH and Z-based object models to support algebraically-based design refinement: The LARCH perspective
| AD-A289235 | p 2935 N95-30999
The occurrence of continuation parameters in CPS terms
| AD-A292952 | p 2941 N95-31460

SYNTHESIS (CHEMISTRY)
Synthesis of novel precursors for PMN powders and the thin films obtained from them
| DE95-008543 | p 2811 N95-30362
Low temperature synthesis of YBa2Cu3O(8-x) and other crystalline oxides
| AD-D017370 | p 3009 N95-30533
Catalytic reactions of synthesis gas. Part 4: Heterogeneous hydroformylation
| PB95-195558 | p 2791 N95-30537
Design and processing of materials by biomimicking. Sections 1. Publications
| AD-A293852 | p 2820 N95-31559
Novel unsymmetrical polydiacetylenes as materials for second and third order nonlinear optics
| AD-A293020 | p 3001 N95-31700
Synthesis and characterization of nanophase face-centered-cubic titanium
| DE95-009533 | p 2809 N95-32051
Synthesis of separation systems: Methods and applications in downstream gas processes
| PB95-208518 | p 2798 N95-32372

SYNTHESIZERS
Automation of the control of acoustic parameters in a digital speech synthesizer
| IFTR-2/1995 | p 2850 N95-31357
Fractional delay waveguide modeling of acoustic tubes
| PB95-206637 | p 2975 N95-31650

SYNTHETIC APERTURE RADAR
Cesar3 MALU library
| PB95-211363 | p 2933 N95-30598
Apparatus and method for producing three-dimensional images
| AD-D017455 | p 2847 N95-30727
Functions for processing synthetic aperture radar imagery
| AD-A293895 | p 2851 N95-31510
Investigation of ground target detection methods in fully polarimetric wide angle synthetic aperture radar images
| AD-A293922 | p 2851 N95-31513
Comparisons of target detection clutter using data from the 1993 FOPEN experiments
| AD-A293052 | p 2852 N95-31606
Folded compact range development and coherent change detection measurement project
| DE95-009082 | p 2853 N95-31628
Inversion of ERS-1 wavemode spectra. User's and programmer's guide
| PB95-223582 | p 2902 N95-32316
Prospects for high accuracy time dissemination and synchronization using coded radar pulses from a low-earth orbiting spacecraft p 2971 N95-32339

SYNTHETIC ARRAYS
Apparatus and method for producing three-dimensional images
| AD-D017455 | p 2847 N95-30727

SYNTHETIC FUELS
BioFacts: Fueling a stronger economy, global warming and biofuels emissions
| DE94-006884 | p 2910 N95-31821
BioFacts: Fueling a stronger economy, thermochemical conversion of biomass
| DE94-006866 | p 2905 N95-31822

SYNTHETIC RUBBERS
Mode I large strain viscoelastic crack behavior in nitrile rubber sheets
| AD-A289984 | p 2820 N95-31617

SYNTONY
Relativistic theory for syntonization of clocks in the vicinity of the Earth p 2971 N95-32343

SYRIA
A study of Damascus steel
| DE95-010127 | p 2809 N95-32023

SYSTEM FAILURES
Probabilistic reliability modeling of fatigue on the H-46 tie bar
| AD-A289926 | p 2751 N95-30927

SYSTEM IDENTIFICATION
Advanced system identification techniques for wind turbine structures
| DE95-004049 | p 2902 N95-30505
System identification for robust process control. Nominal models and error bounds
| PB95-197026 | p 2839 N95-30777
A two-timescale approach to nonlinear Model Predictive Control
| DE95-000943 | p 2952 N95-31161
Flight test validation of a frequency-based system identification method on an F-15 aircraft
| NASA-TM-4704 | p 2757 N95-31846

SYSTEMS ANALYSIS
Protocols for integrity constraint checking in federated databases
| PB95-197695 | p 3022 N95-30456
Nonlinear dynamical systems: Elements of a complex system analysis
| PB95-211652 | p 2950 N95-30478
System considerations for efficient communication and storage of MSTI image data
| NASA-CR-198869 | p 3024 N95-30858
Centrifugal and axial pump design and off-design performance prediction p 2830 N95-31269
Multiresolution signal and system analysis and the analysis and control of discrete-event dynamic systems
| AD-A292775 | p 2851 N95-31430
Automatic verification and synthesis of finite-state hard real-time systems
| AD-A291279 | p 2964 N95-32287

SYSTEMS ENGINEERING
Learning in an intentional system
| AD-A291158 | p 2949 N95-30395
Metrics in method engineering
| PB95-197687 | p 2838 N95-30455
Specific method for task-based interaction design
| PB95-196440 | p 2929 N95-30522
Precision manipulation with a dextrous robot hand p 2888 N95-30829
An architectural approach to strategic information systems planning for the Office of Naval Intelligence
| AD-A289930 | p 3024 N95-30928
Development of a novel wind lidar, phase 1
| AD-A292703 | p 2849 N95-30935
Recommended techniques for effective maintainability. A continuous improvement initiative of the NASA Reliability and Maintainability Steering Committee
| NASA-TM-4628 | p 2892 N95-31530
Design and testing of an optimal digital link capable of 14-channel transmission
| AD-A288505 | p 3000 N95-31652
Solid state research
| AD-A293083 | p 3015 N95-31826
Automatic flight control system for an unmanned helicopter system design and flight test results p 2759 N95-32004
Digital autopilot design for combat aircraft in ALENIA p 2760 N95-32009
Using a Red Team to devise countermeasures p 2842 N95-32141
Advanced turbine systems program conceptual design and product development
| DE95-000088 | p 2890 N95-32163
Stratospheric Observatory For Infrared Astronomy (SOFIA). Phase A: System concept description
| NASA-TM-110669 | p 3002 N95-32187

SYSTEMS HEALTH MONITORING
Making intelligent systems team players. A guide to developing intelligent monitoring systems
| NASA-TM-104807 | p 2951 N95-30925

SYSTEMS INTEGRATION
The process for addressing the challenges of aircraft pilot coupling p 2745 N95-31063
Adaptiveness in information systems integration p 3025 N95-31348
Experimental Aircraft Programme (EAP): Flight control system design and test p 2760 N95-32010

SYSTEMS SIMULATION
Foundations of technology for constructing highly reliable distributed realtime systems
| AD-A293254 | p 2931 N95-30892
The effect of repeatedly sampling an embedded metamodel on the simulation response
| AD-A293783 | p 2953 N95-31582
Mission critical failure effects analysis using quantitative techniques
| AD-A293098 | p 2864 N95-31844
CALORSTOCK'94. Thermal energy storage. Better economy, environment, technology
| DE95-772421 | p 2907 N95-32368

SYSTEMS STABILITY
Stability analysis of linear control systems with uncertain parameters p 2954 N95-31949

T

TACTILE SENSORS (ROBOTICS)
Precision manipulation with a dextrous robot hand p 2888 N95-30829
Force and vision resolvability for assimilating disparate sensory feedback
| AD-A293581 | p 2929 N95-31685

TAIL ASSEMBLIES
Afterbody/nozzle pressure distributions of a twin-tail twin-engine fighter with axisymmetric nozzles at Mach numbers from 0.6 to 1.2
| NASA-TP-3509 | p 2744 N95-31984

TAKEOFF
Analysis and modeling of an airport departure process
| AD-A293782 | p 2749 N95-31581

TANGENTS
A simple and efficient procedure for polyhedral assembly partitioning under infinitesimal motions
| DE95-009838 | p 2942 N95-31644

TARGET ACQUISITION
Apparent size passive range method
| AD-D017360 | p 2753 N95-31180
Investigation of ground target detection methods in fully polarimetric wide angle synthetic aperture radar images
| AD-A293922 | p 2851 N95-31513
Research in ground-to-air microwave imaging
| AD-A292907 | p 2852 N95-31551
Comparisons of target detection clutter using data from the 1993 FOPEN experiments
| AD-A293052 | p 2852 N95-31606
Optimal infrared detector configurations for air target detection p 2841 N95-32130
Acquisition, tracking, pointing and fire control for Ballistic Missile Defense p 2841 N95-32131
The High Altitude Balloon Experiment demonstration of acquisition, tracking, and pointing technologies (HABE-ATP) p 2841 N95-32132
The dynamic range of radar signal generation in the MSS-2 simulation facility
| AD-A293856 | p 2857 N95-32259

TARGET RECOGNITION
Neurodynamical systems for cognition and target identification
| AD-A293111 | p 2951 N95-30884
Optical feature recognition
| AD-A293168 | p 2997 N95-30966
Detection of radar targets using higher-order statistics
| AD-D017442 | p 2850 N95-31392
Research in ground-to-air microwave imaging
| AD-A292907 | p 2852 N95-31551
Nonlinear time series analysis
| AD-A293841 | p 2963 N95-31558
Automatic Target Recognition (ATR): Background statistics and the detection of targets in clutter
| AD-A293062 | p 2853 N95-31673
Optical correlator optimizations and extensions for automated optical target recognition
| AD-A293013 | p 3000 N95-31697
Analysis of target contrast improvement using polarization filtering in the infrared region
| AD-A293085 | p 3001 N95-31841
Optimal infrared detector configurations for air target detection p 2841 N95-32130

TARGET THICKNESS
Effects of mosaicity on Parametric X-Radiation production
| AD-A293677 | p 2985 N95-31597

TARGETS
Scaling of cross sections in ion-atom collisions
| DE95-008938 | p 2978 N95-30573
Passive range measurement system
| AD-D017344 | p 2996 N95-30678
Reflectivity of plasmas created by high-intensity, ultra-short laser pulses
| DE95-009536 | p 3004 N95-30742
Reply-frequency interference/jamming detector
| AD-D017428 | p 2847 N95-30748
Robust position and force tracking control for a robot in contract p 2888 N95-30830
Calculations of the sound scattering from fluid-filled spherical shell sonar targets
| DSTO-RR-0020 | p 2974 N95-31365
Visual processing of object velocity and acceleration
| AD-A292789 | p 2929 N95-31436

Plasma source ion implantation of metal ions: Synchronization of cathodic-arc plasma production and target bias pulses
[DE95-009431] p 3006 N95-31613
Enhanced brightness x-ray lasers
[DE95-010735] p 2886 N95-32029
The HYLIFE-2 inertial fusion energy power plant concept and implications for IFE
[DE95-010561] p 2994 N95-32074
Acquisition, tracking, pointing and fire control for Ballistic Missile Defense p 2841 N95-32131

TASK COMPLEXITY
A Heuristic and complete planner for the classical mover's problem
[DE95-008440] p 2949 N95-30377
Impact of task properties, data display format and cognitive characteristics on recall performance: A cumulative research investigation p 3025 N95-31334

TASK PLANNING (ROBOTICS)
Computer-aided inspection process definition: Development of an expert planning and programming system for coordinate metrology
[DE95-010411] p 2940 N95-31404

TASKS
Symmetric longest queue system
[PB95-197919] p 2950 N95-30808
The development of human behaviour analysis techniques and the development of human factors technologies
[DE95-613356] p 2930 N95-31267
Using case-based reasoning as a Reinforcement Learning framework for optimization with changing criteria
[AD-A293602] p 2953 N95-31654

TAYLOR SERIES
Derivation of two-dimensional (2-D) conduction equation in generalized coordinates with constant and anisotropic physical properties
[AD-A293896] p 3020 N95-31511

TECHNETIUM ISOTOPES
Faster, cheaper radioanalytical methods
[DE95-009913] p 2797 N95-32061

TECHNICAL WRITING
Closing the loop on improvement: Packaging experience in the Software Engineering Laboratory p 2937 N95-31238
Guidelines for creating and using abbreviations and acronyms
[NASA-CR-198884] p 3025 N95-31713

TECHNOLOGICAL FORECASTING
Sleeping renewable beauty: Will the prince ever come
[PB95-214573] p 2903 N95-30640
Study of Extended Air Defence Post 2000 p 2839 N95-32124

TECHNOLOGIES
FBIS report: Science and technology. Central Eurasia
[FBIS-UST-95-027] p 2839 N95-31727
FBIS report: Science and technology. Central Eurasia
[FBIS-UST-95-029] p 2863 N95-31728

TECHNOLOGY ASSESSMENT
High-temperature superconducting current leads
[DE95-008404] p 2858 N95-30374
State-of-the-art low-cost solar reflector materials
[DE95-000260] p 2902 N95-30526
Sleeping renewable beauty: Will the prince ever come
[PB95-214573] p 2903 N95-30640
Review of Gravity Probe B
[NASA-CR-198959] p 3019 N95-30781
The relation of handling qualities ratings to aircraft safety p 2746 N95-31067
Data on development of new energy technologies
[DE95-764135] p 2904 N95-31155
Workshop report: Measurement techniques in highly transient, spectrally rich combustion environments p 2799 N95-31208
The development of the tokamak system technology: A study on the fusion reactor
[DE95-614256] p 3005 N95-31366
Neural network false alarm filter, volume 1
[AD-A293097] p 2953 N95-31562
An assessment of worldwide supercomputer usage
[DE95-009879] p 2932 N95-31645
The design and development of a third generation OSEE instrument p 2781 N95-31800
Active control technology: Applications and lessons learned
[AGARD-CP-560] p 2757 N95-31989
The potential for microtechnology applications in energy systems: Results of an experts workshop
[DE95-009103] p 2865 N95-32077
Study of Extended Air Defence Post 2000 p 2839 N95-32124
Definition of an anti-missile ballistic defense architecture for Europe p 2840 N95-32125
Possible allied ballistic missile defense systems: Related guidance and control requirements p 2840 N95-32126
Multi-sensor data fusion in command and control and the merit of artificial intelligence p 2842 N95-32137
Electronic combat and lethal defense suppression p 2842 N95-32140

TECHNOLOGY TRANSFER
The Technology Information Environment with Industry (TIE-In): A mechanism for accessing laboratory solutions
[DE95-008542] p 3027 N95-30385
National Laboratories: Are their R and D activities related to commercial product development? Report to Congressional Requesters
[GAO/PEMD-95-2] p 3027 N95-31345
Technology transfer into the solid propulsion industry p 2770 N95-31756
Development of a CFC Critical Area Response (CAR) package p 2783 N95-31814
Report to Congressional Committees. Federal research: Interim report on the pilot technology access program
[GAO/RCED-94-75] p 3022 N95-32195
Report to the Vice Chairman, Joint Economic Committee, US Congress. Technology transfers: Benefits of cooperative R and D agreements
[GAO/RCED-95-52] p 3027 N95-32201
Minutes of the fourth annual workshop on chromate replacements in light metal finishing
[DE95-010937] p 2810 N95-32241

TECHNOLOGY UTILIZATION
Sleeping renewable beauty: Will the prince ever come
[PB95-214573] p 2903 N95-30640
Data on development of new energy technologies
[DE95-764135] p 2904 N95-31155
Lessons learned in transitioning to an open systems environment p 2938 N95-31245
Quantum 1/f noise in high technology applications including ultrasmall structures and devices
[AD-A292812] p 2862 N95-31442
Photovoltaic Energy Program overview: Fiscal year 1994
[DE94-011871] p 2905 N95-31661
Structural aspects of active control technology p 2760 N95-32006
Definition of an anti-missile ballistic defense architecture for Europe p 2840 N95-32125

TECTONICS
Studies in marine tectonics: Propagating rifts, depth anomalies and subduction zone anisotropy p 2923 N95-31719

TELECOMMUNICATION
An overview of high-speed networking for workstations
[DE95-009076] p 2947 N95-30577
Dynamic routation in distributed environments
[PB95-197968] p 2847 N95-30812
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-025] p 2771 N95-31360
Dynamic maintenance scheduling for a stochastic telecommunication network: Determination of performance factors
[AD-A293829] p 2852 N95-31555
Custom Turnkey Time and Frequency Systems: A structured, expandable approach p 2969 N95-32330

TELEMETRY
Development of the Multi-Level Seismic Receiver (MLSR)
[DE95-008823] p 2916 N95-31610
Rate considerations in deep space telemetry p 2765 N95-32223
Effects of correlated noise on the full-spectrum combining and complex-symbol combining arraying techniques p 2856 N95-32237

TELEOPERATORS
On-orbit truss structure tele-operation experiment by Engineering Test Satellite-7
[NAL-TR-1246] p 2767 N95-31980

TELEROBOTICS
On-orbit truss structure tele-operation experiment by Engineering Test Satellite-7
[NAL-TR-1246] p 2767 N95-31980

TELESCOPES
Study of different type neutrino oscillations based on neutrino beams from 600 GeV
[DE95-619267] p 2983 N95-31260
Adaptive optics design for the advanced electro-optical system (AEOS)
[AD-A293972] p 2974 N95-31527
The High Altitude Balloon Experiment demonstration of acquisition, tracking, and pointing technologies (HABE-ATP) p 2841 N95-32132

TELEVISION SYSTEMS
Application of computer generated holograms to optical transformations
[AD-A293146] p 2880 N95-30921
Translation workbench for generating subtitles for English TV news
[NHK-435] p 3026 N95-32182

TELLURIDES
Convoy electron emission from surfaces
[DE95-010298] p 2984 N95-31402

TEMPERATURE CONTROL
Control of skin blood flow in the neutral zone of human body temperature regulation
[AD-A291499] p 2926 N95-30563
Supplemental multilayer insulation research facility
[NASA-TM-106991] p 2768 N95-30595

TEMPERATURE DEPENDENCE
Fractal quantum well heterostructures for broadband light emitters
[DE95-009579] p 2860 N95-30707
Hydrostatic extrusion of BSCCO/Ag composite wire
[DE95-007862] p 2805 N95-31121
Hydrogen diffusion and passivation in InGaAlN alloys
[DE95-010889] p 2806 N95-31150
Observations of star fracture and longitudinal splitting in BIS 812 EMA and Q1N submarine construction steels
[DSTO-RR-0014] p 2806 N95-31344
Substrate heating measurements in pulsed ion beam film deposition
[DE95-010862] p 2818 N95-31377
Impact behavior of the active zone within a frozen soil profile
[AD-A292909] p 2915 N95-31386
Differences in creep performance of a HIPed silicon nitride in ambient air and inert environments
[DE95-009172] p 2796 N95-31633
Influence of strain rate and temperature on the mechanical behavior of iron aluminide-based alloys
[DE95-009426] p 2808 N95-31636
Suppression of self-interstitials in silicon during ion implantation via in-situ photoexcitation
[DE95-009173] p 3016 N95-32301
SVN 9 End-Of-Life testing p 2767 N95-32345
Superconducting and normal-state properties of novel materials
[DE95-012368] p 3017 N95-32366

TEMPERATURE DISTRIBUTION
Yellow Sea thermal structure
[AD-A291159] p 2922 N95-30396
Effect of velocity and temperature distribution at the hole exit on film cooling of turbine blades
[NASA-TM-106954] p 2755 N95-30702

TEMPERATURE EFFECTS
Fatigue crack growth behavior of a titanium matrix composite under thermomechanical loading p 2784 N95-30491
Effects of temperature ramp rate during heat treatment on hysteresis loss and critical current density of internal tin processed wires
[DE95-009551] p 2803 N95-30706
May multiple inelastic scattering in CBED patterns be removed analytically
[PB95-196333] p 2992 N95-30717
Evaluation on materials performance of Hastelloy Alloy XR for HTTR uses. 4: Tensile properties of base metals and welded joints
[DE95-721871] p 2804 N95-30761
Calculated coupling efficiency between an elliptical-core optical fiber and an optical waveguide over temperature
[NASA-TM-107005] p 2997 N95-30849
Room temperature fracture and high temperature creep deformation properties of alumina reinforced with 20 vol% particulate niobium
[DE95-010234] p 2815 N95-30897
Membrane transport: A cellular probe of heat stroke
[AD-A293327] p 2926 N95-30924
Performance evaluation of high-temperature superconducting current leads for micro-SMES systems
[DE95-005843] p 2861 N95-30943
Polarized laser induced holographic surface relief gratings on polymer films
[AD-A293275] p 2817 N95-31126
Characterization of an improved Rijke burner as prelude to measurements of aluminum distributed combustion p 2800 N95-31287
Modeling of thermal response of filament used in T-jump experiment p 2800 N95-31297
Hot compression testing of tungsten
[AD-A293683] p 2807 N95-31599
Solution based temperature of Perovskite-type oxide films and powders
[DE95-009089] p 2820 N95-31629
NaK pool-boiler solar receiver durability bench test. Volume 2: Metallurgical analysis
[DE95-010338] p 2905 N95-31640
Evaluation of static strength of T800H/PMR-15 carbon/polyimide laminates at room temperature and 300 C
[NAL-TR-1254] p 2789 N95-31740

Underdense heating of the ionosphere using oblique high power HF radiowaves p 2917 N95-31951
The influence of matrix microstructure and temperature on cyclic deformation and fatigue of particle-reinforced 2219 aluminum p 2808 N95-31974
The influence of microstructure on creep deformation in near-gamma TiAl alloys p 2808 N95-31975
Effects of temperature, frequency, flux density, and excitation waveform on the core loss and dynamic B-H loops of supermalloy
|NASA-TM-106982| p 2865 N95-32207
Influence of storage on the maximal pull-out force of three different optical fibers from three epoxides
|PB95-211777| p 2822 N95-32253

TEMPERATURE GRADIENTS
Thermoacoustic sound generator
|AD-D017342| p 2973 N95-30413
Shear flow effects on ion thermal transport in tokamaks
|DE95-009115| p 3005 N95-30801
Residual stresses and stress corrosion cracking in pipe fittings
|DE95-009332| p 2894 N95-31054
Observations of star fracture and longitudinal splitting in BIS 812 EMA and Q1N submarine construction steels
|DSTO-RR-0014| p 2806 N95-31344

TEMPERATURE MEASUREMENT
Fabry-Perot interferometer measurement of static temperature and velocity for ASTOVL model tests
|NASA-TM-107014| p 2879 N95-30587
Multi-color pyrometer temperature measurement system
|DE95-009825| p 2879 N95-30687
Laser pyrolysis of HTPB p 2800 N95-31298
Measurement of temperatures and OH concentrations of solid propellant flames using absorption spectroscopy p 2801 N95-31302
Non-intrusive combustion diagnostics of premixed hydrocarbon flames using FT-IR spectrometry p 2797 N95-31732
Selected flows with free surfaces: Streams and drops
|IFTR-3/1995| p 2876 N95-31817

TEMPERATURE MEASURING INSTRUMENTS
Diamond thin film temperature and heat-flux sensors
|NASA-CR-198859| p 3012 N95-30847

TEMPERATURE PROFILES
Numerical study of shear-induced heating in high-speed nozzle flow of liquid monopropellant p 2828 N95-31207
Species and temperature profiles of propellant flames obtained from FTIR absorption spectroscopy p 2801 N95-31303
Advanced oxidizers diffusion flames structure p 2801 N95-31307
An efficient numerical procedure for thermohydrodynamic analysis of cavitating bearings
|NASA-CR-195476| p 2878 N95-32210
Film temperatures in the presence of cavitation
|NASA-CR-195481| p 2878 N95-32216

TEMPLATES
Westinghouse Hanford Company Data Management Plan Template, revision 1
|DE95-010046| p 3026 N95-32107

TEMPORAL DISTRIBUTION
Geostatistics and hydrology. Part 1: Spatial and temporal variability. Communications of the Sanitary Engineering and Water Management Division
|PB95-206470| p 2900 N95-30819

TEMPORAL RESOLUTION
Reflectivity of plasmas created by high-intensity, ultra-short laser pulses
|DE95-009536| p 3004 N95-30742
Beam-centroid tracking instrument for ion thrusters
|AD-A293654| p 2769 N95-31567

TENNESSEE
Field performance of the Walker Branch throughfall displacement experiment
|DE95-008677| p 2908 N95-30793

TENSILE CREEP
Differences in creep performance of a HIPed silicon nitride in ambient air and inert environments
|DE95-009172| p 2796 N95-31633

TENSILE DEFORMATION
Ion implantation and thermal stress resistance of ceramics
|DE95-615349| p 2812 N95-30451
Localization in tungsten heavy alloys subjected to shearing deformations under superimposed high pressures
|AD-A293177| p 2804 N95-30977
Predictions of tensile behavior and strengths of a Si3N4 ceramic at high temperatures based on a viscoplastic model
|DE95-010220| p 2821 N95-32025

TENSILE PROPERTIES
Evaluation on materials performance of Hastelloy Alloy XR for HTTR uses. 4: Tensile properties of base metals and welded joints
|DE95-721871| p 2804 N95-30761
Observations of star fracture and longitudinal splitting in BIS 812 EMA and Q1N submarine construction steels
|DSTO-RR-0014| p 2806 N95-31344

TENSILE STRENGTH
Nondestructive testing of ceramic components: Cooperative Research and Development Agreement completion report
|DE95-009510| p 2823 N95-32352

TENSILE STRESS
Stress relaxation of silicon nitride at elevated temperatures
|DE95-009177| p 2814 N95-30732
Differences in creep performance of a HIPed silicon nitride in ambient air and inert environments
|DE95-009172| p 2796 N95-31633
An inverse method to measure the axial modulus of composite materials under tension
|AD-A293042| p 2789 N95-31668

TENSILE TESTS
High strain rate properties and constitutive modeling of glass
|DE95-008434| p 2816 N95-31058
Differences in creep performance of a HIPed silicon nitride in ambient air and inert environments
|DE95-009172| p 2796 N95-31633
Robotic weld overlay coatings for erosion control
|DE95-009643| p 2809 N95-32098
A study of elevated temperature testing techniques for the fatigue behavior of PMCS: Application to T650-35/AMB21
|NASA-TM-106927| p 2791 N95-32209
Metallic multilayers at the nanoscale
|DE95-011534| p 3016 N95-32284

TENSION
Effect of cyclic loading on the creep performance of silicon nitride
|DE95-010289| p 2894 N95-31131

TENSORS
A queer reduction of degrees of freedom
|DE95-613471| p 2964 N95-30369
New tensor interaction and the K(sub L) - K(sub S)mass difference
|DE95-613597| p 2845 N95-30370
New tensor interactions in micron-decay
|DE95-613760| p 2978 N95-30528
The conical singularity and quantum corrections to entropy of black hole
|DE95-613367| p 3029 N95-30606
A compact expression for bilinear combination of Dirac spinors via world tensors
|DE95-619200| p 2960 N95-31258

TERMINAL FACILITIES
The ATC operational evaluation of the prototype integrated terminal weather system (ITWS) at Dallas/Fort Worth and Orlando airports (May-September 1993)
|AD-A293808| p 2921 N95-31587

TERPENES
Prepsolv (TM): The optimum alternative to 1,1,1-trichloroethane and methyl ethyl ketone for hand-wipe cleaning of aerospace materials p 2774 N95-31764

TERRACES (LANDFORMS)
Applications of SXPS for studying surface structure, reaction mechanisms and kinetics
|DE95-008903| p 2803 N95-30547

TERRAIN
Multiparameter radar measurements of precipitation in complex terrain: Meteorological and hydrological applications
|AD-A290786| p 2918 N95-30403
Synthetic Terrain Imagery for Helmet-Mounted Display. Volume 3: Software user's manual
|AD-A293613| p 2753 N95-31463
Synthetic Terrain Imagery for Helmet-Mounted Display. Volume 2: Software design document
|AD-A293611| p 2753 N95-31655
Synthetic Terrain Imagery for Helmet-Mounted Display, volume 1
|AD-A293612| p 2753 N95-31656

TERRAIN ANALYSIS
Neural networks for real-time terrain typing
|AD-A293569| p 2953 N95-31540

TERRESTRIAL RADIATION
Supriolus semi-diurnal variation in the E.R.B.E./outgoing longwave radiation
|NOAA-TR-NESDIS-84| p 2913 N95-30643

TEST FACILITIES
NASA Lewis Research Center's preheated combustor and materials test facility
|NASA-TM-106676| p 2762 N95-30592
Icing simulation in the aeropropulsion systems test facility propulsion development test cell C-2
|AD-A293039| p 2747 N95-31667
Design study of prototype accelerator and MeV test facility for demonstration of 1 MeV, 1 A negative ion beam production
|DE95-737208| p 2995 N95-32262

TEST STANDS
NASA Lewis Research Center's preheated combustor and materials test facility
|NASA-TM-106676| p 2762 N95-30592
Development of a new instrument for rocket engine combustion diagnostics p 2799 N95-31211

TESTING TIME
Computer model to simulate testing at the National Transonic Facility
|NASA-TM-4664| p 2763 N95-32217

TETRAETHYL ORTHOSILICATE
GCMS and FTIR studies of by-product inhibited growth and the rate-limiting step in TEOS-based SiO2 CVD
|DE95-009863| p 3016 N95-32147

TEXTS
An evaluation of an automatic markup system
|DE95-009885| p 3026 N95-32149

TEXTURES
Texture development in aluminium extrusion
|PB95-196598| p 2979 N95-30666
Physical modelling of microstructural evolution during thermomechanical processing of aluminium alloys
|PB95-196341| p 2805 N95-31053
Texture based methods for image analysis: A review
|PB95-211595| p 2945 N95-32251

THALLIUM
Nuclear-spin-dependent parity-nonconserving effects in thallium, lead and bismuth atoms
|DE95-614120| p 2991 N95-32354

THEOREM PROVING
The iteration formula of the Maslov-type index theory with applications to nonlinear Hamiltonian systems
|DE95-613379| p 2957 N95-30676

THEOREMS
Plaquette expansion proof and interpretation
|DE95-616282| p 2965 N95-30432
Strange compactification theorem: Infinite processes and the 3-dimensional poincare conjecture 6. Part A
|PB95-207924| p 2965 N95-30504
4-manifold topology 2: Dwyer's filtration and surgery kernels
|PB95-207940| p 2965 N95-30509
Extension to higher dimensions of the Jaeschke-Eicker result on the standardized empirical process
|PB95-206868| p 2965 N95-30523
The 4-manifold topology 1: Subexponential groups
|PB95-207957| p 2965 N95-30555
Six-vector formalism in electromagnetics of bianisotropic media
|PB95-207130| p 2846 N95-30567
Dressing symmetry of the uniformization solution of Liouville equation
|DE95-613380| p 2956 N95-30607
Barendregt cube with definitions and generalized reduction
|PB95-206793| p 2966 N95-30719
A feedback linearization approach to orbital maneuvers p 2765 N95-30841
Poisson approximation using the Stein-Chen method and coupling: Number of exceedances of a discrete-time-chi-squared process
|PB95-212205| p 2961 N95-31398
Preservation theorems on finite structures
|DE95-613442| p 2962 N95-32067

THEORETICAL PHYSICS
Theoretical high energy physics
|DE95-003107| p 2991 N95-30527
Arithmetic features of rational conformal field theory
|PB95-207908| p 2966 N95-30591
Electrical conductivity study on polythiophenes films
|DE95-614309| p 2813 N95-30645
Abstracts of Annual Physics Conference of Iran
|DE95-611717| p 2768 N95-30881

THEORIES
Formalization of the ramified type theory
|PB95-206785| p 2961 N95-31422

THERMAL ANALYSIS
A metallurgical approach toward alloying in rare earth permanent magnet systems
|DE95-010242| p 2966 N95-30668
Advanced small rocket chambers. Option 3: 110 lbf Ir-Re rocket, volume 2
|NASA-CR-195435-VOL-2| p 2769 N95-31170
Intelligent finite element submodeling of multichip modules for reliability analysis
|AD-A292911| p 2940 N95-31455
Solution based temperature of Perovskite-type oxide films and powders
|DE95-009089| p 2820 N95-31629

An efficient numerical procedure for thermohydrodynamic analysis of cavitating bearings
[NASA-CR-195476] p 2878 N95-32210
Film temperatures in the presence of cavitation
[NASA-CR-195481] p 2878 N95-32216
THERMAL CONTROL COATINGS
High temperature barrier coatings for refractory metals
[NASA-CR-195475] p 2802 N95-30531
THERMAL CYCLING TESTS
Fatigue crack growth behavior of a titanium matrix composite under thermomechanical loading
p 2784 N95-30491
The electrodeposition of low contraction chromium/molybdenum alloys using pulse-reverse plating
[AD-A292727] p 2804 N95-30945
Advanced small rocket chambers. Option 3: 110 lbf Ir-Re rocket, volume 1
[NASA-CR-195435-VOL-1] p 2768 N95-31169
NaK pool-boiler solar receiver durability bench test. Volume 2: Metallurgical analysis
[DE95-010338] p 2905 N95-31640
The influence of matrix microstructure and temperature on cyclic deformation and fatigue of particle-reinforced 2219 aluminum p 2808 N95-31974
THERMAL DECOMPOSITION
Applications of SXPS for studying surface structure, reaction mechanisms and kinetics
[DE95-008903] p 2803 N95-30547
Modeling of thermal response of filament used in T-jump experiment p 2800 N95-31297
The structure and reactivity of boron and carbon surfaces
[AD-A292804] p 2795 N95-31440
THERMAL DIFFUSION
The junction characteristics and current conduction mechanisms of GaInP2 n(+)p diodes and solar cells
[AD-A290857] p 2902 N95-30408
THERMAL EMISSION
Studying the thermal/non-thermal crossover in solar flares
[NASA-CR-189436] p 3031 N95-30785
THERMAL ENERGY
The junction characteristics and current conduction mechanisms of GaInP2 n(+)p diodes and solar cells
[AD-A290857] p 2902 N95-30408
Semiconductor nanocrystals formed in SiO2 by ion implantation
[DE95-008900] p 2978 N95-30546
Fabrication and modification of metal nanocluster composites using ion and laser beams
[DE95-009131] p 2784 N95-30731
CALORSTOCK 1994: Thermal energy storage. Better economy, environment, technology
[DE95-772422] p 2904 N95-31138
THERMAL EXPANSION
Ageing control no. 3 of propellants for rocket motors RB 27 and RB 28
[PB95-210357] p 2825 N95-30626
HTS Josephson technology on silicon with application to high speed digital microelectronics
[AD-A288627] p 2861 N95-31147
Effects of gas-phase thermal expansion on the stability of deflagration through a porous energetic material
[DE95-004382] p 2797 N95-31824
THERMAL FATIGUE
Thermal-mechanical fatigue crack growth in aircraft engine materials
[ISBN-0-315-86543-1] p 2894 N95-31098
The influence of matrix microstructure and temperature on cyclic deformation and fatigue of particle-reinforced 2219 aluminum p 2808 N95-31974
A study of elevated temperature testing techniques for the fatigue behavior of PMCS: Application to T650-35/AMB21
[NASA-TM-106927] p 2791 N95-32209
THERMAL INSULATION
A water blown urethane insulation for use in cryogenic environments p 2775 N95-31765
Evaluation of HFC 245ca and HFC 236ea as foam blowing agents p 2775 N95-31766
Implementation of environmentally compliant cleaning and insulation bonding for MNASA p 2780 N95-31796
Development of integrated insulation joint for cooling pipe in tokamak reactor
[DE95-737220] p 3007 N95-32264
THERMAL MAPPING
Mapping hidden aircraft defects with dual-band infrared computed tomography
[DE95-011531] p 2741 N95-32164
THERMAL PLASMAS
Development of a tokamak plasma optimized for stability and confinement
[DE95-009609] p 3003 N95-30641
THERMAL PROTECTION
High temperature barrier coatings for refractory metals
[NASA-CR-195475] p 2802 N95-30531
A water blown urethane insulation for use in cryogenic environments p 2775 N95-31765
Evaluation of HFC 245ca and HFC 236ea as foam blowing agents p 2775 N95-31766
Convergent spray process for environmentally friendly coatings p 2777 N95-31776
THERMAL RADIATION
Monte Carlo code for evaluating the Boundary Layer Illumination and Radiation Balance model (BLIRB)
[AD-A293963] p 2915 N95-31560
THERMAL RESISTANCE
Ion implantation and thermal stress resistance of ceramics
[DE95-615349] p 2812 N95-30451
THERMAL SHOCK
Ion implantation and thermal stress resistance of ceramics
[DE95-615349] p 2812 N95-30451
THERMAL STABILITY
Nonlinear optical processes in polymer films
[AD-A293384] p 2815 N95-30955
Evaluation of Environmentally Acceptable hydraulic fluids
[AD-A293037] p 2821 N95-31666
THERMAL STRESSES
Ion implantation and thermal stress resistance of ceramics
[DE95-615349] p 2812 N95-30451
Effects of thermal and electrical stressing on the breakdown behavior of space wiring
[NASA-CR-198360] p 2768 N95-30860
Intelligent finite element submodeling of multichip modules for reliability analysis
[AD-A292911] p 2940 N95-31455
Development of integrated insulation joint for cooling pipe in tokamak reactor
[DE95-737220] p 3007 N95-32264
THERMISTORS
Diamond thin film temperature and heat-flux sensors
[NASA-CR-198859] p 3012 N95-30847
THERMOCLINES
Yellow Sea thermal structure
[AD-A291159] p 2922 N95-30396
THERMOCOUPLES
Experimental investigation of the effectiveness of flow-through modules for electronics cooling
[AD-A293284] p 2861 N95-30950
THERMODYNAMIC EFFICIENCY
Natural gas liquefier for vehicle fuel
[AD-A293619] p 2836 N95-31564
THERMODYNAMIC EQUILIBRIUM
Fabrication and modification of metal nanocluster composites using ion and laser beams
[DE95-009131] p 2784 N95-30731
THERMODYNAMIC PROPERTIES
Control of skin blood flow in the neutral zone of human body temperature regulation
[AD-A291499] p 2926 N95-30563
Hydrogen absorption in iron and steel during gas tungsten arc welding
[PB95-197018] p 2804 N95-30776
Germanate glass ceramic
[AD-D017418] p 2816 N95-31011
First-principles approaches to materials stability
[DE95-011533] p 2810 N95-32283
THERMODYNAMICS
Electrochemical vapour deposition of SOFC interconnection materials
[PB95-197844] p 2812 N95-30459
New Fermi-liquid approach for the theory of disordered magnetics
[DE95-613448] p 2967 N95-30739
Lanthanide(III) catalyzed reactions: Structure an d thermodynamics of intermediate complexes, and implications for reactivity
[PB95-197000] p 3019 N95-30775
A proposed phase equilibrium diagram for Pt-Zr system
[DE95-620904] p 2806 N95-31220
Predictions of tensile behavior and strengths of a Si3N4 ceramic at high temperatures based on a viscoplastic model
[DE95-010220] p 2821 N95-32025
THERMOELECTRIC COOLING
Experimental investigation of the effectiveness of flow-through modules for electronics cooling
[AD-A293284] p 2861 N95-30950
THERMOELECTRIC GENERATORS
GPHS-RTGs in support of the Cassini RTG Program
[DE95-010306] p 2768 N95-30674
Welding isotopic heat sources for the cassini mission to Saturn
[DE95-060104] p 2890 N95-32367
THERMOELECTRIC MATERIALS
An experimental search for high ZT semiconductors: A survey of the preparation and properties of several alloy systems
[DE95-010232] p 2865 N95-32084
THERMOELECTRICITY
Optimization of a thermoelectric IR-detector for low working temperature
[NASA-CR-198933] p 2880 N95-30752
THERMOGRAPHY
Use of body surface heat patterns for predicting and evaluating acute lower extremity pain among soldiers
[AD-A292829] p 2927 N95-31446
THERMOGRAVIMETRY
Processing and microstructural evolution of alumina/aluminum alloy and aluminum nitride/aluminum alloy composites by directed melt oxidation
p 2789 N95-31973
THERMOMECHANICAL TREATMENT
A theory for predicting and minimizing the effects of matrix degradation on the thermomechanical properties of general laminates p 2785 N95-30768
Physical modelling of microstructural evolution during thermomechanical processing of aluminium alloys
[PB95-196341] p 2805 N95-31053
Microstructure and aging response of SiCp reinforced A356 Al metal matrix composite subject to post fabrication thermomechanical processing
[AD-A292975] p 2789 N95-31469
THERMOMETERS
Use of body surface heat patterns for predicting and evaluating acute lower extremity pain among soldiers
[AD-A292829] p 2927 N95-31446
THERMONUCLEAR REACTIONS
The 10th INS Scientific Computational Programs
[DE95-717864] p 2982 N95-31178
THERMOPHYSICAL PROPERTIES
CFC-replacement by natural working fluids: R&D and industrial challenges within the refrigeration, air conditioning amd heat pump areas
[PB95-195756] p 2815 N95-30871
THERMOPLASTIC RESINS
Thermoplastic elastomers as a binder in composite propellants
[PB95-211553] p 2837 N95-32249
THERMOPLASTICITY
Thermoplastic elastomers as a binder in composite propellants
[PB95-211553] p 2837 N95-32249
THERMOREGULATION
Control of skin blood flow in the neutral zone of human body temperature regulation
[AD-A291499] p 2926 N95-30563
THERMOSETTING RESINS
Background to plastic media blasting
p 2843 N95-32168
THERMOSPHERE
HST-FOC observations of a remarkable UV auroral event on Jupiter p 3030 N95-30806
SSUSI single sensor auroral E-layer algorithm: Functional description
[AD-A288630] p 2914 N95-31012
Global Ultraviolet Imager (GUVI) investigation
[NASA-CR-189430] p 2917 N95-31820
THERMOVISCOELASTICITY
Thermoviscoelastic behaviour of solids
[PB95-196226] p 2784 N95-30694
THICKNESS
The effect of adding roughness and thickness to a transonic axial compressor rotor
[NASA-TM-106958] p 2867 N95-30524
Wave propagation in a fluid-loaded homogeneous, transversely isotropic, elastic cylinder of arbitrary thickness
[AD-A292728] p 2869 N95-30946
HTS Josephson technology on silicon with application to high speed digital microelectronics
[AD-A288627] p 2861 N95-31147
THIN FILMS
Synthesis of novel precursors for PMN powders and the thin films obtained from them
[DE95-008543] p 2811 N95-30362
Ceramics derived from metal-organic precursors
[AD-A290791] p 2811 N95-30405
Crystallization of sol-gel derived lead zirconate titanate thin films in argon and oxygen atmospheres
[DE95-615230] p 3009 N95-30421
Orientation of rapid thermally annealed lead zirconate titanate thin films on (111) Pt substrate
[DE95-615232] p 2811 N95-30422
Synthesis of carbo-nitride films using high-energy shock plasma deposition
[DE95-615231] p 2811 N95-30450

Morphology and microstructure of (111) crystalline CeO2 films grown on amorphous SiO2 substrates by pulsed-laser ablation
| DE95-008842 | p 3009 N95-30542
Ionic conductivities of lithium phosphorus oxynitride glasses, polycrystals, and thin films
| DE95-008898 | p 2812 N95-30545
Modeling of thermal, electronic, hydrodynamic, and dynamic deposition processes for pulsed-laser deposition of thin films
| DE95-008906 | p 2813 N95-30572
Diffraction-line broadening analysis and stress relaxation in thin metal layers
| PB95-213898 | p 2893 N95-30634
Josephson break junction thin film device
| AD-D017343 | p 3011 N95-30673
Mechanisms of enhanced ionic conduction at interfaces in ceramics
| DE95-009125 | p 2814 N95-30730
A Monte-Carlo model of ionic transport across a solid interface
| DE95-613447 | p 3011 N95-30737
Anodically enhanced diffusion in Cu/Ag thin film couples
| DE95-009198 | p 2814 N95-30738
TV-VI semiconductor quantum well lasers, physics and engineering p 2883 N95-30805
Diamond thin film temperature and heat-flux sensors
| NASA-CR-198859 | p 3012 N95-30847
Structural, chemical and electronic properties of superconducting thin films and junctions
| AD-A292700 | p 3012 N95-30933
High speed random access, Fourier transform holographic associative and high density two-photon three-dimensional optical memories based on bacteriorhodopsin
| AD-A293389 | p 2931 N95-30967
Investigation of polycrystalline thin film CuInSe2 solar cells based on ZnSe windows
| DE95-004068 | p 2904 N95-31164
Cracking during nanoindentation and its use in the measurement of fracture toughness
| DE95-008839 | p 2818 N95-31175
Synthesis and selected micro-mechanical properties of titanium nitride thin films by the pyrolysis of tetrakis titanium in ammonia
| DE95-010224 | p 2818 N95-31187
Molecular nanoclusters as precursors to conductive thin films and crystals
| AD-A290278 | p 3014 N95-31189
Thin-film edge field emitter device and method of manufacture therefor
| AD-D017453 | p 2862 N95-31275
Ion-Assisted Pulsed Laser Deposition of amorphous tetrahedral-coordinated carbon films
| DE95-010861 | p 2885 N95-31394
Intelligent synthetic polymers
| AD-A292905 | p 2819 N95-31395
Deposition and characterization of photoconductive PZT thin films
| ATR-93(8308)-7 | p 2819 N95-31417
Advanced thin-film deposition and physical properties of high-temperature and other novel superconducting materials
| AD-A292798 | p 2795 N95-31439
The structure and reactivity of boron and carbon surfaces
| AD-A292804 | p 2795 N95-31440
The effect of gravity on the deposition of thin films: The physical vapor transport of copper phthalocyanine
| AD-A292997 | p 2838 N95-31472
Characterization of /11'01/ twin dislocation structures in evaporated titanium thin films by HREM
| DE95-615391 | p 2820 N95-31623
A study of switching behavior in Pb(Zr,Ti)O3 thin films using x-ray diffraction
| DE95-010859 | p 2808 N95-31689
Thin-film sulfuric acid anodizing as a replacement for chromic acid anodizing p 2776 N95-31772
A microwave plasma cleaning apparatus p 2779 N95-31786
Spectroscopic ellipsometry as a sensitive monitor of materials contamination p 2782 N95-31808
Microstructure of Al2O3 irradiated with an applied electric field
| DE95-010278 | p 2822 N95-32043
Development of large-area monolithically integrated Silicon-Film(trademark) photovoltaic modules
| DE95-004089 | p 2906 N95-32057
Infrared and millimeter wave detection using thin films of Pb doped BiSrCaCuO superconductor p 2840 N95-32129
The pyrochlore-to-perovskite transformation in solution-derived lead zirconate titanate thin films
| DE95-010453 | p 2822 N95-32161

THIN PLATES
Contributions to the design of neutral cutouts in laminated plates and shells p 2790 N95-32113

THIN WALLED SHELLS
Contributions to the design of neutral cutouts in laminated plates and shells p 2790 N95-32113

THIN WALLS
Performance improvement of composite wings through aeroelastic tailoring and modern control
| AD-A293689 | p 2752 N95-31602

THIOPHENES
Electrical conductivity study on polythiophenes films
| DE95-614309 | p 2813 N95-30645

THOMAS-FERMI MODEL
Low-density ionization behavior
| DE95-009495 | p 2980 N95-30705

THORAX
Erect, neutral and slump sitting postures: A study of the torso linkage system from shoulder to hip joint
| AD-A293239 | p 2930 N95-30907

THREAT EVALUATION
Aerophysics test program 1
| AD-A293890 | p 2963 N95-31543

THREE BODY PROBLEM
The 10th INS Scientific Computational Programs
| DE95-717864 | p 2982 N95-31178

THREE DIMENSIONAL BODIES
On drawing complicated 3D surfaces
| DE95-619199 | p 2939 N95-31257
An investigation of a novel approach to elemental imaging in three dimensions
| DE95-010340 | p 3000 N95-31681

THREE DIMENSIONAL FLOW
Three-D mesh optimization methods for unstructured polyhedra
| DE95-008808 | p 2955 N95-30471
Development of a linearized unsteady Euler analysis for turbomachinery blade rows
| NASA-CR-4677 | p 2742 N95-30611
Solution of the three-dimensional Helmholtz equation with nonlocal boundary conditions
| NASA-TM-110174 | p 2974 N95-30850
Navier-Stokes flow field analysis of compressible flow in a high pressure safety relief valve
| NASA-TM-110640 | p 2868 N95-30862
Three-dimensional (3D) large fluid flow computations for US Army applications on KSR-1, CM-200, CM-5, and Cray C-90
| AD-A293125 | p 2869 N95-30889
Atomization simulations using an Eulerian-VOF-Lagrangian method p 2828 N95-31210
Unsteady flow simulations about moving boundary configurations using dynamic domain decomposition techniques p 2877 N95-31837
Laser anemometer measurements of the three-dimensional rotor flow field in the NASA low-speed centrifugal compressor
| NASA-TP-3527 | p 2756 N95-31985

THREE DIMENSIONAL MODELS
Simulation of airborne electromagnetic measurements in three dimensional environments
| DE95-008546 | p 2900 N95-30363
A phenomenological finite element model of part building in the stereolithography process
| DE95-008437 | p 2932 N95-30376
Numerical simulation of shock/turbulent boundary layer interaction
| NASA-CR-198846 | p 2872 N95-31341
A boundary integral equation approach to three dimensional electromagnetic wave scattering problems p 2853 N95-31839

THRESHOLD CURRENTS
TV-VI semiconductor quantum well lasers, physics and engineering p 2883 N95-30805

THRESHOLDS
Cracking during nanoindentation and its use in the measurement of fracture toughness
| DE95-008839 | p 2818 N95-31175

THRUST AUGMENTATION
Improved hybrid rocket fuel p 2773 N95-31755

THRUST CHAMBERS
Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-30987
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 1
| NASA-CR-195435-VOL-1 | p 2768 N95-31169
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 2
| NASA-CR-195435-VOL-2 | p 2769 N95-31170
Survey of recent Al2O3 droplet size data in solid rocket chambers, nozzles, and plumes p 2770 N95-31195

THRUST VECTOR CONTROL
Beam-centroid tracking instrument for ion thrusters
| AD-A293654 | p 2769 N95-31567
Flight demonstration of an advanced pitch control law in the VAAC Harrier aircraft p 2760 N95-32012
X-31: A program overview and flight test status p 2753 N95-32013

TIDE POWERED GENERATORS
Production simulator for wave power plants
| PB95-212262 | p 2907 N95-32286

TILT ROTOR AIRCRAFT
Effects of civil tiltrotor service in the northeast corridor on en route airspace loads
| AD-A293586 | p 2747 N95-31687

TIME
Relativistic timescale analysis suggests lunar theory revision p 2970 N95-32333

TIME CONSTANT
Analysis of heads-up display quickening versus handling qualities
| AD-A293797 | p 2753 N95-31584

TIME DEPENDENCE
The interaction of magnetizations with an external electromagnetic field and a time-dependent magnetic Aharonov-Bohm effect
| DE95-613463 | p 2845 N95-30368
Existence of solutions in plane quasistationary stokes flow driven by surface tension
| PB95-197935 | p 2868 N95-30810
Properties of new materials relevant to energy and fuel research
| AD-A289734 | p 2825 N95-31149
Direct and inverse problems in random media
| AD-A293033 | p 2850 N95-31280
Stability prediction with rotational flow effects p 2799 N95-31283
Self-adaptive multilevel methods for fluid flow problems p 2873 N95-31412
Numerical simulation of time dependent viscoelastic fluid flow
| TRITA-NA-9311 | p 2873 N95-31414
The prevention of PIO by design p 2757 N95-31991
Predictions of tensile behavior and strengths of a Si3N4 ceramic at high temperatures based on a viscoplastic model
| DE95-010220 | p 2821 N95-32025

TIME DIVISION MULTIPLEXING
Design and testing of an optimal digital link capable of 14-channel transmission
| AD-A288505 | p 3000 N95-31652

TIME FUNCTIONS
Poisson approximation using the Stein-Chen method and coupling: Number of exceedances of a discrete-time-chi-squared process
| PB95-212205 | p 2961 N95-31398

TIME LAG
SCARLET: DLR rate saturation flight experiment p 2746 N95-31068
The prevention of PIO by design p 2757 N95-31991
High resolution time interval counter p 2969 N95-32331

TIME MEASUREMENT
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures p 2799 N95-30990
Burn time measurements of single aluminum particles in steam and carbon dioxide mixtures p 2799 N95-31198
The 26th Annual Precise Time and Time Interval (PTTI) Applications and Planning Meeting
| NASA-CP-3302 | p 2967 N95-32319
The 1994 international transatlantic two-way satellite time and frequency transfer experiment: Preliminary results p 2858 N95-32320
High accuracy time transfer synchronization p 2968 N95-32321
European plans for new clocks in space p 2968 N95-32324
Anticipated uncertainty budgets of PRARETIME and T2L2 techniques as applied to ExTRAS p 2968 N95-32326
PTTI applications at the limits of GPS p 2969 N95-32327
Time aspects of the European Complement to GPS: Continental and transatlantic experimental phases p 2969 N95-32328
Network time synchronization servers at the US Naval Observatory p 2969 N95-32329
High resolution time interval counter p 2969 N95-32331
Monte Carlo simulations of precise timekeeping in the Milstar communication satellite system p 2970 N95-32336
Automated delay measurement system for an Earth station for Two-Way Satellite Time and Frequency Transfer p 2971 N95-32337
Study of tropospheric correction for intercontinental GPS common-view time transfer p 2971 N95-32338

Methodologies for steering clocks
p 2971 N95-32341
The effects of clock errors on timescale stability
p 2971 N95-32342
Relativistic theory for syntonization of clocks in the vicinity of the Earth p 2971 N95-32343
(T2L2) Time Transfer by Laser Link
p 2887 N95-32348
Satellite test of the isotropy of the one-way spe ed of light using ExTRAS p 2973 N95-32349

TIME OF FLIGHT SPECTROMETERS
Background event discrimination in neutron time-of-flight measurements at beams of relativistic nuclei of the JINR synchrotron
|DE95-613006| p 2991 N95-30604

TIME RESPONSE
Aspects of the search time in binary search trees modified according to the move-to-root heuristic
|PB95-212148| p 2963 N95-31396

TIME SERIES ANALYSIS
Sensor Fusion and Nonlinear Prediction for Anomalous Event Detection
|DE95-009429| p 2933 N95-30602
Thermoviscoelastic behaviour of solids
|PB95-196226| p 2784 N95-30694
Nonparametric methods for incomplete data in reliability and for changepoints in smooth functions
|AD-A292773| p 2963 N95-31429
Spatial time-series: Pollution pattern recognition under irregular interventions
|AD-A293830| p 2909 N95-31556
Nonlinear time series analysis
|AD-A293841| p 2963 N95-31558
Arabian Sea mixed layer dynamics experiment: Mooring deployment cruise report
|AD-A293684| p 2923 N95-31600

TIME SIGNALS
Ultrasonic two probe system for locating and sizing
|AD-D017438| p 2996 N95-30724
The 1994 international transatlantic two-way satellite time and frequency transfer experiment: Preliminary results p 2858 N95-32320
Implementation of a standard format for GPS common view data p 2968 N95-32323
PTTI applications at the limits of GPS
p 2969 N95-32327
Custom Turnkey Time and Frequency Systems: A structured, expandable approach p 2969 N95-32330
A globally efficient means of distributing UTC time and frequency through GPS p 2970 N95-32335
Prospects for high accuracy time dissemination and synchronization using coded radar pulses from a low-earth orbiting spacecraft p 2971 N95-32339

TIN
Effects of temperature ramp rate during heat treatment on hysteresis loss and critical current density of internal tin processed wires
|DE95-009551| p 2803 N95-30706

TIN ALLOYS
Cadmium plating replacements p 2776 N95-31773
Measurements of stability margins and current distribution in large-scale Nb3Sn cable-in-conduit conductors
|DE95-009869| p 3007 N95-32148

TIN COMPOUNDS
Convoy electron emission from surfaces
|DE95-010298| p 2984 N95-31402

TIN TELLURIDES
Numerical modeling of Bridgman growth of PbSnTe in a magnetic field
|NASA-TM-106996| p 2837 N95-31359

TIP SPEED
Experimental and computational investigation of the tip clearance flow in a transonic axial compressor rotor
|NASA-TM-106711| p 2876 N95-31738

TITAN LAUNCH VEHICLES
Major weapon system environmental life-cycle cost estimating for Conservation, Cleanup, Compliance and Pollution Prevention (C3P2) p 2774 N95-31761

TITANIUM
Characterization of /11'01/ twin dislocation structures in evaporated titanium thin films by HREM
|DE95-615391| p 2820 N95-31623
An experimental search for high ZT semiconductors: A survey of the preparation and properties of several alloy systems
|DE95-010232| p 2865 N95-32084

TITANIUM ALLOYS
Fatigue crack growth behavior of a titanium matrix composite under thermomechanical loading
p 2784 N95-30491
The influence of microstructure on creep deformation in near-gamma TiAl alloys p 2808 N95-31975
Control of interfacial chemistry and mechanical properties in metal/ceramic composites
p 2790 N95-31976
Synthesis and characterization of nanophase face-centered-cubic titanium
|DE95-009533| p 2809 N95-32051
Creep of a fine-grained, fully-lamellar, two-phase TiAl alloy at 760 C
|DE95-009531| p 2810 N95-32272

TITANIUM CARBIDES
A metallurgical approach toward alloying in rare earth permanent magnet systems
|DE95-010242| p 2966 N95-30668

TITANIUM NITRIDES
Synthesis and selected micro-mechanical properties of titanium nitride thin films by the pyrolysis of tetrakis titanium in ammonia
|DE95-010224| p 2818 N95-31187
Self-lubricating, TiN-MoS2 composite coatings produced by simultaneous deposition from Ti((CH3))2N4/NH3/MoF6H2S gas mixture
|DE95-010359| p 2788 N95-31403

TITANIUM OXIDES
Aqueous TiO2 photocatalysis of metal-EDTA complexes
|DE95-011058| p 2793 N95-31113

TOKAMAK DEVICES
Power oscillator in the tokamaks training
|DE95-616538| p 3003 N95-30473
Effects of particle fueling and plasma wall interactions on D3-D discharges
|DE95-009608| p 3003 N95-30612
Development of a tokamak plasma optimized for stability and confinement
|DE95-009609| p 3003 N95-30641
Helium transport and exhaust studies in enhanced confinement regimes in DIII-D
|DE95-009134| p 3004 N95-30685
Stabilization of the resistive shell mode in tokamaks
|DE95-008748| p 3004 N95-30794
Reynolds stress of localized toroidal modes
|DE95-008750| p 3004 N95-30795
Shear flow effects on ion thermal transport in tokamaks
|DE95-009115| p 3005 N95-30801
Development of plasma diagnostics technologies: A study on nuclear fusion reactor
|DE95-614180| p 3005 N95-31004
The development of the tokamak system technology: A study on the fusion reactor
|DE95-614256| p 3005 N95-31366
Stabilization of ballooning modes with sheared toroidal rotation
|DE95-008388| p 3006 N95-31624
Wall stabilization of high beta plasmas in D3-D
|DE95-009607| p 3007 N95-32116
Measurements of stability margins and current distribution in large-scale Nb3Sn cable-in-conduit conductors
|DE95-009869| p 3007 N95-32148
Design study of prototype accelerator and MeV test facility for demonstration of 1 MeV, 1 A negative ion beam production
|DE95-737208| p 2995 N95-32262
Onset of ELMs in JT-60U
|DE95-737209| p 3007 N95-32263
Development of integrated insulation joint for cooling pipe in tokamak reactor
|DE95-737220| p 3007 N95-32264

TOMOGRAPHY
Multiparameter radar measurements of precipitation in complex terrain: Meteorological and hydrological applications
|AD-A290786| p 2918 N95-30403
Impact behavior of the active zone within a frozen soil profile
|AD-A292909| p 2915 N95-31386
A prototype ionospheric tomography system (ITS)
|AD-A293015| p 2916 N95-31698

TOPOGRAPHY
Local fractal dimension estimation
|AD-A293354| p 2959 N95-30953
Visit to Ionospheric Modeling and Remote Sensing Branch, Phillips Laboratory in Hanscom AFB, MA
|AD-A292339| p 2901 N95-31265
Investigation of ground target detection methods in fully polarimetric wide angle synthetic aperture radar images
|AD-A293922| p 2851 N95-31513

TOPOLOGY
Torus bundles and the group cohomology of GL(N,Z)
|PB95-208120| p 2965 N95-30489
4-manifold topology 2: Dwyer's filtration and surgery kernels
|PB95-207940| p 2965 N95-30509
The 4-manifold topology 1: Subexponential groups
|PB95-207957| p 2965 N95-30555
Good metric spaces without good parameterizations
|PB95-208427| p 2957 N95-30622
Co-groups on sequentially complete, locally convex, topological vector spaces in particular on strict LF-spaces
|PB95-206918| p 2966 N95-30681
Interferometry with particles of non-zero rest mass: Topological experiments
|DE95-616244| p 2979 N95-30689
Bifurcations of contracting singular cycles
|DE95-613371| p 2962 N95-32117

TOROIDAL DISCHARGE
The coupling impedance of a toroidal beam pipe with circular cross section
|DE95-010442| p 2993 N95-31405

TOROIDAL PLASMAS
Stability analysis of the TPX toroidal field coil
|DE95-009666| p 2865 N95-32100

TORPEDOES
Smart material joint band
|AD-D017374| p 2888 N95-30716

TORQUE
Speed control of an elastic two-mass system: Optimization and systems theory
|PB95-212106| p 2868 N95-30701
Robust position and force tracking control for a robot in contract p 2888 N95-30830

TORQUE MOTORS
Speed control of an elastic two-mass system: Optimization and systems theory
|PB95-212106| p 2888 N95-30701

TORSION
Static behaviour of axially loaded uniplanar and multiplanar tubular x-joints
|PB95-207866| p 2892 N95-30585

TORSO
Erect, neutral and slump sitting postures: A study of the torso linkage system from shoulder to hip joint
|AD-A293239| p 2930 N95-30907

TOWERS
Static behaviour of axially loaded uniplanar and multiplanar tubular x-joints
|PB95-207866| p 2892 N95-30585
Technique to prepare high-reflectance optical fiber Bragg gratings with single exposure in-line or fiber draw tower
|AD-D017445| p 2998 N95-31270

TOXIC HAZARDS
Hydrogen sulfide analyzer with protective barrier
|AD-D017412| p 2793 N95-31009
Treatment of plastic media waste
p 2844 N95-32177

TOXICITY
Demonstration of split-flow ventilation and recirculation as flow-reduction methods in an Air Force paint spray booth, volume 2
|AD-A286808| p 2762 N95-30926
Particulate air pollution and increased mortality: Biological plausibility for causal relationship
|DE95-006161| p 2909 N95-31703
Atmospheric environmental implications of propulsion systems p 2771 N95-31747
Replacement of ozone depleting and toxic chemicals in gravimetric analysis of non-volatile residue
p 2780 N95-31793
Environmentally Safe and Effective Processes for Paint Removal
|AGARD-LS-201| p 2843 N95-32165
Bioremediation of wheat starch media waste
p 2845 N95-32178

TOXICITY AND SAFETY HAZARD
Enhanced alkaline hydrolysis and biodegradability studies of nitrocellulose-bearing missile propellant
p 2772 N95-31752

TRACE ELEMENTS
Holistic analysis of gamma-ray spectra in instrumental neutron activation analysis
|PB95-214458| p 2979 N95-30639

TRACKING (POSITION)
Passive range measurement system
|AD-D017344| p 2996 N95-30678
Robust position and force tracking control for a robot in contract p 2888 N95-30830
DEPSCOR92-Wide field spectral imager
|AD-A293079| p 2997 N95-31005
Neural network based data fusion system
|AD-D017440| p 2953 N95-31692
Neural network based three dimensional ocean modeler
|AD-D017441| p 2953 N95-31693

TRACKING PROBLEM
A feedback linearization approach to orbital maneuvers p 2765 N95-30841
Multiple Target Tracking based on constellation matching and Kalman filter p 2842 N95-32136

TRACKING RADAR
Using satellites for radar performance monitoring and calibration
| AD-A293809 | p 2852 N95-31588
The Telecommunications and Data Acquisition Report
| NASA-CR-198911 | p 2854 N95-32221
TRADEOFFS
Pressure transducer performance and measurement trade-offs in a transient, high temperature, combustion environment p 2799 N95-31209
TRAFFIC
Algorithms for categorizing multiprocessor communication under invalidate and update-based coherence protocols
| AD-A290022 | p 2947 N95-30930
Energy storage and alternatives to improve train voltage on a mass transit system
| DE95-010344 | p 2906 N95-32090
TRAILING EDGE FLAPS
Vibration reduction in helicopter rotors using an actively controlled partial span trailing edge flap located on the blade p 2762 N95-32111
TRAINING ANALYSIS
Effectiveness of an electronic performance support system for use with computer-aided design software
| AD-A293757 | p 2941 N95-31573
Optimizing the long-term retention of skills: Structural and analytic approaches to skill maintenance
| AD-A293798 | p 2929 N95-31585
TRAINING EVALUATION
Controller resource management: What can we learn from aircrews?
| DOT/FAA/AM-95/21 | p 2750 N95-32186
TRAJECTORIES
Laser Tracker 3: Sandia National Laboratories' third generation laser tracking system
| DE95-008525 | p 2882 N95-30379
Precision manipulation with a dextrous robot hand p 2888 N95-30829
Visual processing of object velocity and acceleration
| AD-A292789 | p 2929 N95-31436
Multiple Target Tracking based on constellation matching and Kalman filter p 2842 N95-32136
TRAJECTORY CONTROL
Design of systems for active sound control
| PB95-197869 | p 2973 N95-30461
TRAJECTORY PLANNING
Adaptive path planning: Algorithm and analysis
| DE95-008549 | p 2950 N95-30463
Qualitative environmental navigation: Theory and practice --- robot navigation p 2748 N95-30486
Objective analysis of oceanic data for Coast Guard trajectory models
| AD-A292884 | p 2924 N95-32363
TRANSDUCERS
Demodulators for optical fiber interferometers with (3 x 3) outputs
| AD-D017415 | p 2995 N95-30402
Apparatus for producing images acoustically
| AD-D017365 | p 2973 N95-30530
Sonic apparatus for degassing liquids
| AD-D017352 | p 2791 N95-30554
Fiber optic interferometric electric field and voltage sensor utilizing and electrostrictive transducer
| AD-D017433 | p 2996 N95-30753
TRANSFER FUNCTIONS
Enhancements to the SSME transfer function modeling code
| NASA-CR-198957 | p 2958 N95-30754
Control of flexible spacecraft structures using H-infinity wave absorbing control
| AD-A293141 | p 2766 N95-30919
Allan deviation computations of a linear frequency synthesizer system using frequency domain techniques p 2972 N95-32344
TRANSFER ORBITS
A feedback linearization approach to orbital maneuvers p 2765 N95-30841
TRANSFORMATIONS (MATHEMATICS)
The Foldy-Wouthuysen transformation
| DE95-616277 | p 2976 N95-30427
Pi1(sup infinity) and infinite simple homotopy type in dimension three: A research announcement
| PB95-196283 | p 2957 N95-30696
TRANSFORMERS
A simple model for the dc flux transformer in layered superconductors with Josephson coupling
| DE95-614468 | p 2859 N95-30649
Plane wave reflection from a uniaxial chiral quarter-wave polarization transformer
| PB95-206512 | p 2849 N95-31159
TRANSIENT RESPONSE
A transient FETI methodology for large-scale parallel implicit computations in structural mechanics
| NASA-CR-199040 | p 2945 N95-32214
TRANSISTOR CIRCUITS
Voltage controlled MESFET pulse shape generator
| DE95-011656 | p 2865 N95-32300
TRANSITION FLOW
The passage from transitional to free molecular plumes p 2871 N95-30994
TRANSITION METALS
A metallurgical approach toward alloying in rare earth permanent magnet systems
| DE95-010242 | p 2966 N95-30668
TRANSITION TEMPERATURE
Structural, chemical and electronic properties of superconducting thin films and junctions
| AD-A292700 | p 3012 N95-30933
TRANSLATING
A simple and efficient procedure for polyhedral assembly partitioning under infinitesimal motions
| DE95-009838 | p 2942 N95-31644
TRANSMISSION
The quad-service satellite transmitting and receiving system for medical supply support: A battlefield interoperability and communications system prototype, volume 2. User documentation
| AD-A292835 | p 2851 N95-31448
The quad-service satellite transmitting and receiving system for medical supply support: A battlefield interoperability and communications system prototype, volume 1
| AD-A292836 | p 2851 N95-31449
TRANSMISSION CIRCUITS
Electromyostimulation, circuits and monitoring
| NASA-TM-110741 | p 2926 N95-30846
TRANSMISSION ELECTRON MICROSCOPY
Semiconductor nanocrystals formed in SiO2 by ion implantation
| DE95-008900 | p 2978 N95-30546
TEM-examination of ceramic-metal interfaces
| PB95-196531 | p 2813 N95-30664
Microstructure and aging response of SiCp reinforced A356 Al metal matrix composite subject to post fabrication thermomechanical processing
| AD-A292975 | p 2789 N95-31469
Amorphization and the effect of implanted ions in SiC
| DE95-009699 | p 2985 N95-31642
Growth, characterization and device development in monocrystalline diamond films
| AD-A293106 | p 3015 N95-32018
TRANSMISSION LINES
HTS Josephson technology on silicon with application to high speed digital microelectronics
| AD-A288627 | p 2861 N95-31147
The 1994 international transatlantic two-way satellite time and frequency transfer experiment: Preliminary results p 2858 N95-32320
TRANSMISSION LOSS
Performance of residual carrier array-feed combining in correlated noise p 2856 N95-32232
TRANSMISSION RATE (COMMUNICATIONS)
Rate considerations in deep space telemetry p 2765 N95-32223
TRANSMITTANCE
Validation of the atmospheric transmission large-area analysis system (ATLAS)
| AD-A293810 | p 2916 N95-31589
TRANSMITTER RECEIVERS
Opto-electronic components from non-stoichiometric 3-5 materials
| AD-A293206 | p 3013 N95-30985
TRANSMITTERS
Apparatus and method for producing three-dimensional images
| AD-D017455 | p 2847 N95-30727
Cascading synchronized chaotic systems
| AD-D017458 | p 2860 N95-30748
TRANSONIC COMPRESSORS
The effect of adding roughness and thickness to a transonic axial compressor rotor
| NASA-TM-106958 | p 2867 N95-30524
Experimental and computational investigation of the tip clearance flow in a transonic axial compressor rotor
| NASA-TM-106711 | p 2876 N95-31738
TRANSONIC SPEED
Validation of the NPARC code for nozzle afterbody flows at transonic speeds
| NASA-TM-106971 | p 2742 N95-30704
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept
| NASA-TM-108489 | p 2742 N95-30712
Unsteady transonic wind tunnel test on a semispan straked delta wing, oscillating in pitch. Part 1: Description of the model, test setup, data acquisition, and data processing
| AD-A293113 | p 2743 N95-30885
Afterbody/nozzle pressure distributions of a twin-tail twin-engine fighter with axisymmetric nozzles at Mach numbers from 0.6 to 1.2
| NASA-TP-3509 | p 2744 N95-31984
TRANSONIC WIND TUNNELS
Computer model to simulate testing at the National Transonic Facility
| NASA-TM-4664 | p 2763 N95-32217
TRANSPORT AIRCRAFT
Electrical short circuit and current overload tests on aircraft wiring
| AD-A293308 | p 2860 N95-30922
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. C-17 Aircraft program: Improvements in initial provisioning process
| GAO/NSIAD-94-63 | p 2741 N95-32194
TRANSPORT PROPERTIES
Helium transport and exhaust studies in enhanced confinement regimes in DIII-D
| DE95-009134 | p 3004 N95-30685
A Monte-Carlo model of ionic transport across a solid interface
| DE95-613447 | p 3011 N95-30737
Vertical transport in GaAs/AlGaAs superlattices p 3012 N95-30822
Membrane transport: A cellular probe of heat stroke
| AD-A293327 | p 2926 N95-30924
TRANSPORT THEORY
MVP/GMVP: General purpose Monte Carlo codes for neutron and photon transport calculations based on continuous energy and multigroup methods
| DE95-722072 | p 2979 N95-30656
Development of BERMUDA: A radiation transport code system. Part 3: A one-dimensional adjoint neutron transport code
| DE95-717875 | p 2934 N95-30759
Particle filtration: A comparison between theory and experiment
| DE95-009442 | p 2875 N95-31637
TRAPPED MAGNETIC FIELDS
Study of cross-tail current carriers in magnetotail p 3005 N95-30804
TRAPPED PARTICLES
Advances in the simulation of toroidal gyro Landau fluid model turbulence
| DE95-008387 | p 3003 N95-30359
A study of ion trapping and instability in the Fermilab antiproton accumulator p 2993 N95-31647
The 26th Annual Precise Time and Time Interval (PTTI) Applications and Planning Meeting
| NASA-CP-3302 | p 2967 N95-32319
TRAPPING
Properties of new materials relevant to energy and fuel research
| AD-A289734 | p 2825 N95-31149
A study of ion trapping and instability in the Fermilab antiproton accumulator p 2993 N95-31647
High-resolution superconducting x-ray spectrometers with aluminum trapping layers of different thicknesses
| DE95-010253 | p 2881 N95-32047
TRAPS
Studies of highly charged ions with EBIT and Super-EBIT
| DE95-010251 | p 2967 N95-32038
TRAVELING WAVE AMPLIFIERS
Use of a variable frequency source with a single-mode cavity to process ceramic filaments
| DE95-010992 | p 2817 N95-31152
TRAVELING WAVE MODULATION
Microwave electro-optic mixer
| AD-D017328 | p 2862 N95-31179
TRAVELING WAVE TUBES
High energy pulsed microwave sources
| AD-A293334 | p 2849 N95-31142
TRAVELING WAVES
Numerical computation of one-dimensional detonation waves
| PB95-197950 | p 2868 N95-30811
Control of flexible spacecraft structures using H-infinity wave absorbing control
| AD-A293141 | p 2766 N95-30919
TREES (MATHEMATICS)
Join processing in relational database systems p 3023 N95-30764
Aspects of the search time in binary search trees modified according to the move-to-root heuristic
| PB95-212148 | p 2963 N95-31396
TRELLIS CODING
Minimal trellises for linear block codes and their duals p 2856 N95-32233
Trellis complexity bounds for decoding linear block codes p 2856 N95-32234

TRIANGULATION
Non-critical string field theory with non-orientable string interactions
|DE95-737160| p 3020 N95-31281
TRIAXIAL STRESSES
Effects of hydrostatic pressure on the mechanical behavior of composite materials
|AD-A293162| p 2787 N95-30963
TRIBOLOGY
Synthesis of carbo-nitride films using high-energy shock plasma deposition
|DE95-615231| p 2811 N95-30450
Composite structure forming a wear surface
|AD-D017462| p 2785 N95-30749
Effect of local melting on tribology in metal cutting
|PB95-195392| p 2804 N95-31052
Fluid-film lubrication with an application to piston rings p 2890 N95-32119
TRIGGER CIRCUITS
Implementation of the shower max electron trigger at CDF
|DE95-006684| p 2992 N95-31165
TROPICAL METEOROLOGY
Summary of 1993 Atlantic tropical cyclone activity and verification of author's forecast. A year of unanticipated light hurricane activity and a poor forecast: The expected dissipation of the El Nino did not take place and Caribbean basin surface pressure became quite high p 2918 N95-30842
Early August updated forecast of Atlantic seasonal hurricane activity for 1994 p 2919 N95-30844
NASA Tropical Rainfall Measurement Mission (TRMM): Effects of tropical rainfall on upper ocean dynamics, air-sea coupling and hydrologic cycle
|NASA-CR-189437| p 2919 N95-31123
TROPICAL REGIONS
Comparisons of target detection clutter using data from the 1993 FOPEN experiments
|AD-A293052| p 2852 N95-31606
TROPICAL STORMS
Forecast of Atlantic seasonal hurricane activity for 1994 p 2918 N95-30832
Summary of 1993 Atlantic tropical cyclone activity and verification of author's forecast. A year of unanticipated light hurricane activity and a poor forecast: The expected dissipation of the El Nino did not take place and Caribbean basin surface pressure became quite high p 2918 N95-30842
Early August updated forecast of Atlantic seasonal hurricane activity for 1994 p 2919 N95-30844
LAWS hurricane studies
|NASA-CR-189438| p 2919 N95-31128
TROPOSPHERE
Diagnosis of the kinematics and dynamics of rapidly developing maritime cyclones
|AD-A293919| p 2921 N95-31675
Feasibility of tropospheric water vapor profiling using infrared heterodyne differential absorption lidar
|DE95-009647| p 2917 N95-32142
Study of tropospheric correction for intercontinental GPS common-view time transfer p 2971 N95-32338
TROUGHS
Field performance of the Walker Branch throughfall displacement experiment
|DE95-008677| p 2908 N95-30793
TRUSSES
On-orbit truss structure tele-operation experiment by Engineering Test Satellite-7
|NAL-TR-1246| p 2767 N95-31980
TUNABLE FILTERS
Opto-electronic components from non-stoichiometric 3-5 materials
|AD-A293206| p 3013 N95-30985
TUNABLE LASERS
Extended tuning range semiconductor lasers with sampled gratings p 2883 N95-30498
Diode-pumped, continuously tunable, 2.3 micron CW laser
|AD-D017448| p 2885 N95-31273
Tunable ytterbium-doped solid state laser
|AD-D017449| p 2885 N95-31274
Ultraviolet and visible lasers: Rare earth-doped waveguide devices and non-linear optical extraction techniques
|AD-A293976| p 2885 N95-31528
TUNGSTEN
Hot compression testing of tungsten
|AD-A293683| p 2807 N95-31599
Luminescence properties of ZnWO4:Cr(3+) laser crystals
|AD-A293065| p 2887 N95-32152
TUNGSTEN ALLOYS
Localization in tungsten heavy alloys subjected to shearing deformations under superimposed high pressures
|AD-A293177| p 2804 N95-30977
TUNING
Extended tuning range semiconductor lasers with sampled gratings p 2883 N95-30498
Tunable ytterbium-doped solid state laser
|AD-D017449| p 2885 N95-31274
Fine tuning GPS clock estimation in the MCS p 2968 N95-32322
TUNNEL JUNCTIONS
High-resolution superconducting x-ray spectrometers with aluminum trapping layers of different thicknesses
|DE95-010253| p 2881 N95-32047
TURBINE BLADES
Effect of velocity and temperature distribution at the hole exit on film cooling of turbine blades
|NASA-TM-106954| p 2755 N95-30702
Acceleration potential models PREDICHAT/PREDICDYN applied for calculation of axisymmetric dynamic inflow cases
|PB95-207015| p 2889 N95-30957
Advanced turbine systems program conceptual design and product development
|DE95-000088| p 2890 N95-32163
TURBINE PUMPS
Enhancements to the SSME transfer function modeling code
|NASA-CR-198957| p 2958 N95-30754
Design and testing of an oxidizer-rich preburner p 2799 N95-31212
TURBINE WHEELS
Axial loads on yawed rotors
|PB95-214193| p 2742 N95-30638
TURBINES
Improved modeling of unsteady heat transfer (The first step)
|AD-A292777| p 2874 N95-31432
Advanced turbine systems program conceptual design and product development
|DE95-000088| p 2890 N95-32163
TURBOCOMPRESSORS
The effect of adding roughness and thickness to a transonic axial compressor rotor
|NASA-TM-106958| p 2867 N95-30524
Investigating the use of smart acoustically active surfaces for flow separation control in turbomachinery
|AD-A292819| p 2874 N95-31443
Experimental and computational investigation of the tip clearance flow in a transonic axial compressor rotor
|NASA-TM-106711| p 2876 N95-31738
TURBOFAN ENGINES
Wave rotor-enhanced gas turbine engines
|NASA-TM-106998| p 2754 N95-30517
Method for extracting forward acoustic wave components from rotating microphone measurements in the inlets of turbofan engines
|NASA-CR-195457| p 2755 N95-30779
TURBOJET ENGINE CONTROL
Flight assessment of the onboard propulsion system model for the Performance Seeking Control algorithm on an F-15 aircraft
|NASA-TM-4705| p 2756 N95-31425
TURBOMACHINERY
Investigating the use of smart acoustically active surfaces for flow separation control in turbomachinery
|AD-A292819| p 2874 N95-31443
TURBOSHAFTS
Wave rotor-enhanced gas turbine engines
|NASA-TM-106998| p 2754 N95-30517
TURBULENCE
Method and system for suppressing noise induced in a fluid medium by a body moving therethrough
|AD-D017339| p 2973 N95-30411
Electromagnetically activated compliant wavy-wall
|AD-D017340| p 2866 N95-30412
Small scale turbulence in a plane mixing layer p 2866 N95-30449
Active turbulence control using microelectrodes, permanent magnets in microgrooves
|AD-D017351| p 2867 N95-30553
Method and system for reducing drag on a body moving through a fluid medium
|AD-D017336| p 2867 N95-30672
Hot jet/wake turbulent structure and laser propagaion. Part 1: Jet/wake turbulence modeling p 2871 N95-30991
Hot jet/wake turbulent structure and laser propagation. Part 3: Laser propagation measurements and modeling p 2871 N95-30992
Advanced k-epsilon modeling of heat transfer
|NASA-CR-4679| p 2874 N95-31423
Application of wavelet-filtering techniques to intermittent turbulent and wall pressure events. Part 2. Detection of cluster patterns
|AD-A293805| p 2875 N95-31586
Large-eddy simulation of turbulent flow using the finite element method
|DE95-009464| p 2875 N95-31591
The effects of large and small scale turbulence on sound propagation in the atmosphere
|AD-A293657| p 2975 N95-31608
On the interactions between particles and turbulence in a fully-developed channel flow in air p 2875 N95-31707
Heat transfer in shear-free turbulent boundary layers p 2876 N95-31708
Selected flows with free surfaces: Streams and drops
|IFTR-3/1995| p 2876 N95-31817
Advanced gust management systems: Lessons learned and perspectives p 2759 N95-32002
TURBULENCE EFFECTS
The effects of large and small scale turbulence on sound propagation in the atmosphere
|AD-A293657| p 2975 N95-31608
TURBULENCE MODELS
Validation of the NPARC code for nozzle afterbody flows at transonic speeds
|NASA-TM-106971| p 2742 N95-30704
A turbulence model for steady and unsteady boundary layers in strong pressure gradients p 2868 N95-30840
A turbulence module for the NPARC code
|NASA-CR-198358| p 2959 N95-30855
Parametrics on 2D Navier-Stokes analysis of a Mach 2.68 bifurcated rectangular mixed-compression inlet
|NASA-TM-107003| p 2755 N95-30861
Hot jet/wake turbulent structure and laser propagation. Part 3: Laser propagation measurements and modeling p 2871 N95-30992
Large eddy simulation of jets using structured upwind numerics p 2871 N95-30993
Shear-free turbulent boundary layers p 2873 N95-31349
Large-eddy simulation of turbulent flow using the finite element method
|DE95-009464| p 2875 N95-31591
Analysis and modeling of subgrid scalar mixing using numerical data
|NASA-CR-198169| p 2877 N95-31978
LES, DNS and RANS for the analysis of high-speed turbulent reacting flows
|NASA-CR-199075| p 2878 N95-32219
TURBULENT BOUNDARY LAYER
Active turbulence control using microelectrodes, permanent magnets in microgrooves
|AD-D017351| p 2867 N95-30553
Numerical simulation of shock/turbulent boundary layer interaction
|NASA-CR-198846| p 2872 N95-31341
Shear-free turbulent boundary layers p 2873 N95-31349
Application of wavelet-filtering techniques to intermittent turbulent and wall pressure events. Part 2. Detection of cluster patterns
|AD-A293805| p 2875 N95-31586
Heat transfer in shear-free turbulent boundary layers p 2876 N95-31708
TURBULENT COMBUSTION
A pulsed liquid fuel ramjet p 2756 N95-31201
TURBULENT DIFFUSION
Experimental investigation of turbulent particle dispersion in swirling flows
|DLR-FB-94-20| p 2873 N95-31355
TURBULENT FLOW
Simulation of chemical kinetics in turbulent natural gas combustion. Volume 2: Experimental studies of nitric oxide production in gas flames
|PB95-196721| p 2791 N95-30541
Numerical simulation of flow in a whirling annular seal and comparison with experiments
|NASA-TM-106961| p 2867 N95-30710
A turbulence module for the NPARC code
|NASA-CR-198358| p 2959 N95-30855
A pulsed liquid fuel ramjet p 2756 N95-31201
Role of free-surface boundary conditions and nonlinearities in wave/boundary-layer and wake interaction p 2872 N95-31317
Numerical simulation of shock/turbulent boundary layer interaction
|NASA-CR-198846| p 2872 N95-31341
Advanced k-epsilon modeling of heat transfer
|NASA-CR-4679| p 2874 N95-31423
Improved modeling of unsteady heat transfer (The first step)
|AD-A292777| p 2874 N95-31432
Compressible turbulence measurement in low-angle injection into a supersonic flow
|AD-A293836| p 2874 N95-31516
Application of wavelet-filtering techniques to intermittent turbulent and wall pressure events. Part 2. Detection of cluster patterns
|AD-A293805| p 2875 N95-31586
Large-eddy simulation of turbulent flow using the finite element method
|DE95-009464| p 2875 N95-31591

On the interactions between particles and turbulence in a fully-developed channel flow in air
p 2875 N95-31707
Analysis and modeling of subgrid scalar mixing using numerical data
[NASA-CR-198169] p 2877 N95-31978
LES, DNS and RANS for the analysis of high-speed turbulent reacting flows
[NASA-CR-199075] p 2878 N95-32219

TURBULENT HEAT TRANSFER
Improved modeling of unsteady heat transfer (The first step)
[AD-A292777] p 2874 N95-31432
Heat transfer in shear-free turbulent boundary layers
p 2876 N95-31708

TURBULENT JETS
Hot jet/wake turbulent structure and laser propagaion. Part 1: Jet/wake turbulence modeling
p 2871 N95-30991

TURBULENT MIXING
Experimental investigation of turbulent particle dispersion in swirling flows
[DLR-FB-94-20] p 2873 N95-31355
Analysis and modeling of subgrid scalar mixing using numerical data
[NASA-CR-198169] p 2877 N95-31978

TURBULENT WAKES
Hot jet/wake turbulent structure and laser propagaion. Part 1: Jet/wake turbulence modeling
p 2871 N95-30991

TVD SCHEMES
Improved modeling of unsteady heat transfer (The first step)
[AD-A292777] p 2874 N95-31432

TWISTING
Round-robin validation exercise for plate twist test method
[PB95-208088] p 2812 N95-30487

TWO BODY PROBLEM
Multi-particle correlations in quaternionic quantum systems
[DE95-616271] p 3018 N95-30424
Recoil correction in the Dirac-Coulomb problem
[DE95-619241] p 2959 N95-31137
Hamiltonian formulation of two body problem in Wheeler-Feynman electrodynamics
[DE95-620526] p 3019 N95-31193

TWO DIMENSIONAL BOUNDARY LAYER
Viscous diffusion of vorticity in unsteady wall layers using the diffusion velocity concept
[DE95-008537] p 2866 N95-30383

TWO DIMENSIONAL FLOW
Multigrid convergence acceleration for the 2D Euler equations applied to high-lift systems
[PB95-198081] p 2743 N95-30814
Fourier analysis of a robust multigrid method for convection-diffusion equations
[PB95-197091] p 2958 N95-30835
A turbulence model for steady and unsteady boundary layers in strong pressure gradients p 2868 N95-30840
Parametrics on 2D Navier-Stokes analysis of a Mach 2.68 bifurcated rectangular mixed-compression inlet
[NASA-TM-107003] p 2755 N95-30861
Vorticity dynamics and control of dynamic stall
[AD-A288658] p 2756 N95-31400
Some aspects on the modelling of non-Newtonian fluid flow
[TRITA-NA-9317] p 2873 N95-31415
Numerical solution of the full potential equation using a chimera grid approach
[NASA-TM-110360] p 2744 N95-32188

TWO DIMENSIONAL MODELS
Quasi-periodic solutions of Hamiltonian perturbations of 2D linear Schroedinger equations
[PB95-208443] p 2957 N95-30624
On the theory of hole propagation in an antiferromagnetic background
[DE95-614469] p 3010 N95-30650
Potential integral equations of the 2D Laplace operator in wavelet basis
[TRITA-NA-9401] p 2957 N95-30713
A turbulence model for steady and unsteady boundary layers in strong pressure gradients p 2868 N95-30840
Ferromagnetic Potts model in a magnetic field: Finite lattice extrapolation of the (1 + 1)-dimensional Hamiltonian
[DE95-614447] p 3012 N95-30958
Calculation of a residual mean meridional circulation for a zonal-mean tracer transport model
[DE95-009474] p 2911 N95-32350

TWO PHASE FLOW
The Al and A(lc)l2O3 droplet cloud in solid rocket motors p 2770 N95-30988
Study of effect of bubbles on a free-shear layer
p 2872 N95-31100
The Al and Al2O3 droplet cloud in solid rocket motors
p 2770 N95-31196
Experimental investigation of turbulent particle dispersion in swirling flows
[DLR-FB-94-20] p 2873 N95-31355
On the interactions between particles and turbulence in a fully-developed channel flow in air
p 2875 N95-31707
Effects of gas-phase thermal expansion on the stability of deflagration through a porous energetic material
[DE95-004382] p 2797 N95-31824

TYPHOONS
QTSAW (Quick Typhoon Surge and Waves). Wave information studies of US coastlines
[AD-A293172] p 2919 N95-30976

U

ULTRAHIGH FREQUENCIES
Multiparameter radar measurements of precipitation in complex terrain: Meteorological and hydrological applications
[AD-A290786] p 2918 N95-30403
Comparisons of target detection clutter using data from the 1993 FOPEN experiments
[AD-A293052] p 2852 N95-31606
Investigation into the effects of VHF and UHF band radiation on Hewlett-Packard (HP) Cesium Beam Frequency Standards p 2970 N95-32332

ULTRAHIGH VACUUM
Development of germanium-silicon growth technology
[AD-A293199] p 3013 N95-30983

ULTRASONIC CLEANING
Ultrasonic cleaning: Fundamental theory and application p 2778 N95-31783
Aqueous cleaning and verification processes for precision cleaning of small parts p 2779 N95-31787
Ultrasonic frequency selection for aqueous fine cleaning p 2779 N95-31788
Cleaning without chlorinated solvents
p 2780 N95-31792

ULTRASONIC TESTS
The neutron powder diffraction and acoustic investigations of the NH4SCN phase diagram
[DE95-614372] p 3009 N95-30419
Ultrasonic characterization of fiber-matrix interphasial properties and damage in high-temperature composites
p 2785 N95-30823

ULTRASONICS
Detecting intravascular gas bubbles in ultrasonic images
[PB95-195301] p 2926 N95-30513
Sonic apparatus for degassing liquids
[AD-D017352] p 2791 N95-30554
Ultrasonic cleaning: Fundamental theory and application p 2778 N95-31783
Investigation of cleanliness verification techniques for rocket engine hardware p 2770 N95-31806

ULTRAVIOLET ABSORPTION
RDX laser-assisted flame structure
p 2801 N95-31314

ULTRAVIOLET ASTRONOMY
Chromospherically active stars. 6: Giants with compact hot companions and the barium star scenario
[NASA-TM-110641] p 3028 N95-30466
HST-FOC observations of a remarkable UV auroral event on Jupiter p 3030 N95-30806
NASA space astronomy update 6
[NASA-CR-197664] p 3028 N95-31099

ULTRAVIOLET EMISSION
Surface contamination analysis technology team overview p 2781 N95-31797

ULTRAVIOLET LASERS
Ultraviolet and visible lasers: Rare earth-doped waveguide devices and non-linear optical extraction techniques
[AD-A293976] p 2885 N95-31528

ULTRAVIOLET RADIATION
Voyager GO program
[NASA-CR-189435] p 3029 N95-31424
Contamination detection NDE for cleaning process inspection p 2781 N95-31802

ULTRAVIOLET SPECTRA
Chromospherically active stars. 6: Giants with compact hot companions and the barium star scenario
[NASA-TM-110641] p 3028 N95-30466
Cepheid temperature and the Blazhko effect
[NASA-CR-189433] p 3030 N95-31819

ULTRAVIOLET TELESCOPES
NASA space astronomy update 6
[NASA-CR-197664] p 3028 N95-31099

UNDERGROUND STORAGE
Off-potential measurement systems for impressed current cathodic protection
[AD-A290876] p 2812 N95-30558

UNDERGROUND STRUCTURES
Experimental determination of probability distributions for parameters of a Salem limestone cap plasticity model
[AD-A290878] p 2892 N95-30559
Visit to Ionospheric Modeling and Remote Sensing Branch, Phillips Laboratory in Hanscom AFB, MA
[AD-A292339] p 2901 N95-31265

UNDERWATER ACOUSTICS
Thermoacoustic sound generator
[AD-D017342] p 2973 N95-30413
Ray trace model of sound propagation in range dependent media
[PB95-211751] p 2973 N95-30481
Method and apparatus for locating an acoustic source
[AD-D017347] p 2974 N95-30549
Multiple scatter theory of ocean sediments
[AD-A293951] p 2923 N95-31523
The TEVA experiment cruise report
[AD-A293025] p 2923 N95-31701

UNDERWATER COMMUNICATION
Degradation of blue AlGaN/InGaN/GaN LEDs subjected to high current pulses
[DE95-008824] p 2863 N95-31611

UNDERWATER EXPLOSIONS
Response of dual-layered structures subjected to shock pressure wave
[AD-A293731] p 2896 N95-31568

UNIFORM FLOW
Acceleration potential models PREDICHAT/PREDICDYN applied for calculation of axisymmetric dynamic inflow cases
[PB95-207015] p 2869 N95-30957

UNITED KINGDOM
Integration issues in modular mission management aid development p 2841 N95-32133

UNITED STATES
Mars together and FIRE and ICE: Report of the joint US/Russian technical working groups
[NASA-CR-198864] p 3030 N95-30845
An assessment of worldwide supercompuier usage
[DE95-009879] p 2932 N95-31645
Annual review of aircraft accident data: US general aviation calendar year 1993
[PB95-215828] p 2747 N95-31712
Aeronautics and space report of the President
[NASA-TM-110743] p 3028 N95-31979
Electronic combat and lethal defense suppression
p 2842 N95-32140

UNIVERSAL TIME
Time activities at the BIPM p 2968 N95-32325
A globally efficient means of distributing UTC time and frequency through GPS p 2970 N95-32335

UNIX (OPERATING SYSTEM)
UNIX and PC security in a network environment. UNINETT
[PB95-196291] p 2934 N95-30662
UNIX and PC security in a network environment. LOKALNETT 1993
[PB95-196309] p 2934 N95-30697
Improving data consistency in mobile computing using Isolation-Only Transactions
[AD-A293110] p 2948 N95-32021

UNLOADING
An explanation for the shape of nanoindentation unloading curves based on finite element simulation
[DE95-008905] p 2812 N95-30548
Experimental determination of probability distributions for parameters of a Salem limestone cap plasticity model
[AD-A290878] p 2892 N95-30559

UNSTEADY AERODYNAMICS
Development of a linearized unsteady Euler analysis for turbomachinery blade rows
[NASA-CR-4677] p 2742 N95-30611
Axial loads on yawed rotors
[PB95-214193] p 2742 N95-30638
Validation of the helicopter rotor code HERO
[PB95-198040] p 2751 N95-30838
Unsteady transonic wind tunnel test on a semispan straked delta wing, oscillating in pitch. Part 1: Description of the model, test setup, data acquisition, and data processing
[AD-A293113] p 2743 N95-30885
Unsteady flow simulations about moving boundary configurations using dynamic domain decomposition techniques p 2877 N95-31837
FPCAS3D User's guide: A three dimensional full potential aeroelastic program, version 1
[NASA-CR-198367] p 2899 N95-32205

UNSTEADY FLOW
Viscous diffusion of vorticity in unsteady wall layers using the diffusion velocity concept
[DE95-008537] p 2866 N95-30383
A numerical study of the starting process in a hypersonic shock tunnel p 2762 N95-30493

Electron-optical nonlinear interaction in asymmetric quantum-well laser heterostructures
[DE95-613443] p 2883 N95-30609
A turbulence model for steady and unsteady boundary layers in strong pressure gradients p 2868 N95-30840
Large eddy simulation of jets using structured upwind numerics p 2871 N95-30993
Stability prediction with rotational flow effects p 2799 N95-31283
Spectral element method for numerical simulation of unsteady laminar diffusion flames p 2794 N95-31333
Vorticity dynamics and control of dynamic stall
[AD-A288658] p 2756 N95-31400
Unsteady flow simulations about moving boundary configurations using dynamic domain decomposition techniques p 2877 N95-31837
Control of unsteady separated flow associated with the dynamic stall of airfoils
[NASA-CR-198972] p 2744 N95-32193

UNSTRUCTURED GRIDS (MATHEMATICS)
Multidimensional discretization of conservation laws for unstructured polyhedral grids
[DE95-008796] p 2955 N95-30470
Three-D mesh optimization methods for unstructured polyhedra
[DE95-008808] p 2955 N95-30471

URANIUM
Experiments with highly charged ions up to bare U(sup 92+) on the electron beam ion trap
[DE95-008827] p 2982 N95-31174
Excitation mechanisms of 2s(sub 1/2)-2p(sub 3/2) and 2p(sub 1/2)-2p(sub 3/2)in U(82+) through U(89+)
[DE95-010265] p 2993 N95-32042
Defect configurations in neutron-irradiated U3Si2
[DE95-009896] p 3016 N95-32105

URBAN DEVELOPMENT
Sustainability protects resources for future generations
[DE95-000285] p 2909 N95-31695

URBAN PLANNING
Sustainability protects resources for future generations
[DE95-000285] p 2909 N95-31695

URETHANES
Urethane foam process improvements
[DE95-008957] p 2815 N95-30798
A water blown urethane insulation for use in cryogenic environments p 2775 N95-31765

USER MANUALS (COMPUTER PROGRAMS)
Data management system: User's guide
[DE95-008692] p 3022 N95-30392
User's manual for the Scanning Fast Field Program (SCAFFIP) EOSAEL version 1.0
[AD-A291445] p 2933 N95-30397
MVP/GMVP: General purpose Monte Carlo codes for neutron and photon transport calculations based on continuous energy and multigroup methods
[DE95-722072] p 2979 N95-30656
SHEAT: A computer code for probabilistic seismic hazard analysis, user's manual
[DE95-717874] p 2913 N95-30758
Development of BERMUDA: A radiation transport code system. Part 3: A one-dimensional adjoint neutron transport code
[DE95-717875] p 2934 N95-30759
Neutron shielding point kernel integral calculation code for personal computer: PKN-pc
[DE95-717876] p 2980 N95-30760
RASSP benchmark 1 executable requirements user's manual
[AD-A290060] p 2935 N95-30931
QTSAW (Quick Typhoon Surge and Waves). Wave information studies of US coastlines
[AD-A293172] p 2919 N95-30976
Solid Modeling Aerospace Research Tool (SMART) user's guide, version 2.0
[NASA-TM-4431] p 2940 N95-31420
Synthetic Terrain Imagery for Helmet-Mounted Display. Volume 3: Software user's manual
[AD-A293613] p 2753 N95-31463
Network user's guide
[DE95-009185] p 2942 N95-31634
Penelope reference manual: Version 3-3 (C001). Includes Larch/Ada specification manual for sequential Ada (C002)
[AD-A289628] p 2942 N95-31683
PORK object system programmer's guide
[AD-A293596] p 2942 N95-31688
Operation of the computer model for direct atomic oxygen exposure of Earth satellites
[NASA-CR-198188] p 2767 N95-32189
FPCAS3D User's guide: A three dimensional full potential aeroelastic program, version 1
[NASA-CR-198367] p 2899 N95-32205
Computer model to simulate testing at the National Transonic Facility
[NASA-TM-4664] p 2763 N95-32217
BRUTUS: A program for conversion between image formats
[PB95-211421] p 2945 N95-32246
ASSIST user manual
[NASA-TM-4592] p 2948 N95-32250
Inversion of ERS-1 wavemode spectra. User's and programmer's guide
[PB95-223582] p 2902 N95-32316

USER REQUIREMENTS
RASSP benchmark 1 executable requirements user's manual
[AD-A290060] p 2935 N95-30931
An exploratory survey of information requirements for instrument approach charts
[AD-A293882] p 2749 N95-31520
Scalable ATM encryption
[DE95-009868] p 2948 N95-32065

V

V-22 AIRCRAFT
A case study of the teaming concept in the procurement of the V-22 aircraft
[AD-A293770] p 2752 N95-31578

V/STOL AIRCRAFT
Fabry-Perot interferometer measurement of static temperature and velocity for ASTOVL model tests
[NASA-TM-107014] p 2879 N95-30587

VACANCIES (CRYSTAL DEFECTS)
STM measurements of the interaction of vacancies and steps during low-energy-ion bombardment of Si(001)
[DE95-010935] p 3017 N95-32308

VACUUM
Two-loop vacuum amplitudes in a non-Abelian gauge theory on S(sub 4)
[DE95-616284] p 3018 N95-30436
X-band magnicon amplifier research at the Naval Research Laboratory
[AD-A293203] p 3013 N95-30984
Vacuum plume backflow and rarefaction p 2871 N95-30995

VACUUM CHAMBERS
Supplemental multilayer insulation research facility
[NASA-TM-106991] p 2768 N95-30595

VACUUM DEPOSITION
Development of germanium-silicon growth technology
[AD-A293199] p 3013 N95-30983

VACUUM EFFECTS
Instability of weak vacuum
[DE95-613590] p 2985 N95-31620

VACUUM SYSTEMS
Supplemental multilayer insulation research facility
[NASA-TM-106991] p 2768 N95-30595

VACUUM TESTS
Influence of strain rate and temperature on the mechanical behavior of iron aluminide-based alloys
[DE95-009426] p 2808 N95-31636

VALENCE
A valence-fluctuation mechanism with highly anisotropic S-wave pairing
[DE95-009419] p 3010 N95-30571

VALVES
Fast-acting valve for projective launching systems
[AD-D017357] p 2888 N95-30416

VANADIUM OXIDES
Low-voltage cathodoluminescence of europium-activated yttrium orthovanadate
[DE95-008536] p 3008 N95-30382

VANELESS DIFFUSERS
Laser anemometer measurements of the three-dimensional rotor flow field in the NASA low-speed centrifugal compressor
[NASA-TP-3527] p 2756 N95-31985

VAPOR DEPOSITION
Preparation of diisopropyl stibines and use thereof
[AD-D017419] p 2771 N95-30418
Electrochemical vapour deposition of SOFC interconnection materials
[PB95-197844] p 2812 N95-30459
Polarized Raman spectroscopy of chemically vapour deposited diamond films
[DE95-616776] p 2815 N95-30791
Development of germanium-silicon growth technology
[AD-A293199] p 3013 N95-30983
Synthesis and selected micro-mechanical properties of titanium nitride thin films by the pyrolysis of tetrakis titanium in ammonia
[DE95-010224] p 2818 N95-31187
X-ray diffraction study of clusters in a-tC films
[DE95-010860] p 2794 N95-31393
Self-lubricating, TiN-MoS2 composite coatings produced by simultaneous deposition from Ti((CH3))2N4/NH3/MoF6H2S gas mixture
[DE95-010359] p 2788 N95-31403
An analysis of gas phase ethanol/water chemistry for diamond CVD
[AD-A293009] p 2795 N95-31473
Silicon carbide-silicon heterostructure solar cells p 2905 N95-31952
Models of transport, gas-phase and surface chemistry in diamond chemical vapor deposition
[DE95-009861] p 2822 N95-32101
GCMS and FTIR studies of by-product inhibited growth and the rate-limiting step in TEOS-based SiO2 CVD
[DE95-009863] p 3016 N95-32147
Metallic multilayers at the nanoscale
[DE95-011534] p 3016 N95-32284
Optimal heat transfer design of chemical vapor deposition reactors
[DE95-010997] p 2878 N95-32309

VAPOR PHASES
State resolved dynamics of ion-molecule collisions in a flowing afterglow
[AD-A290895] p 2976 N95-30410
Modeling of thermal, electronic, hydrodynamic, and dynamic deposition processes for pulsed-laser deposition of thin films
[DE95-008906] p 2813 N95-30572
A study of gas-phase processes during the deflagration of RDX composite propellants using a triple quadrupole mass spectrometer p 2801 N95-31304
A study of the gas-phase processes of RDX combustion using a triple quadrupole mass-spectrometer p 2801 N95-31315
An analysis of gas phase ethanol/water chemistry for diamond CVD
[AD-A293009] p 2795 N95-31473
The physical and chemical processes governing CO2 laser-induced pyrolysis and combustion of the solid propellants RDX, ADN, XM39, and M43 p 2836 N95-31531
Effects of gas-phase thermal expansion on the stability of deflagration through a porous energetic material
[DE95-004382] p 2797 N95-31824
Models of transport, gas-phase and surface chemistry in diamond chemical vapor deposition
[DE95-009861] p 2822 N95-32101
GCMS and FTIR studies of by-product inhibited growth and the rate-limiting step in TEOS-based SiO2 CVD
[DE95-009863] p 3016 N95-32147

VAPOR PRESSURE
Replacement of ozone depleting and toxic chemicals in gravimetric analysis of non-volatile residue p 2780 N95-31793

VAPORS
The effect of gravity on the deposition of thin films: The physical vapor transport of copper phthalocyanine
[AD-A292997] p 2838 N95-31472

VARIABILITY
Luminance effects on visual acuity and small letter contrast sensitivity
[AD-A293310] p 2928 N95-31140
Voyager GO program
[NASA-CR-189435] p 3029 N95-31424
Measurements of ionospheric variability
[AD-A293495] p 2915 N95-31535

VARISTORS
Voltage surge suppression power circuits
[AD-D017454] p 2860 N95-30726

VECTOR ANALYSIS
Bifurcations of contracting singular cycles
[DE95-613371] p 2962 N95-32117

VECTOR MESONS
Applications of chiral symmetry
[DE95-009552] p 2988 N95-32079

VECTOR PROCESSING (COMPUTERS)
Cesar3 MALU library
[PB95-211363] p 2933 N95-30598
MVP/GMVP: General purpose Monte Carlo codes for neutron and photon transport calculations based on continuous energy and multigroup methods
[DE95-722072] p 2979 N95-30656

VECTOR SPACES
Co-groups on sequentially complete, locally convex, topological vector spaces in particular on strict LF-spaces
[PB95-206918] p 2966 N95-30681
Exact smooth classification of Hamiltonian vector fields on symplectic 2-manifolds
[DE95-613378] p 2958 N95-30803

VECTORS (MATHEMATICS)
Integrals of motion in the two Killing vector reduction of general relativity
[DE95-616281] p 3018 N95-30431

VEGETATION GROWTH
Application of shallow shell stability to plant morphogenesis by Fourier series p 2897 N95-31734

VEINS
Arterial gas bubbles after decompression in pigs with Patent Foramen Ovale
| PB95-195319 | p 2925 N95-30515
VELOCITY DISTRIBUTION
An experimental and numerical study on the structure and extinction of laminar premixed flames
p 2792 N95-30670
Effect of velocity and temperature distribution at the hole exit on film cooling of turbine blades
| NASA-TM-106954 | p 2755 N95-30702
Assessment of the NASA orbital debris engineering model
| AD-A293350 | p 2766 N95-31143
On the interactions between particles and turbulence in a fully-developed channel flow in air
p 2875 N95-31707
The effect of ray curvature on Lloyd's mirror fringe estimates and source localisation
| DSTO-TR-0064 | p 3001 N95-31745
Laser anemometer measurements of the three-dimensional rotor flow field in the NASA low-speed centrifugal compressor
| NASA-TP-3527 | p 2756 N95-31985
Objective analysis of oceanic data for Coast Guard trajectory models
| AD-A292884 | p 2924 N95-32363
VELOCITY MEASUREMENT
Fabry-Perot interferometer measurement of static temperature and velocity for ASTOVL model tests
| NASA-TM-107014 | p 2879 N95-30587
Laser anemometer measurements of the three-dimensional rotor flow field in the NASA low-speed centrifugal compressor
| NASA-TP-3527 | p 2756 N95-31985
Spatially-resolved velocity measurements in steady, high-speed, reacting flows using laser-induced OH fluorescence p 2877 N95-32109
VENEERS
Analysis of variation embedding tests with 17 MM dowel: Densified veneer wood FOREST project, part 7
| PB95-206876 | p 2963 N95-30680
VENTILATION
Demonstration of split-flow ventilation and recirculation as flow-reduction methods in an Air Force paint spray booth, volume 2
| AD-A286808 | p 2762 N95-30926
Demonstration of split-flow ventilation and recirculation as flow-reduction methods in an Air Force paint spray booth, volume 1
| AD-A286807 | p 2763 N95-31101
VERTICAL DISTRIBUTION
Vertical transport in GaAs/AlGaAs superlattices
p 3012 N95-30822
VERTICAL LANDING
Automatic flight control system for an unmanned helicopter system design and flight test results
p 2759 N95-32004
VERTICAL MOTION SIMULATORS
Moving base simulation of an integrated flight and propulsion control system for an ejector-augmentor STOVL aircraft in hover
| NASA-TM-108867 | p 2750 N95-30646
VERY HIGH FREQUENCIES
Investigation into the effects of VHF and UHF band radiation on Hewlett-Packard (HP) Cesium Beam Frequency Standards p 2970 N95-32332
VERY LARGE SCALE INTEGRATION
System considerations for efficient communication and storage of MSTI image data
| NASA-CR-198869 | p 3024 N95-30858
Decimation of encoding errors in an optimum SNS 2 micron low-noise CMOS ADC
| AD-A293208 | p 2860 N95-30900
Analog preprocessing in a SNS 2 micrometers low-noise CMOS folding ADC
| AD-A293356 | p 2849 N95-30954
VESTIBULES
Physiology and physiopathology of equilibration
| PB95-208328 | p 2926 N95-30494
VHSIC (CIRCUITS)
RASSP benchmark 1 executable requirements user's manual
| AD-A290060 | p 2935 N95-30931
VIBRATION
Low vibration polymeric composite engine
| AD-D017332 | p 2887 N95-30386
Vibration-damping structural component
| AD-D017376 | p 2784 N95-30661
Specific rate coefficients from vibrational overtone activation of 1-methylcyclopropene
| AD-A288755 | p 2793 N95-31014
VIBRATION DAMPING
Computerized design of controllers using data models
| NASA-CR-198921 | p 2950 N95-30655
Vibration-damping structural component
| AD-D017376 | p 2784 N95-30661
Minimizing structural vibrations with Input Shaping (TM)
| NASA-CR-189439 | p 2893 N95-30786
Control of flexible spacecraft structures using H-infinity wave absorbing control
| AD-A293141 | p 2766 N95-30919
Finite element analysis of damped vibrations of laminated composite plates
| ISBN-0-315-84928-2 | p 2789 N95-31731
Vibration control for precision manufacturing at Sandia National Laboratories
| DE95-009582 | p 2839 N95-32082
Vibration control of spacecrafts and space structures from lift-off to on-orbit environments
p 2767 N95-32110
Vibration reduction in helicopter rotors using an actively controlled partial span trailing edge flap located on the blade p 2762 N95-32111
VIBRATION ISOLATORS
Vibration isolation mount with locking means
| AD-D017367 | p 2888 N95-30532
Vibration control of spacecrafts and space structures from lift-off to on-orbit environments
p 2767 N95-32110
VIBRATION MODE
Advanced system identification techniques for wind turbine structures
| DE95-004049 | p 2902 N95-30505
Analytic and experimental investigation of rotordynamic response and backward whirl induced by split resonance
| AD-A293639 | p 2889 N95-31566
VIBRATION TESTS
Analytic and experimental investigation of rotordynamic response and backward whirl induced by split resonance
| AD-A293639 | p 2889 N95-31566
VIBRATIONAL SPECTRA
The theoretical calculation of vibrational circular dichroism spectra
| AD-A293614 | p 2798 N95-32258
VIBRATIONAL STATES
Flow models for the design of a hypersonic iodine vapor wind tunnel nozzle with chemical and vibrational nonequilibrium effects p 2742 N95-30448
Energy transfer dynamics in isolated and colliding highly vibrationally excited molecules
| AD-A293304 | p 2981 N95-30952
Comparison of DSMC predictions with temporally resolved vibrational state measurements in NO
p 2872 N95-30996
VIBRATORY LOADS
Vibration reduction in helicopter rotors using an actively controlled partial span trailing edge flap located on the blade p 2762 N95-32111
VIDEO COMMUNICATION
Multi-dimensional data compression for portable communication
| AD-A292751 | p 2850 N95-31426
VIDEO EQUIPMENT
Apparent size passive range method
| AD-D017360 | p 2753 N95-31180
VIDICONS
Video conferencing using DAVE user's guide
| DE95-010341 | p 2854 N95-32045
VIKING LANDER SPACECRAFT
Structural analyses of the JPL Mars Pathfinder impact
| DE95-009581 | p 2767 N95-32081
VIRTUAL PROPERTIES
Form factor of the process gamma(*) gamma(*) yields pi(sup 0) for small virtuality of one of the photons and QCD sum rules (2): Sum rule
| DE95-613629 | p 2988 N95-32078
VIRTUAL REALITY
Virtual Reality Software and Technology '94
| AD-A292334 | p 2939 N95-31262
Visual tracking of self-occluding articulated objects
| AD-A292894 | p 2928 N95-31383
Design and integration issues of visually-coupled evaluation
| AD-A293521 | p 2931 N95-31538
VISCOELASTIC DAMPING
Vibration-damping structural component
| AD-D017376 | p 2784 N95-30661
A finite element formulation for the time domain vibration analysis of an elastic-viscoelastic structure
p 2895 N95-31318
Finite element analysis of damped vibrations of laminated composite plates
| ISBN-0-315-84928-2 | p 2789 N95-31731
VISCOELASTICITY
A viscoelastic anisotropic wave propagation model for composite cure evaluation p 2786 N95-30839
A finite element formulation for the time domain vibration analysis of an elastic-viscoelastic structure
p 2895 N95-31318
Numerical simulation of time dependent viscoelastic fluid flow
| TRITA-NA-9311 | p 2873 N95-31414
Some aspects on the modelling of non-Newtonian fluid flow
| TRITA-NA-9317 | p 2873 N95-31415
Mode I large strain viscoelastic crack behavior in nitrile rubber sheets
| AD-A289984 | p 2820 N95-31617
Nonlinear dynamics and chaotic motions of a singularly perturbed nonlinear viscoelastic beam
p 2897 N95-31706
VISCOPLASTICITY
Predictions of tensile behavior and strengths of a Si3N4 ceramic at high temperatures based on a viscoplastic model
| DE95-010220 | p 2821 N95-32025
VISCOSITY
Small scale turbulence in a plane mixing layer
p 2866 N95-30449
A study of numerical solutions of conservation laws
| TRITA-NA-9315 | p 2960 N95-31361
Evaluation of Environmentally Acceptable hydraulic fluids
| AD-A293037 | p 2821 N95-31666
VISCOUS FLOW
Viscous diffusion of vorticity in unsteady wall layers using the diffusion velocity concept
| DE95-008537 | p 2866 N95-30383
A numerical study of the starting process in a hypersonic shock tunnel p 2762 N95-30493
Numerical study of shear-induced heating in high-speed nozzle flow of liquid monopropellant
p 2828 N95-31207
VISCOUS FLUIDS
Viscous heating of liquid layers under intense shear
p 2827 N95-31206
VISIBILITY
Visual tracking of self-occluding articulated objects
| AD-A292894 | p 2928 N95-31383
Initial evaluation of the Oregon State University planetary boundary layer column model for ITWS applications
| AD-A293775 | p 2920 N95-31465
Evaluation of alternative pavement marking materials
| AD-A292973 | p 2763 N95-31468
VISIBLE SPECTRUM
Ultraviolet and visible lasers: Rare earth-doped waveguide devices and non-linear optical extraction techniques
| AD-A293976 | p 2885 N95-31528
Cepheid temperature and the Blazhko effect
| NASA-CR-189433 | p 3030 N95-31819
VISION
Laser induced vitreoretinal scarring. Evaluation of causative factors and a therapeutic approach
| AD-A293742 | p 2928 N95-31570
VISUAL ACUITY
Luminance effects on visual acuity and small letter contrast sensitivity
| AD-A293310 | p 2928 N95-31140
VISUAL PERCEPTION
Design and integration issues of visually-coupled evaluation
| AD-A293521 | p 2931 N95-31538
VISUAL PIGMENTS
High speed random access, Fourier transform holographic associative and high density two-photon three-dimensional optical memories based on bacteriorhodopsin
| AD-A293389 | p 2931 N95-30967
VOLATILITY
Air pollution control system research: An iterative approach to developing affordable systems
p 2773 N95-31759
VOLCANOES
Properties of new materials relevant to energy and fuel research
| AD-A289734 | p 2825 N95-31149
VOLTMETERS
Development of a method for measurement of triboelectric charging
| PB95-211322 | p 2859 N95-30633
VOLUMETRIC ANALYSIS
Volumetric and electro analytical techniques for chemical characterization of nuclear grade Ag-In-Cd alloys
| DE95-620664 | p 2807 N95-31407
VON KARMAN EQUATION
Studies in non-linear multi-mode responses of harmonically excited rectangular plates with internal resonances p 2895 N95-31331
VORTEX BREAKDOWN
Numerical investigation into vortical flow about a delta-wing configuration up to incidences at which vortex breakdown occurs in experiment
| PB95-198024 | p 2743 N95-30837

VORTEX GENERATORS
A wind tunnel investigation of the effects of micro-vortex generators and Gurney flaps on the high-lift characteristics of a business jet wing
[NASA-TM-110626] p 2750 N95-30827
VORTEX SHEDDING
Validation of the helicopter rotor code HERO
[PB95-198040] p 2751 N95-30838
VORTICES
Advances in the simulation of toroidal gyro Landau fluid model turbulence
[DE95-008387] p 3003 N95-30359
Small scale turbulence in a plane mixing layer p 2866 N95-30449
A wind tunnel investigation of the effects of micro-vortex generators and Gurney flaps on the high-lift characteristics of a business jet wing
[NASA-TM-110626] p 2750 N95-30827
Navier-Stokes flow field analysis of compressible flow in a high pressure safety relief valve
[NASA-TM-110640] p 2868 N95-30862
Unsteady transonic wind tunnel test on a semispan straked delta wing, oscillating in pitch. Part 1: Description of the model, test setup, data acquisition, and data processing
[AD-A293113] p 2743 N95-30885
Large eddy simulation of jets using structured upwind numerics p 2871 N95-30993
A pulsed liquid fuel ramjet p 2756 N95-31201
Dynamics of Current Driven Disordered Josephson Junction Arrays
[DE95-009418] p 3014 N95-31231
Stability prediction with rotational flow effects p 2799 N95-31283
Inductively coupled IR staring array based on photofluxonic pixels
[AD-A292784] p 2998 N95-31435
Initial evaluation of the Oregon State University planetary boundary layer column model for ITWS applications
[AD-A293775] p 2920 N95-31465
Application of multigrid computational fluid dynamics (CFD) methods to rotor analysis
[AD-A293012] p 2874 N95-31475
Large-eddy simulation of turbulent flow using the finite element method
[DE95-009464] p 2875 N95-31591
The study of flame-vortex interactions using a particle image velocimeter p 2796 N95-31709
Experimental and computational investigation of the tip clearance flow in a transonic axial compressor rotor
[NASA-TM-106711] p 2876 N95-31738
Flight evaluation of forebody vortex control in post-stall flight p 2752 N95-32003
VORTICITY
Viscous diffusion of vorticity in unsteady wall layers using the diffusion velocity concept
[DE95-008537] p 2866 N95-30383
Velocity boundary conditions for vorticity formulations of the incompressible Navier-Stokes equations
[DE95-008715] p 2868 N95-30464
Hot jet/wake turbulent structure and laser propagaion. Part 1: Jet/wake turbulence modeling p 2871 N95-30991
Stability prediction with rotational flow effects p 2799 N95-31283
Vorticity dynamics and control of dynamic stall
[AD-A288658] p 2756 N95-31400
VOWELS
Automation of the control of acoustic parameters in a digital speech synthesizer
[IFTR-2/1995] p 2850 N95-31357
The contextual variance of devoiced fricatives in polish
[IFTR-7/1995] p 2854 N95-32192
VOYAGER PROJECT
Voyager GO program
[NASA-CR-189435] p 3029 N95-31424
VOYAGER 1 SPACECRAFT
Determination of the position of Jupiter from radio metric tracking of Voyager 1 p 2854 N95-32222
VULNERABILITY
Recommendations for protecting National Library of Medicine Computing and Networking Resources
[DE95-011554] p 3026 N95-32285

W

WAFERS
Photovoltaic Czochralski silicon manufacturing technology improvements
[DE95-004066] p 2904 N95-31162
WAKES
Role of free-surface boundary conditions and nonlinearities in wave/boundary-layer and wake interaction p 2872 N95-31317
Initial evaluation of the Oregon State University planetary boundary layer column model for ITWS applications
[AD-A293775] p 2920 N95-31465
Space systems environmental interaction studies
[AD-A293826] p 2766 N95-31553
WALL FLOW
An experimental study of planar heterogeneous supersonic confined jets
[AD-A290859] p 2867 N95-30557
A turbulence model for steady and unsteady boundary layers in strong pressure gradients p 2868 N95-30840
Shear-free turbulent boundary layers p 2873 N95-31349
Experimental and computational investigation of the tip clearance flow in a transonic axial compressor rotor
[NASA-TM-106711] p 2876 N95-31738
WALL PRESSURE
Application of wavelet-filtering techniques to intermittent turbulent and wall pressure events. Part 2. Detection of cluster patterns
[AD-A293805] p 2875 N95-31586
WALL TEMPERATURE
Numerical study of shear-induced heating in high-speed nozzle flow of liquid monopropellant p 2828 N95-31207
WALLS
Viscous diffusion of vorticity in unsteady wall layers using the diffusion velocity concept
[DE95-008537] p 2866 N95-30383
The HYLIFE-2 inertial fusion energy power plant concept and implications for IFE
[DE95-010561] p 2994 N95-32074
WARFARE
Study of Extended Air Defence Post 2000 p 2839 N95-32124
Possible allied ballistic missile defense systems: Related guidance and control requirements p 2840 N95-32126
Design of surveillance and multisensor anti-aerial systems p 2841 N95-32134
Using a Red Team to devise countermeasures p 2842 N95-32141
WARNING SYSTEMS
Time aspects of the European Complement to GPS: Continental and transatlantic experimental phases p 2969 N95-32328
WASHERS (CLEANERS)
Aqueous cleaning and verification processes for precision cleaning of small parts p 2779 N95-31787
WASTE DISPOSAL
Producing usable fuel from municipal solid waste
[DE95-008405] p 2902 N95-30375
Environmental projects. Volume 16: Waste minimization assessment
[NASA-CR-198861] p 2909 N95-31651
Manufacturing waste disposal practices of the chemical propulsion industry p 2771 N95-31748
Enhanced alkaline hydrolysis and biodegradability studies of nitrocellulose-bearing missile propellant p 2772 N95-31752
LLW solidification in cement: Effect of dilution
[DE95-010108] p 2798 N95-32091
WASTE ENERGY UTILIZATION
Publications of the Fossil Energy Advanced Research and Technology Development Materials Program: April 1, 1993-March 31, 1995
[DE95-009200] p 2903 N95-30745
WASTE TREATMENT
Environmental projects. Volume 16: Waste minimization assessment
[NASA-CR-198861] p 2909 N95-31651
Technology transfer into the solid propulsion industry p 2770 N95-31756
Treatment of plastic media waste p 2844 N95-32177
Bioremediation of wheat starch media waste p 2845 N95-32178
Waste minimization via preparative scale high performance gel permeation chromatography
[DE95-011797] p 2798 N95-32360
WASTE UTILIZATION
Producing usable fuel from municipal solid waste
[DE95-008405] p 2902 N95-30375
WASTE WATER
Aqueous TiO2 photocatalysis of metal-EDTA complexes
[DE95-011058] p 2793 N95-31113
WATER
On-line surfactant monitoring
[DE95-009417] p 2792 N95-30735
Field performance of the Walker Branch throughfall displacement experiment
[DE95-008677] p 2908 N95-30793
The impact of microbiologically influenced corrosion on protective polymer coatings
[AD-A268896] p 2816 N95-30997
The oxidation of carbon monoxide by nitrogen dioxide p 2801 N95-31310
Study of melting and freezing processes of water for application to ice thermal energy storage system p 2905 N95-31735
A water blown urethane insulation for use in cryogenic environments p 2775 N95-31765
Waterjet processes for coating removal p 2777 N95-31779
Ultra-high pressure water jetting for coating removal and surface preparation p 2778 N95-31780
Evaluation of pressurized water cleaning systems for hardware refurbishment p 2778 N95-31782
Faster, cheaper radioanalytical methods
[DE95-009913] p 2797 N95-32061
Water blasting paint removal methods p 2843 N95-32170
WATER COLOR
SeaWiFS Technical Report Series. Volume 29: SeaWiFS CZCS-type pigment algorithm
[NASA-TM-104566] p 2922 N95-30857
SeaWiFS technical report series. Volume 13: Case studies for SeaWiFS calibration and validation, part 1
[NASA-TM-104566-VOL-13] p 2924 N95-32220
WATER FLOW
Spatial time-series: Pollution pattern recognition under irregular interventions
[AD-A293830] p 2909 N95-31556
WATER MANAGEMENT
Geostatistics and hydrology. Part 3. Hydro-meteorological network design
[PB95-206462] p 2900 N95-30818
Geostatistics and hydrology. Part 1: Spatial and temporal variability. Communications of the Sanitary Engineering and Water Management Division
[PB95-206470] p 2900 N95-30819
WATER POLLUTION
Spatial time-series: Pollution pattern recognition under irregular interventions
[AD-A293830] p 2909 N95-31556
WATER RESOURCES
Geostatistics and hydrology. Part 3. Hydro-meteorological network design
[PB95-206462] p 2900 N95-30818
WATER RUNOFF
Multiparameter radar measurements of precipitation in complex terrain: Meteorological and hydrological applications
[AD-A290786] p 2918 N95-30403
WATER TREATMENT
Aqueous TiO2 photocatalysis of metal-EDTA complexes
[DE95-011058] p 2793 N95-31113
Water blasting paint removal methods p 2843 N95-32170
WATER TUNNEL TESTS
Study of effect of bubbles on a free-shear layer p 2872 N95-31100
An investigation of the side-dump dual in-line ramjet combustor p 2756 N95-31199
WATER VAPOR
The oxidation of carbon monoxide by nitrous oxide p 2801 N95-31309
Brightness temperature simulations for the physical and synoptic interpretation of advanced microwave sounding unit moisture channels p 2921 N95-31721
Feasibility of tropospheric water vapor profiling using infrared heterodyne differential absorption lidar
[DE95-009647] p 2917 N95-32142
WATER WAVES
The determination of wave group parameters from the resolution of incident and reflected waves
[AD-A293703] p 2924 N95-31829
WATERSHEDS
Field performance of the Walker Branch throughfall displacement experiment
[DE95-008677] p 2908 N95-30793
WATERWAVE ENERGY CONVERSION
Production simulator for wave power plants
[PB95-212262] p 2907 N95-32286
WAVE AMPLIFICATION
Aspects of the magnetospheric amplification phenomenon in ducted whistler-mode waves p 2916 N95-31718
WAVE ATTENUATION
Point reflector model for the simulation of radar target glint and Doppler phenomena
[PB95-222980] p 2857 N95-32314
WAVE DEGRADATION
Degradation in finite-harmonic subcarrier demodulation p 2855 N95-32228
WAVE DIFFRACTION
Reflection and diffraction of atomic de Broglie waves by evanescent laser waves. Bare-state method
[DE95-616458] p 2992 N95-30960

WAVE EQUATIONS
Introduction to the theory of Goyaks: Operator manifold approach to geometry and particle physics
[DE95-613460] p 2980 N95-30740
Calculated coupling efficiency between an elliptical-core optical fiber and an optical waveguide over temperature
[NASA-TM-107005] p 2997 N95-30849
Fast multipole methods for scattering computations
[AD-A291093] p 2848 N95-30869
A study of numerical solutions of conservation laws
[TRITA-NA-9315] p 2960 N95-31361
WAVE EXCITATION
Generation of earthquake signals
[PB95-211223] p 2913 N95-30631
Effects of temperature, frequency, flux density, and excitation waveform on the core loss and dynamic B-H loops of supermalloy
[NASA-TM-106982] p 2865 N95-32207
WAVE FRONTS
Wavefront simulator for evaluating RF communication array signal processors
[AD-D017372] p 2847 N95-30660
WAVE FUNCTIONS
The interaction of magnetizations with an external electromagnetic field and a time-dependent magnetic Aharonov-Bohm effect
[DE95-613463] p 2845 N95-30368
Quantum dynamics in regions of quaternionic curvature
[DE95-616276] p 3018 N95-30426
Schwinger-boson studies of the single hole motion in a 2D quantum antiferromagnet
[DE95-614444] p 3016 N95-32071
WAVE GENERATION
Gravitational waves from inspiralling compact binaries: Energy loss and waveform to second-post-Newtonian order
[PB95-207890] p 2913 N95-30590
WAVE INTERACTION
Modeling and parameterization of gravity wave breaking, interactions, and instability processes in the lower and middle atmosphere
[AD-A292740] p 2914 N95-31278
Role of free-surface boundary conditions and nonlinearities in wave/boundary-layer and wake interaction p 2872 N95-31317
Space systems environmental interaction studies
[AD-A293826] p 2766 N95-31553
WAVE PACKETS
Instability of weakly nonlinear chaotic structures
[DE95-613441] p 2966 N95-32066
WAVE PROPAGATION
Interferometry with particles of non-zero rest mass: Topological experiments
[DE95-616244] p 2979 N95-30689
Propagation and scattering of elastic waves in laminated circular cylinders
[ISBN-0-315-85957-1] p 2848 N95-30828
A viscoelastic anisotropic wave propagation model for composite cure evaluation p 2786 N95-30839
Wave propagation in a fluid-loaded homogeneous, transversely isotropic, elastic cylinder of arbitrary thickness
[AD-A292728] p 2869 N95-30946
Direct and inverse problems in random media
[AD-A293033] p 2850 N95-31280
Numerical studies of nonlinear optical pulse propagation p 2998 N95-31411
Response of dual-layered structures subjected to shock pressure wave
[AD-A293731] p 2896 N95-31568
The effects of large and small scale turbulence on sound propagation in the atmosphere
[AD-A293657] p 2975 N95-31608
WAVE REFLECTION
On reflection of Alfven waves in the solar wind
[NASA-TM-110642] p 3031 N95-30582
Reflection and diffraction of atomic de Broglie waves by evanescent laser waves. Bare-state method
[DE95-616458] p 2992 N95-30960
Plane wave reflection from a uniaxial chiral quarter-wave polarization transformer
[PB95-206512] p 2849 N95-31159
Reflection and transmission of electromagnetic plane waves from a uniaxial chiro-omega slab
[PB95-206629] p 2853 N95-31649
Materials with controllable signature properties
[PB95-222964] p 2857 N95-32313
WAVE SCATTERING
Propagation and scattering of elastic waves in laminated circular cylinders
[ISBN-0-315-85957-1] p 2848 N95-30828
WAVE-PARTICLE INTERACTIONS
Perpendicular electron heating by absorption of auroral kilometric radiation
[NASA-198815] p 2914 N95-30848
Aspects of the magnetospheric amplification phenomenon in ducted whistler-mode waves p 2916 N95-31718
WAVEFORMS
Gravitational waves from inspiralling compact binaries: Energy loss and waveform to second-post-Newtonian order
[PB95-207890] p 2913 N95-30590
Statistical interface for chaotic signal in noise
[AD-A290271] p 2848 N95-30932
Seismic studies of subducted lithosphere p 2915 N95-31335
Effects of temperature, frequency, flux density, and excitation waveform on the core loss and dynamic B-H loops of supermalloy
[NASA-TM-106982] p 2865 N95-32207
WAVEGUIDE ANTENNAS
DSS-24 microwave holography measurements p 2857 N95-32239
Fiber optic reference frequency distribution to remote beam waveguide antennas p 2972 N95-32346
WAVEGUIDES
Fractional delay waveguide modeling of acoustic tubes
[PB95-206637] p 2975 N95-31650
WAVELET ANALYSIS
Potential integral equations of the 2D Laplace operator in wavelet basis
[TRITA-NA-9401] p 2957 N95-30713
Fast algorithms for three-dimensional inverse scattering problems
[AD-A293510] p 2852 N95-31537
Application of wavelet-filtering techniques to intermittent turbulent and wall pressure events. Part 2. Detection of cluster patterns
[AD-A293805] p 2875 N95-31586
WEAK INTERACTIONS (FIELD THEORY)
Dynamical analogy of Cabibbo-Kobayashi-Maskawa matrices
[DE95-613462] p 2975 N95-30367
New tensor interaction and the K(sub L) - K(sub S)mass difference
[DE95-613597] p 2845 N95-30370
Introduction to the theory of Goyaks: Operator manifold approach to geometry and particle physics
[DE95-613460] p 2980 N95-30740
Study of the generalized solutions of n-body type problems with weak forces
[DE95-613381] p 2958 N95-30820
Renormcharges in V-A theories
[DE95-613689] p 2985 N95-31622
WEAPON SYSTEMS
Major weapon system environmental life-cycle cost estimating for Conservation, Cleanup, Compliance and Pollution Prevention (C3P2) p 2774 N95-31761
Vibration control for precision manufacturing at Sandia National Laboratories
[DE95-009582] p 2839 N95-32082
SOSIE: A pragmatic approach to the simulation of Broad Air Defense applied to the theater level p 2840 N95-32127
TMD detection and tracking using improved AWACS sensors p 2840 N95-32128
Infrared and millimeter wave detection using thin films of Pb doped BiSrCaCuO superconductor p 2840 N95-32129
Acquisition, tracking, pointing and fire control for Ballistic Missile Defense p 2841 N95-32131
The High Altitude Balloon Experiment demonstration of acquisition, tracking, and pointing technologies (HABE-ATP) p 2841 N95-32132
Design of surveillance and multisensor anti-aerial systems p 2841 N95-32134
Architecture and implementation of a multi-sensor data fusion demonstration model within the real-time combat system of the Canadian Patrol Frigate p 2842 N95-32139
WEAPONS DELIVERY
Improved altimeter settings for A-10 aircraft
[AD-A293142] p 2753 N95-30920
WEAPONS DEVELOPMENT
A case study of the teaming concept in the procurement of the V-22 aircraft
[AD-A293770] p 2752 N95-31578
Report to the Chairman, Legislation and National Security Subcommittee, Committee on Government Operations, House of Representatives. Unmanned aerial vehicles: Performance of short-range system still in question
[GAO/NSIAD-94-65] p 2752 N95-32196
WEAR
Composite structure forming a wear surface
[AD-D017462] p 2785 N95-30749
WEAR RESISTANCE
Structural investigation of xenon ion-beam-irradiated glassy carbon
[DE95-616777] p 2977 N95-30474
Brush seal shaft wear resistant coatings
[NASA-CR-198950] p 2889 N95-31382
Evaluation of Environmentally Acceptable hydraulic fluids
[AD-A293037] p 2821 N95-31666
WEAR TESTS
Brush seal shaft wear resistant coatings
[NASA-CR-198950] p 2889 N95-31382
WEATHER
Initial evaluation of the Oregon State University planetary boundary layer column model for ITWS applications
[AD-A293775] p 2920 N95-31465
WEATHER FORECASTING
Weather influence on passive microwave brightness temperatures
[PB95-195384] p 2900 N95-30536
Forecast of Atlantic seasonal hurricane activity for 1994 p 2918 N95-30832
Summary of 1993 Atlantic tropical cyclone activity and verification of author's forecast. A year of unanticipated light hurricane activity and a poor forecast: The expected dissipation of the El Nino did not take place and Caribbean basin surface pressure became quite high p 2918 N95-30842
Early August updated forecast of Atlantic seasonal hurricane activity for 1994 p 2919 N95-30844
Offshore next generation weather radar (NEXRAD) OT&E integration and OT&E operational test
[AD-A293223] p 2848 N95-30902
Clouds: Their prediction and simulation
[AD-A292864] p 2920 N95-31453
Integrated terminal weather system (ITWS) demonstration and validation operational test and evaluation
[AD-A293932] p 2749 N95-31521
WEATHER STATIONS
The ATC operational evaluation of the prototype integrated terminal weather system (ITWS) at Dallas/Fort Worth and Orlando airports (May-September 1993)
[AD-A293808] p 2921 N95-31587
WEIBULL DENSITY FUNCTIONS
A new goodness-of-fit test for the gamma distribution based on sample spacings from complete and censored samples
[AD-A293875] p 2961 N95-31518
A Stochastic EM algorithm for approximating the maximum likelihood estimate
[DE95-010328] p 2943 N95-32044
WEIGHTING FUNCTIONS
Metafitting: Weight optimization for least-squares fitting of PTTI data p 2971 N95-32340
WELD TESTS
Advanced small rocket chambers. Option 3: 110 1bf Ir-Re rocket, volume 1
[NASA-CR-195435-VOL-1] p 2768 N95-31169
WELDED JOINTS
Stress and strain concentration factors of welded multiplanar joints between square hollow sections
[PB95-208260] p 2892 N95-30492
Fatigue behaviour of multiplanar tubular joints
[PB95-207874] p 2893 N95-30586
Evaluation on materials performance of Hastelloy Alloy XR for HTTR uses. 4: Tensile properties of base metals and welded joints
[DE95-721871] p 2804 N95-30761
WELDED STRUCTURES
Residual stress distribution in FeAl weld overlay on steel
[DE95-009178] p 2899 N95-32317
WELDING
Coupling stud assembly
[AD-D017335] p 2887 N95-30387
Fatigue behaviour of multiplanar tubular joints
[PB95-207874] p 2893 N95-30586
Residual stresses and stress corrosion cracking in pipe fittings
[DE95-009332] p 2894 N95-31054
Welding isotopic heat sources for the cassini mission to Saturn
[DE95-060104] p 2890 N95-32367
WENTZEL-KRAMER-BRILLOUIN METHOD
On reflection of Alfven waves in the solar wind
[NASA-TM-110642] p 3031 N95-30582
WETTABILITY
Wettability of boron carbide
[PB95-196358] p 2802 N95-30518
WHEAT
Dry media blasting with wheat starch p 2843 N95-32169
Bioremediation of wheat starch media waste p 2845 N95-32178

WHISKER COMPOSITES
Whisker reinforced glass ceramic
[DE95-010542] p 2823 N95-32305
WHISTLERS
Aspects of the magnetospheric amplification phenomenon in ducted whistler-mode waves
p 2916 N95-31718
WHITE LIGHT HOLOGRAPHY
A real time method for Fourier transform holographic information storage
[AD-A293186] p 2880 N95-30980
WHITE NOISE
Generation of earthquake signals
[PB95-211223] p 2913 N95-30631
Automatic Target Recognition (ATR): Background statistics and the detection of targets in clutter
[AD-A293062] p 2853 N95-31673
Rate considerations in deep space telemetry
p 2765 N95-32223
WIND (METEOROLOGY)
Development of a novel wind lidar, phase 1
[AD-A292703] p 2849 N95-30935
Global Ultraviolet Imager (GUVI) investigation
[NASA-CR-189430] p 2917 N95-31820
Simulation of katabatic flow and mountain waves
[DE95-010863] p 2911 N95-32276
WIND EFFECTS
Advanced system identification techniques for wind turbine structures
[DE95-004049] p 2902 N95-30505
WIND MEASUREMENT
Development of a novel wind lidar, phase 1
[AD-A292703] p 2849 N95-30935
LAWS hurricane studies
[NASA-CR-189438] p 2919 N95-31128
Mexico Wind Resource Assessment Project
[DE95-009202] p 2921 N95-31726
WIND SHEAR
Terminal doppler weather radar (TDWR) build 5B operational test and evaluation (OT&E) integration and OT&E operational test plan
[AD-A293251] p 2848 N95-30910
WIND TUNNEL APPARATUS
Flow quality improvements in the NASA Lewis Research Center 9- by 15-foot Low Speed Wind Tunnel
[NASA-CR-195439] p 2763 N95-31653
WIND TUNNEL CALIBRATION
Flow quality improvements in the NASA Lewis Research Center 9- by 15-foot Low Speed Wind Tunnel
[NASA-CR-195439] p 2763 N95-31653
WIND TUNNEL MODELS
A laser-based ice shape profilometer for use in icing wind tunnels
[NASA-TM-106936] p 2880 N95-30851
WIND TUNNEL NOZZLES
Flow models for the design of a hypersonic iodine vapor wind tunnel nozzle with chemical and vibrational nonequilibrium effects p 2742 N95-30448
WIND TUNNEL TESTS
Small scale turbulence in a plane mixing layer
p 2866 N95-30449
An experimental study of planar heterogeneous supersonic confined jets
[AD-A290859] p 2867 N95-30557
Fabry-Perot interferometer measurement of static temperature and velocity for ASTOVL model tests
[NASA-TM-107014] p 2879 N95-30587
Axial loads on yawed rotors
[PB95-214193] p 2742 N95-30638
Transonic aerodynamic characteristics of a proposed wing-body reusable launch vehicle concept
[NASA-TM-108489] p 2742 N95-30712
A wind tunnel investigation of the effects of micro-vortex generators and Gurney flaps on the high-lift characteristics of a business jet wing
[NASA-TM-110626] p 2750 N95-30827
A laser-based ice shape profilometer for use in icing wind tunnels
[NASA-TM-106936] p 2880 N95-30851
Unsteady transonic wind tunnel test on a semispan straked delta wing, oscillating in pitch. Part 1: Description of the model, test setup, data acquisition, and data processing
[AD-A293113] p 2743 N95-30885
Hypervelocity wind tunnel number 9, high Mach number development program
[AD-A289934] p 2743 N95-30929
Hot jet/wake turbulent structure and laser propagation. Part 3: Laser propagation measurements and modeling
p 2871 N95-30992
Afterbody/nozzle pressure distributions of a twin-tail twin-engine fighter with axisymmetric nozzles at Mach numbers from 0.6 to 1.2
[NASA-TP-3509] p 2744 N95-31984
Control of unsteady separated flow associated with the dynamic stall of airfoils
[NASA-CR-198972] p 2744 N95-32193
Computer model to simulate testing at the National Transonic Facility
[NASA-TM-4664] p 2763 N95-32217
WIND TUNNELS
Patterns in the sky: Natural visualization of aircraft flow fields
[NASA-SP-514] p 2741 N95-31000
WIND TURBINES
Advanced system identification techniques for wind turbine structures
[DE95-004049] p 2902 N95-30505
Axial loads on yawed rotors
[PB95-214193] p 2742 N95-30638
Acceleration potential models PREDICHAT/PREDICDYN applied for calculation of axisymmetric dynamic inflow cases
[PB95-207015] p 2869 N95-30957
Digital simulation of wind velocities for wind turbine rotors: General considerations
[PB95-206447] p 2904 N95-31157
Mexico Wind Resource Assessment Project
[DE95-009202] p 2921 N95-31726
WIND VELOCITY
Development of a novel wind lidar, phase 1
[AD-A292703] p 2849 N95-30935
Digital simulation of wind velocities for wind turbine rotors: General considerations
[PB95-206447] p 2904 N95-31157
Validation of special sensor microwave/imager ocean surface wind retrievals in equatorial regions
[AD-A293750] p 2920 N95-31571
Arabian Sea mixed layer dynamics experiment: Mooring deployment cruise report
[AD-A293684] p 2923 N95-31600
WIND VELOCITY MEASUREMENT
Investigation of microwave backscatter from the air-sea interface
[NASA-CR-198854] p 2851 N95-31457
Validation of special sensor microwave/imager ocean surface wind retrievals in equatorial regions
[AD-A293750] p 2920 N95-31571
WINDING
A time stepping coupled finite element-state space modeling environment for synchronous machine performance and design analysis in the ABC frame of reference p 2864 N95-31948
WINDPOWER UTILIZATION
Data on development of new energy technologies
[DE95-764135] p 2904 N95-31155
Mexico Wind Resource Assessment Project
[DE95-009202] p 2921 N95-31726
Outlook for renewable energy technologies: Assessment of international programs and policies
[DE95-009084] p 2907 N95-32302
WING FLAPS
A wind tunnel investigation of the effects of micro-vortex generators and Gurney flaps on the high-lift characteristics of a business jet wing
[NASA-TM-110626] p 2750 N95-30827
WING LOADING
Unsteady transonic wind tunnel test on a semispan straked delta wing, oscillating in pitch. Part 1: Description of the model, test setup, data acquisition, and data processing
[AD-A293113] p 2743 N95-30885
WING OSCILLATIONS
Unsteady transonic wind tunnel test on a semispan straked delta wing, oscillating in pitch. Part 1: Description of the model, test setup, data acquisition, and data processing
[AD-A293113] p 2743 N95-30885
WINGS
Development of stitched/RTM primary structures for transport aircraft
[NASA-CR-191441] p 2789 N95-31421
Performance improvement of composite wings through aeroelastic tailoring and modern control
[AD-A293689] p 2752 N95-31602
A probabilistic design method applied to smart composite structures
[NASA-TM-106715] p 2899 N95-32206
WIRE
High-temperature superconducting current leads
[DE95-008404] p 2858 N95-30374
Smart material joint band
[AD-D017374] p 2888 N95-30716
Hydrostatic extrusion of BSCCO/Ag composite wire
[DE95-007862] p 2805 N95-31121
WIRELESS COMMUNICATION
Multi-dimensional data compression for portable communication
[AD-A292751] p 2850 N95-31426
WOOD
Overview of IEA biomass combustion activities
[PB95-196374] p 2902 N95-30519
Analysis of variation embedding tests with 17 MM dowel: Densified veneer wood FOREST project, part 7
[PB95-206876] p 2963 N95-30680
WOODEN STRUCTURES
Influence of adhesives and bonding techniques on the properties of glued timber-steelplate joints
[PB95-211470] p 2813 N95-30599
WORK-REST CYCLE
Forward rapid rotation shiftwork in USAF air traffic controllers: Sleep, activity, fatigue and mood analyses
[AD-A293448] p 2927 N95-31373
WORKING FLUIDS
CFC-replacement by natural working fluids: R&D and industrial challenges within the refrigeration, air conditioning amd heat pump areas
[PB95-195756] p 2815 N95-30871
WORKSTATIONS
An overview of high-speed networking for workstations
[DE95-009076] p 2947 N95-30577
Synthetic Terrain Imagery for Helmet-Mounted Display. Volume 2: Software design document
[AD-A293611] p 2753 N95-31655
Integration issues in modular mission management aid development p 2841 N95-32133
WOVEN COMPOSITES
Post-impact fatigue of cross-plied, through-the-thickness reinforced carbon/epoxy composites
[NASA-TM-110625] p 2896 N95-31419
A study of elevated temperature testing techniques for the fatigue behavior of PMCS: Application to T650-35/AMB21 .
[NASA-TM-106927] p 2791 N95-32209
WRIST
Precision manipulation with a dextrous robot hand
p 2888 N95-30829

X

X RAY ANALYSIS
An investigation of a novel approach to elemental imaging in three dimensions
[DE95-010340] p 3000 N95-31681
Silicon carbide-silicon heterostructure solar cells
p 2905 N95-31952
X RAY ASTRONOMY
Integrated X-ray testing of the electro-optical breadboard model for the XMM reflection grating spectrometer
[DE95-008829] p 2879 N95-30507
X RAY BINARIES
Observations of accreting pulsars
[NASA-CR-198931] p 3028 N95-30469
X RAY DIFFRACTION
Acoustoelastic stress evaluation in metal plate using absolute shear and longitudinal time-of-flight data
[PB95-197810] p 2892 N95-30458
Diffraction-line broadening analysis and stress relaxation in thin metal layers
[PB95-213898] p 2893 N95-30634
Polarisation resonance in X-ray diffraction
[DE95-616727] p 3012 N95-30789
Residual stresses and stress corrosion cracking in pipe fittings
[DE95-009332] p 2894 N95-31054
X-ray diffraction study of clusters in a-tC films
[DE95-010860] p 2794 N95-31393
In situ composites in the aluminum nitride-alumina system
[AD-A293776] p 2789 N95-31509
Annual meeting of the Advanced Light Source Users' Association
[DE95-009373] p 3000 N95-31635
A study of switching behavior in Pb(Zr,Ti)O3 thin films using x-ray diffraction
[DE95-010859] p 2808 N95-31689
X RAY FLUORESCENCE
Annual meeting of the Advanced Light Source Users' Association
[DE95-009373] p 3000 N95-31635
An investigation of a novel approach to elemental imaging in three dimensions
[DE95-010340] p 3000 N95-31681
X RAY LASERS
Quantum and nonlinear optics research
[AD-A293879] p 2999 N95-31519
Diagnosing high density, fast-evolving plasmas using x-ray lasers
[DE95-010734] p 3006 N95-32028
Enhanced brightness x-ray lasers
[DE95-010735] p 2886 N95-32029

X RAY OPTICS
X-ray standing wave interferometry-optics at 1 angstrom with applications to surface and material sciences
| DE95-011453 | p 2998 N95-31114
Quantum and nonlinear optics research
| AD-A293879 | p 2999 N95-31519
X RAY SOURCES
X-ray performance of the engineering prototype Stellar x-ray polarimeter
| DE95-010268 | p 3028 N95-31129
X RAY SPECTRA
Observations of accreting pulsars
| NASA-CR-198931 | p 3028 N95-30469
X RAY SPECTROSCOPY
Integrated X-ray testing of the electro-optical breadboard model for the XMM reflection grating spectrometer
| DE95-008829 | p 2879 N95-30507
Ionic conductivities of lithium phosphorus oxynitride glasses, polycrystals, and thin films
| DE95-008898 | p 2812 N95-30545
Applications of SXPS for studying surface structure, reaction mechanisms and kinetics
| DE95-008903 | p 2803 N95-30547
Development of plasma diagnostics technologies: A study on nuclear fusion reactor
| DE95-614180 | p 3005 N95-31004
The structure and reactivity of boron and carbon surfaces
| AD-A292804 | p 2795 N95-31440
Annual meeting of the Advanced Light Source Users' Association
| DE95-009373 | p 3000 N95-31635
X RAY TELESCOPES
Operating in the space plasma environment: A spacecraft charging study of the Solar X-ray Imager
| NASA-TM-110644 | p 3003 N95-30468
X RAYS
Integrated X-ray testing of the electro-optical breadboard model for the XMM reflection grating spectrometer
| DE95-008829 | p 2879 N95-30507
Ionic conductivities of lithium phosphorus oxynitride glasses, polycrystals, and thin films
| DE95-008898 | p 2812 N95-30545
Physics and application of high density Z-pinches
| NIFS-PROC-14 | p 3004 N95-30671
Studying the thermal/non-thermal crossover in solar flares
| NASA-CR-189436 | p 3031 N95-30785
X-band magnicon amplifier research at the Naval Research Laboratory
| AD-A293203 | p 3013 N95-30984
X-ray performance of the engineering prototype Stellar x-ray polarimeter
| DE95-010268 | p 3028 N95-31129
Effects of mosaicity on Parametric X-Radiation production
| AD-A293677 | p 2985 N95-31597
An investigation of a novel approach to elemental imaging in three dimensions
| DE95-010340 | p 3000 N95-31681
Enhanced brightness x-ray lasers
| DE95-010735 | p 2886 N95-32029
High-resolution superconducting x-ray spectrometers with aluminum trapping layers of different thicknesses
| DE95-010253 | p 2881 N95-32047
X WING ROTORS
Vibration reduction in helicopter rotors using an actively controlled partial span trailing edge flap located on the blade p 2762 N95-32111
X-29 AIRCRAFT
X-29 flight control system: Lessons learned p 2759 N95-32001
Flight evaluation of forebody vortex control in post-stall flight p 2752 N95-32003
X-31 AIRCRAFT
X-31: A program overview and flight test status p 2753 N95-32013

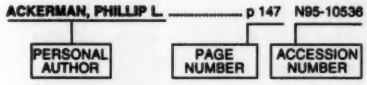
Y

YAG LASERS
Spotsize measurements of a focused CW Nd: YAG laser
| DE95-007746 | p 2884 N95-31139
Optical frequency standards: Hertz-level working standards and their absolute frequency measurement
| AD-A293930 | p 2999 N95-31515
Femtosecond, Cr(4+):YAG laser
| DE95-004964 | p 2887 N95-32155
Stripping by laser p 2844 N95-32174
YANG-MILLS FIELDS
Local solutions of harmonical and bi-harmonical equations, universal field equation and self-dual configurations of Yang-Mills fields in four dimensions
| DE95-620521 | p 2966 N95-31379
YANG-MILLS THEORY
Local solutions of harmonical and bi-harmonical equations, universal field equation and self-dual configurations of Yang-Mills fields in four dimensions
| DE95-620521 | p 2966 N95-31379
YAW
Axial loads on yawed rotors
| PB95-214193 | p 2742 N95-30638
YBCO SUPERCONDUCTORS
Low temperature synthesis of YBa2Cu3O(8-x) and other crystalline oxides
| AD-D017370 | p 3009 N95-30533
Phase transformations in melt-spun Y-Ba-Cu-O bulk superconductor
| DE95-010237 | p 3011 N95-30667
Space qualified hybrid superconductor/semiconductor planar oscillator circuit
| NASA-TM-106978 | p 3011 N95-30703
Investigations of YBaCuO materials with near-room-temperature resistivity transitions
| AD-A293405 | p 3013 N95-31008
Solution based temperature of Perovskite-type oxide films and powders
| DE95-009089 | p 2820 N95-31629
High performance YBCO films
| AD-A293045 | p 2863 N95-31669
YIELD POINT
New material for high average power infrared generation: QPM-DB GaAs
| AD-A292714 | p 2967 N95-30939
Amorphization and the effect of implanted ions in SiC
| DE95-009699 | p 2985 N95-31642
YIELD STRENGTH
Observations of star fracture and longitudinal splitting in BIS 812 EMA and Q1N submarine construction steels
| DSTO-RR-0014 | p 2806 N95-31344
YLF LASERS
A 1.94 micrometer laser apparatus, system and method using a thulium-doped yttrium-lithium-fluoride laser crystal pumped with a diode laser
| AD-D017435 | p 2884 N95-31213
YTTERBIUM
Laser properties of Yb(3+)-doped Sr5(PO4)3F crystals
| DE95-010686 | p 3016 N95-32268
YTTRIA-STABILIZED ZIRCONIA
Electrochemical vapour deposition of SOFC interconnection materials
| PB95-197844 | p 2812 N95-30459
The effect of interface properties on nickel base alloy composites
| NASA-CR-198363 | p 2785 N95-30787
YTTRIUM
Low-voltage cathodoluminescence of europium-activated yttrium orthovanadate
| DE95-008536 | p 3008 N95-30382
An experimental search for high ZT semiconductors: A survey of the preparation and properties of several alloy systems
| DE95-010232 | p 2865 N95-32084

Z

ZEOLITES
The Wide Field/Planetary Camera 2 (WFPC-2) molecular adsorber
| NASA-CR-198866 | p 2881 N95-31456
Composite polymer electrolyte for lithium batteries
| AD-A293924 | p 2820 N95-31514
ZETA PINCH
Physics and application of high density Z-pinches
| NIFS-PROC-14 | p 3004 N95-30671
Basic science with pulsed power and some off-the-wall ideas
| DE95-009486 | p 2854 N95-32050
ZINC
Luminescence properties of ZnWO4:Cr(3+) laser crystals
| AD-A293065 | p 2887 N95-32152
ZINC ALLOYS
Metallurgical and Materials Transactions
| AD-A293617 | p 2807 N95-31464
Cadmium plating replacements p 2776 N95-31773
Processing and microstructural evolution of alumina/aluminum alloy and aluminum nitride/aluminum alloy composites by directed melt oxidation p 2789 N95-31973
ZINC SELENIDES
Investigation of polycrystalline thin film CuInSe2 solar cells based on ZnSe windows
| DE95-004068 | p 2904 N95-31164
ZINC SULFIDES
Glass matrix doped with activated luminescent nanocrystalline particles
| AD-D017416 | p 2816 N95-31010
Germanate glass ceramic
| AD-D017418 | p 2816 N95-31011
On the Jahn-Teller effect of Mn(2+) in zinc-blende ZnS crystal
| AD-A293711 | p 2797 N95-31830
ZIRCALOYS (TRADEMARK)
Neutronic methods for determination of very low concentrations of hydrogen in metals
| DE95-623967 | p 2807 N95-31409
ZIRCONIUM ALLOYS
A proposed phase equilibrium diagram for Pt-Zr system
| DE95-620904 | p 2806 N95-31220
ZIRCONIUM CARBIDES
A metallurgical approach toward alloying in rare earth permanent magnet systems
| DE95-010242 | p 2966 N95-30668
ZIRCONIUM OXIDES
Dielectric property measurement of zirconia fibers at high temperatures
| DE95-010991 | p 2821 N95-31705
ZONAL FLOW (METEOROLOGY)
Calculation of a residual mean meridional circulation for a zonal-mean tracer transport model
| DE95-009474 | p 2911 N95-32350

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The page number helps you locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

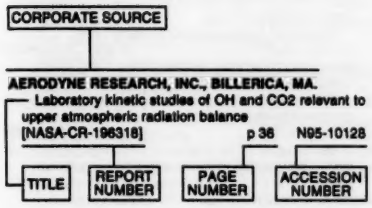
Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The accession number denotes the number by which the citation is identified. The page number helps you locate the citation in the abstract section. The titles are arranged under each corporate source in ascending accession number order.

A

AC ENGINEERING, INC., HUNTSVILLE, AL.
Standardization of surface contamination analysis systems p 2781 N95-31798

ACADEMY OF SCIENCES (USSR), NOVOSIBIRSK (USSR).
Experimental characterisation of gas microstrip detectors. Part 3: Lifetime characteristics
[PB95-192845] p 2880 N95-30691
Recoil correction in the Dirac-Coulomb problem
[DE95-619241] p 2959 N95-31137
Instanton - antiinstanton interaction and asymptotics of perturbation theory expansion of in double well oscillator
[DE95-619245] p 2966 N95-31259
Removal of impurity ions from a magnetic trap with a two-component plasma on their collision with fast component ions
[DE95-614171] p 2984 N95-31550
Optimization of an expander of a gas-dynamic trap
[DE95-614172] p 3006 N95-31679
Determination of electric and magnetic fields in open trap plasmas by means of atomic-molecular beam hydrogen isotopes
[DE95-614177] p 3006 N95-31680
Calibration of multichannel analyzer of charge-exchange atoms
[DE95-614178] p 2987 N95-32053
Energy spectra of charge-exchange atoms from a rotating plasma
[DE95-614179] p 3006 N95-32054
Longitudinal losses of charged particles from an open configuration with arbitrary beta ratio
[DE95-614187] p 2987 N95-32055
Bernstein-Green-Kruskal wave
[DE95-614201] p 3007 N95-32056
Instability of weakly nonlinear chaotic structures
[DE95-613441] p 2966 N95-32066
SO(8) color as possible origin of generations
[DE95-613560] p 2988 N95-32069
Statistical properties of chaotic scattering with one open channel
[DE95-613370] p 3020 N95-32150
Mixing phases of unstable two-level systems
[DE95-613844] p 2989 N95-32151
Nuclear-spin-dependent parity-nonconserving effects in thallium, lead and bismuth atoms
[DE95-614120] p 2991 N95-32354

ADVANCED FUEL RESEARCH, INC., EAST HARTFORD, CT.
HTS Josephson technology on silicon with application to high speed digital microelectronics
[AD-A288627] p 2861 N95-31147

ADVANCED SCIENTIFIC CONCEPTS, INC., PITTSBURGH, PA.
Training metacognitive skills for problem solving
[AD-A290310] p 2959 N95-31002

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).
Flight Vehicle Integration Panel Workshop on Pilot Induced Oscillations
[AGARD-AR-335] p 2745 N95-31061
Active control technology: Applications and lessons learned
[AGARD-CP-560] p 2757 N95-31989
Guidance and Control for Future Air-Defence Systems
[AGARD-CP-555] p 2839 N95-32123
Environmentally Safe and Effective Processes for Paint Removal
[AGARD-LS-201] p 2843 N95-32165

AERO OPTICS, INC., ROLLING HILLS ESTATES, CA.
Vacuum plume backflow and rarefaction p 2871 N95-30995

AERODYNE RESEARCH, INC., BILLERICA, MA.
Embedded infrared fiber optic absorption studies of nitramine propellant strand burning p 2801 N95-31305

AERONAUTICA MACCHI S.P.A., VARESE (ITALY).
Control law design using H-infinity and mu-synthesis short-period controller for a tail-airplane p 2758 N95-31999

AEROSPACE CORP., EL SEGUNDO, CA.
Optimum truncation of a Gaussian beam for propagation through atmospheric turbulence
[AD-A291156] p 2883 N95-30394
Oxygen charge state abundance in the inner magnetosphere
[AD-A293497] p 2915 N95-31536
Beam-centroid tracking instrument for ion thrusters
[AD-A293654] p 2769 N95-31567
Replacement of ozone depleting and toxic chemicals in gravimetric analysis of non-volatile residue p 2780 N95-31793
Allan deviation computations of a linear frequency synthesizer system using frequency domain techniques p 2972 N95-32344

AEROSPACE CORP., LOS ANGELES, CA.
Low-latitude boundary layer near noon: An open field line model
[ATR-93(7270)-1] p 2914 N95-30773
Global Ultraviolet Imager (GUVI) investigation
[NASA-CR-189430] p 2917 N95-31820
Monte Carlo simulations of precise timekeeping in the Milstar communication satellite system p 2970 N95-32336

AEROSPATIALE, TOULOUSE (FRANCE).
Flying qualities of civil transport aircraft with electrical flight control p 2761 N95-32016
Paint removal principles p 2843 N95-32167
Stripping with dry ice p 2844 N95-32172
Aquastrip p 2844 N95-32173
Stripping by laser p 2844 N95-32174
Selective chemical stripping p 2844 N95-32175
Bioremediation of wheat starch media waste p 2845 N95-32178
Process evaluation p 2845 N95-32180
Standardization work p 2845 N95-32181

AIR-CONDITIONING AND REFRIGERATION TECHNOLOGY INST., INC., ARLINGTON, VA.
Compatibility of refrigerants and lubricants with motor materials under retrofit conditions
[DE95-010185] p 2814 N95-30767
ARTI Refrigerant Database
[DE95-008336] p 2816 N95-31057
Compatibility of manufacturing process fluids with HFC refrigerants and ester lubricants
[DE95-012152] p 2911 N95-32364

AIR FORCE CIVIL ENGINEERING CENTER, TYNDALL AFB, FL.
Major weapon system environmental life-cycle cost estimating for Conservation, Cleanup, Compliance and Pollution Prevention (C3P2) p 2774 N95-31761

AIR FORCE ENVIRONMENTAL TECHNICAL APPLICATIONS CENTER, SCOTT AFB, IL.
Improved altimeter settings for A-10 aircraft
[AD-A293142] p 2753 N95-30920
Equatorial Africa: A climatological study
[AD-A293956] p 2920 N95-31524
Artificial intelligence techniques for flight test planning, phase 1
[AD-A293962] p 2751 N95-31525

AIR FORCE FLIGHT TEST CENTER, EDWARDS AFB, CA.
Flight test results of the F-16 aircraft modified with axisymmetric vectoring exhaust nozzle p 2752 N95-32007
An investigation of pilot induced oscillation phenomena in digital-flight control systems p 2760 N95-32011

AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OH.
Selecting optimal experiments for feedforward multilayer perceptrons
[AD-A290856] p 2949 N95-30406
The junction characteristics and current conduction mechanisms of GaInP2 n(+)p diodes and solar cells
[AD-A290857] p 2902 N95-30408
An experimental study of planar heterogeneous supersonic confined jets
[AD-A290859] p 2867 N95-30557
Evaluation of calibration parameters and performance of the video imaging technique of assessing exposure (VITAE system)
[AD-A289023] p 2927 N95-30998
Unification of LARCH and Z-based object models to support algebraically-based design refinement: The LARCH perspective
[AD-A289235] p 2935 N95-30999
Patient/aircraft forecasting for the strategic aeromedical evacuation lift-bed process
[AD-A293902] p 2747 N95-31512
Investigation of ground target detection methods in fully polarimetric wide angle synthetic aperture radar images
[AD-A293922] p 2851 N95-31513
Compressible turbulence measurement in low-angle injection into a supersonic flow
[AD-A293836] p 2874 N95-31516
Acquiring consistent knowledge for Bayesian Forests
[AD-A293858] p 2952 N95-31517
A new goodness-of-fit test for the gamma distribution based on sample spacings from complete and censored samples
[AD-A293875] p 2961 N95-31518
Dynamic maintenance scheduling for a stochastic telecommunication network: Determination of performance factors
[AD-A293829] p 2852 N95-31555
Spatial time-series: Pollution pattern recognition under irregular interventions
[AD-A293830] p 2909 N95-31556
Multipoint quadratic approximation for numerical optimization
[AD-A293837] p 2961 N95-31557
Nonlinear time series analysis
[AD-A293841] p 2963 N95-31558
Analysis and modeling of an airport departure process
[AD-A293782] p 2749 N95-31581
The effect of repeatedly sampling an embedded metamodel on the simulation response
[AD-A293783] p 2953 N95-31582
Analysis of heads-up display quickening versus handling qualities

Vibration reduction in helicopter rotors using an actively controlled partial span trailing edge flap located on the blade p 2762 N95-32111

CALIFORNIA UNIV., SAN DIEGO, CA.
Improved linear dynamic range in externally modulated fiber-optic links p 3001 N95-31950

CALIFORNIA UNIV., SANTA BARBARA, CA.
Extended tuning range semiconductor lasers with sampled gratings p 2883 N95-30498
Study of effect of bubbles on a free-shear layer
p 2872 N95-31100
Processing and microstructural evolution of alumina/aluminum alloy and aluminum nitride/aluminum alloy composites by directed melt oxidation
p 2789 N95-31973

CARNEGIE-MELLON UNIV., PITTSBURGH, PA.
Summary of technical operations
[AD-A293224] p 2935 N95-30903
Structural, chemical and electronic properties of superconducting thin films and junctions
[AD-A292700] p 3012 N95-30933
New adaptive methods for reconfigurable flight control systems, appendix 1
[AD-A292711] p 2756 N95-30937
Development of germanium-silicon growth technology
[AD-A293199] p 3013 N95-30983
Visual tracking of self-occluding articulated objects
[AD-A292894] p 2928 N95-31383
Human-computer interaction (HCI) specialization track Masters of Software Engineering (MSE) program
[AD-A292895] p 2930 N95-31401
The occurrence of continuation parameters in CPS terms
[AD-A292952] p 2941 N95-31460
Metallurgical and Materials Transactions
[AD-A293617] p 2807 N95-31464
Neural networks for real-time terrain typing
[AD-A293569] p 2953 N95-31540
Using case-based reasoning as a Reinforcement Learning framework for optimization with changing criteria
[AD-A293602] p 2953 N95-31654
Force and vision resolvability for assimilating disparate sensory feedback
[AD-A293581] p 2929 N95-31685
PORK object system programmer's guide
[AD-A293596] p 2942 N95-31688
Production matching for large learning systems
[AD-A293105] p 2953 N95-31827
Proceedings of the 1st Annual Software Engineering Techniques Workshop on Software Reengineering
[AD-A293724] p 2943 N95-31834
Experience with a course on architectures for software systems. Part 2: Educational materials
[AD-A293090] p 2943 N95-31843
A programming interface for application-aware adaptation in mobile computing
[AD-A293107] p 2943 N95-32019
PADO: Learning tree structured algorithms for orchestration into an object recognition system
[AD-A293109] p 2943 N95-32020
Improving data consistency in mobile computing using Isolation-Only Transactions
[AD-A293110] p 2948 N95-32021

CASE WESTERN RESERVE UNIV., CLEVELAND, OH.
From molecular to macromolecular liquid crystals
[AD-A293170] p 2816 N95-30974
Spectral element method for numerical simulation of unsteady laminar diffusion flames p 2794 N95-31333
Stability analysis of linear control systems with uncertain parameters p 2954 N95-31949

CATHOLIC UNIV. OF AMERICA, WASHINGTON, DC.
Application of wavelet-filtering techniques to intermittent turbulent and wall pressure events. Part 2. Detection of cluster patterns
[AD-A293805] p 2875 N95-31586

CENTRE EUROPEEN RECHERCHE ET DE FORMATION ADVANCE EN CALCUL SCIENTIFIC, TOULOUSE (FRANCE).
Use of element-by-element preconditioners to solve large scale partially separable optimization problems
[PB95-195772] p 2957 N95-30692

CENTRE NATIONAL DE LA RECHERCHE SCIENTIFIQUE, MARSEILLES (FRANCE).
Temporal information processing mechanisms
[PB95-206344] p 3027 N95-32370

CENTRE NATIONAL DE LA RECHERCHE SCIENTIFIQUE, TOULOUSE (FRANCE).
Use of element-by-element preconditioners to solve large scale partially separable optimization problems
[PB95-195772] p 2957 N95-30692

CENTRUM VOOR REGELEVING EN ONDERZOEK, EDE (NETHERLANDS)
Quality assurance tendering and awarding contracts

Calspan experience of PIO and the effects of rate limiting p 2746 N95-31072

CHALMERS UNIV. OF TECHNOLOGY, GOETEBORG (SWEDEN).
Molecular gas in starburst galaxies: Line intensities and physical conditions
[PB95-208021] p 3029 N95-30569
Feasibility study concerning an active millimeterwave sensor. Project phase MMS2.1
[PB95-210399] p 2882 N95-32245

CHRISTIAN BROTHERS COLL., MEMPHIS, TN.
Improved modeling of unsteady heat transfer (The first step)
[AD-A292777] p 2874 N95-31432

CINCINNATI UNIV., OH.
Artificial neural networks and model-based recognition of 3-D objects from 2-D images p 2954 N95-31838

CITY COLL. OF THE CITY UNIV. OF NEW YORK, NY.
Modern methods in meteorological and oceanographic data acquisition and analyses
[AD-A293884] p 2920 N95-31541
Image representation using fast algorithms based on the Zak transform
[AD-A293416] p 2942 N95-31684
Investigation of the basic physics of high efficiency semiconductor hot carrier solar cell
[NASA-CR-198945] p 2906 N95-32212

CLARKSON UNIV., POTSDAM, NY.
Self-adaptive multilevel methods for fluid flow problems p 2873 N95-31412
A time stepping coupled finite element-state space modeling environment for synchronous machine performance and design analysis in the ABC frame of reference p 2864 N95-31948
Silicon carbide-silicon heterostructure solar cells
p 2905 N95-31952
Vibration control of spacecrafts and space structures from lift-off to on-orbit environments
p 2767 N95-32110

CLEMSON UNIV., SC.
Characterization and prediction of post-impact fatigue damage in stitched composites p 2785 N95-30826

CLEVELAND STATE UNIV., OH.
Development and computer implementation of design/analysis techniques for multilayered composite structures. Probabilistic fiber composite micromechanics
[NASA-CR-198979] p 2930 N95-31134

COLORADO STATE UNIV., FORT COLLINS, CO.
National Institute for Global Environmental Change
[DE95-008333] p 2907 N95-30358
Forecast of Atlantic seasonal hurricane activity for 1994 p 2918 N95-30832
Summary of 1993 Atlantic tropical cyclone activity and verification of author's forecast. A year of unanticipated light hurricane activity and a poor forecast: The expected dissipation of the El Nino did not take place and Caribbean basin surface pressure became quite high
p 2918 N95-30842
Early August updated forecast of Atlantic seasonal hurricane activity for 1994 p 2919 N95-30844
Metal nanotubule membranes with electrochemically switchable ion-transpprt selectivity
[AD-A292712] p 2793 N95-30938
Clouds: Their prediction and simulation
[AD-A292864] p 2920 N95-31453

COLORADO UNIV., BOULDER, CO.
State resolved dynamics of ion-molecule collisions in a flowing afterglow
[AD-A290895] p 2976 N95-30410
Modeling and parameterization of gravity wave breaking, interactions, and instability processes in the lower and middle atmosphere
[AD-A292740] p 2914 N95-31278
Numerical simulation of shock/turbulent boundary layer interaction
[NASA-CR-198846] p 2872 N95-31341
Temporal feature extraction in photorefractive resonators
[AD-A292908] p 2881 N95-31385
Optical frequency standards: Hertz-level working standards and their absolute frequency measurement
[AD-A293930] p 2999 N95-31515
Optimizing the long-term retention of skills: Structural and analytic approaches to skill maintenance
[AD-A293798] p 2929 N95-31585
A computational procedure for multibody systems including flexible beam dynamics
[NASA-CR-199035] p 2897 N95-31730
Combustion response to acoustic perturbation in liquid rocket engines p 2770 N95-31972
Evaluation of discretization procedures for transition elements in adaptive mesh refinement
[NASA-CR-199037] p 2944 N95-32190
Staggered solution procedures for multibody dynamics simulation
[NASA-CR-199034] p 2899 N95-32202
A survey of the core-congruential formulation for geometrically nonlinear TL finite elements
[NASA-CR-199044] p 2944 N95-32203
Computational methods and software systems for dynamics and control of large space structures
[NASA-CR-199036] p 2767 N95-32204
A transient FETI methodology for large-scale parallel implicit computations in structural mechanics
[NASA-CR-199040] p 2945 N95-32214
The individual element test revisited

Typical Contract Number Index Listing

AF- AFOSR-0090-93 ..... p 173 N95-10812

CONTRACT NUMBER | PAGE NUMBER | ACCESSION NUMBER

Listings in this index are arranged alphanumerically by contract number. Under each contract number the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The page number helps to locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

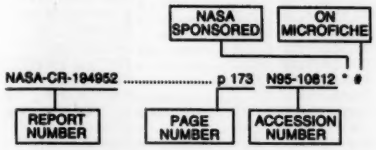
Typical Report Number Index Listing



Listings in this index are arranged alphanumerically by report number. The accession number denotes the number by which the citation is identified. The page number helps to locate the citation in the abstract section. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

APPENDIX

NASA SCIENTIFIC AND TECHNICAL INFORMATION OFFICE PRODUCTS AND SERVICES

The NASA Scientific and Technical Information (STI) Office provides for the collection and announcement of aerospace-related reports and literature obtained worldwide through agreements and exchanges. The result of the collection is the comprehensive NASA STI Database that covers aeronautics, space, and supporting disciplines.

The STI Database, documents generated or obtained by NASA, and products and services derived from or supporting the database are made available to the NASA research community and to the public. Descriptions and sources of these items are presented in the following pages.

Scientific and Technical Aerospace Reports (STAR) is an abstract journal, listing citations with abstracts for aerospace-related reports obtained from worldwide sources. *STAR* is issued on the first of each month, and announces current documents that have been entered into the NASA STI Database during the previous month. The reports are of the following types:

- NASA, NASA contractor, and NASA grantee reports;
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms;
- Translations in report form;
- NASA-owned patents and patent applications
- Other U.S. Government agency and foreign patents and patent applications
- Domestic and foreign dissertations and theses.

Journal, book, and conference literature, journal translations, and certain foreign dissertations having the same subject scope as *STAR* are announced in a companion journal, *NASA Open Volumes on Aerospace (NOVA). NOVA* is issued on the 15th of each month and is available from the NASA Center for AeroSpace Information, at the address below.

ELIGIBILITY AND REGISTRATION FOR NASA STI PRODUCTS AND SERVICES

Organizations of the type listed below that have registered with NASA can receive products and services.

- NASA offices and installations, contractors, subcontractors, grantees, and consultants;
- Other U.S. Government agencies and their contractors;
- Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
- Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
- Organizations abroad that have established reciprocal documents exchange arrangements with NASA.

The central service points—central points of document acquisition and control within qualified organizations—or individuals are eligible to register for NASA STI products and services. Domestic organizations or individuals may be eligible to receive various classes of NASA publications and services and should address their requests for registration or further information to:

ATTN: Registration Services
NASA Center for AeroSpace Information
800 Elkridge Landing Road
Linthicum Heights, MD 21090-2934
301-621-0390

Organizations abroad should direct requests to:

National Aeronautics and Space Administration
Scientific and Technical Information Office (JT)
International STI Office
Washington, DC 20546-0001
USA
703-271-5640

SUBJECT SCOPE

The subject scope of *STAR* and *NOVA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of Earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

HOW TO USE *STAR* SUBJECT CATEGORIES

Abstracts in *STAR* are categorized by 10 major subject divisions that are divided further into 76 specific subject categories. The subject divisions and categories are listed in the Table of Contents together with a note for each that defines its scope and provides any cross-references. For example:

> **16 SPACE TRANSPORTATION**
>
> Includes passenger and cargo space transportation, e.g., shuttle operations; and space rescue techniques. For related information see also *03 Air Transportation and Safety* and *18 Spacecraft Design, Testing and Performance*. For space suits see *54 Man/System Technology and Life Support*.

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents available on microfiche are designated by a pound sign (#) following the accession number.

LIMITED REPRODUCIBILITY

A note of limited reproducibility appears in the citation, if there are factors affecting the reproducibility of more than 20% of the document. These factors include faint or broken type, color photographs, black and white photographs, foldouts, dot matrix print, or some other factor that limits the reproducibility of the document. This notation also appears on the microfiche header.

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report Number Index, patents are indexed by the NASA Case Number, and the U.S. Patent Class. Patent applications are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

Printed copies of patents (which are not microfiched) are available for purchase from the U.S. Patent and Trademark Office.

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the U.S. Patent and Trademark Office.

NASA patent application specifications are sold in both paper copy and microfiche by the NASA Center for AeroSpace Information (CASI). The N accession number should be used in ordering either paper copy or microfiche from CASI.

The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

National Aeronautics and Space Administration
Associate General Counsel for Intellectual Property
Code GP
Washington, DC 20546-0001

SOURCES FOR DOCUMENTS

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below, and their addresses are listed on page A-6. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: CASI. Sold by the NASA Center for AeroSpace Information. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page A-7.

NOTE ON ORDERING DOCUMENTS: When ordering publications from NASA CASI, use the N accession number or other report number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: ESDU. Pricing information on specific data, computer programs, and details on Engineering Sciences Data Unit (ESDU) topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on page A-6.

Avail: Fachinformationszentrum Karlsruhe. Gesellschaft für wissenschaftlich-technische Information mbH 76344 Eggenstein-Leopoldshafen, Germany.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, CA. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration (JBD-4), Public Documents Room (Room 1H23), Washington, DC 20546-0001, or public document rooms located at NASA installations, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: NTIS. Sold by the National Technical Information Service. Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) are available. For information concerning this service, consult the NTIS Subscription Section, Springfield, VA 22161.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free. (See discussion of NASA patents and patent applications on page A-3.)

Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed on page A-6. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 53 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 53 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on page A-8. These libraries are *not* sales outlets. A local library can contact a regional depository to help locate specific reports, or direct contact may be made by an individual.

PUBLIC COLLECTION OF NASA DOCUMENTS

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from FIZ—Fachinformation Karlsruhe—Bibliographic Service, D-76344 Eggenstein-Leopoldshafen, Germany and TIB—Technische Informationsbibliothek, P.O. Box 60 80, D-30080 Hannover, Germany.

SUBMITTING DOCUMENTS

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you

usual contract- or grant-reporting channels), please send them for consideration to the NASA Center for AeroSpace Information, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR's* companion journal, *NOVA*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on a public sale at the NASA Center for AeroSpace Information. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

STAR is publicly available on annual subscription from the NASA Center for AeroSpace Information (CASI). 1995 *STAR* subscription prices are $100.00/domestic and $125.00/foreign. Single copy prices: $33.00/domestic, $41.00/foreign.

An annual, cumulative *STAR Index* is also available at $70.00/domestic and foreign.

STAR is available to registered users on annual subscription from the NASA Center for AeroSpace Information, ATTN: Registration Services, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

IMPORTANT NOTICE

For users not registered at the NASA CASI, prepayment is required. Additionally, a shipping and handling fee of $1.00 per document for delivery within the United States and $9.00 per document for delivery outside the United States is charged.

For users registered at the NASA CASI, document orders may be invoiced at the end of the month, charged against a deposit account, or paid by check or credit card. NASA CASI accepts American Express, Diners' Club, MasterCard, and VISA credit cards. There are no shipping and handling charges. To register at the NASA CASI, please request a registration form through the NASA Access Help Desk at the numbers or addresses below.

RETURN POLICY

Effective June 1, 1995, the NASA Center for AeroSpace Information will gladly replace or make full refund on items you have requested if we have made an error in your order, if the item is defective, or if it was received in damaged condition and you contact us within 30 days of your original request. Just contact our NASA Access Help Desk at the numbers or addresses listed below.

SCAN Goes Electronic!

If you have NASA Mail or if you can access the Internet, you can get biweekly issues of *SCAN* delivered to your desktop absolutely free!

Electronic SCAN takes advantage of computer technology to alert you to the latest aerospace-related, worldwide scientific and technical information that has been published.

No more waiting while the paper copy is printed and mailed to you. You can review *Electronic SCAN* the same day it is released! And you get all 191—or any combination of—subject areas of announcements with abstracts to browse at your leisure. When you locate a publication of interest, you can print the announcement or electronically add it to your publication order list. Start your free access to *Electronic SCAN* today.

Electronic SCAN
Timely
Flexible
Complete
Free!

Over 1,000 announcements of new reports, books, conference proceedings, journal articles . . . and more—delivered to your computer every two weeks.

For instant access via Internet:
